AMATEUR REVOLVER CHAMPIONSHIP TROPHY.
PRESENTED BY MR. WALTER WINANS.

THE TROPHY.

"BAIL UP." SILVERED BRONZE STATUETTE, DESIGNED AND
MODELLED BY WALTER WINANS.

THE subject, which is made on the scale of 1/4 in. to the inch—that is to say, all the measurements are 1/4 of life size—represents a Texas cowboy, who has been "painting the town red," and consequently has got into a dispute with some one and is pointing his frontier Colt at him (represented by the spectator), while he calls out, "Bail up!"

By the angle at which he points the Colt is shown that the man he is "bailing up" is on foot, his hold of the revolver is that adopted by the late Chevalier Ira Paine and taught by him to Mr. Walter Winans.

The cowboy is sitting with the typical cowboy seat, straight legs and one hand resting on the pommel of his Moseman's frontier saddle in the favorite cowboy style. The old broncho pony he is riding is also a typical cowboy pony, narrow, big-headed, sleepy-looking, and yet looking in hard condition.

The armlets above the cowboy's elbows and the ornamental bridle shows that he has lived among Indians. The cards and dice on the ground show that there has been gambling, and the bottles and glass, drinking; the derringer and flowers lying near, that the "trouble" is about a woman.

The base, of blackened wood (not shown in cut), has its ornaments made of parts of frontier .44cal. revolver cartridges, the bullets lying in the fluting, and the heads of the cartridges forming a border near the bottom; the top beading of rope pattern represents the lariat.

THE REVOLVER CHAMPIONSHIP.

THE TARGETS.

WITH this number of FOREST AND STREAM is given the full diagram of targets just as they are sent out to those wishing to make practice scores in the preparation now in progress for the final competitions. On the sheet the conditions are given in full with space left for the record of each string as made. In shooting, fire one shot at each bullseye in the order of the numbers and then enter up the score, taking in each case the number of the innermost ring cut by the bullet hole. The addition gives at once the total score in inches and tenths of an inch. By this

method there will be no confusion by one bullet cutting away the edges of the orifice made by a preceding bullet, and the measurements are surely and accurately made. By sending to this office, copies of the targets may be had by those wishing to do some preparatory shooting. When scores are made, marksmen would oblige FOREST AND STREAM by sending the targets to this office that they may be reproduced in fac-simile and published as illustrations.

THE HARLEM CLUB SHOOT.

MAY 13.—The first important rifle shoot of the season was begun Monday at Union Hill, the Harlem Rifle Club having put \$750 in prizes on the ring and bullseye targets for competition among all marksmen who handle the rifle. Shooting began at 9 A.M., and as the light was good, then M. Dorrier, of the Zettler Rifle Club, succeeded in making a red flag and winning the first morning's premium. Later on members of the Newark Shooting Society, the Marion Rifle Club, the Hudson Rifle Club, the Empire Rifle Club, the Williamsburg Shooting Society and a goodly contingent of the Zettler sharpshooters, besides the majority of the Harlem Rifle Club, arrived at the Schuetzen Park and the competition became very lively.

About noon the light became hazy and the powder smoke began to hang, this and the heat explaining the comparatively low scores. W. Rosenbaum, of the Zettler Rifle Club, scored the last red flag and received the premium.

In the three days shoot the members of the Newark Shooting Society succeeded in winning the lion's share of the prizes, and of the aggregate of \$750 offered they captured \$275. On the ring target Harris won first prize with 72, 73 and 71 and also got the first premium for the best 5 tickets with 354 out of 375. Second prize went to J. A. Boyken with 72, 71 and 70, and he also took third premium with 351 points. Coppersmith took tenth prize on 69, 68, 68; Campbell twenty-first on 66, 66, 68; Weigman twenty-second on 67, 65, 65; Townsend twenty-sixth on 69, 63, 61. On the bullseye target Harris took first prize for the best bullseye and a premium for the fifth most flags. Boyken got the second best, Campbell sixth, Coppersmith twelfth and Weigman sixteenth. Copper smith won first premium for the most flags. Among the shooters were S. J. Lyons, of Collinsville, Conn.; H. M. Pope, Hartford, Conn.; Z. C. Talbot, Springfield, Mass.; E. T. Stephens, Springfield, Mass.

At the shoot on Tuesday Harris missed the 12th bullseye but once in 181 shots. He made 34 1/4 in. bullseyes in 100 shots.

But seven members of the Newark Shooting Society took part in the trophy match to-day, although the weather was all that could be desired. J. A. Boyken won the medal with a total of 213 points. In the expert match Boyken won a bronze medal on scores of 126, 124, 133, 131, 130. Harris made a silver medal score of 129. The next trophy match will take place on May 28.

BOSTON, May 16.—The regular weekly shoot of the Massachusetts Rifle Association was held at its range to-day. The conditions were changeable and unfavorable for high scores. The trap shooters of the association will hold a special tournament at Walnut Hill, Wednesday, May 27, for team and individual shooting, with special prizes and sweeps. Following are the best scores, distance 200 yds., standard American target, re-entries allowed:

All-Comers' Off-hand Match.			
A Maynard.....78	M T Day.....70	S T Crawford.....61	
D N Winn.....74	A S Hunt.....68	J B Hobbs.....59	
A G Howe.....73	D Martin.....66	W I Morse.....57	
I B Thomas.....71	J Ryan.....65		

All-Comers' Rest Match.			
F Daniels.....112	W Conway.....96	A Elton.....87	
M T Day.....107	R H Wood.....95	J French.....87	
T Warren.....109	J W French.....93	D N Winn.....86	
W Peters.....101	A S Hunt.....90	D Martin.....85	
A H Ballard.....99			

Pistol Match, 50 Yds.			
H Severance.....88	M T Day.....73	C F Gray.....71	
G L Hosmer.....82	H L Greene.....73	A S Hunt.....65	
S C Sydney.....74	A Wesson.....72		

The Massachusetts Rifle Association has signed the contract for their new shooting house to be erected at Walnut Hill, and work on it will begin at once. The building is to be 60 ft. long by 20 ft. wide, and the two-story part is to be 60x20 ft.

CREEDMOOR, May 11.—Rifle practice on the State rifle range at Creedmoor was opened to-day by a detachment of the Eighth Regiment under command of Major Chauncey. It was a fine day for practice, with little wind. The entire force of men employed as markers, helpers and workmen on the targets on the State range at Creedmoor struck yesterday morning, and positively refused to go to work. This was a continuation of Saturday's strike, when the men demanded \$2 a day and eight hours' work. A sufficient number of men to man the targets were persuaded to return to work on Saturday, and rifle practice proceeded uninterrupted. To-day, however, they all went out to a man. Gen. Robbins endeavored to persuade them to return to work, without effect. The pay and duties of the workmen are regulated by the State, and Gen. Robbins was unable to negotiate terms, so he ordered them all from the grounds. New men were found to take their places.

NEWARK, N. J., May 14.—The shooting committee of the Newark Shooting Society met this evening and decided upon a programme for the prize festival to be held in the shooting park on Friday and Saturday, July 3 and 4.

Every week we are obliged to defer to the next week trap scores which come in too late for publication in the current issue. It is particularly requested that scores be sent us as early as possible.

FUN AT FINDLAY.

FINDLAY, O., May 16.—The meet of the Ohio Trap-Shooters' League has been a great success, being the best ever given by the League.

The Cleveland Target Co. introduced their unknown angles, which changes the angles of the traps. This unknown angles is the greatest advancement in trap-shooting made for many years. It received the indorsement of every shooter present.

The dinner served on the grounds would be a credit to the best hotel in the country. To the liberality of the Cleveland Target Co. is due the great success of this shoot.

E. C. Damm, president of the Findlay Gun Club, who had entire charge of the affair, deserves a great deal of credit for the pleasant manner in which everything passed off. The tournament was well advertised, and the attendance was the largest ever known in the history of the League.

Second Day.—Weather capital, with no wind. First match at 10 singles, rapid firing system, entrance \$1.50:

Carter	10	J. Webber	10
Osborn	10	Mallard	10
North	10	Miller	10
Dick Smith	10	Latham	10
McDonald	10	Duffy	10
McDonnell	10	Shultz	10
Holt	10	Edwards	10
Geyer	10	Buckeye	10
Falkner	10	Sneth	10
Amrose	10	Shorty	10
Dick W.	10	Narby	10
Perry	10	Spross	10
D. Joy	10	Andrews	10
Chubb	10	Conrad	10

No. 2, league, 10 single bluebirds, unknown angles, entrance \$1.50:

Falkner	10	Chubb	10
Sneth	10	Barkhamer	10
Webber	10	D. Smith	10
Mallard	10	Young	10
Miller	10	North	10
Buckeye	10	Conrad	10
Dr. Carter	10	Perry	10
McDonald	10	Monroe	10
John Bitter	10	Holt	10
Geyer	10	Delow	10
Shorty	10	Edwards	10
Sanford	10	D. Joy	10
Pierson	10	Duffy	10
Duffy	10	Hamilton	10
Nasby	10	Dougherty	10
Dickie	10	Louden	10
Fink	10	Rushmore	10
Dr. Walters	10	Andrews	10
Spross	10	Conrad	10
Maynard	10	Zarbaugh	10
Taylor	10	Latham	10

No. 3, open to all, 9 champion clay birds, entrance \$1.50:

Smith	10	Amrose	10
Taylor	10	Fink	10
Osborn	10	Perry	10
Holt	10	Mallard	10
Sanford	10	McDonald	10
Latham	10	Dick W.	10
Chubb	10	Edwards	10
Carter	10	Spross	10
Conrad	10	Buckeye	10
Carter	10	Nasby	10
Monroe	10	Shorty	10
Joy	10	Conrad	10
Miller	10	Conrad	10
North	10	Conrad	10

No. 4, 15 bluebirds, rapid-firing system, entrance \$2:

Dick Smith	10	Spross	10
Carter	10	J. Webber	10
Miller	10	John Bitter	10
Osborn	10	Falkner	10
North	10	Shultz	10
Holt	10	Monroe	10
Edwards	10	Sneth	10
Chubb	10	Duffy	10
McDonald	10	Doberty	10
Buckeye	10	Karg	10
D. Joy	10	Marin	10
Walters	10	Young	10
Nasby	10	Sey	10
Fink	10	Cook	10
Howard	10	Sanford	10
Hamilton	10	Sanford	10
Mallard	10	Zarbaugh	10
Perry	10	Dick W.	10
Rushmore	10	Dick W.	10

No. 5, 15 single bluebirds, from 5 traps, unknown angles, angles of traps changed for each contestant, entrance \$2:

Dick Smith	10	Nasby	10
Dr. Carter	10	Landen	10
Miller	10	D. Joy	10
Osborn	10	Latham	10
North	10	Young	10
Holt	10	Sneth	10
Edwards	10	Sanford	10
Chubb	10	Falkner	10
McDonald	10	Dick W.	10
Buckeye	10	Shorty	10
North	10	Hamilton	10
Spross	10	Zarbaugh	10
Edwards	10	Cook	10
Andrews	10	J. Webber	10
Perry	10	Buckeye	10
Duffy	10	Buckeye	10

No. 6, league, 10 American clay birds, unknown angles, entrance \$1.50:

Dick Smith	10	McDonald	10
Osborn	10	Fink	10
Taylor	10	Duffy	10
Buckeye	10	J. H. Carter	10
Maynard	10	Evans	10
Miller	10	Perry	10
Carter	10	Geyer	10
Chubb	10	Rushmore	10
W. Dick	10	Webber	10
Sanford	10	Young	10
Joe	10	Andrews	10
Spross	10	Dougherty	10
Holt	10	Hamilton	10
Latham	10	Shorty	10

No. 7, at 9 single bluebirds, unknown angles, entrance \$1:

Dick Smith	10	North	10
Mallard	10	Andrews	10
Miller	10	Maynard	10
Holt	10	Rushmore	10
Chubb	10	Shorty	10
Edwards	10	Hamilton	10
Jay	10	Evans	10
Murphy	10	Hatcher	10
Dr. Carter	10	Daugherty	10
Amrose	10	Perry	10
Osborn	10	Duffy	10
McDonald	10	Webber	10
Langdon	10	Ritter	10
Barkhamer	10	Sneth	10
Nasby	10	Taylor	10
Pierson	10	Dick W.	10
Latham	10	Sanford	10
Buckeye	10	Sanford	10
Spross	10	Sanford	10

No. 8, 20 single bluebirds, rapid fire system, entrance \$2.50:

D. Smith	10	Monroe	10
Osborn	10	Edwards	10
Holt	10	Sneth	10
Taylor	10	Daugherty	10
Dr. Carter	10	Falkner	10
McDonald	10	Hamilton	10
Buckeye	10	Latham	10
D. Joy	10	Perry	10
Dick W.	10	Geyer	10
North	10	Sanford	10
Chubb	10	Shorty	10
Spross	10	Duffy	10
Miller	10	Duffy	10
Mallard	10	Tipp	10
Young	10	Tipp	10

There were a number of extra events contested for, the most important being 5 double birds, which resulted in the following score:

Carter	11	Young	10
Edwards	11	D. Joy	10
Osborn	10	Duffy	10
Miller	10	Tipp	10
McDonald	10	Sanford	10
Holt	10	Shorty	10
Dick W.	10	Mallard	10
Latham	10	Dick Smith	10
Perry	10	Spross	10
Amrose	10	Hutson	10
Hamilton	10	North	10
Buckeye	10	North	10

Third Day.—Match at 15 singles, open to all:

Holt	11	Hamilton	10
McDonald	11	Shorty	10
Dr. Carter	11	Dick W.	10
Dick Smith	11	J. Webber	10
Mallard	11	Sanford	10
Osborn	11	Jaeger	10
Spross	11	Perry	10
Buckeye	11	Karg	10
Latham	11	Young	10
Miller	11	Schardt	10
Amrose	11	Clark	10
North	11	Clark	10
Snipe	11	Clark	10

Then came the event of the meet, the match for the championship. The L. C. Smith trophy, the possession of which is contested for at each annual tournament of the Ohio Trap-Shooters' League, is a handsomely designed silver cup, valued at \$500, and was presented to the League in 1888 by the gentleman whose name it bears, upon the condition that it should be contested for at stated times, and should be emblematical of the State championship. It was first contested for at the League tournament held at Galion in May, 1888, and was won by Rolla O. Heikes, of Dayton, who again secured it in September of the same year. Arthur Paul, of Huron, was the next lucky marksman to gain possession of the valuable cup, having won it in September, 1889. George C. Osborn, of Dayton, took it last year with 47 out of 50, and a thousand people saw him win it again to-day with a score better by one. The conditions were 50 single bluebirds, 3 traps, each contestant shooting seven rounds of 6 each and one round of 8, entrance \$5. There were 20 entries, and the contest lasted about four hours, resulting as follows:

Osborn	11	Hamilton	10
Acklin	11	Shorty	10
Carter	11	Dick W.	10
Spross	11	J. Webber	10
Miller	11	Sanford	10
Young	11	Jaeger	10
North	11	Perry	10
Webber	11	Karg	10
Holt	11	Young	10
McDonald	11	Schardt	10
Schardt	11	Clark	10
Sanford	11	Clark	10
Latham	11	Clark	10
Easton	11	Clark	10
Vincent	11	Clark	10
Pumphrey	11	Clark	10
Wilcox	11	Clark	10
Clark	11	Clark	10
Bacon	11	Clark	10

As the targets were generously donated by the Cleveland Target Company, the entire amount, \$200, was divided into four prizes of \$50, \$30, \$20 and \$10 respectively. Osborn received \$40, Clark \$30, Spross \$20, North Vincent, Sanford and Carter tied for the \$10 prize. In the shoot off Vincent broke 12 straight birds and received the purse.

WATSON'S PARK.—Burnside, Ill., May 12.—A. F. Loyd and W. F. Mussey shot 100 live pigeons each for cost of birds, American Association rules, Loyd scoring 83 to Mussey's 82.

May 13.—The Lake County Club at 10 live birds, Illinois State rules, for practice:

Nie Ford	12	G. Marqued	10
Col Bond	12	W. F. Kissel	10
Williston	12	N. Lewis	10
H. Kuebler	12	J. A. Mott	10
A Weiss	12	Farnum	10
L. W. Fleisner	12	A. Ortesen	10

May 14.—Sporting Review trophy, 20 live pigeons each, use of one barrel only, otherwise American Association rules:

Finnman	10	Marsh	10
Reeves	10	Adams	10

Yachting.

Model Yachts and Boats. Their design, making and sailing, with designs and working drawings. Postpaid, \$2.

SAIL PLAN OF 28-FT. CUTTER "MARJORIE."

THE CHANGES IN NEW YORK HARBOR.

THE dredging which has been going on in the Lower Bay for some years has necessitated changes of marks and buoys at times, on two occasions the lighthouse known as the West Beacon on the point of Sandy Hook having been bodily moved to adjust it to new ranges. During the past week, however, still greater changes have been made, the entire system of marks and buoys being remodeled. Not only have the two familiar marks long known to yachtsmen, the red buoy and the red perch and ball that marked the turn at the Southwest Spit been discontinued, but the two lightships themselves have been moved. It will be some little time before the changes are all made and charted, but the official notice of the changes, as given in the "Notice to Mariners," is as follows:

SANDY HOOK LIGHT VESSEL will be moved about $2\frac{1}{4}$ miles N. E. by N. from its present position, and moored on the prolongation of the axis of Gedney's Channel, the entrance buoy bearing W. N. W. $\frac{1}{4}$ W., $4\frac{1}{2}$ miles. Approximate latitude, $40^{\circ} 28' (15')$, N. Approximate longitude, $73^{\circ} 50' (08')$, W. Bearings and distances of prominent objects are: Highlands of Navesink lights, S. W. by W. $\frac{3}{4}$ W., $8\frac{1}{2}$ miles. Centennial Tower, Coney Island, S. W. by N., $8\frac{1}{2}$ miles. Sandy Hook Light, W. $\frac{1}{2}$ N., $7\frac{3}{4}$ miles.

WRECK OF THE SCOTLAND LIGHT VESSEL will be moved about $\frac{1}{2}$ mile N. E. $\frac{3}{4}$ E. from its present position, and moored on the prolongation of the axis of the South and Swash channels (Swash Channel Range), and distant $3\frac{3}{8}$ miles from the axis of the Main Channel (Main Channel Range). Approximate latitude, $40^{\circ} 28' (48')$, N. Approximate longitude, $73^{\circ} 55' (17')$, W. Bearings and distances of prominent objects are: Highlands of Navesink lights, S. W. $\frac{1}{4}$ W., $4\frac{1}{2}$ miles. Centennial Tower, Coney Island, N. $\frac{3}{4}$ W., $8\frac{1}{2}$ miles. Sandy Hook Light, W. N. W., $3\frac{1}{2}$ miles. The following changes are to be made in the buoyage on the same date:

MAIN CHANNEL AND UP THE BAY.—No. 6, red nun buoy, will be discontinued. No. 6, red nun buoy, will be established just south of 18ft. spot, Flynn's Knoll: Hook Beacon Light (Sandy Hook), S. by W. Romer Shoal Light, N. $\frac{3}{4}$ W. No. 10, red nun buoy, will be established just south of 14ft. spot, Flynn's Knoll: Hook Beacon Light (Sandy Hook), S. E. $\frac{1}{4}$ S. Romer Shoal Light, N. by E. $\frac{3}{4}$ E. Sandy Hook Light, S. E. $\frac{1}{4}$ E. No. 8, South-west Spit, with perch and ball, will be discontinued. No. 12, red nun, will be established just south of 23ft. spot, Southwest Spit: Hook Beacon Light (Sandy Hook), S. E. by E. $\frac{1}{4}$ E. Romer Shoal Light, N. N. E. $\frac{3}{4}$ E. Sandy Hook Light, S. E. No. 10 (turning buoy), W. of Southwest Spit, will be discontinued, and No. 14 red nun, surmounted by perch and ball, will be established on the 23ft. spot just to eastward of the present No. 10. No. 7 (West

Bank) will be discontinued as a channel buoy and changed to a white spar buoy for demarkation of harbor limits only. No. 15, spar buoy (West Bank, N. E. edge) will be discontinued. West Bank bell-buoy, No. 15, will be known as Fort Tompkins bell-buoy, and the number discontinued. The following numbers on buoys will be changed: No. 12 (East Knoll) to No. 8. No. 9 (West Bank, south) to No. 7. No. 14 (north end of Romer) to No. 10. No. 13 (West Bank, E. end) to No. 9. No. 16 (East Bank, N. W. end) to No. 12. No. 15 (West Bank, N. E. edge) to No. 11. No. 18 (Gowanus Flats, S. W. end) to No. 14. No. 20 (Gowanus Flats, W. side) to No. 16. No. 19 (Oyster Island Flats) to No. 13.

SWASH CHANNEL.—Junction Buoy, at junction of upper end of Swash Channel with Main Ship Channel, will be an H. S. nun surmounted by perch and square. Romer Shoal (N. W. edge) bell-buoy, No. 3, will be known as Swash Channel bell-buoy, and the number discontinued. The following numbers on buoys will be changed: No. 4 (Romer, S. edge) to No. 2. No. 6 (Dry Romer Shoal, S. E. end) to No. 4. No. 3 (East Knolls, E. side) to No. 1. No. 5 (East Knolls, N. E. end) to No. 3.

EAST CHANNEL.—No. 2, red spar buoy, will be established on N. side of channel: Centennial Tower, Coney Island, N. by E. $\frac{1}{4}$ E. Romer Shoal Light, W. $\frac{3}{4}$ S. Hook Beacon Light (Sandy Hook), S. S. W. $\frac{3}{4}$ W. No. 5, black-spar buoy, will be established on S. W. side of channel: Centennial Tower, Coney Island, N. E. $\frac{1}{4}$ E. Romer Shoal Light, S. by W. $\frac{1}{4}$ W. The following numbers on buoys will be changed: No. 2 (East Bank) to No. 4. No. 4 (East Bank) to No. 6.

EAST RIVER.—No. 2, red spar buoy, will be established just to the southward of Hunt's Point, to mark the end of sunken dock: Hunt's Point, N. $\frac{3}{4}$ E. College Point, S. E. by E. $\frac{1}{4}$ E. An H. S. spar buoy will be established on the 17ft. rocky spot between Rikers Island and Barretto's Point: North Brother Island Light, W. $\frac{1}{2}$ N. Rikers Island post-light, S. W. by W. $\frac{3}{4}$ W. Sanford's Point, S. $\frac{1}{2}$ E. The following numbers on buoys will be changed: No. 2 (Sunken Meadow) to No. 4. No. 1 (Blackwell's Island, S. end) to No. 11. No. 2 (Shell Reef) to No. 6. No. 3 (Governor's Island, South Shoal, Buttermilk Channel) to No. 1. (L. H. Board N. to M. Nos. 28 and 29 of 1891.) This affects Charts 3394, 3395, 3396, 370, 116, 120, 52, 8a, and A.

HELVETIA.—The new steam yacht designed by Mr. Burgess and built by Lawley for Mr. C. d'O. Iselin, was launched on May 13. She is built for speed, with fine lines and a quadruple expansion engine, a good part of the space being devoted to the machinery.

FLOSS.—We call attention to this little steam yacht advertised in another column, an excellent boat for cruising inland.

MEASUREMENT AND CLASSIFICATION.

IT is gratifying to all who have labored long in the interests of length and sail area as opposed to length alone as a basis of measurement to find that yachtsmen are no longer disposed to neglect the question as of little practical importance, but that a lively interest is apparent in all localities in the kindred subjects of measurement, classification and time allowance. The day has gone by when a yachtsman considered it beneath him to understand anything more than simple addition, and the men who cannot follow out the operations of measuring a yacht and calculating her corrected length, are no longer boasting over the fact. It is no longer left to the few larger clubs to know all that is to be learned in the matter of yacht measurement, but the younger and smaller clubs throughout the country are thinking and deciding these questions for themselves. The following excellent report of the Riverside Y. C. is interesting less from the conclusions arrived at, sound and progressive as they are, than from the evidence which it gives of a careful and thorough consideration of the whole subject. The adoption of the Seawanhaka rule is a step that no club need now be afraid to take; and the classification by corrected length is no less certain to follow in a season or two. The recommendations of the committee, if adopted, will place the Riverside Y. C. on a par with the most progressive clubs in the matter of rules. The report reads as follows:

Your committee appointed at the last meeting of the club to ascertain what action had been taken or was likely to be taken by the larger clubs on the questions of measurement, classification and time allowance, and to report what changes they would consider advisable to be made in the present sailing rules of the club, beg to report as follows:

1. **Measurement.**—The rule of measurement known as the Seawanhaka rule, the formula of which is $L.W.L. + \sqrt{S.A.} \div 2$, is now almost universally used by the larger clubs for the purposes of measuring cabin yachts for time allowance. It seems to be the opinion of the majority of the designers that this is the best rule that has yet been formulated, and we can see no objection to, and many advantages to be gained by its adoption by the club, and we therefore recommend that our rules be so amended that our cabin yachts be measured under the Seawanhaka formula.

2. **Classification.**—It is the opinion of your committee that the tendency in the yachting world is towards classification on sailing length instead of l.w.l. length, and we believe this mode of classification to be desirable. Leaving out the question of the advantages to be gained in allowing greater latitude to the designer and the encouragement of the building of moderate vessels, it seems inconsistent for a vessel to have two measurements, one for

classification and the other for time allowance. A yacht can only be correctly measured in one way, and on that measurement should be classed and sailed.

It should be simply a matter of deciding what is the correct rule of measurement. We find that the special committees appointed by the N. Y. Y. C. and Seawanhaka Y. C. some time since reported in favor of classification on sailing length, and that the Corinthian Y. C. of New York, the Larchmont Y. C., the Lake Y. R. A. and many of the other clubs have adopted rules classifying on sailing length, and we strongly recommend that the club adopt a rule classifying our yachts on this basis.

Your committee have specified class limits in the amendments to sailing rules which accompany this report, which we think will be acceptable. We have carefully considered the vested interests in the yachts of our own and other clubs, and think that no existing boat will suffer by being classified under the limits recommended. It may be considered desirable to subdivide the 5 ft. and perhaps the 50 ft. classes as proposed, creating a 55 ft. class, which would take in the present 48 ft. L.W.I. class, and a 56 ft. class to take in some of the yachts of our own fleet on the new system of measurement. We would not, however, recommend the creation of three classes at this time, as they would seem to be an objection to too great a number of classes, or in fact, any more than are absolutely necessary, and these class limits can be created later as special classes if it is thought necessary.

3. Time Allowance.—The table of time allowance in use by the N. Y. Y. C., the S. C. Y. C. and the Atlantic Y. C. is based on 50 per cent. of the estimated speed figured on the square root of length. Some of the other clubs have a greater percentage, and some a less, but it would seem advisable for the sake of uniformity at least to adopt a table on the 50 per cent. basis.

In the accompanying recommended amendments your committee has tried to formulate a set of rules that are as nearly uniform with the leading clubs as is consistent with what we think for this club's best interests. There may be some dissatisfaction temporarily in the past of some, but we are confident that after a few months' trial the new rules will prove satisfactory to all, and we feel assured that the best interests of our yacht owners will be served by their adoption. Respectfully submitted, C. T. Pierce, Fred Beitz, L. A. Lockwood and F. B. Jones.

Classes recommended: Over 90 ft. corrected length, 80 to 90 ft., 70 to 80 ft., 60 to 70 ft., 50 to 60 ft., 40 to 50 ft., 30 to 40 ft., 20 to 30 ft., 10 to 20 ft., under 10 ft.

Any yacht in any class launched before the season of 1891 and which does not exceed the class limit by more than a fraction of a foot shall be included in the class at the discretion of the regatta committee.

LAWLEY'S YARD.

THERE is little in the present yard of the Lawleys, father and son, at South Boston, to suggest the little establishment of a few years ago on the other side of the Point, the change has been as great as that in yachting which called it forth. The past winter has seen still greater advance from forty years in the establishment of a plant for working steel in addition to wood, a very important matter in the present state of yacht construction. The most interesting feature of the steel plant is the heating oven for bending the angle frames and similar pieces, which, with its accompanying bending floor, is located in the center of the large lot nearly mid-way between the street and the beach. In place of the ordinary fuel furnace, this one is arranged to burn oil, which is forced into it at different points in its length and on each side, the oil coming from a large steel iron reservoir some distance away. An intense heat is generated in a very short time, while the fire is entirely under control, being quickly lighted or extinguished. The first work done on the new floor was the frames for the new yachts, *Mineola* and *Beatrix*, *Overwee*, but just now the new frames for *Volunteer* are being bent.

Near the beach, where much of the high gravel bluff has been dug away, are two new buildings, the sawing and planing mill with joiner shop above, built a year since, and a still newer and larger building of two stories, the lower being the punch shed, well fitted up with rolls, several large drills, plate planer, shears and puncher for flat and curved work, and a large lathe, all neatly arranged, and the building is quite close to the water and ship house. In the second story is a large mould loft, on which are now laid down the lines of *Mineola*, *Beatrix*, *Overwee*, *Sayonara*, *Alborak*, *Fancy*, *Helvetia* and *Melissa*. The new *Volunteer* is also on the floor, the fore body being lengthened between 3 and 4 ft., showing a clean full bow, but without the slightest intimation of the fullness in the topsides which was such a feature in *Puritan*.

The lead casting plant has also been arranged to use oil, so that the large cauldron can be quickly heated up without smoke, the great nuisance of the usual wood fire. The cauldron is located on the edge of the hill, so that the melted lead can be run by troughs directly into a mould, saving the labor of carrying the lead down to the bottom of the cauldron, where there are two holes about 1 in. in diameter, each stopped with an iron bar, through which the molten lead is drawn off. The old building shed is still used, though affording very inadequate facilities for rapid work. With the greater part of the bluff leveled off, giving room for a railway and storage yard in winter, and with a larger and better lighted house, the yard will be quite the complete one.

Just now there is a rush and bustle everywhere; in the basin a number of yachts are fitting out, *Wayward*, *Thetis*, *Baboon*, *Gosson*, *Xara*, *Troubadour*, *Alert*, *Gundred*, *Rosalind*, *Clytie* and others. One *Vanderbilt* boat, *Ilderim*, is launched and laid up in the basin, while the 30-footer *Gladys* is still on the beach. One cause of delay in the *Paine* and *Fife* boats was the great difficulty of securing a plank for the fore body, several pieces were procured from various localities proved rotten or otherwise defective when put over the saw, and after trying Maine and Virginia it was after much delay that keels were found in Ohio.

In construction the new racers do not differ much from the usual build of the Burgess forties, except that the sawn frames of the latter, with their accompanying deck beams, have been replaced by angle steel 2½ x 3½ in.; these frames, eleven in number, being spaced 3 ft. 6 in. apart. Between them are the usual steamed oak frames, two in each space, making the spacing 14 in. These steel frames and deck beams, with their floors, gussets and a plate of ¼ in. steel about 2 ft. 6 in. square laid on the deck beams at the partners and backed with an angle ring about the mast, include all the steel in the boat. The wooden portion is somewhat lightened in the deadwood and other bulky parts, but the general disposition of the scantling is much the same as in the 40 ft. fleet.

All the new boats, however, have channels, with two struts to a side, the channels being of steel plate 3 ft. long and 4 ft. wide. Inside the boat, where the chainplates do not come on a frame, a wide but short timberhead is used, running down to the upper bilge clamp, to carry the chainplate bolts. In the *Paine* boat the deck and sides are connected by two braces of ¾ in. round iron on each side, running from the steel deck beams at the partners down to the steel frames. All of the boats are finished with solid bulwarks bolted to the deck.

In looking from the Boston boats to the *Fife* craft, the conclusion is unavoidable that somebody is wrong; either the Burgess and *Paine* boats are entirely right, or the *Fife* boat is grossly wrong in a construction that is both expensive and unnecessary. The difference between the two constructions is most marked about the main chainplates and the runners, the *Fife* boat being provided with a series of steel diagonal straps, 6 on each side, which is missing in the others. The frames are steel and wood in alternation, spaced 18 in.; the steel being 2 x 2 x ¾ in., and the wood 8 in. sided and but 2 in. thick. The *Fife* boat has the steel plates strengthened below the channels, which are about twice as long as in the other boats, by a plate of steel 1½ in. wide and extending over 6 frame spaces, between the frames and planking, the latter being fitted over it. To this plate, through which the chainplate bolts pass, are rivetted no less than 4 steel straps, 2½ x ¾ in., running diagonally across the frames and down to the keel, where they are fastened to the keel by two screw bolts. The planking on each side, one running forward and one aft. At the partners is a plate of ¾ in. steel 3 x 2 ft., to which are rivetted 4 steel straps, 2½ x ¾ in., crossing the deck beams and running from each corner of the plate. The oak shelf is 5 x 5 in., the steel gussets being forged with a lug through which are two lag screws into the shelf. The butts of the planking are between the frames, each having a screw bolt, 2 in. in diameter, which runs through the plank, the plank ends being bolted to the strap with two screw bolts. The plank sheer and bulwarks are of mahogany, teak not being obtainable. In the Burgess boats the plank sheer is of oak, and in the *Paine* boat of white pine. The interior of the *Fife* boat is not unlike the plan published in the *FOREST AND STREAM* of Dec. 9, 1886, by Mr. *Fife*.

The *Overwee* has a very neat housing for the heel of the bowsprit, hardly to be called bits, as there is no place to make fast a line or chain; in fact, it is a problem with these boats as to what they are to ride to. The heel of the bowsprit is covered by a piece of ¾ in. steel plate, 18 in. long, bent into a semi-circular form on top, the sides of the plates being rivetted to angles, which in turn are bolted to the deck. The hole in the heel of the bowsprit, the opposite sides of this tunnel, in which the heel of the bowsprit lies nearly below the deck are two oak braces, 2½ x ¾ in., bolted up on the under side of the beams and running from the first steel frame forward

to a point beneath the bits, where they meet. In the *Fife* boat the deck beams are spaced 24 in., and are milled 3 in. with steel angles on each steel frame. The wood beams are spaced about 3 ft. apart, and between them are oak battens, 1½ x 1½ in., screwed to the deck. All of the boats are planked with yellow pine, the bottom of the *Fife* boat, however, being oak. The spars are made in the yard, spruce sawn in two and hollowed, after which the parts are dowelled together and the joint made with common glue. Nearly all the boats, including the *Paine* craft, will steer with tillers.

MUSTERED OUT.

THE wreck that meets the eye of the visitor to Lawley's yard is about as thorough and complete as can be imagined, and the first impression is that a fire, a cyclone, or some force of nature has been at work, and that it is not the deliberate and premeditated labor of man. What was but a few weeks since a handsome and graceful vessel the most famous yacht that has ever spread canvas, is now hardly less a wreck in reality and appearance than the battered old hookers whose bare bones lie bleaching along Cape Cod. The ground beneath the ways is covered with broken joiner work, good only for kindling wood, and with scraps and fragments of plates, angle bars and rivets, while above this sombre foreground projects the long bare keel and garboards, which rise the fore portion of the centerboard trunk. Above the keel the midship section of the yacht stands out in relief, where the break has been made, while the gaping interior shows broken bulkheads and doors opening nowhere. All of this portion above the sheer strake, including bulwarks, rail and plank sheer, is gone, leaving only the frames and plating and the accompanying rigging. From the upper part of the keel the midship section of the hull, including the overhang. This latter has been shorn of its peculiar upper part, to be replaced, it is to be hoped, by something rather more in keeping with a yacht.

The passing of *Volunteer*, her mustering out, is something without parallel in yachting; it is no unusual thing for a yacht to be materially changed, in hull and in name, nor is it uncommon for one to be sold to the yard, and after the vessel has been altered about the keel, her name at the same time being changed to *Elma*, but the identity of the hull was still retained. In the case of *Volunteer*, however, there can be nothing in common between the old ship and the new one that is soon to rise on her keel, and it seems as though everything possible had been done to separate the two, and to endow the new boat with a distinct identity of her own. Should she prove a success or a failure it must be as the *Phoenix*, or by whatever name she may in the future be known, and not as the famous *Volunteer*, the nearest approach that has yet been seen, or is soon likely to be, to that nebulous creation, a 90 ft. sloop.

PHILADELPHIA Y. C.—The regatta committee announces the following very complete programme for the season of 1891, under date of May 15: May 30, opening day; particulars in future orders; June 6, first championship race, for all classes; second prize in each class if two or more start, \$10; June 15, annual regatta for all classes; June 20, sweepstakes race. The entrance fee in each class will be \$10, and in each class where four or more start the club will add \$5. In each class where four or more start the stakes will be divided 70 per cent. to the first yacht, 20 per cent. to the second, 10 per cent. to the third. Entries, including check to be made to Mr. A. F. Bancroft, before June 19, at 12 M. June 27, ladies' day, race and informal hop at club house, for yachts in cruising trim. In order to be eligible to participate in the regatta, a yacht must follow the following rules: first and second class sloops, three and not over five; third, fourth and fifth classes, two and not over three. Suitable prizes will be awarded to the winners in each class. July 3 to 8, club cruise, particulars to be announced; July 13, championship race, second prize in each class if two or more start, \$10; July 25, sweepstakes race; Aug. 1, ladies' day; annual cruise, date to be determined; Sept. 1, club cruise, particulars to be announced. Special outside race for first and third classes date and particulars to be announced. Special programmes for each race will be issued in due course. The committee will be glad to arrange additional races should prizes be offered. The committee reserves the right to invite visiting yachts to enter any of the races, and with the exception of opening day, annual regatta and club cruises, to change order of races and dates by giving due notice. In order to encourage Corinthian sailing, a special prize will be awarded to the winning yacht in each class, if sailed under the Corinthian rule. This rule applies only to yachts of 40 ft. racing length and under. The attention of owners intending to enter their yachts for the races is particularly called to Sec. 3, Art. V of the racing rules as revised, which requires all yachts to be measured before they can be entered for any race. Addison E. Bancroft (chairman), Francis Green, John A. Lehman, Regatta committee, P. Y. C.

EASTERN Y. C.—The handicaps race of the Eastern Y. C. will be sailed on May 30, the start being made at 10.45 A. M. The handicaps will be fixed by the regatta committee, and will be declared at the clubhouse on the evening of May 29. Entries must be received by Edward Burgess, Sears Building, before 2 P. M. Thursday, May 28, and must specify whether the yacht be in racing or cruising trim. The following prizes are offered: First class sloops \$100, second class sloops \$75, fifth class sloops \$50, sixth class sloops \$50, seventh class sloops \$50. All classes will sail one of the following courses, to be designated by flag to be hoisted on the committee steamer at 10.30. From starting line, leaving spind on Tom Moore's, Tinker's island and outer breaker buoy (off Pig Rocks) on starboard, Graves whistling buoy and Eastern Y. C. buoy on port, to point of the first yacht and 20 per cent. to the second. Where more than four start they will be divided—70 per cent. to the first yacht, 20 per cent. to the second and 10 per cent. to the third. Entries, including check to be made to Mr. A. F. Bancroft, before June 19, at 12 M. June 27, ladies' day, race and informal hop at club house, for yachts in cruising trim. In order to be eligible to participate in the regatta, a yacht must follow the following rules: first and second class sloops, three and not over five; third, fourth and fifth classes, two and not over three. Suitable prizes will be awarded to the winners in each class. July 3 to 8, club cruise, particulars to be announced; July 13, championship race, second prize in each class if two or more start, \$10; July 25, sweepstakes race; Aug. 1, ladies' day; annual cruise, date to be determined; Sept. 1, club cruise, particulars to be announced. Special outside race for first and third classes date and particulars to be announced. Special programmes for each race will be issued in due course. The committee will be glad to arrange additional races should prizes be offered. The committee reserves the right to invite visiting yachts to enter any of the races, and with the exception of opening day, annual regatta and club cruises, to change order of races and dates by giving due notice. In order to encourage Corinthian sailing, a special prize will be awarded to the winning yacht in each class, if sailed under the Corinthian rule. This rule applies only to yachts of 40 ft. racing length and under. The attention of owners intending to enter their yachts for the races is particularly called to Sec. 3, Art. V of the racing rules as revised, which requires all yachts to be measured before they can be entered for any race. Addison E. Bancroft (chairman), Francis Green, John A. Lehman, Regatta committee, P. Y. C.

EASTERN Y. C.—The handicaps race of the Eastern Y. C. will be sailed on May 30, the start being made at 10.45 A. M. The handicaps will be fixed by the regatta committee, and will be declared at the clubhouse on the evening of May 29. Entries must be received by Edward Burgess, Sears Building, before 2 P. M. Thursday, May 28, and must specify whether the yacht be in racing or cruising trim. The following prizes are offered: First class sloops \$100, second class sloops \$75, fifth class sloops \$50, sixth class sloops \$50, seventh class sloops \$50. All classes will sail one of the following courses, to be designated by flag to be hoisted on the committee steamer at 10.30. From starting line, leaving spind on Tom Moore's, Tinker's island and outer breaker buoy (off Pig Rocks) on starboard, Graves whistling buoy and Eastern Y. C. buoy on port, to point of the first yacht and 20 per cent. to the second. Where more than four start they will be divided—70 per cent. to the first yacht, 20 per cent. to the second and 10 per cent. to the third. Entries, including check to be made to Mr. A. F. Bancroft, before June 19, at 12 M. June 27, ladies' day, race and informal hop at club house, for yachts in cruising trim. In order to be eligible to participate in the regatta, a yacht must follow the following rules: first and second class sloops, three and not over five; third, fourth and fifth classes, two and not over three. This rule applies only to yachts of 40 ft. racing length and under. The attention of owners intending to enter their yachts for the races is particularly called to Sec. 3, Art. V of the racing rules as revised, which requires all yachts to be measured before they can be entered for any race. Addison E. Bancroft (chairman), Francis Green, John A. Lehman, Regatta committee, P. Y. C.

XARA, cutter, the Burgess 40, is now in charge of Capt. Mason, formerly mate of *Bedouin* under Capt. Pittuck, who is fitting her out at Lawley's for the trip to Newburgh, where her new owner, Mr. Alfred Kayne, resides. Capt. Pittuck has retired from yacht sailing, being in very comfortable circumstances, and is living at Wivenhoe.

ALBORAK, the *Paine* 40-footer, is now in Lawley's large shed at the yard of *Overwee*, and will follow that craft into the water, being a little less advanced. She is planked and the deck is laid, but little progress has been made inside, and it will be a month before she is ready for sailing.

TONS VS. RATING.—The new term rating has proved a puzzle to many, and we notice one expert who has evidently mastered its meaning, as he habitually speaks of a 60-ton racer, or 10-ton racer. As a unit of yacht measurement, the term rating has no relation to either tons on the one hand or feet on the other; it measures neither size nor length, but establishes a new and arbitrary unit. So far as tons go, there is no possible relation between a yacht's tonnage and her rating, in fact a 10-tonner, such as *Queen Mab* or *Clareisa*, is a 20-rater. The term "sail tons" was at first used in the same way as rating, but when the new length and sail area rule was finally adopted by the Y. R. A. the name rating was employed, and has since come into general use in Great Britain. The form of the word is certainly a very awkward one, but as a definite unit of measurement it is a great improvement over "tons," which meant of itself absolutely nothing, owing to the various modes of measuring tonnage. A yacht's rating is found by multiplying her length on waterline by her total sail area, and dividing the product by 6,000.

IRENE.—This yacht of 40 rating was launched from Messrs. A. and J. Lugli's shipyard, Pointhouse, on May 2, and proceeded immediately to Gloucester Bay to fit out for sea. The yacht will be joined by her owner, Prince Henry of Germany, brother to the Emperor, on the 10th inst., when she will sail for Kiel. The *Irene* has been designed by Mr. G. L. Watson, and is in charge of Capt. Askew, who is the Prince and Princess's departure in designing a Watson type of cutter, with a little extra grip forward, and is a particularly handsome cutter in the water. The deck fittings are substantial and plain. The saloon has a highly embossed flock in the panels overhead, and the planes of French cretonnes round about. The starboard cabin sofa is in blue velvet, backed by carved walnut. The port sofa is supplied by a couple of massive bay chairs, the Prince and Princess, a departure in designing which will no doubt be followed. The ladies' cabin is done up in a pale cretonne, with walnut and yellow pine fittings, in which good taste and a charming simplicity are equally prominent.—*Field*.

MONTGOMERY SAILING CLUB.—Third regatta, May 17. Course, Norristown to Indian Creek. Distance, 5 miles. Wind, very strong northwesterly.

	Length.	Start.	Finish.	Corrected.
Playford, tuckup	15.00	1 40 00	2 47 50	1 07 50
Cocktail, tuckup	15.00	1 40 00	3 05 00	1 25 00
Gracie, skiff	12.00	1 30 00	Capsized.	
Stranger, sharpie	15.00	1 40 00	Withdraw.	

This was one of the worst winds ever encountered by this club on a race day. The tuckup J. S. Laver capsized before the start, and the *Gracie* was driven under the water when the wind died. At the end of one mile the *Stranger* quit, and the *Cocktail* and *Gracie* each turned in a reef. At 1½ miles the *Gracie* capsized.

OSWEGO Y. C.—We have received the year book of the Oswego Y. C., a neat volume containing the list of members, club rules, etc., and also the constitution, sailing rules, etc. of the Lake Y. R. A., of which body the Oswego Y. C. is an important member. The frontispiece to the book is a reproduction of a photo of the Lake fleet leaving Oswego Harbor for the start on the occasion of last year's regatta. The list includes 24 honorary and 170 active members. Maps of the harbor and of the club moorings are also given. The officers are: Com. Allan Allen, Vice-Com. Swits Condé, Capt. J. P. Phelps, Sec'y-Treas. W. E. Lee, Meas. W. P. Judson; Fleet Surgeon, J. W. Eddy. The opening cruise, to Bigodus Bay, will take place on May 29-30.

MINOLA.—Mr. Belmont's new 46 is a handsome white craft with a low freeboard and a big rig, but with rather more life to her sheer aft than her predecessors, and a better looking boat in consequence. She had her trial trip on May 13, with Capt. Harry Beebe at the helm, and was very successful, being down with a good breeze, and carrying her lower sail very well. She will leave for New York this week, making her moorings at Hempstead, and will enter all the races about New York Bay and the Sound.

YACHT RACING ASSOCIATION.—We have received from the publishers, Messrs. Harrison & Sons, London, the new Y. R. A. book for 1891, containing the rules, time allowances, etc. We notice a change in the method of measuring sails with a round case, the length, such as the ordinary lug or a sail extended by battens, as in a canoe. The new provision is that the extra portion must be measured and included in the area.

OWEENE.—Mr. Turner's new cutter now lies in the large shed at Lawley's, her bottom and decks being completed, and she will be ready for launching this week. Her interior, which is finished in white pine, is only partly completed, and there is no prospect of her being ready for the May 30 race of the Eastern Y. C. Captain Chas. Barr and young John are busy about her, and the interior has been painted with red lead from keel to deck. Her spars are nearly ready but it will be several weeks before she can make a trial trip.

DRAGON.—The new racing 20, *Dragon*, Mr. Hill, arrived at Kingstown on May 6, from the Clyde (Fairlie) in a strong S.S.W. breeze. She behaved very well on the passage and proved on the whole a very good boat at sea. The crew are quite satisfied with her behavior and she will, no doubt, be faster in a light breeze than the former *Dragon*, while she is greatly admired by critics. The vessel is daily expected at Southampton.—*Field*.

SAVIN HILL Y. C.—The Savin Hill Y. C. has just made a change in its measurement rule, adopting the old Atlantic Y. C. rule, now obsolete, having been discarded by both the Atlantic and Larchmont clubs in favor of the Seawanhaka rule. The Savin Hill Y. C. will have to take longer steps than this if it would keep abreast of the times.

SAYONARA.—The new Thayer 46 was out last week on Lawley's ways, and after painting she will be ready save for a delay over her blocks, which have been presented by the bending of her sails. Capt. Mr. Watson will probably be her around the Cape, as soon as she is completed, as Mr. Thayer proposes to enter the New York races.

WAIF—PERI.—Mr. Gouverneur Kortright has exchanged his sloop *Waif* for the sloop *Peri*, owned by Mr. F. P. Sands. Mr. Sands has lately purchased the cutter *Uvira*, which reached Newport from Halifax on May 14, after a run of five days from Halifax.

YACHT DESIGNING.—The last number of *Le Yacht* to hand contains the translation of the interesting article on designing, which appeared in *Le Yacht* of April 15, 1891, by Mr. Cary Smith. The article is translated by Mr. Smith's permission.

FANCY.—Mr. C. F. Lyman's new 30-footer, is now in the small shed at Lawley's, her outboard work being nearly completed. She will have a cockpit and an after cabin, and will be very neatly arranged below, though the space is somewhat restricted.

LARCHMONT Y. C.—On May 16 the formal opening of the season took place at the Larchmont club house with the usual ceremonies, Cappa's band being in attendance.

BEATRIX.—This centerboard 46, for Messrs. Byrant & Prince, has been hurried along by Frisbie, at Salem, and will be launched on Monday next, but it is very doubtful whether she will be in any shape by May 30.

GLORIANA.—The Herreshoff 40 is nearly ready, and should be in good shape before the first of the New York races. She is being built by Bullman, of Boston, while Wilson & Silsby have made her sails.

NEW ROCHELLE Y. C.—Com. Abbott and a large number of the members of the New Rochelle Y. C. were on hand on May 16 to open the season in due form.

ILDERIM.—The *Vanderbilt* 46-footer is now afloat in Lawley's basin, but laid up for an indefinite time, her owner being abroad.

CHELSEA Y. C.—This club is building a club house 55x35 at Chelsea, Mass., near the bridge, to be ready next month.

SIREN, steam yacht, has been sold by W. H. Harrison to Rich and Pease, of Brooklyn, N. Y.

ELF, steam yacht, has been sold by Geo. H. Flint to H. W. Bates, of New York.

CONSTELLATION, schr., Mr. E. D. Morgan, is fitting out at Port Jefferson.

SULTANA, steam yacht, T. L. Park, arrived at Malta on May 12.

ANSWERS TO CORRESPONDENTS.

C. M. W.—Either of the arms will answer well; we should choose the 22.

H. D. O., Newark, N. J.—What is the best bait to use for German carp, also the size hook? They are a very wary fish, and only occasionally take the ordinary worm. Ans. Carp are spawning now and should not be taken. The terming has been used with success. Grasshoppers have proved killing for surface fishing. Corn bread, wheat bread or dough mixed with cotton are generally used. Grains of wheat and barley, maggots and larvae of the wasp are favorite German baits. Hooks suitable for black bass will do for carp—size 0 to 4 are used in still-fishing for bass.

Canoeing.

FIXTURES.

- MAY. 16. Janthe, Spring, Woodside. 30-31. Springfield Meet, Calla Shasta.
- JUNE. 6. Hoisting Sail Competition. 20. New York, Sandy Hook Race Brooklyn. 20. Marine & Field, Open, Bath Beach. 6. Yonkers, Annual, Yonkers. 27. Brooklyn, Ann., Bay Ridge. 12. New York, Annual, S. I. 27. Rochester, Spring Regatta, 27. Janthe, Spring, Passaic Riv. 18. Rochester, Spring Regatta, 27. Irondequoit Bay.
- JULY. 9. Rochester, Sailing Trophy, 15-29. Northern Division Meet, Irondequoit Bay. 11-20. W. C. A. Meet, Ballast 23. Rochester, Sailing Trophy, Irondequoit Bay.
- AUGUST. 6-27. A. C. A. Meet, Lake Cham. 27. Rochester, Sailing Trophy, plain. Irondequoit Bay.
- SEPTEMBER. 5. Orange, Ann., Passaic River. 10. Rochester, Fall Regatta. 7. Janthe, Ann., Passaic River. Irondequoit Bay. 7. Janthe, Annual, Woodside.

A. C. A. REGATTA PROGRAMME, 1891.

REGULAR EVENTS.

- No. 1. Paddling and Sailing Combined.—One-half mile alternately, 3 miles.
- No. 2. Paddling.—Half mile straightaway.
- No. 3. Sailing.—Four and a half miles, same rig and ballast as in Race No. 1. (These three races to constitute the record races.)
- No. 4. Trophy Paddling.—One mile straightaway. Exempt from one-man-one-canoe rule.
- No. 5. Unlimited Sailing Race.—No limit to rig or ballast. Time limit, two hours and a half; 6 miles. Starters in the trophy race to be selected from this race. See Rule 5.
- No. 6. Trophy Sailing.—No limit to rig or ballast. Time limit, three and a half hours; 9 miles. Starters to be selected as by Rule 5.
- No. 7. Novice Race.—No limit to rig or ballast; distance, 3 miles; open only to men who have not sailed a canoe prior to Sept. 1, 1890.
- No. 8. Sailing, "The Prowsic Cup."—Four and a half miles; no limit to rig or ballast. Winner of trophy barred.
- No. 9. Sailing, Club Race.—To be sailed on an L course, one leg a mile and the other leg half a mile, to sail twice over the course; distance, 3 miles. First three members of any one club to count; no club can be represented unless it enters at least three men; to be called early in the meet.
- No. 10. Cruising Race.—Open only to "General Purpose Canoes"; distance, 6 miles. Details to be posted. To be held early in the meet.

OTHER EVENTS.

- No. 11. Paddling War Canoe Race.—For crews of not less than ten; half mile straightaway.
- No. 12. Paddling Tandem.—Half mile straightaway.
- No. 13. Paddling Club Four.—Half mile straightaway.
- No. 14. Sailing Upset and Maneuvering.—Open only to "General Purpose Canoes." No special appliances to sails, no limit to ballast, but at signal the crew must recover paddle; second signal, canoe to be tipped over until the foremast touches the water. Canoes to be lighted and cross finish line under sail.
- No. 15. Paddling Upset.—Usual conditions.
- No. 16. Hury Scurry.
- No. 17. Gymnastics.

THE A. C. A. RACING RULES.

RULE I.—A canoe, to compete in any race of the A. C. A., must be sharp at both ends with no counter stern or transom, and cannot be of the "paddle" type, but may be of any other type within the prescribed limits as follows: Maximum length, 36ft., and for that length a maximum beam of 30in., minimum beam, 28in. Beam may be increased 1/4in. for each full inch of length decreased. No canoe shall have a draft of more than 10in., except the unclassified boats, to which class the limits of length and breadth only shall apply.

The keel outside of the garboard shall not exceed 1 1/2in. in depth, including a metal keel band of not over 1/4in. deep. The centerboard must not drop more than 18in. below the garboard, and when hauled up must not project below the keel. Canoes without centerboards may carry keels not over 3in. deep below garboard, and not weighing more than 30lbs. Leeboards may be carried by canoes not having centerboards.

Measurement.—The length shall be taken between perpendiculars at the fore side of stem and the aft side of stern. The beam at the widest part, not including the heading, which shall not exceed 1 1/2in. in depth. If deeper it shall be included in the beam. The word "beam" shall mean the breadth formed by the fair lines of the boat, and the beam at and near the waterline shall bear a reasonable proportion to the beam at the gunwale.

The "general purpose" canoe shall be one which conforms to the above conditions, and, in addition, has a well not less than 16in. wide for a length of 3ft. 6in., with a sleeping space of 6ft., of which at least 5ft. shall be clear. There must be no projecting centerboard when hauled. The sliding seat shall not be longer than the beam of the boat, and no standing sail shall be used. The regatta committee may rule out any canoe which in their opinion does not conform to the spirit of these regulations.

The foregoing rules of measurement shall not be interpreted to disqualify any canoe built prior to Jan. 1, 1890, which conforms to the rules prior to that date.

RULE II.—None but members of the American Canoe Association, unless upon the invitation of the regatta committee, shall be permitted to enter its races, and no canoe shall enter that is not enrolled on the secretary's books, and no member who is in arrears to the Association shall compete in any race or claim any prize while such arrears remain unpaid.

No canoe shall be entered at any one meet by more than one man. The "crew" of each canoe shall consist of one man only, unless the programme of the regatta states the contrary. Members must paddle or sail their own canoes.

A canoe which is not owned or used for racing by any other member present, shall be deemed to be the canoe of the member bringing it to camp. In double canoe races the owner may associate any other member with himself.

RULE III.—All entries must be in writing, on the blanks provided, and must be handed in to the regatta committee within such times as they may direct.

RULE IV.—Every canoe entering, except for an upset race, must have her entry number conspicuously placed on canoe or man when paddling, and on both sides of mainsail while sailing. The clerk of the course will provide each man, when he makes his entry, with three prints of his number on cloth.

RULE V.—Flags shall be given as prizes as follows: A first prize in each race, and a second in each race where more than two finish.

The winners of the paddling trophy, the sailing trophy and the first record men shall be given large practical bunting flags, with the year and race plainly marked thereon, and the five best flags at the disposal of the regatta committee shall be given to the first three record men in any record races. Only such contestants as finish in all three races will receive a credit number according to position, relative to each other in each race. The highest number given in each race being equal to the number of the contestants, the next one less, and so on; the three numbers given added together give the credit amount on the record.

In case of unavoidable accident which prevents a man from finishing in any one race, the regatta committee may, at its discretion, permit such canoe to enter the other two races, and his marks to be counted for the record, but he shall receive zero for the race which he does not finish.

The contestant obtaining the highest aggregation of points becomes the leading honor man for the year.

There shall be a race for the paddling trophy. The total number of contestants shall be unlimited.

There shall be a race for the A. C. A. sailing trophy.

Conditions as follows: Sailing canoe, A. C. A. rules, no limit to rig or ballast, time limit 3 1/2 hours, distance 9 miles. Accredited representatives of foreign clubs, not exceeding five in number, shall be eligible. In case of more than five foreign entries, the

first five received shall be eligible to start. The total number of starters shall not exceed fifteen, and the ten or more vacancies (after deducting the foreign entries) shall be selected by the committee in the special "unlimited race," as follows: The regatta committee shall nominate two, and the balance (after deducting foreign entries) shall be taken from the leading men at the finish in their order.

RULE VI.—The mode of turning stakeboats, and all directions for each race, shall be announced in the programme of the regatta committee, or posted on the bulletin board one hour before the race is called; and any competitor not knowing the course, or mistaking it, or not following these rules, does so at his own risk. Stakeboats and buoys will be left on the port hand when not stated distinctly to the contrary. The committee shall have the power to change the direction of the race at any time before the first signal, and shall indicate the same by the flags, according to Rule 13.

RULE VII.—No pilotage or direction from any boat or from the shore will be allowed, and any one accepting such assistance may be disqualified.

RULE VIII.—A canoe touching a buoy or other canoe, unless wrongfully compelled to do so by another canoe, shall be disqualified. In case of a foul, the non-fouling canoe must go over the buoy or other canoe, but shall not be obliged to stop for repair, in order to claim the race. Every canoe must stand by its own accidents. If a canoe, in consequence of the violation of the rules, shall foul another canoe, or compel another canoe to foul any canoe, buoy or obstruction, or to run aground, she shall be disqualified.

RULE IX.—Should the owner of any canoe, duly entered for a race, consent that he has fair ground of complaint against another, he must give notice of same before leaving his boat on the finish of the race, to the judge, and must present the same in writing to the regatta committee within one hour of the judge's decision, if appealed from said decision.

The sum of one dollar shall be deposited with each appeal, to be forfeited to the Association should the appeal not be sustained. The regatta committee shall, after hearing such evidence as they may deem necessary, decide the appeal, and the decision, if appealed from, shall be final and not subject to a further appeal. No member of either committee shall take part in the decision of any question in which he is interested. In all cases where a protest is lodged on the ground of fouling, evidence of actual contact shall be necessary to substantiate the protest. The regatta committee shall have the right to demand of any canoe which, to their knowledge, has committed a breach of the rules.

PADDLING RULES.

RULE X.—Paddling races shall be started by the starter asking, "Are you ready?" On receiving no answer he shall say "Go." If he considers the start unfair he may recall the boats, and any canoe refusing to start again shall be disqualified.

The combined paddling and sailing race shall be started in the same manner, the word "Go" being immediately followed by a gun.

RULE XI.—A canoe's own water is the straight course from the station assigned it at starting. Any canoe leaving its own water shall do so at its peril; but if the stern of one canoe is a canoe's length ahead of the bow of another, the latter may leave the water of the latter, which then becomes its own water, and it shall only leave it at its peril.

SAILING RULES.

RULE XII.—The paddle shall not be used in sailing races, except for steering when the rudder is dislaid, or for shoving off when aground, atoul of anything, or in extreme danger, as from a passing steamer or from a squall.

RULE XIII.—Five minutes before the start a signal will be given and a blue flag hoisted, and four minutes later a second signal will be given and a red flag hoisted, and one minute later a third signal will be given to start and an A. C. A. flag hoisted and left up.

Any canoe which crosses to the course side of the starting line prior to the third signal, must return above the line and recross it, keeping out of the way of all competing canoes, using the paddle if necessary; but after the third signal the start shall be considered as made, and all canoes on either side of the line shall be deemed to be sailing rules. Canoes may take any position for starting, and, prior to the third signal, may be sailed and worked in any manner (outside aid not allowed). A green flag displayed signifies that buoys are to be left to starboard, a red flag means to port. The regatta committee may vary the manner of starting at their discretion, but all sailing races should be started to windward when practicable.

RULE XIV.—All shiftable ballast, except centerboards, shall be carried within the canoe, and no fixed ballast shall be carried below the keelband. Ballast may be shifted, but no ballast shall be taken in or thrown out during a race.

RULE XV.—A canoe overtaking another shall keep out of the way of the latter, but when rounding any buoy or vessel used as a mark of the race, if two canoes are abreast of each other when the leading canoe is close to and is altering her helm to round the mark, the outside canoe must give the other room to pass clear of the mark, which ever canoe is in danger of fouling. No canoe shall be considered clear of another unless so much ahead as to give free choice to the other on which side she will pass. An overtaking canoe shall not, however, be justified in attempting to establish an overlap, and thus forcing a passage between the leading canoe and the mark after the latter has altered her helm for rounding.

RULE XVI.—Canoes closehauled on the port tack shall give way to those on the starboard tack. In the event of a collision being imminent, owing to the canoe on the port tack not giving way, the canoe on the starboard tack shall tuck and go about, but shall not bear away. The port tack canoe, by compelling a canoe on the starboard tack thus to give way, forfeits all claim to the prize.

RULE XVII.—Canoes going free shall always give way to those closehauled on either tack.

RULE XVIII.—When canoes closehauled are approaching a shore, buoy or other obstruction, and are so close that the leewardmost cannot tack clear of the obstruction to the windward of her, and by standing on would be in danger of fouling the obstruction, the canoe to windward shall, on being requested, go about, and the canoe requesting her to do so shall also tack at once.

RULE XIX.—Should two or more canoes be approaching a shore, buoy or other obstruction with the wind free, and be so close to each other that the weathermost cannot tack clear of the one to the leeward of her, and by standing on would be in danger of running aground or of fouling the obstruction, then the canoe that is to leeward shall, on being requested, at once bear away until sufficient room is allowed for the weathermost canoe to clear the obstruction.

RULE XX.—Should a canoe be passing her, she pleases in order to prevent another from passing her to windward, provided she begins to luff before an overlap has been established. An overlap is established when an overtaking canoe has no longer a free choice on which side she will pass, and continues to exist as long as the leeward canoe by luffing, or the weather canoe by bearing away, is in danger of fouling. A canoe must never bear away out of her course to prevent another from passing her to leeward. It is to be considered that on which the leading canoe, the weather carries her mainboom. The overtaking canoe, if to leeward, must not luff until she has drawn clear ahead of the canoe she has overtaken.

RULE XXI.—A canoe may anchor during a race, provided the anchor is attached or weighed on board the canoe during the remainder of the race.

RULE XXII.—A change in these rules desired by any member of the Association shall be presented by the regatta committee, with their approval or disapproval, to the executive committee for final action, notice of such change having been given in the official organs at least two weeks before the meeting of the executive committee, at which they are to be acted upon.

RULE XXIII.—In case of temporary vacancies in the regatta committee the other members shall appoint substitutes.

BROOKLYN C. C.—On May 9 the Brooklyn C. C. opened its racing season with two races, a sailing race for the club cup and a paddling race for the Rudd trophy, the results being:

	Start.	Finish.
Eclipse.....	3 31 20	3 55 15
Seabright.....	3 32 00	3 56 07
Unqua.....	3 31 40	3 59 43
Guenn.....	3 31 43	3 59 49

The course was 800yds. straightaway.

Paddling:

Unqua.....	Robert J. Wilkin.....	4 55 37
Eclipse.....	F. L. Dunnell.....	4 55 45
Seabright.....	W. W. Wintingham.....	4 56 20

NEW CANOES.—Mr. Geo. L. Douglas has named his new canoe, designed and built by himself, Tempest; while Mr. F. C. Moore will race the Tornado, a new Ruggles canoe.

RACING RULES AND REGATTA PROGRAMME.

WE publish this week the programme of races for the coming meet of the American Canoe Association at Willsborough Point, Lake Champlain, as drawn up by the regatta committee, Messrs. J. Arthur Gage, L. B. Palmer and W. G. MacKendrick; and also the draft of the racing rules, in which are embodied the changes decided on at the meeting of the executive committee held on the 14th inst., and the meeting of the regatta committee held on the 14th inst. This latter has still to receive the final approval of the executive committee, but no changes are likely to be made in it. The most important changes in the racing rules are in Rule I. and Rule XII., the former including a definition of a "General Purpose" canoe, and the latter making it imperative that all proposals for a change of the rules shall come through the regatta committee, and with at least two weeks' notice in the official organs of the Association of the proposed change. Although this is in no way different from the practice hitherto followed, the language is sufficiently definite and emphatic as to be understood by all, and will prevent any hurried or secret changing of the rules without the knowledge of the members at large. The need of some such restriction has been only too well demonstrated by recent experience.

The definition of the "General Purpose" canoe is very good to begin with, and even though as it should prove as useless as some have predicted, it can do no possible harm. The limit of depth suggested last fall by the regatta committee, not over 15in. from the lowest point of sheer to bottom of keel, has been abandoned, and a limit of 10in. extreme draft substituted, a change that is hardly an improvement on the original suggestion. The establishment of a special racing class, as moved by Mr. Butler, for "unclassified boats," with no limits save 18ft. length and 30in. beam, is indicated in Rule I., but not clearly stated, the canoes being mentioned as "unclassified boats," a term already in common use as applied to canoe yaws, sneakboxes, etc. The intention was to offer one race for canoes not exceeding 18x30, but with no limit to draft of hard wood of keel below the rest, draft of water, sails or seats.

The details of the record races and prize flags have been put in better shape than before.

In the programme the most important changes are the lengthening of the courses and the limiting of the record sailing race to the rig used in the combined race, thus shutting out the standing sail from the record. At the same time an unlimited race is added, leaving the record sailing race still open to the standing sail. This new unlimited race has been made 6 miles, the old one being 4 1/2, while the trophy sailing has been increased by another round, making 9 in place of 7 1/2 miles. The novice race also has been made 3 in place of 1 1/2 miles; while the club race has been made 3 miles in place of 2. This lengthening of the courses is hardly apt to be an improvement and will add to the difficulty of getting off the long programme promptly. A race is also set down for war canoes, not less than 10 men in a crew.

NOTHING LIKE LEATHER.

CANOE rigging is of two kinds, a little good and a great deal very bad, and this is also true of the canoes. The canoes are poor sailors; not a few of the cracks are by no means too proud to use a two-legged tack, a bit of rope yarn, a shoe lace, or a lath nail, without regard to appearances so long as the thing holds together for one race. There are some rigs in the racing fleet which are models of careful workmanship, the neatness of splices and whippings, carefully made blocks, and elaborate brasswork, but the class of work is so poor that it is hardly worth spending one's spare evenings for a whole winter in perfecting it. The first few trials afloat are apt to show a dozen things which must be changed, a spar too heavy or too timber, a block in the wrong place, or a line that will not run freely. A change must be made, usually in a hurry, and the work of hours must be quickly cut away, often to be replaced by any sort of a makeshift; and this necessity for constant changes is responsible for much of the slovenly and clumsy rigging that is to be seen on the fleet.

It is to Mr. Paul Butler, the inventor of so many clever fittings for canoes, that canoeists are indebted for a style of rigging that is always neat and shipshape and yet capable of being quickly and easily changed. In his later rigs Mr. Butler has employed leather everywhere, using it in place both of special brass fittings and of lath nails. When used about a canoe, as it was to a certain extent at one time, leather was a very poor makeshift, the boom being joined to the mast by a strap lashed to each in the earlier R. B. Roys, and rough leather cleats being employed for the tiny sheaves. As now used by Mr. Butler, the result is neat and shipshape, and while not so elaborate as lashings it is in every way more serviceable and convenient. The boom fastenings are a plain corner of leather, made with two lugs, through which and the end of the boom is a brass screw, the end of the boom and of all spars are furnished with cartridge shells, or rather the partly drawn blanks from which shells are made. At the head of the mast the two blocks for the halliards are each rivetted to the ends of a piece of stout leather, a screw-eye through the center of the strap into the top of the mast serving to hold it in place and to carry the weight of the halyard. At the foot of the mast, just above the boom, fastenings are made of a piece of about 2in. wide, to which are rivetted the necessary blocks for halliards and other lines, the leather being held to the mast by a lacing similar to that of a shoe. The two blocks for the halyard on the yard are similarly fitted, being rivetted to a strap encircling the yard, and made fast in a new place in the boom. The reef blocks on the boom are fastened in the same way, and the principle may be further extended in practice.

Another very useful device lately invented by Mr. Butler is a common cotter or split pin, of brass, the end of which is threaded for a nut and lock nut, the pin being about 1in. long and 3/16in. diameter. A hole is bored through the ferruled end of the boom or yard, the split pin is sprung open, and passed through the grommet in the sail and then closed and passed through the boom and the nuts screwed up, thus holding the sail to the spar in place of a lashing. It can instantly be cast off or put on, and is always strong and neat. The same pin may be used to carry a block, or for other fastenings. With this arrangement and the leather fittings a spar can be changed in a few minutes, while the loose ends and slipping of the common wire lashings are entirely avoided. Mr. Butler is now fitting up a new rig for his latest canoe, built last fall, a mainsail of 80ft. and a mizen of 60, each with two battens and the sprit, as in the usual Lowell sail.

WIRE ROPE FOR CANOES.—*Editor Forest and Stream:* While making a purchase recently my attention was attracted to some coils of flexible copper rope which I learned was chiefly used as a lash cord where the size of the work demanded extra strength. Recognizing its peculiar fitness for steering gear purposes I purchased a sufficient quantity to give it a trial, the result of which I will briefly state. It is a six strand rope with seven wires to a strand, and the wires are of a fine gauge. I worked eye splices in the ends, and I would say in passing that it is very much easier to splice than ordinary rope as the strands being very much "stay put" and do not straggle about like cotton or manilla. After completing the splices, I worked some thin copper into them for turnbuckles which gave them a very shipshape appearance. Now if one does not use a spritlock gear I would earnestly recommend a trial of copper rope as well as the common wire lashings are entirely avoided, and safety chain which was not to be depended on, because it chafed through so quickly, I can at last say that in copper rope I have found a material that is open to none of the above objections, and for steering gear and boom brides I do not see how it can be bettered. If the above be no novelty to some of your readers there are very many who do not know of it, and it is them I wish to reach.—SQUAWMAN.

NEWBURGH CANOE REGATTA.—New York, May 15.—The Newburgh Canoe and Boating Association will hold their spring regatta on June 27 next. There will be a race for 400 yds. and cutters, open to all yacht clubs; a race for catboats 25ft. sailing length and under owned on the Hudson between Yonkers and Albany; a race for single-handed cruisers, canoe yaws, St. Lawrence Mosquito boats, etc., open to canoe clubs, Corinthian Navy and paddling open sailing open to all canoe clubs. The regatta committee are Messrs. C. L. Waring, Gardner Van der Meer, Robert Johnston, Fred C. Balfe and Charles S. Williams. Entries and communications are requested to be sent to Charles S. Williams, Chairman Regatta Committee, Newburgh, N. Y. Entries to close June 22. Handsome prizes will be given in each class. The 400-footers Ochoata, Moccasin and Clara are now owned by members of this association.—CHAS. S. WILLIAMS, Chairman Regatta Committee.

A. C. A. MEMBERSHIP.—Eastern Division: Morton C. Cobb, Newton, Mass. Central Division: W. A. Gresson, Grand Rapids, Mich.; Victor E. Montague, Traverse City, Mich.; Edward Van Duyn, Syracuse, N. Y.

KNICKERBOCKER Y. C.—The season was formally opened for the last time at the old grounds at Port Morris on May 16. The club will soon move over to College Point.

NOTICE TRAP-SHOOTERS!

THE SECOND ANNUAL TOURNAMENT

OF THE

Saratoga Gun Club,

OF SARATOGA SPRINGS, N. Y.,

Assisted by the Inter-State Manufacturers' and Dealers' Associa'n,
WILL BE HELD

JUNE 2d, 3d, 4th and 5th, 1891.

\$3,000 IN CASH GUARANTEED.

This tournament will be the largest of the season, and over \$3,000 will be offered in guaranteed purses and for highest averages. The location of Saratoga and the facilities and accommodations to be had there are well known to sportsmen throughout the country. Nothing will be left undone to make this shoot the grandest ever given in America. The grounds will be open for practice matches on Monday, June 1st, and shooters are invited to come prepared for a week's shoot. For programmes and further particulars address

SARATOGA GUN CLUB, Saratoga Springs, N. Y.

The Expert's High Grade Trap Cartridge

Owing to the demand for a thoroughly reliable and strictly first class "Trap Cartridge," we have decided to put on the market a cartridge to be known as "The Expert's High Grade Trap Cartridge. These cartridges are loaded with The Chamberlin Cartridge Co.'s "High Grade Trap Powder," which is made "exclusively and expressly" for these cartridges, and which we know to be the best black powder for trap shooting made. In loading these cartridges the New Conical Base Climax Shells are used entirely. The specifications and lists of these cartridges are as follows:

Load No. 30. 10-gauge Climax Shells, 3 1/4 drs. High Grade Trap Powder, 1 1/4 oz. No. 8 shot. List \$30.00 per M.

Wadded two 9 and one 10-gauge Black Edge Wads on powder and card on shot.

Load No. 32. 12-Gauge Climax Shells, 3 drs. High Grade Trap Powder, 1 1/4 oz. No. 8 shot. List \$27.50 per M.

Wadded two 11 and one 12-gauge Black Edge Wads on powder and card on shot.

Chilled shot \$1.00 per M. net extra.

We solicit a trial of these cartridges and know that they will not fail to give the very best of satisfaction. We are also prepared to load these or any of our regular trap or nitro-powder cartridges in the new U. M. C. Co.'s "Trap" shell for which an extra charge of \$10.00 per M. net will be made.

Send stamp for our list and discount.

FISHERMAN'S AUTOMATIC REEL.

When a sportsman finds anything which adds to his pleasure, without increasing his labor, he wants all his brother hunters and anglers to know of it and share with him the newly discovered "helper."

WHAT WE CLAIM FOR The Automatic Reel.

FIRST—It will wind up the line a hundred times as fast as any other reel in the world.
SECOND—It will wind up the line slowly if the angler chooses.
THIRD—No fish can ever get slack line with it.
FOURTH—It will save more fish than any other reel.
FIFTH—It will prevent tips, lines and snells from being broken by large fish.
SIXTH—It enables the angler, and makes it desirable, to use lighter tackle.
These claims have been substantiated by the most skillful fishermen in America and Europe.

This reel is manipulated entirely by the hand that holds the rod.

AUSTIN & GRAVES,
No. 116 Commercial street, Boston, Mass.

GOODWIN'S Royal Meat Biscuit

This bread is the result of repeated and careful
experiments for my own kennel, but its superior
qualities attracted so much attention that I have
been persuaded to manufacture for sale. The
advantages claimed for it are:

1. The large proportion of finely ground meat
it contains.
2. That only perfectly fresh beef and sound
flour and meal are used.
3. No foreign substance is used to imitate meat.
- Finally, it is a nutritious and perfectly whole-
some and safe food for dogs of any age or condi-
tion of health. The voluntary endorsements and
large orders from prominent breeders are its
highest recommendations. We are now ready
to supply bench shows, kennel clubs and dog
owners in quantities to suit.

FATHERS AND SONS.
WITHIN a few weeks past an unusual number of deaths have been reported from accidents to persons engaged in outdoor recreation. Several cases have occurred of young men being shot by companions, who took them for wild animals, while deaths by drowning while out sailing have furnished texts more than once for newspaper sermons. It is well understood that accidents such as these do not commonly happen to persons of intelligence and experience; but, on the other hand, no one can begin his career as a sportsman knowing all, or indeed any considerable part of, what he ought to know. It is by hard knocks and by himself seeing things done, and done well, that the heedless, ignorant boy becomes the intelligent and competent sportsman. The lesson which such accidents as these teach is not that the use of guns and boats should be abandoned, but that the young should learn how to use them under competent instruction.
The boy is an imitative animal and looks with respect upon his elders, who are familiar with matters about which he knows little or nothing. If he goes into the field with a thorough sportsman, the boy will unconsciously imitate him and will act as he acts. He will soon by intuition take care not to point his gun at dogs or men, not to shoot toward his companion in thick cover, not to fire at a bird that belongs to another. His manners and habits in the field will be formed on those of the elder friend, whose skill he admires and whose knowledge he respects.
On the other hand, if he goes out alone or with some one whose only thought is to get all the birds possible; who is careless with his weapon; is willing to risk his companion's eyes, or perhaps his life, by shooting toward him; who races toward the fallen bird in order to get to it before his ill-trained dog has eaten it up, or at least reduced it to a mass of pulp, the boy may very likely become a careless, noisy field rowdy.
What is true of the gun is also true of the boat and the

canoe. No power on earth can keep the boy from loving and indulging in outdoor recreation. He will sail and paddle if his surroundings admit of this form of sport, and to make it safe for him, see to it that his first excursions are taken under the charge of some older friend or relative, who is competent and careful.
Good habits, in sport as in other things, are easily instilled into the youthful mind, and once adopted are not easily forgotten or abandoned. The boy will shoot, will sail, will ride. It is the duty of parents to see that he is so taught to do these things that he shall do them well. His pleasure will be vastly increased, and the uneasiness and anxiety so often felt by the anxious parent will be no longer experienced.

THE FUR SEALS.
PERSONS who are interested in the preservation of the fur seals from extinction seem to feel very little hope that anything will be done by the Government in time to be of benefit this year. The season for killing is about to open, a large number of Canadian vessels—forty-nine—have left British Columbia ports to engage in pelagic sealing, and still the Government officials are silent and no reply is given to England's proposition to make a close time until a more definite knowledge shall be had of the conditions which prevail on the seal islands.
The excuse is given, by those who wish to get the skins, that before a close season can be ordered a report must be had from the agents recently appointed to look after the interests of the Government. This is a flimsy pretext and means nothing. These newly appointed agents know nothing about the fur seal, nor can they acquire any knowledge of the animal or its habits until they have devoted a season or two to studying it. If the killing is allowed to continue while they are carrying on this course of study, their observations will have a certain historical interest, but will not affect the preservation of this interesting and useful mammal, for by the time their reports have been printed the work of extermination will be practically complete.
As things stand at this writing, the North American Commercial Company has the right to slaughter 60,000 young male seals on the Pribylov Islands; in other words, to destroy the whole stock of male seals on which the crop for ten years to come depends. It is difficult to understand how intelligent men can contemplate such action as this. It might be supposed that even the Commercial Company would realize that this action will destroy their future business, will wipe out any profits in the years to come. This is on the hypothesis that the management of this company have taken the lease of the seal islands as a matter of legitimate business. Of course, if it is a mere piece of stock jobbing, if these managers are nothing more than "promoters," if they wish to declare a large dividend one year, hoping on the strength of that dividend to peddle out their stock in the company at a great price to a gullible public, then their action is natural enough. But, if this is the case, it seems a thousand pities that the United States Government should lend its aid to any such scheme.

JACK-HUNTING DEER.
COLUMNS and columns of discussion have been printed for and against the practice of hunting deer in the Adirondacks by floating for them at night with a jack-light. Opponents of this mode of hunting have repeatedly urged the Legislature to forbid it; but the existing law permits jacking.
The Adirondack League Club is an association which has control of a large territory in the Jock's Lake district, and in addition to the State game laws there are rules of the club regulating the taking of game and fish by its members. These forbid the taking by any member of more than fifteen pounds of speckled trout or ten in number of lake trout in one day, and the same limitation is put on fish carried from the preserve. Another rule reads: "Jacking or floating for deer is absolutely prohibited." This regulation was adopted, we are told, because the members were convinced that jack-hunting resulted in the wounding and maiming of more deer than were killed, and in the lingering deaths of more deer than were "reduced to possession."
The adoption of such a rule by the Adirondack League Association is significant and worthy of note, because the attitude of the State toward its game at large should be in no respect different from that of such a private organization toward the game in its preserves.

SNAP SHOTS.
DR. JAMES A. HENSHALL, who has in charge the preparation of the angling exhibit of the World's Fair, has been visiting some of the tackle makers, and reports a growing interest in the subject. With the co-operation of dealers and anglers, it is hoped that the Chicago display will far surpass anything ever done in this line. The scheme is comprehensive and is gradually being elaborated in detail. The exhibition will include all forms of tackle and angling appliances, and an extensive aquarium of living specimens. This will be under the charge of Mr. Wm. P. Seal, of the Fish Commission, and well known to our readers as the author of valuable studies of water life. The exhibition will adjoin the Government exhibit, and will be contained in a building of spacious dimensions. Dr. Henshall will gladly receive suggestions from all who are interested. We hope to give a detailed plan of the exhibit in an early issue.

The Cranberry Lake waters of the Adirondacks have yielded another large trout. Mr. Frank Paddock, of Watertown, scored a fish in the inlet the other day weighing 4½ lbs. It was here that Mr. A. Ames Howlett, of Syracuse, in July of 1888, captured the trout of 5 lbs. 14 oz. whose birch-bark outline still adorns the office of the FOREST AND STREAM. The fish was mounted and is now in the museum of Syracuse University. Mr. Howlett's fish was only second to an Adirondack trout taken by Mr. Walter Aiken, of Franklin Falls, N. H.; who in 1884 caught a trout of 6 lbs. 2 oz. This was at Spring Pond, near the Second Pond of the Chain of Ponds. The best of this incident was that the big fish was one of a number which when smaller had been transferred by Mr. Aiken from other waters and planted here to grow big enough to make a record on.

We have received for the Helen Keller Fund, since last Thursday, the following:

Dr. J. Frank Perry, Boston.....	\$5.00
"Big Reel," Morristown, N. J.....	2.00
A Friend (through Mr. W. Wade).....	1.00
	\$8.00
Amount sent to Helen Keller.....	118.25
Total to date.....	\$126.25

The Winans Revolver Trophy is now on exhibition in the window of Messrs. Hartley & Graham, No. 315 Broadway, where it is exciting much admiration. The handsome base, received by us subsequently to Mr. Lacy's drawing published last week, adds decidedly to the effect of the piece. The trophy is an artistic bit of realism, whose truthfulness is at once recognized.

John Morton, who died in this city last week, was in his old age fond of telling how he used to stand in the doorway of his house on Canal street and shoot quail on the opposite side of the canal. The spot is within a Bob White's whistle of the FOREST AND STREAM office.

HEARD IN BOSTON: "Hello! Been fishing?" "No. Had the gripe; in the house two weeks; lost twenty pounds, and my spring fishing." "Well, my young friend, you'll get back your twenty pounds all right, but not your spring fishing."

Flash-light photography enables the angler, returning home late at night, to photograph his fish before they have shrunk. We have seen some excellent examples of such work. It leaves no allowance for shrinkage over night.

The New York Times announces in display headlines "Fish puzzle the anglers. They are full of unaccountable freaks this year." Did the fish man of the Times ever know a year when fish were not full of freaks?

Salmon are reported in good supply in the Penobscot at Bangor. Hudson salmon are occasionally taken in nets. Two were captured at Hudson last week, and released. The largest was estimated at 18 lbs.

A St. Augustine correspondent writes that Florida promises to have an efficient game law if the bill now under consideration shall pass in its present shape.

An Idaho law prohibits the killing of moose for six years,

The Sportsman Tourist.

ON THE NORTH SHORE.—V.

(Continued from Page 352.)

THE dawn opened without rain, though the sky disclosed ugly wings of vapor, with patches and fragments of leaden clouds, with here and there a streak of light against the blue of the sky. It was not satisfying, yet so eager were we to cast a fly that we ordered the boat and went down the bay, where we succeeded in catching two trout of about 2lbs. each. After this we started to cross the bay once more, to fish some choice grounds where great wedges of granite were heaped in pell-mell confusion in the water, and where the *fontinalis* are known to lurk and grow golden.

We had not sailed more than half-way across before we struck a gale of wind, which soon set the lake shaking its snowy plumes. We were necessarily compelled to return to camp, with the prospect of passing the remainder of the day in enforced idleness. Our boatmen were instructed to overhaul the provisions and ascertain their condition. Everything was found all right, with the exception of a few onions that were in a high state of demoralization. They then busied themselves in repairing "the dock," which a sudden rise in the lake had tumbled over. This time they made it quite secure, Joe declaring that it would now stand a very heavy sea. After the dock work was accomplished dinner was prepared, to which we sat down with a wolfish appetite, and though

"No sideboards then with gilded plate were dress'd,
No sweating slaves with massive dishes press'd,"

we had a *cuisine* from our *chef* that tickled our palates as daintily as if it had been prepared by old Lucullus himself.

To add to the variety of the weather for the day a heavy fog came up, creating a decidedly chilly condition of the atmosphere, which made us all cluster around the camp-fire for comfort. Toward evening we had some visitors in camp, they being a party of half-breeds living on the east side of Bachewananing Bay. They had started for Point aux Pins for the purpose of gathering huckleberries, but the "northwester" and the fog which drove us in also compelled them to put in near our camp. Joe gave them some mildewed rye bread, the discarded onions and quite a number of our slightly-salted trout. They were a very intelligent looking set, and one of them had a physiognomy akin to that of the lamented humorist Artemus Ward. Joe said he was a Baptist, and the only one in the party, the others all being devout Catholics, the faith-germs of the teaching of Father Marquette.

After quite a chat with our boys, with whom they were well acquainted, they left, kindly thanking us for the damaged provisions.

In looking around the camp after their departure I found a tiny spear, its points being made of two pins. It is used for the especial purpose of spearing cœduces, which the Indians use as a bait for trout, and a taking bait it proves. It is a small fish about an inch and a half long, closely resembling a tadpole, and in color as black as ink.

At sunset the fog disappeared; the wind fell, the west flushed with red; a few stars trembled in the airy dimness of the evening blue; in the south was the young moon, with just enough radiance to touch the lake in silver and throw a gleam over the ragged rocks and on the foliaged forest. It was favorable for the birth of a glorious day, and to our great delight the morning opened with a bright sun and gentle breeze. Snowy clouds, lovely with prismatic glitterings on their puffed-up edges, sailed from the sun, while the joyous sweep of the wind dimpled the lake with an emerald green.

When the boatmen arose to prepare the breakfast they discovered a rabbit in camp, leisurely taking a survey of the surroundings with an eye doubtless to a meal. A swift-flying rock from one of their hands grazed poor bunny and sent him jumping with alacrity into the bushes.

Our half-breed neighbors had not been idle as to securing game for their immediate use. They had placed some snares for rabbits, set a gill-net in the bay and went hunting in the forest, the results being four rabbits, six partridges and about fifty fish of various kinds; enough to last them a week if properly cared for. No wonder the Indian loves the wild life of forest and lake, when his wants are so easily provided for during the open seasons. It is as if his larder were at his very threshold. It is only in the dead of winter, when the ice-king has everthing in his rigid embrace, that he finds he must skirmish around with much more activity in order to keep the wolf from his door.

Immediately after breakfast we crossed over the bay to the big rocks, and here we whipped the waters in vain, for not a trout rippled the waters, owing to the sun being too bright and the surface of the lake too placid. Not at all discouraged we concluded to continue the trip to the Chippewa River, some eight miles distant, as much for a prospective trip as aught else, knowing full well that with the present condition of the weather he of the "painted fin and golden gleam" could not be persuaded to any investigation on the surface. The boatmen did not relish the long trip before them, which had then to be made by oar. Joe stated by way of a demurrer that if we went we would have to remain all night, unless a favorable breeze sprang up. He mumbled some Indian dialect to his helper, not all complimentary, I thought, to us, and then bent sullenly to the oars. We reached the mouth of the river about noon, and after partaking of lunch, which included tea, took the boat and ascended the stream for about a mile, the fallen timber that frequently spanned the river preventing us from going further. There being no trout that desired our acquaintance we returned to the mouth, where one little baby trout, under the legal limit, who had more curiosity than indifference, was quickly snatched from the quiet waters and about as quickly returned that he might grow to truthood.

As we had a twelve-mile stretch to make to camp and but little breeze we concluded to start at once. The sails being spread to the light wind we slowly crept by a coast displaying high ranges of wooded hills, which clustered with charming picturesque irregularity. The boat rippled along with apparent indications of breathlessness in the air, while fantastic dream-like lights and shadows played in the little wrinking waves. Soon there was a dead

calm, a growl from the half-breeds, and then a lowering of the canvas and the musical splash of the oars.

The boatmen perspired freely at their work, and doubtless blessed us in other than language polite, as two old cranks who stood sadly in need of guardians. It's the hard work that robs the swarthy savage of his gentle (?) demeanor, and the idleness that indifferently satisfies. He is only good, Ned avers, when his toes are turned up to the daisies.

Reaching the big rocks where we first stopped we landed for a little rest in the grateful shade, and to gather some of the delicious raspberries so abundant here. After a half hour's halt we embarked, and in about the same time reached camp, with the long shadows stretching o'er the shimmering lake, and a sun disappearing in burning crimson. Our half-breeds, when they awoke next morning, went into the forest to look at some rabbit snares they had set the evening previous. They were greatly rejoiced to find one poor victim dangling from a limb, and exhibited it to us on their return with some degree of pride. Becoming restless, for want of a change, we concluded to break camp immediately after breakfast and go to Pancake Bay, where we expected some royal sport with the dotted beauties of the dimpled pool. We were off by 7 o'clock, and had a very pleasant sail of about two hours, but under skies that momentarily threatened rain. We landed about a mile down the bay, and on looking around for good camping quarters, were somewhat disappointed in not finding them in that locality. Joe was then sent along the shore to see if he could find a good site, and after going at least a mile further, returned with the information that he had found a place that he thought might answer. We all got in the boat and went down to the chosen spot, and on looking it over, were not exactly satisfied with it; but in view of immediate rain, accepted it as a *demier ressort*, and with alacrity soon had our tents in position and the provisions under cover. We were none too quick with our work, for as the last box was carefully stowed away, "down rushed the rain impetuously." This persistency of the deluging elements was evidently realizing to the letter that impressive line, in the song of "The Twelfth Night"—"For the rain it raineth every day."

A close inspection of our quarters satisfied us that we would have been just as well off in an African jungle, for every side was strewn thickly with half-formed humus of rotten twigs, leaves, branches and roots, from which arose clouds of malarial vapor that all the balsam we could pile in our tent would not wholly eradicate. In addition to this, the water was trickling out of the soil in innumerable places, and even through the interstices of the rocks, ten feet above the surface of the lake, it ran in streams. This was something unlooked for on the shores of this great lake, though we got into a similar place on our trip last summer. Pancake Bay had now no charms for us, even though its waters were teeming with trout.

Joe had a disagreeable time in preparing dinner during the heavy shower, but he was always so eager for good, square meals, that we never on such occasions suggested a cold collation. He however succeeded, despite the rain, preparing and placing before us in our tent a first-class dinner, which we heartily enjoyed. About 3 o'clock the clouds began to lighten and then the downpour ceased, and soon we were en route for a trophy. The trout did not rise greedily at the flies, and the result was that we missed quite a number of the responses. At one time two broke simultaneously for my flies, and both were missed; and similar disaster befel Ned, who declared they were only playing battledore and shuttlecock with their tails. Joe looked on in wonder, fairly itching for a chance to throw a fly, and as Ned was alongside, he handed him his rod to see if he could not make a base hit on the jumping trout. He did no better than Ned, much to his disgust. The trout would frequently leap entirely out of the water when making a dash at the flies, and again rise an inch or two away from them. They were assuredly having a picnic at our expense, and the question arose as to whether there was a skillful angler in the boat. Finally I hooked one of those playful *piscies* who had become too rash and unguarded in his gymnastics, and then Joe followed suit with another, neither of which weighed over a pound. At this stage of the proceedings Ned took his rod in hand, and after one or two misses, secured one of the tumbling trout that practiced at vaulting and leaping. Our theory in regard to the singular antics of the sportive trout was, that they were not feeding, but simply skylarking. Joe was of the same opinion, as he stated that he had seen them frolicking in the same manner, and that it was almost impossible to catch one.

A return to camp was now suggested, and being provoked beyond endurance on account of our bad luck, we all acquiesced in the homeward movement.

Though we were disgusted with the dense and shadowless woodland of this particular place, we were deeply enthused with the bay. It is a lovely sheet of water six miles in width, and under the now prevailing rays of a bright sun, disclosed a highly picturesque shore, fringed with balsam, spruce, pine and sugar. As far as the eye reaches you realize those delicious "bits" such as artists love for study, or poets for themes; of jutting rock, gravely beach, curling nook, jagged cliff, with here and there an islet in its coat of gray and purple. The fascination, however, is simply along the ragged coast. Our progress was leisurely made, for after such a dismal dripping of rain as we had had that day, we loved to linger and bathe in the warm rays that were flooding everything with golden radiance:

"I heed not, if
My rippling skiff
Floats swift or slow from cliff to cliff;
With dreamful eyes
My spirit lies
Under the walls of Paradise."

Ned complained on awakening the next morning, which was quite stormy, of having been flayed alive by the sand fleas. "See," said he, showing me the afflicted parts, "it is bloody raw." He resorted to a bathing of the inflamed parts with Pond's Extract, which somewhat relieved him. He was about as disgusted as myself with the camp, and we therefore concluded to leave the place in the morning, weather permitting. My suffering, aside from a few bites, was a severe headache, which I attributed solely to the malarial vapor I had inhaled during the night.

Immediately after breakfast Ned brought out his small canvas bags which were labeled "wax and thread," fly books, "fish hooks and feathers," "tools," "compass," etc.,

and ran over them as if their contents were pearls beyond price. His reverence for tackle was so unbounded that it was a sort of monomania with him. It was his first thought in the morning and the last in the evening. I became so familiar with the contents of those little bags, from their frequent introduction, as he. His rods also received great attention. If a thread looked worn or fragile a new wrapping was at once made; or if he thought there was a weak spot in any part of the rod it would receive immediate attention. Although he ran to extremes in this, as well as in his flies, he was a very skillful angler, and could give many an important point on the subject to professionals who ranked high in the gentle art. One of this class remarked to me one day after Ned had had quite a talk with him at the "Soo" on trouting, "Why, the old gentleman is well posted." Truly Ned is well posted, and it would make a cat laugh, if such a thing were possible, to hear him tell how he discounted some of the gilt-edge craft at "Sailors' Encampment," when bass-fishing there last fall. They failed to get on to his *modus operandi* in securing the bronze-backers to little or no extent, while anchored near him, and so crestfallen were they at their want of success that they up anchor and pulled away, leaving him to his delight and his triumph.

I am digressing, as my theme is trout, not black bass, and will therefore return to the question. Time hanging heavy on our hands that afternoon, after having been compelled to remain in camp owing to the unpropitious weather, we concluded as the wind had abated considerably to take the boat and go down to the point about two miles away, and endeavor to secure a few trout. As we started the sky gave little promise of good weather, for cloud after cloud of a dark slate color raced o'er the arched dome, while the swell from the morning's blow washed with moaning violence o'er beach and against cliff. We had become accustomed to ugly weather, for such a sight as a violet sky and zephyr ripples flashing in silver were a rarity indeed. Ned predicted a storm soon, in which the prophetic Joe acquiesced, from the fact that his rheumatic bones were acutely aching. The weather, however, was splendid for trouting, as was evinced by Ned securing a "spotted beauty" on his second cast. I was not long behind him, for as my flies fell by a rock o'er which the waters were rippling, a trout with a savage leap sprang for the feathery lure and was securely hooked. He went racing around in his element, making dash after dash and leap after leap, in vain attempt to escape from the cruel hook, but he fell a victim to the superior sagacity of his foe above, and was laid in state alongside Ned's peerless beauty. A huge boulder a short distance ahead, which looked as if it was the home of some trout, was our next point of attack, and here Ned fooled a dappled warrior of rosy orange that gave him infinite pleasure in battle. He was a good three-pounder and a perfect model in symmetry; I whipped all around the glassy rock, but in vain, as no other trout, if there, had any idea of being deceived by feather gay or tinsel bright.

Along we glide till we strike a cluster of shattered rocks that looked as if it might harbor some of the spotted dandies. Ned was the first, being in the bow, to send his flies in an inviting place, and no sooner had they struck the water than an investigating trout took one of them; but alas, toying with it a moment too long felt the fatal prick of the tempered steel as it went into his toughened jaw, and then, after frenzied efforts to escape, finally yielded to the artful skill of the unrelenting angler. He was a trifle smaller than the last. I was fortunate enough to here beguile another of about 2lbs., and this was the last the waters around the debris of rocks produced. Once more on the move and we are soon at the point, having fished earnestly as we went along and without the reward of a single rise. We, however, capture three more here, all being under 3lbs. Having now a sufficiency we return to camp, highly elated with the raid on the scaly denizens.

Ned related that evening that the beach in our immediate front was where Cameron, the veteran of the Nepigon, and a party of three others, en route to the "Soo" in a Mackinac sailboat, made a landing in a terrific gale that came near swamping the boat. They fortunately rode in on a big "comber," that sent them high up on the beach, though the men all jumped overboard at a given signal and gave timely aid in shoving her, in order to keep the sea from breaking over their provisions. Here they remained three days, waiting for the wind to lull, and finally were compelled to leave in a very heavy sea that was washing the shore with frightful violence. Cameron, who was the dare-devil that insisted on leaving in the teeth of the gale, narrates the story of the adventure in a highly descriptive and eloquent manner.

ALEX. STARBUCK.

[I seldom write to correct an error, knowing full well that the intelligent reader will at once "catch on" to the misprint in all ordinary mistakes. There was one, however, in your issue of May 15 which somewhat confused matters and which I would like to have you correct. It is thus: You make me say that all the trout we caught hung themselves. It should read, that all the trout *he* (Joe) caught hung themselves. Quite a difference.—A. S.]

NEVER.

MR. CHARLES A. SHRINER, fish and game warden of Passaic county, N. J., gives the following prohibitions, which, while not the subject of legal enactment, are recognized as binding laws of behavior by all reputable lovers of the pursuit of game and fish.

Never violate the letter or spirit of the game laws.
Never take more fish or game than you have convenient use for.
Never be insolent or impolite to a land owner who orders you off his premises.
Never fail to destroy a net or trap when you find one set.
Never shoot at a game bird except on the wing.
Never kill the last quail in a covey; leave some to breed next year.
Never forget that game laws are intended to improve and increase sport, and not to prevent or restrict it.

A Dakota farmer sold his son-in-law one half of a cow and then refused to divide the milk, claiming that he had sold the front half of the beast. He also required his son-in-law to provide all the feed the cow consumed and compelled him to carry all the water to her three times a day. Recently the cow hooked the old man and he is now suing the son-in-law for damages.—*Springfield Republican*.

A BOOK ABOUT INDIANS.—THE FOREST AND STREAM will mail free on application a descriptive circular of Mr. Grinnell's book, "Pawnee Hero Stories and Folk-tales," giving a table of contents and specimen illustrations from the volume.—*Adm.*

Natural History.

THE PORCUPINE.

Editor Forest and Stream:

Will our friend "Lotor," who writes in your issue of May 14, explain what he says in regard to the much persecuted porcupine? He speaks of it as the "quiet, inoffensive little creature that curls itself into a ball at the first approach of an enemy." I have seen thousands of them in our pine woods—not so very little, but inoffensive, unless you object to their appetite for pack straps, shoes and salt pork. But whoever saw one curl itself into a ball when molested.

If you bother a porcupine he will make a few awkward attempts at a gallop toward the nearest tree, raising the quill on his back somewhat as a dog "bristles his crest" when excited. After reaching his tree he will make short work of putting himself out of reach of all weapons of shorter range than firearms.

The tradition about his rolling himself into a ball, although not so bad as the quill shooting story, is, I think, entirely wrong when attributed to the American porcupine. I think this belief comes from the books, where the habits of the English hedgehog are described. This I understand to be a much smaller animal than ours, feeding on insects and perhaps fruit.

Our porcupine has for a steady diet the bark of trees, usually maple, but around old logging camps he finds such delicacies as old boot packs, pork barrels and cook house slush; in fact, anything containing salt or fat in any form. He is an adroit thief, and if you give him a chance will steal a pack strap or a shoe from under the walls of your tent while you are dreaming on your bed of balsam or hemlock boughs.

In conclusion let me say that I have never seen a fair picture of our "porky-hog" as he is often called. I suppose that in making up the wood cuts for an encyclopedia or dictionary it is cheaper to copy some European picture than to make one that we will recognize as belonging to the animal which the book purports to describe.

BACKWOODSMAN.

HINT TO COLLECTORS.

THE experienced collector, who is passing through a region of whose birds and beasts little is known, never neglects to examine the stomachs of hawks and owls in the hope of finding in them shrews, mice or squirrels which may be new species or may have been previously unknown as occurring in this particular locality. And what is true of mammals is also true of insects. Birds devour myriads of these creatures, and those which have hard horny coverings are not at once digested. As to the truth of a story on this point which is printed in a Cincinnati paper, we express no opinion, but it is certain that it might have been true. It is as follows:

"A well-known local entomologist shot a male kingbird in this vicinity a few days ago, and on picking it up was surprised to find a strange-looking beetle crawling out of its mouth. This gave the gentleman an idea, and on skinning the bird, preparatory to mounting, he took particular pains not to injure the gizzard. On opening this he found exactly what he thought he would—a mate for the beetle. The fact that I found one beetle heretofore supposed to be a stranger to this locality led me to think that perhaps the bird had caught both the male and female, and I was right. This curious incident shows how little is known even of the fauna of our own neighborhood. Here I have been studying beetles for twenty years past, and have handled in that time more than 2,000 species, yet in this strange manner, at a time when I least expected it, a new species falls directly into my hands. This also shows the variety of food eaten by the kingbird, one of whose favorite morsels is the common honey-bee. These it devours to such an extent that it has become a nuisance to bee-keepers, who know it as the bee-bird or eagle-fighter."

A TAME PRAIRIE WOLF.—*Editor Forest and Stream:* Last autumn, at the hay camp of Henry Powell, on the St. Mary's River, in northwestern Montana, I saw a young, but nearly full-grown, female coyote (*Canis latrans*), which was perfectly tame and played about the camp with the dogs. It would come when called, lick the hand that caressed it, and when pleased would wag its tail like a dog. At the same time it was a little timid, would not go to a stranger and would nip at any one that took hold of it except the children. Of them it had no fear. Five of these pups were dug out of a hole about 8ft. deep the last of May, 1890. They were then very small, about 3 or 4 in. long and could barely waddle or crawl. At this time they were too young to drink. They had no long hair on the tail, had short ears and blunt, snub noses. They were covered with a coat of short mouse blue hair. For several days they were fed by Mr. Powell's son Charley, who would milk the cows into their mouths. Afterward they were put with a bitch that had pups and she permitted them to suckle. Some of these puppies were destroyed because they killed the hens, but this one had no bad habits. She often wandered off a long way on the prairie and sometimes was chased by the men when they were out hunting wolves with greyhounds. The dogs have often started her supposing her to be a wild coyote. She would run a little way, and then lie down, and as the dogs came up roll over on her back, with her paws in the air. When the dogs reached her they would smell of her and recognizing their camp companion did not attempt to injure her. She is an interesting pet.—GEORGE BIRD GRINNELL (New York, May 20.)

PHILADELPHIA ZOOLOGICAL SOCIETY.—The Nineteenth Annual Report of this Society was read at the annual meeting last month, and contains much that is interesting. The total number of visitors for 1890-91 shows by comparison with the previous year a decrease of 3,719, while the receipts for the same period have decreased \$4,280.24. Sunday receipts are more than three times as large as those of Saturday—the next largest day—\$13,721.29 against \$3,744.52. The number of animals in the collection at the end of February, 1891, was 1,020, of which 303 were mammals, 454 birds, 205 reptiles, 58 amphibians. The accessions during the year were 176 mammals, 210 birds, 671 reptiles and 120 amphibians. Among the more interesting mammals received during the year are two spider monkeys from South and Central America;

a pair of nyghau and three reindeer, two of which have since died. Among the birds may be mentioned a flammulated owl (*Scops flammeola*) from Arizona, sent in by Mr. Herbert Brown, and a specimen of the curious boat-billed heron (*Cancroma cochlearia*) from South America. Among the many interesting reptiles is a new snake from Florida, described by the superintendent, Mr. Brown, in the Proceedings of the Philadelphia Academy for 1890 under the name *Stilosoma extenuata*. The report notes also the addition of a pair of lions about fifteen months old, bred in captivity in Europe, and a pair of wolverines from Minnesota. These last are extremely rare in collections and are of unusual interest. Among the animals which were bred in the garden, the advent of which has been noted from time to time in FOREST AND STREAM, may be mentioned lions, puma, prairie wolves, leopards, camels, llama, bison, Indian buffalo, American elk, deer of several species and kangaroos. The Philadelphia Zoological Gardens are far ahead of anything of the kind in this country, and their management appears to be everything that could be desired.

Game Bag and Gun.

THE FULL TEXTS of the game laws of all the States, Territories and British Provinces are given in the *Book of the Game Laws*.

A PHANTOM GOBBLER.

At a period in the past, before our Legislature made an effective game law, and before public sentiment was sufficiently enlightened to demand its execution, had there been one, it was thought to be the proper thing to have a Thanksgiving dinner of roast turkey as early as the month of March, without waiting for a proclamation from the powers that be. In those days in the spring of the year the bluffs and heavily timbered bottoms near the mouth of the Illinois River were vocal with the calls of wild turkeys during the mating season, and the hunter who could listen to that music and not feel his fingers tingle, and his pulses quicken with excitement, was considered outside the craft and voted "no good no how."

It was the unwritten creed of the country that if a man met a flock of turkeys in the timber, and they attacked him, he was fully justified under the primal law of nature, "self-preservation," in shooting them in self defense, and as this prerogative had a popular and widespread application, hosts of turkeys more or less failed to show up at roll call in November following, which otherwise might have increased tenfold during the summer months, enlarging the chance for sport in the same proportion when the leaves began to fall. The custom was reprehensible to a degree and much to be condemned, but it was hard to make a "Sucker" with a gun think so, especially if he was "out o' meat."

I remember a couple of novices with more ambition than skill who had made several ineffectual attempts to bag some of the patriarchs of the flock, and were bemoaning their hard luck to an old veteran, who was then a prosperous merchant; but the passion was still strong within him, and he seldom failed to have an outing with the boys of a week or two in the spring and fall, when he was certain to carry off the honors, much to the chagrin of some of the more youthful and windy aspirants. He was native to the locality and to the manor born and bred, when droves of deer roamed over the unsettled prairies and the howling of the wolves made night hideous about his father's cabin, and as for turkeys, the woods were full of them. He had seen service and plenty of it, and if there was one kind of game more than another that he loved to hunt, it was wild turkeys. It was his delight to put his skill against their cunning; and the turkey was a sharp one that outwitted him, for he had the faculty of doing the right thing at the right time, and was seldom at a loss in an emergency. It was agreed, if we boys would meet him at sunrise the next morning at a designated spot in one of the narrow valleys leading out from the river, that he would give us some pointers in turkey hunting and post us up in the tricks necessary to success; and we were promptly on hand at the appointed time eager for the initiation to begin.

Going up the valley, which grew narrower as we advanced, to where the inclosing ridges threw out several spurs across it, interlocking each other, we came to an open glade, at the head of which was a pawpaw thicket, which we entered to look for sign, and here we found plenty of it, the ground being literally scratched over; but the old veteran said the sign was not fresh, and had been made the day previous, but the turkeys were somewhere in the neighborhood, unless they had been alarmed the day before.

Getting into an opening he took his turkey bone and gave a shrill "keowlk, keowlk, keowlk," that awoke the slumbering echoes in the surrounding hills. That seductive call would make the average hen turkey green with envy, and had lured many a fine gobbler to his death and the dinner pot, and was still in the business. Receiving no answer the call was repeated, and away over a dividing ridge to the west, nearly a half a mile distant, came a faint answer from a gobbler; and by waiting a few minutes in silence we were able to locate him with tolerable accuracy.

The ridge between us and the gobbler was fully 200ft. high and little less than a fourth of a mile to its top from where we were standing. Between two spurs making out from the ridge ran a deep ravine, partly filled with leaves, brush and vines, the accumulation and growth of years, and up this ravine we toiled our way with as much speed as the circumstances permitted, stopping now and then to give a call or two and to wait for an answer so as to be certain to keep the gobbler coming toward us. The scheme was not to call too often nor to hurry him, but to get to the top of the ridge before he did, otherwise he would either see or hear us and we would get no shots and our trip would be in vain.

After considerable hard climbing we took a position on a rocky shelf that ran across the head of the ravine up which we had clambered. This brought our heads on a level with the main ridge that was between us and the gobbler. About forty steps directly in front of us and on top of the ridge, without a bush or twig between it and ourselves, was a large, spreading white oak, a giant among its fellows and the probable ancestor of a numerous family of saplings that surround it.

We were pretty well blown with our effort, and waited a few minutes to get our wind and steady our nerves; but we were ahead of the gobbler at all events, and that was several points in our favor. We could hear him going through his gymnastics on the other side of the ridge, and we were chuckling to ourselves how we would fool him when he came in sight. He was coming to a surprise party, and he didn't know it. Another low call from the old veteran was answered by a fierce gobble close at hand. "Get ready, boys," was whispered, and the hammers were raised without a click and every gun brought to the shoulder.

"Look out now, he's coming out from behind that big white oak," and sure enough a moment later he came from behind the tree with a Fourth of July strut and as full of vanity as a dude. He had evidently made his toilet with extreme care that morning, and had started out to make a conquest. His wattles looked like a necklace of burnished coral, and every feather glistened in the morning sun; but we were laying for that gobbler with a masked battery loaded with powder and shot and things, and instead of meeting a lady love he met the discharge of three guns loaded with BB shot.

Then what? Now jes' don't "you uns" say a word—don't stir me up. Did we corral that turkey? Did we hang him on a trophy pole and dance a war dance? Did we "tote" him home in triumph and pick his bones over a bottle of Catawba? Nary tote, nary turkey, not a feather.

Why didn't you give him the other barrels? Ah, yes, why didn't we. Would you shell the woods and not a turkey in sight?

Where did he go?

Well that is something no fellow could find out, at least we never did, and we hunted for him with both hands. Six hands, in fact, with digits extended wide, in every nook, ravine, brush heap and hollow log within a radius of half a mile without finding a trace of him.

Was it Old Nick, dressed up as a gobbler, to fool us, or a phantom turkey come back from the happy hunting grounds to draw our fire? Did the earth open and swallow him or did he climb a tree? That was the conundrum and we gave up, and it is a mystery to this day. We lost the turkey, that is certain, if a thing can be said to be lost that we never had, but a hearty laugh over the adventure recompensed us in some degree for our disappointment, and besides the experience was worth something to the boys.

It was agreed that that hunt shouldn't count, and we consoled ourselves with the thought that an old spring gobbler was dry meat at best, and that

The fowl that lived and flew away,
Might come to bag some other day.

ELSAH, III.

CAMERON.

EPH. BROWN AND THE BEAR.

AS old age creeps on and incapacitates us from active business, we are apt to dwell upon events of the past. Memory carries us back to the old log cabin, where in childhood we gathered about the hearthstone, around which clustered the happy associations and scenes of other days; and we drop the sordid cares and wearing anxieties of the present and forget for a moment the lapse of time, and how the years and years have gone by and those scenes are gone, save to memory. And so I am in mood to relate some pioneer incidents which occurred in my younger days.

Ephraim Brown came with the settlers who first broke into the heavily timbered forests not very far from the Cattaraugus Creek, in western New York, a partial description of which region was given in a former article published in FOREST AND STREAM. Brown was an active muscular man, never beaten in a foot race and the champion wrestler and chopper through all that section of country. He was hardly past middle age at the time of which I write, but by his friends and the people where he was best known, he was always mentioned as "Old Eph."

Bears were plenty and occasionally raided the farmers' pig-pens and sheep-folds, and, except by a few hunters, were considered rather a nuisance than otherwise. Now Eph had a near neighbor Shultz, who called on him one day to examine his cornfield, when he said bears or coons, or both, were pulling down the corn every night. Brown looked over the field and soon discovered by the tracks that a small bear (perhaps a yearling) was making a nightly raid on the corn. He informed Shultz that it was a bear, and offered for a small consideration that he would that night or the next drive the bear into his smoke house and shut the door. Now, the consideration might have been five or ten gallons of whisky, as that article was then and there considered a legal tender. All classes drank whisky in those days; and the words total abstinence were unknown in the pioneer vocabulary—albeit there were comparatively less drunkards in those days than at the present day. Shultz readily agreed to Brown's proposal, though rather doubting his ability to fulfill the contract. Shultz's surprise was something more than ordinary when on the following morning he found the bear cooped up in his log smoke-house with the door shut, barred and bolted.

No one had seen just how Brown had captured the bear, but his explanation was about as follows: He cut a blue beech ox-gad about the length of an ordinary fish pole, with a good switch end, and with this formidable weapon he lay in ambush near where the bear would be likely to pass in coming into the field. It was long after the full moon had risen that he discovered the bear making toward the field, and the bright moonlight enabled him to see that it was the same small bear that he expected. By this time the bear had scented danger and started back for the woods; and Brown started for the bear, which he overtook just at the moment that it was climbing the high rail fence. This gave Brown a chance to give him a smart cut over the nose, which brought the bear in a limp heap at his feet; but only for a moment, when he turned and began to show fight, but one or two clips in the face brought his nose down between his forelegs, at which, Brown said, he would whine like a whipped cur. So he started bruin for the smokehouse, as he said, by touching him on each flank, and if he went too fast he would slow him up a little by a slight tap over the nose with his long whip. In this way he succeeded in working him up to the smokehouse, where the bear was only too glad to get in out of reach of the cruel whip. It is not to be supposed that an old, full-grown bear could

be captured that way. Nevertheless, it was generally believed that Brown had accomplished a feat that could not be done by any other man in that region.

A few years prior to the time of which I write there were two brothers who were both crippled by an encounter with a bear. They were skilled hunters, six-footers, and heavily-built men. It was a sort of hand to hand combat, where the two men were badly worsted, thoroughly "chawed up," as it were, one having his thigh broken in two places, while the other had a shoulder badly lacerated and the scalp torn from his skull, so that it hung like a flap over the face. The particular circumstances which brought about such a singular episode I have neither time nor space to relate here.

By a providential circumstance they were found by a party of hunters who happened that way soon after the occurrence. Both men were helpless and were carried out of the woods on stretchers. Their recovery remained doubtful for several months; but they finally lived through. But they were both maimed and disabled for life.

GRANDVIEW, TENN.

ANTLER.

CHICAGO AND THE WEST.

DES MOINES, Ia., May 16.—About a week ago, when leaving Chicago on the evening train of the St. Paul & Kansas City road, I witnessed a little incident which interested me at the time, and which may cast some little light on the question of the speed of a flying bird. We were about forty or fifty miles out of the city, I should think, and I was at the supper table in the dining car, it being then just a little before dusk, when I saw five prairie chickens flying along parallel with the train and about a hundred yards or more distant. I believe they kept this course for more than a mile before they finally turned around a hill and disappeared. They were doubtless on their regular evening flight to their roosting grounds, and any one knows that at such a time they usually fly with great steadiness and rapidity. I lined the birds up with the edge of the window casement, and could see that they did not gain much on the train. Either the train or the birds were irregular, for first one and then the other would see-saw ahead and settle back. The train must have been going over fifty miles an hour, for it makes a fast run through there. From the way the birds followed the surface of the ground, not holding high up in the arrowy flight of the cold fall days, I should think that they were going at about three-fourths of their top speed. Our friends curious in figures might from this formulate a guess not quite so rude as one altogether unaided. It had been my impression that a prairie chicken would fly right away from a railway train, but in this long race it did not seem that way.

All through Iowa and Missouri the country was looking simply beautiful in the early spring, lying out fresh and pleasant in a succession of gentle valleys and rolling ripples of green. The crabapples were in bloom and the dandelions covered the banks, and down in Missouri the "redbud" trees were in full flower. It was very pleasant to see the quiet country life unfolded in panorama as we passed, the cattle grazing on the blue grass pastures, the farm dog dozing in the sun, and now and then a turkey strutting through the yard. For sporting purposes, however, most of this region across central and southwestern Iowa and the upper corner of Missouri has seen its day. Its beauty now is the beauty of the garden and not of the forest or prairie.

And so on to historic Leavenworth, the most beautiful city of Kansas, and indeed one beautiful enough in any company, though Kansas does not offer a very hot competition for the most part. Familiar with the arid western plains of Kansas, I had never seen this old town before, and it seemed very delightful, albeit quiet and quite done its active work apparently. This year Leavenworth has just 250 inhabitants less than it had last year. Leavenworth supplies the West with prominent citizens. They are scattered all through the mountain and plains country. Nearly everybody in Colorado lived in Leavenworth once. Provided one be done with the active conflict, I do not know a better place to settle in, and a better place for a town never was. The hills make a grand amphitheater down to the river. The country round about is a noble one. Fort Leavenworth, the military post and training school located about three miles above the city, is situated in a bit of country as lovely as ever lay out of doors. "It's nearly as pretty as the Bluegrass country," said Lieut. Hughes, one of the officers I met at the post. This, coming from a native of the bluegrass section of Tennessee, is certainly much of an admission. But Fort Leavenworth is called by the army officers one of the most beautiful posts in the United States, and they are glad to be stationed there. I believe, however, that this is largely on account of the feminine population of Leavenworth town, which is numerous and beautiful in the extreme, and therefore of a quality to appeal to the æsthetic nature of the gallant gentlemen of the army. Where the officers are gathered together, there are the ladies also, and *vice versa*. I don't know whether it is the officers, or the ladies, or the bluegrass country around Leavenworth which is responsible for this state of affairs, but everybody seems very happy over it.

And hey! for the glory of the army! The only trade for a man, I do think, and one kindly to its followers. The result of the physical training is so apparent. The men are all men, and not stoop-shouldered *villains*. The uniformity of the excellence of their physical carriage ought to be a shame to the average dollar hunter.

"There's the assembly," said Lieut. "Billy" Wright, as a bugle began to sing, "and if you want to see the cavalry parade, get out." Presently the troops came by, full trot, shining, resplendent, magnificent, the "Senegambian Hussars," as Lieut. "Billy" called the colored troop in front, each big negro of the lot proud of his job, and riding like a king. If you want to see superb horsemanship, go to Leavenworth. And if you want to feel your back-bone quiver, listen to the trumpets.

After dinner we went out across the town, three miles in the opposite direction, to the Soldiers' Home. Here was the obverse of the medal of glory. Two thousand graybeards, hobbling, crawling, sitting, unranked, half uniformed. All waiting. No trumpets here. There may be trumpets some day sounding in *reveille* over the white headstones on the green hills yet beyond the buildings of the Home. And so we ran it down, this trail of glory, from the epauletted youngster seeking the bubble reputation, to the lean and slithered parody of that, and finally the end of it all. Funny business, this

living! If you go to the Soldiers' Home, you would much better go back to the Fort next day and hear the bugles again, and talk with Lieut. Billy, or Lieut. Wren, or Lieut. Hammond, or Lieut. Cruse, or Lieut. Perkins, or Lieut. Scott, or Lieut. Wilson, or Lieut. French, or Lieut. Evans, or Lieut. Elliott, or Lieut. Nicholson from Riley, or some of the flock of young officers you may find out there. The woods are full of them, and they are full of fun.

"Did you ever hear Col. —'s elk story?" asked one of these young gentlemen. "You know, it happened after dinner one evening. Col. — was telling how he chased a great elk which he had wounded, and which he was particularly anxious to secure on account of its magnificent antlers, which he declared measured over seven feet from tip to tip. 'I run the old fellow right up to the edge of a heavy wood,' said the Colonel, 'but there I had to stop, and I lost him. The trees stood so thick no horseman could get through. They weren't over two feet apart anywhere.'

"How wide did you say that elk's antlers were, Colonel?" somebody asked him.

"Seven feet, sir; not an inch less, sir," said the Colonel.

"And how far apart were the trees?"

"Not an inch over two feet, sir, not an inch."

"Well, now, how in — did the elk ever get in there himself?"

"The Colonel stopped a moment, and then straightened up. 'Gentlemen,' he said, 'he did just exactly as I would have done under the circumstances had I been in his place, and just as I have to do now—he had to take in his horns!'

"Well," spoke up another officer near by, "Col. — got out of that better than Gen. — did out of his fish story. Did you ever hear of that?" No one ever had.

"You see, I don't know whether I ought to tell it or not; but if a general could tell it, I suppose a lieutenant can. It seems that Gen. — was out fishing, down in Florida. The day was warm, and the temptation to go into the water was very great. Fastening his line to a stump, he removed his clothing and went in bathing. 'I was just about to come out and resume my apparel,' said the General, 'when I noticed a terrific tug at my line and knew I had a fish of very considerable size. Loosening the line from the stump, I went to work to land the fish, when to my surprise the creature made a determined rush for the sea and I found I could not control it. In some way I became entangled in the line, and was rapidly hauled down the beach in spite of my struggles. I felt the water dash above me as I was rapidly pulled in, and I gave up all for lost. But, gentlemen, I have never yet known my presence of mind to fail me in a time of danger, and it did not now. I thrust my hand into my pocket, drew out my knife, and in a moment had cut the line and was free! Had it not been for that, you would not see me here to-night.' You ought to have seen the General's face when they asked him where the pocket came in in a story like that!"

All sorts of larking when it isn't dress parade, but when the serious part of life is on at the Post the ceremony and dignity of the military community is something very pretty.

Mr. W. W. Carney, so well known to readers of FOREST AND STREAM as former owner of the ranch at Great Bend, where the annual coursing meet of the American Club is held, is now at Leavenworth, and with him and his brother, E. L. Carney, the hours fled all too quickly. In the evening we went over and called on Col. Moonlight, one of the best known figures in Kansas and Western history. Col. Moonlight was once governor of Wyoming, and has long been prominent in political circles. We got him to talking of his early Indian fighting and hunting days, and passed a great evening. A very romantic career has been Col. Moonlight's, I heard elsewhere. He ran away from Scotland when he was a mere boy, and somehow got into the army in this country and has been in all the wars, I understand, from the French and Indian war on down, including the Seminole Indian war, to say nothing of having been a Government surveyor at the time when a Winchester was more useful at that work than a transit. Sometimes nowadays the Colonel goes out on the range for a while, and as soon as he leaves the settlements he throws off his hat and goes bareheaded, sun or rain, till he comes back again. "When I go on a hunt," said the Colonel, "I never take but one cooking vessel, and that is a common tin cup. You can cook anything you want in a tin cup. I don't see what any one would want with any more dishes than that." I should like a photograph of Col. Moonlight on a hunt, hatless, and bearing a single tin cup. It seems to me that is traveling about as light as they make it.

From Leavenworth to the croquet tournament at St. Joseph, as see small bills. On Thursday evening there I met Mr. A. G. Courtney laboring up the hill to his hotel with his Lefever under his arm. "Where's Charlie Willard and Rolla Heikes?" he asked.

"Gone home this afternoon," said I.

"That's all you know about it. They haven't gone home. They missed their train, and I just left them on their way back to the lake to go fishing again. If I didn't have to go to St. Louis I'd go back to the lake myself and fish all day to-morrow." St. Joseph and the lake offer rare attractions for a trap tournament.

Here at Des Moines I find everybody looking forward to the opening of the Iowa State tournament at this place on Tuesday of next week. This should be a good event, though I believe the croquet fishing at Des Moines is not so exceptionally good.

From the West comes one more account of shocking accident from shooting carelessness. In this case a husband killed his wife. The affair happened at Colorado Springs, Col. Mr. and Mrs. Winn, of Coronado, Kas., were with two friends returning from a pleasuring trip of over a month in the mountains. Two ladies rode in one buggy, Mrs. Winn being one of these. Mr. Winn and a friend rode in a carriage directly ahead. In this vehicle were two shotguns, loaded. Mr. Winn moved one of these in some way and it was discharged, the contents striking Mrs. Winn in the neck and killing her almost at once. A fine reprimand for the man who allowed those loaded guns in the carriage; but perhaps he didn't like his wife very much, anyhow. The man who carries a loaded gun in a vehicle ought to be treated as though he expected to kill some one.

At this date the tremendous forest fires of the Michigan

lower peninsula are reported abating. Many counties have suffered terribly. No lives are reported lost, but property of the value of several million dollars has been destroyed. Grouse must have been destroyed in the egg by thousands and thousands, and perhaps many fawns also perished, though as to the season of their birth in that region I am not so certain. These great fires are public calamities and herein should lie a lesson to the careless camper. A newspaper which has gone into this matter somewhat has the following to say:

"In the great majority of cases these forest fires are caused by willful carelessness. Out of nearly 3,000 instances collated in the tenth census, 1,152 fires were started deliberately for clearing land, 628 by hunters' fires, 262 by what the returns called 'malice,' 197 by reckless efforts to improve pasture and only 508 by locomotive sparks. In other words, more than 80 per cent. of the fires might have been prevented by the exercise of proper and sensible precautions." E. HOUGH.

SIX YEARS UNDER MAINE GAME LAWS.

VII.—ON KILLING DOGS.

I AM going to give the tradition of the origin of the law permitting the slaughter of deer dogs, to show the consequences of the practice, the unwisdom of it, the extra-legal abuse of this doubtful privilege, the trouble certain to come from it and the fact that the Game Commissioners were fully warned of what was sure to happen. We cannot deal with compliments now, and the burden of this whole miserable business of dog-killing with its dreadful consequences, must be left to rest where it falls.

Deer dogging is not a recent practice in the eastern part of the State. As early as the forties considerable of it was done, although it was by no means general; for the people of the southeastern part of the State were a race of still-hunters. It is hardly necessary to say that at that period there were few if any deer, except stragglers, west of the Penobscot, so that both still-hunting and dogging were necessarily confined to the regions where both have flourished most ever since. Dogging was not illegal at this time, and did not become so at any season of the year previous to 1853, while it was not prohibited until a later date, some time in the sixties, I believe, though my earliest note of it is 1871.

As has been said, dogging was not at first illegal, and though most preferred still-hunting, it was practiced to some extent, especially in the latter part of the forties and during the fifties. It was then that Rod Park and his pack used to make "such gallant chiding" over the rough granite country that slopes down the Union River. It was noble music say those who heard it. Park was a Veazie lumberman, well known all over the State, an admirable marksman both at game and target, a fine still-hunter for deer, an expert at all outdoor games and employments, the most buoyant, whole-hearted, irrepressible, fun-loving and laughter-making man that ever drew violin bow and loved his friend's quarrel better than his own. His delight in good company drew him from the solitary life of the hunter; his overflowing energy attracted him to the woods, therefore he loved his dogs. He always had a pack of favorites, not blooded, perhaps, but well chosen and remembered long after the limits of their doggy lives. Hunter, and Panther, who were slain, old Jack who fell by a bullet, and old Spot, the most lamented of all, were of them. Two lawyers, Bradbury and Wiggin, were frequent companions of Park's at this time, and they hunted together in the Union River country, sometimes from canoes, but most frequently on the runways, which Park liked best. "A cry more tuneable was never holla'd to," but it was not music to the still-hunters. There were wolves in the country then and the deer being in constant alarm from these, were more frightened of the dogs than they now are, so that a pack of hounds was a serious disturbance to still-hunting. But Park was a favorite and the hunters did not wish to trouble him or his dogs, although they complained loudly of his companions. Park was a poor man like themselves, they said, but that rich men's sport should destroy their occupation was a serious grievance, and on account of it Park lost some dogs. Yet there was in this nothing that would cause recourse to law making. There was, however, another trouble to which Park always attributed the origin of the first law permitting dogs to be killed.

Park had his enemies as well as his friends. Those who have driven from Bar Harbor to Bangor on the tally-ho which ran eight years ago, before the railroad was put through, may remember just half way between Ellsworth and Bangor, on the top of a long hill, two old, blackened houses, the only ones for some miles, which stood on opposite sides of the road not far apart. They were the half-way taverns on the stage road, Johnson's on the right and Mike Mann's on the left, and the hill is still known as Mike Mann's Hill. This hill lies midway between Fitts's Pond (now Phillips's Lake) and Reed's Pond (now Green Lake)—two places at which Park and his dogs used to run deer. The tavern keepers on the hill had the bitterest enmity to each other, which Mann at least, who was small in spirit as he was large in stature, extended to all who patronized his rival. And Park always stopped at Johnson's. Whether there was any other cause for this ill will is not known, but on account of it Park was subjected to much annoyance by Mann and when he was in Mann's vicinity. At one time the road leading down to Reed's Pond was filled full of big hemlocks at a certain narrow place between ledges. Again, Parks had some birch canoes left near there maliciously destroyed. These and other troubles occurred about 1851, but the feud was continued.

In 1853, by the margin of the R. S. of 1857, a new and very remarkable game law was passed. "No person shall hunt or kill on any land not his own in this State any moose from the fifteenth day of March to the first day of October, or any deer from the fifteenth day of January to the first day of September, under a penalty of \$40 for each moose and \$20 for each deer so killed. No person not an inhabitant of this State shall, at any time, hunt or kill any moose or deer except on his own land, under the same penalties as above provided. Any person may lawfully shoot or otherwise kill any dog found hunting moose or deer within the time or with the persons herein prohibited." The aliens meant are undoubtedly Canadians, for summer travel had not then begun to any extent. But why prohibit hounding in close time only? This is covered by the prohibition to hunt at all at that season one would suppose, Park

always declared that this point was "got up by Mann on purpose to annoy him." It must have been introduced by some one living east of the Penobscot, for those living where dogs were not used would have no interest in the matter. The still-hunters of the Union River would have been little likely to propose legislation on the subject; for they would have killed the dog that troubled them without waiting to have the law passed to permit them, and this law would not have protected them in the fall when they needed it most. Park always said that Mann was at the bottom of it. Note how this might have been.

Previous to the law of 1853, the law (R. S. 1840) had been: "Any person who shall kill any moose or deer between the first day of July and the first day of November in any year shall forfeit or pay for every moose or deer so killed the sum of five dollars." That is, close time previous to 1853 was from July 1 to Nov. 1, the very period when Park was hounding deer, for no one ever kept the law then. The fine was too small to be a requisite to anybody, as only half went to the complainant, so that Mann could have done Park no harm by complaining. But to allow the killing of dogs in close time—that is from July to November—would be the most serious injury possible. If Mann could compass that he had abundant revenge. Mann was not a representative at any time—"he hadn't education enough," said Johnson, his old rival, to me this winter. Whatever he did he must do through others. Supposing, then, that he argued with some representative the need of stopping hounding in close time, the advantages of killing dogs as the means of stopping it, and impressed on the legislator the fact that close time was the period of danger. When the close time is changed from the fall months to the winter and summer months, that representative is still acting in obedience to his constituency by urging that dogs ought to be killed in the new close time, while Mann, if he were guilty, loses the opportunity which he correctly sought, though gaining the letter of his desires. That this change in the game law which he could not help even if he had known it, should take place at the same time that he did desire a change is natural enough, while only such a desire as his could explain the singular provision which allows the use of dogs part of the year, but makes their lives a forfeit at the period when they were least likely to be used. For this is not aimed at crust hunting, as may be seen from the fact that moose may be killed with dogs until the middle of March. It was an unfeathered shaft that flew aslant.

Until a better explanation of the subject is given we may assume, as Park did, that the first law permitting dogs to be killed was framed from personal malice. Even if he were wrong, the history of the law would justify such a supposition. Good it has never done, could not do. The man who loses one dog will buy two more, and will forever hate the man who killed his pet and companion. If dogging is illegal it should be stopped, but never by killing the irresponsible dog. Arrest the offender and fine him—he will submit; but any attempt to kill his dog will be resisted, and in one way or another will harm the cause in which it is done or the man who does it. The slaughter of dogs has caused deer dogging to thrive in this State. Doing it in the name of the law has merely brought the law into disrepute; for it is now and long will be considered a worse offense to kill a dog than to use him in running deer. To arrest the man brings credit to the law and little or no danger to the officer; to kill the dog has just opposite effect.

I will give three examples of the results of dog killing, selecting for obvious reasons some of long standing. In every case I could give fullest particulars and could cite other parallel instances. In the first a woodchopper, hearing a hound, stepped behind a tree and cut out her shoulder as she ran past. He escaped with his life, but it was of little value to him for some time. The dog was owned by Louis Ketchum, the well-known Indian guide, who could give full particulars although at the time he was miles away, having lent the hound to those who had her. The second occurred on Long Island in Bluehill Bay. There was a special law that no deer should be killed on the island, but an Indian named Joe Orons, whom I suppose to be dead, met there with companions to evade the law by driving deer into the water and shooting them from the canoe. He had just killed one in this way when a man, said to be named Henderson, shot his dog. The Indian instantly threw down the gun he had, thinking the range too long for the buckshot barrel, and seized a rifle lying beside him. Careless handling caused a premature discharge, which tore open his coat sleeve and burned his arm, but he once more changed guns and fired at the man before he disappeared. He then searched a house on the island to find him, and failing in this was with difficulty restrained from doing great damage to personal property. Almost any of the Oldtown guides could give further particulars. Nor must it be thought that only an Indian would do this. A white man would do fully as much. I know of one man, now deceased, a selectman of his town for many years, a man honest and trusted and with a host of friends, who declared that he himself had walked many miles and spent two days in trying to kill the man who shot his dog. Nor need reference be made to the two wardens who were killed for attempting to take a dog from its owner, in order to prove the hazard of doing it.

Not only is it dangerous to kill dogs, but of late this danger has been greatly increased because most of it has been done illegally. It is not lawful to destroy any dog not actually engaged in hunting, either on the track, or swimming after the deer, or holding it at bay. Yet most of the dogs killed here for some years have either been poisoned or taken from their owners and killed before their eyes. Need we cite the instances of three dogs taken from one canoe and killed, of four belonging to one sportsman, of one and two in many instances belonging sometimes to residents and sometimes to visitors, but in every case killed while not engaged in hunting? Nor has the least discretion been shown in the dogs selected. One well known and decidedly popular contributor to FOREST AND STREAM has given me his own experience. "When I was in Maine, Mr. H. and I had a narrow chance," he writes, "for the lives of two liver and white pointer dogs (which any person could tell were not hounds) notwithstanding the fact that we offered to show what they were by working them on game." "Hounds and greyhounds, mongrels, spaniels, curs, shoughs, water rugs and demi-wolves," all that in the catalogue are clept by the name of dogs, to misquote—have lost their lives or had them endangered by the law

that however it has been enforced, says only, "Any person may lawfully kill any dog found hunting moose, deer or caribou." Nor has the poisoning been legal. Most of it has been necessarily laid out contrary to law prohibiting its distribution within five-eighths of a mile from "any highway, pasture, field or other improved land," and any one can see that while hunting the dog would not take poison—"unless he was a very poor dog," adds one hunter slyly. True, the law does not prohibit poisoning dogs, but if they will not take it while hunting and cannot be killed when not hunting, there is barrier none the less strong for being unexpressed. If not killed in the act, the dog cannot be killed in any way, for he returns to his owner who becomes responsible according to the law which says, "Any person owning or having in possession dogs for the purpose of hunting moose, deer or caribou, forfeits not less than twenty nor more than one hundred dollars." "Any person may lawfully kill any dog found hunting moose, deer or caribou," runs the law, not a wise provision at best, but infinitely unwise as it has been administered. Consider the provocation that has been given, the illegality of methods used, the domestic animals killed and supposed to be killed by those engaged in this work, the peril to human life, that this work was kept up for three years in spite of all remonstrances, and it is not hard to see how murder grew out of it as the stalk from the seed.

Even if it had not been done by officials and under orders it would have caused trouble; but those set to protect and defend the law broke the laws, and disaster was inevitable. The Commissioners—that is Mr. Stilwell, who represents them here—had timely and frequent warnings of what would happen. It was not chance that caused the death of Hill and Niles; it was fate. By the same work we shall have more of it unless care is taken. That murder was no surprise, but we expected it nearer home. It was in this way that I heard it—for I was out of the State that year and my father wrote it me:

"12 Nov., 1886.—Dear Fannie: I send two dailies. You will see by reading, that as Meg Merriles told Dirk Hatterack, 'It is sown; it is grown; it is heckled; it is twisted.' What I have so long expected and foretold has come to pass, and in the way I predicted—by killing dogs. I went to Stilwell twice last month to talk to him about this very thing. He asked me only a short time ago [if] I really believed any man was bad enough to kill another. I told him I did not think, I knew it, and it would be done if he kept such a set of men as wardens and allowed them to do such things. I do not know any of the parties. They may all be angels for all I know. I know the place exactly, as I have slept on the very same spot."

The original of this, with other important documents published and unpublished, is in the hands of the editor. On receiving it I formed the resolution which I have held to ever since, not to stop until the time came to prevent worse evils by showing up these. Unknown to me my father had decided to do the same, had written to the editor of this paper about it and then withdrawn because the danger was not then pressing and the Commissioners needed what support could be given. The danger is here again. We have a new set of laws yet untried, and worse conditions than at first for enforcing them. In giving the results of years of study of these matters, it must again be stated that there is no personal advantage to be sought; no desire to present more than can be proved, but the necessity of saying less; no hatred to any class, for none have injured me; no wish to bring our wardens into disrepute, for some of them could not well have blacker reputations than they now wear; no wish to disparage the Commissioners, for their works are their judges; no thought to stir up trouble—for there is more abroad at present than most realize. To prevent trouble, to save respect for those broken laws before it gets too late, to diminish the danger to human life—that of these wardens and of better men than most of them—is the only possible advantage.

FANNIE PEARSON HARDY.

KANKAKEE MARSH.—Chicago, May 20.—In a recent issue of your paper your talented but misinformed Chicago correspondent accuses the members of the Cumberland Gun Club of spearing fish on the Kankakee Marsh. I am the only member of the club that has had a spear on the marsh this spring, and my only spoils were a few dogfish. Some of the members of the club will go gunning (or spearing) for friend Hough unless he is a little more careful how he advertises them as violators of the game and fish laws.—GEO. T. FARMER.

CHICAGO, May 20.—Editor Forest and Stream: Your issue of May 6 over signature of E. Hough you state that the members of the Cumberland Gun Club have been spearing pickerel on their marsh. On behalf of the members of the Cumberland Club I am authorized to deny this declaration, and say that not a member of the club has engaged in any such practice, and would thank you to correct the statement in your next issue.—W. L. SHEPARD, Sec'y.

TEXAS GAME LAWS A FAROE.—Beeville, Tex.—Seeing the great slaughter of game going on out of season, our club has offered a reward of \$25 for information that will convict any one of violating the deer law. An effort will be made to have the turkey law changed, as at present it is worthless to southwest Texas. In a law to apply properly to this section, the open season should come in about Aug. 15 and close April 1. I believe the State labors under another disadvantage, that is we have no game wardens. The old saying, "What is everybody's business is nobody's business," applies well to this case. Nine times out of ten one neighbor will not report on another, and so it goes; and the game laws are almost daily violated. Bob White is holding his own very well, notwithstanding the pot-hunter and the law-breaker, and the fall shooting promises to be fine. The festive gobble was never more plentiful or boisterous than at this time.—T. J. S.

NEW JERSEY QUAIL.—Smithburg, N. J., April 25.—The prospect for quail shooting in this vicinity next fall is very good. A good many wintered over and can be heard whistling in all directions. There is quite a number of ruffed grouse in the pines south of this place.—B. L. W.

RAMBLERS' OUTING CLUB.—New York, May 19.—The Ramblers' Outing Club has reorganized with the following officers: Pres., F. E. Fox; Treas., W. G. McCabe; Sec'y, R. C. Russell. The club holds its weekly meetings every Monday evening.

"BORES AND SHOOTING QUALITIES."—My letter in your paper of April 30, about large and small-bore shotguns, contains so many printer's errors that I beg to draw attention to them, fearing that the meaning of some of the sentences may be misunderstood. In paragraph seven "13drs." of powder should be 2 $\frac{1}{2}$. In paragraph eight, second line, the word "superior" should be inferior. In paragraph seventeen the charge of shot for a 20-bore is printed "3oz." instead of 4oz. On page 289, paragraph two, the word "larger" should be longer. In paragraph five of the same page, on line fifteen, the words "with a moderate cylinder" are, I think, inserted through some oversight. The sentence should begin: "On the other hand, both the 16-bores are splendid performers with buckshot."—J. J. MEYRICK (Devonshire, Eng.)

WISCONSIN WILDFOWL.—Appleton, Wis., May 23.—I notice what your correspondent "Greenhead" has to say in last issue about Wisconsin bass, and that they are to be protected, etc. I also read what he says in another column under the head of "The Wisconsin Flight," referring to water fowl. The game laws as were in force this spring forbid killing at that time. If one section is so readily violated, where is the virtue in any of the game laws?—C. V. Y.

A SPRINGTIME HUNT.

"If I can get away I'll take the boys and go up to the Shanty for a last hunt before the first of May," so said my father not long ago. I knew that it would only be a question of life or death that would keep him at home, so concluded that it would be possible for him to "get away." A little later that same day brother Ben confided to me that "was the last Saturday before the law went on, and he and Harold did want to go hunting most dreadfully." Then I told him of the little scheme his good father was planning, and a happier boy could not be found. To go hunting on Saturday was fun, but to stay out of school and stay over night! Well, in a boy's estimation, what could be better. On Monday active preparations were begun. Decoys hunted up, guns put in order, the hunting loaded and all the numerous things done that are necessary for even a day's outing. All this was accomplished by the boys between school hours. Tuesday an uninitiated observer might have thought that the whole family were contemplating an immediate trip abroad from the confusion. Blankets and rubber coats were strapped up, boxes of ammunition, with hunting coats of various styles, adorned the chairs. Last, but not least, a table filled with good things to satisfy the inner man were waiting to be packed. We could hardly get any one to dinner, and I think the cook was ready to give up in despair. After ringing the bell repeatedly, the family were assembled. The boys went back to school as they were not to start until 4 o'clock. About 2 I took the horse and carriage and drove father up to his boathouse and watched him set out on his sail of five miles up the river. How I did want to go and I am afraid I very often envied my brother his good times. My part of the hunting expedition generally consisted in watching that nothing was forgotten and of remembering where caps and coats were put and then seeing him off and being ready to meet them on their return. The shanty is owned by a party of gentlemen and furnished with beds, stove and dishes. While of late years the hunting has been rather poor still the business men who can only leave for a day or few hours at a time, and if they do come back with an empty bag they have had the benefit of the rest from care and usually come home refreshed. Father packed the tiny craft with his share of the traps—extra coats and a large bottle of milk were stowed up front—the gun and shells in the middle, and putting up his sail, with paddle and oars, he was gone. I pushed the boat and was soon out of sight. When I returned to the house it was time to start the boys off. They were wild as Indians and such hurrying into camp suits, then the carriage was again filled with guns, etc., and we started the observed of all observers, the whole neighborhood being aware of the fact that the Glovers were going hunting. The boat, another tiny duck boat, with room for two and no more, was soon ready to start. I had many injunctions "to be careful," the boys were off and I turned old Billie's homeward. The next day our hunters returned, tired, but happy, and brought 4 ducks and 8 snipe. As they sat and talked after supper I took down these few notes which I give in father's words:

"Well, I reached the shanty about 6 o'clock, having made several stops, but didn't get any ducks. I got the key to the shanty late yesterday afternoon. It grew late, the boys didn't come, and I got so uneasy that I jumped in my boat and pulled down the river. I only went a short distance and I heard them coming—the wind had died down, so they had to pull most of the way. We enjoyed our supper, and about 8 o'clock were joined by Mr. H., who drove up from town. We went to bed a little after 9—I can't say that any of us slept much—and at 3 o'clock we got up, took a late breakfast, and then started for the marsh. In about half hour I did most of my shooting. I never saw ducks decoy so well. In fact I almost forgot to fire my gun I was so astonished to see a flock come down into the water while I was in plain sight—I killed two as they rose and another dropped to my second shot. The next one I killed at long range, Mr. H. brought down two, and that ended the ducks—we saw no more, so we went over to the low meadow grounds and all started for the marsh. In about half hour I did most of my shooting. I never saw ducks decoy so well. In fact I almost forgot to fire my gun I was so astonished to see a flock come down into the water while I was in plain sight—I killed two as they rose and another dropped to my second shot. The next one I killed at long range, Mr. H. brought down two, and that ended the ducks—we saw no more, so we went over to the low meadow grounds and all started for the marsh. In about half hour I did most of my shooting. I never saw ducks decoy so well. In fact I almost forgot to fire my gun I was so astonished to see a flock come down into the water while I was in plain sight—I killed two as they rose and another dropped to my second shot. week. The prettiest food fish of the family, introduced from Germany, is the tench. Quite a number have been caught in the Potomac.

The shad season thus far has been poor in the Potomac. White perch have been scarce in the seines, but the anglers (hook and liners mostly) have been reaping a rich harvest between Georgetown, a new addition to Washington, and the chain bridge. A fellow told me recently that he caught more than a hundred perch, and stopped fishing for want of bait. He searched for worms in a place wherein worms were not, and had to give up fishing. I asked him why he didn't use young eels, and told him where to look for them. He saw thousands of them go wriggling around the rocks, but didn't know what they were or that they make good bait for white perch.

There has been a little good black-bass fishing. On April 27 Messrs. A. Hancock and J. H. Hunter caught 37 bass at the falls. These weighed about 45lbs., and were caught with minnows. About May 1 Mr. Wm. Alvey, and one or two others, of the Woodmont Club, caught 90 bass in three days' fishing. On the 6th Messrs. Mohler, Hendrickson, Lisle and John and Arthur fished at Weverton, near Harper's Ferry, catching 6 bass and 3 sunfish. Arthur (aged 9) succeeded in taking the largest bass, a 14-pounder. The day was cold and very disagreeable. Lots of bass have been taken on that part of the river, the fishing late in April and early in May having been better than for several years. On May 20 Mr. H. C. Coburn, using live minnows for bait, caught 6 bass averaging over 2lbs. in weight. Dr. Townshend, Mr. Einstein and another gentleman had equal success. These fish were taken at the club house near Great Falls, and the bait was bought at the place for about 25 cents a bucketful. No eggs were seen in the bass opened by Mr. Coburn. Some of the bass now are on the spawning beds and little fishing is looked for until about the middle of August. From then till cold weather sets in good fishing is to be expected. During the fall months the bass is in his prime condition and contests vigorously every inch of ground.

The water in the Potomac at present is very clear and high. A good season for rockfish at the Little Falls is predicted. Rare sport is often had here, the fish ranging from 1 to 15lbs. in weight.

On May 11 a new rod and gun club was organized in Washington, which is named The Washington Rod and Gun Club. The following officers were elected: President, S. W. Stinemetz; Vice-President, Joseph H. Hunter; Secretary, A. M. McCormick; Treasurer, L. K. Devendorf; Captain, George S. Atwater. The object of this club is trap shooting, fishing and the protection of fish and game. A club house for the accommodation of the anglers is to be erected on the Potomac in the vicinity of Seneca, and grounds suitable for trap shooting will be secured.

Many things of interest have been observed in the market besides those already mentioned. The supply of Southern and East Coast fishes has been unusually good. Croakers of large size, weighing as much as 2lbs., have been in good supply; bluefish quite plentiful, and pompano also. Quite a large number of small pompano have been on the market. Red snappers are plentiful. May 14 I noticed a channel bass or red drum of good size, I should say 20lbs. weight. Weakfish or salt-water trout, both plain and spotted, common. Spanish mackerel fairly common. I noticed for the first time this spring moonfish (*Chætodipterus*) and kingfish (*Menticirrhus*), May 14. The moonfish, a pair of them, were as fine specimens as I have ever seen; at least of 6lbs. weight each. The kingfish, but three small bunches, measured from 11 to 15in. each. A few small tautogs were seen. The sea bass (*Centropristis striatus*) are plentiful and reach here in excellent condition. Porgies or scup (*Stenotomus*) are quite abundant and have been running large, but I noticed a few bunches of small ones. These were not larger than the common sunfish. Very few sheephead are seen. Flatfish and young halibut quite plentiful. One or two young drum (*Pogonias*) have found their way to our market. Pike-perch (*Stizostedion*) weighing from 1 to 6lbs. apiece have been more or less common. Eels and catfish in good supply. Sturgeon are reported as being common in the river.

The market has been well supplied with good fat snapping turtles, and by the looks of Golden's stand they can meet a good demand. These come from the Potomac.

CHICAGO AND THE WEST.

CHICAGO, Ill., May 23.—The main fact of interest from this point is that the Kankakee Fish and Game Protective Association was organized last night. This was done at the meeting of the Possum Club, as was earlier announced to be the intention.

Nearly fifty chairs were filled at the Possum Club meeting, several gentlemen being present from outside the city, among these Mr. Geo. L. Maillet, of Crown Point, and Mr. Chas. J. Bockius, of Marion, Ind., and Col. A. W. Jones, of Virginia. Mr. Organ was in the chair, and at 7:30 seated the assembly, which had met at Werner's.

At 9:30 Mr. Organ called the meeting to order and asked for the opinion of the meeting on the subject of organization for this protective purpose. Mr. Gillespie at once moved to organize, and this carried, with some discussion by Mr. Farmer and others. The chair called for a description of the lawless condition of affairs on the lower Kankakee, and attention was drawn to the fact that the fish-ways were not in any of the dams of the Kankakee as required by law. The chair then called on Mr. Geo. E. Cole, president of the Fox River Association, present as guest and organizer by special invitation for the evening. The chair called attention to the fact that nothing succeeds like success, that the Fox River Association had succeeded, that the new association would do well to follow these established lines closely; Mr. Cole was present only under protest, not seeking any glory, but was willing to tell how and show how to organize successfully. The new association would do well to follow his advice to the letter.

Mr. Cole then made some terse remarks about the Fox River work, said he knew that success could be repeated, and at once got to work by moving for a committee of three on by-laws. The chair appointed Messrs. Cole, Mussey and Hough. These retired and in about five minutes reported back for adoption of the by-laws of the Fox River Association, properly modified in phraseology for the Kankakee. By motion of Mr. Low, these were adopted without reading. Mr. Cole explained the by-laws and their effect briefly and plainly, and said it was a very

simple thing to do all the work when it was gone about in the right manner. Mr. Gillespie testified to the thoroughness of the fishway work on the Fox. Dr. N. Rowe spoke briefly and promised all the aid in his power. Mr. Abner Price said English Lake, on the Kankakee, had always been full of gill nets, nothing practical had ever been done to remove them. He was ready, if this thing meant business. Mr. Jas. Sexton, postmaster of the city of Chicago, said he was still ready to lend a hand in anything like this. Col. Felton said he had been interested in propagating things ever since he was knee high. He was glad to see so many present, and was sorry that he could not bring in with him Mr. John Hunner, State Treasurer of Wisconsin, who he knew would be interested in all this, but whom he had been unable to find at his hotel. Mr. Low told the story of his work at Springfield, complimented Commissioner Bartlett and Mr. Cole in the highest terms, and indorsed this movement. He said he did this only on the supposition that those going into the Association would put up their money. He had heard so much of talk. Mr. Maillet, of Crown Point told about the recent yanking of three law breakers in that town, but thought the law of Indiana a trifle faulty. Mr. Bockius also spoke nicely.

On Mr. Cole's suggestion it was moved that the chair appoint a committee of three, the chair to be one of the three, for the selection of eleven directors. This committee shortly reported, and after discussion the list of directors was chosen as follows: Messrs. Geo. E. Cole, Abner Price, A. M. Fuller, J. P. Card, T. Benton Leiter, R. B. Organ, H. D. Nicholls, Fred C. Donald and E. Hough, of Chicago; Mr. Geo. L. Maillet and Dr. H. P. Swartz, of Crown Point, Ind. Some talk was had about extending the work of the association over "northern Illinois," but this was wisely opposed, the concentrated work of the Fox River Association being held up as the model. The annual membership was placed at \$2, and the life membership at \$20. This is just double the Fox River dues, and it was a wise move to make them so. The directors were advised to meet under the by-laws one week from date. A vote of thanks was carried for Mr. Cole amid a storm of applause. Mr. Low then moved that the next meeting of the Possum Club be held during the week of the Illinois State shoot, early June, so that visiting shooters could be invited, and that Dr. N. Rowe be the chairman of such meeting. The latter made a vigorous kick on plea of business, but was seated. The meeting adjourned. Those present were Messrs. Maillet, Dicks, Hamline, Farmer, Place, Cleaver, Weaver, Dr. Jones, Andrews, Von Lengerke, O'Brien, C. S. Wilcox, J. L. Wilcox, Cole, Sexton, Organ, Mussey, Kinney, Low, Gillespie, Felton, Anson, Pfeffer, Parker, Stone, Frazier, Wiggins, Bockius, Sheoban, Cox, Stephens, Fetherstone, Mitchell, Waldron, Haynes, Holder, Haskell, Turtle, Dr. Rowe, Knox, Shaw and Price.

The membership of the Possum changes one-half at every meeting. It grows well, and is already quite a factor in Chicago sportsmanship. If anything needs organizing, the first word is, "Call a meeting of the Possum Club."

This, in brief, is the first step in the progress of the Kankakee Association. It is something needed, and something which ought to succeed. It will be seen that the process of organization, as laid out by Mr. Cole, was very simple. Without such guiding plan, already devised, there must have ensued here one of those disastrous talking events which have strewn with wrecks the course of game protection time out of mind. Now, these eleven directors will meet and elect a president and a treasurer, will assign men to levy the contribution, and will appoint fish, game and legal committees. It is all in the hands of the directors. This may look like a close corporation, but that is just what it ought to be. A crowd will talk, but will not work. If out of the eleven directors six will meet for a quorum, and if out of those six three will actually and enthusiastically work, then this association will succeed. This is what the sifting down of organization does. It was three men that made the Fox River Association what it is. All this policy work, this consultation of personal motives, or club lines, or localities and the like, as is now usually done in such work, is a mistake, because it doesn't organize, and it doesn't sift out the workers from the talkers, and it doesn't get the kernel out of the chaff. Too much thanks cannot be given Mr. Cole for his purely businesslike way of going at this. It would be easy to hurrah for Mr. Cole and the young association, but that would neither please the one nor benefit the other. The time has not yet come to hurrah, but let us hope it will come, as I firmly believe it will.

The following ambiguous paragraph from a daily newspaper was handed me to-day by Mr. R. B. Organ. Does anybody know anything about it out here? "It is hard to tell what the 'improvements' or 'purposes' may mean: 'PEKIN, Ill., May 21.—A meeting of the parties who propose purchasing the tax title to 15,000 acres of hunting and fishing land, contiguous to Spring Lake, which is fourteen miles below this city on the Illinois River, was held to-day. It was decided at once to improve the land so that it may be used for the purpose in view when purchased. There are 63 stockholders.' It will be remembered that Spring Lake county is one of the best hunting and fishing localities along the Illinois River."

A party of gentlemen from Cleveland, Messrs. Chas. W. Burrows, Clark T. Hasbrouck, Jas. Wood, F. H. Morris, A. L. Moses, Walter Kennard, Geo. Faulhaber and S. H. Schmuck, outfitted here this week for the muscullonge country of the Manitowish region, via Lake Shore & Western Railway. They are a jolly crowd, and will have a jolly time. Some of these names are familiar along the Castalia Stream in Ohio.

Dr. O. W. Nixon, literary editor of the Chicago *Daily Inter-Ocean*, Mr. Harry Ballard, city editor of the same paper, with Mr. Wm. Taylor and Col. John S. Cooper, are also on their way to the muscullonge lakes. Col. Cooper is an old-timer in that region, and he takes in with him this year a scheme to get away with the wary muscullonge which gets away with anything I ever saw or heard of in the way of artificial bait. The worthy Colonel has visited some toy store, and purchased a hollow rubber image, about 7x11in. in size, and alleged to be built in the semblance of a young duck. This he inflated and sealed up the hole, and then he got Billy Morgan, over at Spaldings, to wire a shark hook to it. The device is completed by a coat of paint. The whole business looks like a Chinese idol. Col. Cooper fondly dreams that if he leaves that thing floating on the bosom of the festal lakes, the

muscullonge will think it is a young wild duck, and will swallow it bodily; whereupon the arsenic in the green paint will soon cause the fish to turn belly up, or come out and lean over a log, in either of which cases the task remaining to the Colonel would be but trifling in its nature, as he could easily secure the fish. Look out now for a weird fish story when that crowd gets back. A literary editor, a city editor and a 7x11 rubber duck—if that isn't a muscullonge combination I don't know where you get them. E. HOUGH.

TONS OF FISH DRIED UP.

Editor Forest and Stream:

Why is so little attention paid by the Fish Commissioners of the several States bordering on the river to the fishes of the Upper Mississippi? I spent four months of last summer and fall on the river between Dubuque and St. Louis and I think I am drawing it mild when I say that I have seen tons of black bass and great northern pike left by the water of spring in the shallow ponds on the islands. In a month after the river gets into its banks most of these ponds are dry and the fish that are not scooped up by the natives are left to rot in the sun. At the expense of a few dollars these fish might all be saved. You have no idea how many fish are destroyed in that way every year; they seem to run into all the ponds and low places on the islands to escape the running ice during the spring break-up, and when the river falls they are left imprisoned; then it is only a question of time until they meet their fate. This makes a feast for coons, skunks and mink. I have taken pike that would weigh from 10lbs. upward with great gashes cut in them by the murderous beak of the blue crane. I wonder what he expected to do with such a fish. F. W. S.

[In 1888 two cars of the U. S. Fish Commission were lent to the Illinois Commissioners, with the men necessary to manage them, and from July 15 to Oct. 5, 26 carloads of fish were rescued and deposited in Illinois waters. This work is still continued with the help of the U. S. Commission. In 1889 two cars were used and in 1890 three cars were engaged in the work. The fish distributed were from 4 to 14in. in length. Many hundreds of thousands of valuable fishes, including bass, crappie, strawberry bass, wall-eyed pike and catfishes. In twelve days, near Rapid City, Illinois, nearly one half million of fish were transferred from drying pools to the river. The same kind of work was carried on more than ten years ago by Mr. Shaw, then Fish Commissioner of Iowa. He was followed by Dr. Bartlett, of the Illinois Commission, and in 1884 the Government took up the project and carried it forward on a gigantic scale. There is no question about the immense service rendered by such rescue of valuable food fishes, and all States subject to such mortality of fish life should take steps to save them from destruction.]

PLEASANT LAKE.

THE many beautiful lakes of New Hampshire afford superb attractions, as her thousands of summer guests annually testify, yet none will tempt thither the anglers of her neighboring States in the years to come like a cold, deep, sparkling gem which lies placidly sleeping in the valley near the base of Kearsarge Mountain in the town of New London.

This attractive sheet of water, pure as crystal, is known as Pleasant Lake, and was at one time locally famous for its trout fishing. Near its western rockbound shore is the residence of Mr. Ransom F. Sargent, the genial superintendent of the Lake Sunapee fish hatchery, and through whose influence the attention of Hon. E. B. Hodge, State Fish Commissioner, was directed to this natural trout pond.

Mr. Hodge at once perceived the advantages of stocking its waters, and, by an act of the Legislature prohibiting the taking of trout or landlocked salmon from any of its feeders for a period of five years, he felt justified in instructing Mr. Sargent to screen its outlet effectually, and place in the brooks several thousand fry of the salmon, rainbow and brook trout from the Sunapee hatchery, each year.

In the spring of 1890, 15,000 young salmon were placed in Great Brook, and late in the fall myriads of fingerlings swarming the stream proved only too well that these waters are adapted to a thrifty advancement of their growth. Wardens have been appointed to serve as keepers, and a vigilant guard will be maintained, lest unscrupulous poachers attempt to evade the law.

The five natural trout streams supplying the lake with its water of crystal purity, have been carefully posted in conspicuous places with copies of the legislative act, defining the penalties imposed, and with the recent addition of 45,000 more fry, no doubt exists of the future treats in store at Pleasant Lake for "knights of the rod."

BYRON.

THE SQUIRES CATALOGUE.

LIKE a tree flourishing by the waterside Mr. Squires's catalogue takes on new stateliness with the years. The edition prepared for the season of 1891 excels that of last year, and that one surpassed anything that had ever been dreamed of by the most ambitious of sportsman's catalogue makers.

In addition to the material given before Mr. Squires now presents a number of well-written and readable papers prepared for the catalogue by Hon. Theodore Roosevelt, Dr. James A. Henshall and Messrs. Henry P. Wells, Charles Hallcock, C. Bowyer Vaux and others. These are illustrated—and for the most part happily—with engravings from original drawings by well known artists; and no detail of adornment of type and luxurious paper has been neglected. All are creditable and well worthy of their setting, with the single exception of the work of Bill Nye, whose humor degenerates into stable-boy coarseness of a vulgar type. Mr. Roosevelt writes of "Big Game Hunting," a subject on which he is an authority, by virtue of a long experience on the plains and in the mountains of the West. Mr. Wells has chosen the salmon as his theme, Dr. Henshall puts a vast amount of black bass lore into compact compass, and Mr. Hallcock sketches the happy days of boyhood on the shores of Long Island Sound. This paper we have selected, by Mr. Squires's permission, to reprint here, and it appears, nearly in full, with two of the four illustrations, for the delectation of many a silver-haired reader of the FOREST AND STREAM, who was himself once a boy down by the sea.

COPYRIGHT, 1891, BY HENRY C. SQUIRES.

NE learns his salt-water lessons

early who is reared beside the bright waves of Long Island Sound. Given a good centerboard boat and unrestricted personal liberty in hours of boyhood, and there is no better kindergarten for the angler than its broad expanse of bosom and the errant tideways of its indented shores. In the course of fifty years I have seen it in all its moods.

It was my good fortune to spend portions of a lusty adolescence at New Haven, where my father's villa occupied the vantage ground of an overlooking bluff, whence were barely visible the blue outlines of Long Island, twenty miles off; and as the greater part of my tuition was acquired at Brooks & Thatcher's boat house, with the hopeful son of the senior partner as my inevitable companion, we two, John and I, soon learned the caprices of that changeful Mediterranean, and how to lay the Teazer's course accordingly.

Dear old boat! She was a weatherly little craft and took right hold of the water as though she meant to keep her grip; and she did, for many a time did old Captain Brooks anxiously watch her through his glass from the boat house loft at the head of the harbor as she came bowling up the channel when no other sail was in sight, except perchance some stately West India vessel in-bound with "rum, sugar and molasses" for the Trowbridges or the Armstrongs. In course of years we came to know every reef and ledge within a reach of forty miles up and down the Sound. From Bridgeport to New London is an archipelago of breezy islands and surf-worn rocks, many of them awash only at low water, among whose marine subways and thoroughfares a multitude of fish of many kinds find sumptuous nursery ground and pasture; and there was not a spar buoy, spit, or spindle, which did not indicate for us some favorable fishing ground for blackfish or sea bass, or a noted rendezvous for cunners, dogfish, sea spiders, robins, and all that disreputable ilk which betimes annoy the angler by occupying his time or stealing bait. We knew every sandbar and shoal where we could catch shrimps and sandworms, and all the tepid shallows in the estuaries where minnows swarmed, and the sedgy shores with their bands of mussels, beds of clams, and colonies of fiddler crabs.

Egad! what fun it was, and is, to catch the fiddlers away from home, or prod them out of their burrows with a stick! We used to sail over to the east side of New Haven harbor, near old Fort Hale, and fill our tins on the early flood; or we would find our quarry on the west side marshes to which West River is tributary. A colony of these comical crustaceans reminds me of a prairie dog town in Kansas or Dakota. It is a sort of seashore analogue. Each little settler who does not happen to be foraging or visiting his neighbor is always sitting at the door of his dugout, with his big claw swinging menacingly over his shoulder, and whenever a person approaches he bobs down out of view. All the vagrants hustle incontinently, and in half a moment the village seems untenanted, with nothing but empty holes in sight. A few minutes later, however, if all is quiet the community gets alive again, and an expert catcher can fill a two quart can in half an hour.

In midsummer, when the ebb served, we calculated to run down the harbor under a northwesterly breeze from off the land, and so reached the fishing ground as early as possible on the young flood, returning with the wind fair from the northward in the afternoon. Usually, we were contented to try the "Cow and Calf" rocks off Branford, or the "Monument" near Stony Point, a matter of a dozen miles or so, but the cruise was often extended to the Thimble Islands to the eastward, or to Charles Island, Black Rock, and the Middle Ground, off Bridgeport, to the westward—all favorite places for old fishermen at the present time. On occasion we ventured to Faulkner's Island and beyond, though the latter was seldom attempted in a single day. Trips like these involved the use of a 28ft. jib and mainsail boat called the Eagle, for which we always took the Teazer along as tender; and great were the times we had, sometimes stopping overnight with the light-keeper, or going ashore to dinner at Malachi Krig's at Branford Point,

or at Double Beach, or at Double Point, Guilford, or Stony Point, where we often met carriage parties who drove down from New Haven to join us in a chowder or clam bake, or a feast of green corn and lobsters. Wonder if they have such fun nowadays! The old parties don't, I know, for most of them are dead; but now and then a survivor turns up unexpectedly in some remote region to talk over the reminiscences which can never be forgotten. Six quarts of provender served in wooden kids was the regulation mess at an old-time clam bake, and the individual who could not get away with that much had no appetite at all.

The climax of festivity was in the blackfish season. Odd zoos! what superlative chowder those blackfish do make! but hardly equal to sea bass though. Sometimes we caught fine sea bass when we fished for tautog, letting our big sinkers down to the rocky bottom. The blackfish occasionally ran up to ten or twelve pounds in weight, though the average was smaller by a good deal, and their humor was capricious. Sometimes, on eventful days, the boats would fill up soon, and on other occasions fishermen would get no fish at all. But John Brooks and I never were "elected." There was one infallible crack 18in. wide between two big rocks at the Thimble Island where we were sure of fish, as a last resort if we failed to find them at the regular trying places. Indeed, this crack was a clean rift from top to bottom through the very center of the island where Captain Kidd's punch bowl and ringbolt used to be pointed out to the credulous; and as the tide ebb and flowed through it, the blackfish used it as a sort of thoroughfare, and any one curious enough to peer down into the depths, where the kelp swayed gently with the motion of the current, could see the blackfish lazily sculling through. Then it was fun to drop a fiddler crab directly before the nose of one of them, and see him hook himself incontinently; then up with the line hand over hand till we had him floundering on rocks beside us. But the greatest fun was the mystery with all the other fishermen, who came in empty handed, where those blackfish came from. We kept the secret always close and none of them ever guessed. Wonder if it is that way now?

Mentioning flounders—we had great sport with them, too, in the spring off the draws of Long Wharf and the old Basin Wharf, when the rising tide flowed through. A piece of umbrella wire 8in. long, with a 6in. snood at each end baited with a clam, was the kind of rig we used to supplement a stout line and stiff cane pole. Sometimes we would catch a basketful, though it was cold work early in the season, and there were days when the fish froze stiff on the piers. Later, when the weather grew warmer, it was fun to spear them on the flats among the rushes and eel grass, just before and after dead low water, when the tide had run an hour or so. But the trick was to see the fish, for they had a knack of burying themselves out of sight in the ooze. It was only when one moved that he betrayed his whereabouts by stirring up his roil.

Still earlier in the spring was the frostfish season—frostfish then, tomcods in the fall. We used to think it sport watching for them when the harbor was frozen over in the clear space which was left between the wharves and the ice by the rise and fall of the tide. The fish would come up to breathe and look for food, and it was an easy matter to jig them with a triangle of stout hooks bent on to an umbrella wire with a wooden handle attached. In June came the weakfish, or suckermangs, when the channel became a sandbar, and the beach and old Fort Hale would often swarm with fleets of fishing boats. I remember one season when every boat caught weakfish as fast as their occupants could toss their bait over and pull in. They used crabs and shrimps, and fished with hand lines only a few yards long, taking most of the fish near the surface. The fish were fairly ravenous.

At the Quinnepiac River bridge in July was the favorite place to catch young bluefish, or snapping mackerel, about the size of one's hand. That was about the

only place and time of year when delicate tackle was in vogue in the forties, for snapper fishing was the special pastime of dilettante anglers, and drew out many who did not show up on other occasions. With float and shrimp and line as fine as gossamer thread, and hooks diminutive, they basketed hosts of these delicate fish. The tide ran through the draw by the old Bell Dock with a rush, and the water fairly sparkled with the flashing of the silvery fish as they were swept through. About the same time there was splendid sport outside the harbor on the Sound, trolling for large bluefish. Fleets of white-winged sharpies, and many larger craft, cruised off shore and on in the ever freshening breeze, and sturgeon leaped hilariously and fell again with ponderous splash. In the fall the eels and tomcods would command attention, and there and West River was the preferable fishing ground, though the wharves and the Quinnepiac were not far behind in choice. Indeed, the general

round of sport was varied and continuous, though the variety of fish life was less than on the New Jersey coast. We missed the Spanish mackerel, the sheepshead, the kingfish, and the drum, although occasional representatives of some of these families would be caught in the great menhaden seines which were hauled inside the harbor. The proceeds of these hauls would disclose what kinds of fish inhabited the Sound, and it was interesting to examine them. They used to call menhaden "whitefish" in those days, and in July and August the harbors and open waters fairly swarmed with them. My father leased a seining ground at Oyster Point, where a colony of fishermen had a fish house, and capstans worked by horses, with seines which would sweep a circuit of a mile. Occasionally they would catch a million whitefish at a haul. These were chiefly utilized as fertilizers, and were spread over the fields with pitchforks and plowed in. I remember that while the menhaden were running comparatively few food fish were taken in the seine. There were a few shad, sand porgies, and flounders, with a miscellaneous assortment of crabs, eels, horetish, starfish, jellyfish.

Here and there blue crabs make their awkward way to spawning places in the sand, swarms of shrimps skitter over the surface of the water; horseshoe crabs crawl mysteriously over the bottom, with motive power invisible, looking for all the world like spelter wash basins with handles like bayonets, serrated on the edges. Farmers gather them in for their hogs, hauling them out of the water with rakes, and when they catch one turning him upside down, with his legs all sprawling, and thrusting his tail in the sand to hold him prisoner until the wagon comes around to pick all up and haul them away to the pig pens. There is no end of jellyfish in delicate tints of pearl, lavender, mauve, and brown, most of them translucent—beautiful to look at, but apt to sting like nettles when handled. Occasionally one finds a sea urchin which has been wrenched from some distant reef and thrown up on the land wash; with here and there a shark's egg, looking like a pocket book with tendrils at the four corners, and strings of pike with water blisters on them which snap when they are pinched. It is astonishing what a variety of forms one finds down by the sea, all of them delectable baits for fish, and what a multitude more the receding tide will uncover—soft clams, skimmers, sand worms, razor clams, scollops, mussels, periwinkles, and diminutive shellfish of many kinds.

One day two dudes, fashionably equipped and rigged, rowed up the Arthur Kill, abreast of a line of boats engaged in weakfishing. It was obvious that they were new to the business, although their flannels were the correct thing. They had hardly come to an anchor when one of them caught a sand porgy. He lifted the quivering trophy inboard and held it up before him, dangling at the end of the line, himself quite bewildered and evidently in doubt what to do with it. Presently he became impressed with the necessity of removing it from the hook; but when he attempted to touch it, it wriggled and he drew his hand back nervously. Then he made a second movement. "Do you think the blasted thing will nip me?" we heard him ask his companion. The other could not say. Then he turned in his extremity and appealed to the nearest boatman. "Me boy," he said, "would you mind taking 'im off, if you'd be so kind?" The appeal was so candid and earnest that the other could not decline the favor, notwithstanding the inconvenience it subjected. When the dude had sufficiently expressed his thanks for the favor he gave a sigh of obvious relief, and turning abruptly to his comrade without regarding his benefactor any further, he asked, "Don't you think it was rather sudden, the way he took it?" Then he contemplated the dying fish with visible emotion as it lay gasping on the bottom of the skiff, and a regretful qualm came over him. Directly a new idea was born of his solicitude, and he added, "Wouldn't it be a good plan to put a little sea water on 'im? Perhaps 'e might revive?" Yea, verily! it is strange what one oftentimes discovers "Down by the Sea."

COPYRIGHT, 1891, BY HENRY C. SQUIRES.

ANGLING NOTES.

TWO speckled trout were caught in fykes last week in the Hudson River at Sing Sing. One weighed 8oz. and the other 12oz. This is the first time that trout have been taken in the lower Hudson as far as I have heard. Striped bass have been taken in large numbers much to the disgust of the Sing Sing anglers. It seems a pity that so many people should be deprived of their favorite sport by a few net fishermen. Over 1,500 lbs. were taken in one haul on the flats off the mouth of the Croton River and only fetched 5 cents a pound.

The largest speckled trout taken at the South Side Sportsmen's Club this season was killed by Mr. S. W. Milbank, weight 3 lbs. 2oz. One good angler, who fishes for size only, reports that he killed eight trout from 13 to 14 in. long and two of 15 in. They were caught on the Buskill, a famous stream for large trout.

Owing to the rapid changes in the weather, the fly-fishing has been very uncertain. I visited the Blooming Grove Park Association last week. Heavy northeasterly rains, followed by freezing weather put a stop to all fly-fishing. The night I arrived there was a magnificent show of trout running from 1 lb. to 1 1/2 lbs. in the ice box, taken the day before in Lake Giles, most of them on the Parmachenee belle. The Association have improved their club house very much by enlarging the dining room and adding a number of bedrooms. Everything is very comfortable and in tip top order. The hatchery makes a fine showing and the fry look well. They will turn out a number of landlocked salmon next season.

Hundreds of anglers are looking forward to Memorial Day, the opening of the black bass season. What the result will be or how the changeable weather will influence the bass, no one can tell. The probabilities are that bass will be late spawning this season and consequently not in as good condition as usual. Greenwood Lake and Hopatcong guides are making great preparations and expect a crowd from New York and adjoining cities. To secure choice of boatmen it will be well to go early the afternoon before, and when possible take bait along and have everything ready for an early start on the morning of the 30th.

The veteran angler is amazed at the reports of the catches made on some of the streams this season. He says to himself, "How much the fishing has improved this spring," and immediately starts for the promising locality, but to his disgust finds, on his arrival, that he ought to have been there the week before or next week or any other time but the present. It seems too bad that people cannot confine themselves to facts in reporting catches and not lead the confiding brother angler astray.

Mr. Ed. Mott in truth laments the fact that he cannot get something for nothing and vents his spite on the unfortunate angler who likes to fish with decent tackle instead of a bamboo pole and "worms." He has probably been trespassing on other people's property and got "fired off." But the cold hard fact remains that trout fishing is a luxury nowadays that must be paid for, either by traveling far enough to get beyond the reach of the grasping farmer who asks a small toll for the privilege of fishing or by paying dues to some good club, and the quicker he recognizes this fact the better.

SCARLET-IBIS.

THE NEW HAMPSHIRE TROUT SEASON.

CHARLESTOWN, N. H., May 23.—*Editor Forest and Stream:* Your correspondent "B." from Nashua, writes a very good letter from "his point of view," but the trouble is that the range of his vision from that point is far too limited and only incloses a strip of land twenty miles wide on the southern edge of the State. Now, the State of New Hampshire stretches over three degrees of latitude to the north of Nashua, and, as "B." admits, the waters in the upper part of the State are covered with ice April 15. I have caught trout all over New Hampshire for more than fifty years, probably before "B." was born, and I have fished the length and the breadth of it, and I know that for the average of the State and on average seasons May 15 would be amply early to open the season.

Now and then, as last year, we have a remarkably early spring, and one of the best baskets of trout I ever caught I got on April 23, 1841, in this town. In the early '70s I have found May 23 early enough in the brooks between Manchester and Nashua.

The men who forestall the opening on the first of May will do the same thing on April 15, and the trout are not worth catching until the warm spring rains have filled the brooks and given them something to eat and some life to seize the bait.

I have been out three times with poor success so far, and the only decent catch I have heard of was taken in the warm rain of the 15th inst. Your correspondent "B." admits that the Fish Commissioners who ought to know, and do know, were bitterly opposed to the change, and I have reason to believe that it was quietly worked through the Legislature before they knew anything about it, as it was known that they would oppose such a purely local measure.

When the statutes were last revised in 1879, the sections relating to fish and game were placed in the hands of the Fish and Game Commissioners, and they went through them thoroughly, and struck out a mass of local enactments and codified the whole law, just as you have been trying to do in New York. They then at the request of some Nashua anglers fixed the opening date at April 1.

Four years' experience showed this to be ridiculous, and the Legislature changed it to May 1. Vermont has tried the same thing and changed from April 1 to May 1 last winter.

By the present law, our brooks are now open to anglers on the borders of Maine and Vermont, or three-quarters of the way round the State, two weeks earlier than they can fish at home, and we have the same trouble that Vermont has been having from "pirates" from New Hampshire.

"B." admits that the older anglers were opposed to the change, and as one of them I shall oppose it until it is revised, and this will be done next session, if the majority of the anglers of the State are kept posted on the matter.

The essential virtue in game laws is their uniformity under equal conditions, and when northern New England is fixed on May 1 and northern New York the same, it is absurd, if not criminal, to run a great wedge through the middle of it, clear up to Canada, opening the season two weeks earlier to suit the notions of a few boys on the border of Massachusetts.

VON W.

A DAY ON THE POTOMAC.

HEARING great reports of this spring's bass fishing at Weverton, Point of Rocks and neighboring points, a party of five left Washington city at 4:40 A.M. May 6, for Weverton, on the Potomac. It seems as if from the start our fishing excursion was destined to be a failure. We rode to the Metropolitan Junction in an engine so as to catch our train. It was the Treasury train and did not come into the depot, so we had to board it while getting water.

Our train would not stop at Weverton so we had to get off at Washington Junction. As the train we had left was a little late we hoped to make close connection with the next train. But in this we were disappointed, for the train was two or three hours late on account of a wreck. These circumstances were not calculated to elevate the spirits of a fisherman. Besides the weather was bitterly cold. We all had on overcoats but they did little good. Had we not gotten thus far we would not have kept on our journey. At last our train whistled, pulled into the depot and we boarded it. We arrived at our destination, sleepy, cold and in very bad spirits. The boatmen were waiting for us. We got in the boats and pushed out into the river, expecting to catch nothing but colds. We had gotten but a short distance up the river when it began to snow a little; this soon stopped but the temperature began to fall and with it our spirits. After many unsuccessful casts one of our party in boat No. 2 got a strike and landed—not a bass but a sunfish. There are many rocks in the river here. There were no more strikes for an hour or more, then a bass was reeled in. No further success till the afternoon.

About noon we went ashore, built a large fire, thawed ourselves out, and ate dinner with a relish. Boat No. 1 caught one bass, which weighed 1 1/2 lbs. This was the largest we caught during the day. The evening was nearly a repetition of the morning. Boat No. 1 landed three more bass, and No. 2 one bass and two sunfish. The reward of getting up at 2 o'clock in the morning, being delayed twice by trains, catching colds and nearly freezing, was six black bass and three sunfish. We had fished from Weverton to Knoxville. At Knoxville we went ashore, then to the depot. After feasting on sardines, crackers and milk we leaned back in our chairs, talked and tried to sleep away the two or three hours we had to wait for the next train for Washington.

The bass would not notice a spoon, and all the fish were caught with live minnows.

Very many bass were caught in the river near these points during the latter part of April and the first of May. One gentleman caught 80 bass in three days about the first of the month. People living on the river say the fishing has been unusually good this year.

The scenery here repays one for his trip, but the day was such a one that man could hardly contemplate the beauty of nature.

GARLAND LISLE.

ANGLING IN CANADA.

THE fishing season in Canada has opened very auspiciously this spring. One of the most remarkable catches so far this month occurred in Lake St. Charles, fourteen miles from Quebec, on the 10th inst, when a fine specimen of the gray trout or togue, called by the French-Canadians *toulade*, was killed by Mr. L. Welch on an 8oz. rod, after a fight of an hour and a half. The monster was 35 in. in length and weighed 17 1/2 lbs. Very rarely, indeed, except on certain conditions, does this sluggish giant rise to the fly. Its popular habitat in the vicinity of Quebec is Lake St. Joseph, twenty miles distant from Quebec by the Lake St. John Railway, where it is found in great abundance and grows to a very large size. Here it is often taken from 20 to 30 lbs. in weight, usually by deep-water trolling. The angling for red trout (*Salmo fontinalis*) in Lake St. Joseph has been very good for the past fortnight, the average run of the fish taken being from 1 to 3 lbs.

The annual spring migration northward of American anglers commenced last week, and promises now to continue in steady streams. Dr. Porter, of Bridgeport, and Miss Porter arrived here on Friday and left on Saturday for the lake and river fishing in the Metabetchouan district. They will shortly be followed by several other members of the Metabetchouan Fishing and Game Club, of which United States Senator J. H. Platt is president. Mr. Warren R. Briggs, architect, of Bridgeport, writes that Senator Read and himself will be here, en route for the same preserve, in the course of a day or two, accompanied by their wives.

Two young Englishmen arrived from the old country by the last mail steamship to fish Lake St. John and its tributary waters. In the lake itself the angling is now excellent, it being as yet too early in the season to fish for ouananiche in the Grande Discharge.

Mr. B. A. Scott, of Lake St. John, has been having some rare sport taking the wall-eyed pike that swarm the Peribonca and the lake itself, and that at this season of the year are particularly voracious. During the last few days he has expressed to friends in this city several very handsome specimens of the troller's skill, weighing 12 to 20 lbs. each.

Ouananiche fishing has opened this season a little later than usual, but from this time forth it will certainly improve every day. American anglers will be glad to learn that active measures have been adopted for the preservation of this beautiful game fish, Mr. H. J. Beemer, the American railway man, to whose energy the opening up of this magnificent country is mainly due, having leased from the provincial government the exclusive fishing rights of Lake St. John and its tributaries, embracing an area of over 20,000 square miles. No charge is made to anglers for fishing these waters, the protection of the fish having been undertaken by Mr. Beemer in the interests of the guests of his hotels. One of these latter, which is situated at the terminus of the Quebec & Lake St. John R. R., at Roberval, and overlooks Lake St. John from its western shore, has accommodation for 300 guests. The Island House, situated on one of the islands of the Grande Discharge, in the midst of the ouananiche fishing grounds,

has room for a hundred guests. The distance between the two, in a straight line across the lake, is 25 miles and this is covered in about an hour and a half by the new steamer Mistassini, capable of accommodating nearly 400 guests. There are also two other steamers on Lake St. John, the Peribonca and the Undine, the latter of which may be chartered by private parties of tourists or anglers. During the month of May, and the greater part of June, there is but little fishing in the Grande Discharge, however, the best sport at present being had either along the western shore of the lake, at Roberval, or in the Mistassini and Peribonca rivers, which may be reached either by steamer from Roberval or by canoes with Indian guides, which may be obtained at Roberval.

The salmon fishing season in Canadian streams will open in the course of a few days. Mr. Hogan, proprietor of the St. Lawrence Hall, Montreal, and other salmon fishermen will leave Quebec for the rivers flowing into the Gulf of St. Lawrence early next month. Lord Stanley, of Preston, and family will probably again fish the Cascapedia this season.

E. T. D. CHAMBERS.

QUEBEC, May 18.

P. S.—By an unfortunate slip of either the pen or the types, I was made to say in your issue of the 14th that the ice left Lake St. John early in April. The error must have been so apparent to those of your readers acquainted with this country, that it is scarcely necessary for me to ask them to read the word "April" as intended to be "May."—E. T. D. C.

WISCONSIN ANGLING.—Milwaukee, May 23.—Trout fishing seems to be the prevailing attraction for our local sportsmen just now. Several parties have been away north and west and all have returned with good catches, although they do not explain precisely the method employed in taking the fish. As they were provided with rods, flies innumerable and large creels, however, it is to be presumed the fish were taken from their natural haunts in a truly sportsmanlike manner. An early riser walking along the shore of the bay may see dozens of fishermen, old and young, fishing from the breakwater and pier, assiduously watching their lines for the occasional bite from herring or perch with which they are now and then rewarded. There are a number of fishing clubs formed in the Cream City, several of which own lake front property on Okauchee and Nagowickia lakes. They are making preparations for a busy season, and even now the Saturday evening trains are all loaded with men and boys with their rods and market baskets of provisions, all anxious to get out into the country for a day. Of these clubs we will write more later on. The C., M. & St. P. Ry. will commence running its Sunday trains on the 24th for the accommodation of tourists and fishermen who cannot leave on Saturday. Oconomowoc, Giffords, Okauchee, Nashotah, Nagowickia and Pewaukee all receive their share of visitors. Many are building summer houses for their families on the lake front sites, and a more beautiful locality than Waukesha county with its lakes innumerable and pleasant drives cannot well be imagined.—GREENHEAD.

FT. WASHINGTON, MD., May 12.—A visit to the hatchery of the U. S. Fish Commission at Fort Washington apprised us of the fact that the shad season is about closed there; only a single shad was caught during two seine hauls in a cove which has furnished as many as 300 at a single haul in the height of a good season. The output of eggs from the hatchery will be at least several millions less than last year's yield owing to the sudden and protracted spell of cold weather in the midst of the run. It is reported that there is now near the mouth of the Potomac an unusual number of shad, but whether they will reach the upper river is very doubtful. There was a poor showing all around for the seine to-day; the contents embraced only a few alewives, several shad, a couple of suckers, catfish, white perch, young striped bass, a yellow perch, a carp and a moderate number of sunfishes of two kinds. The captain of the seine, Harron, says the water is too clear for fishing. The sunfishes are beginning to glow with the brilliant hues of the spawning season, and very soon their nests may be found in the shallow water of the neighboring creeks. The sluggish snapping turtle is lurking in the marshes when not paying tribute to the Fish Commission larder.—B.

MONSON TROUT WATERS.—Monson, Me., May 18.—On May 15, F. C. Briggs, of Boston, who represents H. W. Goodwin, 114 Milk street, Boston, went to South Pond, in this town, and spent the day with a guide. He took sixty-seven spotted trout, many of them weighing upward of 1 lb., and was highly elated with the trout and the fishing there. Very liberal catches have also been made at Bear, the Doughty and other ponds here since the ice went out. About seventy-five trout were taken by a party of two gentlemen at Bear Pond during one day's fishing last week.—J. F. C.

THE BOOK OF THE GAME LAWS is for sale by fishing tackle and gun dealers generally. The compilation is winning praise everywhere, and has already taken a place among standard works of reference. From Portland, Ore., comes the note that the Oregon Fish and Game Protection Association, of Portland, has made Mr. Chas. B. Reynolds, editor of the *Book of the Game Laws*, an honorary member, in recognition of the value of his services to the cause in having prepared the compendium.

EGYPT MILLS, Pa.—On the morning of May 6 cold weather accompanied by a snow storm made the outlook for fly-fishing very unpromising, but Mr. Ford and a companion took 41 fair-sized trout during the day. On the 9th the fish were rising freely in Tom's Creek, and these gentlemen got 57 trout ranging from 7 to 11 in. Mr. Ford remained in Pike county until the middle of the month. No very large trout were taken, but there was uniformity of size. No fish under 7 in. was basketed and the largest were 12 in. The best day's fishing yielded 67 fish to three rods. The unusual dryness of the season had so lowered the streams that the fishing was not up to the usual mark.

DECORATION DAY ANGLERS from New York will be given half-fare rates on Decoration Day by the New York, Ontario & Western Railway, whose notice to that effect appears in this issue. The managers of that road are making intelligent provision for fishermen.

GREEN RIVER, NEW BRUNSWICK.—Boston, Mass., May 21.—*Editor Forest and Stream:* Will you kindly let your readers know through your angling notes that Green River, N. B., is leased to the Tobique Salmon Club, and that all persons fishing there without proper permit will be prosecuted. In the Sunday edition of the Boston Herald, May 17, there appeared an article with map of the waters in this section of New Brunswick. As sportsmen trusting to the information given in this article may plan a trip up there I wish to forewarn them that the wardens are on the river and it will be properly protected. It is a shame that such articles are printed snap shot, as many innocent people might spoil a season under such guidance.—E. B.

MICHIGAN TROUT.—Plainwell, Mich., May 16.—Our record on trout here this year has been the best for some years, and is so good that I thought it might be interesting to your readers. May 1, H. S. Stratton brought home one weighing 1lb. 7oz. May 2, George and Rudie Gelkey and Charlie Woodhams brought in one of 1lb. 10oz. May 3, Wm. Crispe one of 2lbs. 14oz. and one of 2lbs. 12oz. Then during the week J. D. Clements brought in one of 2lbs. and one of 1½lbs., and Chauncey Hoose one of 2lbs. These all came from the Abrams Creek, about two miles south of here, and are thought to be of the plant of 1879. Quite a number of trout streams in this neighborhood, but no extra large trout caught but these.—J. H. M.

THE CASTALIA STREAM.—The third paper of the series, descriptive of the "Upper Club," will be given next week.

Fishculture.

U. S. FISH COMMISSION WORK. The Fort Washington station of the Commission has closed its work with shad for the season. The number of eggs collected is 33,445,000. At Havre de Grace, Md., the yield of eggs to May 18 was 48,747,000. On the Delaware to May 14, the number was 6,479,000. From present appearances the output of fry this year will be at least equal to that of 1890, which was nearly 86 millions. The steamer Fish Hawk is at Crisfield, Md., engaged in hydrographic problems connected with the oyster and awaiting the arrival of the Spanish mackerel, which have not yet entered the Chesapeake. Cold weather and storms have greatly interfered with the shad work and the shad have run more into the small streams than usual, causing smaller catches in the great rivers.

The Kennel.

All communications must reach us by Tuesday of the week they are to be published; and should be sent as much earlier as may be convenient.

FIXTURES.

DOG SHOWS.

Sept. 1 to 4.—Dog Show of the Youngstown Kennel Club, at Youngstown, O.

Sept. 9 to 11.—First Annual Dog Show of the Hamilton Kennel Club, at Hamilton, Ont.

Sept. 14 to 18.—Toronto Industrial Exhibition Association Third International Dog Show, at Toronto. C. A. Stone, Sec'y and Supt.

Sept. 22 to 25.—Inaugural Dog Show of the Montreal Exposition Company, at Montreal, Canada.

FIELD TRIALS.

Nov. 2.—Inaugural Trials of the United States Field Trial Club, at Hicknell, Ind. P. T. Madison, Secretary.

Nov. 16.—Eastern Field Trials Club's Thirteenth Annual Trials, at High Point, N. C. Members' Stake Nov. 12. W. A. Coster, Secretary.

Nov. 30.—Central Field Trial Club's Third Annual Trials, at Lexington, N. C. C. H. Odell, Sec'y, 44 and 46 Wall street, New York city.

Dec. 14.—Philadelphia Kennel Club's Field Trials. Charles E. Connell, Secretary.

BEAGLE TRAINING.

Editor Forest and Stream:

Under this heading "Quester," in an article appearing in your issue of May 21, raises some questions that I also would like to see discussed by the older members of the fraternity.

Referring to the interrogations as they occur, "Should a beagle be under control?" For my part I would answer yes. One of my beagle hounds (a bitch) is an excellent hunter and trailer; one of the kind that will do all the hunting for you while you sit on the fence and look on; but should you see a rabbit during this time it would be next to impossible to call her "on," and to say this is provoking, is putting it mild. As long as she is only a few rods distant and under my eyes, the usual whistle call meets with fairly prompt response; but when far enough off to be lost to view in the brush, all calls are of no avail. Thus, only too many instances are brought to mind where a dog under control would have greatly added to the interest of the hunt, and often to the size of the bag. This hound was not trained by me.

Again, following close upon the heels of pussy, the dogs violently giving tongue; is it not gratifying to hear them "bark up" and signify that the game has been run to earth, rather than to have an ominous silence ensue and feel the uncertainty as to the whereabouts of the quarry? More than once have I tramped across the swamp only to learn that the dog was simply for the time outwitted or nosing around a hole or stone wall. In the case of a well-trained hound this silence would have denoted, without alternative, that the game had deluded him, for were it otherwise he would give tongue or "bark up."

Certain it is that a much harder task is before the trainer who wishes to have his dog well in hand and convey to him by action and voice the different phases in the chase, than to allow him to run at random and hunt at will. Some hounds that the writer has hunted with would keep within convenient distance of their master, occasionally ranging a little further off but keeping an eye on him; and not only would they watch when he was trying the brush heaps but would themselves give such places particular attention. When not trailing they would quickly respond to call and follow the course of his finger on the ground with their noses, because they knew from experience that game had been discovered and the hand indicated in what direction it had gone. But all this requires time and patience on the part of the trainer, and much practice on the part of the hounds, and there always will be sportsmen who will differ as to what constitutes a well-trained hound.

In that portion of Connecticut where the writer is at home, the cotton-tail abounds, but the haunts are most unfavorable for hunter and hound. The brush is very thick, difficult to get around in and affords numerous hiding places for the game. For this reason your dogs should here be close at hand, as in the course of a day's hunt it is not

unusual for a person to start quite as many rabbits as the hounds themselves; and the brush being so dense, and a good shot but infrequently to be thought of, it is desirable to have your beagles answer to call at once. However, let us hear from others on this matter. The recent bench shows have demonstrated that the little hound has many friends; no doubt many of these follow the chase, and from them a few words are solicited.

HARTFORD, Conn.

Editor Forest and Stream:

"Quester" asks if beagles should be trained, and wants to know how, etc. It is not at all necessary to train them to range and quarter like pointers and setters, nor can he be trained to be under much control. I have hunted with beagles for many years, generally use two and three couples. I use them exclusively for hares and rabbits. I don't allow them to run foxes, so they will not leave a rabbit track for a fox, but allow them full freedom to hunt wherever they wish. When I wish to leave one cover for some other, I blow a horn and call them in, which they will come to, without they are on track; then if I want them I have to catch them and tie them up until I get them all together. I always use the horn when I want them to come for their food, which associates something good with the sound of the horn. If they hole up a rabbit they should of course remain at the hole and give tongue until I come up, and if I have a ferret they will stand some little distance from the hole, under great excitement until the rabbit bolts, when it is great fun for them and me. It is very seldom they catch one or that I can shoot one, for my dogs are in danger; thus I often hole up the same rabbit three or four times, and then perhaps lose it. I don't go out for quantity, but for sport. I know many pot-hunters who laugh at me, as they say they can take a ferret and kill twice as many as I do without any dog, by putting the ferret into every hole they find, and when the rabbit comes out, knock it in the head with a club, and think that great sport. I do not at all mind sitting on the fence or a log waiting for them to start the rabbit, and when "Quester" gets as old as I am he will take a fence or log frequently. The northern hare gives me the best sport, as he never holes.

Pt. Rowan, Ont.

NOTES AND NOTIONS.

I AM somewhat surprised, Mr. Editor, that you should have admitted the remarkable letters headed "A Straightforward Challenge," the more so as I understood you to say from the first that you declined the position of stakeholder. Surely it has passed into an axiom that of all conceivable arguments, the financial one is the most utterly weak and vain. In fact you know the opprobrious designation given it, and I held you above even countenancing it in any shape. The willingness to support one's opinions by a bet is in no sense indicative of anything as to the question at issue, as a stubborn, self-opinionated man, who cannot see anything but his own side and therefore the very man likely to be wrong, is the one readiest to adopt the "argument." It must be understood that these criticisms apply to no individual (except you, Mr. Editor), as all other parties are entirely unknown to me.

There are two perfectly legitimate ways of settling such differences of opinion as mark the case. One is to agree to meet at specified dog shows, under judges of good repute, and let that settle the question. This is evidently the "straightforward" way of meeting the question, and the only one entirely free from any objection whatever. But if circumstances do not permit the adoption of this mode, the next plan in order of propriety is for the loser to bear the expenses that naturally follow a special contest. This plan at least eliminates the "money grubbing" element from the case, although nothing can be meaner than to infer cowardice, or insincerity in expressed views, in a party declining such a contest, for while the expense may be a matter of no moment to A, it may be a most serious matter to B. To sum up, nine out of ten "challenges" are vainglorious boastings, best treated with silent contempt.

Mr. Moore's purchase of Plinlimmon is a piece of thoroughly sound judgment that all breeders of any kind of dogs would do well to pattern after. The mischief in many breeders' operations is, that the dog himself is more considered than his procreative powers, and any man, well read in dog lore, can cite many instances of great show dogs' utter failures as getters of good stock, and not a few very indifferent ones who founded families of the greatest merit. I can recall a certain dog, himself the champion of his day, and the fountain head from whom comes the present type of the breed, who was sired by a very indifferent specimen who was palsied from infancy, and two other dogs, almost on a plane with the first one I have in my mind, both of whom were sad cripples and only moderate specimens. But the vital point with all of them was that they demonstrated their ability to get stock of the very highest class, and it is most unfortunate that breeders are so prone to overlook the consideration, above all others the important one to them, what does the dog get? Here is where Mr. Moore's judgment was shown, in securing the very foremost stud dog of his breed, and whether other dogs are better show specimens, is a matter of the very least significance. Until they demonstrate that they can average as high in their produce as Plinlimmon has done, their show form or merit goes for very little. I trust that Mr. Moore will continue his display of good judgment by showing Plinlimmon very little. When a dog has so thoroughly shown his value as a stud dog and won glory enough as a show dog, it seems murder to further task him by showing, thereby risking somewhat his prospects of further value to the breed.

No man will have more sympathy in the loss of a dog, than will Mr. Page in his loss of Charles Davis, and in all the ranks of dogmen, none can be found more thoroughly deserving of sympathy, but it is well to point out that the use of wide mesh wove wire for separating dogs, is very dangerous. Accidents such as that which happened to Charles Davis are uncommon, but if meshes are even wide enough for dogs to even get a paw through they are dangerous. A dog may very readily break a wire in such a "fence" and the point of the broken wire may puncture a blood vessel, leading to most serious results. Such was once my experience, and learning from it, I immediately changed my fencing to the closest mesh I could get, with specially heavy wire. Such mesh cloth is not commonly kept in stock, but can easily be procured by specially ordering it, say from Sedgewick Bros., Richmond, Indiana.

THE ONLOOKER.

One of the pillars of pugdom has gone the way of all dog flesh. Dr. M. H. Cryer's old champion Max died April 30. He was one of the foundations of the doctor's successful kennel. Max was whelped July 6, 1882, so that he had reached a ripe old age. His sire was the old champion Roderick, dam Dolly. His last appearance we believe was in 1889, when he had to put up with second to his son Dude. As a sire he was especially valuable, being responsible for such well known dogs as champions Dude, Myrtle, Psyche, Sallie and Tim, the sensational winner at New York in 1890, and is grandsire of champion Bob Ivy. The cause of death was supposed to have been apoplexy, as he was to all appearances quite well, though very fat, but was shortly after found dead.

EASTERN FIELD TRIALS DERBY ENTRIES.

THE entries for the Eastern Field Trials Derby closed May 1, with 51 English setters and 17 pointers, making 68 in all. This shows a falling off from last year when 83 were entered, among them 6 Irish setters, of which breed there will be no representative at this year's trials. All the dogs entered were whelped in 1890.

ENGLISH SETTERS.

MONK OF ELMS (Elmo Kennels'), dog, June 6, 1890 (Monk of Fitness—Countess Amelia).

SANBORN (Joseph H. and John Hunter's), black and white dog, May 23, 1890 (Ben Hill—Daisy Hunter).

ROD'S RODNEY (S. F. B. Biddle's), black, white and tan dog, Aug. 11, 1890 (Rodrigo—Fannie Gladstone).

PRIMA DONNA (E. J. Myers's), blue belton bitch, Aug. 4, 1890 (Rockingham—Donna).

COUNT FEATHERSTONE (E. O. Damon's), lemon and white dog, March 3, 1890 (Count Noble—Florence Gladstone).

JENNIE F. (E. O. Damon's), black and white bitch, April 3, 1890 (Count Noble—Gladstone's Girl).

LADY EVELINE (Blue Ridge Kennels'), black, white and tan bitch, May 12, 1890 (Gath's Mark—Flame Gladstone).

ORIOLE (Blue Ridge Kennels'), black and white bitch, May 13, 1890 (Gath's Mark—Flame Gladstone).

BOB COOPER (Blue Ridge Kennels'), chestnut, white and tan dog, Feb. 22, 1890 (Roi d'Or—Miss Nellie Y.).

COUNT ANTEO (Chas. P. Stokes's), lemon and white dog, April 1, 1890 (Count Noble—Gladstone's Girl).

LUCIA (Herbert Merriam's), black and white bitch, April 16, 1890 (Rodrigo—Royal Myrtle).

WUX LUNG (N. T. Harris's), black and white dog, February, 1890 (Capt. Bethel—Enid).

TORY ALICE (F. R. Hitchcock's), black, white and tan bitch, Oct. 23 (Jean Val Jean—Miss Thompson).

LUMMACK'S NOBLE (Clover Hill Kennels'), lemon and white dog, Oct. 7, 1890 (Count Noble—Florence Gladstone).

WAGTAIL (O. W. Donner's), black, white and tan dog, Feb. 21, 1890 (Rodrigo—Belle of Piedmont).

CHARLEY KLAN (J. M. Avert & Bayard Thayer's), black, white and tan dog, February, 1890 (Rodrigo—Lucy).

MARCO (J. M. Avert & Bayard Thayer's), black, white and tan dog, March 12, 1890 (Jean Val Jean—Lucy).

ALPHONSE (J. M. Avert & Bayard Thayer's), black, white and tan dog, Aug. 2, 1890 (Jean Val Jean—Haydee).

CAMMILLE (J. M. Avert & Bayard Thayer's), black, white and tan bitch, Aug. 2, 1890 (Jean Val Jean—Haydee).

SAPPHO (Royal Phelps Carroll's), black, white and tan bitch, 1890 (Rodrigo—Ollie S.).

IZA (Royal Phelps Carroll's), black, white and tan bitch, 1890 (Rodrigo—Ollie S.).

ROBESPIERRE (Royal Phelps Carroll's), black, white and tan dog, 1890 (Rodrigo—Ollie S.).

EFF JAY (F. J. O'Connell's), lemon belton dog, April 16, 1890 (Dad Wilson—Dashing Flora).

REX (A. J. Latta, Jr.'s), liver and white dog, Jan. 9 (Rex—Fanny).

WESTMINSTER DICK (Westminster Kennel Club's), liver and white dog, May 10 (Naso of Kippen—Glaucal).

AMERICAN KENNEL CLUB MEETING.

THE regular quarterly meeting of the American Kennel Club was held at 44 Broadway, New York, May 21, commencing at 2:30 P. M., Mr. August Belmont presiding.

The President—I notice the presence of a stenographer here other than our official stenographer, who in reply to my question as to whom he represents, says one of the sporting papers, and as this is not a public meeting of the American Kennel Club I have requested him to retire from the room, which he has not done, therefore I ask the vote of the members on the subject. We have our own stenographer here to take the minutes of our meeting, which are naturally the property of the American Kennel Club and its members.

Mr. Whiton suggested that it would be better to call the meeting to order, and then if the members desired to go into executive session they could do so.

Dr. Coyer—I move that this meeting be called to order. Motion carried and meeting called to order.

The following members responded to the roll call: American Beagle Club, H. F. Schellhass; American Pot Dog Club, Dr. M. H. Coyer; Associate members: J. L. Anthony; Cincinnati Kennel Club, J. T. Richards; Kansas City Kennel Club, J. M. Taylor; Long Island Live Stock Fair Association, J. Van Schaick; Louisiana Poultry and Pet Stock Association, A. H. Vanderpool; Mascoutah Kennel Club, J. Mortimer; National Greyhound Club, L. Whitton; Philadelphia Kennel Club, W. H. Child; Virginia Field Sports Association, J. S. Wise; Toledo Kennel Club, Dr. T. Foote; American Mastiff Club, F. T. Underhill; Great Dane Club, G. Muss-Arnolt; Southern California Kennel Club, J. Watson; Continental Kennel Club, H. E. Twyford; Massachusetts Kennel Club, E. B. Sears; and Collie Club of America, J. D. Shotwell, who arrived at 4 P. M.

The Secretary—I have no members present representing any club which I have omitted?

Mr. Peshall—I have not heard the New Jersey Kennel Club called. I believe the New Jersey Kennel Club is a member.

The Secretary—I have the names of the delegates whose credentials are on file here.

Mr. Peshall—I present my credentials now.

The Secretary—I have three credentials here.

The President—The secretary will please announce the credentials.

The secretary then read the credentials of James Watson to represent the Southern California Kennel Club, which were, on motion, accepted.

Mr. Richards—I now move that all persons other than the duly qualified delegates to this club or the members of the press authorized to represent some recognized paper, be excluded from the room.

Motion seconded by Mr. Schellhass. Carried. The stenographer referred to by the president retired.

Mr. Peshall—I represent a club here.

Mr. Richards—I rise to a point of order, whether Mr. Peshall's name has appeared as a delegate, and if his credentials have been recognized?

The President—Mr. Peshall, you will not interfere with the business of this meeting until you are properly authorized to do so. I believe under the resolution just adopted your presence is not admissible in this room.

Mr. Peshall—I am here representing the New Jersey Kennel Club.

The President—You cannot vote on your own credentials, and you cannot take any part in the meeting.

Mr. Peshall—Mr. President, I can presume that my credentials are passed upon. We can test this matter very easily.

Mr. Richards—I move, not as a matter of right, but as a matter of courtesy, whether credentials of Mr. Peshall as a delegate of some club which is a member of the American Kennel Club be permitted to remain until the credentials are taken up and passed upon, and I move that the unanimous consent of the members be given to the taking up of the credentials. Motion seconded and carried.

The Secretary then read the credentials of E. B. Sears, as representing the Massachusetts Kennel Club. On motion of Mr. Whitton, the credentials of Mr. Sears were accepted.

The President—Mr. Morris, may I ask you whether you represent a paper here?

Mr. Morris—Yes, I represent the FOREST AND STREAM.

The Secretary then read the credentials of C. J. Peshall, as representing the New Jersey Kennel Club.

The President—Will you please state to the credentials of the New Jersey Kennel Club?

Mr. Richards—I move that the credentials be rejected, and that the secretary be directed to inform the New Jersey Kennel Club of the rejection, and also request the club to communicate with the American Kennel Club any excuse which the New Jersey Kennel Club has to offer for the rejection of its credentials.

The Secretary—I suppose that might come in the form of some charge against the New Jersey Kennel Club, and they may plead ignorance of Mr. Peshall's status. Motion seconded.

Mr. Wise—I presume the motion is debatable. I should certainly vote to reject Mr. Peshall, but I do object to the New Jersey Kennel Club presenting any excuse. I don't know that they have any to make, but I will not object to their making any. I may send whom they please and we may accept whom we please, or we may reject whom we please. If it is necessary to embody in the resolution a statement of the reasons why we object to him and reject him, that is a different matter. The reason why I shall vote to reject Mr. Peshall is this: Mr. Peshall stands disqualified by this club.

This New Jersey Kennel Club, as a member of the American Kennel Club, has the right to send any man as a delegate. I suppose that might come in the form of some charge against the New Jersey Kennel Club, and they may plead ignorance of Mr. Peshall's status. Motion seconded.

Mr. Wise—I presume the motion is debatable. I should certainly vote to reject Mr. Peshall, but I do object to the New Jersey Kennel Club presenting any excuse. I don't know that they have any to make, but I will not object to their making any. I may send whom they please and we may accept whom we please, or we may reject whom we please. If it is necessary to embody in the resolution a statement of the reasons why we object to him and reject him, that is a different matter. The reason why I shall vote to reject Mr. Peshall is this: Mr. Peshall stands disqualified by this club.

the rules and hear Mr. Peshall while debate is pending upon this resolution.

The President—I should like the privilege of saying a few words before I announce any ruling upon that point. It has been my object as your executive officer to exclude from the business of the American Kennel Club and its affairs in every way possible, everything of a personal character involved in this case of Mr. Peshall's, and see to it that the time of the meeting should be devoted to the interests of the club and not wasted in wrangling or in interference when you are here assembled. The suit which has just terminated and which is entirely a private matter, one conducted by the District Attorney for the benefit of an individual, notes your secretary, but a private individual, and in which the American Kennel Club has taken no part, notwithstanding the fact that it has been attempted to drag it in through the newspapers, I distinctly say that it was with that object always that I have endeavored to prevent Mr. Peshall coming here unless he had a right to do so, and taking part in your debates, because it has been transpired that when we have been here for business other than that of Mr. Peshall, when we have been here, we have been able to transact our business because all sorts of outside questions are dragged in and stump speeches are made, and our whole time is wasted. The interests of the club require attention to business, and while, if it is your wish to open the debate so that Mr. Peshall shall be heard, I naturally shall rule if there is objection to permit that, if I think that is the general sentiment of the club, I have no objection to doing so. My duties as president of this club have been simply to endeavor to have its business transacted properly, and what has come in its way I have tried in the best manner to brush aside. I fear that by opening the debate to Mr. Peshall we will transact no other business here this afternoon. I cannot think that he is sent here for personal satisfaction. The fact simply is, as Mr. Peshall comes here as a delegate, and in this way his disqualification does not seem possible for him to act. Therefore, all you will listen to will be the pros and cons of the back history of all this trouble with which the American Kennel Club has nothing to do whatsoever. If there is no objection made I shall recognize Mr. Peshall.

Mr. Richards—I move an amendment to the motion to suspend the rules to admit Mr. Peshall to be heard, that all debate upon this principal motion be limited to ten minutes.

The President—I think you will have to pass the first amendment.

Mr. Whitton—I was going to suggest that Mr. Peshall be allowed to be heard if the time is limited to ten minutes.

Mr. Whitton—I move that the rules be suspended and that Mr. Peshall be allowed to speak ten minutes.

Mr. Watson—I understand this must be by unanimous consent? The President—Yes.

Mr. Watson—I shall decline to give my consent. Mr. Peshall should come here at the proper time with measures toward the removal of his suspension and disqualification. I call for the question upon Mr. Wise's amendment.

The ayes and nays being called resulted in the following vote: Ayes—Messrs. Schellhass, Coyer, Anthony, Richards, Taylor, Vanderpool, Mortimer, Wise, Underhill, Muss-Arnolt, Watson, Twyford, Foote—13. Nays—Messrs. Whitton, Child, Sears—3.

Mr. Richards—I withdraw the original motion. I understood the amendment to be offered as a substitute.

The President—Under the original resolution I think Mr. Peshall should retire from the room, but I do not like to ask him unless it is your wish.

Mr. Peshall—I shall leave. (At this point Mr. Peshall retires.)

The President—The last meeting was adjourned, and on motion adopted. The secretary read his report as follows:

NEW YORK, May 20, 1891.

GENTLEMEN—I have received since the last meeting applications for admission to membership from two clubs, the New York and New England Poultry and Kennel Club, of Mohawk, New York, the first bench show of which will be held in January next, at New York, N. Y., the American Bull-Terrier Club, of Boston, Mass. The board of directors of the Washington City Kennel Club identifies the breed of dogs for which this club was organized, "to promote and encourage the breeding and improvement of," as the dog now known as the "round-headed bull and terrier." We have never registered this breed of dogs and have no class for it in the stud book, and your action upon this application will determine the club's recognition of the "round-headed bull and terrier," now known as the American Bull-Terrier Club.

Notice has been received at this office of the amalgamation of the American Beagle Club and the National Beagle Club, with the request that the records of this club be changed by substituting the new title of the consolidated clubs, i. e., the National Beagle Club, in place of the American Beagle Club, as it now appears in our list of members. The board of directors of the Washington City Kennel Club from the secretary of the American Pet Dog Club, forwarded by its delegate, Dr. M. H. Coyer, asking the assistance of the American Kennel Club in taking such action as it may find necessary to improve the dog license law of the city of New York. I would recommend that you would do well to refer this matter to a special committee. I have received an appeal against the decision of the bench show committee of the American Bull-Terrier Club, on the protest against the special award to the printer dog Rip Rap. Your decision in this case should be rendered at this meeting if possible. I have received charges against two of our clubs for non-payment of prizes awarded at their last shows. The correspondence I have had in the matter satisfies me that in one case the bench show committee of the American Bull-Terrier Club, and in the other the charge relates to matters over which this club has no control. As I am expecting replies to my last letters on the subject, I will defer specifying details until later.

The advisory committee held a meeting on the 11th inst., and acted upon all matters before it. Its report will be read at this meeting.

I will inform you that the Southern Field Trials Club and the Worcester Kennel Club are in arrears for annual dues, which were payable in December last. I have sent bills for same, to which no attention has been paid, and I would therefore recommend that said clubs be dropped from the roll of membership. There appears to be a demand for the recognition by this club of the winners of field trials held through the country, under the name of "Sevens," which has been indicated by the "recognized shows" a list of "recognized field trials," and I would suggest that the president be requested to appoint a committee to examine into this subject, and if deemed advisable after investigation to recommend at the September meeting of this club such a list, which if adopted would greatly assist our members at their next bench show. Several suits have been instituted against the officers and associate members of this club, and it was necessary to employ counsel to protect the interests of all persons made parties to such suits. I would therefore ask that at this meeting a resolution be passed authorizing me to pay a retaining fee to said counsel. I employed two public auditors and accountants to examine the books of the American Kennel Club for the year 1888, and would respectfully ask permission to have their certificate included in this report and spread upon the minutes, and for authority to pay the bill for their service from the funds of this club. I herewith submit a communication from Messrs. Hudspeth & Collier, attorneys for C. J. Peshall and request action upon it at this meeting, as I have promised to report to said firm the result of your action regarding it. Before closing this report I beg to announce to you officially the death of E. Sheffield Porter, which occurred at his home in New Haven, Conn., on April 16 last. Mr. Porter was one of the organizers of the American Kennel Club, and was elected as its first secretary Oct. 2, 1884, serving until May 19, 1885. He was an associate member of the club and one of its strongest supporters at the time of his sudden death. Respectfully submitted,

A. P. VREDENBURGH, Sec'y.

Auditors' Certificate.

We, Thomas Bagot and Henry R. M. Cook, public accountants and auditors, of the city and county and State of New York, being duly sworn, do hereby state that we have examined the books of account and vouchers of A. P. Vredenburg, secretary-treasurer of the American Kennel Club, of No. 44 Broadway, in the city of New York, and found that from Jan. 10, 1888, to Jan. 11, 1889, the moneys received amounted to four thousand, seven hundred and fourteen dollars and sixty-nine cents, consisting of the following items:

Balance on Jan. 10, 1888..... \$650 04

Received for members' dues..... 310 00

registration of prefixes..... 42 00

traveling fund..... 100 00

sundries (incidentals)..... 7 50

retains..... 2,123 00

sales of stud books..... 697 00

tabulated pedigrees..... 54 50

advertising..... 425 25

Total receipts..... \$4,714 69

We also found that the disbursements for salaries, rent, print-

meeting at which he was elected. The American Kennel Club was not mentioned.

The Secretary—I will also state that I presented this communication to the counsel of the club, and they have advised that we pay no attention whatever to it.

The Chairman—The club will state that long prior to this letter the secretary of the club was instructed that the names of those persons who were disqualified should be dropped from the *American Kennel Gazette*, the only object of publishing those names during the show season being, that committees of shows would have due notice of those who were and were not disqualified, and consequently the dropping of three names was entirely voluntary on the part of the advisory committee, and long before any action or request was made on the part of Mr. Peshall.

In the matter of the appeal of Mr. Anthony against the pointer award of the Washington City Kennel Club, Mr. Child moved that the appeal be sustained and that the action of the Washington City Kennel Club be reversed.

Motion lost on the ground, as stated by those voting in the negative, that the entry was made in the name of the Charlottesville Field Trial Kennel, which is located at Charlottesville, Virginia, under the rule defining the definition of one exhibitor or person, as passed at the annual meeting in February, 1891.

Major Taylor moved that the chair appoint a committee of three to report at the next meeting on a rule to govern specials given under the American Kennel Club. Motion lost.

Mr. Richards offered the following resolution:

Resolved, That this club be informed with profound regret of the death of Mr. E. Sheffield Porter, one of its earliest members and officers, and desires to express its sense of the loss which has been sustained.

Resolved, That Mr. Porter's memory is endeared to the members of this club as a gentleman, zealous and intelligent in kennel matters, and warm-hearted, generous and considerate in personal relations.

Resolved, That this resolution be placed on the minutes, and a copy sent to the family of the deceased.

Adjourned. A. P. VREDEBURGH, Secretary.

DOG CHAT.

IN view of the increased interest Irish setters are now commanding, and the fact that several importations are expected, we do not think it out of place to quote part of a letter from the foremost breeder of reds in this country. He writes us in answer to our comments, in a letter to him, on the prevalence of short, thick heads, more on the English type, of many of the Irish setters bred nowadays, and of many of those imported. An idea is abroad that English breeders have not and do not desire the long, clean, domed-shaped head with which we associate true Irish type as seen in the heads of Elcho, Jr., the late Glencho, Molly Bawn, and a few others. Our correspondent says that from correspondence with the Rev. O'Callaghan and Mr. Cecil Moore, he is convinced they want the long, lean head as much as we do. Old Rose, which Cecil Moore bred, and who exported her to this country, had it, and so had Noreen and Old Elcho; and from the breeding of Elcho to those bitches we got the heads. Mack N. was sired by Norwood, bred by Dr. Jarvis, by Elcho, Jr., out of Rose. Molly Bawn was sired by Glencho, by Elcho out of Noreen, and Elcho, Jr., was by Elcho out of Noreen, too. Dr. Jarvis's Duke Elcho has the long head to perfection, and is by Elcho, Jr., and his dam also has a strain of Elcho blood. His Edna H. also has the typical head, and she is by Elcho, Jr., out of Romaine, she by Elcho out of Rose. Old Palmerston and Elcho had it, and their blood when crossed intelligently are pretty sure to have it. Of course not every one, but in this line of blood is where you find the typical heads. To breed dogs with typical heads, good coats, color, form, legs and feet, and body combined with field merit, is very difficult. Many of them have all but the heads, still, by a persistent following of the above lines of blood success must of necessity follow in the majority of cases. This breeder goes on to say: "Importing dogs is not sure to improve the breed. I have imported a dozen since 1873; some of them had better have been left over the water, and I wish they had; some I would not breed to myself and sold for a song, in comparison with what I paid for them, and their new owners lauded them to the skies, from ignorance I hope, and one was so poor I killed her on arrival. I expect now the best I ever imported, yet I may be disappointed, if so, shall frankly say so, and not say he is the best I ever saw." So it would seem that we have just as good blood over here in this breed, and whether we can improve matters by taking what England chooses to give as is highly problematical.

This is a copy of the notice Mr. Peshall served on Mr. Vredenburg during the executive meeting of the A. K. C. last Thursday: "Sir—You will please take notice that on the 12th day of May, 1891, I was elected and duly appointed the delegate of the New Jersey Kennel Club to the American Kennel Club, and as such delegate I hereby protest against the further publication in the *American Kennel Gazette*, published by the American Kennel Club and edited by you, of what has been known as the 'Disqualified' list. And I as such delegate and on the part of said New Jersey Kennel Club, and for each and every member of the New Jersey Kennel Club, forbid the sale or circulation by you or by any person or persons, as employees of the American Kennel Club, in any manner whatever, of any copy or copies of said *American Kennel Gazette* for and from the month of December, 1889 to the month of March, 1891 inclusive, for the reason that each and every number of said *American Kennel Gazette* containeth matter and things which are libelous, unlawful and in violation of the penal code of the State of New York. Respectfully, C. J. PESHALL, Delegate New Jersey Kennel Club."

American journals must not rely too implicitly on "Cheerful Horn's" irreverent jokes when the latter remarks that at the English Kennel Club's field trials there were present four bishops, three parsons and one deacon. On this one contemporary comments: "This not only speaks well for them but for the management that draws them out for recreation needed and consequent enjoyment for such liberal-minded men, for there is nothing in field trials that should not be encouraged by them." The parsons were there all right, the Reverends Serjeantson, O'Callaghan and Shield, but the bishops and deacon were there in name only. The Bishop family is well known among field trial men on the other side, and Mr. Sam Deacon has not yet qualified for ecclesiastical honors, though his form, we are told, is "syph-like."

The case told about in the *Evening Sun* the other day of an unfortunate man who died with the symptoms of hydrophobia, is an instructive one. The dog that bit the man was not mad, yet the belief that he was mad killed the man. There may be many as weak-minded men as this, who on learning that a dog which had bitten them had gone mad would die of bogus hydrophobia. We know of only one case where a man bitten, afterward found that the dog died with every symptom of hydrophobia, still he is alive yet, and very much so, as he contributes to these columns.

The dog poisoner has been abroad in Flatbush, L. I., and several valuable dogs have succumbed. This reminds us that Mr. Van Zandt's Irish setter Darragh Pat, who ran in the Eastern Field Trials last fall, was seemingly all well and in half an hour was found dead. Poison is supposed to have been the cause.

The coming show at Toronto will be quite lively for those who like to see speedy dogs. The Indus trial exhibition intends to donate prizes for greyhound and whippet races, which will take place in the ring before the grand stand each afternoon of the second week; the dogs competing in

the races will be required to be entered in their regular classes at the bench show.

Mr. Logan's kennel of fox-terriers, to the number of thirty, are now with Mr. Harry Twyford at his kennel in Bay Ridge, L. I. Mr. Twyford will in future have full charge of the kennel. It seems Mr. Thayer paid a pretty long advance, \$500, for Pitcher, on the price Mr. Logan paid for him. Dona, we are told, cost him also \$500. One can put \$1,500 in a very small quantity of dog flesh nowadays.

Mr. Shotwell, secretary of the Collie Club, desires us to announce that the Seminole Kennels having purchased The Squire, Roslyn Wilkes and other stud dogs from the Chestnut Hill Kennels, will carry out the arrangement made by the latter of allowing a discount of 30 per cent. from their regular stud fees to members of the Collie Club.

A Mr. Day advertises for his lost dog. We trust he will succeed in finding him, for it is only fair that as every dog has his day, Mr. Day should also have his dog.—*Judge*.

The International Field Trials Club, of Canada, will hold their trials at Chatham, commencing Nov. 10.

Friend Dole has been dipping into his purse pretty deeply, for we hear that a stud bull-terrier shortly sails for this country that cost over \$500. It is also said that the great fox-terrier D'Orsay will very likely soon be among us. As he is held at \$3,000 it ought not to be very difficult to guess who is after him.

The late English owner of Harper, Mr. A. M. Hodgson, purchased at the Bulldog show the bitch Nina Fidget, said to be the best in the show.

Messrs. Dole and Comstock, after doing several English shows, are now striking out for the Continent before returning home.

The English Bulldog show was a great success as an exhibition of bulldog quality, but the attendance was poor. The club dinner seems to have been especially enjoyable. The only damper thrown on the affair was the fact that, owing to the hot weather, of seven arrivals the night before the show, three were found smothered in their crates, among them a very good one, Force, owned by Dr. Berison.

The King Charles spaniel Toodles has been sold by Mr. J. Dean to Mr. Buggs, who sends him to this country. Toodles won second at the late Cruft's show, so he ought to be a valuable addition to the toy spaniel ranks.

At the coming Leeds show \$5,000 will be offered in prizes and specials. The Queen and Prince of Wales are expected to exhibit some dogs there.

We have received from Dr. Cryer his book on the pug, for which we thank him, but as we had not time to look it over we will defer further mention till next week.

A meeting of the Irish Setter Club is called for May 30 (Decoration Day) at 2 P. M. at W. Tallman's store, 109 West Thirty-fourth street, New York city. All members are invited to be present and to submit their views on the club's affairs generally and the matter of field trials in particular.

Mr. Pritchard writes us that preparations are being made to receive some new arrivals at the Flour City Kennels, at Rochester, N. Y. A new kennel has been built some 50ft. long and 14ft. wide, with eight stalls and concrete floors, in fact everything up to the modern standard. That good bitch Lady Colens has been bred to Ilford Chancellor, and a litter out of Lady Dorothy by the same dog was expected on the 24th. If like breeds like then we may look for some good Rochester bred mastiffs another season. Another letter states that they have just heard from Dr. E. L. Kimball, of Jackson, Mich., saying that his bitch Lula Minting whelped May 14, eight pups, three dogs. This effectually disposes of the rumor that Ilford Chancellor was not as good as he should be in the stud, for on the contrary they have had excellent reports of his get.

"Billy" Tallman, who is known to every dog man in the country, has opened a store just west of Broadway on Thirty-fourth street, New York city. Mr. Tallman intends to supply anything that may be needed for a dog's welfare, from a collar to a ton of biscuit. A rendezvous up-town was very much needed, and as "Billy" has several inviting looking chairs set round his place, no doubt there will be lots of dog tales swapped from time to time. We are negotiating for a phonograph so as to catch the choicest for our "Dog Chat." In any case we trust our friend will have the success in his new venture that he deserves.

We had intended to give this week a brief review of the facts in the Peshall case from the beginning, but the report of the A. K. C. meeting is of such length as to preclude devoting further space to the subject. In a later issue, however, we shall give such a review, for without the facts in mind the character of the proceedings of the club last Thursday cannot be justly estimated.

Extract from a letter: "For goodness sake take my exchange ad. out, as the countless letters I am receiving from it have long since ceased to be a virtue, and as I make a point of answering all communications, they are making my stamps disappear altogether too fast."

Among the new kennel advertisements this week we find that St. Bernards are for sale by A. H. Moore, F. E. Bacon and J. Hellen. G. W. Lovell has pointers and setters, E. W. Vine pointers and H. B. D. Bruce Clumber spaniels. In the stud is H. F. Church's bull-terrier.

A meeting of the Gordon Setter Club will be held at Dr. Meyer's office, 159 W. Thirty-fourth street, May 28. This is the adjourned meeting which should have been held at Dr. Glover's office May 14, to consider the application of Mr. Malcolm regarding the action of the club in his case.

Mr. E. C. Buckle, of the Charlottesville Kennels, Virginia, was an interested spectator at the English Kennel Club Field Trials held recently. He was a guest of Mr. Brailsford.

"THE AMERICAN BOOK OF THE DOG."

Editor Forest and Stream:

I have just returned from a long trip to the Southwest, and in reading the back numbers of FOREST AND STREAM was surprised to see Mr. Wade's communication under the above caption. I seriously regret that anything should have found its way into type, under Mr. Wade's signature, that is not true, or that is not satisfactory to him; and I most emphatically disclaim any intention to misrepresent either him or the facts.

When the proof of the mastiff article came from him, the corrections he had marked were made, and in this shape it was printed—not a word having been added by me. When the MSS. originally came to me from Mr. Wade it contained the statement that Messrs. Milliken, Kelly and Bowditch imported mastiffs early in the eighteenth century. I certainly should not have taken the liberty of interpolating such an important statement as this in another man's mat-

ter, even if I were confident of the truth of it, which I could not have been in this case, for I have never seen this statement made elsewhere.

Of course there is a record of it somewhere, else Mr. Wade would not have said it. He does not guess at anything. It is a fact that I supplied some of the names that are given on page 577 as "breeders, owners or importers," but I wrote Mr. Wade that I had done so "subject to his approval," and that if any of them were not satisfactory to him he should cut them out. He erased but one, and his letter of Oct. 11, 1890, which is before me, says: "Proofs received, and I return them corrected as far as I think they need it, or I feel like taking the liberty of cutting your improvements."

I sent Mr. Wade proofs of several cuts that were used in illustrating his articles. That of Czar had printed under it the words, "Russian Wolfhound—Czar. Owned by Mr. Paul H. Hacke, Pittsburgh, Pa." It came back to me with Mr. Hacke's name canceled, and that of J. Sperber written under it, apparently in Mr. Wade's hand. I could have no possible motive in making such a change myself, as Mr. Wade implies, for I never heard of Mr. Sperber before or since, and have no knowledge, other than this simple correction on the proof, that there is such a person; while I know Mr. Hacke to be a prominent fancier of this breed.

Mr. Wade has been a good friend to me, and I repeat that I would not willingly misrepresent him in any way. Neither would he, I believe, willingly misrepresent me. He has accused me wrongfully in these matters, but I believe it is owing solely to a lapse of memory. He has forgotten just what he did write, in certain instances. I hope the foregoing may serve to refresh his memory, and that he will accept these statements in the friendly spirit in which they are made.

G. O. SHIELDS.

BEAU BRUMMELL.—Pittsburgh, Pa.—Editor Forest and Stream: I have sold that grand young Irish setter Beau Brummell to Mr. E. B. Bishop, of Cincinnati, O., who will take him to California and place him in the public stud. Beau Brummell is well known as the winner of first prizes at New York, Baltimore, Pittsburgh and Washington (open class), thus entering the challenge class within twenty-two days after the first time he was ever shown at four of the largest shows held in America this year, and being passed upon by a different judge each time. As well as being so fine a bench dog, Beau Brummell is a magnificent, level-headed fielder, and Mr. Bishop will run him in the field trials that are to be held in California next fall, where I expect he will give an excellent account of himself. Beau Brummell was sired by champion Elcho, Jr. out of Red Rose; she by the famous champion Bix out of champion Lady Clare, and is a litter brother to my challenge dog Kildare. Mr. Bishop has also purchased my Irish setter bitch Belle Aurea (A.K.C.S.B. 20831), who is now in whelp to Beau Brummell. I am not at liberty to state the exact price that was paid for this pair, but will say that the amount is represented by no less than four figures. Judging from the prices that are now being given for Irish setters I think it is a fair criterion of their fast increasing popularity. I shall replace Beau Brummell with the best red dog that I can find in England or Ireland, and Joe Lewis is now on the other side looking for a dog for me that can win over anything in America. If he can find such a one you may look for him at the head of the Kildare Kennels next fall, both at the field trials and the bench shows.—W. WASHINGTON.

KENNEL NOTES.

Notes must be sent on prepared blanks, which are furnished free on receipt of stamped and addressed envelope of large letter size. Sets of 200 of any one form, bound for retaining duplicates, are sent for 30 cents.

NAMES CLAIMED.

Prepared Blanks sent free on application.

Eldestman. By W. Wade, Hulton, Pa., for fawn mastiff dog, whelped April 23, 1891, by Beauport out of Emma.

Hope. By H. K. Devereux, Cleveland, O., for liver, white and ticked pointer dog, whelped Feb. 1, 1891, by imported Uccas (Nimrod—Isa) out of imported Dora of Armstadt (Marquis—Hilda of Z-born).

Gale Gladstone. By H. K. Devereux, Cleveland, O., for black, white and tan English setter bitch, whelped February, 1891, by Breeze Gladstone (Gladstone—Sue) out of Katie Noble (Count Noble—Queen Meg).

Ruby Blas. By F. G. Taylor, Philadelphia, Pa., for English setter dog, whelped March 11, 1891, by Breeze Gladstone (Gladstone—Sue) out of Katie Noble.

Gale Gladstone and Ball o' Yarn. By F. G. Taylor, Philadelphia, Pa., for black, white and tan English setter bitches, whelped March 11, 1891, by Breeze Gladstone (Gladstone—Sue) out of Katie Noble.

Phil Darnell. By F. G. Taylor, Philadelphia, Pa., for English setter dog, whelped Feb. 14, 1891, by Breeze Gladstone (Gladstone—Sue) out of List Noble.

Marjolaine. By F. G. Taylor, Philadelphia, Pa., for orange and white English setter bitch, whelped Feb. 14, 1891, by Breeze Gladstone (Gladstone—Sue) out of List Noble.

Joe Forester II. and Duchess of Brunswick. By Dr. A. C. Heffenger, Portsmouth, N. H., for black, white and tan foxhound dog and bitch, whelped March 6, 1891, by Joe Forester (Bruno—Cllo) out of Gypsy Blanco (Peter—Toppy).

BRED.

Prepared Blanks sent free on application.

Betsy Splanger—Bacchanal. John Moorhead, Jr.'s (Pittsburgh, Pa.) fox-terrier bitch Betsy Splanger (Warren Sampler—Warren Dangle) to Oriole Kennels' champion Bacchanal (champion The Belgravian—champion Bedlam) May 21.

Mary Anderson—Bo'swan. Dr. D. Maclean's (Detroit, Mich.) bull bitch Mary Anderson (Surplice—Bully) to E. A. Woodward's Bo'swan (Grabber—Susan) May 8.

Fleet—King of Kent. H. K. Devereux's (Cleveland, O.) pointer bitch Fleet (Dash—Sport) to Westminster Kennel Club's King of Kent (Priam—Ken's Baby) April 7.

Rodreka—Breeze Gladstone. B. M. n's (Philadelphia, Pa.) English setter bitch Rodreka (Rodger—Gem) to F. G. Taylor's Breeze Gladstone (Gladstone—Sue) April 7.

Golden Rod—Inspiration. Chas. Chippenger's (Lansing, Mich.) pointer bitch Golden Rod—Beaufort (Zuba) to F. G. Taylor's Inspiration (Bang B—ng—Tollie Doe) May 1.

Bernie—Inspiration. J. B. Ellison's (Philadelphia, Pa.) pointer bitch Bernie (Victor the Blue Stocking—Charlotte Corday) to F. G. Taylor's Inspiration (Bang B—ng—Tollie Doe) May 7.

Marguerite II.—Brake C. J. H. Day's (Rd. Bank, N. J.) pointer bitch Marguerite II. (Mainspring—Marguerite) to Mr. Lovell's Brake C. (Glen Graphic—Jennie) May 3.

Hops—King of Kent. Charlottesville Field Trial Kennels' (Charlottesville, Va.) pointer bitch Hops to Westminster Kennel Club's King of Kent April 25.

Betsy Brackett—King of Kent. F. Larkin, Jr.'s (Sing Sing, N. Y.) pointer bitch Betsy Brackett to Westminster Kennel Club's King of Kent, April 24.

Ralph's Queen—King of Kent. W. E. Field's (St. Louis, Mo.) pointer bitch Ralph's Queen to Westminster Kennel Club's King of Kent, April 14.

Clip—King of Kent. J. N. Pike's (Malden, Mass.) pointer bitch Clip to Westminster Kennel Club's King of Kent, April 9.

Lass of Bow—King of Kent. Westminster Kennel Club's (Babylon, L. I.) pointer bitch Lass of Bow (Graphic—Chmax) to their King of Kent, April 4.

Westminster Nan—King of Kent. Westminster Kennel Club's (Babylon, L. I.) pointer bitch Westminster Nan (Westminster Coo—Nancy) to their King of Kent, March 29.

Kate VIII.—King of Kent. Westminster Kennel Club's (Babylon, L. I.) pointer bitch Kate VIII. (Donald II.—Belle) to their King of Kent, March 27.

Nancy—King of Kent. Westminster Kennel Club's (Babylon, L. I.) pointer bitch Nancy (Bang Bang—Polly) to their King of Kent, March 25.

Lass of Kent—King of Kent. Geo. Jarvis's (New York) pointer bitch Lass of Kent to Westminster Kennel Club's King of Kent, May 2.

Oriole Lilly—Lord Baltimore. Wambach & Hermann's (Baltimore, Md.) pug bitch Oriole Lilly (Roland—Dollie) to their Lord Baltimore, Jan. 29.

Dollie-Othello Boy. G. W. Wambach's (Baltimore, Md.) pug bitch Dollie (Cricket-Dot) to his Othello Boy, March 18.

WHEELPS.

Prepared Blanks sent free on application.
Queen Bendigo. John Moorhead, Jr.'s (Pittsburgh, Pa.) bull-terrier bitch Queen Bendigo (Bendigo-Mag), May 24, seven (five dogs), by his Mr. Dick (Young Dutch-Nettle).
Emma. W. Wade's (Hulton, Pa.) mastiff bitch Emma, April 28, two dogs, by Messrs. Taunton & Winchell's Beaufort; one since dead.

Rosa Lee. Dr. J. A. Hartman's (Letrohe, Pa.) English setter bitch Rosa Lee (Racko-Gerry), April 28, six (three dogs), by F. G. Taylor's Breeze Gladstone (Gladstone-Sue); all black, white and tan.

Front. D. Struss's (Milwaukee, Wis.) English setter bitch Front (Drake, Jr.-Daisy), May 10, thirteen (six dogs), by F. G. Taylor's Breeze Gladstone (Gladstone-Sue); all black, white and tan.

Little Donovan. White bull-terrier dog, whelped May 26, 1890, by Duke out of Fussy, by H. A. Harris, North Wilmington, Mass., to Dr. Sneed, Brooklyn, N. Y.

White Pinner. White bull-terrier dog, whelped April 19, 1887, by Charlie out of Rue, by H. A. Harris, North Wilmington, Mass., to Dr. Sneed, Brooklyn, N. Y.

KENNEL MANAGEMENT.

C. R.—Your inquiry will be answered by mail if you will send us your address. The welfare of your dog should be considered by you important enough to induce you to follow the rule of giving your name when writing for advice.

J. P. M., Camden, N. J.—I have a very fine Irish setter; he is troubled with what some people call hush in the throat. The least excitement starts him coughing a dry husky cough, with continual retching, frequently raising a white froth. Can you advise me what to do? Ans. Rub the throat morning and night with camphorated oil.

GUN, Philadelphia, Pa.—Kindly advise me as to treatment of an English setter bitch 3 years old. She has pimples and sores all over her body, legs and tail, and had warts on lips and inside of ears, has three on under, close to back teeth, and scratches almost continually. The skin is red. The warts in her mouth and ears have gone. I have been treating her for eczema, and have rubbed her with oil of cade 3oz., dilute acetic acid 4oz., cotton seed oil 8oz., carbolic acid 1dr. and given salt-water baths. Internally I have used flowers of sulphur and cream of tartar, equal parts. Dose, a tablespoonful once daily. Have been treating her for six weeks, but have not succeeded in curing her. She is fed once daily on stale bread and meat soup. On some parts of her body the hair is out, also on tail from root to tip on top, round the eyes and here and there on ears. Kindly advise me of a remedy in next week's issue if possible and state what the disease is. Is it contagious? Ans. It is very likely sarcoptic mange. Apply either

Potass carbonatis..... 3i
Sulphur flor..... 3ij
Glycerine..... 3vi
or the following:

Bals. Peru..... aa 3ij
Spts. rectificati..... aa 3ij
Zinc. oxid. 3i
Glycerine..... 3x

After washing the dog thoroughly with carbolic soap and warm water. It is contagious by contact. Clean and disinfect the dog's kennel thoroughly. The warts can be touched with nitrate of silver, which will effect a cure.

Rifle and Trap Shooting.

The Winans Trophy.

PRACTICE TARGETS for the Amateur Revolver Championship will be mailed free to any address from this office.

RANGE AND GALLERY.

ENGLISH REVOLVER MATCHES.

The programme of the competition at Bisleigh has been issued, and provides the usual generous offer of rich prizes. The prizes for revolvers are increased, and a new series is added in which \$50, divided into nineteen prizes, will be given. In this series the target will appear for twelve seconds only, and "no concession will be made for misfires or other failures of the revolver or ammunition." With respect to the back sight of revolver which may be used at the N. R. A. meeting, it is now announced that it may be either a plain open V or open half circle, or buckhorn pattern, "or some simple pattern of sufficient solidity and strength to withstand rough usage."

The several revolver events are as follows:

THE REVOLVER PRIZES.

Unlimited entries. Aggregate value, \$150. N. R. A. prize. Restricted to officers, warrant officers, petty officers and staff sergeants of H. M. land and sea forces, to gentlemen cadets of the R. M. A., Woolwich, and of the R. M. C., Sandhurst, and to members of the N. R. A. Distance, about 20yds. Weapon, revolvers. They will be subject to examination by an officer appointed for the purpose before competitors will be allowed to use them. Number of shots, 6. Position, standing. No rest of any kind, natural or artificial, will be allowed, nor will the competitor be allowed to support himself on any part of the shooting gallery or table from which the firing takes place; nor may he use more than one hand to steady his revolver.

Entrance fee, 2s 6d, for each entry. No competitor to take more than one prize in any series.

Target.—A disc 12in. in diameter, Bulseye, 3in. diameter, scoring 6 points, with a central cartou 2in. in diameter, scoring 7 points. Remainder of target divided into four rings, scoring respectively 5, 4, 3 and 2 points. No sighting shots allowed.

First Series.—At a target moving across the line of fire, at about the rate of the "quick march". One prize of \$10, one of \$5, one of

\$4, one of \$3, ten prizes of \$2, eighteen prizes of \$1. [Thirty-two prizes, \$50.]

Second Series.—At a target disappearing and re-appearing at intervals of three seconds. One prize of \$10, one prize of \$5, one prize of \$4, one prize of \$3, ten prizes of \$2, eighteen prizes of \$1. Thirty-two prizes, \$50.

Third Series.—At a target shown for twelve seconds only. No concession will be made for misfires or other failures of the revolver or ammunition. One prize of \$5, one prize of \$3, five prizes of \$2, twelve prizes of \$1. Nineteen prizes, \$50.

In addition to the ordinary regulations for shooting governing other competitions, the following must be strictly observed:

1. The petty officer or non-commissioned officer at the firing point will load and hand to the competitor the revolver ready for use. The revolver must not be loaded until the competitor is in position.

2. On receiving the caution, "All clear," the competitor will fire his chambers in the order of delay. The revolver must not be raised from the table before each shot until the target appears.

3. In the event of any misfires, in the first or second series, the competitor will continue to fire the remaining chambers, and will then place his revolver on the table. The petty officer or non-commissioned officer at the firing point will then reload as many chambers as may be necessary to enable the competitor to complete his series.

4. Should there be from any cause an interruption in the shooting, the competitor must at once lay his revolver on the table and in the receptacle provided for the purpose, muzzle downward.

5. Any competitor firing or pointing his revolver elsewhere than from the gallery at the target will be disqualified under "Clause 2, Section II, Penalties" of the Regulations.

THE "PUNGS" (REVOLVER).

Unlimited entries. Given by Pungs Frères et Cie, of 23 Crutched Friars, E. C. Open only to officers of the regular and auxiliary forces. Condition of firing the same as those of the Revolver Prizes. Second series—Entrance fee 2s. 6d. for each entry. First prize, \$100, 2nd, \$50, 3rd, \$25, 4th, \$10, 5th, \$5, 6th, \$2, 7th, \$1, 8th, \$1, 9th, \$1, 10th, \$1, 11th, \$1, 12th, \$1, 13th, \$1, 14th, \$1, 15th, \$1, 16th, \$1, 17th, \$1, 18th, \$1, 19th, \$1, 20th, \$1, 21st, \$1, 22nd, \$1, 23rd, \$1, 24th, \$1, 25th, \$1, 26th, \$1, 27th, \$1, 28th, \$1, 29th, \$1, 30th, \$1, 31st, \$1, 32nd, \$1, 33rd, \$1, 34th, \$1, 35th, \$1, 36th, Wednesday, Second Day.—The weather was all that could be asked, with a good strong wind, making the shooting quite difficult. The entries ran as high as \$2 and everything passed off very pleasantly. The new arrivals for second day were N. S. Young, of Burlington, and Chas. Strawn, of Jacksonville, Ill.

About 5 o'clock a hard rain set in and the convenience of a good club house was fully appreciated. The annual meeting was held to-night at the Commercial Club Rooms, and the president's address, which is always looked forward to with much pleasure, as we always get some good advice from our president, Mr. Smith, ran as follows:

GENTLEMEN OF THE STATE ASSOCIATION: Since the Iowa State Association was first organized, in my changes have taken place. Every year more interest is taken in our game and fish. Our Legislatures have seen the necessity of protection of the game and fish, and most of the States have good game and fish laws. They are not quite as well enforced as I would like to see them, but public opinion is fast tending toward the protection of our game and fish.

every sportsman's home in the land. And I think they have led many men to see the error of their ways. Men who at one time were continually violating the game laws, have become good men to enforce them.

Our Fish Commission is not what it should be. The last Legislature did not see fit to make any appropriation for its support. The claim was made that it was not well conducted, and that no benefit was derived from it. I can hardly see any good reason why the Legislature should not make an appropriation for the Fish Commission, when it can be made of so much benefit to every man, woman and child in the State.

Over \$500,000 are sent out of Iowa every year for fish. Why not raise the fish in Iowa and keep the money at home? Let the Legislature appropriate \$40,000 to stock our lakes and streams and Iowa need not import fish. Fish fresh from our lakes and streams are one of the best articles of food that man uses. But more than half the fish that are sent in here are not fit for man's table to eat.

The last Michigan Legislature made an appropriation of \$55,000 for their Fish Commission. They know it will be money well spent. There is not a single State that has a well conducted Fish Commission that is not satisfied that it is one of the best investments they have ever made. Ask your member of the Legislature to look after the matter. It is well worth attending to.

The sportsmen of the United States have secured to be thankful to President Harrison for issuing his proclamation adding fifteen hundred square miles to our National Park. We can now feel that our Park is to be protected, and that we can have a place where the large game of our country can live. President Harrison knows the value of his rod and gun. He knows the pure air of heaven is essential to good health. Every man that spends a few days of his rod and gun is a better man for the doing.

The spring flight of wildfowl in Iowa was greater than it has been for years, and we may look forward to good fall shooting. The open prairies are covered with plover and snipe and the booming of the prairie chicken may be heard on every hill. I think I never saw more bird life in Iowa.

The sportsmen and March were very severe on the quail and prairie chickens, but I think most of them got through the winter safely.

The finances of our association are in good condition. Before we adjourn I hope that a committee will be appointed to attend the next session of the Legislature to see if something cannot be done for the Fish Commission. I have no doubt but that if the matter is properly presented something will be done.

Then the balloting commenced for the place in which to hold the next State shoot. Atlantic and Des Moines received favorable mention, and on the ballot by clubs Atlantic received 12 and Des Moines 15.

In the election of officers for the ensuing year J. G. Smith, of Algonia, was re-elected president; P. J. Leffingwell, of Clinton, President Pro Tempore; J. H. Howard, of Davenport, Second Vice-President; Nelson Royal, Secretary; C. O. Parkins, Treasurer. The Board of Directors will be N. S. Young, Burlington; Charles Givern, Clear Lake; G. E. Converse, Des Moines; F. O. Davis, Davenport; C. W. Budd, Des Moines.

The law committee was W. L. Read, Des Moines; L. L. DeLano, Atlantic and Des Moines, Algonia.

Thursday, Third Day, May 21.—It rained hard all night, and is still raining this morning, with no prospect of a let up. On reaching the shooting grounds we find quite a number of shooters willing to face the traps in a steady downpour of rain, so event No. 12 was commenced. A large canvas was put over the trappers, and with rubber coats on the shooters kept asking for just one more shot. I had a good deal of fun, when I was not wet, but I was out. I have attended many tournaments, but never met such a merry lot of trap shots. Everybody was in a good humor, and the day passed very quickly and pleasantly to all. Shots No. 11 and 13 were declared off on account of scarcity of live birds. The association had added \$20 to shoot 13, and in place shot 28 single targets, entrance \$3, and added \$30. Never in our experience have I heard of such a success, and many of our shooters would make no complaint if targets were substituted in their place in all our tournaments.

No. 14, 12 singles, entrance \$2, \$10 added:		Georgeson	010101011111-8

NEW YORK STATE SHOOT.

THE Rome Gun Club has been making big efforts to make the thirty-third annual convention of the New York State Association a notable one. The programme is a very fine affair, and is indicative of the high style in which the shoot preliminaries have been carried on. In presenting the programme to the association, the president said: "In placing before you the programme of the thirty-third annual convention and tournament of the New York State Association for the Protection of Fish and Game, we take pleasure in calling your attention to the large amount of cash prizes, and we feel confident that, although the arrangement differs from last year's programme, taking everything into consideration, the meeting of 1901 will be the best in the history of our association."

The programme provides for \$1,800 cash prizes and \$800 in merchandise, not counting the Dean Richmond Trophy. In addition to the regular State events there will be sweepstakes each day, rapid firing system, American Shooting Association rules to govern, 13-gauge guns allowed 14oz. shot. The rapid firing system will be under the personal supervision of Mr. T. H. Edwards, of Buffalo, N. Y. All trap shooters are invited to attend the tournament and participate in the sweepstake shooting, whether member of a club or not.

The shoot grounds of the Rome Gun Club are situated on Floyd avenue, three-quarters of a mile from the city. Street cars will leave all depots on arrival of trains, and run directly to the grounds; also will run over the grounds during the day. The grounds will be in readiness for practice shooting Monday, June 15, at 12 M. The headquarters of the Rome Gun Club, during the convention, will be at the Arlington Hotel.

The annual meeting of the association will be held Monday evening, June 15, at the Arlington, at 8 o'clock.

M. R. BINGHAM, Secretary.

PENNSYLVANIA ASSOCIATION.

HARRISBURG, Pa.—A meeting of the State shooting organization was held in the rooms of the Harrisburg Shooting Association, President H. A. Penrose in the chair. There were present H. M. F. Worden, W. H. Wolstencroft, H. C. W. Matz, Dr. P. K. Gotwald, E. M. Spence, J. D. Mason, W. V. Seckhouse, J. H. Worden, J. H. Worden was chosen secretary. On motion of H. M. F. Worden, E. M. Shaner was requested to notify the various clubs of the State to forward to James Wolstencroft, Philadelphia, \$5, the requisite fee necessary to become members of this Association, and that a meeting of the Association be held in Harrisburg not later than July 15, to determine when the first State shoot shall be held.

On motion of W. H. Wolstencroft, it was decided that each club having become a member of the Association be entitled to one vote either by sending a delegate or by proxy, said proxy to be sent sealed to the president, H. A. Penrose, not to be opened until the time of said meeting upon the call for vote to determine when the next State tournament shall be given.

J. H. WORDEN, Acting Secretary.

SLATER GUN CLUB.—Slater, Mo., May 22.—The wind was blowing very strong and it carried the birds away very fast, which accounts in great degree for the bad scores made.

Shoot No. 1, 5 bluebirds:		Robertson	00011-2
Vaughan	0111-4	Field	01100-2
Rhodes	1010-3	Storts	00001-1

NORTHERN DIVISION MEET.

A MEETING of the executive committee of the division was held at Kingston last week and the matter discussed. Good feeling prevailed and it was decided to hold the meet at Jacob's Island, Pigeon Lake, a locality well known and to the northwest of Peterboro'. The date fixed is a trifle earlier than usual, but opportune, from July 15 to 27. The meet will open on Wednesday and close two weeks later, affording ample time for the members to enjoy a good outing.

A special committee to make arrangements for the meet was named, selected from the clubs of the district. It includes Com. Col. Cotton and Purser C. E. L. Porius of Kingston; D. B. Jacques and Dr. Powell, Toronto; A. F. D. MacGillan and J. G. Edwards, Lindsay; W. Boyd and W. J. Reid, Bobcaygeon, and Col. J. Z. Rogers and G. W. Hutton, Peterboro'. A meeting of the committee will be held on May 16, after which a trip will be taken up to Jacob's Island to view the camp and make other arrangements for the meet. A report will at once be issued to members advising as to details, route to reach camp, etc.

The committee have done well in locating the meet on Pigeon Lake. No more beautiful site for a camp is available than Jacob's Island. These shores are accessible for small craft, and on the "Narrows" side is a sheltered shore available for a safe harbor. The sloping shore, rising gradually from the water, is covered with grass, and is a splendid grove of maple among which tents can be pitched with comfort to the occupants. The only uncertainty at present is will the ground be large enough. That point will be considered by the committee on the 16th. That desire of a sailing canoe, wind, is always found on Pigeon Lake. What breeze there is moving on a hot day will fill the sails on that water when it is perfectly calm on the neighboring lakes Buckhorn and Chemung. In the neighborhood of the camp good wood water is at hand, and it is directly on the line of boats passing from Bridgenorth to Bobcaygeon. Supplies for table can be procured from the farms on the shores of the lake.

The site has the further advantage of being easy of access to canoeists from a distance. By way of Peterboro' canoes and small craft will be taken by the Bridgenorth terminus of the G. T. R. and to the camp by steamer, or the canoeists can take ship and sail to the camp. By way of Lindsay, Bobcaygeon is reached by steamer, and the camp is then distant only a five mile trip by canoe, a mere trifle.

The local members of the committee, Col. Rogers and Mr. G. W. Hutton, are pushing the meet in an energetic way and promise a success. They are anxious that the canoeists, especially those of the Ontario C. C., will lend a hand and by the presence at the meet and assistance make the event a big success, which it deserves to be. Those who are not members of the division can apply to Mr. Hutton, who will arrange matters handily. It is on record in canoeing annuals of the success of the big A. C. A. Stony Lake meet in 1889 and of the Northern meet at the same place in 1887. Peterboro' and the district about it is the home of canoeing, and it behooves all lovers of the sport to lend a hand on this occasion.—Peterborough Review.

CANOE YAWLS.

BETWEEN the canoe proper, the 16x30 one-man craft, and the small decked yacht of the Windward type, is a very useful class of boat to which the name canoe yawl has been very loosely and improperly applied. These craft, which range from 16x4 to 18x55ft., with a draft of 6 to 30in., according to the keel or centerboard, are fine boats for certain uses, and especially for waters too wide and open for the small canoe. Thus far they have been used in very crude design, but the design is no reason why a very sharply and speedily boat should not be turned out on the usual dimensions. We have had in preparation for some time a series of articles on the boats and their rigs, giving examples of the leading types and classifying them in a way not yet tried; but other work has interfered to prevent the completion of the scheme.

In England the canoe yawl is quite numerous, and has in a measure injured the smaller canoe, so much of the water on the coast being better adapted for the larger boat. Most of these craft, however, are full in model and with fixed lead keels, in no way canoes. Two years since the Royal C. C. adopted a definition of a canoe yawl, prohibiting deep lead keels and limiting the length and sail area to 5 rating, or 166sq. ft. of sail for 18ft. l.w.l. and a number of boats have been built to this rule, which are the direct opposite of the large and clumsy cruisers, being intended for racing only, in smooth waters, as at Oxford. The Snake and Torpedo are examples of the class. Between the two extremes but little improvement has been made, and the perfect canoe yawl is still as far distant as the perfect canoe. The following, from the *Field*, is said to improve most things, especially man's brain, and the truth of this was amply demonstrated last Saturday at Hendon, when the new canoe yawl, designed by Mr. Richard De Quincey, was floated and fitted-out.

"The previous production in canoe yawls from the drawing board of this able designer was far from satisfying the yearning of such canoeists as hold a preference for something larger than a canoe, but still essentially of canoe type. The new craft holds a very large proportion of good points; but we should point out that she is essentially of what may be truly termed the 'smooth-water school,' but none the less a very fine boat of her class.

"We have before said that the vocation of a 'canoe yawl' is to supply the sea-going power and accommodation requisite for coasting—easy and large open air cruising—which is, and must necessarily be, lacking in a 16ft. by 30in. canoe. Failing in such qualities, a canoe yawl can hold no higher claim of popularity than a 'catboat.' If she is equally unseaworthy and dangerous, she becomes simply a trap—a trap indeed, which may be skillful handling under an expert crew be taken through moderately bad conditions of wind and sea, but none the less a trap which, in unskilled hands, may easily prove to be a 'death trap.'

"We cannot too strongly condemn the 'skimming dish' type, when produced in any size larger than a canoe. A canoe of such type can be man-handled by her crew of one man perched on her weather deck; and little danger of fatal accident exists while such craft confines her cruising to waters usually considered as canoeable waters, but the inevitable circumstances are changed when a craft of this inferior model, but of comparatively large size, is set to do work which both she and her crew are at least novices in.

"A skimming dish is not, and never can be, an efficient sea boat. Her deficiency of freeboard renders her wet, at least, if not dangerous and swampy. Her extremely small range of stability gives her superior capsize qualities, which are dangerously violent in her great initial, and therefore at first sight apparent, stability.

"This type of canoe yawl has, unfortunately, been brought into existence in some river quarters, and, having earned a bubble reputation of being fast (which, of course, they ought to be, or they are useless), it is not surprising to find that there are men who will to a near extent follow suit.

"Our comments last week and previously, directed against such yacht models claiming to be canoe yawls, were aimed at a class of boat infinitely superior to these 'skimming dishes' from a sea-going point of view, but which erred on the other side in abandoning most, if not all, of the canoe features, such, for instance, as fixed heavy lead keels and permanent deep draft.

"The new canoe yawl, just launched, was built by Bathurst for Mr. Staples from Mr. De Quincey's design. She is 18ft. by 55ft. beam on deck, but her beam at the l.w.l. is very considerably less. She has a saucer-shaped midsection, showing considerable rise of floor, and a small rounded topside close to deck edge. Her draught of water is apparently very small; she at present carries no ballast beyond a center plate of some 160lbs., and she is rigged up to the limit rating of 0-5-4. c., it may be assumed, at 166 square feet.

"Owing to an extremely rounded deck her otherwise pretty side sheer is lost, and she at a short distance looked a very straight bulled boat, and added to this a peculiarly long coaming gives her almost a hogged appearance. The bow as she floats shows sharp and long, with a bit of hollow, and the after body, though looking full to a first glance is in reality fine both in lines and displacement. Her center plate is about midships, and would appear to ask for a larger center to assist in the holding her up to wind. She is very much cut up and tucked up aft; indeed the turning points of this boat might safely be solely estimated in regard to rudder and center plate, though possibly on some rare occasions water heaped on the lee bow might for a time affect her.

"This new craft was out for a trial on Hendon Lake. It was a puffy breeze, with considerable weight in the squalls. She slipped across the water with a general opinion of those on the club raft that 'she's a flyer,' and certainly she went very cleanly through the smooth water. As she was laboring under the disadvantage of steering with yoke lines, her tiller gear not being ready, her performance to windward had better not be judged. On Monday next, however, there is a race for 'yawls and canoes' on Hendon Lake, when she will speak for herself or forever hold her peace.

"At the very time that the above light displacement craft comes into floating existence we hear of one in America of almost the opposite type—a craft 22ft. long by 4ft. beam and of 2ft. draft, with 240 sq. ft. of sail and a lead keel. She is designed by Mr. F. W. Martin. Her sections are practically those of a yacht intended to be kept lying afloat. (Her lines are given in *FOREST AND STREAM* of April 16.)

CANOEING IN GREAT BRITAIN.—The growth of canoeing proper in Great Britain of late years has been very unsatisfactory, and even the establishment of a British Canoe Association on the lines of the A. C. A. has not done much toward uniting canoeists and making new recruits. This season, however, there is a prospect of a revival in racing on the Thames and in other parts of England, and an awakening of canoeists generally. One hopeful sign of the times is the increase of canoe literature, which is certain to accompany any growth of the sport. For several years the only journal dealing with canoeing was the *Model Yachtsman and Canoeist*, now edited in its canoe department by Mr. Geo. F. Holmes. Within the last few weeks a new yachting weekly, the *Yachtsman*, has been started, and the feature being a canoeing department, edited by Mr. Walter Stewart, so well known to American canoeists. The *London Field*, which at one time made a specialty of canoeing news, but of late years dropped this feature, has for several weeks past published a column of chatty "Notes of the Week," evidently the work of Mr. W. Baden Powell. All of these gentlemen are noted as skillful designers and canoe enthusiasts as well as crack sailors, and the friendly competition will furnish interesting reading for canoeists and a much needed stimulus to British canoeing.

IANTHE C. C.—The rainy weather of May 16 caused a postponement of the regular events of the Ianthe C. C. spring regatta, but several scrub races were held. On May 23 the regular regatta was held, the senior sailing race being won by Geo. L. Douglas in Tempest, the junior by Geo. Baxter, Mr. Meize being delayed while leading by an outside boat; two paddling races by L. P. Palmer, the upset by Geo. Douglas, and the tandem by Palmer and Crick. Mr. Palmer's new cruiser Teaser has been rechristened Crick.

ATLANTIC DIVISION MEET.—Dr. E. W. Kitchell, of Perth Amboy, has been appointed a member of the site committee in place of Robert H. Peebles resigned. The committee is now at work on arrangements for the meet and will soon issue a circular to be sent out with the regatta committee's programme.

A. C. A. MEMBERSHIP.—Eastern Division: Henry Kittredge Gates, George H. Stevens, Willard M. Foster, Lowell, Mass. Central Division: Edmund K. Baker, Kismet, N. Y. Northern Division: S. L. Richey, E. S. Martin, Lindsay; W. H. Hamilton, Bobcaygeon.

THE DANUBE RIVER.—Editor *Forest and Stream*: Can any of your readers tell me if a canoe has ever made the whole Danube voyage from source to mouth, and if so, where I can find a record of that performance?

NEW YORK Y. R. A.

A MEETING of the New York Yacht Racing Association was held, at which were present delegates from the Columbia, Harlem, Hudson River, Jersey City, Newark, New Jersey, Pavonia, Sing Sing, Staten Island Athletic (Yacht Department), Tappan Zee, Yonkers Corinthian, Indian Harbor and Kill von Kull yacht clubs, thirteen.

The Canarsie Y. C., of Far Rockaway, L. I., and the Brooklyn Y. C., of Brooklyn, N. Y., were elected to membership. The Brooklyn Club, after remaining out of the Association for nearly two years, has finally come back into the fold. This brings the number up to twenty clubs now in the Association. Com. Frime, the president, to whom was referred the matter of a cruise, submitted a report, which was unanimously adopted as read, and he was authorized to have the report printed for distribution among the clubs of the Association. The report was as follows:

N. Y. Y. R. A. ANNUAL CRUISE 1891.

The cruise of the N. Y. Y. R. A. shall take place on July 6. Yachts will rendezvous in Hart's Island Roads, off City Island, on Saturday afternoon, July 4, report to the fleet captain and remain at anchor over Sunday and sail as follows: Monday, July 6, to New York Islands, Conn., 25 miles; Tuesday, July 7, to New Haven, Conn., 81 miles; Wednesday, July 8, to Saybrook, Conn., 30 miles; Thursday, July 9, to Shelter Island, Conn., 20 miles; Friday, July 10, to Thimble Islands, Conn., 32 miles; Saturday, July 11, to Bridgeport, Conn., 39 miles, and disband.

The start will take place at 9 A. M. each day; at 8:30 a gun will be fired to prepare to start, and all yachts must remain at anchor until the starting gun is fired. The first yacht reaching the destination for the day will take her own time of arrival, and may, at some convenient place, hoist an ensign and take the time of arrival of all the other yachts, all of which must pass between this yacht and the nearest shore; the record of each day's run shall be delivered to the fleet captain immediately after the arrival of the last yacht. In the event of a steam yacht accompanying the fleet, the time of arrival will be taken by the steam yacht. Yachts desiring to leave the fleet must first obtain leave from the admiral. During the cruise the president of the association shall command the fleet and act as admiral and shall issue such orders as may be necessary. He shall appoint a fleet captain, who shall see that his orders are executed. The vice-president of the association shall act as vice-admiral during the cruise, and in the absence of the admiral shall command the fleet.

The admiral shall appoint a fleet surgeon who shall attend to all sickness or accidents to members while on the cruise.

The fleet shall be composed of a squadron from each club in the association, numbered according to date of organization, and each squadron will be commanded by the commodore of the club composing the squadron, who shall receive orders from the admiral and execute the same.

All yachts shall carry the association flag at the masthead and its club flag on the peak, but yachts may display both flags at the masthead while at anchor.

The daily runs shall be subject to change that may be made by the admiral and may deem proper during the cruise. Delegates from the various clubs present reported that so far forty owners of yachts had signified their intention of joining the cruise.

On motion the following was adopted: That a regatta committee consisting of three members, who will have entire charge of the management of the race. This we think the best plan, as it will do away with the appointment of judges, and of course will prevent two different decisions, as occurred at the last regatta of this association—we refer to the decision on the Just Woke Up. A committee of three to be called an entertainment committee will also be appointed by the fleet captain. This committee will have charge of the association steamer.

MEDUSA VS. M. E. STAPLES.—In October, 1889, a collision occurred in New York Bay between the cutter Medusa and the tug M. E. Staples, resulting in a suit by Mr. Center, owner of Medusa, against the owners of the tug. The case was heard by the U. S. Inspectors, which was adverse to the yacht, was published in the *FOREST AND STREAM* of Feb. 6, 1890. A decree has just been rendered by which the Medusa is declared free from all blame, and a reference ordered to assess the damages to be paid by the tug. This decision, which we believe to be an eminently just one, establishes the right of the tug to not only run in commercial craft, but pleasure vessels have certain rights that must be respected by steamers and other craft. This is almost the reverse of the very peculiar decision of the U. S. Inspectors.

OWEENE.—The new Turner 46-footer, Owenee, was launched at Lawley's yard on May 22, at 10 P. M. Her Scotch crew, made up from the old crews of Clara and Minerva, arrived last Monday week. Capt. Charles Barr will be in command and his nephew, young Barr, will be with him. Mr. Turner has just been elected vice-commodore of the Mass. Yacht Club.

YACHT CLUB ARGENTINO.—We have received a copy of the year book of the Yacht Club Argentino, of Buenos Ayres, established in 1884, and now numbering 92 active members and 14 boats.

MAID OF HONOR.

THE steel steam yacht shown in the accompanying plans was designed by Mr. Dixon Kemp for the Earl of Cawdor and is now building by Day & Summers & Co., of Southampton, Eng. Her dimensions are:

Length over all.....	142ft.
L.W.L.....	117ft.
Beam.....	17ft. 9in.
Draft.....	10ft. 6in.
Displacement, long tons.....	198
Boiler, steel, length.....	8ft. 9in.
diameter.....	9ft. 10in.
Furnaces, two, diameter.....	3ft.
Heating surface.....	818sq. ft.
Grate area.....	36sq. ft.
Steam space.....	15sq. ft.
Cylinders, diameter.....	15½ and 30 in.
stroke.....	28 in.
Propeller, bronze, diameter.....	8ft.
pitch.....	12ft. 6in.
surface of blades.....	17sq. ft.

The hull is built entirely of steel, under Lloyd's special survey, and will be classed 100 A1. The arrangement of the interior is clearly shown by the plans.

The question of having a boiler pressure of 160lbs. instead of 100lbs. and three cylinders (triple compound) instead of two was considered, but the advantages claimed for the higher pressure are scarcely available for steam yachts. The saving of coal is the chief advantage and this saving, as between steam of 100lbs. and 160lbs. pressure, is, as nearly as possible, 18 per cent. A steam yacht of the horse power to be developed on board the Maid of Honor will consume about 100 tons of coal in a season; the saving would therefore be only 18 tons, or say £25, while the additional cost of the boiler and machinery for working at 160lbs. would be at least £500, the interest of which alone would equal the saving in coal. Of course, if very long voyages are contemplated, during which the yacht might steam 20,000 or more miles, the case would be altered, as the saving would be very considerable, and, moreover, for any given bunker space the coal which could be stowed would last longer.

IN THE DELAWARE TIDES.

SATURDAY, from a yachting point of view was just about right; a bright, breezy day, the very dust clouds on shore making an excuse to get out as they could to where the white caps chased each other rapidly over the old "Coffee grounds" bar. Barring the promise that the wind would go down with the sun, the day was an ideal one for sailing. Standing around with hands in pockets, secretly wishing some other fellow would come along and get his feet wet bending on that jib, the captain of the little keel sloop Nance suddenly awoke to the fact that the new Burgess centerboarder was about to get under way for a trial spin. The question of a possible wetting was out of sight at once; to hustle out a crew of two, bend on the delinquent jib and clear up the disorder the carpenters had left took but a short time, and by the time the Burgess thirty had a start of half a mile, the little 20-footer was heeling down smartly to the fresh so'westerly wind and dashing through the living spray like something alive. With all lines neatly coiled down and in place we were in trim once more and while the big boat sticks to her reefs and storm jib we are carrying whole sail with tolerable comfort, the crew strung out along the weather rail.

While the breeze kept fresh the more powerful boat keeps her lead and we go no closer. It is a straight look down the river, however, and presently under the lee of the big Quaker City warehouses and manufactories we are almost in a calum. The big fellow evidently disdains to shake out a reef for so small an opponent, so we crawl slowly up on him foot by foot, until we can easily read the big gilt initials on the handsome Burgess counter. A stiff puff between the buildings takes off her captain's hat and opens out the space of clear water between us before we feel it. By close windward work we manage to pick the hat up and, as the wind grows lighter and lighter for the next two or three miles, we are able, when nearly opposite naughty old Gloucester, to toss it to its owner. Knowing full well the licking that awaits us should we venture down the breezy shore with our big companion, and satisfied with our impudent achievement, about we go and with lifted sheets start homeward. Looming the horizon of the stream we close along the Pennsylvania shore, in and out of the docks, the lessening wind barely giving us headway against the four knot tide. To our sorrow we venture over the flats below the Southwark quarters, keeping as nearly as we can judge about a foot of water under our keel. A sudden "Look out ahead," a sharp turn of the wheel hard to starboard—and we bring up with a proverbial "dull thud" that is simply sickening in its grim promise that we shall stay just where we are until the tide turns. Off comes the canvas and hard at it we go with pry and hawser, uselessly of course. The tide is leaving us fast and in twenty minutes a foot of red is showing below the waterline. Then only are we able to see what we have struck and find we have driven directly through the rotten side of a wrecked barge, long forgotten, and the receding waters leave us high and dry in perfect cradle. Supported on an even keel by the decayed ribs of the wreck, her bow high in the air, the poor little Nance looks a most mournful sight, seeming to say to us piteously as we row off in the tender "Please let me down." Satisfied of her temporary safety and seeing nothing to do else, we hie us to Gloucester by dint of a hearty white ash breeze and regale ourselves on all we can get—planked shad and "Rochester" no bad diet for hungry men. We are back again with the turn of the tide, but it is eleven o'clock before it touches her, and well into the quiet of a clear Sunday morning before it lifts us softly off our unsought perch, and home we go in the dawning.

JIB HANK.

BENDING WOOD.

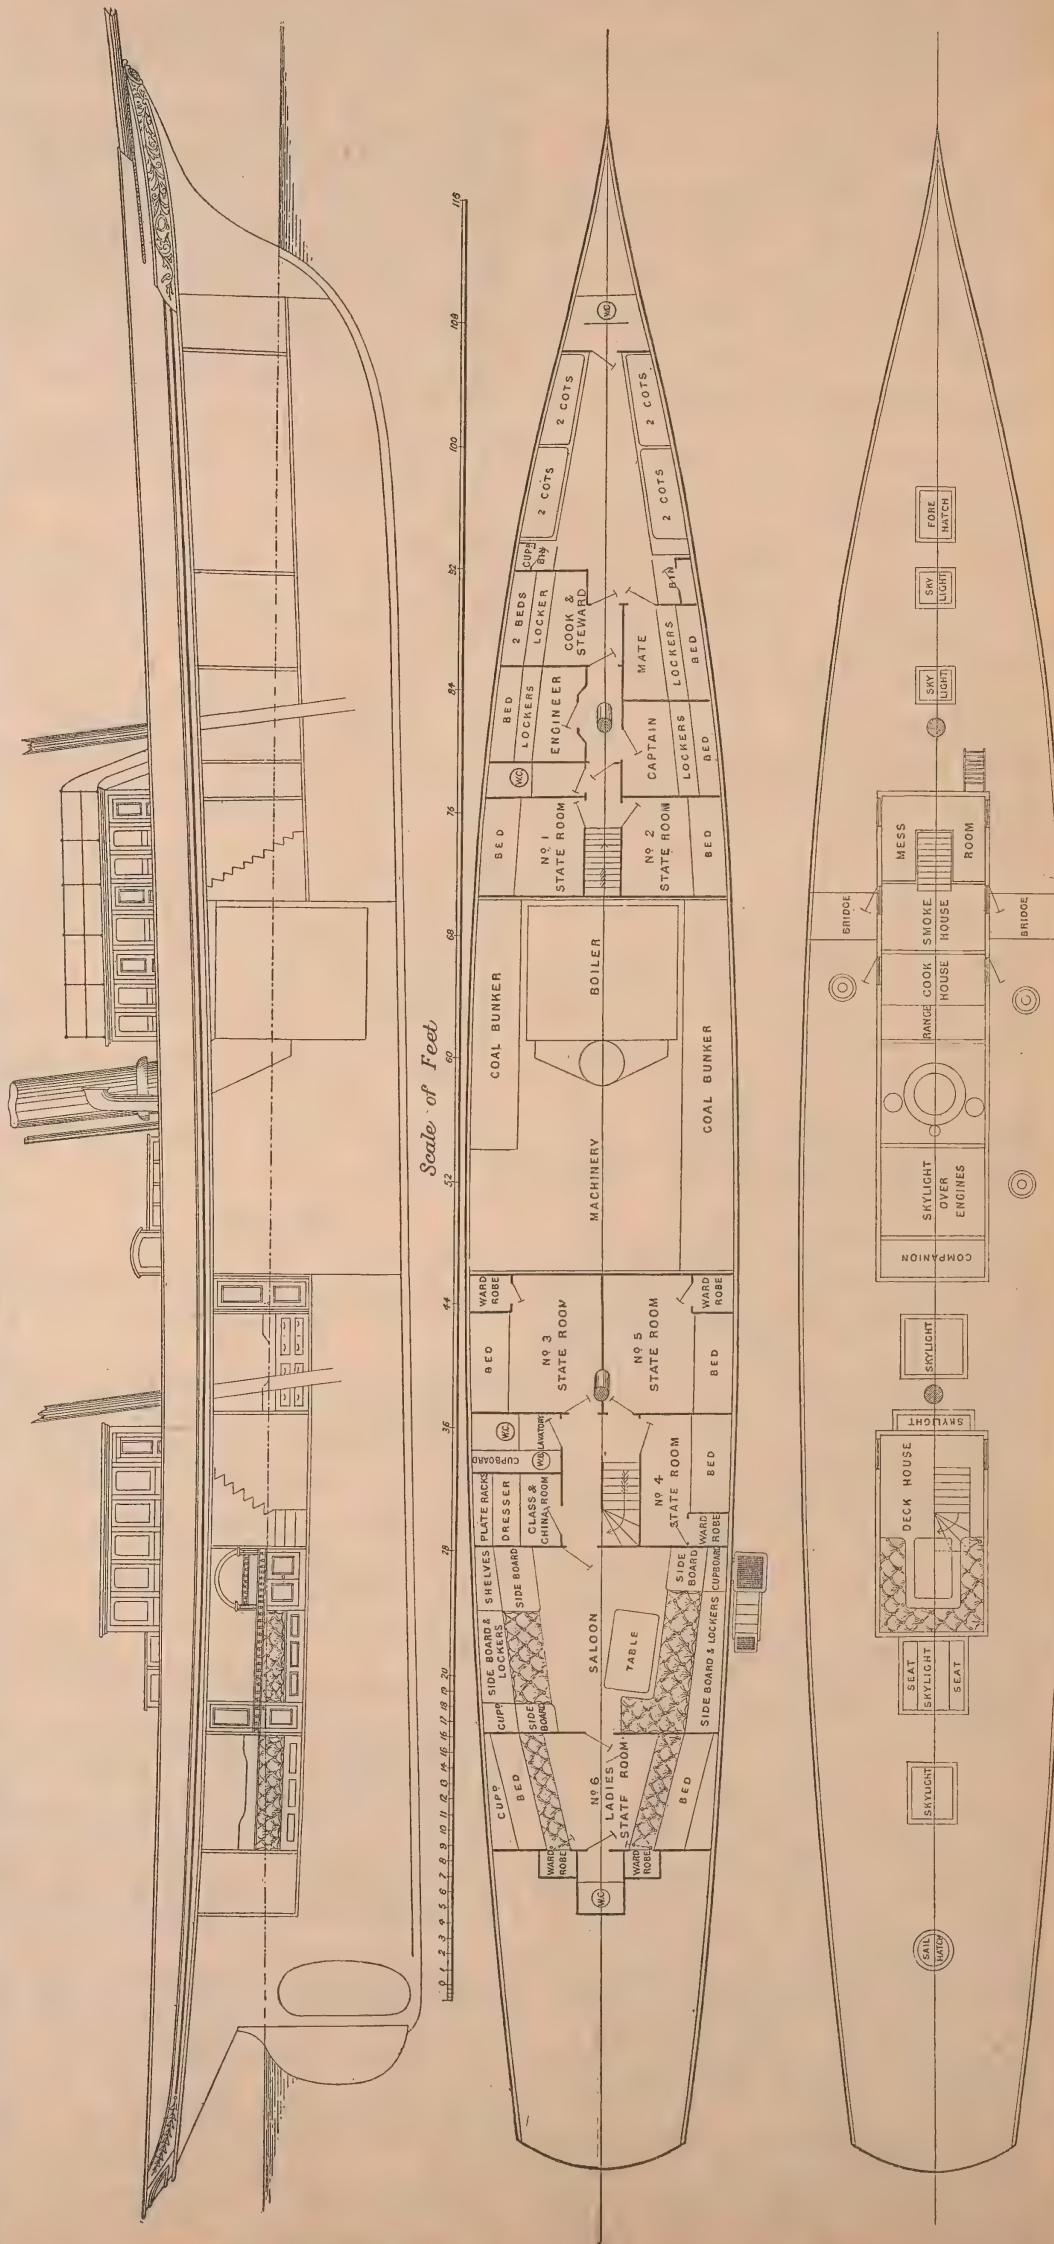

A MARKED feature of the new part steel construction that is rapidly coming into use in American yachts is the steamed and bent frame that is used between the steel frames, the common practice being two steamed frames between each pair of double ones.

The use of all double sawn frames, that was universal but a few years since, has been largely abandoned in the construction of racing yachts under 50ft., and the bending of the oak frames has become quite an important matter.

The common method is to bend the frames to shape over a timber block, the plant being of a primitive sort, and the percentage of split and damaged frames very large. The frames, after being staylathed, are set up in the same manner as sawn or steel ones and regulated by batten. In the new Fife cutter Barbara, the bent frames, of which there is one to every steel frame, are wider and thinner than in the American boats, and were steamed and put in place after the planking was fastened to the steel frames. The same method was followed, we believe, by Mr. Piepras in Bedouin, Oriva, Ileen and Wenonah, all of which have alternate sawn and steamed frames.

The bending of oak for frames is not a difficult matter with the proper plant, but as usually carried out there are plenty of frames hidden by plank and ceiling which should never go into a boat, especially into one in which every member is expected to do its full share of the work with the least possible weight. The following letter, which we copy from the *Iron Age*, shows to what a degree of perfection the bending of wood has been brought in other branches. Of course there is a difficulty in yacht work from the fact that but few pieces of any one shape are required, but this is not insuperable, and there is room for a very great improvement over existing methods:

"Of course, bending wood is a science; the wood must be steamed just right, with the right kind of steam, or it will be brashy and soft. Nearly all kinds of wood will bend, if treated right. The writer bent a carload of black birch double not long since. The latest use to which the bent wood has been successfully adopted is for the rims or faces of wooden pulleys. It was a difficult work at first to master the rims. They had to be bent for large pulleys from great heavy plank 14ft. long, 4in. thick and 13in. wide, and for all the pulleys as wide as the lumber would run. The largest, strongest and latest improved machinery was constructed by the Menasha Wood Split Pulley Company, of Menasha, Wis., who had determined to make bent wood rims for pulleys. They have the largest bending machine in the world. It will bend a rim for a 12-inch diameter pulley one minute, and the next moment will bend a great, strong, heavy, hard wood plank for a 96-inch diameter pulley. It will bend a stack of rims as high as the highest church steeple in one day. The men who operate the steam boxes and the machine have bent stock for wagons, sleighs and plows for twenty years, and the rims are as square and true and perfect as it is possible to make any rim by any means. They think they have done badly if they break more than one single piece in a week. Now and then the steel straps used with cast iron upsets to inclose the lumber while bending will break, and the heavy plank, released from its bend, will fly off and knock the men flying down on the floor or strike them in the ribs or stomach, or they just barely escape a flying piece of iron; still, they very soon get up and at it again as if nothing had happened. These little knockdowns are their pastimes, and add the only variety to the

STEAM YACHT "MAID OF HONOR." DESIGNED BY DIXON KEMP, ESQ., 1890.

SAIL PLAN OF STEAM YACHT "MAID OF HONOR."

work. Visitors at the pulley works usually stand apart and view these machines from a distance.

"When the rims are removed from their steel bending forms they are stayed in shape with wooden straps, then laid away to air dry, after which they are kiln dried. When kiln dried they never lose their shape again, but remain exactly as left by the bending as if they had grown that way. The bent ribs are all made from hickory or other hard wood, and make the best belt surface for pulleys ever discovered; besides, they never wear out. This company manufactured 50,000 pulleys last year. They sell them all over the world, and are to-day 2,000 pulleys behind their orders. This seems to be a very fair evidence of the value of bent rims and bent wood for nearly all purposes where it can be used.

"PUBLIUS V. LAWSON."

NAVAL RESERVE ASSOCIATION.—Commander J. W. Miller, of the first battalion of the Naval Reserve of the State of New York, has issued instructions to the various batteries for the collection and arrangement of specific information of a useful nature, as follows: "The First Battery is to ascertain the total number of tugs in these waters having a speed of over ten knots, and also those having a speed of over twelve knots, together with the size and the owners' names and addresses, as well as the names and addresses of all wrecking companies, with their capacities. The Second Battery is to obtain a full set of Government charts, tide books, aids to navigation of New York Bay and approaches, and of Long Island Sound. Inlets or rivers crossed by railroads are to be marked, and the depth of water at the railroad bridges is to be shown. The capacity of the railroads for the transportation of torpedo boats is another feature of this detail. The commanding officer of this battery is to make a report on the best methods of defending the eastern entrance to Long Island Sound in case of emergency. The detail for the Third Battery provides for obtaining a list of steamboats which have licenses for Sound and Bay passenger service, the number of passengers allowed by the inspectors, and the number of men that could be transported by them in time of emergency. Besides this the Third Battery is to obtain the speed, tonnage, draft loaded, number of state-rooms, number of berths, and cubic capacity of freight space of all these steamers, together with the names and addresses of their owners. The Fourth Battery is to confine its labors to shipbuilding and supply men. It is to obtain the names and addresses of all shipbuilders, with their capacities and plants; ship carpenters and general outfitters, such as joiners, boiler-makers, and engine builders, together with a list of anthracite and bituminous coal dealers, and the amount they can supply per day." The practical value of work of this kind needs no proof.

NEW YORK Y. C.—The regular meeting of the New York Y. C. was held on May 21, with Com. Gerry in the chair. The most important business was the arrangement of the programme for the annual cruise, a very great change being made from the regular custom, the rendezvous being changed from New London, where it has been since 1884, to Glen Cove. It was decided to rendezvous at the latter place on Aug. 3, sailing next day for Huntington Bay and thence to Newport in time to sail the Golet Cup race on Aug. 7. A steamer will accompany the fleet, carrying the non-owners and their friends. Mr. Jenkins Van Schaick, of Glen Cove, has promised a grand clam-bake to the fleet on Aug. 3. The Oak Bluffs Club, through Dr. H. A. Tucker, has offered a cup for the 46-footers should the fleet visit Vineyard Haven. Treasurer F. W. J. Hurst announced a balance of \$41.00 in hand. Mr. W. H. Webb, the shipbuilder, presented to the club a model of the old schooner yacht *Edward*, built and owned about sixty years ago by J. Prescott Hall, Edward Center, N. Pendleton Hosack, and Geo. E. J. Bowdoin. The following members were elected: H. B. Wolcott, J. H. Breslin, W. C. McMillan, N. D. Lawton, J. T. Boss, A. Ingraham, C. H. W. Foster, W. F. Whitehouse, G. J. Colford, J. E. Berwind, W. H. Butler, Alex. Brown, F. A. Guild, F. H. Walker, J. S. Newberry, W. L. Van Wart, Howard Carroll, C. Hubbard, Wm. Gregory.

JAPANESE LACQUER.—Naval Constructor McIntony has taken up the lacquer-covered plates that have been immersed in the navy yard basin for several months past, and forwarded them to Washington with his report. It is understood that an important part of this report will deal with the insulating power of the plates against galvanic action, a point in which lacquer differs from ordinary protective compounds. It is well known that if a steel plate having magnetic oxide of iron on its surface be exposed to sea water a strong galvanic couple is set up between the oxide and the steel underneath the protective covering, and pitting of the metal results. With lacquer the case is different. Lacquer has no chemical action on the magnetic oxide, and if the plate is dry when it is applied galvanic action is prevented. The exclusion of water prevents any action whatever, and the best results with the test plates were obtained on plates on which the presence of magnetic oxide was ignored. The removal of this oxide, which is ordinarily considered necessary, is therefore avoided.—*Iron Age*.

ATLANTIC Y. C.—The programme for the opening sail on Memorial Day, a fixture originating with the Atlantic Y. C., is as follows: The club flag will be hoisted at 10:30 A. M. and saluted, after which the yachts will sail down the lower bay and return. Schooners and Classes 1, 2, 3, 4 and 5 of sloops will sail to and around Buoy 14 on the Southwest Spit, while all other classes will sail to and around the Swash Channel bell buoy and return, yachts keeping the outer marks on port hand in rounding. Yachts must pass to the westward of Fort Lafayette and the Rimmer Beacon to the eastward of buoys on the West Bank, going and returning.

LAKE CHAMPLAIN Y. C.—Officers, 1891: Com., W. Seward Webb, of New York; Vice-Com., W. H. Crombie, of Burlington; Pres., J. Gregory Smith, of St. Albans; First Vice-Pres., Elias Lyman, of Burlington; Second Vice-Pres., H. LeGrand Cannon, of New York; Sec'y., A. G. Winemore, of Burlington; Treas., Horatio Hickok, of Burlington; Meas., A. C. Tuttle, of Burlington; Capt., D. W. Robinson, of Burlington; Fleet Surgeon, Dr. A. P. Grinnell, of Burlington.

THEETIS, sloop, Mr. P. V. Stevenson, has been laid up in Lawley's basin all winter. A new suit of canvas has been made for her by Mr. Wilson, of Boston, from his own plans, and the hull has been put in the neatest possible shape by Capt. Perry. She sailed last week for New York with her owner on board.

TOM BOY, cutter, Mr. Archibald Rogers, has been sold by Mr. Burgess to Mr. A. B. Smith, of Boston.

CORINTHIAN MOSQUITO FLEET.—The first race of the season will be sailed on May 30 at Larchmont, starting at 11 A. M., and open to small craft of other clubs. The classes will be 21 to 25ft. l.w.l., including yachts of 25ft. corrected length; 18 to 21ft.; 15 to 18ft.; under 15ft. A \$75 subscription cup, to be known as the Corinthian Mosquito Fleet Champion Cup for 1891, is offered for the special class; and to be sailed for on May 30, June 20, and at the fall regatta, with a sail off if required. Two boats must start in each race. Fourteen new members have lately been elected.

BRAT.—This pretty name has been given to the new 1-rater, lately built for Mr. Paul Ralli, late owner of the *Yarana*. A 1-rater, of which a number have been built in England this year, is an open sailing boat such as a yacht's cutter. Such limits have been laid down for the class as will produce a type of boat that may be carried at the davits of a sailing yacht, and in which good sailing may be had. Old yachtsmen like Mr. Ralli and Mr. E. T. Quilter, have taken up the class, and plenty of racing is promised.

CORINTHIAN NAVY.—The fleets of the East River Squadron and the Long Island Sound Squadron will assemble off the breakwater at Glen Cove, Long Island, on May 30, at 9 A. M., to take part in a cruise. The fleet will disband on the 31st inst. Thos. T. Taber, vice-admiral, commanding; W. S. Sainsbury, fleet captain.

NAUTILUS.—On May 20 the new 46-footer *Nautilus*, designed and built by Mr. H. C. Winttingham at Bay Ridge for Mr. J. Rogers Maxwell, was launched. She will be ready for the races next month. Mr. Maxwell will have both *Nautilus* and *Shamrock* with the New York fleet on the cruise, and *Shamrock* will enter the Golet cup race.

GONE INTO TRADE.—The once famous schooner *Flying Cloud*, built by Inman, at Lympington, Eng., in 1852, has just been sold to a London firm, who will use her for carrying explosives. A similar fate befell the American schooner *Rambler* a few years since.

STELLA, sloop, built at Amsterdam from designs by Mr. A. Gray Smith last year, and which made a very good record in the racing, will have a new suit of Laphroaie canvas this season.

HANNIEL, steam yacht, formerly owned by Mr. Ford and now by Mr. C. H. W. Foster, has been painted white. She will serve as a tender for her owner's new 46ft. boat *Barbara*.

CONQUEROR, steam yacht, Mr. F. W. Vanderbilt, is at Southampton, and will soon sail for New York. Capt. Woods, late mate of the *Alva*, is in command.

"THE YACHTSMAN."—A new weekly, devoted solely to sailing, has been started in London under the title of *The Yachtsman*.

GLORIANA.—The new Morgan 46-footer had a successful trial trip at Bristol on May 10, and is now at Newport.

BEATRIX, the Bryant-Prince 46-footer, was launched on May 26, at Frisbie's yard, Salem.

FANCY, Mr. C. F. Lyman's new 30-footer, was launched at Lawley's yard on May 22.

JATHNIEL, steam yacht, Mr. D. S. Ford, has been painted white.

Answers to Correspondents.

No Notice Taken of Anonymous Correspondents.

U. G. C., Sing Sing, N. Y.—Is there registered a bitch Starlight, No. 12,272? If so please furnish me pedigree. Ans. What breed?

SUBSCRIBER, Poughkeepsie, N. Y.—Please to inform me whether a cocker spaniel needs any training to tree partridges? Ans. Yes.

J. T. McG., Baltimore, Md.—Will you please send me full pedigree of Gen. Felix Agnus's collie dog Sir Loch? Ans. He is not registered.

G. W. N., Detroit.—For trout fishing go to Sault St. Marie, Mich. Write to Peter M. Moore, Deputy Fish and Game Warden Francis O. de lauze, 18 South William street, New York; but we doubt your getting permission to fish in the club waters. For trout near New York write to D. M. Crane, Canadensis, Pa., or to Dr. Fuller, Dingman's Ferry, Pa.

F. A. P., Brunswick, Maine.—I never have shot for money, but have rowed several races in shells for money. Of course, rowing has nothing to do with shooting. I wish to know if I am eligible to enter this contest? Ans. Yes, you are eligible. The date of the competition has not yet been set.

C. L. W., Little Falls, N. Y.—Can clubs or individuals by purchasing tracts of land in the Adirondacks that the West Canada Creek runs through prohibit fishing in the creek when it has been stocked by the State? Ans. Yes. Stocking a stream with fish from the State hatcheries does not make it public.

C. O., Brooklyn.—The secretary of the South Side Club is Mr. Francis O. de lauze, 18 South William street, New York; but we doubt your getting permission to fish in the club waters. For trout near New York write to D. M. Crane, Canadensis, Pa., or to Dr. Fuller, Dingman's Ferry, Pa.

J. R. B., Auburn, Ala.—1. Who is the breeder of the pointer bitch Patsy, by Short (Old Short-Shot) out of Carrie (Lort-Lady Croxteth)? 2. Who is her present owner? Ans. 1. F. Hibbard, Athens, Ohio. 2. At the time she was registered it was the A.K.C. Stud Book, in Part 1, Vol. V., in 1888, she was owned by T. E. Baker, Logan, Ohio.

W. G. H., Yazoo City, Miss.—1. I have an English setter puppy whose dam's grand sire is an English setter, Dan, by Count Noble out of Spark. Can I find out through you whether Dan is registered or not? 2. Is there any way by which I can get this information? Ans. 1. The Dan you mention is not registered. 2. No, unless some of our readers can give you the information you ask.

H. E., Crediton, Ont.—I have a rifle, 45-90 Winchester, 1888 model, and also the Winchester reloading tools made for large cartridges; and I find in shooting shells I reload myself that the powder bakes and the gun gets loaded so that I cannot hit a 2ft. target at 80yds. Will you please give instructions how to reload shells and what powder should be used? Ans. Try a harder bullet, one with more tin in it, also a moister burning powder.

YOUNG SPORTSMAN, Houston, Texas.—Will you please inform me what weight, kind of bore, length of barrels, etc., a 12-gauge hammerless shotgun should be in order to obtain the best results in shooting quail, ducks, prairie chicken, and squirrels. Also say what kind of powder would be best suited for said gun for general use. Ans. Choose a 7½lbs. modified choke, 30in. barrels, and use first-class black powder to insure uniform results.

J. G. D.—Some time ago I heard a sportsman of more than ordinary intelligence, and one whom I regarded as a close and acute observer, assert that the use of mercury in gun barrels to prevent rust, etc., was injurious to the metal of the barrels. As I understand him, it changes the character of the metal, weakens it, destroys it or disintegrates it. Do you think that there is anything in it? Ans. The mercury will not affect the metal. In fact mercury is regularly stored in iron receptacles in commerce.

L. S. H., Illinois.—Can you or some of your readers tell me the cause of a close shooting gun making a patchy pattern? The gun shoots very close, making a pattern of over 400 No. 8s 14oz. 30in. circle at 40yds. The pattern is close enough, but there are holes in it that will allow a bird to slip through. The fault seems to be in the boring, as other guns shoot the same loads without showing so many holes and thick places in the pattern. I should like to hear from you or from some of your readers who have had experience in gun boring. Ans. It may be that the fault is in the wadding. Try various styles of wadding, and see if that will not give the remedy.

P. M., Lincoln, Neb.—1. Inclosed find pedigree of my Irish setter puppy, named *Cuban*, which name I would like to claim. Please let me know if Mike Hughes and champion Mamie, owned by C. H. Buford, of Lincoln, Neb., are registered. 2. My puppy shows four white toes. Does that hurt his value? 3. Could I get him registered? 4. What book can I get for information for thoroughly training my dog? Ans. 1. No. 2. Not necessarily. 3. The pedigree shows three generations, and if correct your dog can be registered; write to A. P. Vredenburg, 44 Broadway, New York City. 4. "Hammond's Training vs. Breaking." We can supply it. Price \$1.

J. L. M., Springdale, Pa.—What is meant by the term *Susquehanna salmon*? Is it a salt-water fish in fresh water, or is it entirely a fresh-water fish? In our locality we have two varieties of the salmon family, one which we call a clear salmon, and which I have seen to reach 11lbs. in weight, the other a much smaller fish which rarely reaches 2lbs. in weight, which we call a jack salmon. Are those the proper names? Ans. *Susquehanna salmon* and *jack salmon* are names generally applied to the same fish, belonging to the perches and not to the salmon family. The fish is better known as the pike perch or wall-eyed pike. In our issue of June 7, 1889, you will find a description of the pike perches and a long and bewildering list of its common names. The salmon has no spines in any of its fins, as you will observe by consulting our Trout Supplement, and is, consequently, very different from the spiny perches.

SUBSCRIBER, Denver, Col.—1. How would you breed to correct a faulty point, to the opposite extreme or to one having the point just right? 2. What is meant by the term "meally-faced"? 3. I have lost two valuable litters through the bitches having no milk. Can I do anything to insure a flow in another one now in whelp? 4. Is eating grass by a dog indicative of any disorder? If so what is the remedy? Ans. 1. To the one having the point just right, on the principle that like begets like. 3. One speaks of a meally-faced liver and white pointer when the liver marking on face is shot with white, not clear and distinct. 8. We do not know of any remedy. Perhaps your bitch had not enough exercise during pregnancy. Better procure a foster mother for the pups that are on the way. 4. No. Eating grass is a method the dog has of cleansing the stomach; let him eat as much as he likes. It often promotes vomiting and is popularly known as the "dog's medicine."

H. G. B., Philadelphia.—1. Will you kindly give me the ingredients of the best lotion to use as a preventive for black flies and mosquitoes? 2. What is the best preparation to use to make canvas waterproof? Ans. 1. We repeat an answer given for the other day: The black fly preventive recommended by Mr. E. A. Samuels in his "With Fly-Rod and Camera" is this: One part pure Stockholm tar to two parts sweet oil, adding a little oil of turpentine and 2 drops creosote. One half pint tar, ½ pint lard or vaseline, ½oz. pennroyal, 3 drops creosote; mix with hand and bottle for use. 2. Take 2½lbs. alum and dissolve in 10 gallons of boiling water; then in a separate vessel dissolve the same quantity of sugar of lead in 10 gallons of water and mix the two solutions. The cloth is now well handled in this liquid until every part of it is penetrated, then it is squeezed and dried in the air or in a warm apartment, then wasped in cold water and dried again, when it is fit for use. If necessary the cloth may be dipped in a liquid and dried twice before being washed. The liquor appears curdled when the alum and lead solutions are mixed together. The sulphate of lead is taken up in the pores of the cloth, and it is unaffected by rains or moisture, and yet it does not render the cloth tight. Such cloth is also partly unflammable. A solution of alum itself will render cloth, prepared as described, partially waterproof, but it is not so good as the sulphate of lead.

FOREST AND STREAM, Box 2,832, N. Y. city, has descriptive illustrated circulars of W. B. Leffingwell's book, "Wild Fowl Shooting," which will be mailed free on request. The book is pronounced by "Nanik," "Glean," "Dick Sykes," "S. Billene," and other competent authorities to be the best treatise on the subject extant.

NAMES AND PORTRAITS OF BIRDS, by Gurdon Trumbull. A book particularly interesting to gunners, for by its use they can identify without question all the American game birds which they may kill. Cloth, 220 pages, price \$2.50. For sale by **FOREST AND STREAM**.

The Celebrated Smith & Wesson Revolvers

HAVE BROKEN ALL RECORDS FOR REVOLVER SHOOTING.

The Most Perfect Small Arms

EVER MANUFACTURED.

Unrivalled in Beauty of Finish, Durability and Accuracy.

Manufactured in calibers .32, .38 and .44-100. Single and Double Action Hammerless Safety and Target Models, with all latest improvements—Automatic Shell Extractor, Rebounding Lock and Patented Safety Device.

The Smith & Wesson Revolvers are constructed entirely of **best wrought steel**, carefully inspected for workmanship and stock, and **GUARANTEED**. Do not be deceived by **IMITATIONS** largely manufactured of **malleable cast iron**, and often sold for the genuine Smith & Wesson. All of the Revolvers of this firm are stamped upon the barrels with their name, address and dates of patents.

If dealer cannot supply you, orders sent to address below will receive prompt and careful attention. Catalogues and prices furnished upon application.

Hotels and Routes for Sportsmen.

ONLY rail route to the delightful summer resorts north of Quebec, through the **CANADIAN ADIRONDACKS**. Monarch Parlor and Sleeping Cars. Magnificent scenery. Beautiful climate. Hotel Roberval, Lake St. John, recently enlarged, has first-class accommodations for 300 guests, and is run in connection with the "Island House," a new hotel built on an island of the Grand Discharge of Lake St. John, in the center of the "Ouananiche" fishing grounds. Daily communication by the new fast steamer across the lake. The fishing rights of Lake St. John and tributaries, an area of 20,000 square miles, are free to guests of the hotels. For information as to hotels, apply to hotel managers. For folders and guide books to Thos. Cook & Son, 261 Broadway, New York; to Raymond & Whitcomb, 296 Washington St., Boston, and to ticket agents of all principal cities. —ALEX. HARDY, J. G. SCOTT, Gen. F. & P. Agt. Quebec, Canada. Sec'y & Manager.

Hotels and Routes for Sportsmen.

When planning your annual tour remember that this company controls over 4100 miles of railway equipped in the most approved modern style, passing through a magnificent country noted for its unsurpassed facilities for sport. **A FEW OF THE PRINCIPAL RESORTS.** PORTLAND, Me.—For deep sea fishing. ANDROSCOGGIN LAKES (via Bryant's Pond or Bethel).—Excellent trout fishing and game, large and small, of every description. THE WHITE MOUNTAINS (via Gorham, N. H.).—For trout and varieties of game. THE SALMON RESORTS of Quebec, New Brunswick and Nova Scotia (reached via Quebec).—For Ouananiche, trout, caribou, bear, moose, beaver, otter, etc. THE RIVER ST. LAWRENCE (in the neighborhood of the line for 400 miles).—For muscalonge, pike, bass, whitefish, pickerel, perch. THE THOUSAND ISLANDS (via Gananoque or Kingston).—For pickerel, black bass, muscalonge, pike. MUSKOKA LAKES.—The best place on the continent for fishing, shooting and camping. All varieties of fish and game. PARRY SOUND AND GEORGIAN BAY (reached via Penetang, Midland, Collingwood, etc.) for black bass, pickerel, deer, partridge, bear, otter, etc. LAKES ONTARIO, ERIE, HURON AND MICHIGAN (via stations at all principal ports). LAKE SUPERIOR (via Collingwood, Wlarton, Sarnia in connection with steamship lines). The charges for hotels, guides and camping at many of the fishing waters named above are extremely low. Full particulars of same, with many valuable hints as to best months and general facilities, are published in a pamphlet entitled "Fishing and Hunting Resorts of the Grand Trunk Railway," which will be furnished gratuitously on application to the Company's principal agents, or to the General Passenger Agent at Montreal, P. Q. WM. EDGAR, Gen. Pass. Agent. L. I. SEARGEANT, Gen. Manager.

These arms are carried by Anglers, Hunters, Fishermen and Tourists.

H. M. QUACKENBUSH'S SAFETY CARTRIDGE RIFLE.

The Best Accurate Rifle Yet Offered for the Money.

Whole length, 38 in., weight 4 1/2 lbs.; caliber, 22,100, for regular "BB" or long and short cartridges. We guarantee these rifles to shoot as strong and as accurate as any 22,100 Caliber Rifle made; besides, they are perfectly safe to handle, quick to operate, reliable in every respect, and will bear incessant use without impairing their efficiency in the least degree. The rear sights are adjustable, and the barrel can be instantly removed from the frame, making a handy arm to carry in trunk, valise or package. Each Rifle is tested before leaving our works, and is knocked down as above stated, and neatly packed in a neat, strong box. We also manufacture a full assortment of Air Guns, suited to meet the tastes and wants of every one. The quality of our goods has established them in all the principal markets of the world, and their superiority has induced the U. S. Navy to place them, with success, on their school ships. Illustrated Price List sent on application. Address **H. M. QUACKENBUSH, Manuf'r, Herkimer, N. Y., U. S. A.** NOTE—We stamp our name on each Gun we make. Send for Catalogue No. 32. Mention FOREST AND STREAM.

LYMAN ACCELERATING SHOTGUN CARTRIDGE

The "EXPERT" is charged with a perforated cake of especially prepared powder, which burns progressively—the only correct method of availing of the power of powder in guns. Shot started easily, with rapidly increasing velocity and least recoil, and without stringing. Perfect combustion, little smoke, harmless dry ash residue. Cake burns in shell; no drying, heated grains to cut barrel of gun. Cakes made by machinery; greatest uniformity of pattern and penetration. No nitrates, decomposing, or changeable chemicals! Detonating impossible! Shotted cartridges, or Blanks containing powder cake only, for sale by **LYMAN CARTRIDGE CO., 9 Chambers Street, N. Y.** 10, 12 and 16-Gauges. J. P. FISHERMAN'S AUTOMATIC REEL.

When a sportsman finds anything which adds to his pleasure, with-
out increasing his labor, he wants all his brother hunters
and anglers to know of it and share with him
the newly discovered "helper."

WHAT WE CLAIM FOR The Automatic Reel.

FIRST—It will wind up the line a hundred
times as fast as any other reel in the world.
SECOND—It will wind up the line slowly if
the angler chooses.
THIRD—No fish can ever get slack line with it
FOURTH—It will save more fish than any
other reel.
FIFTH—It will prevent tugs, lines and snells
from being broken by large fish.
SIXTH—It enables the angler, and makes it
desirable, to use lighter tackle.
These claims have been substantiated by
the most skillful fishermen in America and
Europe.

This reel is manipulated
entirely by the hand that
holds the rod.

THE PROSPECTS FOR THE FUR SEALS.

THE correspondence between the United States and Great Britain has been published within the last few days, and serves to give a notion of the present status of this question. It appears from this correspondence that there is a prospect that a close season may be ordered in the Bering Sea for American and English subjects, except that the North American Commercial Company—the lessees of the islands—shall be permitted to take this year 7,500 so-called food skins, which it is claimed must be taken to subsidize the natives, and to reimburse the Commercial Company for its outlay this year. A bill providing for a close season has been introduced in the British Parliament.

If an agreement such as this had been reached three months ago, and adequate preparations for its enforcement had been made, it would have received the approval of most of those who desire the protection of the fur seal. It is true that 7,500 male seals can ill be spared from the small herds now at the "rookeries" on the islands, and it is equally true that these seals are not really needed for the support of the natives; nevertheless the concession of this number to the lessees might well be made if the killing could be limited to that. As matters stand, however, there is no reason to suppose that the destruction of seal life will be so limited. In the first place, the agreement between the two governments is not yet made, and it may take some time to arrange its details and complete it. In the meantime the Commercial Company has received permission to take 60,000 seals this year and the season for killing has already opened at the islands. If orders to limit the catch to 7,500 seals were dispatched to-day, they could hardly reach the Pribylov Islands in time to limit the catch to that number.

In the second place the Bering Sea is now swarming with pelagic sealers, who for weeks have been killing the seals in great numbers, and of these pelagic sealers, those who fly the British flag can hardly be warned to stop their work of destruction except by British authority, conveyed through a British man-of-war. Moreover, if pelagic sealers should be found there in vessels which have a German, or an Italian, or a Japanese register, these cannot be interfered with.

It will be seen that any agreement which may be made between the Governments of Great Britain and the United States must fail of wholly accomplishing its object on account of the lateness of the season. There has been delay and shilly-shallying over unimportant legal questions on the part of both Governments, and these delays can hardly fail to result in a slaughter of the seals, which in view of their greatly diminished numbers is terrible to contemplate. It is to be hoped that now the agreement may be made without delay, and orders issued at once by both Governments to stop the killing of the seals.

ANGLING RESORTS.

OUR angling columns this week contain mention of many waters where the fisherman may hope to cast his fly with profit. We repeat here a request often made before, that those who have knowledge of resorts for anglers will favor the readers of this journal with such information as may be of practical aid to them. One part of the FOREST AND STREAM's usefulness—and we consider it a very important one—is this constant supply of information for the benefit of the growing hosts of fishermen.

The tendency of the times is toward taking up and reserving all the best and most accessible waters, and shutting the public out. Hardly a week goes by that we are not asked to take a hand in the organization of a club to buy out somebody's reservation. The average holders of wilderness tracts, who cannot realize upon their possessions in any other way, appear to think that there are multitudes of fishermen and shooters eager to buy up choice sections of the backwoods and at generous prices. A comparatively small proportion of these fish and game bonanzas are ever actually unloaded, but there is no denying the fact that the most desirable tracts are rapidly passing into private control.

Under these conditions it is more difficult than ever before for the individual, who has no affiliation with a club, to find good shooting or fishing. We endeavor to do our part toward his guidance by filling our columns with such information as our friends may supply. If you have a good thing, whose value to yourself is not likely to be lessened by its sharing with others, tell us of

it. Send us some notes for publication under the fishing resort heading in our angling columns.

There is another side and a brighter side of the picture. The old resorts are one by one being taken from the public, but intelligent public enterprise in stocking the waters is constantly opening new opportunities. Michigan anglers are catching trout to-day in streams where ten years ago they would have found no reward, and where there would be none now but for the work of the Fish Commission. Pennsylvania rivers teem with bass, the result of stocking. New York lakes and brooks tell the same story. By the planting of landlocked salmon New Hampshire is converting her lakes into gold mines.

And so the record might be extended of State after State, whose angling resources are constantly enlarging. All this means that the extent of public fishing waters is widening, and if the methods that have been proved practicable are followed, who shall deny that in a few years the problem which now appears so perplexing shall not have been solved to the satisfaction of all.

SNAP SHOTS.

THE New York Herald opened the summer silly season promptly on June 1 with a sensational report of the killing by policemen of seven dogs on the previous day, which it called the "First Day of the Mad Dog Season." These seven animals, the Herald affirmed, were "mad," but not a particle of evidence was given to support such a theory. One dog, described as a cross between a mastiff and a bloodhound, bit a child who tried to play with it, while in spite of the owner's contention that this was not an evidence of madness, the creature was shot by a stupid policeman. Some years ago the Herald made up out of whole cloth a mad dog scare, interviewed a lot of fools for their views on hydrophobia, printed hysterical letters from ignorant women, and before abandoning its sensation actually caused the death of numerous victims from fright. The indications afforded by the Herald of last Monday are that metropolitan journalistic enterprise will be turned to the same field of activity this summer.

The FOREST AND STREAM grizzly bear in the Central Park menagerie, of this city, has developed pronounced sweetness of disposition and an inordinate appetite for peanuts. She thrusts a paw appealingly between the bars of the pit, children place peanuts within the tremendous claws, and she transfers them to her mouth, the whole proceeding being marked by confidence and fearlessness on the child's part and amiability and gratitude on that of the bear. The danger sign on the bars above is a mockery, and the gentle creature belies the *horribilis* of her name. It need not be added that this journal takes a vast store of pleasure and pride in such a well-behaved grizzly, for whose equal the Rockies might be hunted over in vain.

A fisherman who always catches his bait minnows by hook and line instead of by net asserts that the fish thus taken are larger and longer lived than those which are netted. In the rush for the bait, runs the theory, the big and strong fellows get there first, and the weak little chaps are crowded out; but on the other hand the big ones escape the net and the little ones are caught. The hooking does slight injury or none at all; and the fisherman who hooks his minnows will thus have the most healthy, vigorous and attractive bait.

At the meeting of the Fisheries Society at Washington last week Capt. J. W. Collins, Chief the Division of Fish and Fisheries, read a paper outlining the plan of the exhibit in this department at the World's Fair in 1893. The promise is that here for the first time the United will adequately display its fishery resources. The full text of Capt. Collins's paper will be printed in our angling columns next week.

A brief mention in these columns the other day of a proposed memorial of "Nessmuk" has elicited a number of responses, and we shall shortly announce the nature of the undertaking. Meanwhile we would be glad to have the addresses of those who may be specially interested in the matter.

ANY subscriber may supply a friend with a copy of the current issue of the FOREST AND STREAM by sending us on a postal card the name of that friend.

An Adirondack Number.

THE FOREST AND STREAM of June 18 will be an Adirondack Number. It will be filled with papers relating to the different phases of life in the North Woods, and there will be such variety that all readers, whether visitors to the region or not, will find something to their tastes. Among the contents will be the following:

The Primeval Adirondacks.

An account of camp life and hunting in the Smith's Lake country. By Raymond G. Hopper.

Two Weeks at Spruce Lake.

The experiences of four young fellows under tutelage of a guide.

Paul Smith's in 1890.

A racy picture of life as it is lived at this famous North Woods hostelry. By Fannie B. Merrill.

The Blazed Trail.

A story of misadventure. By W. P. Anderson.

Three Weeks on the Raquette.

A detailed account of deer hounding. By Paul Pastnor.

A Reminiscence of '66.

Deer hunting incidents recalled by an old hunting coat. By "Senior."

The Sportsman Tourist.

"THALASSA! THALASSA!"

OF TIMES, when evening shadows fall
And song of birds is hushed in sleep,
The music sweet of other climes
Comes stealing softly through the pines;
And, muffled 'neath night's sable pall,
Chords from a mighty organ sweep:
As, in the mountain torrent's roar,
I hear the waves beat on the shore.
Oh, music wrapped in mystery—
The deep intoning of the sea!

And oft, mid heat of summer day
I sit beside the brook and dream.
The golden clouds drift slowly by;
Lost are the bounds of earth and sky;
'Mid fleecy sails the breezes play
And pearly crests on azure gleam.
Restless and restful, to and fro,
Sunlight and shadow come and go,
While with thought's white-winged argosy
I rest upon a far-off sea.

Oh, waters blue! Oh, purpling shore!
Oh, winds that kiss the trembling foam!
The light, the life, the love are thine;
The wrack and wreck alone are mine;
Yet still I dream of days of yore,
On glistening sands again I roam.
The endless throbbing of the tide,
O'er mountains high, 'cross valleys wide,
Through lapse of years, still comes to me—
Eternal, changeless, bounding sea!

IN THE MOUNTAINS OF UTAH.

SHOSHONE.

ON THE NORTH SHORE.—VI.

(Continued from Page 370.)

AFTER we had retired that evening a terrific rain storm, accompanied by severe thunder and vivid lightning, set in, and continued till morning. I slept through it all, perfectly unconscious of the warring elements. Ned said it was the grandest storm he ever encountered in camp. Peal after peal and flash after flash were continuous, while the rain came down as if the flood gates of heaven were open. Everything was made as bright as day, and as he looked on the lake, he saw a schooner tempest-tossed, and a steamer breasting heavily against the surging waves. The lightning grew more luminous, while the frightful roar of the thunder was so heavy as to fairly make the earth tremble. The dense forest stood outlined in the vivid flashes so clear and distinct that leaf and limb were in plain view, while the very ground seemed to be running rivers of water, all uniting to produce an elemental strife that petrified him with fear. For several hours we were enveloped in

"Such sheets of fire, such bursts of horrid thunder,
Such groans of roaring wind and rain,"

as flamed and roared in the storm that beat upon Lear. Continuing his graphic description, Ned said, "I thought of the Angel's Song in Goethe's 'Faust.'"

"And storms with rival fury heaving,
From land to sea, from sea to land,
Still as they rave, a chain is weaving
Of deepest efficacy grand,
There burning desolation blazes,
Precursor of the thunder's way;
But, Lord, thy servants own with praises
The milder movements of thy day."

There was much fear expressed by the boatmen at the terrible storm, Joe declaring it the wildest and most furious he ever witnessed.

"Me thought the lightning hit me sure," he said in converse about it, and as for poor John, he covered his head and trembled in fear, expecting every minute that a bolt of lightning would incinerate him.

Ned couldn't understand how I could slumber amidst all the tumult, and particularly the attacks of the bloody sand-flies, which he said very nearly devoured him. Hardly a wink of sleep had he, and so woe-begone did he look that morning that I deeply sympathized with him.

"We must get out of here," he stated after breakfast, but noticing there was such a gloom in the great volume of black, jagged clouds, that were tumbling o'er each other, we thought it best to wait a while and see if the prospect would brighten. In the meantime we had the provisions carried to the beach for immediate loading, and then we sat down on a log at the edge of the lake and watched the weather as if our lives depended on it. It sprinkled a little just after the last box had been brought down, and then our hearts sank into our boots, and we sincerely wished we had the provisions back where they were so nicely sheltered.

"We are a pair of old fools," growled Ned.
"I protest, there is only one."
"Oh! I beg pardon, the other is a crank."
"Demonstrate the difference between a fool and a crank."

"One never knows when he is well off, and the other never can tell."

I acknowledged Ned's masterly ability by elevating my beaver, being satisfied after that solution that he had the head of a diplomat, and troubled him no more with enigmas.

The sprinkle soon ceased, and being somewhat desperate we waited for no further elemental developments, and ordered the provisions aboard and the tents taken down. Joe said the weather looked "dirty" and we had better wait, but there was no wait in us, and we insisted on departing at once, and for a land where the sand fly pests not, and where the atmosphere is pure and fragrant. We had had enough of the jungle and its malaria, and would repose on the flinty surface rather than again camp amid such disagreeable surroundings.

We finally got off about 9 o'clock, with a good quarter-wind, that made the water sing a racing chorus at the bow. It was six miles across the bay, and four beyond that to our destination, and if the breeze held we would make it in two hours, if not less. Two miles had been made, when a heavy fog came rushing down upon us. Ned now took his compass from its receptacle, the

little bag, and placing it on the seat by Joe, told him to steer by that. He marked the four principal points of the compass on the seat, and as he did so remarked that we ought to have set the compass before the fog obliterated the land ahead. This was something new to me in navigation, but then I was a landlubber that knew nothing about boxing the compass, or even "compass cards," and was as much confused over such things as was Peter Simple when Mr. Chucks was told to "bleed all the buoys."

I noticed, however, that Joe paid little attention to the compass, because it had not been set soon enough, but that he held the boat's head well in, determined not to miss the opposite shore. The breeze was not only freshening quite rapidly but it was changing its course, which, if it continued so much longer, would give us a dead-ahead wind. We went surging along, throwing the spray on all sides, with an occasional sprinkle inside.

"I no like this," said Joe.

"Me too," said Ned.

Still we kept plunging ahead in a heavy sea that was alive with whitecaps, when all at once the fog lifted and the shore was visible. There was evidently a look of hard weather ahead and it just then appeared as if we would have to make a tack or two before we reached the shore. Joe, who had been getting somewhat restless, said we had better turn back and run into the west side of Bachewanaung Bay.

Ned jumped at the suggestion saying, "I think so, too." Joe being thus encouraged swung the boat around in the tossing billows and away she went like a greyhound, with the snowy froth curling from her prow. It was delightful sailing now. We had the wind at our heels and were skimming o'er the surges with an oily smoothness:

"Merrily, merrily goes the bark

On a breeze from the northward free;

So shoots through the morning sky the lark,

Or the swan through the summer sea."

Just before we reached Bachewanaung Lighthouse we were again enveloped in a heavy fog, but Joe having a perfect knowledge of the shore, rounded us into the bay with the utmost precision. Again the fog lifted, thus giving us an opportunity of making a landing at the most lovely camping quarters, being a clear, glassy plain, and free from those pestiferous insects that make life a perfect misery. We were greeted by a lot of mangy curs that sniffed the provisions from afar. This compelled us to keep our eatables in an anchored boat, for so wolfish are these dogs that in a short time they will gnaw through a box or barrel. We drove them away a short distance, and there they remained ever on the alert to pounce down when a chance for food offered. On the Nepigon, at Dog Town near the mouth, so ravenously hungry are the horde of dogs there, that I have known them to steal meat as it was being prepared in the skillet. These dogs would doubtless do the same, and therefore we had to keep a constant watch upon them. The boys got the tents erected in a short time, and then prepared us an ample meal.

I was delighted with this lovely spot, for it is from this side of the bay its manifold charms appear. There are no crags, no pinnacles, no ramparts of rocks, no mountain frown nor savageness brought into contrast at any point with the general serene beauty. It's the rapturous reverse that is here exemplified. In the north of this dreamland of the icy lake the purple hills gently come upon you with shadowy impressiveness; rills and rivers, with flash and gleam, purr through the winding vales; islets and islands, in sweet repose, dot the surface in jeweled splendor; while on every side, under the magnificence of an azure sky, the prospect is not only inviting, but magnificent—

"Ever pleasing, ever new,
When will the landscape tire the view?"

In the afternoon the boatmen put the camp in good order, mended sails and gathered balsam, while Ned, who had been aching for a good wash, cleaned up with the Ivory soap, put on a change of linen, lit a cigar and then sat down with me to a game of cribbage, in which he got on the wrong side of the score.

My change of raiment I postponed to the morrow, being satisfied that there was not time enough for me that afternoon in which to eclipse our now dandified Ned, who looked royal in his purple and fine linen. Being in the immediate vicinity of the fishing station we paid it a visit and there made the acquaintance of Mr. Ganley, the head of the establishment. He gave us a peep into a fish car, where reposed on icy beds some magnificent specimens of brook trout. These, we presume, were either caught in gill nets or purchased from the half-breeds, who this season receive eighteen cents per pound for them. This very liberal price here induces nearly every Indian and half-breed anywhere within ten or fifteen miles of a fishing station to make a steady business during the season of capturing and disposing of these finny beauties at the above figures. They observe no law in their capture, their sole object being possession. When they can't entice them to their baited hooks or lures they use the spear, the "villainous jiggling process," "gang hooks" and gill nets. The latter they set in the immediate vicinity of the shore rocks or on the reefs and then with a long pole go pounding over the bottom in hopes of driving them into the meshes. They capture immense numbers this way. I was informed that a shipment of 2,000 lbs. was made at one time from one of these fisheries this season; and I presume that this was only a small portion of what then went to the Chicago market. This wholesale and illegal slaughter is rapidly depleting the waters of the North Shore of these lovely and delicious game fish, and even in my two years' experience on this shore I have noticed not only the depletion, but the reduction in size. It is not the matured savage alone who engages in this cruel warfare, but every boy that can paddle a canoe is out every day craftily stealing over the rocky grounds with peering eyes, and on seeing a trout poised in the clear waters down goes his hook, and up comes the struggling *fontinalis*.

The Fish Commissioner at the Canadian "Soo" has had his attention time and again called to the illegal capture and traffic in these fish, but he gives no heed whatever to it. The Indian and half-breed make no attempt at concealment, though well knowing the law on the subject, but pursue their market-hunting tactics with unblushing effrontery. Ned, on one of his trips a few years ago to the North Shore, secured one of these gill nets and took it to the Fish Commissioner as evidence of the nefarious busi-

ness; but it was like pouring water on a duck's back, no attention whatever being paid to it. This is a crying evil that will soon depopulate the lake of the trout, unless the higher authorities of that government call to account the criminal negligence of their subordinates. Mr. Editor, why not vigorously twist the fishing-tail of the British Lion on this subject? Come, sharpen your pencil and make the editorial page of your paper truly warlike.

The evening prospects for good weather on the morrow were exceedingly flattering. Huge white clouds, that wise men call *cirri cumuli*, swept grandly over the blue sky, and gathered in masses as the sun went down. The air was strong and full of aroma from the healthful balsam, which surrounded us on all sides, and Ned, feeling in musical tone, enlivened us with many a delicious aria, while the half-breeds in their tents near by sawed vigorously on their "fiddle," as if they had a contract to untwist all the chains that tie the hidden soul of harmony. Although Ned warbled sweetly, I knew a conspiracy was hatching in his soul that would soon manifest itself in a grand attack, and probable destruction of that distracting instrument. He loved a concord of sweet sounds, but that cat-gut scraping was more than he could endure. I tried to convince him that the boys were simply interpreting the weird music of Wagner, but it did not stop the revolutionary flame that was gathering great force within him.

After the troublous times at Pancake Bay we enjoyed that night a most delightful slumber and rosy dreams:

"Of joys perpetual in perpetual change!
Of stable pleasures on the tossing wave!
Eternal sunshine in the storms of life!"

The dawn gave us a sky of light, drifting clouds, ribbed in gold and orange, and a breeze just right for trout. Breakfast over we took boat with only one of the boys, John, leaving Joe to guard the provisions from the stealthy raids of the hungry canines, and shoved ahead for the lighthouse point, some two miles distant. The sun was quite warm, and John, having the entire job of rowing, and feeling the heat, proceeded leisurely along, giving us a fine opportunity for observing the landscape under the crimson tints of the sun.

A few crows, which Ned took for blackbirds, were seen sitting on the limbs of a recently fallen tree that hung o'er the declivitous bank, while the ever-present seagull, the scavenger of the lake, circled round and round the summit of a great rock just ahead, and then again soared, swaying his graceful wings, and uttering at intervals that peculiar cry, that in solitary haunts sounds so intensely mournful. A cabin in a beautiful grove, nestled charmingly on the grassy bank, with the sunshine brightening the foliage and dancing on the water that rippled on its threshold. It was the home of a half-breed, whose prattling children were playing their pranks on the rocky beach, while the mother was toiling with her household cares. It was a pleasing picture of a simple life, but it taught a lesson of contentment that you seldom see in stately halls of pompous splendor.

The lighthouse, like a watchful sentinel, bathed in rosy mist, came in view, and then a half mile along an irregular shore of ragged rocks and low cliffs, that a lover of nature would admire, and we are in the desired trout-trout waters. Our rods were soon in play, sending the feathery conceits around every rock, boulder and crevice we thought harbored the finny Adonis; but it seemed love's labor lost, for not a fin rippled the water in response. We displayed all our skill and cunning to inveigle the radiant beauties. Fly after fly of the most perfect and approved style were tried; still the waters remained unbroken. When we had about despaired of securing a trout, John called our attention to a thunder cloud that was assuming alarming proportions in the west. He advised us, if we desired to reach camp with dry jackets, that we had better head for it, and leave the daintily painted reveler of the aqueous realms to his statue-like poise. The boat throwing no curl from her outwater under the manipulation of John, we each took an oar, and thus doubly equipped, our speed was more than doubled, and the Mackinac went gaily o'er the crinkling waves. Speculation was rife as to whether we would reach our haven before the threatened rain fell, and the pool box showed up even on the result. We stuck manfully to the oars till camp was reached, and then the storm, so menacing, passed safely over, with a moan or two of thunder and a few flashes of lightning. It broke some miles to the east of us, as we could plainly see the rain pouring down upon the distant hills. We tried our chances with the brook beauties no more that day, but sat around the quarters and idled the afternoon away in crib and a grand attack on the pages of "Lorna Doone" and Balzac's "Two Brothers."

The next day was also passed in restful luxury, as we had concluded to await the arrival of the steam tug Annie Clarke, which is employed here in the fisheries, and take tow on her to the Lizard Island.

ALEX. STARBUCK.

FROM NEW MEXICO.

Editor Forest and Stream:

A ranchman who lives in the foothills of the Sacramento Mountains, about 70 miles west of this place, was in town a few days ago and gave me some interesting tips on game in his neighborhood. He reports antelope abundant on the mesas between here and his ranch, and deer, turkeys and quail by the hundred, everywhere in the foothills. He says that he can kill a deer or a turkey any day within two or three miles of his house. He also reports some elk, bear and mountain lions, 10 to 20 miles back from that place.

The Sacramentos are 8,000 to 10,000 ft. high but are open, grassy ridges, so that one can ride all over them. There are scattered oak trees all over the range and the acorns furnish good bait for deer, bears and turkeys. There are clear, cold springs everywhere, and plenty of rich grass for horses, so that it is an ideal hunting country.

Antelopes are still plentiful in this valley. Every one who rides through it between here and Roswell, which is 85 miles north, reports seeing numerous herds. As a general game country this valley and its environs takes the cake. I am not a professional guide and have no axe to grind, but if any of your readers wish to come here next fall I will put them on track of all the game they want.

H. A. LADD.

EDDY, N. M., May 28.

Natural History.

ON THE TEETH OF FISHES

AS A GUIDE TO THEIR FOOD HABITS.

BY DR. JAMES A. HENSHALL.

Read at the meeting of the American Fisheries Society, at Washington, D. C., May 27, 1891.

THE food of fishes is either vegetable or animal, as in the case of all other vertebrates. When vegetable it, of course, consists of *algæ*, while the animal food may be batrachians, fishes, crustaceans, mollusks, insects and their larvæ, etc.

A fish's diet may be restricted to but one of these various articles, or it may go through the entire bill of fare like a Christian; but the general character of the food of a fish may usually be determined by the structure and position of its teeth, so that an examination of the teeth of a fish will indicate whether it is herbivorous, carnivorous or omnivorous.

The teeth of most fishes, when they exist in the mouth, may be in patches or bands of equal teeth and may be either villiform or brush-like, setiform or bristle-like, cardiform or card-like, rasp-like, or they may be of unequal size and sharp and conical, compressed or lancet-shaped, or blunt, broad or truncated, molar-like, canine, incisors, etc. The teeth may be situated on the jaws, vomer, palatines, pterygoids, tongue and gill-arches, or the mouth may be entirely toothless, and the teeth confined to the pharyngeal bones of the throat, or they may exist in the oesophagus or gullet.

Fishes with unequal, sharp, conical or canine teeth are piscivorous and feed upon small fishes which they swallow whole; and those with lancet-shaped teeth, while also piscivorous, cut or lacerate their prey before swallowing it. Fishes with pavements of molar-like teeth feed upon crustaceans and mollusks, while those with toothless jaws are herbivorous, or if carnivorous, feed upon minute animal organisms, and are in no sense, piscivorous.

Beginning with the toothless fishes, that is, with no teeth in the mouth, are the minnows (*Cyprinidae*), and suckers (*Catostomidae*); they are both herbivorous and carnivorous. All of the minnows with intestines several times larger than their bodies feed principally upon vegetable matter, and the others upon insects and their larvæ and minute crustaceans (*Entomostraca*). Minnows have a few very small pharyngeal teeth, with or without grinding surfaces. Those having teeth with grinding surfaces are herbivorous, and those without these masticatory surfaces are carnivorous. The pharyngeal teeth of the suckers are larger and more numerous than in the minnows, and may be sharp or more or less truncated. They feed upon vegetable matter and micro-organisms extracted from the mud, and some of them on thin-shelled, minute mollusks.

The larger toothless fishes, as the sturgeons, whitefish, mullet, etc., feed upon minute animal organisms, mostly crustaceans. Some of the large toothless fishes, as the shovel-nosed sturgeon, paddle-fish and sawfish, have the snout prolonged into organs for stirring up the mud or sand of the bottom in order to obtain the small animal forms upon which they feed. The paddle-fish has the gill-rakers developed into a beautiful straining apparatus for securing these minute creatures. The saw of the sawfish is not used, as has been frequently asserted, as a weapon for disabling its prey for food, though it is used as a weapon of defense. Its use in procuring food is by stirring up the mud or sand of the bottom, and its food, as in the case of the paddle-fish and shovel-nosed sturgeon, is composed of small forms. I have frequently observed schools of half-grown sawfishes feeding in shallow water by raking the bottom with their saws, which are well fitted for this purpose. Their food seemed to be principally small crustaceans and mollusks.

Fishes with small, feeble, sub-equal teeth, as the herrings (*Clupeidae*), anchovies (*Engraulidae*), silversides (*Atherinidae*), etc., as we might imagine feed upon minute or microscopic invertebrate forms, mostly crustaceans, which exist in countless myriads in fresh and salt water.

Fishes with bands or patches of villiform or brush-like teeth, as the sunfishes (*Centrarchidae*), catfishes (*Siluridae*), striped basses (*Labracinae*), etc., feed principally on crustaceans, as crawfish, crabs, shrimps, etc., insects and occasionally small fishes. The black bass is not, as popularly supposed, a piscivorous fish—indeed, not so much so as the brook trout, which has stronger, sharper, and more unequal teeth. The principal food of the black bass is crawfish, as the shrimp, squid and crab is of the striped bass, though neither fish will object to a minnow, if it can catch it, when hungry. The minnow is a good bait for the black bass, as the menhaden is for the striped bass, but it must not be surmised from this fact that they are piscivorous in their habits.

A minnow on a hook is in a disabled condition and cannot escape, and most fishes will take it under these conditions, whereas if it was free it would easily get away. Fishes have been found in the stomach of sturgeons, but that is no indication that it is piscivorous, which it could not be with its toothless jaws and sucker-like mouth entirely below the projecting snout; but finding a disabled or dead fish on the bottom, it swallows it. So, whenever the black bass, striped bass, white perch, or the catfishes, or any fish with brush-like teeth finds a disabled fish of suitable size, on a hook or otherwise, it is taken in. I have demonstrated this fact time and again by dropping a hook baited with a minnow in the midst of a school of similar fishes, when it would be singled out and seized by a larger fish which had failed to notice those that were free.

I cannot refrain from saying, in this connection, that the black bass has been greatly misrepresented and unjustly maligned and grossly abused as a piscivorous fish, and often by those who ought to have known better. It has been accused of depopulating rivers of young shad that have been planted in them, while the striped bass of the same waters have escaped such imputation. It has been charged with the destruction of brook trout in certain waters, while the catfishes have not had a word raised against them. But happily the charges have been proven false, and the black bass has been acknowledged to be not so black as it has been painted. I lately saw a statement in public print from the superintendent of a fish hatchery that the pike-perch (*Stizostedion vitreum*) was not so voracious or destructive to other fish as the black bass or mascalonge! Comment is unnecessary.

I found this prejudice existing in England, and the opposition to the introduction of the black bass into British waters was very pronounced. Mr. Marston, of the London *Fishing Gazette*, informed me that the prejudice had been imbibed from American writers and anglers, who, in order to convince British anglers of the fine game qualities of the black bass had unwittingly overdone the matter and conveyed the impression that it was a more voracious and piscivorous fish than their pike! I wish to say right here that the reason of the failure to stock certain waters in England successfully with black bass is that said waters were not suitable for the small-mouthed bass—the kind experimented with. If the large-mouthed species had been introduced I have no doubt but it would have done well. It is eminently fitted for the sluggish, grassy broads of England, and would not be so destructive to other fishes as their perch, not to mention their pike. We have in America thousands of small lakes, many of them without inlet or outlet, where the black bass has existed from time immemorial with the pike, pickerel, perch, sunfishes, suckers, ciscoes, and even brook trout without detriment to either of these species—indeed, if any species suffers it is always the black bass.

The piscivorous fishes which swallow their prey whole are those with cardiform teeth, as the pickerel, or with sharp or conical teeth, as the dogfish (*Ania calva*) of fresh waters, or with canine teeth, as the mascalonge, barracuda, pike-perch, snappers, weakfish, etc. All fishes with unequal, sharp, conical or canine teeth may with certainty be pronounced entirely piscivorous in their habits, feeding principally or entirely upon small or young fishes or which are small enough to be swallowed whole. Sometimes, however, their eyes prove to be larger than their stomachs and they perish in the attempt to swallow a fish many sizes too large for their capacity.

Fishes with lancet-shaped teeth, as the kingfish, mackerel and Spanish mackerel, or with strong compressed teeth, as the bluefish, are entirely piscivorous, but bite, cut or lacerate their prey before swallowing it. The teeth of such fishes are miniature shark teeth and they are equally as destructive to their smaller congeners.

Fishes with prolonged or produced jaws, armed with strong, sharp, unequal teeth, as the marine and freshwater garfishes, morays, etc., are also wholly piscivorous.

Fishes with incisor teeth, as the sheephead, pinfish (*L. rhomboides*), scup, etc., have also molar-like teeth, and feed on crabs, shrimp or mollusks, and are not at all piscivorous. By the aid of its human-like incisors the sheephead can readily remove barnacles and other mollusks from rocks, timbers, etc., and crush them with its powerful molars.

The drumfish (*P. chromis*), and the fresh-water drum (*A. grunniens*), have villiform teeth on the jaws, but a strong pavement of rounded teeth in the throat for crushing the shells of mollusks, which is their principal food—though as might be judged from their villiform teeth, they occasionally swallow small fishes and crustaceans.

Thus, by observing the character and position of the teeth of fishes we have a sure and certain indication of the character of their food, that is, of their principal and natural food. Of course there will be exceptions, but they only prove the rule. A herbivorous fish will occasionally swallow animal food, while carnivorous fish will sometimes swallow vegetable matter. A fish that lives mostly on crustaceans, may consume twenty-five per cent. of fishes, and *vice versa*. They should be judged, however, by what they feed on mostly and habitually, when situated so that they can exercise their choice in the matter, for change of environment may involve a change of diet. The horse and dog may take kindly to sweetmeats, occasionally, but the one returns to his oats and the other to its vomit, notwithstanding, and it would be foolish to magnify their vagaries into confirmed habits.

DOES THE POSSUM "SULL"?—Some time ago the editor of the FOREST AND STREAM asked about the word "sull" as applied to the action of the possum. From this it is clear that he was not "raised" in the South. Every boy that hunts possum with the darkies knows that they will "sull." The word is doubtless formed from the adjective sullen. It is quite possible that some darky originated it. But to be honest, I did not before know it was not in Webster's dictionary. What else is one to say? If a possum doesn't sull, what does he do? That reminds me that "Lotor" says the naturalists have discovered that this action is not voluntary, but that the animal is simply paralyzed with fear. I wonder if those naturalists ever saw him look out of the corner of one eye to see if the coast was clear for a scamper. I hardly think the theory will "wash." Why doesn't the Chicago Possum Club take up these weighty questions anyhow, and settle them once for all?—AZTEC.

LIVE FOXES.—Ogdensburg, N. Y., May 30.—I inclose the following clipping from the Ogdensburg *Journal*, May 9. It shows that Mrs. Reynard is a good provider: "Hon. D. Magone for some time past has been missing some of his fancy-bred fowls from his farm near this city, and Friday Messrs. John Ashwood and Napoleon Baker went out with a hound to investigate into the cause. The hound took the scent and led the hunters to the hole of a fox. When they neared the hole a large she fox emerged and was brought down by a shot by Mr. Baker. They then dug into the nest and found feathers, a Rouen duck partially eaten, a mink skin and other evidences of depredations. Eight young foxes were captured and Mr. Ashwood now has them in his possession." The young foxes are quite lively; the males inclined to be vicious, but the females quite gentle. Does anybody want them? If so they can write to Mr. Baker, who is quite a fox hunter.—NEW GUN.

A WHITE-WINGED ENGLISH SPARROW.—Kendallville, Ind., May 27.—While shooting some English sparrows to-day I shot one with perfectly white wings. I saw one a year ago like this one, but could not secure it. The one that I shot to-day was a female and the other a male. Have any of your readers secured any like these?—L. A. T.

TAME CROW.—Sandusky, O., May 27.—I notice in the last issue of FOREST AND STREAM about Mr. Nielson's pet crow killing sparrows. Mr. Nielson tells me that the same pet crow sometimes follows him to the depot and always finds the way home.—A. H. D.

Game Bag and Gun.

THE FULL TEXTS of the game laws of all the States, Territories and British Provinces are given in the *Book of the Game Laws*.

A FATHER'S JOY.

A FARMER lived in the long ago,
I can't say just how long;
He had three sons who were his pride—
They all were stout and strong.

He wished to see their character
Well formed without a blot,
But his ambition was to make
Each boy an expert shot.

His barn, just half a mile from home,
He visited one day,
And in it saw a staring owl,
Then made quick haste away,

To tell his sons what he had seen
On high up in the shed,
And that, with rifle charged with ball,
The owl they would strike dead.

Obedient to their sire's command,
On to the barn they went,
And with unerring aim a ball
Into the owl's brain sent.

Ekultant, with the bird of night
In hand, to bless their sire;
One looking back in terror cried,
"The barn is all afire!"

Back to the barn the trio ran
To quench th' incipient flame;
Their efforts were of no avail,
The barn to ashes came.

Sadly went the boys to tell
The ruin they had wrought
By firing of that little gun
Their father's pride had bought.

The father looked as they drew near;
Upon his brow a scowl;
"I fear those boys won't mount to much,
For they ain't got the owl."

And ere inquiry he could make,
One boy in anguish dire
Cried out, "Don't whip us, papa dear,
We set the barn afire!"

"The barn burnt down? Why how you talk;
Well, that is pretty bad;
But that you missed the owl to me's
A matter much more sad."

"Nay, father, as the fellow sat
A-winkin' overhead,
I took dead aim and down he came,
Shot through and through the head."

"Well done, my boy!" the father cried,
As joy beamed in his eye;
"The barn is burnt, but that is nought—
You hit the owl, don't cry." N. D. ELTING.

INDIANS AND WILDFOWL.

Editor Forest and Stream:

I notice that there seems to be considerable speculation among sportsmen as to the cause of the rapidly decreasing flight of water fowl. They are, indeed, becoming very scarce, as compared to former years, and I fear that even were the shooting of them entirely prohibited in the United States it would only defer their extinction for a time.

I learn from different half-breeds, who have been in the far North, some to Slave Lake and beyond, that the different tribes in that northern region, the great breeding ground for water fowl, now depend upon them in great measure for their subsistence. As soon as these birds arrive in the spring the natives resort to all sorts of means to entrap them. They also gather vast quantities of eggs. When the moulting season comes on, and the young birds are nearly ready to fly, the great catch of the season takes place. Each family then gathers ducks and geese by the hundreds and dry them for winter use; and, indeed, it is about the only food they have. While moose, caribou and the wood bison were still plenty they had no use for water fowl, of course; but now that the game has become scarce they have to live upon that, as many of the tribes receive little or no aid from the Canadian Government. I am told that in the summer of 1889 great fires destroyed the marsh grass where the water fowl breed, and as a result the Indians got very few of them, many persons dying the ensuing winter from starvation. From this it seems that in spite of all game laws we may enact for their preservation, the water fowl will soon have gone the way of the buffalo. J. W. SCHULTZ.

PIEGAN, Montana.

FOR AN EMERGENCY ON BEARS.—Kentucky, May 28.—In FOREST AND STREAM of May 21, Mr. S. H. Greene says: "It is true that I was armed with the best Parker and plenty of shells loaded with duck shot, but some way I found myself wishing that he knew that I was only just a plain duck hunter, and neither looking nor loaded for bar." Perhaps Mr. Greene and others would like to know (if they do not already know) how a duck load can be, in almost an instant, "loaded for bar." With a penknife cut the shell nearly or quite off between the two top wads which are between the powder and shot. The forced load gives a greater penetration than a chambered solid ball will give. As a test, I had some shells loaded with 3½ dr. powder, 1½ oz. No. 10 shot, one card board and two felt wads on powder and stiff card board on shot. I cut one of the shells as described above, and knocked a round hole through an inch and a half walnut plank door at 120 yds. Quite a desirable "load for bar." I do not advocate the use of the cut shells except in cases of necessity, although I do not think it injurious to even full-choked guns. The part of the shell that is cut off carries the shot all together, which are held in by the wads in each end, as far as the gun will shoot.—W. L. YATES.

COOT SHOOTING IN IPSWICH BAY.

OUR camp at Annisquam Point, a narrow strip of land running out into Ipswich Bay, is within 20 yds. of where we keep our boats, and everything necessary for our gunning expeditions during the months of October and November.

The point being within easy distance of our place of business it is convenient to slip down there at night quite frequently, and provided we do not oversleep, 3 o'clock next morning finds us in our boats; and with half an hour's rowing we are out on the bay, our decoys set, guns laid handy, loaded with 1½ oz. of No. 3 shot and a couple of hundred more shells in our gunning box, for the coots may come solid, and we intend to be ready for them. Here is a pair coming now! But they sheer off and set their wings to the next fellow's decoys. Out shoots a stream of fire and down comes coot No. 1—perhaps! Intent upon watching this operation we did not see the single one light near our decoys; but now we see him and he gets a charge of shot and is under water at the flash! Up he comes again and is moving off, but a straightaway shot stops him for good. He is taken in, and now business begins in earnest, for we find that this is their feeding ground, and they are coming right and left, singles, threes, fours and dozens!

Now then, look out for that black line coming in from sea. They don't appear to notice the decoys, but they see the boat and up they rise and over our heads, all scattered. We let them pass a little, for the best we can do now is to take one with each barrel, and down they tumble, spat! spat! One is on his back, but the other is only winged and so under water like a fish.

We pick up the dead one and hurry back to our decoys. By this time it is bang! bang! bang! all around us, for they are coming fast. Here are a dozen white wings flying straight along the shore. We keep down close, all ready for them, but they are coming by too far off; no, they see the decoys, turn half round and with wings set come over the decoys with a rush.

The first barrel knocks out four, but we see we have missed with the next. No! he is hit, he falters, sets his wings and falls dead. But now we have something to attend to nearer the boat. Two of our coots have their heads up and are considering whether to dive or try to fly, but a couple of charges of No. 8 across their necks settles the question; and so it goes on for an hour or two, when the cream of the fun is over, although we could have a shot now and then all day.

We count up and find we have taken 31. It is now 11 o'clock, time to go ashore and get dinner, and maybe we are not as hungry as bears.

Now these coots, although perhaps not as good eating as pie, are never by any means in danger of "going begging," when properly cooked, especially if set before a gunner just in from a morning's shooting.

What do we do with our coots? Never mind that! We have had some capital sport, and after counting up, well, we confess that about "settles it!" We furnish a tiptop wild game dinner to a few friends, perhaps sell half a dozen at 50 cents a pair and are satisfied. Later in the season we get now and then a redhead or black duck, with a few brant and geese. L. A. WASS.

GLOUCESTER, MASS.

A QUAIL SHOOT IN WEST TEXAS.

ON Tuesday, Nov. 11, 1890, Rev. Dr. H., of Dallas, Tex., Ed Harris, Bob Malone and the writer crawled into a double-seated hack drawn by two fine roadsters, and pulling the dogs in after us we sped away for Cedar Mountain, fifteen good miles south of Abilene for a two days' quail shoot.

Our hunting ground did not lie among the so-called mountains, which are only low hills rising abruptly from the dead level of the prairie, but in that peculiar strip of low scrubby brush that follows these hills within from a mile to a mile and a half paralleling them for hundreds of miles, called by the Texas folk "shineries." If you never saw a shinary let me describe one. It is a sandy ridge of varying height running parallel with all these West Texas mountains and covered with a little shrub of the oak family and growing to the height of your shins. This tiny oak grows "as thick as the hair on a dog's back" all over this sandy ridge and matures its acorn as well as its tall and stately giant brothers. Skirting these dwarf thickets are thickets of a sterner sort, thickets of the chapparal, cat-claw and prickly ash, called by the cowboys "tear blanket." In and around these shineries Bob White has his habitat, and they are here by the thousands. The shooting is not of the easiest, as frequently the tops of the chapparal and prickly ash interfere.

Arriving at the shinary at 10 o'clock, we decided to test the ground before lunching. Kate O'Moore II., the red Irish setter bitch owned by the writer; Zeke, a young pointer, the property of Ed; Fred, a wild, untutored descendant of the famous old Meteor, and the property of Bob, and Garnet, a dropper, borrowed for the occasion for the use of the eminent D. D. from Dallas, were the dependance in the way of dogs. We were busy disengaging the team from the hack when we were excited by hearing two or three quail (Bob Whites) calling in as many different directions.

We were soon among them, and the dogs were pointing on all sides. Several hits and several misses, and we are on into the shinary proper. Another covey is pointed, and as they rise eight sharp, ringing roars from the guns, and right out from a clump of chapparal bushes not fifty yards away, and in a line with the firing from the guns, a frightened and wild-looking citizen rushes toward us, crying, "My God, men, what does this mean? Don't yer see my house thar? What are you shooting right into the hind eend of my kitchen fur?"

Sure enough there, not forty yards away but completely hidden from view by the brush, was a shanty literally teeming with tow-headed children, crying and begging "mammy" to not let them be killed. Of course, we regretted the scare, but no one would ever look for a human habitation in such a jungle. On examination we found some twenty-seven or twenty-eight No. 8 pellets stuck into the clap-board sides of the shanty. This surprise somewhat "rattled" every man in the party for the next half hour, and on returning to the hack at 2:30 o'clock we found that all told we had bagged only seventeen Bob Whites.

Our sport from then till night was superb, and when

we drove up to a farmhouse at sunset our sum total was sixty-three birds.

A magnificent feast of quail, a string of good yarns around the hospitable hearth of our host, a splendid bed, with an early and royal breakfast like the supper of the evening before, and bidding our kind entertainer and his pleasant family good-bye, we are, by an hour after sunrise, popping away at the birds again. Our first covey was found within 150 yds. of the house, and we were hardly ever so long as half an hour without quail to shoot at.

At 3:30 P. M. the eminent D. D. had enough and begged that a discontinuance be granted, and piling into the hack we rolled out for Abilene, 18 miles away, a cold "norther" blowing, and every one in the party perfectly satisfied with every detail of the hunt, except the many unaccountable misses, which were about equally distributed among the party, except that "ye correspondent" had as many birds as the other three altogether, and the joke on the whole party—180 birds all told constituted the bag. *Deo volente*, I will say something of the larger game of west Texas in my next. This is a sportsman's paradise, and any brother sportsman desiring a few weeks' rest and recreation can find it by coming to Abilene and stopping with the writer, whose latch-string hangs on the outside. Come and let us show our hospitality. Can give you as many shots at quail or antelope as you may desire.

TEXAS.

WABAC WARD.

"SIX YEARS UNDER MAINE GAME LAWS."—A paper by Miss Hardy, relating to the Graves case, has been received too late for this issue, and will be given next week.

Sea and River Fishing.

THE FULL TEXTS of the game fish laws of all the States, Territories and British Provinces are given in the *Book of the Game Laws*.

ON THE WISCONSIN BRULÉ.

ON the shores of Lake Superior the winter's mantle of snow is not withdrawn until spring is far advanced. It does not wholly disappear in the latter days of April, but lingers in great gray patches in the secluded places among the woods, beside whose margins the beautiful pink blossoms of the trailing arbutus are found coddling like baby faces against the blanched cheeks of grandpa. It is very charming then to watch and woo the tender advances of nature's sweet beneficence; and if the true lover of rustic features will but seat himself quietly beside some broad and placid river flowing lakeward, whose surface reflects the mottled sky and over-arching treetops, he will be sure to discover something more than the splash of a leaping trout, of which there are myriads in all the Wisconsin streams. He will observe, hear and enjoy, forsooth, themes and sensations which are vouchsafed at no other time or elsewhere. Already in this vernal month of April the listening ear detects a whisper of music in the softened air, accented by random bird notes and the peep of hylas; but only the wood nymph or dusky son of the forest can determine whether it be the whisper of the pines, the muffled tinkling of cowbells, or the premonitory tuning of the Brulé harp. Possibly it may be all three, but certain it is that the full melody of the harp is never heard until the 1st of May. Then its chords are all in sweet attune. They peal forth through the forest aisles with mellifluous eloquence. They wake the spirit of old Winneboujou, the titular divinity of the river. They call out the entire Ojibwa remnant which still lingers around the traditional haunts of their forefathers—old men, young men, and comely maidens, all together. They rouse up the mighty Mudjewis immortalized by Longfellow. Even Gitchie-Gumee, the great Manitou who holds the winds of Lake Superior, hears the dulcet strains with favor. All men or persons who have had the good fortune, by invitation or election, to listen to its cadences, never weary of extolling their soothing and restful effects. Tired lawyers, overworked merchants, worn-out doctors, professional journalists, and literary ladies from many a Western city, yea, the good Bishop of Minnesota himself, all join in the spontaneous acclaim; for do they not all go forth to the river at the summons of the harp in the blooming spring? Moreover, there are published chronicles, prepared by the cunning craft of the archivist of the Winneboujou Club, which can be produced in attestation thereof, and if other vouchers be demanded, there is the harp itself.

The Brulé River is a virgin stream of ample width and volume, with many changeable moods. Its bright waters have never yet been choked by intruding logs, except in the lower part, and the amber pebbles which shine on the bottom reflect without interruption the joyous ripple of the surface above. It winds, widens, meanders and splashes, with occasional impetuous spurts, for a distance of sixty miles, through a waste of sombre pines which have scarcely been scored by the swamper's axe. Sometimes it spreads out into lakes a quarter of a mile wide, and anon lengthens into reaches a half-mile long. One of these lakes incloses the island camp established by Frank Bowman, of St. Louis, a dozen years ago or more, at that time the only white man's habitation on the river. At the headwaters, where the watershed separates the feeders of the St. Croix, there are pretty falls. No way-side paths follow the margin except where the deer have beaten runways, and there are no settlers' cabins or clearings south of the Northern Pacific Railway crossing, except those which belong to the three clubs above, or to their Indian guides and attendants. These camps have only been located within the past four years. Above them there is open sesame to the canoe alone.

From the little sylvan station of Brulé, half hidden among the towering pines, there is a good wagon trail through the woods for about four miles, and when the visitor comes to the end of it, there is an opening and a vista, and lo! the sparkling river sweeping with majestic curve, and the bright red villa camp of the Winneboujou Club in full view by the water side, with its breezy flag waving a welcome, and broad verandahs inviting rest and refreshment. Close by are servants' quarters and an ice house, while just within the edge of the forest one Indian wigwam gives an aboriginal cast to the surroundings. Under the bluff is a landing, with a jackstaff, and a dozen green-painted Adirondack boats drawn up in line with their noses pointed inshore, looking for all the world like

a row of alligators asleep in a bayou. A rustic bridge crosses the stream at the tail of a pool a few rods further down, where there is a rapid fairly alive with fin. trout at this season of the year; and just on the opposite side a trio of pliant birch trees bend to the water's edge to whisper confidentially where the biggest baskets can be caught in the shortest time by those who are not adepts. But Winneboujou's foster children, who are acquainted with his "medicine," can pick out 2lb. trout *ad libitum* in advantageous places where big boulders in mid-channel divide the streamy waters, or projecting points of land intercept and turn the current; and the credulous may readily conceive that the acme of sport is truly attained when the angler is permitted to fish from a boat controlled by an expert hand holding hard when there is business to attend to, and dropping down cautiously to points of vantage when occasion requires. With a dry boat and ample provender for the noon hour, contentment well may sit at ease upon the prow, with radiant face upturned toward paradise. Woodchucks may chatter as you pass and fretful porcupines fling their bristles from the bank, but the trout will never fail to come to a well-presented hook. On the Brulé there is no such word as fail.

I have heard fabulous stories of myriads of trout having been taken from the Brulé in early days by guests of the Island Camp; of hundreds of fish buried in ignoble graves when Winnebago was asleep, because they could not be eaten or otherwise disposed of. Bowman himself used to boast that he had caught 1,400 in a day, which would be at the rate of two a minute for eleven hours fishing, a feat almost as despicable as it is incredible. I do not know that his untimely death was ever charged as retribution for this offense, but it has been iterated under breath that Winneboujou never fails to make exemplary reprisal for abuse of even the humblest of those who wear his mottled livery. Certain it is that he has prohibited fishing in the river this year, or in any of its tributaries, except during the month of August, and it is even intimated that he may attempt to close it altogether eventually. But of this there is small probability, for he is a professional angler himself, of whom it is officially stated that he was the inventor of the "dusky-miller," the "loyal-knight" and other captivating flies, of which no successful imitations have yet been made.

Naturally this inhibition of the river was a painful surprise to the habitués of Winneboujou Camp; so that when the harp rang out at 7:30 A. M. of the opening day to wake the slumberers it had a mournful twang. Breakfast was ushered in with a bad grace, barring the Bishop's presence; and when the plan of campaign came thereafter to be discussed and all the lawyers and counsellors and prime ministers of the party put their heads together to decide whether to forswear their allegiance to Winneboujou or to invoke the evil spirit of Skitewaboo, who is always hanging on the outskirts of Bad River Reservation, the camp was divided against itself, one-half going up the river to the watershed and over into the St. Croix, and the other remaining to warm the hearth and make their "medicine." Thereupon a miracle happened of marvelous import. All the trout in the Brulé were incontinently transformed into suckers and perch; and the most potent eye-opener which Jim, the colored steward, could compound, was unable to make visible any other kind of fish. Whether this was the magic of the good Winneboujou or of the evil-minded Skitewaboo, could not be ascertained. It has now become an interesting question whether the stream can be restored to its original occupants, the trout, by the coming August, at which time it has been rumored that ex-Secretary Vilas, of Madison, and Col. J. H. Knight, the lumber baron of Ashland, will invite the entire Wisconsin Legislature to their Brulé Camp for a trout supper, with the stipulation, however, that none of them shall fish. These two gentlemen have a new and pretentious camp on a bend of the river a half mile above the Winneboujou. Between the two is the Gitchie-Gumee Camp of Milwaukee. Both are conspicuous to the brigades of boats and canoes which are constantly passing up and down when the Brulé harp is in full attune and the colors are flying from the masthead at headquarters.

The Brulé region is full of game. There are swales and muskegs which harbor deer in large numbers, as well as bears, and there is a large variety of rodents and fur animals which range along the creeks and bottoms and burrow into the sandy soil of the pine country. Of these there are stuffed specimens at the Winneboujou camp, including some fine antlered heads of deer, and full forms of lynx, badger, fox, mink, otter, martin, ermine, squirrel, porcupine, woodchuck, fisher and skunk, all shot in the immediate vicinity. Indeed, the whole northern part of Wisconsin, excepting along the Lake Superior shore, is a dense timbered wilderness. Moose are not uncommon, and moose meat and venison are always abundant. Lakes and streams are distributed throughout, some of them stocked with great masacalonge, pickerel, bass and pike, and others with lake and brook trout.

The Lake Shore & Western Railroad in eastern Wisconsin, leads into the most remarkable collection of masacalonge waters known anywhere, of which the Gogebic, Eagle and Tomahawk are already famous. The Chicago, St. Paul, Minneapolis & Omaha traverses the western and central parts of the State, with termini at Superior City and Ashland; and undoubtedly reaches a greater number of choice fishing grounds than any other road in Wisconsin. Once I went out with a party of officials in the pay car and spent a week on the road, taking my portable Osgood canvas canoe, which we put into any number of strange and familiar waters with eminent success and surfeit of sport. I know of no other method of fishing which is so independent and charming.

The whole upper tier of counties swarms with fish. Gordon, White Birch, Drummond, and scores of other places offer golden opportunities to the angler. At Ashland we find in June and July the famous "rock-fishing," so called, where an expert can pick up great 4lb. speckled trout as they cruise along the fronts of the pictured rocks and in and out of the caves and crevices opened by the work of the waves, and among the crags and boulders which have become detached from the face of the cliffs and dropped down from the heights. This is an experience never enjoyed by most anglers, and is well worth the trial. The best bait is the minnow, but flies are sometimes attractive if handled properly. There is no better hotel anywhere than the "Chequamegon," on Gitchie-Gumee Bay, and no more charming attractions than the

Apostle Islands, the old French Mission at La Pointe, the Indian Mission at Odonah, the Bad River Reservation, the extensive Zion Mines, and the accessible fishing waters within an hour's ride in all directions. June is pre-eminently the angler's month, and I am happy to be able to point out the way and the place to anxious inquirers. But I would not at present speak again of the Brulé Harp.

CHARLES HALLOCK.

MAINE WATERS.

Editor Forest and Stream:

Fishing in the Maine lakes, from having been actually poor since the moving of the ice, is just beginning to be good. On Saturday, May 30, trout had just begun to come up to the fly, at Upper Dam, Richardson Lake, and the same was true of the upper lakes. But up to that time the weather had been unusually cold, with the season backward. It will doubtless surprise many of the readers of the FOREST AND STREAM further south to know that on that day the birches had just begun to be fairly green, while the maples on the hillsides were scarcely out of the red. On the mornings of May 24 and 26 there was ice in the bottoms of the boats of those who sought to catch the early fish at the Rangeleys. Ice formed nearly $\frac{1}{2}$ in, in thickness at Camp Stewart and Birch Lodge. Such weather was not particularly favorable for fishing for trout. Speaking of Birch Lodge, it may not be inappropriate to say that His Excellency, Gov. Russell, of Massachusetts, was at that beautiful camp on the cold days in question, the guest of Messrs. Bayard and John Thayer, the owners of the Lodge. Mr. John Thayer is a member of the Governor's staff. The Governor went a-fishing with the rest of the boys, and caught as many as any of them. One day was spent at B Pond with good success. The Governor is accredited with an 8lbs. trout. The other members of the Birch Lodge party were John Simpkins, F. Peabody, Jr., and Dr. Haven, all of Boston. On the return of the party from B Pond, on the little steamer, the lodge was illuminated with red and blue fire and Chinese lanterns, with salutes from camps adjoining. The Governor thoroughly enjoys the sport of trout fishing, and is as genial as a boy.

One of the best little parties of the season, at Richardson Lake, has been that of Mr. Eugene E. Pakridge, vice-president of the North American Insurance Co., of 59 Kilby street, Boston, with his friends, Mr. and Mrs. B. G. Ackerman, of Brooklyn, N. Y. Mr. Ackerman is also of the insurance guild, and is of the firm of Ackerman, Deyo & Hillard, of 41 and 43 Pine street, New York. It was truly a pleasure to meet these genial people, and it is also certain that friends will vouch for their kindness, when considering how their trout were distributed on Monday and Tuesday. Mrs. Ackerman was high line, having caught a landlocked salmon, after the fish had once escaped from the rod of her husband. These three people are getting to be "old-timers" at the Upper Dam, having been there several years in succession, and being fully persuaded that they shall be there again next year. Mr. Pakridge's only mishap was the loss of his lunch basket on one of his trips out fishing. It went on a lark up to Camp Stewart, and just how it got back to the Upper Dam was somewhat of a mystery, till the fact came out they were really among friends, though some way into the wilds of Maine. That basket went down by a fellow fisherman, just as every lost basket will be sure to go, if the owner only takes the precaution to put his name to it. Mr. Pakridge's trout are not generally weighed—"estimated" is more practical. In this connection he has a conundrum that is original: Why is a trout not like a man? Give it up! Well, the man weighs more when he is dressed, and the trout does not.

Lately the salmon fishing has been better at Bangor. F. W. Ayer has landed a 27-pound fish, and others have been doing well, ten having been landed in one day. At Weld Pond the fishing has also been good, one boat having taken twenty landlocked salmon in a single day. Trout fishing at Swan Lake, six miles from Belfast, Me., has been excellent of late. It seems that Fish Commissioner Stanley was the first to discover this fishing, he having trolled there recently with such success in taking large trout as to surprise "the oldest inhabitant." He took two 4-pounders. The pretty little steamer, the Wawa, owned by S. Betton, T. McKane and Mr. Boree, of Richardson Lake, was burned to the water's edge on Thursday night last at the South Arm. The hull immediately sunk in deep water. Mr. L. Dana Chapman, with Dame, Stoddard & Kendall, of Boston, has had his usual good luck at The Narrows, Richardson Lake, this season. He is just out of the woods with three trout weighing 4 $\frac{1}{2}$, 5 $\frac{1}{2}$ and 8lbs.—really about the best record of the season, up to the present writing.

His Honor Mayor Matthews, of Boston, also goes a-fishing. He goes by special invitation of Dr. Heber Bishop, of the Megantic Club, to the preserve of that club. He went equipped with a fine split bamboo rod. The list of the party is: His Honor Mayor Matthews, G. W. Dillingham and Alfred Hopcroft, of New York; W. H. Helsten, of New Milford, Conn.; Wm. A. Brewer, of Plainfield, N. J.; Dr. M. A. Morris, Dr. C. W. Stevens, M. F. Stevens, Charlestown; Frank Hopewell, O. F. Kendall, Dr. Heber Bishop, Dr. E. W. Branigan, P. H. Powers, of Boston; E. S. Sparrow, of Somerville; Francis B. Green, L. L. Holmes, of New Bedford; W. H. Burns, of Worcester; Geo. Duffy, of Malden.

SPECIAL.

MICHIGAN TROUT.—Tawas City, Mich., May 28.—We do not usually brag of this piece of the woods, but a note from the *Au Sable Times* of May 27, written from Killmaster, is worth reproducing. The writer says: "By a recent issue of our spicy little paper I see your fish reporter from the banks of Silver Creek has been getting in his first story relative to the 2 $\frac{1}{2}$ lb. trout caught in that stream. This was a pretty good trout for Silver Creek. But I write to tell you of a speckled trout caught in our pond on Saturday by Miss Cora Anthony that weighed, two hours after being taken out of the water, exactly 4 $\frac{1}{2}$ lbs. and it is estimated that there were taken out that day by all comers fully 350 trout of all legitimate sizes. Our stream was planted four years ago, the same as Silver Creek, and when one thinks of a 4lb. trout the growth has been most phenomenal. We are stocking every stream in this county, which has the proper conditions, and hope to make Alcona the banner trout county in Michigan." We started to plant trout fry hereabouts 4 years ago, furnished by the Michigan Fish Commission, and you see the result.—N. C. H.

WHERE TO GO FISHING.

OUR ANGLING READERS who have knowledge of fishing waters where there is room for more fishermen, will win the gratitude of the guild by sending to the FOREST AND STREAM just such notes as these which follow.

I.—Newfound Lake, N. H.

THIS beautiful expanse of water, seven miles in length and three miles wide, is located in the towns of Bristol, Hebron and Bridgewater, N. H. It is easily accessible, Bristol, two miles from the foot of the lake, being reached by the Bristol branch of the Northern New Hampshire railroad, now leased and operated by the Boston & Maine railroad. Keaching Bristol in the P. M. a stage drive of nine miles, nearly all of it along the shore of the lake, brings one to the Grove Hill Farm, situated at the head of the lake. Mr. John W. Sanborn, the owner (address Hebron, N. H.), will meet any parties at Bristol, if he is notified in season. It was the pleasure of the writer to pass two weeks, just ended, at the Grove Hill Farm, while in pursuit of the finny monster of Newfound Lake, and he cannot say too much in its praise. The prices for board, guides and boats are reasonable, the fare of the best, and Mr. Sanborn and his excellent wife will do all in their power to make your stay pleasant and your catch of fish large. The house stands on a bluff at the head of the lake, and the view from the piazza takes in the whole lake, with the rugged mountains on the opposite shore. Mr. Sanborn owns a small steamboat with which he will take the fishermen and their boats to any part of the lake. All the fishermen, and they number about fifty, who have stopped at Mr. Sanborn's the present season, will concur fully with me in my opinion as here expressed.

The fishing season opens on the lake as soon as the ice leaves, this year the 21st of April. It was the bad fortune of the writer to be ill at that time, and he was a week late in reaching the lake. During his stay of two weeks he succeeded in landing ten fish, three landlocked salmon, weighing respectively 9 $\frac{1}{2}$, 7 $\frac{1}{2}$ and 5lbs.; and seven trout weighing respectively 14 $\frac{1}{2}$, 14, 12 $\frac{1}{2}$, 10 $\frac{1}{2}$, 9 $\frac{1}{2}$, 8 $\frac{1}{2}$ and 8lbs. These fish were all taken at the head of the lake, almost within gunshot of Mr. Sanborn's.

I desire to call the attention of the readers of FOREST AND STREAM to this lake, as furnishing the largest fish on an average of any lake in New England, and the ease and facility with which it can be reached (only three hours by rail from Boston) should bring it to the front as one of the best fishing resorts, and should induce more anglers to try their luck in its clear and icy waters. The State has provided at an expense of \$1,000 a hatchery, and about one million fry were hatched out this year and put into the lake. My friend, Col. E. B. Hodge, our genial and efficient Fish Commissioner, is to be heartily congratulated on the success of his efforts in stocking the lake with landlocked salmon. Any fisherman who has taken one of these gamy fish and witnessed his frantic and angry struggles, first clearing the water with a mighty spring, then with a tremendous dash running out 30, yes 50ft. of line from the reel, then into the air again with the water dripping from his gleaming sides, and with another terrible break for liberty he makes the reel sing for another 50ft. of line, and this course pursued till his spirit is wholly broken and life nearly extinct—any fisherman who has taken one of these gallant fish from the waters of this magnificent lake will be anxious to revisit the scene of his victory—and I claim for Newfound Lake, that as a fishing resort, taking into consideration the size of its fish, it has no equal in New England.

For any further information about this lake and its fishing I would refer any of your readers to that veteran angler George H. Fowler, Esq., of Bristol, N. H., who took from this lake last season 76 fish averaging over 9lbs. each. He is thoroughly familiar with the lake and will gladly answer any inquiries. Try Newfound Lake, my friends, and I do not think you will be disappointed. I was not.

P. L.

ORFORD, N. H., May 25.

II.—Round Mountain Lake, Me.

Editor Forest and Stream:

It will doubtless be good news to many of your readers to learn that Edgar Smith, the famous guide and proprietor of the camps at Round Mountain Lake, Maine, is still the possessor of the two feet which were almost despaired of after his encounter with the horse car in Boston last winter, and that he has been able to superintend the repairs and improvements on his buckboard road from Eustis to the lake in person, and gone in for the season. His father, Kennedy Smith, whose genial face and profound knowledge of woodcraft is so well known to the older devotees of the rod and gun, has been in Boston the last week and declares that the prospect for early trouting in the old Alder Stream Pond (now Round Mountain Lake) was never so good as this season, the snow water from the surrounding mountains being nearly exhausted, and the "speckled beauties" out gunning for their early spring medicine. He proposes to make a great effort this season to explore the bottom of this famous lake, and if possible land a few of the 20-pounders which old Sylvester Fuller used to grow fat on, long before the tide of pleasure seekers turned thither. Business was very good with Edgar last season, and as every one came out without regrets the prospects for this season are extremely promising. All who enjoy landing 1 $\frac{1}{2}$ lb. fish with a fly-rod should not fail to visit this beautiful spot and take a few, enjoying what to a real sportsman is a pleasure, fishing where the trout is so plentiful that all he can catch will never be missed.

Edgar Smith's P. O. address is Eustis, Maine, and he is as prompt in answering correspondents as he is at the breakfast table.

GEO. H. BARNEY.

A note from Kennedy Smith, dated May 30, says: "The trout are now just beginning to bite sharp, and parties who are now in camp are having good sport. Mr. J. Goodrich, of Connecticut, who was here twice last year, arrived the 8th. Although he is 84 years of age he enjoys catching trout as well as any of the boys. His first catch was 16 trout in 15 minutes. Quite a number of parties are expected to arrive the first week in June. Early fishing is always good."

III.—Quimby Pond, Me.

Editor Forest and Stream:

On Wednesday, May 15, at Quimby Pond, which is about ten miles from the Mountain View House, Rangeley Lake, Me., Ed. Shumway, of Boston, and W. L. Mercer, S. R. Ellis, J. H. Davis and Chas. E. Pierce, of Cambridge, Mass., took 162 trout on the fly in about three hours; the sizes ran from $\frac{1}{2}$ to 1 $\frac{1}{2}$ lbs. This is said to be the only pond in Maine in which the trout rise to the fly as soon as the ice goes out. There was plenty of snow on the banks of the pond.

JAP.

IV.—A Day at Pico.

Nestled among the grim sentinels of the Green Mountain range are to be found many ponds and lakes possessing rare beauty and genuine attractions. In a rocky glen at the base of Killington Peak, some ten miles from the enterprising town of Rutland, lies one of nature's rare jewels, known indeed to but few yet, nevertheless appreciated by all who may have been so fortunate as to have cast a fly upon its mirrored surface.

An article by "Von W." in the issue of April 30, brought vividly to my memory the trip to Pico, its attractions, environments and the circumstances which led me to visit this natural trout pond.

When passing from Rutland across the Green Mountain Range through Mendon and Sherburne to Bridgewater, one is constantly impressed with the wild, unbroken stretch of primeval forest which, save at rare intervals, has yet escaped the ax of the lumberman. At Sherburne one first crosses the Ottaquechee River, its headwaters being upon the eastern slope in that town, thus it was that, while crossing this section of the State early in May, the remark of a fellow passenger caused me to make inquiry concerning the attractions afforded to the angler in this and adjoining towns.

The result of our conversation established between us a bond of fellowship, for I learned that for many years he had taken the speckled beauties from these streams and ponds, and, "best of them all," said he "is old Pico."

This to me was a new name, unfamiliar to but few, as I have since learned, and curious to learn more of the facts I at last engaged my *compagnon de voyage* to accompany me to the pond in question on the following week, Thursday.

True to my inclination the day set apart for the sport found me at "mine host's" cottage, about three miles from the Pond, as he persisted in calling it, and after a hearty meal, long ere the sun lit the peaks of the highest mountains around us, we set out "across lots," Wilson, the guide, with one eye skyward eagerly observing every token of a day favorable to our sport, and filling my ear with extraordinary yarns of the fishing days gone by.

After about an hour we reached the height of land immediately adjoining the waters we were in search of, and as Wilson pointed proudly down into the valley at our feet and remarked, "There is the best trout pond in New England," a remark which I took with a degree of incredulity, making proper allowance for his pride in a favorite resort, I beheld a beautiful lakelet almost completely surrounded by the virgin forest of spruce, hemlock and fir. A smart breeze ruffled its surface, and the guide's face was wreathed in smiles as I gazed at the sight in admiration and wonder; for I will venture to state that no less than one hundred elegant "breaks" were made within my range of vision in as many seconds.

Descending to the rocky shores, "neath a stately fir we found the skiff of a neighbor, that Wilson had secured for the day, and after carefully getting in casting shape we pushed out into the lake. What had been a half hour before a strong, steady breeze, just suited in fact to casting, was now but an occasional flabby gust of wind, which seemed to bode ill to our success; but while I was getting impatient, Wilson was forecasting a fine day's sport, and, indeed, true to his prediction, so it proved.

With the rising sun came a fine breeze, and when a few moments later a beauty seized my fly with the characteristic determination of the brook trout, I could but feel that here was a nook unchronicled in the sportsman's atlas. No other species of fish are found in the clear cold water of Pico. Fed by three mountain brooks, transparent and beautiful, it lies there among those mountains a gem, uncut but rare.

The result of our day's casting was 18lbs. of brook trout as handsome as ever rose to fly. Upon the sandy bottom at the inlet of these brooks were scores and scores of the "handsomest fish that swim," varying in size from $\frac{1}{2}$ to 1 $\frac{1}{2}$ lbs., while the brooks themselves teem with finny inhabitants.

This for the headwaters of the Ottaquechee, of which as yet but little is known. No doubt the old Green Mountain State contains many such spots, equally as tempting to the followers of Walton, but for complete satisfaction I think this day's sport was fully as gratifying as any ever spent on lake or stream.

BYRON.

FOR "FOREST AND STREAM" READERS.

WE have secured, for the private information of the readers of FOREST AND STREAM, knowledge of a number of streams and lakes easily accessible from this city, where we believe that good fishing for trout and black bass may be had. The information, much of which comes from private sources, we are not at liberty to print, but we shall be glad to furnish it without charge to any reader of FOREST AND STREAM who will apply for it, either personally or by letter.

PROTECTOR CARR.—The Ithaca, N. Y., *Journal*, commenting on the work of State Game Protector Carr, says: "Mr. Carr, in a manner reputed to be fearless and conscientious, is industriously putting the scourge of the law to offenders big or little, rich or poor, influential or friendless, in his territory. Although a Republican appointee under a Democratic governor, the most strenuous advocates for his retention when his removal was sought were found among the uncompromising, hardshell Bourbon Democrats of this city. The present laws are onerous. Protector Carr is executing them relentlessly. He will either succeed in making them so obnoxious as to bring about their modification or repeal; or they will stand approved and fish and game once more abound."

A Constant Reader.

When I fail to take the FOREST AND STREAM you may know that I have handed in my checks.—J. G. S.

A THREE WEEKS' OUTING.

WHEN a sportsman sends an account of his trip to your valued paper he is so enamored of the fish or game he has taken that he forgets numberless things that would be of interest and profit to your readers, who are likewise sportsmen. Now, as I go hunting and fishing with my husband, I will, for novelty's sake, give your patrons a woman's view of things seen and done during the last three weeks of August, 1890.

Up the Hudson by night and over the New York Central by day brought us to Niagara in time to get a night view of the upper rapids and falls. The next morning gave us ample time so revive all former recollections of this grand scene. During the afternoon we went over to Toronto and took the boat down the St. Lawrence. The early morning found us at the beginning of the Thousand Islands, and the brilliant day showed them to the greatest advantage. We intended to stop over at Alexandria Bay for the fishing, but learned on inquiry there was little or no fishing either there or at Clayton. Either the sewage or the multitude of steam launches or something else kept the fish lower down the river. The novel experiences of the plunges down the various rapids were greatly enjoyed. There is no other place short of the Danube where a similar experience can be had. At Ogdensburg my husband caught sixteen bass weighing from 1 to 2 lbs. each in three hours. Another man by trolling caught six muscalonge, averaging 5 lbs. each, in the same time, and the middle of August, we were told, is not as good as later, frosty nights having an invigorating effect on the appetites of fish as of people.

A few interesting days were passed in Montreal—essentially an American city—where the boodle aldermen and errant bank cashiers have given the citizens the idea that Americans are made of money, and have taught them to charge those from the States about thirty-three per cent. more than Canadians. One of the boodlers—the reputed stakeholder—built, and still owns, a fine block of houses in a fashionable street, vieing in architectural beauty and solid construction with the many fine residences of the wealthy.

We took a night boat down the river to Quebec. Its beautiful situation, toboggan slide streets, its forts, battle fields, and monuments, and the Montmorency Falls were all visited and greatly enjoyed. The caleche gives oddity and the British officer gives color to the scene. The very small scarlet cap stuck on the side of his head helps the caleche in the effect produced. Quebec, Washington and St. Augustine, are said to be the three cities of America worth a journey to see. We did not enjoy so fully its high-priced first-class hotel, which in New York would have been a poor second-class.

Lured by the highly colored pictures and glowing advertisements of the large trout of Lake Edward, and the ouinansich of Lake St. John and the Grand Discharge, my husband made particular inquiries about them. A man at the hotel who claimed to be just down from Lake St. John said: "I am no fisherman, and I had no suitable tackle or flies, but I went down on the wharf, a few steps from the hotel the other morning, and caught fifteen ouinansich, weighing from 3 to 5 lbs. each, in a half hour or so." This was the place we had been looking for, and we took the train for Lake Edward next morning.

We reached there about 2 o'clock, passing on the way through a region extending for 20 or 30 miles formed of a network of streams, that were said to be alive with trout and ouinansich, but every part of it is controlled by some club. We found the hotel at Lake Edward to be a plain, even rough, wooden building, with no conveniences whatever for ladies. It was poorly kept and not at all clean. There was ouinansich, but no trout, on the table, which rather surprised us, as there are no ouinansich in Lake Edward, the advertisements said nothing but trout. After dinner my husband found there were no guides to be had and no fishing except at the foot of the lake, 13 miles distant, and then with bait only. Being a fair hand at casting a fly he detests bait-fishing. To get to the fishing ground it would be necessary to charter a steam launch. He drew the line at the launch and wasted the afternoon in catching chubs not far from the hotel.

The next morning he found a man familiar with the lake and under his guidance fished for two miles the likeliest looking places, but did not obtain a rise or see the slightest evidence of fish. Disgusted with Lake Edward, and with the Munchausen stories told of its fish, we took the afternoon train for Roberval, on Lake St. John, where five-pound ouinansich could be caught from the dock, a few yards from the hotel.

We arrived an hour before dark. The hotel is beautifully situated and fairly well managed. The broad lake stretches out like an ocean before it, with no land visible on the opposite side. With a strong wind blowing it is very much like an ocean. On inquiry we found that there was no fishing nearer than the Grand Discharge—twelve miles distant—and there never was any except in the spring when the ice was breaking up. Then large fish could be caught from the wharf with bait. This was a grievous disappointment, and if my husband had not been a very temperate man in speech, the advertisers of Lake St. John fishing would have been forcibly and graphically characterized. Later in the evening we learned that small trout could be caught in a brook that entered the lake five miles distant. He engaged a guide for next morning, anticipating a pleasant canoe trip if we got no fish.

At breakfast time next morning a team came to the door with a long wagon and a birch canoe on it, and behind another team and buckboard. On inquiry we found they were to take Madame and Monsieur to the brook. The fishing was not down the lake, but five miles inland. There was some more suppressed indignation at the deception, and then the procession started. An hour's drive brought us to a magnificent brook, almost a river—with falls and deep holes and fallen trees lying in it, running now through meadows and again through woods, an ideal place for fish. If in Maine or the Adirondacks it would have been swarming with big trout. After faithful fishing for several miles, using a great variety of the most approved flies, fifteen small trout were the result, the largest a half-pound; and we were told that we were very successful, none larger ever being caught. Another visitor went to a more distant brook and caught one. Disgust don't express the state of mind in which we walked home, to meet the teams coming for us at the edge of the village. Holding a mass meeting in our room, after dinner, we unanimously voted Canadian advertising a delusion and a snare, and Lake St. John a big fraud.

A quiet Sunday renewed somewhat our enthusiasm. And on Monday morning we determined to go to the Grand Discharge. In Canada the ordinary man don't seem to be able to tell the whole truth. There seems to be always some reserve that inures to his profit. The hotel bill was 50 cents a day more than the advertised charges. The passage to the Grand Discharge was \$1. When we got there the steamboat anchored in the middle of the rushing stream, and 25 cents each was charged to take us ashore, which could be done only in a canoe. The best fishing was said to be two miles distant at a camp. Once settled in the camp, things were pleasant enough—for a camp. Of course everything was very primitive. The scenery was grand. The water rushed by like Niagara below the falls or the rapids of the St. Lawrence. And the volume of it was immense. The charges were \$2 per day for each person and the canoe-men charged \$2 each. Two were necessary for each fisherman, owing to the very rapid current; so it costs a fisherman \$6 per day. The ouinansich seemed abundant. Their fins could be seen as they rolled over porpoise-fashion wherever the foam gathered in patches; but they were not eager for the fly. The average catch is six a day to each rod, and the largest caught last summer, according to the record of the camp, was 5 1/2 lbs. The average is 1 to 2 lbs. The water was covered with a small fly similar to the Beaverkill, with which they gorged themselves, and so were indifferent to the artificial ones.

The Saguenay is the outlet of Lake St. John, and the Grand Discharge is the beginning of it. The distance to Chicoutimi, the head of navigation, is given as 42 miles, 30 of which are rapids. Some of it very rapid, and there are several miles in which no boat could live. We determined to make the descent to Chicoutimi in a birch canoe. We had two very skillful habitants. The actual time in making the descent was five and a quarter hours, not counting a carry of four miles. The scenery is grand, and the whole effect thrilling, at times the rush almost takes your breath away. Boating in the Adirondacks is tame and flat compared to it, yet with careful men it is not at all dangerous. The birch is a very safe boat, as the passenger sits in the bottom, and it is so light it can be propelled wherever there is a heavy dew. The charge is fifteen dollars, and the expenses of the carry, for the rapids. The last six miles—which seem more like twelve—are made in a carriage, and cost six dollars additional. From Chicoutimi there is a daily steamer to Quebec, taking about eighteen hours.

We returned home by the Adirondacks; coming by small boat from the Upper Saranac to the Raquette, and thence by steamer to Blue Mountain, and then by stage, rail and river to our city home.

Reviewing the trip after six months have passed, and its small vexations have been forgotten, we conclude that pleasure costs more to the square foot in Canada than in the States; Americans are charged from twenty-five to thirty-three per cent. more than Canadians at hotels, and we suspect the same in the stores. About Lake St. John everything is very dear. This is due no doubt to the Hudson's Bay Fur Co., which formerly had the only store in this region—everything was paid for in barter—and as they charged very high for the goods, farm products were rated high also, and when money came in with the railroad—three or four years ago—the same price was charged in cash that the article was reckoned to be worth in barter.

Fishing is poor, all the good streams are controlled by clubs. In brooks not connected with deep waters, the fish are probably killed by the long continued and extreme cold. The small streams are frozen solid for three or four months of the year. Any one going to Lake Edward or Lake St. John expecting good sport, except at the time of the breaking up of the ice, will be disappointed. At the Grand Discharge there are ouinansich to be caught all summer, but not in any great numbers, the average for the summer being 8 to 10 lbs. to the rod per day at an expense of six dollars, without counting the cost of getting there. It would require much enthusiasm, or a long purse, to enjoy this for any considerable time.

While at Lake St. John we visited the Hudson's Bay Fur Company's station. They employ the Cree and Montagnais Indians, tribes formerly numerous and powerful. At the time of our visit they were getting ready to depart on their annual trip to Hudson's Bay. They seemed very poor, being clothed in the cheapest kind of clothing, lodged in miserable tents, with in many cases the ground for a floor, and their food consisted of thick cakes baked on the top of the stoves, one of which was in each tent. We saw no meat or vegetables; nevertheless they seemed strong and healthy, and their families were large. The company furnishes them in advance with groceries, traps, arms and ammunition—whatever will aid them in hunting and sustain them while doing it. They leave in August and September and return during the following May and June. The returns of the winter of 1889-90 were thirteen and a half tons of pelts, varying from the most costly to the most common furs, all of which were shipped to London. The poor fellows that get them probably find very little to their credit when their accounts are settled.

C. S. W.

Editor Forest and Stream:

As suggested, I have carefully read the communication you referred to me with the remark, "What have you to say to that?" The communication is a series of charges against the authorities of the Quebec and Lake St. Johns railroad, the hotel keepers, the guides, and above all does it convey dark innuendoes against all fishermen who have told big or little stories of the fishing in Lakes Edward and St. John. I don't know why you pitched on me specially as the party responsible. Am I to be the scapegoat for all the big stories of Lake Edward fishing, simply because I have fished there and made some statements in regard to it? I do not remember what I said of it, but whatever it was I will stick to it, no true fisherman ever falls a fish.

On my first trip to Lake Edward I hired a boat and a guide to row me to the best fishing grounds, and I tried first the fly, then bait, then trolling with feathered spoon, with the result of one solitary trout weighing about 2 lbs. caught trolling. I returned to the hotel at night disgusted, packed my belongings, and took the first train home; but I was so charmed with the lake itself and the beautiful scenery that I determined to try it again later in the season. This time I hired a boat and went prospecting by myself, having learned that my guide on the

former occasion played upon my verdancy and did not expend his muscle in taking me where he should. He pulled me down the lake about five miles when he should have taken me ten. In the course of a few days' prospecting I discovered grounds where I had splendid success, and thereafter had no cause for complaint.

My experience on my first trip was, as I say, very similar to that of your complaining correspondent, and had I not made my second trip I should have held similar opinion. I found, as did "C. S. W.," that there was no good fly-fishing in the deep waters of the lake, but I could and did get a good many small trout by casting along shore in the shallower waters. To get satisfactory fly-fishing it was necessary to go to the outlet or discharge, called the Jeanotte River. There I found the finest fly-fishing I ever experienced, and caught more large trout than I ever had taken on any waters in a lifetime's fishing, running from 1 to 4 1/2 lbs., the latter an exceptional size, I admit, but I did get many weighing as high as 3 lbs., a true bill and no nonsense. I brought them home, and friends who ate them will indorse my assertions—if a fair and square fish story ever needs substantiating (an insult to the cloth).

Although a fly-fisherman from infancy I am not so terribly scientific as to scorn an occasional indulgence in bait-fishing, and any one going to Lake Edward not so thoroughly dyed in the wool as not to disdain that sort of fishing, if acquainted with the best grounds or having a guide that is, can land some splendid fish from a boat fishing off the points in about 25 or 30 ft. of water. The fish are the true brook trout, gamy, and the most beautifully marked I ever saw, even handsomer than the famed rainbow trout of St. Cloud River in California.

Your correspondent failed to enjoy the fly-fishing from not going to the foot of the lake and fishing in the outlet, and also deep water bait-fishing because the guide did not take the party far enough down the lake. For some reason the fishing is not good at the upper end near the station. Presumably because the water is not deep and there is bottom grass; although fine fish have been taken near the hotel early in the season.

I caught some good fish trolling from the boat in the lower lake with a small feather spoon, and also by putting a small shot on a fly, letting it sink, and reeling in smartly.

There are days when fish will not bite well in any waters; and parties should not be discouraged with the indifferent luck the first day. The next may give fine sport. They should give their minds and time to it.

Your correspondent complains of the accommodations. This I can hardly understand, as there has been a good hotel at the lake the last two years, with good rooms and a good table. The original hotel was rather a rude affair it is true, but has been relegated to the employees of the railroad for the last two or three seasons. The present hotel is good enough for any one not expecting to find a Windsor or Murray Hill in the wilderness at \$2 a day. The beds are good, the rooms neat and clean, and the terms reasonable.

So much for Lake Edward. As for Lake St. John, I am not as familiar with the fishing, as I have not exploited it.

There is a fine hotel on its banks at Roberval capable of accommodating 300 guests. I spent several days there, but at that time the steamer was undergoing repairs, and there was no means of reaching the outlet or Grand Discharge, where the best ouinansich fishing is found; but friends who have been there and fished are enthusiastic on the sport they had.

Recently a large hotel has been erected on one of the islands in the outlet, where the fishing is as it were at the doors, and there should be no difficulty in enjoying the sport without having to go far. This new hotel solves the problem of convenience and good accommodations within easy reach of this so-called ouinansich or landlocked salmon fishing. A new and larger steamer has been built, which will run from the Roberval Hotel to the Grand Discharge daily; fare one dollar, reasonable enough for such a pleasant trip.

There are several large rivers emptying into the lake that have as yet not been tried and are scarcely known, which doubtless do abound in large trout and afford fine trout fishing. This season the steamboats will carry guests to them, and will doubtless open up a new field for the fisherman. There is said to be good fishing in the lake for doré, pike and other varieties including the ouinansich, but the railroad and hotel people disclaim having made any promise that fine fishing can be had from the shore or wharf and decline to be held accountable for the yarns of irresponsible persons. It surely looks as if some one had imposed upon your correspondent in telling of the fishing from the wharf.

It is promised that every facility will be afforded tourists this season in the way of steamers on the lakes, boats, guides and camp outfits at reasonable rates and no extortion permitted. The railroad company is the lessee of lakes Edward and St. John and their tributaries and outlets except the Jeanotte River, the outlet of Lake Edward, which has been secured by a club which will make a reasonable charge for fishing in that river. All the waters under lease to the railroad and hotel company will be free to the public, the Jeanotte River Club alone making a charge. At Lake Edward the hotel people will give attention to the question of good men as guides and good boats; and will have a small steam yacht to tow boats down to the foot of the lake, which will be a great convenience, and what has been greatly needed, as it will enable parties who do not care to camp out to get down to the best fishing grounds early and back in time for dinner, giving ample opportunity for fishing—at least six hours. The charges for all these accommodations will be reasonable—hotel charges, \$2 per day, or \$10 per week, at which no one can cavil. The railroad will run drawing room cars, and more frequent trains at excursion rates.

The trip is a delightful one, the scenery fine, and as for Lake Edward it is one of the most beautiful to be found in any country in the world, with its limpid waters, bold shores wooded to the water's edge, interspersed with islands like emeralds on its placid bosom. It is well worth a visit, aside from the fishing. A sail down to the outlet twenty-two miles and back is about as delightful an excursion as any lover of scenery could ask for; and as for fishing, I will guarantee that if your complaining correspondent will follow my example and try it again, giving several days to it, she will change her opinion and become a convert to the beauties and the

fishing she will enjoy. You can't expect all the cardinal virtues for \$7 a month, as the soldier said when on trial before a court martial for drunkenness.

Now, as for the wail over exorbitant charges at Lake St. Johns. The hotel people can hardly be held responsible for what boatmen charge tourists, as heretofore the men owned their own canoes, and we all know that human nature in Canada is not very different from what we find it at all the fishing and watering places. Try Newport or Long Island and see where they will land you; try any place in the Adirondacks and you will find the same thing. The tourist that travels and fishes at a thirty-mile-the-hour gait must pay the penalty. I have done a good deal of exploring in my day and visited hundreds of places advertised as the paradise of the sportsman and found 90 per cent frauds. I have paid high for boats, guides and transportation, and had nothing to show for it; been further and fared worse than "C. S. W." did, and had I in each case gone for the authors of alluring advertisements my life would have been devoted to the pursuit of justice under difficulties. I found the people in Canada a very fair lot in comparison with our own at the resorts of tourists. Good hotel fare at \$2 a day is not high; you can hardly stay at home for that. A boat at 50 cents a day is reasonable; a guide at \$1 is less than you can hire an imported citizen for to come and clean up your back yard, occupying about an hour. Common laborers get \$2.75 a day here in New York. A one-horse vehicle to drive to the Park costs \$5, a carriage \$10. You can't equal that in Canada. We pay all these prices at home, then go abroad and complain at paying less than half those rates. It is hardly reasonable to expect luxuries at cost price. They come high, but we must have them seemingly. They are not economical adjuncts to happiness.

I have taken some pains to get posted on this season's

day, and which any one can see who is lucky enough to visit the upper reaches of this singular stream. To begin at the very beginning go to the upper pond, or "Head Pond," which lies on the far side of Castalia village from the club house. This is much like a plain pond of clear water, and is not spectacular in its effects, but it is full of feed, shrimps, crawfish, miller's thumbs, etc. It is about 5 acres in size, and is made by springs. From this upper pond an arm of the old natural stream used to cross the town above the Castalia mill, and wind through the scanty woods to the right of the railroad depot as you look up from the club house, coming across the meadow which lies at the right of the club house. This old natural stream is now abandoned, and the main volume of the water from the upper pond flows through a winding artificial bed, which in a few years has so grown up with moss and water plants that it presents only the natural characteristics of the stream. This main stream comes rushing and tumbling past the old mill site and falls with a series of pretty cascades into the great square pool known as the mill pool. This is a lovely pool indeed, deep, white and lively, the focus of four convergent, meandered or natural streams, and full enough of oxygen to intoxicate even a trout.

Just above the mill pool lies the center setting and chief gem of all this property, that magnificent natural spring known as the Blue Hole, which is the original source of the mystery and romance of the Castalia stream. This great spring is the second supply for the stream. The third supply is the "lower blue hole." As the fourth, we may add the artesian well spring struck last month by the Lower Club, mention of which was made in the issue of May 14. Thus it may be seen that a tremendous body of water must underlie all this little valley. This supposition makes possible all the artificial meandering of the stream which has been carried on by the Upper

one two-pounder to the quiet fly cast late in the evening. Just above the bridge which connects the club house to the dining hall there lies a little reach of rapid but deep water, and in this we could see the trout moving about all the time. Andy, the keeper, demonstrated ocularly the assertion that trout could be taken from the doorstep by catching one on the fly as we stood watching the fish working in the pool beneath the bridge.

Suppose we now face about and look down stream from the club house bridge, we shall see the straight water lying directly ahead, between the big cottonwoods that line the race, till it crosses the line of the club possessions. Off to the right of this, on an apparently low and level plot of ground, not sixty acres in extent, is the latest completed artificial water, and there is three miles of fishing water, all on this fifty-seven acres. It would seem impossible to wind the water around so much and still get any fall to it enough to make it lively, but the pitch of the land is far sharper than it looks. We found that throughout all this new water the flow was swift and steady. The peculiar moss which is all through the stream has already spread all through this new stream, and that there are trout there I know very well, for Mr. Zollinger, the president of the club, and myself caught some in there in the evening. The fish in the new water did not seem to be so large as those above the mill pool. All this new water has the customary number of floats, rock piles and other artificial shelters. Across the necks of the curves foot bridges are laid, so that one can pass rapidly from one part of the stream to another. The Upper Club has in all 4 1/2 miles of made stream, averaging 22ft. in width and 4ft. in depth. On its 104 acres of property it has 6 miles of fishing water, and not a point of it all is over ten minutes walk from the club house. The 3 miles of new water below the club house was made in 1890.

DIAGRAM OF UPPER CLUB'S STREAM AND GROUNDS.
(From original design by Andy Englert.)

prospects at Lakes Edward and St. John, and have it from the best authority that great pains will be taken this year to make everything agreeable and no extortion permitted.

If "C. S. W." will make that trip again about the middle of August I will meet her there and introduce her to some very large trout that I have in reserve, and she shall take a 5-pounder with her own fair hands, and thereby be compensated for past disappointments.

R. L. OGDEN.

THE CASTALIA STREAM.—III. THE "UPPER CLUB."

MILLER, the keeper of the Lower Club, took me on his wagon for the short but muddy ride between the latter club and the headquarters of its neighbor, the "Upper Club," as we may most easily distinguish it. The white sides of the Castalia mill, which is a land mark on the upper stream, were easily visible all the way, and presently we could see the club house of the Upper Club, and could define the course of their streams and boundary lines. Miller pointed these out, he being familiar with them, the more especially in his work as contractor in the building of some of the "new stream." A tall pole marked the location of the lower blue hole, as Miller called it, and across the pleasant meadow the tall cottonwoods pointed out the line of the old raceway. There are two of these raceways, and each club has one, the water therein running straight as a line between the old artificial banks. The curving water connecting these races lies in the meadow, and the last of these curves, as I believe I have already said, rounds out into the lower race right at the club house of the Lower Club. All this mid-way panorama showed nicely in the bright spring morning, for now the weather had grown warmer, and the snow had disappeared.

Miller drove through the country lane up to the edge of Castalia town, turned into the club driveway at the railway depot and put me out at the door of the club house. Here a little crowd of welcoming members poured out, and FOREST AND STREAM had changed hosts.

Andy Englert, the keeper of the Upper Club, made me a diagram of the club grounds, showing the course of the streams, etc. This is of course only relative, and foreshortened out of all perspective, but in spite of its sufferings at later hands in re-drawing, if the reader will glance at it, he can get a better idea of what we saw this April

Club. The "Side Stream" and "Andy's Stream," ooth of which can be seen wandering around between the head pond and the Blue Hole. As you look up-stream, "Andy's Stream" curves off to the right of the Blue Hole and comes into the mill pool below it. This part is not yet an actual stream, but will be. When we were there the whole willow flat which used to be the bottom of Hoyt's mill pond was heaped up in long curving lines of yellow dirt and laborers were trenching as though for heavy railway work. It will take all summer, probably, to complete this stream and get the water through it right, and to level down the unsightly banks as is the intention. There will be a mile of new water on the willow flat when the work is done. At present the fishing above the mill pool is chiefly in the curving artificial stream first mentioned, which runs from the head pond to the mill pool.

And now for a look into the Blue Hole. It is a sight not to be forgotten. No wonder the simple natives of a superstitious day shivered in awe as they gazed into its weird and ghostly depths, motionless, changeless, transparent, and draped with funeral gloomy moss along its curving sides. The sight makes one's shoulder blades creep to-day. I should think at a guess that it is 75 to 100ft. across this great spring. It is nearly a perfect circle, and tapers down, cone-shaped, or with sides curving like those of a drinking tumbler, to a depth of 43ft. Drop a nickel in, and you can see it every inch to the bottom. The green moss hangs out in great streams on the sides. The water is clear, but of a steel blue, ghostly cast. Its volume is always just about the same, and it is always just so clear and just so cold. The uniform temperature of the great spring is 50°. Below the spring the stream warms 2° per mile. At the brick mill of the Lower Club, and at Venice, two or three miles below that, the nearly uniform temperature is 71°. The trout live all through the stream in equal condition. At this early date of April there seemed to be a general working of the large trout toward the head of the stream. The average of the fish we secured out from under the floats was very heavy. I never saw such a quantity of one-pound, pound-and-a-half or two-pound trout. The stream seemed full of them.

At the foot of the mill pool all the waters are united, and from the railway down past the club house the stream lies straight in the banks of the old raceway, passing through two splendid deep pools above the club house, each of which has in its time yielded more than

That the fishing on the upper stream is good was proved within a few minutes after we had entered the club house, for several anglers had been out that morning and had brought in good creels. Mr. J. C. Zollinger, the club president, had been especially fortunate and showed a basket of magnificent fish, a number of which ran over the pound mark. He had in his catch one European brown trout of about a pound weight, one of the few which have been heard from in the stream out of the small number planted. This was a plump and shapely fish, but not more beautiful than the brook trout which lay beside it. To show alike the local plenty of feed and the natural voracity of the trout, Andy showed me the contents of the stomach of one of the trout. There were over 200 of the small so-called fresh-water shrimps, nearly a handful in all. Of this sort of feed, of crawfish, miller's thumb and stickleback minnows and the like the Castalia stream is literally full. The water is good for the feed and the feed is good for the fish. Trout conditions are about perfect in Castalia stream, and they obtain in the made streams to an extent one would hardly think possible in so short a time.

In the afternoon it came off bright and quiet, and the trout did not rise, but it was very pleasant to walk along the banks and watch the water and the trout. Such great lusty big fellows, and so many of them! They lay under the protection of the floats for the most part, but if you stamped hard upon the covering they would dart out in schools, perhaps a dozen, sometimes twenty or thirty great big fellows. It is not forbidden by the ethics of this club to fish under the floats, and many of the large trout taken are caught upon a fly under the float with the current. This is not fly-casting, and though it is fly-fishing in some sense of the word it is not high grade work, and therefore not really good enough for this club. Only "artificial bait" may be used, and I sincerely hope that this means strictly the artificial fly. That is the only lure which should be tolerated for an instant on this stream. The limit for a day's catch is 15lbs.

The club has a hatchery of its own, a little building by the side of the great mill pond, and the stream is constantly stocked. Andy has twice gone up to the Anna River, or the south shore of Lake Superior, to secure spawn, though not with any very great success. From now on the club will plant annually about 500,000 fry, and such yearlings or younger as it may be possible to obtain from the Government. The first outlay of the club

at planting was during the first year, when it spent \$100 and put in 20,000 fry. Then at different plantings it put in 2,500, 7,500, 2,000 fry, and then 35,000. Then it put in 200,000, and then 150,000, then 300,000. The Government put in 3,000 yearlings, and then 5,000 yearlings. This year 400 yearlings were put in. It is probable that the club will reconsider an action which may have been too hasty, and will hereafter put in none but the American brook trout. There were 200 fry of the European brown trout put in two years ago, and five years ago there were planted at different times 5,000, 2,000 and 10,000 rainbow trout fry. A number of these fish have been taken over 2lbs. in weight. There have been planted also 100 yearlings each of the Loch Leven trout, Von Behr trout and 100 brook trout a year and a half old. Thus the active organization shows itself fully disposed to be up and doing, and not disposed to let its property or its sport decline.

I have already said something, and perhaps nearly enough, about the early history of both these Castalia clubs, but I find some little discrepancies as to dates in the several stories I have heard from different club members. In a talk with Mr. A. C. Moss, treasurer of the club, at Sandusky, that gentleman referred to the records and gave me the following facts, which should be accurate: It is usually said that the club organized in October, 1879, but the first certificate of stock of the "Upper Club" was issued really May 15, 1873, the club being then first incorporated as the "Cold Creek Trout Club." This was on the old leasehold basis with the Castalia Milling Co., \$50 a year for 20 years. Then followed the deliberate persecutions of the latter concern, and when it was decided to buy the ground outright instead of leasing, the club changed its name to "The Cold Creek Sporting Club Company." The club then put money into it and shares were held at \$400. Then again, in 1890, the club again changed its name, this time to "The Castalia Trout Club Company," and this is the legal and actual name of the "Upper Club" to-day. Not so very many men could answer an off-hand question as to the name of either of these two clubs of the Castalia stream, but the distinction of upper and lower club will serve.

The Upper Club has a membership of 67, which would seem quite large enough. There is a smattering here of the neophyte element, always delightful, albeit innocent of the guileful ways of the wily trout, but the per cent. of old stagers is quite enough to bring up these younger gentlemen into the full skill of the angler's craft, for there are skillful trout fishermen here as you will find anywhere.

Thus far the Upper Club has wisely been putting its money into the work on the new streams, thus extending its amount of fishing as quickly as possible, so that time may at once begin the work of softening the artificial quality and rendering all as like as possible to the natural home of the trout. Indeed, the chief factor of interest in the story of this part of the stream is this artificial extension of the stream. It is work new in the angling world, this building of trout water. Doubtless many readers of this, who are used to the rough country natural to trout, will think that no hand but that of nature can make a trout stream, and will value lightly the charm and worth of this artificial water. There is no license for any one to do this, though it needs an actual visit to the grounds to understand this perfectly. It should be remembered that all this valley is level and not rough, the stream having no mountains, hills or heavy timber near it. It is not a mountain, but a meadow trout stream, and one part of the meadow is as good as another for the stream provided that the water pass over it with the swiftness and coldness of the natural stream. The clever engineering of the club has made this sure in its work, as you may see by going over the stream.

The water of the old mysterious springs carries its charm with it as it goes. The moss is even now spreading all through the new water, and the feed is following the moss all along. It is not thought that the meandering of the stream will change the temperature of the water for the Lower Club, but still there should be plenty of consideration before too much of this meandering is done. It would probably be easy for the Upper Club to sink an artesian well and tap a stream say half way down its grounds, which would keep down the temperature and increase the volume of the fishing water, but no one could foretell just what effect this would have upon conditions now existent above the half-way point of the property. The well spring of the Lower Club, just sunk, lowered the big Blue Hole a foot in one night, and scared the Upper Club half to death. A few more tapings and the big Blue Hole may go to the demeriton bow-wows, and there you are. It would seem safer and better for the Upper Club, and both the clubs, to be conservative and careful and to let well enough alone after this. There is no more audacious finger-snapping in the face of nature on record than this stocking, changing and improving of the Castalia stream, but nature is behind it all after all, and she should not be defied to the point of insult, or she may get even, as she has a baddish way of doing sometimes.

One point about the history of the subterranean stream of the Castalia Valley is of interest and will lend additional mystery to the mysterious quality of this locality, and that is the story of how this stream was located before the boring on the well was commenced. In the issue of May 14 I stated that Mr. Ely had announced the striking of the flow, but that was not really the first I had heard of this artesian well. When Miller was taking me up to the Upper Club, on this day of which I am writing here, he showed me where the well was sinking, and told why that spot was chosen. "We got it by the divining rod," said he, "one of them witch hazel sticks with a crotch in it. You know you just hold the rod loose in your hands, and when you walk over the water the fork of the rod just twists down. The rod won't turn for everybody. It won't turn for anybody who ain't a 'witch.' We had an expert down from Cleveland to locate the water, but the rod worked for me just as well as for him. We found that the stream flows under the meadow and right past the corner of my barn. The rod would twist over so strong you couldn't hold it."

Miller evidently had perfect simple faith in the truth of all this. I don't have any faith in the divining rod, though there may be "more things in heaven and earth than are dreamed of in our philosophy." In this case, however, we must all be credulous and must believe the story of the water witch. The divining rod was the only thing lacking to round out the history of this enchanted

and still enchanting stream. People have always said that Castalia Stream was "bewitched," from the time of Major Rogers, 1765, till now, and who shall deny this today, after the successful event of the witch's witching?

The Upper Club has not yet a very large club house, but will soon build another larger. It has also one hotel, just across the bridge from the club house, one cottage, one tenement house, one barn, one ice house and one hatchery. And then it has Andy. It is the only club in the world that has Andy. Andy Englert comes of a family of old country game keepers. He has all the skill and gentleness of heart which one in his place should have, and all the patience and love of watching the ways of small things. The club will never part with Andy. He has more than half made the club what it is.

In the supper room we looked over the trophies on the wall, pictures, mounted fish and birds, etc. Mr. Frank N. Beebe, of Columbus, O., an angler of wide traveling experience, has presented the club with two trout from the Rockies, nicely mounted, one a magnificent trout, 11lbs., of the Coeur D'Alene Lake country (*Salmo malma*), the other a mountain trout, 3lbs., from the Coeur D'Alene River. These hang before the eyes of all and show the glory of the tribe. In the evening we looked for some glories close at home, and went through a few pages of the club record. I found that in 1887 there were caught by the Upper Club members 1,634 trout, total weight, 557lbs. In 1888, 2,270 fish, total weight, 6184lbs., one fish taken that year which weighed 2lbs. In 1889, 2,407 fish, weight, 768lbs., largest fish, 2lbs. 9oz. In 1890, 3,242 fish, weight, 1,054lbs., largest fish, 2lbs. 12oz., this was a rainbow trout. The catch of 1891 will doubtless be the heaviest yet. In the first week of the season this year there were caught 343 fish, weight 157lbs. The heaviest fish ever taken on the grounds was a pure brook trout, and weighed 3lbs. 2oz. Some days' catches I caught on the pages turned, Mr. G. W. Baker, 4 fish, 8lbs.; Mr. J. L. Seenie, 15 fish, 104lbs.; Mr. J. C. Zollinger, 15 fish, 8lbs.; Mr. Frank N. Beebe, 3 fish, 5lbs. 2oz.; Mr. Geo. W. Bills, 27 fish, 14lbs.; Mr. G. W. Oswald, 30 fish, 14lbs. 12oz.; Mr. J. S. Sweeney, 39 fish, 21lbs. 8oz., one fish 1lb. 13oz.; Mr. C. T. Hasbrouck, 17 fish, 8lbs. 8oz.; Mr. B. D. Babcock, 3 fish, 2lbs.; Mr. Frank N. Beebe, 21 fish, 9lbs., one fish, 1lb. 10 z.; Mr. Jos. Ingersoll, 28 fish, 11lbs. 8oz.; Mr. N. B. Hasbrouck, 26 fish, 14lbs. 6oz. And so forth. Moreover, Judge DeWitt, Mr. Zollinger and Andy killed 51 woodcock in one day, 79 in a day and a half. This was last year, up on the willow flat where the new stream is now building.

All the comforts of home at the Upper Club, and all the courtesies in the world. What men these sportsmen are! They put paper and writer under obligations. And so the visit ended, of a bright and clear morning, leaving unpaid the debt of courtesy to all the following ladies and gentlemen: Mr. J. C. Zollinger, president, Sandusky, O.; Mr. G. W. Bills, vice-president, Toledo; Mr. A. C. Moss, treasurer, Sandusky; Mr. A. L. Moss, secretary, Sandusky; Messrs. Zollinger, Bills, Moss, F. N. Beebe, Geo. J. Johnson, J. S. Sweeney, C. T. Hasbrouck, directors; Messrs. Geo. A. Ingersoll, Richard Bacon, Calvery Morse, Burton D. Babcock, Jas. W. Fenner, Daniel Myers, Lee McBride, C. B. Beach, C. W. Scofield, Geo. F. Ely, John Huntington, A. G. Huntington, R. A. Carran, H. E. Hill, M. A. Bradley, S. H. Nicholson, M. M. Rodgers, L. C. Carran, Tom L. Johnson, Jas. B. Clyne, Jos. Ingersoll, Clark T. Hasbrouck, N. B. Hasbrouck, John C. Weideman, George J. Johnson, W. Scott Robinson, Thomas H. White, Geo. W. Baker, Henry W. White, Joseph Kilby, Rollin H. White, Geo. W. Short, Ralph Worthington, J. S. Dickle, Wm. Grief, all of Cleveland; Mrs. John Huntington, Ida R. Baker, Cleveland; Messrs. Jos. M. Spencer, J. W. Oswald, Geo. W. Bills, Chas. W. Reynolds, Clarence Brown, John A. Waite, Geo. E. Pomeroy, John B. Ketcham, all of Toledo; Mr. W. F. Smith, Paynesville; Mr. J. Sweeney, Detroit; Messrs. Theo. Rhoads, Geo. J. Atkinson and F. N. Beebe, Columbus, O.; Messrs. Jere Atwater, Thos. C. Adams and Dr. Wm. Storey, Castalia; Messrs. J. C. Zollinger, Wm. L. Melville, Augustus L. Moss, Edward S. Marsh, Paul Miller, Augustus C. Moss, Adam J. Stoll, John T. Davis, all of Sandusky. Messrs. Wm. E. Miller and Fred A. Beckwith, Elyria, O.

"You see that ruined building where the walls are falling down," said Mr. Zollinger as we walked over to the depot to take the train to Sandusky. "It burned down not long ago. The family has moved away. The parents of that family built here in Castalia in earlier days, and they were both massacred by the Indians. This was always a great Indian ground."

More history, more romance, more change and shifting and passing away of the human faces which have been mirrored in Castalia stream since first it flowed. But now, as then, the stream itself flows on, always just so full, just so clear, just so cold, smiling, mocking and mysterious, and whence it comes or whither it goes no man can yet say. And if we gaze, face between hands, down into its blue depths we cannot answer that, nor can we answer it if we gaze, face between hands, up into the blue depths of the sky above. Thus the mystery of the stream is still baffling and unknown; and of this the stream will talk to itself for ages, and ages and ages, and what new faces will look into it in those days, and what they will see therein, who knows? That is a mystery also for us. But sure it is, the stream will never turn a wheel. *Va done!* It is aristocrat, this! Put wheels on it and it will withdraw beneath the ground and tell its story to the earth gnomes, never any more answering to the water witch, witch he never so wisely. E. HUGH.

ST. LOUIS NOTES.—May 30.—The Gilead Slough Hunting and Fishing Association has completed its new club house, and to-day the steamer Bald Eagle conveys the members and their friends to the opening. Some 200 members and guests will take in the opening event, and the steamer will return on Monday morning. The committee of arrangements are A. E. Winkelmeyer, Edward Bartold, J. W. Schloeman and D. Delabar. Decoration Day has become a regular angler's day in this section and large delegations have gone to the various club resorts. King's Lake, Gilead Slough and Mudcock Lake are the most patronized. Angling in the lakes and sloughs is good now, but in the rivers is poor on account of muddy water.—ABERDEEN.

The Red Letter Event of the Week.

From "Shoshone," Panguitch, Utah: "I am now receiving the FOREST AND STREAM regularly, and its arrival is the red-letter event of the week."

NOTES FROM KENTUCKY.

TAYLORSVILLE, Ky., May 15.—*Editor Forest and Stream:* I am sorry to say that the great fish pond and game preserve, whose establishment was authorized by charter, has not yet materialized. Senator Gilbert has not given it the attention required, but says he will go to work shortly. Stock in the company would pay a big interest, and the improvement would be of great value to the vicinity. Fishing in Salt River is fine. The anglers have been very lucky, and some of the finest bass caught for years have come to creel this spring. There is no shooting here at this season. No game to shoot, and the interest in club shooting seems to be at the lowest ebb.

If more of the people would read FOREST AND STREAM I am sure a great interest would be manifested in the great pistol contest, but nine-tenths of them are ignorant of the project.

The Kentucky Fish and Game Club appears to have gone to sleep. I endeavor to arouse an interest in the idea of preserving and restocking wherever I go, but single-hand work is slow, and it may be a long time before the proper sentiment is awakened.

A sucker measuring 19in. was caught lately in Clear Creek, the largest of that kind ever seen in that water. More anon.

SHEPHERDSVILLE, Ky., May 20.—The fishing season opened here about the first of this month, with rod and line and trot-line. The catch by trot-line is mostly blue cats; with rod and line the only kinds caught are croppie and small-mouth bass. Fishing should have been good, as there was a rainy winter and no ice; but expectation has been disappointed and no great amount has been caught. The only spring game are red and gray squirrels. These are plentiful, but hard to find owing to the density of undergrowth in the woods.

This county would furnish a splendid location for a game and fish preserve. The land is cheap, full of small mountains, and has a covering of young timber and undergrowth. Thousands of acres could be leased for a nominal sum, and sufficient grounds for club buildings bought very low. It is only 20 miles from Louisville, the metropolis, and no more picturesque, pleasant or healthy situation could be found. A preserve of five thousand acres would furnish cover for quail, squirrels, pheasants, grouse and wild turkey, and include several miles of good streams that could soon be filled with bass and trout. There are some turkeys and deer already in the forests. Should any of your readers desire such a preserve let them give this an examination. J. S. M.

ANGLING NOTES.

MOST of the salmon anglers left last Friday and Saturday for the Canadian waters, word having been received that the salmon had made their appearance in the rivers. All that was wanted was a little rise in the water to send them up to the best pools. Owing to the cold weather the snow has melted very slowly, and there is but little danger of a freshet.

A salmon weighing 10lbs. 9oz. was caught in the Great South Bay last Thursday, of course in a net.

There was another run of good-sized salmon in the Penobscot, but most of them fell into the hands of the owners of the great fykes and other nets that obstruct the mouth of that river.

The day before Decoration Day was rather discouraging to the many thousands who left the city on sport intent. But it turned out all right, and the fishing was all the better for it. Most of the clubs were well attended, though many of the members of the South Side Club were either salmon fishing or at Tuxedo. Two gentlemen drove over to Lake Ronkokoma from the South Side Sportsmen's Club and returned in the evening with forty-two black bass, all taken on the fly. The trout in the brook at the latter named club are unusually fine this season, averaging from 6½ to 7lbs. for the twenty-four, and they are perfection on the table. The fly-fishing on their four miles of stream is simply perfection. The cold clear brook runs swiftly under the overhanging trees and bushes, fringed with ferns and wild flowers. The trout are even more brightly colored than the flowers. The ruffed grouse are heard drumming on every side and the quail call in every direction. Hardly a day passes but the angler fishing quietly down the brook sees the graceful deer as they come down to drink. Mr. C. F. Imbrie saw four at once a few days ago. No wonder that the members love their splendid brook fishing.

The Ontario & Western R. R. have planted one million of fry this season, making in all over six million of young trout turned out during the past ten years, not counting the thousands of lake trout, rainbows, etc. This road has published a charming guide book, beautifully illustrated with views taken on the Beaverkill, Neversink and other famous trout streams.

Mr. H. E. Jenkins, of this city, showed the writer, a few days ago, a magnificent specimen of "brown trout" which he had killed that morning on a wild stream in Westchester county. It weighed three pounds and some ounces, I have forgotten the exact number, and Mr. Jenkins says he made a splendid fight.

Mr. Edw. A. Watson called on me a few days ago, he was on his way to the Canadian salmon rivers; his home is Nimrod Hall, Va., a place famous for fish and game. Black bass, trout, ruffed grouse and deer abound there, and once in a while a black bear can be killed. Nimrod Hall is a great resort for English sportsmen, and is always full to overflowing with guests to delight in that wild mountain scenery. Milbro is the nearest station (seven miles) on the C. & O. R. R.

Messrs. Grant & Soule, the famous guides and owners of camps on Seven Ponds, Me., write that the fishing is excellent, and there is plenty of waters there not controlled by the Megantic Club. This place is noted as being one of the few places where trout take the fly all summer. This place is reached from Rangeley via Kennebec Lake. Mr. John W. Mason, 142 Duane street, New York, vouches for the fishing, and as Mr. Mason is an excellent and well-known angler there is nothing more to be said. Prof. Mayer, of Stevens Institute, has also visited this section, and speaks in the highest terms of it. SCARLET-IRIS.

THE BUSTARD FEATHER FOR FLIES.

Editor Forest and Stream:

Will some of your readers explain through your columns why tropical birds, particularly the pheasant family, have such warm downlike under-plumage? I have at times pulled to pieces many species of tropical birds to use the feathers for tying flies, and have always wondered why nature endowed these birds with plumage fit for the coldest of climates, when they were destined to live in the tropics. About the only exception to this rule that I have noticed is that of the bustard. This bird has a thick skin composed almost entirely of fat, which takes the place of down in regard to warmth.

It has probably been a mystery to many why the original designers of the different salmon flies always seemed to pick out the rarest and most expensive feathers. I think I have discovered the "why" as to at least one feather, and I am satisfied that there was "method in their madness." The bustard feather is exceedingly hard to obtain, and yet nearly every salmon fly with a mixed wing calls for that feather. I have lately been making some experiments with these feathers which give the following result: The feather is almost absolutely waterproof and very buoyant. I placed a lot of these feathers under a powerful glass, and found they were covered with minute globules of oil that had exuded from the bird's fatty skin. It is almost impossible to make the feather sink. I weighted a feather, and placed it in a basin of water to soak, after two hours I detached the weight and the feather immediately popped up to the surface. A few shakes threw off all the water and the feather to all appearances was dry. When tied with other feathers into the wing of the salmon fly, part of this oil is undoubtedly taken up by the others, thus making the whole wing waterproof to a certain extent.

The old designers certainly knew what they were about when they selected the bustard feather, and they surely had good reasons for choosing other rare and expensive feathers. Can any one throw any more light on this subject.

ESPY-KAY.

ODD ANGLING INCIDENTS.

AN angler who was fishing for trout one day last week not far from this city, was annoyed by chubs which persistently took his fly. He kept hooking chubs and throwing them off until at last without unhooking it he cast a chub back into the water. Instantly it was taken by a fish, which proved to be a brown trout weighing 3½ lbs., one of a plant of three years ago.

The London *Fishing Gazette* records the exploit of a Mr. Turle: "Although he had fished the neighborhood of Taunton for the past forty years, this veteran angler never before caught a fish in such a peculiar manner. He cast the fly in his usual form, and a moderate-sized trout rose to it. He struck, and as he thought, hooked it. For its size it gave an unusually strong and strange pull, and when landed Mr. Turle found that the fish was not hooked at all, but his gut had formed a loop with the hook, which held the fish in the middle of the body. Having on, of course, more than one fly, the fish had evidently risen to the foremost, and in striking the end hook must have become entangled with the cast of gut so as to form a noose, which fastened round the body of the fish."

THE ANGLER IN NICARAGUA.—The student of natural history will find a rare field for exercise in the wonderful flora and fauna, while to the sportsman the country is a veritable paradise. In a previous letter I spoke of the various kinds of game to be found in the forest on the Atlantic slope. To those may be added deer, which are abundant on the Pacific slope, particularly in the vicinity of Rivas. But it is the angler who will find greatest cause to rejoice. To say nothing of the barracouta, snapper, and other fine sea fish to be had off Greytown, let me confine myself to the fish of the lake and the San Juan. The most highly-esteemed fish is the juapoti (pronounced wah-po-i), which somewhat resembles the black bass in appearance, but is much more savory. The saballeta, a silvery fish, shaped like the striped bass, is a gamy fellow, who when hooked will leap out of the water and endeavor, often with success, to shake the hook out of his mouth. He is, however, rather bony and not highly thought of as a food fish. But the great game fish of the fresh water is the savalo-real, or tarpon, which fairly swarms in the river and lake. Wherever there is a shoal place in the river they are to be seen breaking in hundreds, and at the Toro Rapids, above Castillo, they are so numerous that they frequently jump into the boats ascending or descending. When ex-United States Minister Hall, who is the agent of the canal company at Managua, was descending the river to meet Senator Miller, five large tarpon jumped into the little steamer which carried him down the Toro Rapids. Lake Nicaragua is, so far as I know, the only body of fresh water in the world that can boast of the shark. It is full of genuine man-eaters, similar in appearance to those of the ocean, and quite as savage. It is said that at least 25 persons annually fall victims in the lake to these monsters. Of course they also travel up and down the river. A large alligator or crocodile—I should say the latter from the shape of his snout—also inhabits the river. At the Toro Rapids we saw a huge one swimming. His head alone was about 5 ft. long. These "gators" have a queer way of fishing. They select a shoal place in the rapids and lie head to the current, with mouths wide open. They have been a good deal shot at since war was begun on the canal, and consequently are now extremely shy of man. The natives, however, do not seem to have ever dreaded them half as much as the sharks.—*W. E. S. in The Sun.*

DR. WILLETT KIDD, the Game and Fish Protector for the Second District of New York, has brought suit in the Supreme Court of Orange county against John Q. A. Ward, the well-known sculptor of this city, and against Josiah Wentworth for having caught trout in Ulster county in April. We know nothing of the circumstances of these cases, but their moral probably is that when fish laws are as badly confused as they are in this State even well-meaning fishermen may find themselves entangled in the meshes.

AN 11 LB. BROWN TROUT.—Caledonia, N. Y., June 2.—*Editor Forest and Stream:* There was a brown trout (*Salmo fario*) taken in our stream yesterday by Mr. F. P. Brownell that weighed 11 lbs. This I think is the largest

of this variety ever taken in this country. The very first plant was made 8 years ago this spring, and consisted of a very few of the fry which were hatched from eggs sent by Mr. Blackford or Fred Mather to the New York State hatchery at Caledonia. I saw the fish this morning and it was as perfect a specimen as I ever saw.—J. ANNIN, JR.

FISHING IN EXCELSIS.

IN this truly superb volume, ["With Fly-Rod and Camera"] a model of choicest topographical beauty, perfect as to "touch," and quality of paper, solidity and excellence of binding, the fly-fisher will at once recognize the hand of a consummate master of his craft. It is not in this or that, here or there, but in a completeness, not less massive than finished, that it is to be seen. "Thorough" from first page to last is everywhere writ large, and as modestly as delightfully. We shall not commit the blunder of exaggerated praise if we say that Mr. Samuel's work is worthy to take classic rank, and should be styled "America's Walton," for, like the gentle Isaac, Mr. Samuel, without attempting or laboring a style, achieves one; there is the simplicity, strength, and directness of the old master, and not a little of his fanciful turns of thought. Men totally indifferent to angling turn to Walton's pages as to an unending calumet for workaday worries, for the simple reason that the tranquil heart of sunny content beats the same tune for the angler as "Fly-Rod and Camera" gives the similar unbounded delight. There is a vast deal more than concerns fly-fishing in this fascinating volume; no other work conveys its unique charm. There is a world of lore concerning the fish themselves, lore only to be found in Nature's library, and written in characters requiring a lifetime to decipher, and difficult to impart when deciphered. What, for instance, more difficult to describe the true color of a fish, or the thing when seen through the refracting medium of water, itself reflecting the color of the sky, and another when the fish is taken out of that element, but such things as these are trifles Mr. Samuel surmounts with the ease that comes of profound knowledge of his subject, and practice that has embraced every detail of the sport he describes. The form in which the book is judiciously cast largely contributes to this minusculation. It is the narrative of the doings of a fishing party of four, on and in Canadian waters, thrown into dialogue form. The interlocutory treatment is so deftly searching that not a point is overlooked; and so naturally is each man's *metier* brought into play, that we seem to be on the spot questioning for ourselves and listening to the experiences of these work-wise specialists, each one supreme in his way. These discussions, diversions, and gossip by the camp-fire—the camp sometimes pitched at the forest edge, sometimes by river or lake—the sport, the glowing descriptions of scenery, the solitude that is not loneliness, the inexpressible out-of-door delights of that country, almost persuade us that civilization must be criminal, and fly-fishing ordained by providence as the natural occupation of man. * * * With this extract we must close our notice of this remarkably fine and unique work, a work in which there is nothing weak, slurred, or defective, whether in literary execution or exposition of the fly-fisher's craft. We have refrained from making comment on the statistical and scientific sections—fishing figures, weight, size, and number of fish taken, etc.—although the temptation to do so has been almost irresistible. The difficulty of deciding what to present where the information is so varied, minute, wide and wise has largely operated as a fortunate circumstance. The lover of "the gentle art" will find in the book an inexhaustible fund of enjoyment, and no fisherman bent on an expedition to the glorious rivers and lakes Mr. Samuel so eloquently and graphically describes will be in possession of a complete outfit unless supplied with a copy of "Fly-Rod and Camera." He will find in it everything necessary for his guidance, from dressing a fly to building a bark tent, or in seeking comfortable quarters. Somewhere near 150 beautifully executed illustrations adorn and enrich this sumptuous volume, and many of them are good enough to rank as "perfect pictures."—*Land and Water.*

Fishculture.

THE AMERICAN FISHERIES SOCIETY.

THE twentieth annual meeting of the American Fisheries Society was held at Washington, D. C., in the lecture room of the U. S. National Museum. The Society was called to order at 2 P. M., Wednesday, May 27, by the president, Mr. E. G. Blackford. The attendance was not so large as had been expected, but quite a number of interesting papers were presented and the meeting was altogether successful. The papers as announced were as follows: "Transplanting Fish" by J. J. Strahan; "Breeding Habits of the Yellow Perch," Fred Mather; "The Rearing of Salmonidae in Troughs and Tanks," C. G. Atkins; "Fish Protection and the Fisheries Society," A. N. Cheney; "Transportation of Living Fishes," Wm. P. Seal; "The Fisheries at the World's Fair," G. Brown Goode and J. W. Collins; "The Fish and Fisheries of Florida," H. H. Cary; "On the Tenth of Fishes as a Guide to their Food Habits," J. A. Henshall; "The Rearing of Yearling Trout," Frank N. Clark, and "Kennerly's Salmon," by T. H. Bean.

U. S. Commissioner of Fish and Fisheries, Col. Marshall McDonald, being unwell, his address of welcome was read from manuscript. Members present at the opening session were: President E. G. Blackford, Secretary E. P. Doyle, Treasurer Henry C. Ford, Dr. J. A. Henshall, Dr. H. H. Cary, Fred Mather, A. N. Cheney, Frank N. Clark, W. L. Powell, L. D. Huntington, F. J. Amsden, Dr. J. C. Parker, William A. Butler, Jr., W. L. May, G. Brown Goode, R. Rathbun, Capt. J. W. Collins, Wm. P. Seal, J. J. O'Connor, B. B. Porter and S. H. Kauffmann.

The following new members were elected at this meeting: Bashford Dean, T. D. Huntington, Peter W. Lynch, Frank J. Amsden, Chas. H. Babcock and Wm. S. Kimball, all of New York; H. H. Sherwin and Wm. R. Huntington, of Ohio; B. B. Porter, of California, and Hugh M. Smith and Wm. Brown, of the U. S. Fish Commission.

Messrs. W. L. May, A. N. Cheney and R. Rathbun were appointed a committee to nominate officers for the coming year. The following gentlemen were nominated and unanimously elected by the Society: President, James A. Henshall, Cincinnati; Vice-President, J. C. Parker, Grand Rapids; Treasurer, Henry C. Ford, Philadelphia; Recording Secretary, Edward P. Doyle, New York; Corresponding Secretary, Tarleton H. Bean, Washington, D. C. Executive Committee, S. H. Kauffmann, Washington, D. C. (chairman), and W. A. Butler, Detroit; L. D. Huntington, New York; H. H. Cary, Atlanta, Ga.; William Hudson, Hartford; B. B. Porter, San Francisco, and W. L. May, Fremont, Neb.

An important measure acted upon was the passage of a resolution urging upon Congress the importance of enacting such laws as will protect and propagate the fish of the Great Lakes, and asking Congress to take such speedy action as possible to secure uniformity in the laws of the United States and Canada, regulating the fisheries in the Great Lakes. Allied to this is the matter of enforcing salutary laws after they are passed, and the Society asks that after such uniformity shall have been secured Congress will appropriate an amount amply sufficient to enforce the laws and give the necessary protection. The resolution also asks for the passage of measures looking to the propagation of food fish in these waters.

The committee appointed to consider the feasibility of enlarging the membership of the Society and widening the scope of its work, reported favorably upon the suggestion of United States Fish Commissioner McDonald. Hereafter, then, all members of angling clubs and fish and game societies in sympathy with the American Fisheries Society will be admitted into membership, and it is thought that this will increase the usefulness of the organization and awaken an interest in the study of fishculture and fish protection.

Two interesting papers were read, one by Mr. Fred Mather upon the "Breeding Habits of the Perch," and the other on the "Transportation of Living Fish." The latter paper, by Mr. Seal, created a great deal of discussion, and the mem-

bers were evidently divided in their views as to whether it was best to carry young fish in open vessels or in those hermetically sealed. One gentleman created much amusement by stating that he had always been successful in carrying his small fish and bait in a jug with an ordinary stopper. He meant to convey the idea that it did not injure the fish to shut out the air, but the reference to the jug and "bait" drowned the force of the argument in the laughter that followed.

Another discussion arose over the attempt to find a solution for the disappearance of brook trout from certain streams. Some were inclined to believe the trouble was owing to the temperature of the water, but the majority were disposed to believe it was due entirely to the absence in the streams of the proper kind of food. Mr. Frank N. Clark spoke strongly in favor of the planting of yearlings, claiming that a thousand yearlings are worth more than a million fry.

Mr. S. H. Kauffmann, of the local committee on entertainment, extended a very cordial invitation in behalf of the Woodmont Rod and Gun Club, of Washington, to the member, of the Fisheries Society to attend a banquet given in their honor at Harvey's, on Wednesday evening, the 27th. This invitation was gratefully accepted and proved a very successful affair. The large public dining room at Harvey's was set apart for the exclusive use of the guests and was beautifully decorated with plants and flowers. The menu was one to suit the occasion and read as follows:

Little Neck Clams.
Deep Sea Culture Oysters.
Soup.
Clear Green Turtle, Clam Broth, Clam Chowder.
Fish.
Sheepshead à la Cubelain.
Potatoes Hollandaise, Cucumber Salad.
Entrees.
Soft-shell Crabs au naturel.
Tomatoes en Mayonnaise.
Saddle of Frogs en Fricassee.
Asparagus Tips.
Roman Funch.
Salads.
Lobster, Buds of Lettuce.
Cheese.
Roquefort, De Brie, Bent's Crackers.
Coffee, Cigars.

At the conclusion of this most excellent repast speeches were called for and were responded to by Judge Wilson, Dr. J. A. Henshall, President E. G. Blackford, Mr. Fred Mather and others. A number of short impromptu speeches were made and a most enjoyable evening was spent.

The following members of the Woodmont Club were present at the banquet: R. B. Donaldson, J. Maury Dove, W. S. Harban, R. O. Holtzman, S. H. Kauffmann, J. W. McCartney, F. B. McGuire, Wm. C. McFutire, W. H. McKnew, Albert Ordway, J. W. Pilling, B. K. Plain, P. G. Russell, W. Kelsey Schoepf, E. J. Stellwagen, B. H. Warner, James P. Willet, Jere M. Wilson and Levi Woodbury.

At the last session, held on Thursday, Dr. Cary moved that the Woodmont Rod and Gun Club be made an honorary member of the Society and heartily thanked for its kindness and hospitality. This was unanimously agreed to. New York city was agreed upon as the next place of meeting, and the time fixed is the last Wednesday in May, 1892. Messrs. Blackford, Mather and Doyle were appointed a committee to arrange for the entertainment of the members in New York. The Society was then adjourned and the members conveyed to the U. S. Fish Commission carp ponds, where Dr. Hessel explained the methods of his work, and then to the U. S. Fish Commission headquarters to inspect the aquaria and fishcultural apparatus.

The Kennel.

All communications must reach us by Tuesday of the week they are to be published; and should be sent as much earlier as may be convenient.

FIXTURES.

DOG SHOWS.

Sept. 1 to 4.—Dog Show of the Youngstown Kennel Club, at Youngstown, O.
Sept. 9 to 11.—First Annual Dog Show of the Hamilton Kennel Club, at Hamilton, Ont.
Sept. 14 to 18.—Toronto Industrial Exhibition Association Third International Dog Show, at Toronto. C. A. Stone, Sec'y and Supt.
Sept. 22 to 25.—Inaugural Dog Show of the Montreal Exposition Company, at Montreal, Canada.
Sept. 29 to Oct. 1.—Third Annual Dog Show, in connection with the Central Canada Fair, at Ottawa, Ont. Alfred Geddes, Supt. 1892.

Jan. 13 to 14.—Second Annual Dog Show of the South Carolina Kennel Association, at Columbia, S. C. F. F. Capers, Secretary, Greenville, S. C.

FIELD TRIALS.

Nov. 2.—Inaugural Trials of the United States Field Trial Club, at Bicknell, Ind. P. T. Madison, Secretary.
Nov. 16.—Eastern Field Trials Club's Thirteenth Annual Trials, at High Point, N. C. Members' Stake Nov. 12. W. A. Coster, Secretary.
Nov. 30.—Central Field Trial Club's Third Annual Trials, at Lexington, N. C. C. H. Odell, Sec'y, 44 and 46 Wall street, New York city.
Dec. 14.—Philadelphia Kennel Club's Field Trials. Charles E. Connell, Secretary.

GREYHOUNDS AT CHICAGO.

Editor Forest and Stream:

By your courtesy I will write a few lines about the criticism of greyhounds at the Chicago show (FOREST AND STREAM, April 16).

Healthy criticism tends to improvement. Erroneous statements, uncorrected, lead to confusion, mix the beginner, retard progress, and even make enemies of men who, but for such expressed opinions, might be on good terms.

My esteemed friend Lacy knows that I do not take up my pen for the purpose of unnecessarily finding fault with his work, very much of which redounds to his credit and to the paper's. I write to keep things straight, prevent the spreading of wrong ideas and attendant bad results. At the same time I realize the delicacy of my position. However, just as all feelings of friendship, or the reverse, must not be considered or be permitted to influence a man's judgments or criticisms so must his opinions and comments on a question of this sort be uninfluenced by his friendship and regard for the author of the work criticised. It is the report that we must consider, not Mr. Lacy, and as it is his aim, just as it is mine, to improve dogs and leave the owners to take care of themselves, I feel quite sure he is not going to feel offended at what I am about to write.

Here in America if you criticise a man's dog, in nine cases out of ten you are supposed to be criticising the owner, his wife or a distant relative, but as Mr. Lacy does not look at things that way, I guess I am on safe ground. Why, Mr. Editor, only the other day I got a note from a man, saying: "You go for Tracy hammer and tongs in your New York report. I didn't know you and he were not on speaking terms." Now, as a matter of fact, and although I am but slightly acquainted with Mr. Tracy, I hold him in high esteem and believe him incapable of intentionally doing wrong by anybody or anything. I went for the awards "hammer and tongs" simply because I believed them to be wrong. But what has that got to do with any opinion I

might have of Mr. Tracy as a man? And so I am going "hammer and tongs" for Mr. Lacy's report, which doesn't prove that my grandfather and his had a row over the appetite or the pedigree of a bull pup. The criticism I would like to have explained is as follows:

Then came the open dogs, with Lord Neverstill an easy winner over Jolly Ranger, in front, ribs, loin and bone. This dog afterward beat Gem of the Season for the special. His wonderful rib development and short loin is what is wanted, and his excellent quarters show that he is well off for the necessary propelling power, and his short back gives him a great advantage in his turns when after the wily lack. Like all of his breeding, he is a bit coarse looking in coat and not let down enough behind.

To begin with. What, may I ask, is "wonderful rib development"? This is a very misleading statement to confront a beginner. If the ribs are sprung beyond a certain point, *i. e.*, more than necessary to permit of the free working of the machinery behind them, then they are wrong. If the ribs are well sprung (which does not mean sprung to excess) then they are right; but "wonderful rib development," as I take it, has never yet been considered essential to either speed or stamina. "A short loin is what is wanted." Why, may I ask? A short loin means lack of liberty behind. What is needed is a loin of fair length and great strength, which does not mean a very wide loin, but a loin with depth as well as width. But in addition to a short loin you advocate a short back because "it gives him [Lord Neverstill] a great advantage in his turns." Now, if you have a short-backed and short-loined dog, you very clearly have a dog short between the couplings, and this formation has never yet been advocated by coursing men. To have symmetry, a dog with such a body must have legs much shorter than are and always have been seen in the greyhound, and after you have made these changes what remains? A dog perhaps, but certainly not a greyhound. Admitting, for the sake of argument, that this dog's short back "gives him a great advantage in his turns," I claim that in a course with a dog of average speed the advantages to be derived from the shortness of his back would never be seen, because this dog would never have the speed to reach the hare, let alone to take possession and keep it. He would be outclassed (outpaced) from the moment he left the slips, and quick turning would never add a point to his score. He would not be on hand to turn. But where is the evidence, written or other, to show that a short back and short loin combined will give a quick turn? Is it not far more likely that a short back and a liberty-showing loin would give such a result? Can you name a single instance of a short-backed and short-loined greyhound beating a dog of average pace? I never saw one that was worth a tinker's cuss, and, with the exception of Fullerton, I have seen many of the best public performers before and since the Bradford crack (Cock Robin) made such a bold bid for Waterloo honors. Market Day, winner, I believe, of a 168 dog stake at Plumpton and a dog with a very great turn of speed, had neither a short back nor short loin, and I can say the same of Little Coomassie, a bitch that when she once got up was without exception the most brilliant performer I have ever seen.

But you don't halt at the short back and short loin, but add that this dog Lord Neverstill is not well let down behind. And this is the greyhound (?) that beat Gem of the Season at Chicago, and the FOREST AND STREAM is on record as endorsing the award. Now, sir, I maintain that no short-backed, short-loined, badly let-down behind greyhound that ever lived could fairly beat Gem of the Season, beat one-half of him, or beat one corner of him, because Gem is a greyhound, whereas a dog of that formation is not a greyhound. Then again, what are we to understand from the statement that Lord Neverstill, "like all of his breeding, is not let down enough behind." This is surely a well-bred greyhound. He comes of a winning family on both sides, and methinks you will have a difficult task to prove that dogs of his breeding are "not let down enough behind." In truth, they are as well let down behind as any greyhounds in the world. Now, then, if Lord Neverstill has the defects you have enumerated (I don't see how he can), a very great wrong has been done the owner of Gem of the Season, and the Chicago judge, whoever he was, should be "roasted." If, on the other hand, the decision was correct, then Neverstill does not have these defects and his owner has been unfairly treated. No man is going to breed to a short-backed, short-loined, high-backed greyhound, because greyhounds proper are not built that way. It is pretty generally conceded that the late Mr. Walsh ("Stonehenge") was either the best or very nearly the best authority we have ever had on the greyhound. If there was one breed of dogs he knew more about than all others, it was greyhounds. He owned greyhounds, he trained them himself, he coursed them, he was essentially a greyhound man. His greyhound standard stands out boldly from the rest as a masterpiece in its line, and it is not difficult to tell by that standard which breed "Stonehenge" loved most. J. H. Walsh was not a Rousseau writing about Russian wolfhounds. He was a good and practical judge of greyhounds writing of a breed he most thoroughly understood, and, what is more, he was a genuine dog friend. In arriving at a conclusion as to the formation of back most desirable, I think you will agree with me that we need not go behind or before the "Stonehenge" standard.

Here it is: "It must be self-evident that every additional inch in length of back increases the stride by that amount exactly, and therefore if prolonged indefinitely it would be advantageous, till counterbalanced by the disadvantages inseparably connected with this form, in consequence of the diminished strength. The length of back should therefore be looked for between the neck and the last rib, rather than between the last rib and the hip bone; and this is a very important consideration too often neglected."

There is another matter pertaining to greyhounds that I would direct your attention to. You have recently stated that certain dog owners in Canada had attacked Miss Whitney and the writer in some of the daily papers. Are you aware that two of my friends, Mr. H. W. Lacy and Mr. J. Otis Fellows, are responsible for nearly all the abuse that has been hurled at me! Mr. Fellows awarded first prize to a prick-eared greyhound at Kingston and Mr. Lacy gave the same dog a prize at Ottawa. You will remember that when this dog was brought before me I fired him out of the ring in quick time, and the owner, who is a beginner and for anything I know to the contrary a well-meaning one, has been shedding tears and spilling ink ever since. Because my friends just named missed the prick ears, or had orders not to withhold prizes, and because they did award prizes to an animal, by name Elcho, they have been written up in the Canada papers as wonderful judges, whereas I, who refused to confer honors upon a little prick-eared brindle dog, am very much no good and a perfect ignoramus on dogs. It's the old racket over again. A young man, a dog, a fever, papers packed with trashy articles, a noise and a funeral. "How often, O, how often," have we been through all this, and still they come.

Mr. Lacy and Mr. Fellows may have been justified in awarding prizes to a prick-eared dog, they may have been instructed to award the prizes. "Small show," "first attempt," "don't wish to displease these men," "committee decided that prizes must be given in all classes," etc., etc. But I wish to ask these gentlemen in the interest of dogs and for the benefit of uninitiated beginners, would they award high honors to prick-eared greyhounds if such dogs were shown in fairly good company? Look at the harm that may be done by such judgments unless they are qualified. The owner of this dog Elcho has already stated that he had been requested to place him in the public stud. No sane person, that has had any experience with dogs, is going to

breed to prick-eared greyhounds that have neither a fashionable pedigree nor a first-class record in the field behind the defect. But what is to become of a novice, with no friend at hand to advise him? He will breed to anything that has won a prize, anything with four legs, type is destroyed and improvement becomes an utter impossibility. So I beg of you straighten out these matters, clear the mist from the beginner's eyes, give him a chance and thus avert the possibility of unnecessary controversies in the near future.

It seems a bit hard to criticise the work of one who, while still suffering from la grippe, had the pluck to tackle a report of probably 700 dogs and get to Cleveland in time for the opening there. But neither FOREST AND STREAM nor Mr. Lacy can afford to have that report hurled at them in days to come. So I think the better plan is to correct it and do it now.

CHAS. H. MASON.

NEW YORK, May 12.

[We are not as a rule given to pleading the baby act, but in this instance we must say that our intention was to write short loin instead of back, and our copy would no doubt so have it could it at this late day be found; but unfortunately it cannot. Not having the opportunity to read the proof before insertion in FOREST AND STREAM, the mistake had to go uncorrected, and until our attention was drawn to it by the above letter we did not know it had been made. To show how easily such a mistake may be made, even Mr. Mason himself in quoting from "Stonehenge" wrote in the above letter, "The length of back should, therefore, be looked for between the last rib and the hip bone." (The italics are ours.) This he corrected, when sent the proof, to the way it stands now. So, after all, we may be excused when writing our report while traveling from one show to another in letting an error slip in now and then. To prove that we did not mean that a greyhound should have a short back, it was only the week before, while judging at Boston, that we put back an otherwise good hound, Imperator, for that very fault. Now, then, as to rib development. To our mind rib development does not mean great spring of ribs, which a greyhound should not have unless he has the necessary chest development to support it. Rib development in our mind is just "that length of back between the neck and the last rib" that "Stonehenge" speaks of. And the further back that rib is placed, to a certain extent, so much the better development. The term "well-ribbed up" covers our meaning. We still maintain that the short and strong loin, comparatively speaking, is what is required, and no less an authority than Mr. Lowe holds the same opinion. A dog long between the last rib and hip cannot turn and gather his hind parts under as one of the short-loined dogs can, still we are sapiently told at times that certain dogs do not stand over enough ground, too short in loin, etc., when the length of ground to be covered is obtained by the bend of the stifle or, in other words, the more "let down" a dog is, the more ground can be stand over. As to awarding Elcho the second prize at Ottawa in a class of four dogs, we did that considering the occasional elevation of his ears a much less fault than the half-inch overhanging top jaw of the dog Launcelot, which the week before Mr. Mason gave third to in a strong class of thirteen dogs at Toronto, and these reasons were fully stated in our report of the Ottawa show at the time. We do not think that a man like Dr. Mills has had anything whatever to do with the letters in the Toronto papers, for we think he would be the first to abhor any underhanded way of showing his opinion.]

"THE SHEPHERD DOG."

Editor Forest and Stream.

The work with the above title, by Mr. W. A. Wickham, of Tipton, Iowa, is really a valuable contribution to our list of doggy publications. Mr. Wickham has expended a vast amount of research on the subject, as is shown by his many quotations, from almost every author who has written on the dog. I regret to see that in a few instances he has incorporated the work of living writers in his text without giving credit for it, but it strikes me that this is more the result of defective editorship than intentional plagiarism; as for instance, the use of Mr. Cleaver's precise on training sheep dogs, the subject being afterward much more elaborated by Mr. Wickham himself. A very pleasant feature in the book is, that while Mr. Wickham is a breeder and seller of coonies himself, the fact is nowhere intruded on the reader in the text, and but for a modest advertisement on a cover page, his being in the business would not be known to the reader. This is a most agreeable contrast to the books of too many breeders, who seem to have written, not to raise the breed as a whole in public estimation, but to boost their own stock, and with the result that the intelligent reader sets the whole thing down as on a plane with a patent medicine advertisement.

Mr. Wickham is entirely wrong in one statement—that the bobtail sheep dog is not suitable for a companion, the fact being that they are the most charming companions of any dogs I know. Too many affectionate dogs are too overwhelming in their demonstrations, jumping and pawing over one, a fault only eradicated by training while young, and the bobtail, while as affectionate as any dog, refrains from this and contents itself with more moderate indulgences of its affection. Many will jump up beside their master without jumping on him, and if unnoticed for what they deem too long a time, will attract attention by a pat of the paw or a thrust of the nose into one's hand. Mr. Wickham's suggestions as to protection of flocks, are an admirable feature in his book, giving it an air of practical value outside the mere doggy departments. Of course, a "tenderfoot" like myself has no opinion as to the correctness of the ideas of Mr. Wickham on these points, but the incorporation of them in the work is novel, and worthy of much commendation.

Mr. Wickham alludes to the Russian wolfhound as a protector of flocks from wolves, and in this connection there is one characteristic of the Russian dogs, mentioned only by Lieut. Tarnowski in an English contemporary, that is of enormous value and completely overlooked. It appears that these dogs have the trick of concentrating all their strength in one desperate fling at the wolf when they come within striking distance, launching themselves at him like a thunderbolt. By this trick the wolf is knocked over and deprived of a great share of his resisting or fighting ability, and thereby the dog is able to overpower it with much less chance of injury to himself. That Lieut. Tarnowski is correct in attributing this characteristic to the dogs, is proved by their mode of attacking other dogs, showing this trick.

Mr. Wickham has overlooked one piece of most exasperating stupidity, not uncommon in purchasers of a sheepdog, in expecting that the dog will off hand obey verbal orders given him, without first ascertaining exactly what form of words the dog has been taught that conveyed that particular order, and the usual result of this giving the dog orders without first determining what words to use, is that he sticks his tail between his legs and clears out for home, doubtless thinking "what does that fool mean?" Let the new owner either get a complete manual of the words the dog has learned as commands, or go to work slowly and let the dog understand by signs what is wanted, and he will soon learn to associate new words with the desired commands. It is really astonishing how blindly owners of dogs go to work with them, apparently forgetting—as "Jansen" said of the renowned "Sharleyow"—"de tog is but a tog."

W. WADE.

HULTON, Pa., May 23.

CENTRAL FIELD TRIALS CLUB DERBY ENTRIES.

THE entries for this club's third annual Derby, which closed May 15, number 87, divided as follows: English setters 53, pointers 26, Irish setters 1 and Gordon setters 2, all whelped in 1890. The entries last year numbered 116.

ENGLISH SETTERS.

CHAS. KEAN (J. M. Avenant and Bayard Thayer's), Roderigo—Miss Lou Ellen.
MARCO (J. M. Avenant and Bayard Thayer's), Jean Val Jean—Lucy.
ALPHONSE (J. M. Avenant and Bayard Thayer's), Jean Val Jean—Haydee.
CAMILLE (J. M. Avenant and Bayard Thayer's), Jean Val Jean—Haydee.
ROD'S RODNEY (S. F. B. Biddle's), Roderigo—Fannie Gladstone.
NAT'S BOY (F. S. Brown and J. B. Ellison's), Nat Goodwin—Hazel.
NAT'S GIRL (F. S. Brown and J. B. Ellison's), Nat Goodwin—Hazel.
LATONIA (W. F. Burdell and J. D. Poston's), Paul Gladstone—Latonia.
SAPPHO (Royal Phelps Carroll and J. M. Avenant's), Roderigo—Ollie S.
IZA (Royal Phelps Carroll and J. M. Avenant's), Roderigo—Ollie S.
ROBESPIERRE (Royal Phelps Carroll and J. M. Avenant's), Roderigo—Ollie S.

DRUID'S LILLY (Geo. A. Day's), Ruby's Druid—Cricketer.
JENNIE F. (E. O. Damon's), Count Noble—Gladstone's Girl.
NED NOBLE (J. K. Garnett's), Rowdy Rod—Pearl Noble.
MONK OF THE ELMS (Paul H. Gotzian's), Monk of Furness—Countess Aurelia.
BONDHU'S NELLIE (T. H. and F. F. Minor Gibbs's), Gus Bondhu—Nellie.
ROWDY ROD, JR. (H. B. Hollins's), Rowdy Rod—Pearl Noble.
SANDBORN (J. H. and J. A. Hunter's), Ben Hill—Daisy Hunter.
ARLINE (J. Shelley Hudson's), Dad Wilson—Bohemian Girl.
MCDUFFY (L. D. Hargrave's), Roi D'Or—Nora.
WUN LUNG (H. T. Harris's), Capt. Bethel—Enid.
JENNY BRAILSFORD (Thomas Johnson's), Frank Simpson—Jenny Deans.
MANITOBA PET (Thos. Johnson's), Dick Bondhu—Manitoba Belle.
LORA (Pierre Lorillard, Jr.'s), Gladstone's Boy—Ruby D.
MISS RUBY (Pierre Lorillard, Jr.'s), Gladstone's Boy—Ruby D.
VIRAGO (Pierre Lorillard, Jr.'s), Rowdy—Liberty.
HILLBURN (Pierre Lorillard, Jr.'s), Ben Hill—Belle of Stanton.
PALSEY (Pierre Lorillard, Jr.'s), Paul Gladstone—Miss Elsie.

HOPE'S MARK (J. M. Lasseter's), Gath's Hope—Lady May.
HOPE'S GIPSEY (J. M. Lasseter's), Gath's Hope—Dimple.
PRIMA DONNA (E. J. Myers's), Rockingham—Donna.
LUCIA (Herbert Merriam's), Roderigo—Royal Myrtle.
WUN LUNG'S SISTER (S. J. McCartney's), Capt. Bethel—Enid.
MISS PRIM (Allen Meble's), Roderigo—Queen Ella Noble.
MCMURDO (W. B. Meares, Jr.'s), Roi D'Or—Mildred.
LADY DUDLEY (Harry Northwood's), Gladstone's Boy—Diamond M.
AMY ROBART (Harry Northwood's), Dad Wilson—Bohemian Girl.
DAD'S GIRL (Blue Ridge Kennels'), Dad Wilson—Bohemian Girl.
REEL (Blue Ridge Kennels'), Roderigo—Lufra.
LADY EVELINE (Blue Ridge Kennels'), Gath's Mark—Flame Gladstone.
ORIOLE (Blue Ridge Kennels'), Gath's Mark—Flame Gladstone.
BOB COOPER (Blue Ridge Kennels'), Roi D'Or—Miss Nellie Y.
LAUNDRESS (Blue Ridge Kennels'), Roi D'Or—Belle of Piedmont.
EFF JAY (F. J. O'Connell's), Dad Wilson—Dashing Flora.
RANDOLPH'S ROY (Randolph Kennels'), Ned—Betts's Belle.
BOOTH (B. Ridgway's), King Noble—Queen Vashti.
TENNYSOON (B. Ridgway's), King Noble—Queen Vashti.
NONA BENE (R. W. Shaw's), Roderigo—Lufra.
TOM'S MAUD (John C. Vail's), Tom Draw—Gypsy H.

POINTERS.

MISS ARKOS (Beresford Kennels'), Arkos—Loole.
DAUNTLESS (Beresford Kennels'), Arkos—Loole.
BOB (W. G. Brokaw's), Arkos—Loole.
BETTY (W. G. Brokaw's), Arkos—Loole.
LEAO (Capt. Davis Baker's), Dan—Kate.
OUTCAST (Charlottesville Field Trial Kennels'), King of Kent—Hops.
EXILE (Charlottesville Field Trial Kennels'), King of Kent—Hops.
KENTISH LASS (Charlottesville Field Trial Kennels'), King of Kent—Hops.
MAINSTAY (Charlottesville Field Trial Kennels'), Mainstay—Bar Maid.
TORY EARL (H. B. Duryea's), Duke of Hessen—Westminster Ina.
PROMOTION (John R. Daniels's), Lord Graphic—Bell.
BELLE OF THE BALL (T. H. and F. F. Minor Gibbs's), Sambo—Di.
BLACK WONDER (J. H. and John A. Hunter's), Ike—Bang Bang's Pride.
TORY DUKE (F. R. Hitchcock's), Duke of Hessen—Westminster Ina.
TORY VISCOUNT (F. R. Hitchcock's), Duke of Hessen—Westminster Ina.
TORY SQUIRE (F. R. Hitchcock's), Duke of Hessen—Westminster Ina.
MERRY MONARCH (R. M. Hutchins's), Spring—Zura.
ABESS OF KENT (E. Joy's), King of Kent—Lannie Bijou.
REX (A. F. Latta, Jr.'s), Rex—Fannie.
BANNERMAN II. (Dr. C. E. Michel's), Bannerman—Main Dell.
BAN DELL (Dr. C. E. Michel's), Bannerman—Main Dell.
PRINCE, JR. (Jas. A. Mahaffey's), Prince Black—Flirtation.
SHOT S. (W. B. Sheldon's), Springbok—Flush.
WESTMINSTER DICK (Westminster Kennel Club's), Naso of Kippen—Glauca.
LUCKY BOB WHITE (Chas. & G. Sander Whealen's), Luck of the Goat—Meteor's Trinket.
TRINKET'S DELL (Chas. & G. Sander Whealen's), champion Brackett—Robert's Trinket.

IRISH SETTERS.

DUCHESS (Jas. B. Blossom's), Dick Swiveller—Yuba.

GORDON SETTERS.

ARGO II. (Jas. B. Blossom's), Beaumont—Venus.
ROSEMONI (C. C. M. Hunt's), Beaumont—Madge.

THE ENGLISH POINTER CLUB FIELD TRIALS.

THE fourth annual trials of this club, and the last of the English spring trials, were run off near Wrexham, May 5 and 6. The Duke of Portland is president of the club. The first day's running was on the estate of Sir Watkin Williams Wynn, Bart. The judges were Dr. Salter and Mr. R. L. Purcell Llewellyn. *Stock-Keeper* says the entries for the Puppy Stakes were disappointing, only ten entries being on hand; the All-Aged Stake had seventeen. Mr. Brailsford, who had recovered sufficiently from his accident to be present, handled some of Mr. Heywood Lonsdale's dogs, and so did Angus Cameron. The first stake run off was the Pointer Puppy Stakes for Puppies of 1890. First prize, £35; second, £19; third, £11; fourth, £5; drawn in the following order:

Mr. Beck's Nancibel, Naso of Upton—Devonshire Judy, against Messrs. Bulled & Turner's Devonshire Magg, Devonshire Jack—Devonshire Fan.

Mr. Thorpe Hinck's Friar Raffle, Melton Solo—Ruby Friar, against Mr. Nicholson's Beau of Drayton, Beau of Kent—Moll Drayton.

Messrs. Bulled & Turner's Devonshire Baby, Molton Byssa—Devonshire Lady, against Rev. W. Shield's Major o' the Border, Perdix—King.

Mr. Beck's Busy Ben, Rapid Ben—Busy, against Mr. Lerche's Queen of the Isles, Naso of Upton—Devonshire Judy.

Mr. Thorpe Hinck's Darkie Friar, Melton Solo—Ruby Friar, against Mr. Nicholson's Bang of Ercall, Beau of Kent—Moll of Drayton.

Scout was not very good, and contrary to the experiences of the other trials, game was not at all plentiful, and that found was very wild; so that the sportsmen present had more walking than they bargained for. The result of the running proved that that consistent performer Busy Ben, owned by Mr. Beck, was awarded first prize, Mr. Nicholson's Beau of Drayton second, Mr. Beck's Nancibel third and Mr. Nicholson's Bang of Drayton fourth; the stake being run through by 3:30 P. M. Busy Ben ran a very good dog through all the three meetings, getting second at Aqualata, third at Stratford and here first. A few heats of the All-Aged Stakes were then run off, the following being the draw:

ALL-AGED STAKES.—First prize, £35; second, £20; third, £12; fourth, £5.

Mr. Brown's True Blue, Tory IV.—Melton Lady Bird, against Rev. W. Shield's Beau o' the Border, Saddleback—Melton Broom.

Mr. Heywood Lonsdale's Ightfield Deuce, Wynnstay—Dainty, against Rev. W. S. Richardson's Rex of Melton, Naso of Kippen—Melton Bingle.

Mr. Lloyd Price's Welsh Crab, Crab—Joy, against Mr. H. Brown's Prime Minister, Tory IV.—Lady Bird.

Mr. J. Stark's Mars IV., Sambo II.—Fan IV., against Mr. D. Moriarty's Glenbeigh, Grouse V.—Rita.

Mr. Lowe's Ben of Kippen, Rocket R.—Laura of Kippen, against Mr. Stark's Hanworth Juno, champion Joss—Bess II.

Mr. Bulled's Devonshire Lady, Melton Baron—Village Star, against Mr. Lloyd Price's Saul.

Mr. Lowe's Belle des Bordes, Young Bang—Polly against Mr. Heywood-Lonsdale's Crab, Plum—Myrtle.

Mr. Bulled's Devonshire Sall, Melton Baron—Village Star, against Mr. Heywood-Lonsdale's Prawn.

Mr. Heywood-Lonsdale's Beacon, Ightfield Dick—Polly Peacham, a bye.

As will be seen by the above Mr. Brailsford had three dogs in, Ightfield Deuce being well known to our field trial men. Glenbeigh, the pointer pup that scored so well in the previous trials, seemed altogether off here, as in his first heat he began by flushing a single and following it several yards; then pointed a brace of pheasants, rushed in and chased, losing of course all chances of coming out a winner in this stake. The next day, Wednesday, the meet was at Wynnstay Brickyard, and among those present was Mr. E. C. Buckle, of the Charlottesville Kennels, Virginia, and Capt. McMurdo's aide-de-camp. Game was not generally plentiful. After running several heats there was a fresh draw, and Ightfield Deuce ran against Mr. Lloyd Price's Welsh Crab. They were put down in rough pasture. Deuce went very merrily, but passed birds which she should have found. In the next Deuce false pointed, and Crab passed without backing; both ranged and quartered well and were taken up.

Another heat was:

"Mr. Brown's True Blue, worked by owner, and Mr. Heywood Lonsdale's Crab, by Brailsford, were put down at the top of a steep sloping grass field. True Blue flushed and both dropped to wing. Crab pointed and drew on to the hedge but made nothing out; both ranged fairly. Crab rather fond of the hedgerows. In the next field of similar character, both feathered about some rushes, and True Blue pointed but nothing came of it, and the next brace were called for."

"Mr. Heywood Lonsdale's Prawn, worked by Cameron, and Mr. Bulled's Devonshire Lady, by Turner, put down on grass. The former false pointed once or twice and the Lady backed, both ranging in good style. In the next, a rough poor field, Lady went stiff and lame, Prawn false pointed and Lady backed; then we moved on to a clover field, across which, as we reached it, an old hare went leisurely bobbing. Prawn false pointed, and again pointed and drew on without finding, but directly after nailed birds and Lady backed, and the trial was over."

"Mr. Bulled's Devonshire Sall, worked by Turner, and Mr. Heywood Lonsdale's Beacon, by Cameron, were put down in nice clover root. Both dropped to hare that got up before Beacon, who directly false pointed and Sall backed. Beacon made a bad flush, while feathering round them. The next field was unproductive, but in the next both got points, a hare getting up before Beacon, who remained steady. In a large field of spring corn Sall dropped to a hare that got up before her. Put down on rough fallow, both passed a hare. Put down on grass again nothing was done, and at a quarter to two P. M. a move was made to lunch, beating the field over in which it was laid, but without finding game."

"After luncheon Mr. Heywood-Lonsdale's Ightfield Deuce and Mr. Lowe's Ben of Kippen were put down on grass, former worked by Brailsford and latter by owner. Both ranged freely, but Ben flushed and did not drop, and was ordered up and same owner's Belle des Bordes was put down with Deuce. After a long tiresome tramp on a piece of bare pasture, Deuce pointed birds and Ben backed, and both pointed birds rising before Deuce, close to the hedge."

The awards were: Mr. Heywood-Lonsdale's Ightfield Deuce first, Mr. Lowe's Belle des Bordes and Ben of Kippen equal second and third, Mr. Heywood-Lonsdale's Prawn, fourth, and Mr. Bulled's Devonshire Lady reserve, the stake being finished at 3 P. M.

Then the heat to decide the \$50 special for the best in either stake, owned by a member of the club, was run off, and resulted, after a good deal of false pointing and flushing on both sides, in Mr. Beck's Busy Ben beating Mr. Lowe's Ben of Kippen. This brought the trials to a close with the usual vote of thanks to the judges and Sir Watkin William Wynn for the use of the estate.

BEAGLE TRAINING.

Editor Forest and Stream:

The much mooted question of beagle trials interests me very much. I have hunted with those game little dogs ever since I could carry a gun and I must say that the question of hunting beagles seems, by the correspondence that has come to my notice, to be in the hands of novices. In the first place, should beagles be under control? Some say yes. I want a dog to know one call, and that is in case you start a rabbit and want your dog; then he should come if he has not found a trail. If he has, then he should mind nothing but what he is doing. The beagle that could be called from a trail, I should put out of the way as soon as he came within range. So much for minding or being under control. My experience is, that a dog should hunt as he sees fit, and run at his own sweet will. If he is properly handled he will not go so far from his master that he will be out of call when wanted. If a beagle should run a rabbit to ground, he should stay with the game, or at the hole until the hunters come up. Should a beagle hunt like a pointer or setter? I should say no to this. The bird dog must hunt close or he would be worthless in thick cover. As I said before, the beagle should be as independent as a dog can be. He should range away for any distance that he could be heard from should he give tongue, and under no circumstances should he mind when on game, this I repeat, as I noticed that in the last field trials there was some talk, and I think judgment, on being under control. If you are going to hunt your dogs on field mice or greyhops then you might leave the beagles at home and take spaniels and terriers with you and you will have capital sport, but when it comes to foxes or hares, those dogs that mind would be useless, inasmuch as they are not built for long runs and they would be so much under control that they would get tired hunting and be looking for orders. I should like very much to have "Quester" come to Brockton in the season and get an insight into the ways of the pack of beagles I run; they are as good as there are, but they may not be up to the standard of those field trial judges who look for a dog to leave a hot trail at the beck or call of a hunter who does not know half as much about hunting as the dog he is trying to hunt. Hoping I have not tired you with my rather rambling letter I will close with this last remark. Do not expect a good beagle to know any thing but hunt when in the field.

BROCKTON, Mass., May 27.

WHITE WONDER.

Editor Forest and Stream:

The following articles appeared in FOREST AND STREAM Sept. 4, 1890, and Jan. 1, 1891, signed by "Namquoit":

Mr. Harris's bull-terrier formerly called White Wonder, that was protested against at the Boston show for being deaf, was deaf when born. He was bred by Mr. Pratt, of Oak Hill, Stoke-on-Trent. He is by White Sam out of White Rose. Mr. Pratt thought that the puppy was deaf when born and sold it to Mr. Hughes, a postman at Stoke, for £1. The postman soon discovered that the puppy was deaf but kept the matter as quiet as possible, but in spite of his precautions the dog finally became known throughout the section as the "postman's deaf dog." Mr. Hughes made up his mind to get even with Mr. Pratt and laid his plans very shrewdly. He wrote Mr. Heath, the former owner of Miss Gledynne, now called Attraction, Enterprise and other good ones, and got him to make a date to call and see the dog. He then goes to Mr. Pratt and tells him how wonderfully the puppy has improved and that Mr. Heath is taking of purchasing him. (Mr. Heath and Mr. Pratt were at that time trying to outdo each other.) Mr. Pratt not wishing to see his rival with the best dog in the country, and supposing the puppy must have outgrown his deafness, purchased him on the spot for £10. Of course he soon discovered that the dog was totally deaf and threatened suit, but as he had sold the dog as a hearing dog he was advised to let the matter rest. This much I know to be the facts. It is furthermore stated by those who ought to know that the White Wonder was soon after reported dead and the same dog was represented as another dog under another name. I have not questioned Mr. Harris in regard to the affair, but if he paid the price stated, £30, he was badly sold, whether he knew him to be deaf or not. If Mr. Hinks sold the dog as a hearing dog and he was anything about the deafness, he is a swindler of the first water. Hinks & Pratt are one firm. American readers must not get this Hinks mixed up with James Thorpe Hinks, the Clumber man, at Leicester, or E. C. Hinks. It is Fred Hinks that sold White Wonder.

We said then that the above was false in every particular, in proof of which we submitted the following letter from Mr. Hinks:

BIRMINGHAM, Oct. 9.—Mr. Harris—Dear Sir: Your favor of the 19th ultimo is at hand inclosing a cutting from the FOREST AND STREAM of Sept. 4; and in reply I can only say that it is absolutely false from the commencement to the finish, as Mr. Pratt never owned or had in his possession White Wonder, and that he never was out of this town until he was sent to you. Moreover, he is by no means the Great out of Kit and the Great is within a few miles from FOREST AND STREAM respecting White Wonder is an entire fabrication altogether. And it is a pity reporters cannot find something else to do than drag a gentleman like Mr. Pratt into a matter which he knows nothing about. Yours truly, FREDERICK HINKS.

We then added that White Wonder is by Gully the Great out of Kit, by Ducrow out of Eclipse; Gully the Great is by Gladstone out of Florrie. Breeder, Mr. Brooks. Whelped, June, 1888.

"Namquoit's" reply to the above on Jan. 1, 1891, is as follows:

Messrs. H. A. & W. L. Harris state in a letter to FOREST AND STREAM, published Dec. 4, that my statement regarding White Wonder, in issue of Sept. 4, is false in every particular, but in their so-called "proof" they simply make an assertion without giving the first atom of proof of their statement. I repeat that White Wonder, now owned by Messrs. Harris, is by White Sam out of Rose, and that every word of my statement is true and that I can substantiate every word of it. The gentleman who accused me of forgery in my investigation of the pedigree of Mr. Harris. Those who gave me my information are gentlemen of far better standing than Mr. Hinks, and saw the dog almost daily for months. I do not misunderstand Messrs. Harris. I consider them gentlemen, but I can prove that they were badly swindled if they bought White Wonder (Beryl) for a sound dog, and if they did not, still they have purchased a false pedigree. I never yet made a statement in print that I could not substantiate, and until they can prove what they say I would thank them not to call my statement false.—NAMQUOIT.

Referring now to "Namquoit's" (A. R. Crowell's) above letter of Jan. 1, 1891, concerning the pedigree of my bull-terrier White Wonder and the gentlemanly attacks on Mr. Frederick Hinks, I have to say the statements therein contained are false in every particular, in proof of which I inclose the official pedigree of White Wonder, with the attested statement of Mr. Fred Hinks concerning the same:

[COPY.]

THE KENNEL CLUB PEDIGREE CERTIFICATE.

White Wonder—Sire, Gully the Great (E.S.B. 25,465); dam, Kit, by Ducrow, by Marquis out of Florence; Gully the Great, by Gladstone (17,710) out of Florrie, by Baron (13,076) out of Maggie May (10,839); Gladstone, by Dutch (13,513) out of Maggie May (10,839). Stud Book No. (if any), nil. Born, about June, 1888. Color, white. Breeder, Mr. Brooks.

I certify that the above is a true copy of the pedigree of the bull-terrier dog White Wonder as recorded in the books at the Kennel Club. Signed W. W. Aspinall, Secretary (per L. L. D.) Kennel Club, 6 Cleveland Row, St. James, London, S.W. Date, Feb. 6, 1891. Fee, one shilling.

[COPY.]

I, Frederick Hinks, of Pershore street, Birmingham, in the county of Warwick, England, bull-terrier breeder, do solemnly and sincerely declare as follows: That the within pedigree of the bull-terrier dog White Wonder was obtained by me from the secretary of the Kennel Club, London, England, and is a correct pedigree of the bull-terrier dog White Wonder which I imported to America, to Mr. H. A. Harris, of North Wilmington, Mass., and since

registered in the American stud book as Beryl. And I make this solemn declaration conscientiously believing the same to be true and by virtue of the Statutory Declarations act 1835. Declared at the City of Birmingham, in the county of Warwick, this 20th day of February, 1891. Before me, JAMES HEMMANT, a commissioner to administer oaths in the Supreme Court of Judicature in England.

I trust this will settle the matter once for all, and I think an apology from "Namquoit" is due Mr. Hinks and myself both for his false statements in regard to White Wonder and his scurrilous and base attacks upon Mr. Frederick Hinks.

NORTH WILMINGTON, Mass., May 27.

P. S.—There is a postman's deaf dog still in England, and his pedigree is as follows: By White Sam out of Duchess III., weight over 50lbs.—H. A. H.

ADVISORY COMMITTEE MEETING.

A MEETING of the advisory committee was held Monday, May 11, 1891. Present—August Belmont, Thos. H. Terry, Dr. J. Frank Perry, James L. Anthony, John S. Wise.

The following matters were submitted by the secretary, having been referred to this committee by the executive committee of the American Kennel Club, at its meeting held Feb. 26 1891:

American Kennel Club }
vs. } Re, specialty Stud Book.
National Greyhound Club.

Ordered, That the matter be referred to a committee, consisting of President Belmont, with power to act with the National Greyhound Club, the result arrived at by said committee to be final.

Henry H. Carr }
vs. } Re, unsatisfied claim for stud service.
Jean Grosvenor.

Ordered, That in this case the charge of fraud is not sustained. The case dismissed.

William Purdy, Jr., }
vs. } Re, unsatisfied claim for the
purchase of a dog.
W. L. Washington.

Ordered, That Mr. Washington is liable under his contract for the sum of £5, for the purchase price, and £1 additional for carriage to Philadelphia, Pa. From said amount is to be deducted the sum of £5 paid by the said Washington for express charges, the balance of £1 to be paid by the said Washington in liquidation of the claim. This amount paid, W. L. Washington (in the opinion of the committee) would have recourse against said Purdy for fraud or misrepresentation in the sale of this dog.

W. W. Bradley }
vs. } Re, unfair dealing in
the sale of a dog.
Associated Fanciers
of Philadelphia, Pa.

Ordered, That the Associated Fanciers, advertising, "City office at No. 140 South Eighth street, Philadelphia, Pa., and kennels and poultry farm at Berlin, N. J., and reputed to be under the charge of one Howard I. Ireland as manager," be and is hereby disqualified.

The following new business was submitted and acted upon:

Thomas J. Farley, }
vs. } Re, appeal for re-
instatement.

Ordered, That the application of Farley be received, and that the disqualification imposed upon him May 8, 1888, be and is hereby removed.

E. H. Moore }
vs. } Re, demand for solid gold medal.
American Mastiff Club.

Ordered, That the American Mastiff Club owes E. H. Moore a gold medal, and the one sent is not a discharge of its promise; that a gold medal of standard purity, worth not less than \$25 to \$50 is what was reasonably due under its public undertaking in its printed circular, section III., taken in connection with rule XXX. of the American Kennel Club.

Ordered further, That the American Mastiff Club have thirty days in which to discharge its obligation to said Moore, as above defined.

Hudspeth & Collier, }
Attorneys for } Re, request for copies of proceed-
C. J. Peshall. } ings of Advisory Committee
meeting July 2, '90, and Execu-
tive Committee meeting Sept.
25, '90.

Ordered, That the request of Messrs. Hudspeth & Collier be complied with, and that the secretary is hereby directed to supply said attorneys for Peshall with copies of said proceedings. (Signed) A. P. VREDENBURGH, Sec'y A. K. C. —Kennel Gazette

OUR HUMBLE ASSOCIATES.

Editor Forest and Stream:

I inclose an extract from a striking sermon by the Rev. Dr. George Leon Walker, of this city. How many sportsmen have corrected (?) their dogs when they thought the canine had committed some blunder in the field—when he really had not? Dr. Walker is quite right in saying that a dog possesses reason and self-consciousness. The Doctor's reference in his sermon to his own little dog is here given:

"Forced to admit the existence in them of memory, affection, some degree of reason and will, they for the most part, so far as I have observed, try to draw a line of effectual separation between animals and men at the point of self-consciousness; affirming that a dog or a horse, however conscious he may be of things external to himself, is not conscious of himself as a separate entity whose own existence or condition becomes a matter of distinct realization. Against the validity of this attempted discrimination I think any one who has had the fortune to be at all intimately associated with intelligent specimens of some of the higher orders of animal life has seen manifold reason to protest. Take one example from the biography of a little friend of mine, who was for some eleven years a member of my household. This little dog knew just as well as I did when he had broken some household rule of behavior, and on such occasions he received the small chastisement allotted for disobedience with perfect recognition of its desert and with eager readiness to be reconciled. But on one occasion when he was thus lightly disciplined for a supposed offense, his behavior arrested my notice from its peculiarity and awoke the instant inquiry in my mind whether he had, perhaps, not done the thing supposed. He showed none of his customary desire to be restored to favor. He went sadly to his cushion in the corner and refused to respond to my caress. No physical hurt could explain his behavior. He could scarcely be said to have been physically hurt at all. I inquired into the matter. He had not done the thing for which the trifling discipline had been inflicted. He had been treated unjustly, and he knew it. And he made me know it also. I apologized to him, and he knew that I apologized, just as well as any man could know; but it was forty-eight hours before he would condescend to forgive the injustice. Not self-conscious! He was as self-conscious as I was. And he had the advantage of a self-consciousness of being in the right when I was in the wrong."

There is much in the above quotation to commend itself to all dog lovers.

A. C. COLLINS.

HARTFORD, Conn., May 27.

GORDON SETTER CLUB MEETING.

At a meeting of the executive committee of the Gordon Setter Club of America, held May 28, 1891, at 159 West Thirty-fourth street, N. Y. city, the following business was transacted:

Minutes of meeting of the executive committee of March 27 were read and approved.

The committee on field trials reported progress, and stated their expectation of soon being able to make report of definite arrangements.

The committee on constitution and by-laws submitted their revision of the constitution, to be voted upon at the next general meeting of the club.

Dr. H. C. Glover stated his inability, from press of professional engagements, to attend properly to his duties as president of the club, and tendered his resignation of the presidency, which was accepted with regret. He was again elected a member of the executive committee.

Resolved, That a person becoming a member of this club within six months of their annual meeting shall be credited for dues for the following year.

Resolved, That the executive committee hereby empowers the president, vice-president and secretary-treasurer to elect members duly presented, without calling a meeting for that purpose.

Resolved, That the field trial committee is hereby given full power to arrange for a Gordon setter field trials this autumn.

Resolved, That, should there be a Gordon setter field trial this fall, the Gordon Setter Club will give fifty dollars to the winner of first, provided there are ten entries or seven starters; this prize to be known as the Gordon Setter Club prize.

Resolved, That inasmuch as the last called general meeting of the club did not take place on the 4th inst. owing to the unavoidable absence of the president, Dr. Glover, and in order to do justice to Mr. Malcolm, the president be requested to call a special meeting of the club to vote upon the action of the committee in this case; also upon the revision of the constitution and by-laws; and that Mr. Malcolm be duly notified to appear at this meeting in his own defense. Said meeting to be held at the office of Mr. Wm. Tallman, 109 West Thirty-fourth street, N. Y. city, on July 7, 1891, at 8 P. M.

Dr. E. C. Dent was elected a member of the club. Dr. John H. Meyer was unanimously elected president of the club to fill the unexpired term of Dr. Glover.

DOG CHAT.

ACCORDING to the resolutions adopted at the meeting of the executive committee of the A. K. C., May 21, the president has appointed the following gentlemen as a committee to consult with the proper officials in New York and Brooklyn for the purpose of improving the dog license law, viz.: Messrs. J. Van Schaick, J. T. Richards, H. F. Schellhaus. The following committee is appointed to report upon the best method by which the field trials and coursing meetings could be brought under the jurisdiction of the American Kennel Club: Messrs. W. H. Child (chairman), G. W. LaRue, L. C. Whiton, T. H. Terry and Major J. M. Taylor. Dr. H. T. Foote (chairman), Dr. H. C. Glover and Mr. Jas. Watson, a committee of three, is appointed under resolution of the same meeting, to collect and report upon evidence as to the existence of the breed of dogs as described in the standard of the American Bull-Terrier Club.

Re. American bull-terriers alias round-heads, alias Boston terriers. When doctors differ, who shall decide? James Watson.

Mr. A. E. Pitts, of the Mohawk-Indianola Kennels, Columbus, Ohio, has imported the noted pug dog Bonsor, through Spratts Co. He was shipped May 16 on S. S. Europe, together with a Barzoi and a spaniel of whose destination we are not informed. Bonsor is now in New York, and will shortly be illustrated in *FOREST AND STREAM*. Mr. Pitts told us at Chicago that owing to the heavy demands on Kash's services the kennel sorely felt the need of a good second string, and Bonsor was chosen. Bonsor was whelped June 30, 1887, and bred by Mrs. Foster. He is by champion Diamond out of Maggie, and weighs 13lbs. His winnings amount to 50 prizes, among them being firsts at Glasgow and Crystal Palace 1890 and Derby, Liverpool and Crufts show this year. It will therefore be seen that in their second string this kennel has another pug that will no doubt be worthy of being termed a "crack."

As an instance corroborating the style of the Barzoi in "going for" its game, that Mr. Wade speaks of in his letter on Mr. Wickham's book, we mention the fact that one of Mr. Hacke's wolfhounds made just such a jump on a beagle at Pittsburgh, one chop being enough to make two gaping wounds several inches long in the poor little brute's neck. They are certainly very sudden in their movements, and on this account it behooves owners of these dogs when out in public to keep a good eye on them or trouble will ensue.

We learn from *Le Chien* that a dachshund named Lips Tallian, owned by Mr. Hermann Winkelmann, of Berlin, has been sold to an "amateur Americain" for \$250.

Mr. F. F. Capers, secretary of the South Carolina Kennel Association, writes us that their second annual dog show will be held at Columbia, S. C., Jan. 13 to 16, 1892.

Among the new advertisements this week we notice that the Swiss Mountain Kennels have St. Bernards for sale; C. T. Brownell several Gordon setters; N. S. Gates, dachshunds; Moorfield Kennels, English setter puppies; York Street Farm, collie bitches; H. F. Littlefield, St. Bernards and bull-terriers; James Wrinkle, pointers; and E. Beach, Llewellyn setters.

The New York and New England Kennel and Poultry Club held their spring meeting at Albany, May 23. A large number of members were present, together with the following officers: President, John T. DeGraff, Amsterdam; Vice-President, O. H. Barber, Albany; Recording Secretary, L. H. Myers, Bethlehem Center; Corresponding Secretary, Wm. H. House, Fort Plain; and Treasurer, W. E. Churchill, Mohawk. The Hon. R. P. Flower and T. Gordon Lillico were elected new members. Messrs. Houck, Rockenstyre and Becker were appointed a committee on hall and exhibition and with power to select a judge of dogs. Clarence W. Houck, not wishing to serve as delegate to the A. K. C., of which the club is now a member, Mr. W. E. Churchill was unanimously chosen in his stead. It was decided to have the show in the Lark street rink, where former shows of the Albany Kennel Club have been held. Mr. James Mortimer was chosen as judge of dogs and will take all breeds. The above named committee was also instructed to confer with the Rensselaer Kennel Club of Troy, with a view to their joining the society and lending their help toward making the exhibition a success. The dates chosen for the show were Jan. 5 to 8, 1892.

In forming a committee to act with the English committee in regard to a uniformity of spaniel standards, every important breed of spaniel should find representation on the list. Clumber spaniels as an ancient and honorable breed certainly deserve equal care with the others, and a representative of the breed should have a say in the proposed

action. Speaking of Clumbers, Mr. Mercer writes us that their new kennels will soon be in order. They are roomy, with plenty of yard room and a canal within one minute's walk in which to swim the dogs. With a good and trustworthy kennelman this kennel should now experience better luck than heretofore. It is vexing to sell the expected litters of four or five bitches and then to have the pups afterward die on their hands, as has been their experience.

Mr. James W. Whitney, owner of the Flour City Kennels, has, we are informed, sent an order to Mr. James Hutchings, of Exeter, Devonshire, England, for a mastiff bitch that is in whelp to Exeter Noble. He has also disposed of the cocker bitch Phyllis (Obo II.—Darkie) to Mr. G. C. Cross, of Rochester, N. Y.

One of England's oldest and most respected judges of sporting dogs, Mr. William Lort, writes to the *English Field* about dogs seizing wolves. He says: "In looking over a few back numbers of the *Field* I notice the expression of considerable diversity of opinion on the powers of different breeds of dogs to run up to and to successfully tackle wolves. I also observe that your correspondent 'Lucknow' invites sportsmen to give their experiences. I have not, like Mr. E. Lowe, had the opportunity of seeing the wolf pursued in Russia by hounds bred especially for the purpose; nor have I anywhere seen the wolf coursed by pure-bred greyhounds. But with other breeds and dogs of no breed I have witnessed and joined in many a blood-warming chase of the wolf in various parts of the American continent—Florida, the Northwest and the Far West—and although these chases frequently ended with a kill, at times I observed a most unaccountable want of energy in the canine pursuers. When not cheered on they would frequently cease to hunt, even when the quarry was in view and when no great pace seemed required. On reflection I thought, seeing how keen the pursuit was at first, that the dogs ran well until their curiosity was satisfied, and that then they either disliked their game or they looked upon the sport as too much like running after something of their own sort. I came to hold the latter view more strongly when I considered the energy, perseverance and determination of the same dogs when in pursuit of deer, the fox, raccoon and other animals. Doubtless many dogs, and powerful ones, too, as suggested by one of your correspondents, are afraid of wolves so much so that they will not run up to one and seize even a wounded one. Dear old Whitecloud, chief of the Iowa tribe, with whom I have had many a lively hunt in days long since, told me that a fear of the wolf was brought about from puppies being entered before their teeth were grown, and at several wolves instead of at single ones. I can readily believe that Whitecloud was right in what he said, for I have often seen dogs, even strong old ones, after having been cut and mauled by wolves, refuse for a long time to go near one—in fact to evince an unconquerable fear of them."

A meeting of the executive committee of the Irish Setter Club was held at the store of Wm. Tallman, 109 W. 34th street, New York, President Wm. H. Child in the chair. There were present Messrs. Child, Thompson, and Davis, and Messrs. Cheney and Perry by proxy. Messrs. Blossom, Conto and Clement were also present. Mr. Wenzel, owing to sickness, was absent. On motion of Mr. Thomson it was decided to hold the trials on, or as near as possible, the grounds of the Eastern or Central Clubs. Mr. Perry dissented, favoring Indiana or Ohio. On motion a committee of two, consisting of Messrs. Child and Blossom, were appointed to wait on Col. Odell to see if any arrangement could be made to run the Irish setter trials on their grounds. The secretary was instructed to communicate with Messrs. J. Otto Donner, Luke White and Dr. Glover with a view to securing their services as judges. The vote on the adoption of constitution having been favorable for its adoption, it was duly declared as adopted, and the secretary was authorized to have blank applications for membership printed for distribution. As the expense of holding a satisfactory field trials will be large, the members are requested to secure as many new members as practical, and also as many donations to the field trials fund as possible. No prizes will be offered at bench shows at present, all the energies of the club are to be devoted to encourage the running of Irish setters in the field trials. We therefore trust that all owners of Irish reds will devote their best energies to make the inaugural trials a success. Get your dogs into the hands of the trainers as early as possible, so that there may be no excuses made on account of lack of training. Take courage from the record made by Rev. O'Callaghan's Coleraine in the late English trials. It can be done, it is in the dogs, it only needs intelligence on the part of the trainer to restrain their "Irishism" and bring out their true hunting instincts.

Mr. C. A. Sumner has been elected secretary of the Southern California Kennel Club in place of Mr. H. T. Payne.

It is time the clubs which intend giving dog shows in Canada this fall made public their intentions. Mr. A. D. Stewart, who has been elected superintendent of the coming Hamilton show, writes a sensible letter to the Canadian papers, advocating a move on the part of London and Kingston, from which cities nothing has been heard. He also makes a good suggestion that the different shows embracing the circuit should print on their premium lists the entire programme of the circuit, showing, in their order, the places and dates at which the shows will be held, names of superintendents and dates of closing of entries. This idea might be extended to our spring circuit with advantage, for it forms a handy reference when making entries and calculating on challenge wins, etc. The Hamilton Club will adopt the idea in any case.

The recent members' show of the Toronto Kennel Club has been instrumental in arousing greater interest in the club and a large number of new members have since been elected. The entrance fee, after June 5, will be \$5. We hear that the spaniel classes at the coming Industrial Exhibition show will be well worth striving for, \$300 is set aside for them, and the Spaniel Club's classification No. 1, with numerous additions, will make friend Wilmerding's task no sinecure.

The boy whose leg was joined recently to that of a dog in one of the New York hospitals, complains that now his shin barks very easily.—*Ex.*

From Milwaukee we hear that another bench show is on the tapis. The Wisconsin Kennel Club has been organized with the following gentlemen as officers: G. G. Pabst, President; C. C. Hendee, Vice-President; F. Rice, Secretary; John Dickens, Treasurer. An effort will be made to hold a show this fall, and with such active members of the fancy as Messrs. Pabst, Sichel, Mariner, Oleott and others in the club, there should be little difficulty.

To show the vast number of dogs shown and men interested in dog matters generally in England, we mention the fact that although there had been nine dog shows in one week, the entry at one of them, Gloucester, footed up 1,250, among which were some of the best dogs in England. An interesting feature of the show was the appearance of a Duke and a Duchess in the show ring at the same time. The Duchess of Newcastle was also an exhibitor and the way she handled her dogs in the ring, brought out their good points to the best advantage. We can imagine the score-head

notices such an event would be heralded with by the big dailies of some of our cities, but it only proves how fashionable, during the last year or two, the showing of thoroughbred dogs has become.

The Brussels, Belgium, show was, we are told, very well managed and arranged. A number of English exhibitors availed themselves of the "outing" such a trip afforded. The judges were chiefly English and a very good class of dogs were present. The Queen of the Belgians and other persons of note visited the show, and on the Sunday rat killing, fox and badger baiting contests were held in connection with the exhibition.

During the Boston show we were asked by Mr. Edward Brooks, of Boston, Mass., to advise him where and how he could procure a pair of Dandie Dinmonts to beat "all creation." As Frank Dole was sailing that week we put this commission in his hands just as the vessel was leaving her dock, and that he has fulfilled his orders is shown by his securing King of the Heather and Heather Madge for this gentleman. These are two of the best and have been doing a lot of winning, so that we fancy Mr. Brooks will be satisfied now that those he showed at Boston and which he had purchased as the best that could be bought, were only ordinary. We hear the pair cost \$600.

Last week we mentioned that Frank Dole had purchased a crack bull-terrier. It now turns out to be no less a dog than Gully the Great, one of the best stud dogs living. Such dogs as Greenhill Maggie, White Wonder, White Queen, Shrew and Northfield Pride, and other good ones, own him as sire, and Streatham Monarch as grandsire. The bitch, The Shrew, also from Mr. Hicks's kennels, will also accompany Gully the Great to this country. The name of the purchaser is not given, but we should not be surprised to hear that this dog goes Pittsburgh way.

Dr. Benison, a noted bulldog breeder on the other side, has put his kennel of "bills" on the market. These include such dogs and bitches as Forceps, Irtunio, Found, Freda and Flippant. Perhaps this is a good opportunity for our fanciers of this breed to pick up something nice, with friend Dole on the other side to see that they are as good as they should be.

This is what the esteemed editor of the *English Stock-Keeper* says of the round-headed bull-terrier which seeks admission into the sacred precincts of the A. K. C.: "The latest kennel extravagance in America is an American Bull-Terrier Club, founded to foster and protect that hideous canine abortion, the round-headed bull-terrier. These hideous creatures are in high favor with our Gallic cousins, whose woful ignorance of all dogs except those used in the field, is sufficient excuse for any such vagary of taste, but we did not expect such an idle conceit in America. When a French dandy sallies out with his *bull-terrier* there is so much fancy in the man that one can afford to overlook its absence in the dog. These little animals are good enough to catch rats in a stable. It is the custom in France to put through their collar, short bits of straw, and the ends sticking out each side give the dog a most comical air. We have a water color painting of a *bull-terrier* and a *terrier-de-Skye*, by that talented animal artist, Olivier de Penne; if the breed is to become recognized as a sober fancy, we shall hang our picture where it will run the risk of being seen, though we candidly admit, clever as this work is, it less deserves hanging than the breed it depicts."

Friend Dole has also purchased from Mr. Henry Jones his dachshund bitch Janet, whose show career, though short, has been at the top of the tree. She will visit Perodactyle before coming over. The bull bitches Maggie and Priddy Cromer are also now counted in Mr. Dole's string. Mr. Comstock buying for his own kennels only, has been more modest, having only purchased one Irish terrier bitch, Crute, surely an appropriate name for a show dog. She came out well at Manchester, but did not follow up her success at the Kennel Club show. All the same, *Stock-Keeper* says: "She is in the first flight. Her head in its length and leanness is almost too perfect; she suits the latest orders of the club in having drop ears, and she is altogether far superior to anything of either sex yet seen. We think the fancy in this country sustains a loss in letting her go." These two "Yankees" are now in Paris.

The bull bitch Zohara, that won several firsts and seven specials at the Bulldog Club show, is only eight months old, but her owner, Mr. Haydon, has refused \$650 for her. She has most excellent head properties and is just as good in body, but her detractors say she is too small, as she does not weigh more than 26lbs. The chances are she will grow out of that, weight is not a *sine qua non* in a bulldog; were they still used for bull baiting, the small, active dog could bite and hold on just as hard, and harder, than his more clumsy and heavier brother.

The prospects of a great meeting of greyhounds at Great Bend this fall are very good, writes Mr. H. C. Lowe. Several noted Californian hounds are expected to make things interesting.

Mrs. Smythe, proprietor of the Swiss Mountain Kennels, who called upon us last week, in company with her friend Mrs. Meeham, has commissioned Mr. S. W. Smith to buy a young stud dog for her fast-increasing kennel.

A representative breeder of "Uncle Dick's" abomination, the long and low-dachshund, Mr. Carl Klocke, of Pittsburgh, Pa., made a pleasant call upon us on Tuesday. Mr. Klocke has some of the most typical dachshunds in this country in his kennels, his dogs always being well up in the list whenever he shows. He knows what he wants, though he cannot just breed it; getting them low enough is his stumbling block. During his visit he will look round all the dachshund kennels and go on a still-hunt for Rubenstein, whose services he wishes to secure. He presented us with excellent pictures of his Fritz K. and Bessie K.

Mr. H. F. Peck, who is so favorably known to the boys on the circuits in connection with the Logan Kennels of fox-terriers, late of Youngstown, O., has been in this city for the past week. He brought all the dogs of the kennel to Mr. Twyford's place at Bay Ridge. Our thanks are due him for an excellent picture of Pitcher in quite a striking attitude.

Mr. Mercer, of Ottawa, owns a very fast greyhound bitch called Betsy, and the owner of the Toronto champion racing greyhound, Why Not, has challenged him to a match, which owing to Betsy's interesting condition cannot come off before the fall. Neither of these greyhounds has been beaten in this game, and as both are trained to leave the slips at full speed and run in a straight course, like whippets, a good race is sure to result. They will most likely come together at the Toronto show races. Betsy has visited Justinian, who is brother in blood to Fullerton, and as he, in England, won the Tenant Farmers' Stakes at Alcatraz and divided the Mullinar Stakes, "Clumber" expects something pretty good.

A three-year-old setter dog, the pet and pride of a family living on Madison avenue, has a pair of curious eccentricities. Nothing can induce him, says the *N. Y. Times*, to trot further east than Second avenue, and to become friendly with a messenger boy in uniform. If he is out walking with his

stood all day at the Clarendon Hills traps to-day, and made havoc among the inanimate clay birds, with the following leaders: McNutt, Adams, Amsden, Johnson, Green, Stewart and Newcomb.

FIVE DAYS AT NEWARK.

I FORWARD you scores of the five-days tournament at Newark. The affair was a pronounced success in every way, not only so many targets thrown as might have been, but enough to satisfy the shooters. Wednesday was a rattling busy day. The live bird days, as a matter of course, were excellent, but it was no place for a poor or medium shot to get in.—J. P.

CHICAGO TRAP NOTES.

CHICAGO, Ill., May 30.—The programme of the seventeenth annual tournament of the Illinois State Sportsmen's Association is a very fascinating little book for a shooter. The money offered at this shoot is greater in amount than at any previous tournament, they tell me. The prizes in the great live-bird Board of Trade badge shoot foot up \$250, and for the L. C. Smith cup contest, targets, the total is \$757. This is quite aside from the entrance money, of course. The club team championship offers a total of \$427. These are the three great Illinois stand-by events. The open tournament will be full of attractions as ever, and the aliens in attendance should be many. New York State shoot may lead this one on targets, but as a mixed tournament it is almost certain that the Illinois event will be the chief one of the entire trap season this year. John Watson says he will have plenty of birds.

About that St. Louis wild bird tournament this week. Here in Chicago we had banked on that being the sensational event of the day, as no wild pigeons have been shot at trap for years. Yet Charlie Willard, just back yesterday from St. Louis, says that the shoot was rather lull, the entries not running over about 13. This seems singular, and is a great surprise, as we thought this destined to a shooting boom in attendance. About 5,000 wild birds were on hand. Charlie says they all started promptly, but were slow and easy killed, compared with the good domestic bird. He did not want to see wild birds shot at Illinois tournament, as there was talk of doing to some extent if the birds could be obtained from Mr. Haggerty.

Mr. J. E. Limberg ("Wick"), of Cincinnati, dawned on the Chicago horizon last Thursday and got acquainted with some of the boys around here. He reports Al Baudle as holding live bird shoots at his grounds two days in the week. All Chicago men will be glad to hear of Al's success, and Wick's also.

It seems there is a certain Cincinnati man, Mr. Wm. Rhines, pinner in the baseball club of that place, who is doing something of a pigeon shot. It will be remembered that one Adrian C. Anson, captain of the Chicago baseball team, is also something of a shooter. His meteoric career among the Chicago shooters last winter will be remembered by most trap readers. Now, it seems further that this Mr. Rhines wishes to shoot Cap'n Anse a pigeon match, though he has not been able to get enough to say anything to Anse about it. If Anse does hear about it, there is likely to be a "no game" card up in Philadelphia this week, for he certainly would have to quit long enough to go after Mr. Rhines. I am authorized by Captain Anson to state that there will soon appear in the columns of FOREST AND STREAM a complete and revised list of all the Chicago shooters who have refused to shoot him a race. This black list, if he may be believed, will fill a column in the paper and will contain the names of many of our most prominent sportsmen.

Mr. R. B. Organ and Mr. Alex. T. Loyd will soon get together on their 100-bird race. After this is over Mr. Organ proposes to challenge Mr. Loyd another race, on Grand Calumet Heights grounds, and has a scheme by which he intends to make all the birds drive. The grounds he right upon the lake beach, and the water for quite a distance out is shallow. Mr. Organ proposes to establish the score on a platform built on weighted barrels out in the lake, the traps being set on the beach, just at the edge of the water. At this club the birds do not fly out over the lake, but generally head straight for the barns, and this arrangement of Mr. Organ's ought to insure a very high per cent. of fast drivers. Considerable preparation has been going on for the past two weeks, by way of preparation for the State tournament.

E. Houghton.

WOLSTENCROFT'S TOURNAMENT.

PHILADELPHIA, May 28.—Wm. H. Wolstencroft's second tournament at Tacca Driving Park, May 27, 28, and 29, although the attendance of trap shots was excellent, the threatening weather of the first and last day kept many away, and made the event a losing one, financially. Mr. Wolstencroft, with his usual liberality, put up \$525 in guaranteed purses. Among the many out-of-town crack shots there were Milt Lindsley, of Hoboken, N. J.; E. D. Miller, of Springfield, N. J.; J. B. Cleaver, of Wyoming, Pa.; J. W. Evans and R. Stout, of the Magnolia, Del.; A. W. Dubray, of the Parker guns, from Meriden, Conn.; L. W. Budd, of Pamber-ton, N. J.; and W. Sanders and J. Minard, of Atlantic City, N. J. A. J. Rust, champion live pigeon shot of Pennsylvania; J. Sivard, J. Treadway, E. Barron, W. Timm, C. Lane, and many other prominent local sportsmen, took part in the shooting. Miss Ray Hunsinger, "Little Hawkeye," the celebrated female shot, came on the ground and was warmly welcomed. Large crowds were attracted to the exhibition of her skill with the shotgun. Mr. Wm. H. Wolstencroft referred all the shots to the satisfaction of every one present. Keystone Rapid Firing System rules governed the shooting, key-stone targets; all the purses divided 40, 30, 20 and 10 per cent.; all surplus added to purses. In nearly all instances, ties divided. One of the features of the tournament was the change in the rules that Enoch D. Miller, and Alfred J. Rust, the latter winning by a score of 10 straight, Miller breaking 7. Rust was enthusiastically applauded.

May 26.—The programme to-day consisted of nine regular and two extra events. Guaranteed purses amounting to \$175, to which were added all the surplus money, were divided between the winners of the events in the first, second, third, and fourth prizes on the basis of 40, 30, 20 and 10 per cent. American Association rules with some alterations and the Penrose system of rapid firing governed the tournament. One of the changes in the rules is that "the marksman may hold the gun in any position he desires." The following are the winners of the prizes in yesterday's events:

First event, 10 singles, 25 entries: First money, Miller, J. Wolstencroft; Evans, Buckshot; Gordon; second, Dubray, Hall, Minard; Sivard, Landis; Thurman; third, S. Richards, Rust, Johnson; fourth, Stout, Barron, Lindsley.

Second event, 30 singles, \$50 guaranteed: First money, Hall, Rust, Sivard, Miller, Minard; second, Buckshot, Gordon; third, Dubray, Thurman, Cleaver; fourth, Stout, Landis, Lindsley.

Third event, 15 singles, \$25 guaranteed: First money, Miller, Hall; second, Rust, Ware, Gordon; third, Buckshot, fourth, Thurman, Sivard, Landis.

Fourth event, 15 singles—First money, Rust, Thurman, Landis; second, Miller, Minard, Hall; third, Du Bray, Buckshot, Evans; fourth, Barron, Ware, Gordon.

Fifth event, 25 singles, \$50 guaranteed—First money, Miller; second, Rust, Lindsley; third, Buckshot, Hall, Evans, Landis; fourth, H. French.

Extra event, 10 singles—First money, Rust, Miller; second, Buckshot, Barron; third, Hall, Sivard, Lindsley, H. French; fourth, Cleaver and Evans.

Sixth event, 10 singles—First money, Rust, Du Bray, Evans; second, Hall, Hack, Miller, Landis; third, Richards, Lindsley, J. Wolstencroft, Thurman and Ware; fourth, Terry, Sivard, H. French.

Seventh event, 15 singles, \$25 guarantee—First, Miller; second, Lindsley, Hall, Landis; third, Rust, Buckshot; fourth, Ware, Thurman, Terry, Barron.

Eighth event, 10 singles—First, Rust, Thurman, Landis, French; second, Buckshot, Lindsley, Miller, Barron, Sivard, Hall, Gordon; third, Hack; fourth, Wolstencroft, Du Bray, Barron.

Ninth event, 15 singles—First, Landis; second, Buckshot, Mills, Thurman; third, J. Wolstencroft, Hall and Barron.

May 27.—Sixteen events were shot off, including those scheduled for the day, in which \$125 was given away in guaranteed purses.

First event, 10 singles: First money, Lindsley; second, Buckshot; third, J. Thurman, Ritter and Rust; fourth, Hall, Jacobs, Jones, Ruple and French, 6.

Second event, 15 singles, \$25 guarantee: First money, Miller 14; second, Evans and Jacobs 13; third, W. Wolstencroft, Thurman and Buckshot 12; fourth, Jones, French, Lindsley and J. Wolstencroft 11.

Third event, 15 singles, \$25 guarantee: First money, Wm. H. Wolstencroft 14; second, Buckshot and Miller 13; third, Rust 12; fourth, J. Wolstencroft 11.

Fourth event, 15 singles: First money, Hall and Thurman 14; second, Lindsley 13; third, Rust, Jones, Evans, Buckshot and J. Wolstencroft 12; fourth, French 10.

Fifth event, 15 singles, \$25 guarantee: First money, S. V. Merchant and W. Wolstencroft 14; second, Hall 13; third, Evans, Miller and Lindsley 12; fourth, Jones, Jacobs, Buckshot and Rust 11.

Sixth event, 10 singles: First money, Lindsley, Rust and Miller 9; second, French, Jones and Jacobs 8; third, Smith, Evans and J. Wolstencroft 7; fourth, Hall, Ruple and Buckshot 6.

May 28.—The tournament was concluded to-day.

First event, 10 singles: First money, Miller 10; second, Landis, 9; third, Felles, Buckshot, Henry and Rothacker, 8; fourth, Rust, Thurman and Gordon, 7.

Second event, 15 singles: First money, Rust and Landis 13; second, Miller and Rothacker 12; third, Gordon and Felles 11; fourth, J. Wolstencroft, Henry and Buckshot, 8.

Third event, 10 singles: First money, Miller 10; second, Landis, 9; third, Buckshot and Rothacker, 8; fourth, Rust and Felles, 7.

Fourth event, 10 singles: First money, Landis 10; second, Miller, Wolstencroft and Felles, 9; third, Blackbird, Thurman and Rothacker, 8; fourth, Henry and Buckshot, 6.

Fifth event, 15 singles: First money, Krueger, 15; second, Rust, Rothacker and Miller, 12; third, Felles, 11; fourth, Buckshot and Thurman, 10.

Sixth event, 10 singles: First money, Miller, 10; second, J. Wolstencroft, 9; third, Buckshot, Rust and Blackbird, 8; fourth, Landis and Thurman, 7.

Seventh event, 15 singles: First money, Felles, 14; second, Miller, Rust and J. Wolstencroft, 13; third, Landis and Blackbird, 12; fourth, Buckshot, 9.

Eighth event, 10 singles: First money, Miller and Landis, 10; second, Thurman and Blackbird, 9; third, Rust, 8; fourth, Buckshot, 7.

Ninth event, 15 singles, \$25 guaranteed: First money, Miller, 15; second, Krueger, 14; third, J. Wolstencroft, 13; fourth, Rust, 12.

Tenth event, 15 singles: First money, Miller, 15; second, W. Wolstencroft, 14; third, Blackbird, 13; fourth, Henry and J. Wolstencroft, 12.

Eleventh event, 15 singles: First money, Krueger, 15; second, Miller and Buckshot, 14; third, Rust and Landis, 12; fourth, Felles, 10.

Twelfth event, 15 singles: First money, Krueger, 15; second, Miller, Rust and Rothacker, 12; third, Felles, 11; fourth, Thurman and Buckshot, 10.

KANSAS CITY, Kansas, May 23.—An interesting and exciting contest took place at Metropolis Shooting Park, in this city, yesterday afternoon, between teams of ten men each selected from the Metropolis Gun Club, of this place, and the South Side Gun Club, of Kansas City, Mo., resulting in a victory for the former by seven birds, as shown by the scores hereto appended. The occasion for this contest was a challenge issued by the South Side Gun Club to the Metropolis Gun Club for a series of three shoots, the first to be held on the Metropolis grounds in Kansas City, Kansas, the second on the grounds of the South Side club in Kansas City, Mo., and the third on the grounds of the South Side Gun Club, the conditions being 25 single burocks to each man, 18 yds. rise, 3 traps, American Association rules. The score in detail is as follows:

Metropolis Gun Club, Kansas City, Kansas.

P H Harris.....	52429-19
Geo McClellan.....	33114-12
C R Holden.....	23155-19
A W Walls.....	33124-15

The closing event was the ammunition race to divide 1,000 shells. Samson was first; Dean and Johnson tied for second, and then the tie was shot off before Dean secured second place; Knowles and Harvey div. third, and fourth was taken by Hill.

SPRING HILL GUN CLUB.—The regular holiday matches were shot on the grounds of the club Decoration Day. Shooting at targets was cut short by the anxiety of the boys to get at the live birds provided. The regular match for gold and silver medal was shot at 10 kingbirds, 18 yds. rise; gold medal won by Simpson with a score of 24. The regular match for silver medal was won by S. There were five ties for the latter, and the shoot-off was very hot. Hathaway and Dr. Allen remained in after breaking 8 each, and there being no prospect of either dropping out, they agreed to divide the sweep and toss up for the medal. Hathaway chose "heads" and got the trophy. After lunch the backstops were taken down and grounds prepared for pigeons. We had as guests Dr. Hudson, president of the Emerald Gun Club; John Peck, T. C. Peck and G. H. Peck, of the Haverstraw Gun Club. About 250 birds were provided, and while some were poor, the balance were fair and a few were grand, and carried away shot from both barrels. The scores follow:

Sweeps at 5 birds, 28 yds. rise, \$3 entrance, 13 entries.	
1st Event.	2d Event.
Hathaway.....	11110-5
Simpson.....	11111-5
Allen.....	11111-5
Moeller.....	00100-1
Pickhardt.....	00010-1
G Peck.....	11011-4
Moeller.....	11111-5
J Peck.....	00110-2
Duryee.....	11110-4
Ten Eyck.....	00001-1
G H Peck.....	01000-1
Blauvelt.....	01111-4
Bray.....	00110-2
Dr Hudson.....	10101-3
Jones.....	11010-3
Watson.....	00111-3
Pearson.....	01100-2

We have taken quite a liking to the kingbirds, a few of which we had to-day, and may use them altogether.—AD VANCE.

BROOKLYN, N. Y., May 27.—Nineteen members of the Glenmore Rod and Gun Club put in an appearance at Dexter Park to-day. G. Frohman won the club medal with a straight score of 7. The regular shoot of the Atlantic Rod and Gun Club at West End, Coney Island, to-day, had a usual attendance. The Engeman badge was won by Charles Morris with a straight score of 14. He tied Dick Monsees with 7 straight and beat him by one bird in the shoot-off. O. Mohrman won the second prize after killing 6 in the regular shoot with K. F. Sutherland, T. Buckley and E. Ward. President R. Dwyer won the third prize with 11 straight. The fourth prize was divided by J. B. Dwyer and J. B. Voorhes. At a special meeting of the Coney Island Rod and Gun Club preparations were made for the next Inter-State League shoot, which will take place at Woodlawn Park, L. I., on June 11, beginning at 11 A. M. There are five clubs, and the four visiting ones are the Newark Gun Club, the Central Gun Club of Long Island, the Fountain Gun Club and the Atlantic Rod and Gun Club.

WINDSOR, May 28. In the shooting tournament of the Windsor Keystone Club yesterday the winners in the first event were Crowell, Glover and Spross; second event, Spross, Wait, North, Youngblood and Parker; fourth event, Spross, Youngblood, Glover, Wait, Scane, Oulien, Smith and Wharf; fifth event, Spross and Spanogle; sixth event, Youngblood, Scane and Seitch; seventh event, Scane and Cooper; eighth event, Scane, Skinner, Cole and Spross; ninth event, Crowell.

CLEVELAND, O., May 28.—At the regular weekly practice shoot of the Blue Rock Shooting Club to-day Arnold broke 24 out of possible 25, and again wins the badge. The conditions were 25 singles, A. S. A. rules. Following is the score: O. Arnold 24, E. Barton 18, Harrison 12, Zapt 8, W. C. Hinde 10.

NEWARK, N. J., May 30.—The annual spring tournament of the Maplewood Gun Club was held to-day and a large delegation of Newarkers were on hand. The shooting was all at artificial targets, A. S. A. rules. In the first 10-bird event Jackson and Smith broke straight, C. Dean 9, Hallett, L. Dean, Reeves, Parry, Craft and Ayers 8 each. Fifteen birds—Parry 15, Hallett, C. Dean and Phillips 14, Ayers, Smith and L. Dean 13. Ten birds—L. Dean and Phillips 10, Parry, Smith and C. Dean 9. Twenty birds—Smith and Phillips 13, L. Dean, Hallett and Manitz 13, Ayers and Parry 17. Fifteen birds—L. Dean 15, Hallett, Ayers and Smith 14, S. Tillou, Manitz, Phillips and Goldner 13. Ten birds—DeWolff, Williams, S. Tillou, Smith, Phillips and Reeves 10, Hallett 9. Twenty-five birds—Siggins, Van Dyke and Hallett 24, Smith 23, L. Dean, Ayers, Phillips and Tillou 22. Fifteen birds—L. Dean and Van Dyke 15, Williams and C. Dean 14, Reeves, Ayers, Smith and Tillou 13, Phillips, Jackson and Parry 12. Ten birds—Sickley, Smith, Phillips and Manitz 10, Hallett, Goldner and C. Dean 9, Van Dyke, L. Dean, Williams, Siggins and Eager 8. Event No. 16, at 15 birds—Hallett 15, L. Dean, Sickley and Van Dyke 14, Williams 13, Phillips and Reeves 12, Jackson, C. Dean, Manitz, Eager, Goldner, Craft, Tillou and Siggins 11. Six more ten-bird events concluded the day's shoot.

ST. LOUIS, Mo., May 30.—A Missouri State Amateur Shooting Association was formed this week at Lexington. The first tournament will be held on the 12th, 13th and 14th of August, with live birds. Professional shots will be barred. The wild pigeon tournament held at Compton Avenue Park this week was not much of a success in point of attendance. A number of professional shooters were in attendance, but the matches were mostly between individuals. This afternoon the St. Louis Gun Club shot wild pigeons for a model, and the Compton Hill Gun Club has a double medal shoot. Trap shooting is having a boom in this city, and greater interest is taken in the matches than for years past. Much of the success is due to the work of Rawlins Bros., the headquarters for sportsmen in this city.—ABERDEEN.

ROCHESTER, N. Y., May 27.—Rochester Gun Club, unknown angles, 30 burocks, 8 Keystone traps, 28 yds. rise:	
F L Smith.....	111101101000110011111111-22

HONEOYE FALLS, N. Y., May 28.—The third monthly shoot of the Honeoye Falls Gun Club was held on their new grounds on Decoration Day. This club has been organized a short time and is in a very prosperous condition. Our first medal shoot was held to-day. 15 members of the club being present. We shot a race of 15 birds: Dr. H. Benham won first, breaking 13 out of a possible 15; C. J. Wilkinson second, with 12; Dr. J. L. Weller third, with 11.

UNIDENTIFIED.—A score, in which Messrs. H. Benham, C. J. Wilkinson and J. L. Weller won medals, has come to us without date or place. Whose is it?

READING TOURNAMENT SCORES will be given next week. CANADIAN SCORES will be given next week.

Canoeing.

Secretaries of canoe clubs are requested to send to FOREST AND STREAM their addresses, with name, membership, signal, etc., of their clubs, and also notices in advance of meetings and races, and report of the same. Canoeists and all interested in canoeing are requested to forward to FOREST AND STREAM their addresses, with logs of cruises, maps, and information concerning their local waters, drawings or descriptions of boats and fittings, and all items relating to the sport.

NORWALK C. C.

THE boat and club houses of the Norwalk C. C. were formally opened May 30. Early Saturday morning ten of the "boys" started for a two days' cruise and camp at the club house, at the "Knob," Wilson's Point, arriving at the house about 10:30. In the afternoon several paddling races substituted the cruise to Westport, as there was not wind enough to entice them to start. After lunch a start was made for Rotten Point, to the fire works and enjoy a jolly lark. A pleasant evening was enjoyed, and the presentation of two handsome canoe lamps to our worthy commodore and secretary, by an unknown gentleman, was the event of the evening. About 11 P. M., under the escort of the commodore and secretary and their bright-flaming lamps, we returned to the club house. Sunday morning proved damp and stormy and disappointed those who had planned a quiet sail on the home quiet lake. At 1:30 it cleared up and a light breeze caused a hasty scramble to get duffle together and shoved away in the boats. Sails were set and all were soon under way. The breeze was a failure and soon died away; paddles were then put in swing and the course laid for home. The boat house reached, sails furled, boats washed out and roll call, completed programme for the day.

The club is now in a very prosperous and successful condition. Three new members were elected at the May meeting. Two new and very fast boats were added to the fleet May 1. Commodore J. C. Green's new 15.6x36 is a beauty, as well as a flyer, and will be a leader in the club races. Miner Dibble has added one of the latest modelled and neatest constructed 15.9x36 boats, and with

his 125sq. ft. of sail will sustain the club's honor as a very "fast" sailor. Captain Leonard Searles brought out a very neat set of sails of his own design and will be the winner in many of the races. Comfort, room and a fast sailer is Secretary Thomas Benedict's choice. His canoe yawl Marguerite is ably handled by him, in paddling or sailing he is always with the first boat. The members who attended the opening day and cruise were: Commodore J. C. Green, Secretary Thomas Benedict, Jr., Captains Ross Burchard and Leonard Searles, Ex-Commodore F. J. Bradbury, Miner Dibble, E. M. Smith, F. H. Smith, E. J. Pope and H. S. Scott, of the Newburgh C. C.

The club's cruising roll is now 18, all in good standing, with 22 boats, 1 naphtha launch, 4 yaws and 16 canoes. Ex-Commodore Bradbury has lately added to the fleet his racing yacht Gertrude.

VIDETTE.

THE EASTERN DIVISION MEET.—It has not been customary to hold a division meet in the division which has the general meet for the year, but the Eastern Division has determined to repeat the experiment which proved so successful last year of a meet near Lowell, the date being June 5-7. The campsite will be located in a grove on the shores of Tyng's Pond, two miles long by one-half mile wide, situated four miles from Lowell, and reached by electric cars, running half-hourly. The grove is owned by the railroad, is fenced in, and will be devoted to the exclusive use of the canoeists during the summer, insuring the usual camp privacy. At a quarter mile from camp is a dining hall where meals will be furnished at \$1.00 per day, and free transportation to and from camp will be furnished to those who desire. The lake will permit of a good mile and a half triangle being laid out, with quiet water for paddling. All boats and duffle should be sent to Lowell in care of Paul Butler, and will be transported to and from the camp free of charge. The canoeists will be divided into divisions of B. & M., by the Old Colony, connecting with Fitchburg at Framingham, and by the Stony Brook, connecting with Fitchburg at Ayer Junction. Members are invited to come to camp Thursday night and remain until Monday if possible. The following races will be held on Saturday: Regular events—1. Paddling half mile straight away. 2. Combined sailing and paddling, four and one-half miles. 3. Sailing, four and one-half miles, unlimited. 4. Tandem single blade. 5. Sailing upshot. 6. Upset paddling. Other events—1. Visitors' race, four and one-half miles sailing, unlimited. (Prize to be offered by Vespers). 2. Prizes presented by Lowell & Suburban Street R. R. Co. 3. Sailing unlimited. A. C. A. rules to govern. Regatta Committee—J. W. Cartwright, Jr., Boston; H. W. Richards, Roston; R. P. Weber, Lawrence.

BEATRICE A CANOE.—From Tuesday morning until Friday of last week a large canoe, covered with a canvas apron, was anchored in Sheephead Bay near the mouth of the Oriental Canal, no one being seen about her. On the latter day officer Carson rowed out to inspect the boat and found lying in the well the body of a man who had been dead for several days. The canoe, on which was painted the name White Cross, was towed ashore and the body taken in charge by the coroner, being finally identified as that of Captain Charles H. Mulford, a well-known yachtsman. The canoe was fully fitted up for a cruise, Mr. Mulford having left New York on Monday for a cruise through Great South Bay to Sag Harbor. His death was presumably due to heart disease or apoplexy, and evidently took place on Monday night after he had anchored. Mr. Mulford was born in Sag Harbor in 1834, but had a varied career, beginning before the mast as a boy, rounding the Horn and reaching San Francisco at the age of 21. He was employed by the vigilance committee. He spent many years in California as a journalist, and also visited Europe, while in New York he was well-known, being at one time editor of the *Graphic*. Of late he has been the editor of the *White Cross Magazine*. Some fragmentary writing in the canoe show him to have been a spiritualist, and his trip was taken partly for the sake of his solitude and isolation, as he desired to be alone when working some work which he had promised. At one time he lived in a hut built by himself on Staten Island, and a lonely life of this kind was no new thing to him. So far as we can learn he belonged to no canoe club and was unknown to New York canoeists.

PATCHING CANVAS BOATS.—San Luis Potosi, Mexico.—Now that the commodore of the Shenandoah C. C. has finished his pleasant cruise, perhaps he or some one else skilled in canoeing could be kind enough to make up a small number of the great waterproof patch on a canvas canoe or boat, have a Acme that I think a great deal of and that has done me excellent service for nearly two years. It stands knocks and scratches well, but once when overloaded grounded on a sharp stone and got a slit cut in it about 4 in. long. I sewed a patch on, but find it hard to make it water-tight. Is there any way to glue on such a piece without resorting to the needle and thread?

THE ZEREGA SAIL COMPETITION.—Mr. Zerega, the donor of the two prizes for the best hoisting and lowering of sails, will be present at the Atlantic Basin, 56th street, Brooklyn, on Saturday at 1 P. M. with Mr. Stephens, who will act as judge. Among those who will compete are Messrs. Wintringham, Stevens, Dunnell, Douglas and Whitlock.

A. C. A. MEMBERSHIP.—Northern Division: F. W. Read, W. Kennedy, J. T. Robinson, E. Botum, R. Ventress and G. A. Harris, Bohaygeon, Ont. Can. Eastern Division: W. J. Collins, E. F. Lawson, C. A. Godfrey, Lowell, Mass.

CONNECTICUT RIVER.—A correspondent asks for information about the Connecticut River from Second Lake to Haverhill, and of the Merrimac from Warren to Andover.

OCTOBER.

MEMORIAL DAY, MAY 30.

THE national spring holiday, Memorial Day, was observed in the customary manner by yachtsmen throughout the country, near every club enjoying at least a reunion at the club house, or informal sail of the yachts, while many devoted the day to races or formal reviews of the fleet. About New York and Boston the weather was cool and overcast in the morning, clearing in the afternoon, the wind being light all day.

EASTERN Y. C. HANDICAP.

The first important race of the season in Eastern waters, the handicap of the Eastern Y. C., lost much of its promised interest from the absence of the 48 footers, none of the class being ready, in fact it will be another month before the Eastern fleet, Beatrice, Oweene, Barbara and Alborak are at all ready. New York is likely to have a fair fleet in the June or July races, Jessica, Gloriana, Minola, Nautilus and Sayonara; but not until before the season has advanced half over will the entire fleet be on board. The only starters on Saturday were the thirties Saladin, Hawk and Elf, the handicap from Saladin to Hawk being 5m. 15s., and to Elf 20m.

The course was from Marblehead Rock, leaving spindle on Tom Moore's Rocks, Tucker's Island, and Outer Breaker Buoy on Pig Rocks on the starboard, to the Graves Buoy, leaving it on the port, to turn to the turning buoy, leaving it on the port to finish at Marblehead Rock, 24 miles.

The new outer mark, used for the first time, is a white spar buoy laid down by the Lighthouse Board for the Eastern Y. C. The start was from one gun at 11 A. M., the wind being light from the south, making a beat to the Graves Buoy. Saladin crossed the line 22s. after the gun, Hawk 10 45s., and Elf 34. All carried club-tees, Saladin soon leaving the others.

Off Pig Rocks the wind eased up, giving Hawk quite a gain on Saladin, and when they were timed at the turn there was but 43s. between them.

Saladin..... 12 51 08 Hawk..... 12 51 51 Elf..... 1 10 07
With the wind well ahead Saladin set no jibtop sail until within a mile of the next mark, but Hawk and Elf, out only to take it in. The time of the jibe at the outer mark was:

Saladin..... 2 06 41 Hawk..... 2 08 53 Elf..... 2 26 12
The last leg was made under spinners in a falling wind, the full times being:

	Elapsed.	Handicap
Saladin.....	4 29 13	Time.
Hawk.....	4 32 52	
Elf.....	4 59 46	

Hawk wins \$50.

The regatta committee included Messrs. W. S. Eaton, Jr., R. D. Sears, P. T. Jackson, Jr., and Henry H. Buck.

SOUTH BOSTON Y. C.

The South Boston Y. C. was served but poorly by the wind on Saturday, the first class being unable to finish, while the other classes were able to finish. The first race was for the 25 footers, the winner was beaten for the first time. The winner in the special class was a new boat, True Blue, designed and built by Harry Hutchings. The times were:

The judges were Hubert Pope, W. H. Godfrey, H. F. Macintyre and Thomas Christian.

FALL RIVER Y. C. OPEN REGATTA.

The second Memorial Day regatta of the Fall River Y. C. was quite a success in spite of light winds, there being a fleet of 32 yachts at the finish. The conditions were:

First class, sloops over 30ft.; second class, under 30ft.; third class, cat-rigged boats 24ft. and over; fourth class, 21ft. and under 21ft.; fifth class, 18ft. and under 21ft.; sixth class, 18ft. and under. These are the prizes: First class—First prize, a silver cup valued at \$175, now held by sloop Millie, of Providence. The winning sloop is to hold this cup during the year and deliver it to the judges on the morning of the next annual contest. When won the times by any sloop it will be held permanently by that sloop. The second prize in the first class will be a barometer valued at \$25. In the second, third and fourth classes the first prize is \$20 and the second prize \$10. In the fifth class the first prize is \$15 and the second \$8. In the sixth class the first prize is \$10 and the second \$5. No first prize in any class will be given unless two or more yachts compete and no second unless three or more yachts compete.

The courses were: Class 1—To and around Coal Mine Buoy, thence to finish line; distance 18 1/2 miles. Classes 2 and 3—To and around Hog Island Lightship, thence to finish line; distance 10 1/2 miles. Class 4—To and around Mount Hope Buoy, thence to finish line; distance 10 1/2 miles. Classes 5 and 6—To and around Common Fence Point buoy, thence to finish line; distance 10 1/2 miles.

Flying start. The measurement will be according to the club rules and time allowance in accordance with the Herreshoff table. Sloops allowed fore and aft sails only, including spinners. Catboats will be allowed but one sail. Yachts will carry but one man for each 5ft. or fractional part of their sailing length, and stationary sails only.

The wind was light S. E. The sloop Millie, winner of the cup in 1890, declined to start against Shark, the new importation from Boston. Yvonne is a new yacht, just built by Reed Bros. The times were:

FIRST CLASS SLOOPS.

	Length.	Elapsed.	Corrected.
Shark, A. E. Austin.....	32.03	2 51 20	2 51 20
Kismet, William Powers.....	30.07	3 06 47	3 04 54

SECOND CLASS SLOOPS.

	Length.	Elapsed.	Corrected.
Hattie, George B. Perce.....	28.09	3 06 08	3 06 03
Diamond, Lewis H. Tillinghast.....	26.01	3 16 02	3 15 09
Thetis, David Cummings.....	25.00	3 27 45	3 25 25
Three Sisters, C. A. Pardee.....		Time not taken.	

THIRD CLASS SLOOPS.

out time allowance was not determined. Sophia won the S. H. Bailey cup for the best time over the Gangway Buoy course with time allowance. The regatta committee included G. W. Fuller, R. H. Wylie, J. F. Hogan, H. B. McAllister and J. Hendry. The judges were George Parkhill, Columbia Y. C.; J. C. Summers, Cherry Diamond Y. C.; J. A. Hutchinson and Capt. P. Grace, Harlem Y. C.

PAVONIA Y. C. OPENING REGATTA.

The opening regatta of the Pavonia Y. C., of Communipaw, N. J., was held on Saturday in a light wind. After the race a number of the yachts sailed down to the club's station at Atlantic Highlands. The times of the race were:

CLASS A—SLOOPS OVER 30FT.				
	Start.	Finish.	Elapsed.	Corrected.

Square.....	12 51 00	4 56 05	4 06 08	4 06 05
Marie.....	12 51 44	5 12 45		

The winners were: Class A, Phantom; Class B, Wacandah; Class C, Forsyth; Class D, Christine; Class E, Annie J.; Class F, J. T. Corlett; Class G, H. H. Holmes; Class H, Square. The Fullman silver cup was awarded to the J. T. Corlett, for the fastest corrected time.

CORINTHIAN MOSQUITO FLEET.

The chief event of Memorial Day about New York was the initial race of the new 25ft. c.l. class, two of which, Mr. L. J. Boury's Smuggler, and an unnamed craft lately launched for Mr. C. W. Wetmore, owner of Liris, are now ready for racing. The first race was due to the enterprise of the Corinthian Mosquito Fleet, which has put up a \$75 silver cup for a series of races in this class during the season. The Corinthian Mosquito Fleet Champion Cup for 1891 must be won three times to be held permanently. The regatta was held off Larchmont by courtesy of the Larchmont Y. C., the yawl Nonpareil doing duty as mark boat at the starting line. The courses were:

For boats 21ft. and over around the spar buoy on westerly end of Execution Reef; thence around Matinicoke Buoy; thence around black spar buoy off Constable's Point, leaving all these buoys on the port hand; thence around the westerly buoy on Execution Reef, leaving all buoys on said reef to starboard; thence across the finishing line, 18 miles.

For boats 18ft. and under 21ft. around the spar buoy on westerly end of Execution Reef; thence around Matinicoke buoy; thence around black spar buoy on Constable's Point, leaving all these buoys on port hand; thence around the westerly buoy on Execution Reef, leaving all buoys on said reef to starboard; thence across the finishing line, 5 miles.

Boats must not pass between buoys either on Hen and Chickens Reef or Execution Reef.

There were seventeen starters in the seven classes, from 15 to 25ft. l.w.l. The wind was light S.W. when the race started at 1 P. M., the weather being hazy; but with more wind the fog disappeared, and the result was a very good race. Smuggler was over the line first, but off the wind the Wetmore boat gained, making better time, and she was the winner, and the buoy off Constable's Point at 3:31:35, with Smuggler 3:37:01. On the wind the latter gained, crossing the line in the lead. The times was so close that a remeasurement of Smuggler will be necessary to determine the winner. The times were:

SLOOPS—25FT. CLASS.				
	Length.	Start.	Finish.	Elapsed.
Nameless, C. W. Wetmore.....	25.00	3 10 00	6 27 00	3 17 00
Smuggler, L. J. Boury.....	25.00	3 11 00	6 34 00	3 23 00
SLOOPS—17FT. CLASS.				
Coyote, H. W. Bucknall.....	17.00	3 54 05	6 21 55	2 27 50
Teal, O. Sanderson.....	17.00	3 54 05	6 21 55	2 27 50
CATS AND YAWLS—21 TO 25FT. CLASS.				
Dot, J. W. Hildreth.....	21.00	3 55 21	6 27 50	2 32 29
Cupid, H. W. D. Bart.....	21.00	3 55 21	6 27 50	2 32 29
CATS—21 TO 25FT. CLASS.				
Ada, W. S. Alley.....	21.00	3 55 21	6 27 50	2 32 29
La Perchole, C. Buchanan.....	21.00	3 55 21	6 27 50	2 32 29
CATS, OPEN—18 TO 21FT. CLASS.				
Olga, C. S. Little.....	18.00	3 55 21	6 27 50	2 32 29
Cruiser, A. B. Alley.....	18.00	3 55 21	6 27 50	2 32 29
OPEN SLOOPS—18 TO 21FT. CLASS.				
Bouncer, T. Clapham.....	18.00	3 55 21	6 27 50	2 32 29
CATS—15 TO 18FT. CLASS.				
Coot, C. O. Munroe.....	15.00	3 55 21	6 27 50	2 32 29
Water Wag, F. J. Hynes.....	15.00	3 55 21	6 27 50	2 32 29

The regatta committee included Dr. Theodore Ledyard, F. S. Grant and J. M. Williams.

PLYMOUTH Y. C.—The light wind of Saturday made a finish impossible, except for the canoes in the Plymouth Y. C. regatta, the times of this class being:

	Length.	Start.	Finish.	Elapsed.
Carmen, F. A. Jenks.....	14.00	2 18 10	4 19 07	1 59 07
Mollie, A. L. Bailey.....	14.00	2 21 55	4 19 07	1 57 12
Flying Fish, A. L. Rich.....	13.01	2 37 50	4 19 07	1 41 17
Daisy, G. W. Cooper.....	14.09	2 38 47	4 19 07	1 40 20

The prizes were opera glasses and marine compasses, and were awarded to the first three boats. We have received a copy of the club book for 1891. The club is organized as a company.

EXCELSIOR Y. C.—The Excelsior Y. C., of South Brooklyn, held its second annual regatta on Saturday off its new club house at 43d street, the times being:

CLASS A.				
	Length.	Start.	Finish.	Elapsed.
Ella S., John Strand.....	20.00	3 10 00	6 27 00	3 17 00
O I C., John Terrell.....	19.00	3 11 00	6 34 00	3 23 00
CLASS B.				
Lady Ella, John Smalley.....	21.00	3 16 00	6 27 15	3 11 15
Maud L., Hugh Graham.....	21.00	3 15 15	6 33 00	3 17 45

CLASS D.				
Cricket, Wm. Lebrecht.....	12.07	3 26 30	4 55 30	1 29 00
Little Johnnie, H. Coates.....	12.00	3 26 45	4 26 15	59 30

CANARIE Y. C.—The spring review of the Canarie Y. C. took place as per programme in spite of unfavorable weather. In the evening a reception was held at the club house.

NEWARK Y. C. REGATTA.—The Newark Y. C. enjoyed a very pleasant day at the club house at Bayonne, a large number of ladies being present. In the afternoon a ladies' race was sailed on the Bay, the winners in the various classes being Emmy C., Arrow, Ohio, Ripple, Cleo and Americus.

ATLANTIC Y. C. OPENING SAIL.—The dull weather of Saturday morning was rather discouraging for the members of the Atlantic Y. C., as the opening sail is made a festive occasion for the ladies and other guests rather than a yachtman's holiday with real racing. In spite of little wind and cloudy skies the fleet turned out in goodly numbers for a sail to the S.W. Spit and back, no times being taken.

AMERICAN Y. C.—A reception was held at the club house at Milton's Point, at which a large number of guests were present.

PHILADELPHIA MODEL Y. C.—The Philadelphia Model Y. C. sailed several races on Saturday, the wind being very light.

BAYSWATER Y. C.—Owing to the weather, the regatta of the Bayswater Y. C. at Far Rockaway was indefinitely postponed.

BROOKLYN Y. C.—The fleet of the Brooklyn Y. C. turned out in review on Saturday, a reception being held at the club house in the evening.

JERSEY CITY Y. C.—The fleet of the Jersey City Y. C. sailed down to the new station of the club near Totenville, Staten Island, on Saturday, to open the new house.

ROYAL VICTORIA Y. C. CUP.

THE ROYAL VICTORIA Y. C. CUP.

THE above illustration, for which we are indebted to the Yachtsman, shows the new cup, recently established by the Royal Victoria Y. C., of Ryde, England, for international competition; the conditions governing which were published in the FOREST AND STREAM of Nov. 18, 1890. The cup is of gold, valued at \$3,000.

AMERICAN MODEL Y. C.

THE American Model Y. C., of Brooklyn, N. Y., is now working hard for the encouragement of model-yacht sailing, a sport that has declined of late years about New York, though at one time in quite a flourishing condition. Prospect Park, Brooklyn, has long been the center of the sport, and the American Model Y. C. has its station there. The club was re-organized in 1887, and is now in a very satisfactory condition. The present officers are: Com. W. V. Hanson; Vice-Com. G. W. Lyon; Treas. G. W. Townley; Secy. Harry Melvin; Messrs. F. Nichols. The yachts must not be under 30in. l.w.l., fixed ballast is compulsory, and the total weight of yacht with largest set of sails must be registered, and the registered weight declared previous to a race. There are three classes; 53 to 63in. l.w.l., 42 to 53in., and 30 to 42in. The allowance is 53, per class. The races are sailed to windward, the course being $\frac{1}{2}$ mile.

The first race of the year was sailed on Saturday, the first heat of the third class yachts being called at 11 A. M., the first yacht crossing the line at 11:10:13 as a fresh S.W. wind sprung up. Six new yachts and one year old started, their lengths averaging 40in. on l.w.l.

The last year's boat, Electra, was looked upon as sure winner, she being tuned up much better than the newer boats. She made the fastest time in the second heat of the race, making the three-tenths of a mile in 11:25.5, in three legs, beating Star on elapsed time by $\frac{1}{4}$ sec., but being beaten by Star on corrected time by $\frac{1}{4}$ sec., rather close sailing, with the other boats strung out.

Electra did not do so well in the other heats, but Mr. Scott's new cutter Marian showed up as well as can be expected of a new yacht, and there is no doubt that the future races of the season will be between Electra, Star and Marian.

The second class race was called at 12 M., only two yachts starting, May, owned by Mr. Fisher, and Kate C., owned by Mr. Sheridan. Kate C. crossed the line at 12:00:12, taking the lead, May crossing 8s. later. A close race followed. May taking the lead at about one-fifth of the course. She would undoubtedly have won this heat, but her main sheet slackened away and ran off just enough to go outside the finish flag. Kate C. crossed the line in fine style, everything drawing.

In the second heat Kate C. was handled to perfection, crossing the line a winner of the prize, making the fast time of 8:56 elapsed, winning by $\frac{1}{4}$ sec. corrected time, elapsed time of May being 9m. 25s. Scrub races wound up the day's sport. The summary was:

SECOND CLASS—42 TO 53IN. L.W.L.—FIRST HEAT.				
	Sec.	Start.	Finish.	Elapsed.
May, H. Fisher.....	7.5	2 00 20	Sailed outside finish flag.	
Kate C., J. Sheridan.....	8	2 00 12	2 10 47	10 35 10
SECOND HEAT—FINAL.				
May, H. Fisher.....	7.5	2 22 00	2 31 20	09 20
Kate C., J. Sheridan.....	8	2 21 15	2 30 11	08 56
THIRD CLASS—30 TO 42IN. L.W.L.—FINAL.				
Jennie L., G. Armsstrong.....	4.5	12 26 53	12 41 49	14 56
Dora H., J. D. Casey.....	4.5	12 26 53	12 41 49	14 56
Ida May, W. W. Neff.....	7.5	12 27 02	Did not finish.	
Marion, J. A. Scott.....	8	12 26 40	12 40 03	13 23
Star, G. W. Townley.....	8.5	12 27 18	12 39 11	11 53
Electra, J. Pfeiffer.....	8.5	12 28 42	12 41 06	12 24
Harrietta, G. W. Lyon.....	7.5	12 26 53	12 40 40	14 05

Distance sailed three-tenths of a mile. Time keepers, Harry Melvin and F. Nichols. The prizes were of \$5 value each. The next race will be sailed on July 4.

"TIME ALLOWANCE RATING."—The Atlantic Y. C. has just added its share to the increasing confusion of terms by announcing a class of "25ft. time allowance rating." Just what "time allowance rating" means is not yet explained, but it appears to be the familiar old "sailing length" in English-mach clothes. One strong feature of the real thing, the original English "rating," is that in nearly all classes it abolishes time allowance; as the smaller fractions of a rating are not counted, and each boat is, or considered to be, built to the limit of the class, 20-rating, 10-rating, etc., down to the new $\frac{1}{4}$ -rating class, so that there is no time allowance from one boat in a class to another. If American clubs are prepared to adopt the established British unit of rating for both classifying and allowing time (where necessary) the term rating can very properly be used here. If, however, they are to adhere to the present established American unit of sailing length feet, some suitable term should be coined for it as soon as possible.

TITANIA.—Mr. Iselin's 70-footer has been towed from City Island to Staten Island, and as her owner is abroad it is certain that he will not put her in commission, but has sold her, the reported purchaser being D. H. Smith, late owner of Samona, schr.

BOOKS RECEIVED.—Beverly, Hull and Plymouth Y. C. year books.

YACHT ARCHITECTURE.

IT is not only from the great advances in yacht designing within the last thirty years that the yachtman of to-day has an immense advantage over his predecessors of the past generation, but from the fact while the sum total of knowledge accessible to the latter was exceedingly limited, being derived only from his own observation eked out by such meagre facts as the builders of the day made public; the modern yachtman has at his command a very extensive library of technical works, in which is recorded the latest advances in the science of design as well as the art of building. One of the best known of the writers who have placed the inquiring yachtman and the amateur designer under such obligations is Mr. Dixon Kemp, of London, long time editor of the Field, whose books on yachting are so widely read. Mr. Kemp is the first writer who has attempted to deal comprehensively with the extensive field of yacht architecture, his work on the subject, published in 1885, meeting with a degree of success which has called for a second edition, which is just ready. The original book is so well known as to call for no new notice, and it is sufficient to say that it has been improved and enlarged by re-writing and additions, which add greatly to its original value.

Of the progress in recent years, the writer speaks as follows in the preface: "It cannot be claimed that any great discovery has been made during the last decade, which has thrown new light on the science; nevertheless, yacht designing and construction have undergone great development in all their branches. The rescinding of the old tonnage rule as a means of rating yachts in competitive sailing, and, as a consequence, the removal of the tax upon beam, has had a great effect upon the form of yachts, and enabled designers to solve the problems set them with great freedom." Among the many tables of dimensions and elements we notice a new one that is very interesting, and at the same time, excessive draft is taking such a prominent place in American designing. From the examination of a large number of yachts, Mr. Kemp reaches the conclusion that in keel craft the draft varies as the length $\frac{1}{2}$ x .75; from which formula he has computed a table of drafts as follows: 20ft. l.w.l., 5.5 draft; 25, 6.4; 30, 7.2; 35, 8; 40, 8.8; 45, 9.5; 50, 10.2; 55, 10.9; 60, 11.5; 65, 12.1; 70, 12.7; 75, 13.0; 80, 13.4; 85, 13.7; 90, 14.1; 95, 14.3; 100, 14.6. Though these figures have been exceeded in some of the new racing craft, they represent very well the general practice of the present time in Great Britain, and contrast sharply with the drafts of the newer American boats, such as the forties Liris, Tomahawk and Helen, drawing between 10 and 11ft., and the 46ft. craft now preparing, with drafts of 10 to 12ft. This table is supplemented by a column of sail areas for the various lengths, which also make a strong contrast with American practice.

Since the first edition of the book appeared, two great changes have taken place; the old tonnage rule with its limitation of beam has been abolished, and the centerboard has been admitted to British races; while at the same time the narrow keel cutters built under the old rule have come into close competition with the most improved types of centerboard craft. A number of the latest designs have been extended by additional matter relating to the wider yachts now built in Great Britain, as well as to the centerboard, the latter being considered at length in the chapter on lateral resistance. While throwing little new light on the question of centerboard vs. keel, the discussion is quite interesting and suggestive in many ways. The chapter on resistance and wave making and the wave form theory contains, in a compact and available form, the record of the latest conclusions of such specialists as Mr. Froude and Mr. Colin Archer. The chapter devoted to steam has been considerably enlarged, special attention being given to water tube boilers, and forced draft.

One of the most interesting features of the book is the design of one of the new 20-raters, Ghost, by Mr. C. P. Clayton; the entire construction being illustrated in detail by colored plates. Among the new designs are two of the new 24-raters, Lady Nan and Dolphin, most curious craft, being boats of shoal body but with immense lead fins in place of centerboards. The construction of Dolphin is quite elaborate, the details being fully shown. The lines of Mayflower and Volunteer are given, but accompanied by the following explanation: "The plates of the Volunteer and Mayflower were given me by Mr. Dartmouth Hutton, who obtained them from the New York Y. C. The lines were taken from models in the possession of the club, and although the lines may not represent with exactness the form of the yachts, they are no doubt as accurate as lines taken from models usually are, and convey a good idea of what the yachts are like. The lines may be of no practical value, but they are useful for comparing the type of yacht which has lately sprung into existence in America with the contemporary British type."

Among other additions to the plates are a series of designs of yacht's boats and small open craft, the whole series of plates covering the entire range of yachting and boat sailing.

NEWBURGH CANOE AND BOATING ASSOCIATION.—The annual regatta of the Newburgh C. and B. A., on June 27, will be the most important ever held, including a large variety of craft. There will be an open race for sloops and cutters of 40ft. and under, an open race for catboats of 23ft. and under, with races for cruisers, canoe yawls, canoes, paddling and sailing, and rowing boats.

A QUICK TRIP.—The Burgess 30-footer Rosalind left Lawley's at 6 P. M. on May 19 and reached New York at 2 A. M. on May 22, her time being 58 hours, or the best yet made by a 30-footer. She was in charge of Capt. Chas. Foster, with one hand.

THE PEQUOTS AT MORRIS COVE.

THE original promoters of the "Family Outing Club," fast becoming recognized as the proper adjunct to a well regulated yacht or canoe club, the Pequot Association of New Haven, will open their newly acquired and valuable property in every department on June 13, the café June 8.

The arrangements in the way of providing social entertainment for members and guests include Saturday night hops each week, events of more or less importance every evening, and the probability of "free for all" yacht race, canoe race and cycle tournament on July 4. The growth and popularity of this corporation is something wonderful, with a membership of over three hundred ladies and gentlemen, recognized leaders of society, and most prominent in business circles, with a glorious harbor for the cyclist, canoeist and yachtsman, a magnificent location, good harbor, and in season excellent bathing, boating, fishing and shooting, the members may well rest assured of the pleasure of an entire season, or the year round for that matter, with their families and friends at "the club."

The Pequot premises include several acres of lawn and orchard, barns, magnificent beach, docks, and house with over fifty rooms, wide verandas (triple deck), large dining-room, club hall, parlors, smoking and toilet rooms, and forty-one sleeping rooms. The dormitories are permanently allotted to the stockholders, who are all members of the club, but all the other privileges of the entire property are intended for the general use of the association.

Article II. of association declares the purposes of this corporation "to be to encourage aquatic and all out-of-door sports, unite yachtsmen, canoeists, bicyclists, et al. for social intercourse and improvement, and to do all other necessary acts to maintain a seashore club and equip suitable quarters to promote and perpetuate, etc." Therefore very properly the association cordially invited club members (properly vouched) to make their anchorage at "the Cove."

Special attention should here be called to the obstruction at the mouth of the New Haven harbor through building the "West Breakwater" now just showing above water. Two red lights are shown at night and the southerly end appears a little north of direct range from Stratford and light to New Haven light.

There are several mails received at the club house each day and all mail, express or freight addressed care of steward, Pequot Association, Morris Cove, New Haven, will be stored and cared for without charge, at owner's risk, for any qualified guests who may desire to make this their basis of supplies. Ship stores, water, etc., may be obtained of the steward. Frequent stages to New Haven, about 4 miles distant, over a delightful road. Red light displayed at end of club pier. Blue and white light on pier at south shore of the cove makes most safe anchorage for from 3 to 8 ft. at ebb tide, being out of range of sou'westers. Correspondence addressed to F. P. Lewis, Commodore, New Haven, Conn., W. W. Cornwall, Secretary, Jersey City, N. J., is promised careful attention.

ZAYDA.—The steam yacht Zayda was launched a few days ago from the works of Chas. L. Seabury & Co., Nyack-on-the-Hudson. She is 55 ft. long by 8 ft. beam and draws 3 ft. of water. The Zayda is designed as a day launch and is also arranged for cruising. Her frames are of selected white oak; planking of cedar and copper fastened throughout. The machinery consists of a 75-horse power triple expansion engine and a Seabury safety water-tube boiler. This will drive the boat at a guaranteed speed of 12 miles per hour natural draft, and about 14 miles with forced draft. The working steam pressure allowed is 300 lbs., but the average pressure carried is 300. Some of the details are as high as 300 lbs., and will steam steadily all day long. The cabin arrangements of the Zayda are worthy of special comment, as all the room is used to advantage. Under the forward deck is storage room for anchors, etc., and on deck she carries a windlass, also brass cannon and extra ropes, a brass rail making finish. The pilot house comes on top and is very roomy, being fitted with wide seats both thwartwise and fore and aft. Under these seats are clothes lockers, chart racks, etc., so arranged that the top pulls out and makes a fine wide berth for sleeping on. Next aft comes the owner's cabin, which is also finished in same manner as seats in pilot house. This room will accommodate a party of four. Off of this cabin on starboard side is a toilet room with patent w.c., wash basins, etc. On the port side is a room for stowage. Next aft comes engine room, which is very small considering the size of boat and her power. The machinery is of a high class and sets low down in boat. It is compact, strong and light weight, the coal consumption being about 600 lbs. for ten hours' running, which is very economical. Steam can be obtained in ten minutes from cold water. Aft of engine room is crew's cabin and galley, and next aft is open cockpit with a canopy for awning. Under the deck is a large icebox and refrigerator. The cabin work is all mahogany with windows to slide up and down, and the furnishings are of silks, damasks, plushes and Wilton carpets, making beautiful contrasts with the wood work. Messrs. Seabury have a 70 ft. high-speed yacht in construction and some other steam launches of special design.

A FLUTILLA FOR LAKE ERIE.—The steam launch Nahma, built by Chas. L. Seabury & Co. for Mr. D. E. Stone, of Cleveland, Ohio, started on her long trip to Cleveland May 25, under command of Capt. Wyborn, of Nyack, having in tow two boats, the new 25 ft. cabin catboat Ola, built for Mr. H. C. Rouse, of Cleveland, and launched last week at Bay Ridge, and a 22 ft. naphtha steam launch. They go via Hudson River to Albany and canals to Buffalo, thence by Lake Erie to Cleveland. Mr. Rouse is one of the party making the trip. The Nahma is a style of launch which is becoming very popular, she is 37 ft. long, 7 ft. beam, draws 2 ft. 6 in., and is built of select oak frames, cedar-planked, copper-fastened, etc. Over the cockpit is a canopy-top roof of wood with storm curtains on sides to bait or canopy; this inclosing the boat and making summer cabin. She is fitted as an open or party launch, but can be used for cruising, as she is supplied with all conveniences—w. c., wash basin, provision and clothes lockers, etc. The machinery is a 25 H. P. compound engine and a Seabury safety water-tube boiler, which will drive the launch at a speed of 11 miles per hour. Owing to the lightness of machinery and its setting so low down in the boat, she is thoroughly seaworthy, and developed full contract speed under unfavorable conditions and also great towing qualities.

MASSACHUSETTS Y. C.—Fleet Captain Garrett has sent out the following order for the cruiser "The Theodore" has expressed his intention of calling the squadron together for the summer cruise on Saturday, July 25. Leaving Boston that day the squadron will race to Portland, and afterward will race from Portland to Booth Bay, from Booth Bay to Rockland, and from Rockland to Camden. Prizes will be offered for all these races, of which notice will be given later. Early notice is given in order that captains desirous of joining in the cruise may have ample time for making their arrangements. Invitations have been extended to the Hull and Quincy yacht clubs to join in the cruise. Captains intending to make the cruise with the club will please notify me.

YACHT CRUISING ON THE ST. LAWRENCE.—Editor Forest and Stream: Can you or any of your readers give me a few points as to the practicability of going in a small sailing yacht, 2 ft., with a couple of ladies from Lake Champlain, or rather after leaving Lake Champlain up the St. Lawrence River to the Thousand Islands? I would like especially to know? 1. Is it easy or possible at Sorel on the St. Lawrence to hitch on to a tow of ships or canalboats going up the river, and about the cost of such towage and to whom to apply? 2. Is it possible or best to sail any parts of the route, or is a tug necessary for the whole distance? 3. What facilities are there for getting supplies of provisions beyond Montreal, and about how much time ought one to allow for such a cruise up to the Islands? 4. How about the neighborhood of the Thousand Islands for the safety of a small yacht, current, winds, depth of water, harbors and the like, and the sources of entertainment for a summer vacation. The party are three, the ladies good sailors, and all accustomed to the boat and to similar cruises on the Atlantic Coast, Long Island Sound and Lake Champlain. We know the disadvantages of a sailing yacht as compared with steam in going against strong currents and getting through locks, as well as its advantages in other ways. We made a dash through once as far as Montreal and gained some wisdom, but we want more, especially as regards the upper part of the route. Possibly some of your readers have tried it in a similar small craft, and if so, we shall be glad to exchange points in our experience with theirs. We have two months, July and August for vacation.—K. (Hartford, Conn., May 27.)

NEPTUNE BOAT CLUB.—On May 23 the Neptune Boat Club, of Baltimore, opened the season by a reception in the new club house, just completed. The house is on the main branch of the Patapsco River, just north of the Light street bridge, about 25 min. by horse car from the center of the city. There is 5 ft. of water at the club wharf with a fine anchorage. The club extends a generous invitation to visiting yachtsmen. The additions to the Neptune fleet this spring embrace the steam yacht Restless, owned by the Messrs. Evans Bros.; the 30 ft. naphtha launch Sylvia, owned by Dr. Foster; 35 ft. canoe Albatross, owned by Mr. Volz, the keel sloop Outing, Mr. W. A. Blake, and 35 ft. canoe Neptune. Other boats will be added to the fleet later on.

BAYONNE ROWING AND ATHLETIC ASSOCIATION.—This club has just organized a yachting department, the commodore being Mr. J. Herbert Murphy. The first race was sailed off Bayonne, N. J., in New York Bay, on Saturday, the winners being Kitten, Little Silver, Gracie, Bantam, and the canoe Ute.

RAMONA—GOLDEN FLEECE.—On May 29, while the steam yacht Golden Fleece was at anchor off Staten Island, the schooner Ramona collided with her, the steam yacht being considerably damaged, while the schooner lost her bowsprit.

ROMOLA.—Mr. Joseph Pulitzer has been fortunate enough to secure the services of Lieut. A. P. Nazro, U. S. N., recently in charge of the Branch Hydrographic Office in New York, to command his steam yacht Romola. Lieut. Nazro has been granted a leave of absence from the navy.

CORINTHIAN Y. C.—The Corinthian Y. C., of New York, has selected Monday, June 23, for its annual regatta over the usual courses in New York Bay.

HULL Y. C.—In place of the usual annual cruise, it is proposed to substitute this year a short trip of three or four days to the neighborhood of Provincetown.

LARCHMONT Y. C.—The spring regatta of the Larchmont Y. C. will be sailed on Saturday.

Answers to Correspondents.

No Notice Taken of Anonymous Correspondents.

T. A. H.—The cork vest was formerly made in Brooklyn, but we cannot learn present address of maker.

W. M. H. Indianapolis, Ind.—Please tell me through your paper who is the owner of the Chestnut Hill Kennels? Ans. Mr. Mitchell Harrison, P. O. Box 1630, Philadelphia, Pa.

D. M. H. New York City.—I find it is very difficult to get a Chesapeake Bay dog; have written to many about them, and was at the point of buying one twice, but both times they were sold; perhaps you can help me to find out where I can get one. Ans. Write to Mr. I. T. Norris, or Mr. Harry Malcolm, Baltimore, Md.

H. O. B.—See design of Windward in "Small Yachts." Such a yacht has good room for her length. The cost will run from \$700 to \$1,200. The cutter or modified sloop rig is better in most cases than the yawl. The plans from a competent designer would cost \$50 to \$75.

M. P. Morristown, N. J.—Will you please give in your valuable journal the extended pedigrees of the pointer dog Craft and bitch Temptation, mentioned in your issue of the 7th inst., in pedigree of the H. J. I understand Craft is No. 1038 A. K. R. and Temptation No. 5,613, either in A. K. R. or A. K. C. S. B. I think the latter. Kindly give also, if possible, the names and addresses of breeders and owners of each dog. Ans. Craft (A. K. R. 1038)—Breeder, George V. Poyner, Dayton, Iowa. Owner, Mortimer Mills, Jersey City, N. J. Sire, Bang, by champion Bang out of Luna, by Sancho out of Lass; Bang, by Cobham's Bang out of Price's Vestra. Dam, Poyner's Jean, by Stead's Girl; Bang out of Green's Girl; Glenmark by Rush out of Stead's Temptation (A. K. C. S. B. 5513)—Owner, George W. McNeil, Jr., Jersey City, N. J. Breeder, Geo. L. V. Tyler, West Newton, Mass. Sire, Fogg's Don out of Alden's Maid S., by Pete, Jr., out of imported Kate; Pete, Jr., by champion Pete; Don, by Fogg's Pete out of Queen.

C. W. W. Gallon, O.—Please inform me through your paper what breed of dogs to handle. I am going into the kennel business. I have 30 acres of land situated three miles from town. There are a great many quail on it and I could handle bird dogs very well. Now, let me know what kind of dog you think I should handle to make the most money out of. Ans. We have no doubt that some breed of hunting dogs, pointers, setters or spaniels, would suit your purpose best, especially if you are competent to train and handle dogs, though it would no doubt be some time before you could make a name in the business. Until then you must be content with indifferent returns. There are very few who succeed in making a good paying business out of dogs. An investment in beagles would very likely be remunerative if the best strains are procured. Pups sell for from \$10 to \$20 each. Do not attempt a large kennel unless you have had experience. Get two or three bitches of whatever breed mentioned you think will find a market in your country and then increase stock as you feel you are able to.

FOREST AND STREAM. Box 2,832, N. Y. city, has descriptive illustrated circulars of W. B. Leffingwell's book, "Wild Fowl Shooting," which will be mailed free on request. The book is pronounced by "Nanit," "Gloan," "Dick Swiveller," "Sybillene" and other competent authorities to be the best treatise on the subject extant.

New Publications.

LETTERS TO YOUNG SPORTSMEN on the Choice and Use of a Gun By Sir Ralph Payne-Gallwey, Bart. New York: Longmans Green & Co.

A BOOK ABOUT ADVERTISING. Messrs. Geo. P. Rowell & Co. send us their "Book for Advertisers." It is full of facts and figures which cannot fail to interest advertisers, and, which no sensible advertiser can afford to leave unstudied. Published by George P. Rowell & Co., at 10 Spruce street, New York. Price \$1. **THROUGH RUSSIA ON A MUSTANG.** By Thomas Stevens. With illustrations from photographs by the author. New York: Cassell Publishing Company, 1891. This is the story of a ride from Moscow to the Black Sea, made by the author in the summer of 1890 for the New York World, to report on the conditions—manners, customs, etc., of the people of European Russia. The ride of 1,100 miles was made on an American mustang which the author bought from the Carver-Whitney show at Moscow.

HANDBOOK OF ATHLETIC SPORTS.—Volume III.—Boxing. By R. G. Allanson-Winn, Ins. of Court School of Arms, Winner of the Middle Weights, Cambridge, 1874-7; Heavy Weights, 1877-8. With prefatory notes by Bat. Mullins. With 11 illustrations. Wrestling. By Walter Armstrong ("Cross-buttocker"), late Hon. Sec. Cumberland and Westmoreland Wrestling Society in London. With 26 illustrations. Fencing. By H. A. Colemore Dunn, Barrister at Law, Ins. of Court School of Arms, Winner of the Medal at the Gernay Gymnasium. With 17 illustrations. Single Stick and Sword Exercise, including Quarterstaff, Cudgel, Single Stick and a Southern Point. Walking, Canoeing and Umbrella. By R. G. Allanson-Winn and C. Phillips Wolley, Ins. of Court School of Arms. With numerous illustrations.

MILLIONAIRES OF A DAY: An Inside History of the Great Southern California Boom. By Theodore S. Van Dyke. New York: Fords, Howard & Hulbert. Cloth, \$1; paper, 50 cents. Readers of other books by Mr. Van Dyke (his "Southern California," his "Rifle, Rod and Gun in California," his treatise, "The Still Hunter") will know that in "Millionaires of a Day" they have a treat before them. His knowledge of southern California, every square mile of which he has hunted over, and every portion and product of which he is familiar with, gives him a great advantage in treating his material; while his style is so crisp, his portrayals of human nature so witty, his descriptions of the land so admirable that—even if one has no interest in real estate booms—he will enjoy every single page of the book. As a matter of fact, the story, also, this little volume has a high value; the conditions of real and of fanciful growth are so clearly set forth that, for any man who has interest in land anywhere, this shrewd analysis of a real estate craze which would have ruined any other land than the one it swept over, will commend itself as of solid worth. Let any one pick up the book and read the conversation between two millionaires and a southern point, and he will be satisfied that he will not be satisfied until he has read the whole story. It is as apt and clever as anything that this charming writer has produced.

THE KING'S CHASE.—Forests were looked upon, first and foremost, as the hunting grounds of royal and noble persons. Lord Abergavenny had St. Leonard's forest in Sussex, the Duke of Buckingham had the forests of Brecknock-hay and Cassellay, Lord North had the forests of Weybridge and Sapley, and within their boundaries they were able, after the fashion of the King, to punish offenders by forest laws above and beyond the common law of the country. In early legal phraseology a forest is described as "silva sacrosancta;" and the derivation of "forest" is given in a treatise of the forest laws that was published about the latter end of the reign of Queen Elizabeth as "fera" and "statio." Again, it is stated that a forest differs from other places, which have woods and coverts, in being "privileged for wild beasts and fowls." These wild beasts or fowls were specified. The hart, the hind and the hare are beasts of the forest; the buck, the doe, and the fox are beasts of the chase; the hare, the coney, the pheasant, and the partridge are beasts and fowls of the warren. So late as the reign of James I., all the Judges of England were summoned by the King to confer upon the question of forests. It is curious to note the change from earlier times, how the timber has ceased to be the principal object, and the trouble and anxiety is centered on the preservation of the game. The first resolution of the Judges ran as follows: "That the Justices in eyre and the King's officers in the forest have charge of venison, vert and green hue, for the maintenance and preservation of the King's game, and of all manner of trees," mark, not for timber, but "for covert, and browse and pannage;" but that when there was occasion to fell woods in the forest, or timber for the King's use, it must be taken and sold by authority, under the great seal, by the view of the forester, that it might not be taken in places inconvenient for the game. Acting upon this resolution of the Judges, the Lord Treasurer of England and the Court of Exchequer was forbidden to fell any woods or coppices within any of the King's parks, forests, or chases, except at fit times and by the view of such as have charge of the game.—*The Nineteenth Century.*

"But," I said, "probably you have all seen tame fish." They nodded assent. "Well, a gentleman I know had a lake, and some of the pike in it were so tame they would take food quite close to the edge of the water. If you threw bits of meat, bread or anything to them they would catch and swallow them. One of them became quite an expert in catching, and would come up to the side, poke its head out of the water, open its mouth and take in anything you threw. I saw it swallow seven brussel sprouts one day, and it upon one occasion swallowed a Spanish onion. Often visitors would cheat the fish and throw pebbles at it; but it made no difference, it swallowed all—in fact it got to like pebbles so much that when caught, as it was one day by an angler who did not know it was a tame fish, upon being weighed it scaled 13 lbs., but after the pebbles were taken out it only weighed 4 lbs."—*London Fishing Gazette.*

NAMES AND PORTRAITS OF BIRDS, by Gurdon Trumbull. A book of early interesting to gunners, for by its use they can identify without question all the American game birds which they may kill. Cloth, 220 pages, price \$2.50. For sale by FOREST AND STREAM.

The Expert's High Grade Trap Cartridge.

Owing to the demand for a thoroughly reliable and strictly first class "Trap Cartridge," we have decided to put on the market a cartridge to be known as "The Expert's High Grade Trap Cartridge." These cartridges are loaded with The Chamberlin Cartridge Co.'s "High Grade Trap Powder," which is made "exclusively and expressly" for these cartridges, and which we know to be the best black powder for trap shooting made. In loading these cartridges the New Conical Base Climax Shells are used entirely. The specifications and lists of these cartridges are as follows:

Load No. 30. 10-gauge Climax Shells, 3 $\frac{1}{2}$ drs. High Grade Trap Powder, 1 $\frac{1}{2}$ oz. No. 8 shot. \$18.00 per M. net.

Wadded two 9 and one 10-gauge Black Edge Wads on powder and card on shot.

Load No. 32. 12-Gauge Climax Shells, 3 drs. High Grade Trap Powder, 1 $\frac{1}{2}$ oz. No. 8 shot. \$16.50 per M. net.

Wadded two 11 and one 12-gauge Black Edge Wads on powder and card on shot.

Chilled shot \$1.00 per M. net extra.

We solicit a trial of these cartridges and know that they will not fail to give the very best of satisfaction. We are also prepared to load these or any of our regular trap or nitro-powder cartridges in the new U. M. C. Co.'s "Trap" shell for which an extra charge of \$10.00 per M. net will be made.

Send stamp for our list and discount.

THE CHAMBERLIN CARTRIDGE CO., CLEVELAND, OHIO.

PAWNEE

HERO STORIES AND FOLK-TALES.

With Notes on the Origin, Customs and Character of the Pawnee People.

By GEORGE BIRD GRINNELL ("YO.")

Cloth, 417 pages. Illustrated. Price \$2.00.

Pawnee customs and beliefs are richly illustrated by the folk-tales and in the copious notes Mr. Grinnell gives an uncommonly spirited account of Pawnee life in peace and in war. There is an account of the defense of a Pawnee village by 200 sick men, cripples, old men and squaws, against 600 Sioux warriors, which for sheer gallantry and indomitable pluck will match almost anything in military history. The Pawnee warriors were all away at the time, and the Sioux counted upon an easy victory. But the Pawnee cripples and women actually beat them off after a hard day's fighting, and at last so terrorized them that the bold assailants fled in panic and sustained a heavy loss. Mr. Grinnell also has written a picturesque and vivacious sketch of one of the last Pawnee buffalo hunts, in which the Indians commonly reverted to primitive weapons and usages, often hunting quite naked with no other arms than their bows and arrows. A particularly interesting part of the book is that which treats of the Pawnee doctors or medicine men. The statements of Mr. Grinnell show the possession by some of these men of a kind of skill in sleight-of-hand far beyond that usually attributed to Indians; some of the facts here described are as puzzling and unaccountable as those performed by the famous jugglers and fakirs of Hindostan, while one of their tricks is a close parallel to the East Indian mango feat. . . . Those who desire to learn of the many other wonders done by the Indian doctors must refer to its pages for themselves. As it is certainly one of the best works on Indian life, legend and character that has been written for a long time, it should obtain a wide circulation.—N. Y. Tribune.

FOREST AND STREAM PUB. CO., 318 Broadway, N. Y.

LONDON: DAVIES & CO., 1 Finch Lane, Cornhill.

BIRD PORTRAITS.

Some Native Birds for Little Folks.

BY W. VAN FLEET, M.D.

A handsome imperial octavo volume of untechnical descriptions of the lives and ways of fourteen American birds. The list comprises:

Robin, Chickadee, Kingfisher, Great Horned Owl, Bobolink, Blue-jay, Woodcock, Nuthatches, Meadowlark, Ruffed Grouse, Cedar Bird, Killdeer, Summer Duck and Crossbills.

Each of these birds is beautifully illustrated by the photogravure process from drawings by Howard H. Darnell. The paper is substantial, and the 147 pages of large, clear, handsome type contain just the sort of information necessary to make little folks better acquainted with the birds described, and to awaken a taste for extended study. Everything has been done to make the volume one of the most handsome gift books of the year. Price, postpaid, \$3.00. FOREST AND STREAM PUBLISHING CO., 318 Broadway, New York. DAVIES & CO., 1 Finch Lane, Cornhill.

FISHERMAN'S AUTOMATIC REEL.

When a sportsman finds anything which adds to his pleasure, without increasing his labor, he wants all his brother hunters and anglers to know of it and share with him the newly discovered "helper."

WHAT WE CLAIM FOR

The Automatic Reel.

FIRST—It will wind up the line a hundred times as fast as any other reel in the world.
SECOND—It will wind up the line slowly if the angler chooses.
THIRD—No fish can ever get slack line with it.
FOURTH—It will save more fish than any other reel.
FIFTH—It will prevent tugs, lines and snells from being broken by large fish.
SIXTH—It enables the angler, and makes it desirable, to use lighter tackle.
These claims have been substantiated by the most skillful fishermen in America and Europe.

This reel is manipulated entirely by the hand that holds the rod.

ANGLING AT THE WORLD'S FAIR.

IT is safe to assume that no single department of the World's Fair in 1892 will have a greater interest for FOREST AND STREAM readers than the angling exhibit, which will be held in conjunction with the Government's fishery display. In our angling columns will be found a paper by Capt. J. W. Collins, outlining the scheme of the exhibit. Dr. James A. Henshall is in charge of the angling department, with present headquarters at Washington; and he will be glad to communicate with any persons who may have in their possession articles appropriate for exhibition. The scope of the display will be broad enough to include all objects of interest, from an ancient work on angling or a prehistoric fish-hook to the latest fad in tackle.

There is no need of a World's Fair to demonstrate that tremendous strides in the field of angling appurtenances have been made during the fifteen years which will have elapsed since the Centennial; and yet the American angler has become so accustomed to the announcements of new rods and lures and other devices, and fishing tackle has been so multiplied and perfected, that without some such display as that which is projected for the Chicago fair few of us are likely half to realize the truth. Take a single branch of angling, that for black bass—with which Dr. Henshall by reason of his writings on the subject is popularly associated. When the FOREST AND STREAM was established in 1873, there was no black bass tackle to be had. The manufacturers did not make it; they said there was no call for it. But look through the catalogues to-day; each maker is striving to outdo his competitors in the supply of rods, reels, lines and flies specially adapted to this popular fish. And so it is in all other branches. The demand has increased year by year, and keeping pace the tackle industry has grown surprisingly; just how far we have progressed will not be fully appreciated until we see the collections at Chicago.

Our illustration shows the central portion of the fisheries building. Excluded from the view are two smaller polyginal buildings, connected with the main building on either end by arcades. The extreme length of the building over all is 1,100ft., and the width 200ft. It is built on a banana-shaped island, and the building is subdivided into three parts, to conform to the shape of the site. In the central portion will be the general fisheries exhibit. In one of the polyginal buildings will be the angling exhibit, and in the other the aquaria.

A SHOOTING ERA.

NEVER since man first learned the use of villainous saltpetre for hurling projectiles has there been such an era of powder burning as the present. The discharge of musketry and artillery by armies and squadrons in time of war is not to be compared with the continuous and universal firing of guns all over this fair land smiling with peace. It is an era of gunpowder.

The inventions of artificial targets for the trap and of machines for loading shotgun shells have wrought a revolution in shooting. It was not so long ago that some of us cannot recollect it, when to go shooting meant an undertaking to be planned for and prepared for. A time had to be set, and odd hours were devoted to loading shells, studying time tables, and making ready for travel and absence from home. Even when one had reached his destination, he was compelled to hunt up his game before he could shoot it, or shoot at it; and it sometimes happened that after all, for the time and effort expended, there was nothing more tangible to show for it than tan and fuller breathing and an elastic step.

But all this has been changed. We have reached an age and a stage as nearly approaching the you-press-the-button style of shotgun using as the busiest and most expeditious of shooters could clamor for. The target factories and ammunition dealers have made it easy and practicable for all to shoot, without expenditure of time in travel or hunting for game. When a busy man takes it into his head that he will have a little shoot, he sends to the gun store for a hundred loaded shells, and the boy returns with the order filled. The man takes them home, calls in his next door neighbor, with his neighbor's boy to handle the trap, draws a supply of targets from the store in the barn, and they bang away to their heart's content; and after it is all over one or the other of them has something to show for it. No time has been lost, no money paid out for railroad fares and hotel bills, no dis-

appointment incurred by reason of barren covers or elusive game.

Trap-shooting has this in its favor, that it can be taken up in odd hours, without spending time in travel, and without the disappointments that wait on the novice in game hunting. There are scores and hundreds of towns where two or three or a half dozen business men spend a few hours each week in shooting at the trap, without any interference with business; but where no one of the shooters would think of leaving home for even a day to go shooting. And just in this is to be found the certainty that trap-shooting as a form of rational amusement will continue to grow in popularity.

The development of trap-shooting has had a perceptible effect on the making of guns. Trap-shooters as a rule demand guns which will shoot close; they want an arm that will carry its shot in a compact mass for a long distance. Given such a gun, they will take care of the rest, and by practice acquire the skill to hold on the target. As trap-shooting gains in popularity a large proportion of the guns sold are closely choked. On the other hand, for work in the field, guns which will scatter more are preferred.

There used to be frequent discussions of the merits of trap-shooting as a preparative for field shooting, but the subject has little consideration nowadays, because a vast proportion of gunners who have taken to trap-shooting are not field shots, nor will they ever be. There is not game enough for them all to shoot, and they have not the opportunity to seek it.

Unquestionably there are a hundred good shots to-day where there were ten five years ago; that is to say, good shots who can hold closer on the flying target and make a score at artificial birds. The art of shooting—if by this is understood the perfection of gun and ammunition and skill in their handling to hit a mark—has been mastered by thousands who under the old regime would never have found time to try to bag game in the field.

SNAP SHOTS.

THE good work recently done by Dr. Willett Kidd, one of the New York State Game Protectors, in securing the prosecution of Charles Delmonico, of the famous Delmonico's restaurant of this city, deserves recognition. Last summer Dr. Kidd visited Delmonico's and ordered woodcock at a time when they were out of season. The birds were served; and this prosecution has followed, the suit being for the recovery of a penalty of \$25 each for twenty-four birds. Dr. Kidd is doing excellent service in his district.

What with taxes and license regulations and hydrophobia scares and libel suits, the dog owner of to-day has surely enough to contend with, without being subjected to new embarrassments; but here comes an added complication. A Tarrytown, N. Y., poetess has just brought suit for \$5,000 damages against her next door neighbors, whose dogs by their howling have prevented her from making poetry. It would be necessary to examine the poetry she has already written to determine whether or not the dogs have performed a commendable service in protecting the public from any more of the same sort; but they may have reasoned in their brute way that in thus baying the muse they were only doing their duty.

At last an agreement has been reached by the United States and England to limit the killing of seals this summer to the 7,500 which are required as a food supply for the natives of the islands. Presumably the prohibition of the contemplated killing by the Commercial Company has come too late to restrict the catch to the limit named; but it is gratifying to know that even such an arrangement as the present has been made.

The first rule in writing for publication, or in writing for any other purpose for that matter, is to sign a communication with the writer's name, or to accompany it with a note giving this information. Anonymous communications are not regarded in newspaper offices. If a writer requests that his name be withheld from publication, such a request is always respected.

American wild pigeons have taken their place among menagerie specimens of rare creatures. Several were received at the Central Park aviaries the other day.

We have received through Mr. W. Wade \$10 for the Helen Keller fund. The giver is unknown to us,

An Adirondack Number.

THE FOREST AND STREAM of June 18 will be an Adirondack Number. It will have a four-page supplement filled with papers relating to the different phases of life in the North Woods, and there will be such variety that all readers, whether visitors to the region or not, will find something to their tastes. Among the contents will be the following:

The Primeval Adirondacks.

An account of camp life and hunting in the Smith's Lake country. By Raymond G. Hopper.

Two Weeks at Spruce Lake.

The experiences of four young fellows under tutelage of a guide.

Paul Smith's in 1890.

A racy picture of life as it is lived at this famous North Woods hostelry. By Fannie B. Merrill.

The Blazed Trail.

A story of misadventure. By W. P. Anderson.

Three Weeks on the Raquette.

A detailed account of deer hounding. By Paul Pastnor.

A Reminiscence of '66.

Deer hunting incidents recalled by an old hunting coat. By "Senior."

The North Woods in the Fifties.

A visit to the Adirondacks thirty-three years ago,

The Sportsman Tourist.

TWO PILGRIMS IN THE WEST.

GEORGIE AND PORGIE were two little men who went to hunt for grizzly bears and mountain sheep and moose and elk and goats of the cliff and deer and trout and whitefish and prairie dogs and pike and grouse and coyotes. They were going to bring home skins and heads and branching antlers, except in the case of the trout, pike, whitefish and grouse. These they were only going to eat.

They each provided themselves with a repeating rifle, a belt full of cartridges, a pair of Smith & Wesson navy revolvers and a hunting knife but little smaller than a broadsword. They also had a return ticket apiece by the United States Central Railroad for the Territory of Monidota and back, and a large number of blank checks. The tickets proved very valuable. When they took the cars at Boston they were each clad in tunics and knickerbockers of a dead leaf tint, with tennis shoes and deer-stalker hats, and their pockets bulged with silver dollars, interesting for their legal tender character. The conductor on the train spied the gentlemen, and while punching their return tickets so frequently that they resembled shotgun targets after a penetration test, he said with a pleasant accent of command that guns were not allowed on passenger trains. Georgie said he had tried to send his gun by freight and had begged the baggage man to check it, but failing in this he had had the weapon nailed up in a case as the rules of the company prescribed. The conductor was shocked that any gentlemen should wish to carry lethal arms in the same conveyance with timid and excitable ladies, and he forthwith summoned the brakeman who put the guns over the stove in the baggage car after knocking the sights off to lessen danger. Georgie and Porgie were then notified to pay the baggage man one dollar each on every division of the United States Central Railroad or they would lose their guns. There were twenty-seven divisions.

These assessments paid to the baggage men, together with the fees exacted by negro porters, and the balances required in settling the issues of an interesting game of whist, which they played with two polite and skillful strangers, had nearly exhausted the stock of legal tender dollars which Georgie and Porgie had laid in, when they arrived (after a week of travel on the cars and of delays at the disconnecting points) at the station in the Territory of Monidota, where their sport was to begin. This point was known as the Steer's Paradise, and it was surrounded by a wide belt of country covered in part with the bones of cattle that had gone to glory during the nine exceptional winters that had occurred in the Territory in the course of the last ten years.

Steer's Paradise had been the headquarters of the Great Goose Cattle Company, and the receiver of that now bankrupt concern occupied the chief mansion in the settlement and drove an excellent pair of horses around the country in search of assets to pay a dividend on the Goose Cattle Company's debts. Georgie and Porgie at this place bought two horses with suitable trappings, and a fine dog. They also engaged the services of Mr. Orlando Ricketts, locally known as "blue" Ricketts from the character of his language. The function of Mr. Ricketts was to be an aid in the adventurous and hazardous life which Georgie and Porgie were about to lead, and an instructor in those more delicate and abstruse points in a hunter's career which cannot be learned from the extensive body of literature now extant on the subject.

Mr. Ricketts was willing to relieve his employers of the tedium of paying for their purchase, and as the legal tender money was now all gone Georgie filled out one of the blank checks he had provided with so much foresight. Mr. Ricketts went away with the check but soon came back in a contemptuous and irritated frame of mind. He stated with a needless and indeed meaningless number of adjectives that the check was without value. This Georgie knew to be untrue, but the rude force of Mr. Ricketts' logic and the difficulty of immediately proving the goodness of the check made the situation painful.

By good fortune, however, Porgie discovered that the receiver of the Goose Cattle Company was a friend of his papa and that gentleman not only cashed Georgie's check but took a personal interest in the two young travelers. At the suggestion of the receiver Mr. Ricketts was paid off, as he consented to renounce his engagement in consideration of two months' wages. Several more horses were bought and a wagon was hired for transporting their material into the mountains and their skins and other trophies back to the railroad. Attached to the wagon and to the party of the hunters was an able-bodied veteran who had seen much service in the Grand Army of the Republic and was drawing a pension on account of a distemper contracted during a torchlight procession. He eked out this allowance by the earnings of organized idleness. His name was Pond, and in view of his present occupation Georgie and Porgie thought it would indicate a play of fancy to call him horse pond. This name the teamster resented. He did, however, permit his nominal employers to call him Colonel and was even sufficiently placated by that title to resume his position as chief of the expedition.

With the aid of the receiver Georgie and Porgie had now got ready for their real start. They had supplies of canned tomatoes and canned corn and sardines and Brown's ginger and catsup. The unsalable luxuries of the frontier town had quite completely loaded their wagon. They reserved room, however, for a thousand rounds of ammunition apiece for the rifles and three hundred rounds apiece for the pistols, which they intended to use only for emergencies at close quarters. The Colonel laid in a stock of flour and pork for the general good, and added a private store in a five-gallon keg labeled vinegar. He said, however, that it was not good vinegar, suited for the consumption of people of Boston, so he would use it himself between meals to keep off the scurvy to which he was subject.

The date of departure from the Steer's Paradise was fixed for 6 o'clock on the morning of Sept. 13. The day was Friday, but the party rose superior to superstition, and did set forth at 1 P. M. on that day. At 1.30 they stopped to lunch on sardines and canned corn, but the dust got into their food so abundantly that the viands lost their relish. At 4 o'clock the party passed a house, and the Colonel wished his friends to spend the night

there, but the hunters begged him to camp out as that course was more becoming to their present mode of life. Accordingly the wagon stopped about half-past six at a pool of a rich brown color, which supplied them with water, and as there was no fire wood to be had the party supped on cold canned tomatoes. They then retired for the night. Georgie and Porgie had one handsome blanket apiece tied behind their saddles, and placing the saddles for pillows as the best books advised, they stretched themselves on the stones and prickly pears.

The Colonel had provided himself with a large assortment of bedding, which he rightly thought would appear unattractive to the two young men, and he curled himself up in the wagon box, took a draught of vinegar from his keg, and feeling secure from scurvy for the moment, he was soon snoring soundly. The dog, too, after a supper of sardines, went to sleep without uneasiness, but the young men enjoyed but a troubled slumber. They felt, however, that in a few days they would become inured to the use of saddles as pillows, and that their hardened frames would easily resist the chill of the night air and the roughness of the ground.

In the morning they arose somewhat stiff and fatigued but they welcomed the Colonel's suggestion that they should drive to a farmhouse about four miles off to breakfast, as the water at their camp was of a distasteful character. The saddle horses, however, had not remained near camp, as well-trained hunting horses should, but as they were still visible in the distance the hunters set out, accompanied by their dog, to catch them. The dog took the lead and soon approached the horses, but he barked so loudly and ran so fast as to alarm them. The hunters were obliged to use their utmost speed to head off the horses and prevent them from returning to Steer's Paradise. Luckily they here met a farmer's boy, who told them that they could catch their mounts by driving them into the angle of a wire fence near by. The boy then took some stones which he threw at the dog with precision and force, and soon with the boy's aid the horses were caught and taken back to the wagon.

Porgie wished to reward the boy, but as he had thought it unnecessary and unsportsmanlike to carry money into a wild region he was forced to offer the boy a can of corn. About 10 o'clock the party reached the farm house, where it proved that the Colonel was well acquainted, and soon after they breakfasted on fat bacon and a kind of tea that seemed peculiar to the country. George thanked the farmer for his hospitality, and was surprised by the gruff manner in which his civility was received. The Colonel, however, restored their pleasant relations by giving the farmer a can of sardines, a can of tomatoes and a draught of vinegar, as the people of Monidota seemed very liable to scurvy.

The party then journeyed on through a plain that began to lose its grassy appearance and take on a covering of sage brush. Toward sunset some animals appeared slowly walking along a neighboring ridge. The Colonel said that they were antelope and that the party was in serious need of fresh meat. The Colonel's language was not as polished as this, but his meaning was clear, and the hunters set off after the game. They rode carefully toward the herd and had some trouble in getting the dog to follow them, as he was riding in the wagon on a sack of bacon. At last, however, he did come, and after a time perceived the antelope, who had stopped to inspect the strangers. As long as the antelope stood still the dog followed the hunters full of suspicion; but when the game began to move the dog bounded forward courageously with loud howls. The hunters increased their speed, but the sage brush and the roughness of the ground so impeded them that they soon lost sight of the chase. The antelope they quickly saw about a mile distant, and the dog returned soon after showing his pride at having driven them away. During the gallop Porgie had lost one of his Smith & Wesson navy revolvers, but he thought that he could manage to get along with his rifle and his remaining revolver by using a little additional quickness.

The Colonel was dissatisfied with the result of the hunt, but they drove along until they came to a water-hole, where some stunted willows grew, and camped there. The Colonel showed the hunters how to collect chips for a fire. They piled up several bushels and the Colonel made some coffee and fried some bacon. Both coffee and bacon had an over-powering taste of the acrid smoke from the chips, and the strong wind blew such a cloud of choking dust and vapor from the smouldering pile that Georgie and Porgie were glad to retire to the shelter of the willows with a can of tomatoes and a bottle of catsup. The Colonel, however, seemed to enjoy his meal.

The next morning the weather had moderated, and Georgie, looking out before the dog was awake, saw several antelope regarding him curiously from a piece of rising ground. It struck him as singular that the antelope seemed usually to occupy a commanding position. He decided in this instance to leave the dog asleep and stalk his game as if it were red deer in the highlands of Scotland. He therefore took his gun and crawled some distance on his hands and knees. Then he fired a shot and the antelope disappeared. He at once left his gun among the sage brush and ran forward with his knife to "gralloch" the antelope, as a stag should be "gralloched." He was surprised to find how far it was to the spot where the antelope had stood. He had gone at least a quarter of a mile before he came to the place, and then could find no dead body, although a living antelope was looking at him from a considerable distance. He then went back for his gun, but the sage brush seemed to be all alike, and he could by no means distinguish the spot where he had laid it down. At last he returned to camp, and found Porgie there expectant, but when he found there was no fresh meat to be had they got out a can of corn and a can of currant jelly and breakfasted very nicely.

Although Georgie was now without a gun yet he had two revolvers of Smith & Wesson's navy model, and it seemed to him that by getting close to his game and firing a great many times he could make up for the want of a larger weapon, and that if he ran out of ammunition then he and Porgie could use the gun turn and turn about.

Soon after this they overtook a flock of birds walking along on the prairie. Some of the birds were nearly as large as turkeys, but they were all of a dusty color that made them hard to distinguish from the ground at a little distance. Georgie and Porgie both began firing with their revolvers. No birds were injured by the first few shots, but finally one of the largest tumbled over dead; and they took their game to the Colonel who called it a sage

hen and advised them to clean it at once. This, however, they knew to be wrong, because game of this kind should be hung a long time to get a rich flavor, and therefore they kept the sage hen entire until night when they decided to clean and eat it. The Colonel ate some pork and some canned corn, but the hunters dined on sage hen. It tasted so bitter that they could scarcely relish it, and it made them both very sick a little later, but they did not speak of this to the Colonel, and on awaking in the morning while the Colonel was taking an early draught of vinegar to hold the scurvy at bay, the hunters went to get their horses which they had taken the precaution to tie up, and spied a house whither they went and asked for breakfast.

It turned out that the house was occupied by a young man named Edgar, whom the hunters knew. Edgar's father had bought a ranch for him and settled him in the West to grow up with the country, and had also supplied him with a large band of sheep that he might have a sure moderate income by their wool and their increase, and perhaps gain a good deal of wealth by careful investment of the proceeds. Edgar was very glad to see the hunters and soon told them much about sheep. His own band, he said, had been unfortunate, as their wool dropped off by reason of a disease called the scab, and the young lambs died from a kind of worm in their livers, but he had skillful herders who dipped the sheep in tobacco juice and other things to prevent the scab, and aside from the damage done by disease, old age and hard winters, his sheep were nearly as numerous as at first. He was obliged, however, to go hunting a good deal to pass the time, and he gave the hunters much useful information. First he examined Porgie's gun and found that the front sight which had been knocked off by the baggagemen was still lacking, so he cut a copper cent in two with an axe and made a very good sight of it by filing. He said it was lucky that Georgie's gun was lost, because he had spoiled his last copper cent in fixing the other. Edgar seemed to have a great many guns and he lent one to Georgie and gave the hunters much advice. At Edgar's suggestion they gave the dog to the Colonel and paid him off with money Edgar lent them. The Colonel's supply of vinegar was running low and he was glad to avoid the renewed danger of scurvy, so he went back with the dog and the wagon. Edgar also told the hunters to leave their pistols and most of their ammunition at his ranch, where they could send for them if needed.

Edgar and the two friends were accompanied on the start from the ranch by a neighbor of Edgar's named Sam. Sam had lived a long time in the country and said he was very familiar with it all. Besides this Sam could cook, and assisted by Edgar bound the luggage of the party firmly upon pack horses, for the mountain trails could not be used by wagons. It seemed at first to Georgie and Porgie impossible to fasten their things safely on the animals, but after the operation had been done once or twice it seemed very simple.

Sam said the secret lay in throwing the diamond hitch, so he taught the hunters how to cross the rope and pass the bight under the standing part, which was, he said, "the whole trick." Georgie and Porgie then packed one horse and threw the diamond hitch, but they were troubled by two things—in the first place, the rope tangled badly when they tried to arrange it, and afterward it all pulled out straight when they began to tighten. Sam said it would save a great deal of time for them to take another lesson first, but he never had any leisure to teach them after that, and they were content to leave the matter with him.

The party had killed several grouse and caught enough trout for their needs by the time they had got well into the mountains, but they had seen no larger game until one morning Edgar, who was leading the party, stopped and motioned for silence.

All dismounted quickly, and Edgar said he had seen the horns of a buck over the ridge, and the hunters could now get a shot. Georgie said it had been arranged between himself and Porgie that Porgie should shoot the first large animal they met and he the second, and so on alternately, but Edgar told them both to come and fire the moment they got a good chance. They crept up to the ridge and saw a fine deer standing quite near. Both the young men happened to get ready at about the same moment and their shots came close together. The buck ran away some distance and he looked as if he were going out of sight, but Edgar said he was hard hit and soon he lay down, and by the time the hunters reached him was quite dead. They searched for the bullet wounds, but they could only find one hole and neither of them could remember what part he had aimed at. Porgie knew how a deer should be divided among various claimants when each had a share in the capture, but here there was doubt. Finally they decided that the meat should be common property and that Porgie should have the head to stuff and Georgie should receive the skin for a mat.

That afternoon a message came to Edgar from his herder to say that the sheep were threatened with a renewed attack of the scab and ought to be dipped in tobacco juice again. So Edgar had to go home, but Sam said that he would stay with the hunters and take them to a place where they would be sure to find bear. Sam said the place was about twelve miles off and he knew the way very well. They traveled, however, two days and a half before Sam recognized the desired spot. They made camp very quietly in the evening and ate cold pancakes for supper so that they need not frighten the game with the light of a fire. Early in the morning they rose and looked for bear and bear tracks or other indications. It proved that it was a bad season for berries and Sam said the bears must be back along the range, seeking other food. Georgie and Porgie thought they had reached the back of the range and asked Sam if there were any other back region in the range further back than they were. Sam would not explain clearly, but maintained that the bears must be back along the range because they were nowhere else. While they were discussing this point Sam looked down a small valley and was surprised to see a well-traveled wagon road there. The party approached it and soon met a four-horse team. The driver told them that a newly-completed branch of the railroad ran to a station about half a mile away. This displeased Sam, but Georgie and Porgie thought on reflection that this would be very convenient for them. So they got Sam to pack up their things and made him a present of many valuable articles that they did not want and some money

besides. Then they wrote to Edgar, thanking him for all his kindness and asking him to visit them in Boston. They then made the best use of their return tickets and on their arrival at home they had their trophies put in order. George's mat looked very well at first but the hair proved very brittle and the skin wore bare in spots and had to be thrown away, but Porgie's head was well mounted and still lasts as a handsome memento of their mountain hunt.

H. G. DULOG.

CHAT BY THE WAY.

Being Notes from the Editor's Correspondence.

NOW, however, when the "annual fish" is in sight, I'm feeling in a trifle better shape; the old leaven is working again, and for the past three or four weeks I have at odd times, when off duty, been overhauling my camp outfit and tackle, that nothing may be lacking when the day comes around to start north. As I grow older I believe the love of the woods and the waters grows stronger, and not even grief, or worry, or misfortune can crowd it out of my heart; and a pleasant camp—if only in anticipation—with old and tried comrades, eases the aches and smoothes the rugged places that else would make life hardly worth the living.

I do not imagine I will have very good luck with salmon; usually it is too late when I get down there. It will make a nice outing, and really most of the fun is in planning it ahead and enjoying the absence from business.

Your contributor "Dexter" writes very pleasantly of the Rushmore camp on Long Point, a locality very familiar to me, being only about two miles from my home. It used to be a delightful place, but is rather crowded now to suit those who like seclusion in their outings. Way back in the early sixties I camped there with two others, in primitive fashion, in the rudest of shanties, and with almost as simple a cooking outfit as is recommended by Col. Moonlight, in Mr. Hough's last letter. Except our party of invited friends, we had not a visitor nor a neighbor during those fourteen delightful October days, whose like in all ways I shall never see again. Now from June till November one cannot be alone on Long Point for two hours. The old conditions were far pleasanter to me than the new, but I would like to run across "Dexter" there.

Natural History.

HOW WAS IT DONE?

IN a late number of FOREST AND STREAM one of its correspondents undertakes to explain the reason why a beaver is able to make wood stay under water, by stating that "it sucks the air out of the wood."

The *modus operandi* he, however, fails to explain, and if asked the question at the head of this article, might reply in the same manner that an old friend of my youth used to puzzle the boys.

Old Uncle Gash was beloved by all the boys in the neighborhood, because he used to delight in boys' company on his fishing and hunting expeditions, which occupied all his hours in favorable weather. He was 70 years of age as long ago as my memory carries me, and was still living, and over 90, when I last heard from him; and although he had then given up his favorite sport, fox-hunting, he had lost none of his old-time love of fishing, nor any of the store of stories with which he used to interest his youthful companions.

One that I have often heard him relate, and with which he delighted to puzzle a fresh youngster, was as follows. I will try and follow his language and idiom as nearly as time will allow my memory to recall them:

"Waal, boys, so ye want a story? I'll tell ye 'bout a man I knowed daown in old C'nnec't'c't, afore I moved up here. I was a boy m'self then, an' seed the man a thousan' times; 'tho' I didn't see him jest esackly do what I'm a goin' to tell ye 'bout, 'tho' I've heard a-many a time thet he did it, an' have no kind of doubt but what he did do it.

"Ye see, this man, he went an' made a bet, he did, that he cud jump f'm the top of the steeple to the new meetin' house daown to the graoun', 'thout hurtin' hisself. The day was fixed, an' everybody cum to see him du it, f'm miles aroun', till there was an all-fired great crowd ther.

"Waal, he got up in the steeple, an' he made a speech to the crowd, an' he spit on his han's, an' he swung his arms back an' forth, so's to make a big jump, an' daown he cum!

"He'd only got 'bout half way daown, when, by gorriolly gosh, he seed he'd made a miscalc'lation, an' was goin' to be killed, if he kept on, so he turned right raoun' an' jumped back ag'in, an' come daown by the stairs."

Then the boy, who had never heard the story before, would ask: "But, Uncle Gash, how could he jump back?" And Uncle Gash, with a twinkle in his eye, would reply, "Sonny, that's your question; answer it yourself."

AREFAR.

P. S.—Dear FOREST AND STREAM, count me in on that "Nessmuk" memorial. If ever there was a nature's nobleman, 'twas he, and I hope that every one who has ever profited by his words will promptly respond to this appeal to keep his name remembered.—A.

VARIED PLUMAGE.—A correspondent of the FOREST AND STREAM, in issue of June 4, speaks of a white-winged sparrow. This calls to my remembrance the fact that a robin, one-half pure white, remained about my brother's house in Highland, N. Y., during the summer and was an object of much curiosity. I am hereby led to the inquiry, why domestic fowls, such as turkeys, pigeons and dunghill fowls, have such variety of colors, while the wild birds of the same species are uniform in color? Is it because when some freak in nature's coloring had been observed that such fowls that were domesticated had been selected to breed from?—N. D. E.

DUCKS EAT QUAIL WITHOUT THE TOAST.—One of the strangest things I ever heard of was a feast of recently-hatched quail by, what do you think? domestic ducks. A gentleman by the name of Fitch had a few of the tiny quail, and as they were running about, his ducks came along and shoveled them up in the twinkling of an eye. I do not doubt the story, as it was told me by a man whose veracity I cannot question. The ducks doubtless mistook them for good-sized insects.—N. D. E.

RUFFED GROUSE IN CONFINEMENT.

VINELAND, N. J., June 8.—*Editor Forest and Stream:* There is to me an interesting experiment going on in this city at present, which may be of interest to your readers. A couple of weeks since a farmer near town found a ruffed grouse's nest with the hen sitting. Having a bantam hen at home engaged in the same business he took the eggs home and put them under the hen, which in eleven days hatched out nine little beauties, which the gentleman gave to an acquaintance in town, and I saw them a day or two since. They were confined in a wire run perhaps 3ft. by 2ft., connected with a close coop, and are as regardless of the presence of man as though they were ordinary chicks, most of the time, when I saw them, running around the edge of the run endeavoring to get out. They have nothing in common with the hen, not noticing her call when she has a tidbit or wishes to hover them, or note of alarm. They eat millet, cracked wheat, chopped grass, bread crumbs and hard-boiled egg, being as fond of the last as anything. They have scarcely any inclination to go under the hen at night, the gentleman telling me that he has to drive them into the coop at dark. They are as quick as a flash in their movements and as cunning as you please. The same gentleman hatched a quail in an incubator last year, and now has fourteen quail eggs in process of incubation, the success or failure of which I will notify you.

O. O. S.

THE PORCUPINE.—*Editor Forest and Stream:* I do not doubt that "Lotor" will be able to satisfactorily answer "Backwoodsman," who doubts that the porcupine will "curl itself into a ball when molested," but as he asks who ever saw one do so, I feel called upon to say that I have, many times. "Backwoodsman" probably knows that the porcupine's nose is his weak and vulnerable point; a slight blow there will kill him almost instantly. The next time "B." meets one, if he will take a light switch and apply it to the animal's nose, I venture to say he will see it suddenly become very like a ball. The head will be thrust under the stomach to protect that tender nose, and a round and bristling back will alone be visible. Not a perfect ball, but a very good imitation.—F. L. BALLARD (Springfield, Mass., June 1.).

FALLOW DEER IN NEW JERSEY.—There recently arrived on the National Line steamer Europe three fallow deer (one buck and two does), which were a present from the Duke of Sutherland to Geo. Shepard Page, of Stanley, N. J., who has placed them in his park at Stanley. Three varieties of deer are found in Great Britain, namely, the red deer, the fallow deer and the roe deer, the latter being the smallest member of the deer family and not much larger than a goat. The red deer are found principally in Scotland, where they are hunted by sportsman. The fallow deer are about half the size of the red deer, and are frequently seen in droves of 50 to 150 in the great public parks of England. They become gentle pets and are often seen feeding from the hands of ladies and children.

PURPLE GALLINULE AT SEA.—The Ward Line steamship Niagara brought to this port on its last arrival here a passenger that was not on the manifest. This was a purple gallinule. When nearly sixty miles off the coast of Florida, this handsome bird, thoroughly exhausted, alighted on the awning of the vessel and made no attempt to escape when approached by one of the sailors. The bird was presented to the Central Park Menagerie. The gallinule is an inhabitant of Florida, and is a bird of short flight. The one in question must have been blown off the shore in a storm, but it is remarkable that the bird was found so far from land. For this reason it is an ornithological curiosity. The bird this morning seemed none the worse for its hard experience.—*New York Evening Post.*

Game Bag and Gun.

THE FULL TEXTS of the game laws of all the States, Territories and British Provinces are given in the *Book of the Game Laws*.

WEIGHTS AND BORES.

Editor Forest and Stream:

In a former letter about large and small-bore shotguns, I remarked that the guns generally used in the States seemed to sportsmen in this country unnecessarily heavy. I was, therefore, pleased to read in your paper of Jan. 29 the letter of "20-Bore" showing what excellent work can be done with a weapon of only 5lbs. weight and 20-gauge; but I believe, from the experiments described in my last communication, that a 12-gauge of the same weight would be found still more serviceable.

Various articles which have appeared in the American sporting press within the past few months show that some sportsmen in the States, of great experience, are in dread of serious accidents from burst barrels if very light 12-bores come into fashion. I therefore took advantage of a recent visit to London to call at the shop of Mr. Turner, in Brook street (who was the first English gun-maker to put in the market a 12-bore of less than 6lbs. weight), and examined two kinds of light guns, one called the "Featherweight," which averages about 5lbs. 14oz., and another which weighs only from 5 to 5½lbs. A careful inspection showed that in all the parts where there is any important strain the metal is fully as thick as in ordinary guns of the same gauge. The breech actions and breech ends of the barrels are as stout as in guns of 7 to 7½lbs. weight. In the "Featherweight" the lightness results from shortening the barrels to 28in., putting on a very small fore-end, and cutting away the stock in the following manner:

The other gun is still further reduced by the barrels being only 27in. long, by such parts as the trigger guard, locks, etc., being no larger than in 20-bores, and by the

central rib being very narrow. This is deeply sunk between the barrels and curves up to the usual level at the muzzle and breech. The charge recommended for this gun is that of a 16-bore, viz., about 2½drs. of powder and 1oz. of shot. The manager informed me that all the guns are bored for and targeted with Schultze or E.C. powder.

The balance of these guns is exquisite, and the extraordinary quickness and accuracy with which they come to the shoulder shows that they would be delightful weapons for woodcock or ruffed grouse shooting. For all round work the "Featherweight" would be preferable because it takes the ordinary 12-bore charges, and many sportsmen who have used it state positively that they do not notice more recoil than in 7lbs. guns.

Men differ so much in the degree to which they feel recoil that no one can well judge for another what will be pleasant or otherwise. One of my shotguns is a 6½lbs. 12-bore which does not kick disagreeably at a target when loaded with 3 to 3½drs. of No. 4 black powder and 1 to 1½oz. of shot. When firing at game, or even at small birds plundering my fruit trees, I am perfectly unconscious of the slightest recoil, so can quite believe that a 6lbs. gun would not be unpleasant with these quantities of powder and shot, especially if E.C. or Schultze were used instead of black powder. I have, however, never tried a "Featherweight" and am not likely to do so, having already three shotguns and very little work for them.

It is usually said that the recoil of a gun depends upon the proportion between its weight and the load. This statement should be qualified with the additional words, "other things being equal," for the kick, or at least that amount which is felt at the shoulder, depends very much upon the fit and length of the stock, the boring of the barrel and the manner in which the metal is distributed. A thick mass of the latter in the breech and breech action absorbs much of the recoil, and a long stock causes it to be felt less than a short one. I believe also that guns whose bore is slightly cone-shaped from breech to muzzle, kick more than those which are bored cylindrically nearly all the length and then contracted to a choke within an inch or so of the muzzle. Some sportsmen think that the size of the gauge makes a difference. Sir Payne Gallwey, who is one of the best authorities upon guns in England, remarks in his "Letters to Young Shooters," that "small bores recoil more in proportion than 12-bores, for various reasons." In another place he states that "a 12-bore of the same weight as a 20-bore, and using the same charges, recoils less." It appears that both in this country and America 12-bores are being reduced in weight by making the barrels light. Of course they should then be used only with the loads of 16 or 20-bores, and those sportsmen who wish to use the full 12-bore loads should carefully examine the breech actions and weigh the barrels before purchasing.

The barrels of a 30in. 12-bore of 7 to 7½lbs. usually weigh from 3lbs. 4oz. to 3lbs. 6oz., and if of good Damascus twist are perfectly safe for any charges that can be crammed into the shells. They are sometimes made lighter, even down to 3lbs., but should then be only of the very highest quality and consequently of the most expensive material. For each inch taken from the muzzle about one ounce should be allowed.

If, therefore, barrels of 28in. weigh 3lbs. 3oz., and the breech action be as massive as that of an ordinary gun, there need be no apprehensions as to safety, provided the material be good. With very narrow ribs the weight of the barrels may be a few ounces less. I obtained the following details of the weights of the various parts of guns on the "Featherweight" principle, which may be of assistance in guiding those who are buying light guns.

	12-bores.	16-bores.	20-bores.
Stock.....	2½lbs. 7oz.	2½lbs. 6½oz.	2½lbs. 5oz.
Barrels.....	3½lbs. 3½oz.	2½lbs. 14oz.	2½lbs. 10oz.
Fore-end.....	¾lb.	¾lb.	2oz.
Total.....	5½lbs. 14oz.	5½lbs. 6oz.	4½lbs. 15oz.

These are the weights of hammer guns, hammerless with the Anson & Deley action being about 1oz. heavier in the stocks.

In 10-bore guns the weights are: Stock 3lbs. 4oz., barrels 4lbs., fore-end 4oz.; total 7lbs. 8oz. These are said to give no unpleasant recoil with 1½oz. of shot and 60grs. of Schultze powder, which would equal about 4½drs. of black.

Mr. Lincoln Jeffries, of Birmingham, is another gun maker who builds 12-bores of less than 6lbs. weight, while retaining the full strength of breech and action. I have not seen one, but, from printed descriptions by sportsmen, the weight appears to be reduced much in the same manner as in Mr. Turner's guns. Of course, no one with practical knowledge would maintain that such light weapons have the same killing range as those of greater weight with heavier charges, but it is claimed that they can be fired pleasantly with the usual charges which are found to kill game satisfactorily up to ordinary ranges—say 35yds. for cylinders and 45 or 50 for chokebores. Leaving out duck shooting, there is no doubt but that a man will, on the average, kill more game with a gun which he can carry comfortably and handle quickly at the end of a long day's tramp, than with one of more power, which fatigues him by its weight. Rapidity of aim, particularly in thick brush, more than compensates for extra range.

J. J. MEYRICK.

ENGLAND.

VERMONT DEER.—A Vermont exchange reports: "The frequent appearance of deer within the past two years near the Green Mountain range naturally arouses the anticipation of sportsmen. Hardly a week passes now without the report of some one's having seen one or more of these animals either in some clearing adjacent to the highway or further back in the thicket, while about remote ponds and water courses evidences of their presence multiply, their yards and runways being readily found by woodsmen and fishermen. A favorite haunt of the deer is about old Haystack Mountain, in Wilmington. A few days ago two handsome deer were seen coming out into a meadow near the old Robinson place in Searsburg, and followed by their young they proceeded to reconnoitre the field for a time and finally disappeared. Everybody appears to understand that the law does not permit them to have in their possession one of these animals before Nov. 1, 1900, hence there is no immediate fear of their early extermination and ten years is quite a period for their increase."

SIX YEARS UNDER MAINE GAME LAWS.

VIII.—AN ASPECT OF THE GRAVES CASE.

THE murder of the two wardens, Niles and Hill, by Calvin Graves, in 1886, was the means of calling forth a sympathy for the latter which to those not intimate with all that had preceded must have seemed unaccountable. I do not refer to the reckless talk of desperadoes and malcontents who delight in upheavals; but sober-minded men of character and good repute, who disapproved the act, felt and still feel a sympathy for the actor. Anomaly as this is, it is what has happened before often enough when the side which wielded authority did not do it according to justice.

Of course this murder has been extenuated in every possible way on the one hand, and been intensified with equal ingenuity on the other. It is beyond the province of this paper to enter into any discussion of the case—whether it was in self-defense or otherwise, provoked or not, deliberate or the impulse of a fiery moment. It was done—double murder. The courts have investigated all the facts pertaining and by their sentence expressed unqualified disapproval. There can be no reason for seeking to differ from their decision and to discuss the case here or seek extenuations would virtually be doing this. Yet there is an aspect of the case which did not enter into the trial in court that has had weight in producing the sympathy which I find exists toward Graves.

The trial was for murder. It did not therefore concern itself with questions whether Graves at the time of committing this act was engaged or purposed to engage in breaking the game laws. An authority so high that investigation of the records seemed needless after his statement, has told me that no evidence was brought on to show that Graves was hounding deer. The only testimony on the point, he said, was that McFarland, his companion, went away with the dog and returned with it about noon tied to his belt. The keen eye of the public took note of this fact and the attempt has been made on Penobscot waters at least to show that Graves was the one attacked. Without in any manner pretending to settle the point, indeed without considering it important except as producing sympathy for Graves, we may examine the grounds of this claim:

The place at which this deed was committed is a peculiar one. Five lakes of the same chain—First, Second, Third, Fourth and Fifth Lakes Machias—are arranged almost in a circle, the head of Fifth Lake lying very near to First Lake, with Fletcher Brook cutting off half of the remaining distance, the whole inclosing a piece of land nearly, if not quite, thirty miles in circumference. This unfits it for hounding, because the deer when pursued are quite as likely to run into one of the other four lakes as into the one which is watched. All who are experienced in the use of hounds declare that it is one of the poorest places in the State for that work. There are deer enough within this region, but they cannot be obtained with hounds. Yet Graves and McFarland were hunting here on Nov. 8. Either they were not hounding deer or they did not know their business, say those who know no more of the circumstances than was published in the newspapers. Not only is this section entirely unfitted for the use of hounds, because it is so surrounded by water and devoid of natural runways, but there are no boats on any of the five lakes except such canoes as the Shaws of Lower Dobby own and keep for their own use on the further side of Fourth Lake. It is well known that Graves and McFarland had no boat. This greatly diminishes the probability that they were hounding. They were in a county where deer could not be dogged successfully, where they had not the ordinary means for pursuing them in the water, where there was little chance that they could be posted so as to shoot at a deer on the land because most of it is too flat to afford runways, yet they had a dog with them. It is well known here that there are dogs, rarely but yet sometimes found, which are trained to keep close to their masters and by whining when they catch the scent of a deer direct the attention of the hunter to the right point. When the deer is wounded they will keep the trail when otherwise the animal might be lost. These dogs are sometimes owned and used by still-hunters here, but the practice is not general. Because the location in which Graves and McFarland were hunting was so unfavorable to the use of hounds in the usual way, because also when they came back after an unsuccessful hunt the dog was with them, which would hardly have been the case if he had been put out after a deer and lost him, it has been supposed by those willing to put the matter in as good a light as possible that the dog was one trained to aid in still-hunting and that the men were not engaged in hounding at the time. If this is true—and it is purely a supposition—sympathy with the accused would be the natural consequence; but it would follow equally if the supposition were merely a probability. Having seen enough of the ground myself to judge the matter, and having conversed with those who knew it thoroughly and also knew about hounding deer, there seems to be nothing inconsistent in the theory, though it is probably nothing more than an ingenious explanation of what might have been true if events had been different. No confidence need be placed in the truth of this supposition, for its influence lies in its existence and the absence of known facts to disprove it. It throws the burden of the crime upon the wardens and partially exonerates Graves, which is all that is desired. For, if this is true, though when strictly construed such a use of a dog might be found illegal, it is so different from ordinary hounding that no one here would consider it a violation of the law. Then to the illegality of attempting to take a dog from its owner instead of fining the owner, is added this still further complication of taking a dog which was supposed to be used in a way not contrary to the statute, when the owners, by the testimony given in court, were attempting to carry it off to avoid a quarrel which the wardens themselves provoked.

I give this not because it has any value as fact—probably has none—but because it shows how keen people have been to discover extenuating circumstances, how they seized on the absence of evidence to construct a defense, how they have not ceased to continue to do this. How prevalent this sympathy may be I cannot tell, having deemed it unwise to discuss the matter more than was necessary; but I never heard a woodsman or back-settler speak upon the subject who did not feel less severe in his judgment of the deer than of the deed. On Machias, where the event occurred and the men are known, a very

different sentiment may prevail, but on Penobscot, where personalities do not enter into opinions formed and the knowledge of the facts is very likely limited, there is a sympathy felt and expressed which must be recognized. If the reports which I have received at second hand are at all correct, the feeling is not by any means so limited in its extent.

Although not bearing directly upon the subject in hand, I have deemed it important to speak of this sympathy with Graves and this tendency to find excuses for his deed, because a timely recognition of it is needed. The excuses may be flimsy fabrications, but the sympathy is a fact which must not be denied, and I do not find that in the records that I have kept for the four years past there is any material abatement of it. It is a dangerous element in the present status—dangerous because the feeling is divorced from the ethics of the case, and exists side by side with condemnation of the act, dangerous because it does not stand as staunchly by the decision of the courts as it should, and also because it is shared by honest law-abiding men with the dishonest and lawless. Yet it is the inevitable result of certain given conditions. The representatives of the law had been acting unlawfully, and had alienated from their support a large body of people. Some of them had gone so far that their lives were in danger if they went beyond well understood limits of both territory and action. The provocation was great and long continued, of a kind very often most difficult to prove, highly exasperating to public feeling and yet not sufficiently damaging to property to warrant recourse to law in the cases where proof could be obtained. Appeals to have the wrong suppressed were made and the petitions were disregarded. The dangers feared with sufficient evidence of what occurred under less irritating conditions were detailed and rejected as visionary. There was no redress of the wrongs, but they could not go on much longer without being avenged, and it was only a question of circumstances sufficiently provoking and a man whose judgment or self control had deserted him to decide where the inevitable event would occur. It came like a great shock to one-half of the State, but to another part it was an arrow sped which slacks the tension on the bowstring and brings the bow back to its shape. The hunters, the back-settlers, the people of the smaller towns of eastern Maine were relieved from future fears and a sympathy with the one who had removed from them what might well have happened nearer home was natural. That the deed seemed not to be prompted by personal malice or premeditation removed much disapproval which would otherwise have been felt. That so good excuses as the one already given could be constructed without violence to any known facts was considered an additional reason for allowing the impulse to get the better of the judgment.

I would not wish to over-estimate either the amount or the extent of this feeling, too common anywhere, far too much so on Penobscot. It will do no harm at present, but with the recurrence of conditions similar to the old ones its power will be felt as a serious obstacle to the course of justice. Just how this will occur need not be described, but there is a way already suggested by some which makes it seem better to avoid than to incur the risk. For this danger to the laws and their action seems to me a more serious evil than the loss of life which is also to be feared. Concerning the latter there will be differences of opinion; but the ones to underrate it will be those who know least about it and those who know most will not be likely to tell all they know. In eastern Maine there is continual risk that a repetition may recur, and there is a fear and distrust lest the old conditions may be renewed, thus precipitating the danger. It is not expedient to say why it seems necessary to speak of this sympathy for Graves further than what has been said, but I have heard too much on the subject without seeking it, and been forced to read too far between the lines sometimes when little has been said, to consider the matter one of light import. If local, restricted to comparatively narrow limits, it will spread fast enough; if of wider range it is still worse; but as a fact it must be faced and considered. There is no excitement on the subject now, and this is the time to prepare for the eradication of such a sentiment as this and the protection of our higher forms of administering justice, by a just and equitable enforcement of the game laws by men who will be respected for their personal worth as well as for their office. Otherwise there is danger. A careful study of sociological conditions here and a good acquaintance with the history of the woods for the past sixty years have left no doubt in my mind that murder has been historically much more common than most suppose; that it still is likely to occur at any time when personal revenge or a rude but extra-legal sense of justice demands satisfaction; that it may be committed by men who are not dishonest and who would scorn to do a mean act, and that if the man who does it has borne a fair reputation previously and acts in a way for which any possible justification may be found, he will obtain a sympathy which will hinder the cause of law or largely annul the effect of the sentence. Under our game laws, administered as they have been for the past few years, this is sure to happen in event of another Graves case; for the public conscience has gone wrong and we who have grown up under this strained and distorted condition where officers of justice have been unjust and rights have been made wrong, hardly know what right is and what wrong is in game matters.

FANNIE PEARSON HARDY.

NORTHAMPTON, Mass., lovely for situation and famed as the seat of Smith College, is a center of culture and learning and refinement, but at Barr's, its principal restaurant on the main street, they serve quail on toast in the month of June. If there is a gun club or a game association in Hampshire county, we commend them to secure a revision of the Barr bill of fare.

TOURIST TICKETS.—The Chicago & Northwestern Railway Co. has placed on sale tourist tickets at reduced rates to principal resorts of the West and Northwest, including Colorado, Wyoming, Idaho, Montana, Utah, California, Oregon and the Puget Sound country. Many of these excursion tickets give the holder privilege of going by one route and returning by another, and the favorable arrangements in the matter of return limit, stop over privileges, etc., commend them to the special attention of the tourist visiting the West and Northwest. Full information can be obtained at any ticket office, or by addressing W. A. Thrall, Gen. Pass. & Ticket Agent, C. & N. W. R'y, Chicago, Ill.—Adv.

Sea and River Fishing.

THE FULL TEXTS of the game fish laws of all the States, Territories and British Provinces are given in the *Book of the Game Laws*.

ON THE NORTH SHORE.—VII.

[Continued from Page 390.]

ABOUT 10 o'clock the steam tug arrived, bringing Hon. Aaron Turner, the publisher of the *Grand Rapids Eagle*, a fishing companion, and also a naphtha launch, which was in tow and which had just been purchased in the East by the veteran editor, and I might also add angler, especially for the outing he was now taking. I have no desire to make any disparaging remarks about the use of a naphtha launch on Lake Superior for a trip of this or any other kind; but simply state that since the Atlantic has been crossed by a single man in a smaller boat, there is a prospect that this naphtha launch, which is about 20ft. long, might with safety operate here. But I will assuredly cling to the Mackinac sailboat as the safer of the two. I hope Mr. Turner, who is an old friend of mine, may have many a pleasant trip with his launch, which, in justice to the little craft, I must say steams along o'er the gentle waves like a bird on wing.

The Turner party camped in our immediate vicinity, and in the afternoon, accompanied by Capt. Ganley, took the naphtha launch and went to the other side of the bay to try for trout, but returned in the evening without a scale.

Ned was pleased to meet with the old veteran guide of the Nepigon, John Borshea, whom Mr. Turner had brought with him from the "Soo." They related many reminiscences of angling on that famed stream which deeply interested me. John stated that he had been upon the Nepigon early this season with a party from Pittsburgh, who found the trout more plentiful than ever, owing, he thought, to the low stage of water that prevailed. The men went poorly provided for comfort, having thin blankets and rather slim commissary stores, and were, therefore, soon sick of the trip. The Turner party came over to our camp about sunset, and when they looked into our tent and saw our mattresses in beds of balsam a foot deep or more, our heavy blankets, mosquito bars, inviting pillows and the like, were high in praise of our thoughtfulness, and declared that we had made camp life both a charm and a delight. Ned and I being old campers and on the shady side of sixty, had made somewhat of a study of camping, believing that comforts never came amiss in an outing of this kind.

Ned received by the boat a bundle of papers and some books, which were sent by his thoughtful wife from the "Soo." These were very acceptable, as the papers gave us the first news from home since being in camp. The afternoon had been exceedingly bright and beautiful, and as the evening approached cloud fleeces of orange pushed up over the edge of the west, while a fragrant breeze caressed the lake, sending lilac shudders over the gentle ripples which soon smoldered into smoky gold. The evening being cool, as they always are in this latitude, a roaring camp-fire was built, around which gathered the Turner party, Capt. Ganley and his brother, and the swarthy boatmen, and then story telling and discussion of varied topics, from law to theology, were indulged in till a late hour.

Capt. Ganley announced as he departed that the tug would leave in the morning at 6 o'clock sharp, and advised us not to tarry over our tea and trout if we desired to take passage with him, as he was a decided railroad man as far as the time-table was concerned. We impressed this fact duly upon our boatmen, and then we turned in to court "tired nature's sweet restorer, balmy sleep."

Ned arose early in the morning and awoke our boatmen, who did not seem to relish the idea of going up the lake. We, however, hurried them with the breakfast and the packing, and just made the boat as she was leaving the dock. Joe did all he could to have us left, but being up to his contemptible tactics he did not succeed in his efforts.

We ran along a coast replete in bluffs and cliffs that was every minute increasing in picturesque beauty. Arriving at Mamaine, where Mr. Turner and his party disembarked, and where they expected a most delightful time in the pleasant recreation of coaxing from his watery lair with dainty fly the peerless prince of the spotted robe. The Rasmie brothers have a large fishery here, which has been carried on at this place for the last thirty-five years, having descended from father to sons—the present proprietors.

It is a lovely place, and just before the veteran angler left the tug he took a sweeping glance with an admiring eye at the massive bulwarks of rocks that lined the abrupt shore, and then turning to the verdureless islets gleaming in aged gray, remarked:

"These things delight me beyond power of expression." It was evidently a landscape that any lover of grand and sublime nature would rave over.

"For all is rocks at random thrown,
Black waves, black crags, and banks of stone,
As if were here desired
The summer's sun, the spring's sweet dew,
That clothe with many a varied hue
The bleakest mountainside."

From Mamaine onward the character of the shore changes. Instead of the low sandy islets, we now passed among isolated rocks of greenstone, rising abruptly from deep water, generally bare, but sometimes covered with a tuft of trees at the top. The rock which about Gros-Cap is sandstone, often unaltered, now becomes more highly metamorphic. But the larger islands and the edge under the cliffs continue of sandstone, and are flat and low for some distance to the northward. The line of the cliffs is continuous, rising at a distance of a quarter of a mile at most from the water, with an average of 200 or 300ft. The whole surface, down to the very beach, was covered with trees; indeed, I may say once for all, that with the exception of some ancient terraces of fine sand and gravel, and a few summits of bare rock, the entire shore of Lake Superior as far as we went is continuously covered with forest. The trees continued the same, except that the white pines and maples had disappeared,

The number of species is small; black and white spruce, balsam fir, canoe birch and aspen, with arbor vitae in the moist places, and here and there a few larches and red pines, with an occasional yellow birch; the spruces prevailing on the high land, and the birch and aspen near the water, yet everywhere a certain proportion of each. From the great similarity of evergreens on the one hand, and the white-stemmed aspens and birches on the other, at the distance of a couple of hundred yards the forest seemed to be composed of only two kinds of trees. The trees are not large, usually not exceeding 30 or 40 ft. in height. Yet the whole effect is rich and picturesque. Here, as in all the features of the lake, the impression is a grand uniformity, never monotonous, but expressive of its unique character.

The renowned Agassiz says: "The resemblance to the seashore often recurred to his mind, and according to Dr. Leconte, several insects found here are identical with species belonging to the seashore, and others corresponding or similar. The beach-pea (*Lathyrus maritimus*) and *Polygonum maritimum*, both of them seashore plants, are abundant in this neighborhood; the former, indeed, throughout the north shore of the lake."

The first point of interest we passed was Point aux Mines or Mica Bay, as it is sometimes called. Here was established years ago a very extensive copper mine by an English company, who, after sinking hundreds of thousands of dollars, finally abandoned it as unprofitable. The works are located in a deep cove protected on either side by ranges of rock, with a broad beach at the bottom; and above this is a steep bank, on which at the height of 30 or 40 ft. above the water stands the dwelling of the superintendent, and above it the storehouse, the lodgings of the workmen, etc.

We again refer to the celebrated naturalist, who visited this shore about thirty years ago, and who in writing of the geological character of this lake, says that "the rock at the south of Mica Bay he considers a proof-positive of the correctness of the glacial theory. Its surface was a couple of hundred yards in extent, sloping regularly north to the water's edge. The whole was polished and scratched, except where disintegrated. The scratches had two directions, the prevailing one north 10° to 30° west, the other north 55° west. The scratches on the outer or lake side seemed to have a rather more westerly direction than the rest. Great numbers of these striae could be traced below the water's edge, from which they ascended in some places at an angle of 30° with the surface, showing that they could not have been produced by a floating body. The rock is granite, with an astonishing number of veins and injections of epidiotic feldspar, granite and trap, often crossing each other so as to form a complicated net work. Wherever exposed it was ground down to an even surface."

It was not very long after passing this place when Montreal Island began to develop its wood-crowned shores. It is about six miles from the shore, and contains between three and four hundred acres. Directly opposite the island Montreal River flows into the lake, being about 40 yds. wide at the mouth, and empties through a kind of delta, partly overgrown with large trees. The water is deep and clear, but of a rich amber color, such as is seen in nearly all the rivers on the coast. At its entrance into the lake is a broad beach, which in the south forms a point somewhat jutting across its mouth. On the northern side, at a short distance from the water, the beach, which is of small pebbles, has a very declivitous slope, nearly as much as it could stand. We frequently met with such steep beaches often of a considerable height. Outside there is a bar, which extends entirely across 6 ft. below the surface. The stream issues from the hills through a chasm 6 or 8 ft. deep and a few yards wide, with straight walls of rock, somewhat overhanging on one side. From this gorge the river issues with great force. The cliffs which hem the foaming water are filled with fanciful pictures of curious forms. In rapid succession come castles with moats and towers, heads of gorgons, demons, dwarfs, and the like, and with the dance of sunbeams upon the gray and lichen bulwarks, the scene is one of indescribable beauty and grandeur. Higher up there is a cascade of some 40 ft., falling from a dark, still lakelet, and above this again a succession of seething rapids. Here nature in her great generosity presents a portfolio of lovely views, of tossing torrents, massive rocks, variegated forests and waving shrubbery, that form the material of a landscape that stimulates the imagination, educates the sense of beauty and gladdens the heart. "In these happy spots of nature where land and water, above and below, combine their charms, it is hard to tell whether the stony upland height, or the liquid deep beneath, most lures the sight."

Leech Island, which seemed to possess an arcadian beauty as it nestled lovingly on the gleaming waters of the great lake, was the next object of interest in the picturesque panorama which was being rapidly disclosed to us as the little tug plowed through an almost unruined surface. It is four miles west of the Lizard, and contains about 400 acres, all of which is in dense woodland. Just north of this is a small island called Gull Island, so named from its being a breeding place for the white-winged birds of the icy lake. Four miles beyond this is Gargantua Lighthouse, which is located on a small rock 75 ft. above the level of the lake. It is one of the finest harbors of refuge on the lake, and shows a wealth of wild, entrancing beauty in its moss-covered and storm-beaten rocks, ragged shoreland and receding hills, in whose ravines huge shadows linger and whose tops blaze with morning gold.

Two miles above this, Pictured Island rears up in awful grandeur its solid walls 155 ft. perpendicular, and then comes Little Detroit Island, with its granite ledges running up a hundred or more feet and its channel of about the same dimensions. Just half a mile further on, Gargantua Fall River, a charming little stream, with foaming falls near its mouth, sends its darkling waters into the great lake, and then follows Menaboujou and his wife, being two large rocks, looking at a distance like man and wife, that have fallen into the lake from the cliff above. These are always pointed out with some interest, and it is said that no Indian, even at this late date, ever passes by them in his canoe but that he does not leave an offering of some kind upon the rocks, in order to propitiate the great magician of Lake Superior. This myth is one of the most general in the Indian country. It is the prime legend of their mythology. He is talked of in every winter lodge—for the winter season is the only

time devoted to such narrations. "He leaps over extensive regions of country like an *ignis fatuus*. He appears suddenly like an avatar, or saunters over weary wastes a poor and starving hunter. His voice is at one moment deep and sonorous as a thunder clap, and at another clothed with the softness of feminine supplication. Scarcely any two persons agree in all the minor circumstances of the story, and scarcely any omit the leading traits. The several tribes who speak dialects of the mother language, from which the narrative is taken, differ in like manner from each other in the particulars of his exploits. His birth and parentage are mysterious." Story says his grandmother was the daughter of the moon. Having been married but a short time, her rival attracted her to a grapevine swing, on the banks of a lake, and, by one bold exertion, pitched her into its center, from which she fell through to the earth. Having a daughter, the fruit of her lunar marriage, she was very careful in instructing her from early infancy, to beware of the west wind, and never, in stooping, to expose herself to its influence. In some unguarded moment this precaution was neglected. In an instant the gale accomplished its Tarquinic purpose. Menaboujou is talked of all along Lake Superior. You cannot come to any strangely formed rock or other remarkable production of nature without immediately hearing some story of his being connected with it. He is also the legislator of the Indians, and the great model or ideal for all their ceremonies, customs and habits of life. Nearly all their social institutions are referred to him. Enough having been said about this mysterious being, in explanation of the fallen rocks named after him and his wife, will state that the next point of interest to the lover of nature is Cape Chogg, but a few miles above Menaboujou and his wife. Here the cliffs come down upon the lake, the rocks rising from the water to the height of three hundred feet, with chasms, sometimes vertical, sometimes slightly inclined, and strewn all the way up with stones, like the "slides" at the White Mountains. Beyond this it falls away into a vast basin of green, sloping hills, curving inland and then sweeping out to rocky points beyond. The cliff, wherever the slope allows any soil to rest, is covered with birches to its base, leaving room for a wide slope of debris, and a beach that rises in five terraces, the lower one falling steeply to the water some twenty feet, showing that it alone can be connected with the present level of the lake, and that the rest must belong to former epochs.

The landscapes here are of amazing beauty, being interspersed with islands of varying size, immense blocks of granite, against which the tumultuous waves dash, visions of mountains, so many-tinted and so singular of outline that they almost seem to have been created for the express purpose of compelling astonishment.

"The mighty pyramids of stone,
That wedge-like cleave the desert airs,
When nearer seen and better known,
Are but gigantic flights of stairs.

The distant mountains, that appear
Their solid bastions to the sky,
Are crossed by pathways, that appear
As we to higher levels rise."

Having been somewhat geographical, if not topographical and mythological on the trip, will return to the subject proper, and soon have the reader in camp with us.

ALEX. STARBUCK.

THE JOYS OF DEEP-SEA FISHING.

RECENTLY my brother Bob, who is a more successful angler for dollars than for drum—a member of the firm of Markly, Alling & Co., in the windy city of Chicago—sent me a \$20 Bethabara-lancewood-tip fishing rod, with a \$6 reel, with other piscatorial appurtenances thereto belonging. After showing my most welcome present from my younger brother to my friends in my law office (I am a "*liber et legalis homo*" and work as well as fish), I solemnly promised myself that that rod should have its "baptism" with its silk line in taking in out of the wet a big drum off the coast of Anglesea.

June 1 was the day I selected for my outing to christen my lancewood tip, and it is in the first flush of my victory over a big fish (the *jeunesse dorée*, so to speak, of my piscatorial pride), which leads me to treat you as I treated that drumfish, *i. e.*, to drop you a line.

I meant to be on deck in the gray dawn of the first June morning, and as I sped down through the new-leaved woods and lawns of May, down toward the infinite sea, I sang all alone a verse of Elizabeth Stoddart's anthem to June:

"The spirit of flowers is watching now
As winking in the sun they suck the dew,
The thickets parley with the splendid fields—
What meaneth June to hap us every year?"

It was night when I reached the Hotel Anglesea, and I was a case of "tired eyelids on tired eyes;" and after a sound sleep in the blessed sea air, which to me is ever like Keat's "Lucent syrops' tinct with cinnamon," I was ready to fight a 14 ft. shark or haul in the quick-darting bonita on my silk line with my new reel. Brother Bob (with whom I took my pleasure after gray squirrels in the Indiana woods thirty-six years ago) would have smiled amid his Chicago hardware had he witnessed the boyish pride and genuine enthusiasm with which I enjoyed my rod with a lancewood tip.

I woke at the Hotel Anglesea with my strength renewed like the eagle's and I demolished a breakfast, and the sight of the debris of that matutinal meal made Landlord Smith sigh.

The tide was right, and before my fisherman got ready for our day's outing I went down, rod in hand (and the sand fleas for bait in a small tin box, as I carry small green frogs for fresh-water bass), to the long wharf, where the water was 6 ft. deep. There was a soft south wind rippling the waves, that kissed each other ere they broke upon the strand. I impaled two sand fleas, one on each hook, and threw out my line as far into the "raging main" as I could reach in my first inartistic throw. As I sat with my legs dangling over the wharf, the subject nearest my heart was whether I would miss the big mud-hen tides this September as I did the last: for the "clapper rail" can only be bagged on the Anglesea moors when "moon-led water white" covers the meadows so the adventurous gunner and his pusher can paddle over the marsh grass in a canoe. I suddenly changed my mind from feather to fin by reason of the little thrill running

up my right arm, which said in plain fisherman's English, "That is a drumfish sucking in a sand flea."

I made no motion. I waited patiently sixty seconds. Then I knew that this drumfish was my "meat," for he had got one or more sand fleas and a hook fast in his "inwards." Then came the tug of piscatorial war, which tried my soul more than any legal "scrap" I ever had with that "frosty son of thunder," John James Ingalls Crandall, the legal acrobat I generally clean out when trying a "hoss" case before a Jersey jury.

That drum pulled with the force of one of Ben Butler's "forty jackass power mud machines," but I yanked him toward me, tenderly but firmly, as though I loved him. Then the big fish with the flea and the big hook inside, ran away with my line as the fat lawyer John Wartman chases an "earnest worker" in a beneficial short-term society, ere he thinks his cash has gone where the wood-bine twineth! I trembled for my new silk line, not knowing how, from my coign of vantage on the high wharf, I could pull in my drum.

My "whopper" came up to take a peep at his mortal foe. He churned the water white as he went down head foremost, not liking his new foe with an old face. He sulked as drum never sulked before. I gave him the butt and up he came again like a jack in the box, weakening perceptibly, for the fish had evidently swallowed a power of water.

As he went down again he made a break for Seven-Mile Beach, across the inlet, and ran away with every inch of my Chicago silk line. I was scared again, but held on him hard and the drum soon came up "blowing" with wide open mouth. Then I felt good. His bright sides quivered in the sun. Then I felt better. But I felt best when I slowly reeled in my prize, thoroughly exhausted to where the water under the wharf was only 3 ft. deep, and trusting my pole to my young friend Hampshire (I call him New Hampshire because of his youth) I bade him hang on like grim death to a defunct Scipio Africanus. Without hesitation, accoutered as I was with my best Wanamaker suit on (259 lbs. avoirdupois being my fighting weight) I let myself drop gently into the water, seized my 40 lbs. drumfish by the right gill and yanked him out on the dry sand with a single flop.

Then I gave a yell which mine host of the Hereford House heard half a mile away. Hampshire joined me in a halcyon and vociferous shout, and pronounced that kind of morning fun "heroic fishing."

That drum I bore in triumph to the Hotel Anglesea, and at 4:17 P. M. expressed it to my fellow soldier and fellow statesman William J. Sewell. And that was the way in which I caught my first drum on the first summer day in June.

Dr. Marcy, Dr. Gross and Charles H. Barnard, of the West Jersey Game Society, caught 18 black drum by wading in the surf, early in the week, the big fish averaging 48 lbs. a piece.

The rockfish and flounders are biting well and an occasional 5 lb. weakfish.

Stillwell Ludlam tells me that the spring shooting is good with decoys on Seven Mile Beach. The bay birds are abundant en route to the colder climate north of us where the bullhead plover, avocets or long-legged lawyers, calico-backs, robin-breast snipe, Wilson plover, marlin, graybacks and sickle-bill curlew go to "nest-hiding" and raising their young.

This place is yet the paradise of the genuine fisherman. Some 68,000 black bass have been caught and shipped from Anglesea to New York and Philadelphia during the first twenty days in the month of May.

Two steam yachts, the Wave and the Harvey, jointly capable of carrying 150 people to "the banks," start out every morning when the north wind don't blow and return to an early dinner, laden with the sports of the great deep. The fare is \$1 a head. Three decent hotels The Anglesea, J. J. Sturmer's and Pickwick's Hereford House give the wayfaring man comfortable provision for man or beast at \$1.50 or \$2 a day.

The drum will remain till July, and the honest angler who needs rest and enjoys inlet or deep-sea fishing can find no happier spot than Anglesea. If the lover of rod or gun will come to Philadelphia he will readily find his way here via the West Jersey R. R. And if the angler ever angles at Anglesea there is no doubt that he will come again.

JAMES M. SCOVELL.

MINNESOTA FISHING.

WAYZATA, Minn., June 1.—The fishing season in Lake Minnetonka has opened up in a most promising manner. The law prohibiting spearing and seining is universally observed. Among the fine catches noted during May are those of L. H. Hays and two friends of Minneapolis, who caught 160 black bass weighing 290 lbs. A. Straud, of this place, caught 25 black bass weighing 69 lbs. George Allen, of St. Paul, caught 60 black bass weighing 173 lbs. S. B. King, of St. Paul, caught one pickerel weighing 103 lbs. and 19 bass. The largest pickerel so far reported was taken by John H. Ball, of Minneapolis, and weighed 18 lbs.—THOS. SIMPSON.

ALEXANDRIA, Minn., June 1.—The various club houses on the lakes in this vicinity are being fitted up for the reception of guests. The Miltonia Club of Chicago will have a large party here very soon. They have twenty yachts and a steam launch. The new summer resorts on lakes Darling, Carlos and L'Homme Dieu is the most attractive locality, and a number of cottages are being built. The finest catch of fish so far reported is that of H. B. Pardee and friend, who caught 151 black bass, pike and pickerel in one afternoon.—G. H. ROE.

LITCHFIELD, Minn., June 1.—A number of extra good catches have been made this season with hook and line. Lakes Ripley and Minnebelle are full of fish. A. J. Reeves and two others caught 73 black bass on Sunday afternoon each weighing from 1½ to 5 lbs. A number of persons have caught as high as 30 or 40 black bass in a single afternoon.—JAMES ROBINSON.

FOR "FOREST AND STREAM" READERS.

WE have secured, for the private information of the readers of FOREST AND STREAM, knowledge of a number of streams and lakes easily accessible from this city, where we believe that good fishing for trout and black bass may be had. The information, much of which comes from private sources, we are not at liberty to print, but we shall be glad to furnish it without charge to any reader of FOREST AND STREAM who will apply for it, either personally or by letter.

CHICAGO AND THE WEST.

CHICAGO, Ill., May 29.—I suppose about the dullest reading on earth to the average reader of a shooting journal is that about game and fish protection, this the more especially since so much cry is raised in such matters compared to the amount of wool actually gathered. The majority is more interested in new ways of catching and killing than in new ways of saving and sparing. Nevertheless I can conceive of a large body of readers of FOREST AND STREAM who would be glad to hear of some really good and practical work in the way of protection, and for these it is a pleasure to say something more about the progress of that live young organization, the Kankakee Fish and Game Protective Association, whose birth was chronicled last week. It is a great satisfaction to do this, because everything points to the conclusion that we shall have here a good running mate for the already successful Fox River Association, and because such an organization is almost a necessity for so prominent a sporting stream as the Kankakee, much abused as it is. FOREST AND STREAM seems to have been the first paper to call attention to this latter fact, although the fact has been patent long enough. FOREST AND STREAM was also the first paper to discover the actual good being done by the Fox River Association, and to publicly show the difference between practical protection and a mere talking bluff at protection. FOREST AND STREAM was the first paper to suggest that Mr. Geo. E. Cole, president of the Fox River Association, having shown himself a success there, would be a good man and the best man for the presidency of the Kankakee Association. But then, the fact that FOREST AND STREAM was the first paper in a good many ways is something which is known and goes without saying, so we must not talk about that, the chief fact of interest being the very decent outlook for the Kankakee Association. In short, one would not be taking any risk in calling the Kankakee Association already a silver-trimmed success. It has been started on a good, plain, practical basis, with the understanding that friendship, policy, diplomacy, oratory, resolutions and the like didn't go, and that only results would be counted. A good many similar associations might well cast their eyes on that platform, and it might not be out of the way for them to study the way, brief, direct and eminently practical, in which the necessary steps for organization have in this instance been taken.

A week ago to-day there existed as material for the Kankakee Association simply a mass consisting of some hundreds of sportsmen interested in the Kankakee region. As related last week, these were gotten together at the Possum Club meeting. Such a plebiscite is necessary only in form, as there will always be present many not really interested in the actual work. Out of the total, however, there may be gathered together, as there were here, those who really mean business. The by-laws of the board of directors are the next essentials. The Possum Club touched the button, the directors do the rest. All the management of the association for the year lies with them, and thus further reference to the plebiscite is rendered unnecessary, and a vast confusion of ideas skillfully evaded.

The first duty of the directors was to complete the organization, and for this purpose the directors of the Kankakee Association met last evening at the Sherman House of this city. The virtue of a compact directorate can be seen at once. Out of the eleven directors but seven were on hand. Mr. Fred C. Donald sent a letter of regret, explaining that absence from the city would detain him away. Mr. George Maillet, of Crown Point, Ind., also sent word, by his colleague Dr. Swartz, that he could not be present. Those present were Messrs. Cole, Price, Organ, Nicholls, Card, Swartz and Hough; Mr. Mussey, secretary of the first meeting, also acting as secretary at the directors' meeting. Mr. R. B. Organ was called to the temporary chair. The by-laws were read, and Mr. Cole spoke a few words in explanation, saying that the movement did not protect fish alone, but also game, and that fish protection simply went ahead and paved the way for game protection. The creation of a sentiment in favor of the principles of protection was the first thing.

The important office of the presidency now came up, and this was urged upon Mr. Cole. The entire meeting seemed to feel that he had experience where the others had only good intentions, and that no one else could head this movement, which ought to take no false steps at the beginning. Mr. Cole begged to be let off, and explained how busy he was and how much devoted to the Fox River Association, where all his spare time and money went. Mr. Hills, of the Fox River Association, he said, had just begged him under no circumstances to accept the presidency of the new association. He would help, but he could not lead. He could not go out and raise money, or devote his time as he had done with his pet organization. He did not want the Fox River men to think he had forsaken them or their work.

Mr. Cole's talk made all look grave, for it was not wanted to place him in any wrong position. The need of a definite head, and a nucleus of experience, however, was so keenly felt that no other channel of escape appeared. It was reasoned that the Illinois State Fish Commission, by Dr. Bartlett, had its office right at the side of Mr. Cole's desk, and that if Mr. Cole should unite in himself the heads of the two leading protective societies, the office at 86 Dearborn street would be the focus for the work of the whole State, thus exemplifying still better the doctrine of practical concentration of effort. Finally the motion was put tendering Mr. Cole the presidency as an advisory office, free from all financial care, with an honorary life membership, the promise of active lieutenants, and the record upon the minutes that the Fox River Association must not think Mr. Cole in the least subtracted from their work. In support of this it was argued that many members of the Kankakee Association would doubtless be members of both associations, that no rivalry existed, and that the growth of one meant the growth of the other. Mr. Cole tried to answer to this, but failed, and amid applause yielded and took the chair, the first president of the Kankakee Association. This was a very large step in the right way, and there was no opposition anywhere to this.

Mr. Organ now nominated Dr. H. P. Swartz of Crown Point, Ind., for the vice-presidency, and this judicious movement carried at once. The Crown Point men live near the Kankakee, and they are workers, among whom none better than Dr. Swartz.

For the office of secretary-treasurer there was no choice. Mr. W. P. Mussey, situated as he is in daily

touch with all the sportsmen of Chicago, and being known as he is, was the only man to be considered for a moment, and was at once elected.

The important committee on ways and means now came up. This is the hustling committee, and the one which must raise funds. It was decided to make the number seven. Mr. Abner Price, the father of Chicago sportsmen and as fine a model for all young sportsmen as ever lived, was chosen chairman of this committee. Mr. R. B. Organ and Mr. J. P. Card were elected at once after that. Both of these gentlemen were chosen because it was known they would hustle. It was left to the above three to choose four associates, and they reported in favor of W. P. Mussey, Henry Ehlers, C. D. Gammon and one other. Thus they went outside of the directory for three of their men. Club lines and everything of the like were wisely laid quiet aside.

The president now suggested the committee on fishways. For this Messrs. Cole, Mussey and Hough were chosen. Mr. Cole said that he was practically superintending the fishway work on the Fox River for Dr. Bartlett, and would take it up on the Kankakee also. He could get State Warden Buck, a man of the best experience, to assist in the work on the Kankakee, and could save the Association at least \$100 of needless expense. There is a strong suspicion that the dam owners on the Kankakee will have their fishways in within the next year or so. The so-called Canal dam is the worst, the canal commissioners being loath to spend \$1,500 of their appropriation on a fishway.

The most important committee, that on protection, was now advised for election. This is the committee on disbursement and executive work in protection. It was chosen after careful thought and discussion as follows: Mr. H. D. Nicholls, chairman; Messrs. Wolfred N. Low and Fred C. Donald, of Chicago; Mr. George I. Maillet and Dr. H. P. Swartz, of Crown Point, Ind., five in all. The president was declared *ex-officio* member of all the committees.

The secretary now opened a subscription list. Mr. Cole was formally elected an honorary member at this point, and was requested not to subscribe. The six other directors present, however, each took out a life membership at \$20. Thus the neat little sum of \$120 was the record of the first evening's work. It was voted to put \$75 at once at the disposition of the ways and means committee, to cover the printing of the minutes of the Possum Club meeting for organization, and of the directors' meeting, also of membership tickets. So actual work was begun on the first evening.

Dr. S. P. Bartlett, Illinois State Fish Commissioner, and also the State Fish Commissioner of Indiana, were elected honorary life members.

The secretary was instructed to notify all appointees, and the meeting adjourned on call of the president, subject to notification by the ways and means committee.

As soon as the secretary has the membership tickets ready they will be issued, the amount taken out by any one man being charged to him, and he being duly credited by all the names and cash and by the unused tickets turned in by him. For instance, some one will take say five life tickets and a dozen annual tickets, and give them to Fred Duree, or Mr. Durham, both good sportsmen at Mokence, and both much interested in this work. These men get up their list of membership in Mokence, and send their names and cash and unused tickets back to the secretary. Another lot of tickets will be sent down to Kankakee town and to Crown Point and all the interested towns, while in every one of the big Kankakee sporting clubs the right men will be working up the membership lists and the treasury at the same time and by this same process. There ought to be \$600 raised very rapidly in this way, and that will serve to set a patrolling warden at work, post the game law cards along the stream and start the work on getting the fishways put in. No suits may be needed on the latter. A notification and the assurance that plain business is meant is usually sufficient to cut off a great deal of lawlessness. A test case and conviction or two of the Indiana seiners, spearkers, fyke-netters and killers of illegal summer ducks and woodcock will be needed, but after that the work will be lighter. Protection carried out on these lines will protect, for that has been proved. Is it such a very hard thing to do? To the contrary, it is a very simple thing to do, when gone about in a businesslike way. From the east we hear that Chicago is there considered the leader of the protective movement in the West. Of course she is. Chicago leads in everything. She must lead in this new work and must advance her money with all the accustomed liberality which has made her what she is. But this will be no Chicago movement alone, and the result will be no mere selfish betterment of Chicago sport. This is a movement for Illinois and Indiana and every sportsman of these States within a hundred miles of the Kankakee is interested in this, and ought to stand by it. The Kankakee River has been ravaged, robbed, violated long enough. There are men enough who live or visit along it to prevent this now, and the time and way has come for them to do so.

All this may to many be very uninteresting matter to read, though I am sure I never wrote a line in my life in which I was more interested than these. At all events, this is how the Kankakee Association arose in one week out of the unorganized material, and its plain and easy steps may be of use to any other body seeking to organize for a like purpose. As stated earlier, we have already the Fox River Association, the Rock River Association, the Beardstown Rod and Gun Club on the Illinois River, and now comes the Kankakee Association. Others may follow in this and other States. We are working for a State league out here in Illinois. To any future organization, the advice natural would seem to be, Don't try to cover too much ground, but take one stream or region; don't try to get a large body of enthusiasts for workers, for the enthusiasm of many is expended in talk. Keep it all compact, condensed; keep things hot, and keep on a-movin'. The Kankakee Association will succeed or fail on these lines. In my heart I believe it will be success and not failure, which it will reach.

May 30.—The fishing season is upon us in vigor. Several muscullonge parties are either out or about to start. A pleasant one will be that which starts to-night for Lake Vieux Desert, Wis., via Lake Shore & Western R. R. There will be Charlie Gammon, Harry Nicholls, Tom Cribben and Hi Thomson, others possibly joining them later at their camp, which will be on the spot of their conquests of last year and the year before.

I was talking with a gentleman at Spaldings' the other day, though I did not learn his name. He was about to start on a salmon trip in Canada and informed me that he was just back from the Outanogon River, where he caught over 100 trout one day, averaging nearly up to a half pound.

The regular annual Fred Taylor party has gone up to the Little Oconto for trout. This year there will be Fred himself, Jack Whiting, W. A. Barton, Geo. Nye and one or two others whose names are not caught. They always get trout on that trip. I presume the party will kill 2,000 or be disappointed.

Mr. Wm. Payson and a few friends start also to-day for the Oconto country of Wisconsin and will be in after trout for about ten days.

Several parties will go to Mokence on the Kankakee to-day after bass. I do not think they will get a great many, as the bass have not yet dropped back from above. The latter half of June is the best for that part of the Kankakee, and the best fishing is four to six miles below Mokence. My friend H. and myself made our third trip to Mokence last week. We got about fifty rock bass, nearly all on the fly, and three black bass, two of these on the fly. The bass did not seem to be in that part of the stream, though as usual we only fished right in town along the edge of the island. About ten days before our visit there came up the Kankakee a most remarkable run of rock bass. They were taken by thousands at Mokence. Mr. Strunk, the justice of the peace there, told me he thought a carload had been sent out of the town. One man caught 160 rock bass in one morning. The natives slammed them out in great shape, and I reckon they got the whole run, for not a fish could get above the dam, which was closed again when we were there. I cannot see the pleasure in snailing these little rock bass out on a bait rod, but on light fly tackle they make a good deal of fun. After a good deal of experiment we found silver-doctor and professor the best day flies this time. With these and a big Donaldson for a stretcher we caught rock bass very rapidly from sundown till after dark. They were rising to the slightest ripple of a fly clear after dark. I hooked and landed three big rock bass at one cast in the morning. On the whole, it was very good fun of a humble sort. The black bass that we struck were of the very gamiest sort. The water is very clear and swift, over a rocky bed, on this part of the river.

Yesterday I met a gentleman who was just about to make a second trip to Twin Lakes, Wis. (via C. & N. W. to Genoa Junction). He caught 9 small-mouth bass on the fly there one day last week. He reports jungle-cock, tied with red and yellow blended under the dark wings, as the fly which met success there. There are only a few who fish the fly on Twin Lakes, but often these have good success.

We still have no word from our friend Ed Varus, on Big Cedar Lake (Chicago & Erie Railway to Ora). He promised to write when the bass began to rise. They have been rising well all over the Fox Lake country. Mr. Roth, one of the John Wilkinson Co.'s adjutants, caught 20 bass, big-mouths, on the frog at Loon Lake last week (Antioch, via Wisconsin Central). He started up again last night after more. There are not many boats on Loon Lake, and this party has them all engaged.

Mr. J. M. Clark has made two bass trips, one to Silver Lake, Wis., and one to Willow Springs, on the Des Plaines River, each time meeting with very flattering success. That there is bass fishing in the Des Plaines is true without a doubt, as I have heard of several good catches there, among others one mentioned to Charlie Porter by a friend just in. Willow Springs is a picnic ground on the Santa Fé Road. To get fishing one needs to go about a mile or so above the Springs. I believe it was yesterday that Mr. Clark, his canvas boat and camp outfit included, started with a friend for Burlington, on the Fox, intending to float that stream to Grass Lake. Of their success I expect to have something to say later.

Reports continue to come up of good catches of pickerel and some bass in the Deep River, Indiana, near Liverpool. E. Hough.

THE VERMONT LEAGUE.

PUTLAND, Vt., June 3.—That the officers of the Vermont Fish and Game League mean to carry out the aims of the organization is very evident. Cloth posters containing a synopsis of the fish and game laws have been posted in every railroad station, post office and hotel in the State. A very neat cut of a trout exactly 6 in. long with notice that the League prosecutes violations of the 6 in. law appears in the leading weeklies of the State. Upon complaint of the League, Edward Higgins, of Arlington, was convicted of catching trout in close season (month of April) and fined for one offense \$10 and costs; the fine was made for only one offense, as Higgins is a poor man; he offered to plead guilty to one offense, and remarked with grim humor that it weighed just a pound and three-quarters. Last week the League prosecuted a boy at Brattleboro for violation of the 6 in. law. Amos Weatherbee, of Vergennes, was fined June 2, one offense, for catching bass during the close season, amounting with costs to \$9.50. It appears to be the policy of the League to scatter the prosecutions as far as possible throughout the various fishing resorts of the State. Under the stimulus awakened by the League local clubs are being organized throughout the State, and several prosecutions have been made through their efforts. It is believed that when the people have become more familiar with the fish and game laws and see the results arising from the observance of them, that prosecutions will be of rare occurrence. VERMONT.

Another correspondent writes: "Vermont at last has an association that is in earnest in the work of protection. Not many days ago the Vermont Fish and Game League, whose headquarters are at Rutland, reached out to Brattleboro and chastised certain parties for keeping trout under 6 in. long. This week it stretched forth its hand to Ferrisburgh, and made an example of Amos Wetherbee, of Vergennes, for taking a black bass some days before June 1. According to reports, Amos has often indulged in this illegal pastime, but till now has escaped punishment. The League is entitled to great credit for the promptness and energy with which it attends to all violations of the law reported to its secretary, John W. Titcomb, of Rutland."

The advertisement of Chas. Plath & Son, 130 Canal street, manufacturers of fishing tackle, was inadvertently omitted from our columns on its regular issue of May 28. They are still at the old stand and we hope their friends and the public will extend to them the cordial support which their goods merit.—*Adv.*

THE FISHERIES AT THE WORLD'S FAIR.

Read before the American Fisheries Society by Capt. J. W. Collins, Chief of Division of Fish and Fisheries.

IT is doubtless safe to assume that all who are prominently identified with commercial fishing, with angling, with fishculture, or with the scientific study of questions relating thereto will feel an interest in that section of the World's Columbian Exposition which will be specially devoted to an exhibition of all that pertains to them. It may well be a matter of special gratification that the fisheries will receive more consideration at this exposition than has ever been accorded them elsewhere under similar circumstances. And it should be all the more satisfactory to Americans because heretofore there has never been adequate and suitable provision made at any exposition in this country for a fishery exhibit, and all attempts in this direction have been limited by small appropriations and inadequate space.

It is true that there have been numerous fishing exhibitions in different European countries, some of which have been national and others international. It is also well known that the United States has participated in two of these, and the highest honors were awarded to America and Americans at Berlin and London. But while the National Fish Commission succeeded so well in securing recognition for our fisheries abroad, and though all honor is due to Prof. G. Brown Goode, who so ably represented this country on these occasions, it nevertheless will be apparent to all that, while it was then practicable to illustrate the principal features of American fisheries and fishculture, it was not possible with the means and time available to make a thoroughly exhaustive presentation of them.

Never before has the occasion presented itself to do this, and, as has been stated, it should be a matter of much satisfaction that the management of the World's

cumference, around which will be placed the largest aquaria that it is practicable to use; while in the center will be a pond 20ft. in diameter with a beautiful fountain, beneath the spray of which will disport many ornamental fishes. Entering galleries near the side of the building the visitor will pass two rows of large aquaria, in which, as in those previously alluded to, there will be representations of the fauna of the Atlantic, the Gulf of Mexico, the Pacific and interior waters, including the Great Lakes. No words of mine will, I believe, convey anything like an adequate idea of the beautiful architectural effect of this aquarial building, to the construction and equipment of which the exposition authorities have very generously contributed. I will not, therefore, attempt a description, but will content myself with the hope that all present will be there to see it in the summer of 1893.

In this building the U. S. Fish Commission will make a great national exhibit of our fishery resources, embracing many varieties of fish, marine invertebrates, etc. It is the purpose of the Commission, as it is of the Exposition management, to give consideration to species that are economically important, while the occasion will be improved to call attention to the great work that has been done, by the State and National Governments, in the artificial propagation and acclimatization of fish and other aquatic species, thereby restoring and maintaining abundance in waters that had become depleted by over-fishing or other causes. It is impossible to overestimate the consequence of this work, either in the present or future, and it is beyond question desirable that this opportunity should be improved to make the public better acquainted with it than ever before.

The western building of the group is similar in form and construction to that devoted to the live-fish display. Here it is expected there will be assembled a magnificent and exhaustive exhibit of all that pertains to angling, and let us hope that the thousands of enthusiastic and

may see object lessons which will convey in the most emphatic manner information concerning the methods and magnitude of our fisheries, and their history and development from the earliest settlement of the country. In the same way the world may learn what has been done in America by the States and Federal Government to maintain and increase the supply of fishes by artificial propagation, etc., and may become familiar with the results which have been achieved here by scientific exploration of our inland waters and the ocean depths.

I have reason also to believe that the fisheries of several foreign countries will be fairly illustrated. It is not necessary to speak of how much this will add to the interests and importance of this part of the Exposition, since I am sure this will be understood by all. But it is certain that it must be of great moment to us as a nation to gather here the arts and appliances which are used for the capture and preparation of fish in other lands, for, in addition to the interest we may naturally feel in seeing the exhibits of foreign countries and comparing them with our own, it must be assured that our fisherman can learn many things of value and importance to them by a study of such exhibits.

But, aside from the mere question of trade, and the enthusiasm which comes from recollection of sport we have enjoyed in angling, or the official zeal felt by those who are charged with great responsibilities, there is a peculiar reason why our love of country should prompt us to a special effort to bring prominently to the notice of the world an American industry which has played so prominent a part in the history and development of this nation.

It is not perhaps so well known as it ought to be that fishing was the first industry prosecuted in the Western World, and that it led to the settlement of regions that offered small attraction of other kinds.

It is nevertheless an historical fact that fleets of fishing vessels followed close in the wake of Columbus, and

UNITED STATES FISHERIES BUILDING, WORLD'S FAIR.

Fair have arranged to construct a group of buildings specially designed for the purpose of a fisheries exhibit—an action which should result in the most hearty cooperation of all who are interested in fishing and the industries dependent thereon, and the inauguration of such an effort on their part as will result in making this section of the exposition equal to any in completeness and attractiveness.

Before proceeding to a more detailed consideration of these buildings, permit me to say that the exhibit of the U. S. Fish Commission, illustrative of its work and functions—including scientific exploration, fishculture and fisheries, but exclusive of live fish—will be located in the Government building, immediately opposite the center of the main fisheries building, with which it will be connected by a bridge crossing the ornamental lagoon.

For the reception and accommodation of general exhibits of fish, fisheries, and fishculture, both domestic and foreign, there will be a group of three buildings, most admirably and appropriately located on an island in the lagoon at the northern part of Jackson Park, near the outlet of Lake Michigan. These buildings have been designed in the Spanish style by the well-known architect, Mr. Henry Ives Cobb. They will be somewhat unique, but exceptionally graceful and pleasing to the eye, while their ornamentation, form and dimensions have been considered with the special object of adapting them to the purposes for which they will be erected. Withal, they will have a warm tone of color which will offer a pleasing contrast to the other exposition buildings. The illustrations herewith presented will doubtless render unnecessary any elaborate description, since a consideration of them will enable one to form a correct estimate of the leading features of Mr. Cobb's design.

The main central structure is rectangular in form, 450ft. long and 150ft. wide. This will be the great central hall, where will be displayed all that pertains to commercial fishing and fishculture, including apparatus of capture, boats, vessels, products, models of fish-breeding establishments, ponds, etc.

Connected with each end of the main hall by an elegant curved arcade is a circular building about 135ft. in diameter. The one at the east, nearest the lake shore, will be devoted to an exhibit of living specimens of fish and other forms of aquatic life. Let me say that this building will have a grand central rotunda 180ft. in cir-

public-spirited anglers in America and other countries, as well as all those interested in the manufacture and sale of anglers' outfits, will join hands in making this the grandest display of its kind that has ever been seen. For never in the world's history has there been such satisfactory provision for showing all the details of the gentle art. Not only will there be ample room for installation of exhibits, but here, right in the shadow of the building, fly-casting and bait-casting can be held, and the art of the angler may be tested, from shore or boat, in friendly trials of skill, and in the exhibition of the various modes and methods of angling.

As to what may be embraced in this fisheries exhibit, I believe the classification adopted is sufficiently broad in its scope to permit the inclusion of anything which will be strictly germane to fish or fishing. This seems to cover the whole field, and under it not only will it be proper to show living and mounted specimens of all forms, from microscopic animals to whales, together with aquatic or marine vegetation, and the apparatus for their capture, but it will also include the products of the fisheries and their manipulation in all their varied forms of methods and material. Besides this, there will be ample opportunity to illustrate angling of every description, together with fishculture and the literature of fishing and all that pertains thereto. Indeed, I can think of nothing which would be of value to the fisheries exhibit that cannot properly be included under the classification referred to.

I have thus briefly outlined what has been and will be done by the Exposition management to provide for a great fisheries exhibit. It now remains with others to make this one of the most attractive and successful features of the World's Fair, as I believe it will be: for it must be fairly assumed that those who are interested in fishing and all that pertains thereto will not permit this grand opportunity to pass unimproved. From information now at hand, we have reason to expect marked enthusiasm in this matter on the part of all the fisheries interests in this country, and that as a result there will be gathered at Chicago in 1893 a magnificent and exhaustive display illustrative of angling, commercial fishing, fishculture and the science of the seas. It will thus be possible for the citizens of other countries who are our customers to find there an infinite variety of fishery products—the harvest of seas, lakes and rivers—and the whole world

within a few years after his discovery of America fishermen of Spain, Portugal, England and France were plying their lines on the banks of Newfoundland. The very names of some of our headlands, islands and bays, are suggestive of fishing and the abundance of fish in their vicinity. Capt. John Smith gave the name of Cape Cod to that famous arm of Massachusetts, because, as he said, cod were so abundant near there that they "belabored" the sides of his ship.

It was fishing that led to the settlement of New England. When the delegates from the Puritans went to King James and asked for permission to settle America he with true Scottish thrift, asked what profit might arise. They answered, "Fishing." This seemed to impress the King favorably, for he said: "So, God have my soul; 'tis an honest trade; 'twas the Apostles' own calling." And so this little band of pilgrims established themselves on the rugged rock-bound coast of New England, in a harbor which they described as being in the shape of a fishhook.

The free school, one of the grandest and most important heritages of American children, was first established and maintained from the income of the fisheries at Cap Cod.

The part which our fishermen took in the establishment of the independence of this country forms one of the most striking and glorious pages in the history of the Revolution. Indeed, it is perhaps not too much to claim that the result of that struggle might have been very different had it not been for the courage and aggressive energy of the men who had been trained in our fisheries. On more than one occasion they saved the American army from defeat and enabled it to achieve important victories. I will not stop to recount them in detail, but will simply say that we have it on so high an authority as General Knox, Washington's chief of artillery, that the victory at Trenton—one of the most important of the Revolution—was due, more than anything else, to the part taken in it by fishermen. Years after the close of the war, when General Knox was a member of the Massachusetts Legislature, Marblehead applied for a charter for a bank. There was opposition to it. Then General Knox arose and stated the claims of Marblehead and the reason they should be recognized. "I am surprised," said he, "that Marblehead should ask so small a privilege as that of banking and that there should be opposition to it. Sir, I wish the members of this body knew the people of Marblehead as well as I

do. I could wish that they had stood on the banks of the Delaware River in 1777, in that bitter night when the Commander-in-Chief had drawn up his little army to cross it, and had seen the powerful current bearing onward the floating masses of ice, which threatened destruction to whomsoever should venture upon its bosom. I wish that when this occurrence threatened to defeat the enterprise, they could have heard that distinguished warrior demand: "Who will lead us on?" and seen the men of Marblehead, and Marblehead alone, stand forward to lead the army along the perilous path to unfading glories and honors in the achievement of Trenton. There, sir, went the fishermen of Marblehead, alike at home upon land or water. Alike ardent, patriotic and unflinching, whenever they unfurled the flag of the country.

The privateers of that period were manned mostly by fishermen, and their captures of British merchantmen undoubtedly had much to do with the conclusion of the war and the establishment of American independence. Sabine remarks that the books of Lloyd's Coffee House show "that from May, 1776, to February, 1778, the American privateers (173 in number) made prizes of 733 British vessels, which, with their cargoes, were worth more than \$25,000,000, after deducting the value of the property retaken and restored. * * * The mercantile interests became at last so clamorous as to render the war unpopular, and to embarrass the ministry in their measures to continue it."

I deem it unnecessary to enter into a fuller discussion of the public services of our fishermen, who, in the second war with Great Britain, manned our war ships and swarmed in every sea on privateers, and who at all times, whenever the occasion demanded it, have "rallied round the flag" to maintain and uphold it against all aggression. But I will say that this is a matter that should not be passed unnoticed, and is one that should prompt us to make an additional effort, if need be, in gathering and placing on exhibition at the World's Fair all that may tend to illustrate every phase and condition of those industries in which we are especially interested, and for the conservation and maintenance of which we are in duty bound to exert ourselves to the utmost of our ability.

FISH IN MAINE WATERS.

THE Harry Moore party, already mentioned in the FOREST AND STREAM, is back from Moosehead Lake. The trip was a most successful one, as indeed the trips of this party usually are. There is no use of denying the fact that experience and familiarity with the waters fished has a great deal to do with the success of fishermen. The party took nearly 300 trout, saving none of less than 1lb. weight. Mr. J. A. Faulkner, of Lowell, was "high line" of the party, in the way of the heaviest fish caught. He took a lake trout weighing 21lbs. The fish measured 34in. length, was 10 $\frac{1}{2}$ in. in depth. Across the tail the measure was 10in. A diagram of the trout was shown on 'Change at the Boston Chamber of Commerce the day of the return of the party. It was curious to note the comments of those who saw it, but were not familiar with the possibilities of Moosehead Lake. The diagram was made by laying the trout on paper and drawing around him with a pencil; but the wise ones did not believe that there ever was a trout as large. They nudged one another with the wink that the figure was a put up job.

Those trout at Swan Lake, Swanville, Me., are attracting a good deal of attention. The wonder is that although fishing in the pond has been done for years, and that the lake is within a few miles of the city of Belfast, yet the work of taking of such trout by trolling has waited all these years to be initiated in the spring of 1891 by Fish Commissioner H. O. Stanley. It has long been known that these great trout were in the lake, but no one has succeeded in getting them. One was shown at H. C. Litchfield's tackle shop, on Washington street, Boston, the other day. The fish weighed 7lbs., was 22in. long and 15in. in girth. It was caught by Col. C. B. Hazeltine, of Belfast, who has taken much interest in these trout. By Mr. Litchfield the fish was pronounced a sea trout, and the theory is that they come up the river from the salt water, the lake being not far from the influence of tide water. Others declare that they are only perfect brook trout, grown large from the abundance of the feed in the lake. The fish shown at Litchfield's was pronounced a wonderfully handsome trout. A number of sportsmen visiting that lake have taken remarkably fine fish. Col. Hazeltine is determined yet to take them with the fly, and if skill and energy will accomplish such a feat, he will be sure to do it. Mr. Chickey, subscription agent of the Boston Herald, was at Belfast on Saturday, and was shown a trout just brought in from the lake, that weighed 5 $\frac{1}{2}$ lbs. Mr. Chickey says that they called it a "sea trout," but that he was unable to see any points different from the ordinary brook trout, except that the red spots were less bright, and that the sides were more silvery than the sides of the brook trout usually are. In shape it was a perfect brook trout.

Fishing in eastern Maine is reported to be remarkably good. Landlocked salmon are being taken from Sebago Lake, near Foxcroft, in great numbers, and they are of good size. The record of last Sunday—those fellows will fish on Sunday, for they say that the fish bite better on that day—was twenty-eight, the larger running up to the vicinity of a dozen pounds. It is worthy of note that though this lake was formerly stocked with pickerel, and later with black bass, that the salmon seem to be gaining possession, and to be driving the bass and pickerel into the shallow waters near the shores. The lake is well supplied with smelts, after the manner of the Sebago waters, and the salmon are thriving upon them.

Reports from the Rangeleys are not of as flattering a nature as on former seasons. The exodus of fishermen to those famous resorts has never been greater, but generally they return rather poorly satisfied. I have seen a number of returned Boston sportsmen, and scarcely one of them pronounces the fishing at the Rangeleys up to former seasons. But few big trout have yet been taken, as compared with former seasons. I hear it suggested on every hand that now that the railroad is about completed "clear to Rangeley," that the fishing will be worse overdone than ever. Railroads to the very homes of the trout, with fine hotels and all the comforts of city life, are not conducive to fine catches of trout. Tourists and summer residents may be drawn to the Rangeleys by the railroad, but the sportsmen sigh for the old days when it was a work of hardship to get there; but, oh, the trout that one

could get! Those days are gone forever. The march of the iron horse has driven the buffalo into the past, and the result will doubtless be the same with the trout and the deer.

A party of the members of the Ingewood Club started for the preserves of that club on Wednesday. This is the first full party of sportsmen to these preserves in New Brunswick this season, and they go with great expectations. There is but little chance but what their expectations will be realized, for the club controls some of the finest fishing grounds in the country. The names of the party are: Jerome Hilburn, of Gilman Bros.; Samuel Shaw, of the Murdock Parlor Grate Co.; E. Noyes Whitcomb, of Whitcomb & Burleigh; Gen. W. Walker, of Pawtucket, R. I.; E. H. Sampson, paper and twine dealer; J. H. Houston, of the dry goods house of R. H. White & Co.; W. H. Mitchel, banker; Geo. H. Rimbach, of Goodwin & Rimbach, of the Crawford House; John W. Wetherbee, lumber dealer; H. P. Brigham, Boston agent of P. Lorillard's tobacco; L. S. Brown, of Blaney, Brown & Co. Mr. Brown has taken a great deal of interest in the Ingewood Club. A slight change in the programme of leaving Boston has been made. The party will all go on Friday, with the exception of Mr. Brown and Mr. Brigham, who left on Wednesday.

A late dispatch from J. A. French, proprietor of the Union Waterpower's camps at the Upper Dam, Me., says that on Tuesday C. J. Bateman, of Boston, hooked on to what proved to be a landlocked salmon at 7:45 A. M., but did not land the fish until 8:20. The fish weighed 7lbs. and 14oz. It was 20in. long. It was taken on a Leonard 8 $\frac{1}{2}$ oz. rod and a Montreal fly, in the pool below the dam. Lewis Chadwick did the netting of the fish. Mr. French adds that the fishing is good. In four days 250 trout have been taken. One weighed 6 $\frac{1}{2}$ lbs. and another 5lbs. Mr. Bateman and Mr. Kelley are among the most successful. They fish with the fly only.

SPECIAL.

TROUT AND PICKEREL.

BROOKLYN, May 30.—The gripe seized me on March 28, holding me fast here in Brooklyn for three full weeks, before I could gain strength and pluck enough to get to my home among the hills of H—, Conn., consequently like many another I lost my trouting season almost entirely.

One afternoon Jim was going out to cut the inevitable and annual peabrush and beanpoles, and I mustered courage enough to ride out with him, and while he was getting his load I wet my line in a convenient brook, taking in about an hour and a half, eighteen small trout; and after giving three to a sick neighbor, the remainder made us a good breakfast the next morning. Jim and I went out once after that, and from the same brook took twenty-eight which gave us two pleasant meals. We threw back into the stream many that would not bear the 6in. law test. The same brook had been fished by several others this season with good success as far as numbers are concerned, and I could not help thinking what fine sport this brook would afford if it could only be left unfished for two or three years; and the same would be true of all other streams in that locality. Could this suspension of fishing the streams be accomplished, while I might not "be there to see," I should have the satisfaction of knowing that somebody would have splendid sport. Something has got to be done to protect trout, either by shortening the open season very much, or suspension of fishing for one, two or three years, or else lovers of the sport must content themselves with fingerlings, or in sitting on the fence watching posted-brook fishermen catch trout. I meant to have told you of the big scheme I had for catching pickerel through the ice; and though it is a little "out of season" now, and besides the scheme did not materialize for reasons hereinafter named, it may amuse you to hear it. During last February I had determined trying the pickerel through the ice, and knowing that minnows or baitfish were difficult to procure, I just imagined I could fool the voracious pickerel with spiraling otherwise called smelt; so buying ten pounds of the smallest, dearest and hardest frozen smelt in the market I started. The next day, the only one I had to devote to the pickerel, was "colder'n blue blazes" and I respectfully declined allowing the poor pickerel the unheard of privilege of sampling smelt on so cold a day. So I divided my ten pounds of smelt among my neighbors, saving enough for my own table, and thus ended my big scheme on the pickerel. Now, what I want to know is this. Will some fisherman try smelt for pickerel bait next winter, or will every body laugh at my folly? If I am alive next winter I shall endeavor to give the pickerel another chance at smelt.

A.

AFTER CANADA'S SALMON AND TROUT.

Editor Forest and Stream:

Senator D. M. Read, of Bridgeport, and Mr. and Mrs. Walter Briggs, of the same place, returned here a few days ago from their charming summer headquarters on the Metabetchouan River, a few miles off the line of the Quebec & Lake St. John R. R. They were delighted with their trip and took a very large number of handsome red trout, some exceeding 3lbs. in weight. It is the intention of Messrs. Read and Briggs to return to their preserve in the early autumn, accompanied by other members of the Metabetchouan Fishing and Game Club.

U. S. Consul Ryder, of Quebec, has just made a very large catch, all with the fly, at Cedar Lake, or Kiskisink, which is 135 miles from Quebec. His fish averaged over a pound in weight.

Other large catches have been made in Lake Edward, the largest lake between Lake St. John and Quebec, which measures over 30 miles in length. Messrs. McCormick and Odell, of this city, recently took there, in two days, 60 trout weighing 100lbs., besides a number of smaller ones. Guests at the hotel on Lake Edward, which adjoins the railway station, are conveyed to their camping or fishing grounds by steam yacht. Members of the Quebec Press Club had good sport early this week and took some heavy fish at the mouth of Rat River on the westerly side of Lake Edward. Recent departures from Quebec to Lake Edward include Messrs. P. J. Enwright and A. L. Barrows, of Burlington, Vt., who left here by train yesterday morning. They are both members of the Laurentian Fishing Club and have hitherto done most of their Canadian trout fishing in the lake country north of Three Rivers. The well-known author of "Where the Trout Hide," Mr. Kit Clarke, of New

York, was here a couple of days ago, on his way to his favorite camping ground at Isle Paradise, in Lake Edward, and is accompanied by Mr. Nat Rogers, of New York. The Paradise Fin and Feather Club, of which Mr. Clarke is a prominent member, has a splendid club house on an island in the lake, and Mr. Clarke will probably camp there for two or three weeks and then go to Lake St. John to wrestle again with the gamy ouananiche.

Messrs. William Lee and D. Rickaby took twelve dozen speckled trout last week in the lakes belonging to the latter mentioned, on the line of the Lake St. John Railway, none being under half a pound in weight. Lieut.-Governor Angers has just returned from the lakes of the Laurentide Club with some ninety fish. A 8lb. trout was taken last week in one of these lakes. While the lake fishing has been exceptionally good, nothing of any consequence has so far been done in Canadian trout streams, the rivers being still high, and the snow water from the inland woods being still in them. Indications are that later in the season a number of camping and exploring parties will arrange for excursions this season through the country north of Lake St. John. A New York gentleman, writing to your correspondent, proposes to canoe it up to Ashuapmouchouan for several miles, then, with his Indians, portage or carry his canoe, provisions, etc., into Lac Jeanne, the source of the Was-siemska, which is one of the southwesterly tributaries of the Mistassini River, and float down these streams into Lake St. John. This trip will occupy about a fortnight.

Salmon fishermen are rushing to their respective rivers. There are already on the Restigouche, Cornelius J. Vanderbilt, H. B. Holland, Chester Griswold, Billy Florence, Dudley Olcott, Abraham Lansing, Charles Berryman and W. H. Sage of New York, and Messrs. I. H. Stearns and Ives of Montreal. Henry Hogan of Montreal left to-day for St. Aune des Monts to fish the St. Aune River, and R. G. Dum of New York and Hodges of Boston are on the Natashquan on the north shore. On another north shore river, the Moisie, are Messrs. Amos R. Little, David G. Yates and Edward P. Borden and party of Philadelphia. On their return from their salmon expedition they will fish their trout preserves on the Metabetchouan, probably in August. The Watchichou, on the north shore, will be fished this summer by Mr. L. Pike of New York.

E. T. D. CHAMBERS.

QUEBEC, June 5.

ANGLING NOTES.

AN enthusiastic fly-fisherman residing in California writes for information regarding the Dolly Varden (*Salvelinus malma*). He complains that they will not rise to the fly, though they take bait very well, even the humble "barnyard hackle," generally known as "wums." He is of the opinion that they need educating, and suggests the introduction of a few of our sprightly Eastern brook trout for companions in order that a good example might teach them to appreciate the beauties of the "fluttering fly."

Many others have made inquiries about these Western trout, and the subject has been pretty well discussed, still such matters are always interesting to fishermen, and particularly to those who are about going on Western trips.

I have fished in some of the waters of the far West, and, as far as I could observe, I found three species of the salmon family, the Dolly Varden (*Salvelinus malma*), the black-spotted salmon trout (*Salmo mykiss*), and the rainbow (*Salmo gairdneri*). The natives call these by all sorts of names regardless of rule, and it is impossible when they speak of "mountain trout," or "spotted trout," or "salmon trout," or "brook trout," etc., to know what they mean or what species they refer to. The Dolly Varden is the only true trout or member of the *Salvelinus* family found on the Pacific slope, but its habits resembles the lake trout more than the speckled trout. We could not catch them on the fly, though I was told that they did occasionally take a bright salmon fly. What few we caught we took by trolling with a mottled pearl bait. It was in the month of September and they were just spawning, so we did not make any great effort to capture them. The largest we killed weighed 9lbs.

The rainbows we took were small and did not seem very anxious to make our acquaintance. These fish spawn in the spring and were as indifferent about our flies as their brethren that have been introduced in our own waters. The *Salmo mykiss* or *purpuratus* (the black spotted trout) was decidedly superior to the rainbow. They took the fly boldly, fought bravely and were a fine fish on the table with firm pink flesh. They vary very much in color, and the male and female are so different in appearance that many of the resident fishermen consider them a different variety. They are found in all the Western lakes and rivers and furnish food and sport to thousands of anglers.

The quiet colored flies seem to be the favorites, such as the light and dark-coachman, brown-palmer, professor, brown-hen, golden-spinner and crowding. The addition of jungle-cock shoulders adds to their killing qualities, and the patent fluttering flies are great favorites in the West. The sizes of hooks depend on the waters they are to be used in, the same as in the East, but No. 8 will answer for most localities.

When first visiting the West the Eastern angler will find some difficulty in hooking these fish, for they show their salmon blood in the manner of taking the fly, and it does not answer to strike them quickly. All that is necessary is to tauten the line as they turn to go down. They are splendid fighters and jump freely, and a 2lbs. fish will take off line in a manner that will make the reel buzz. They also spawn in the spring. Why these fish were not introduced on the Atlantic coast, instead of the rainbow, is a mystery that will never be explained.

SCARLET-IBIS.

SKOWHEGAN, Me., June 9.—Large forest fires are raging in the vicinity of the Upper Enchanted Ponds and on the Parlin Stream. The region within a radius of thirty miles is completely enveloped in a dense suffocating cloud of smoke. The extent of the fires is unknown, but it is feared that all the dams on the Parlin Stream and the lumber camps there and on the Upper Enchanted will be destroyed. Nothing but rain will keep fires from spreading.

UNEQUALLED FOR USE IN ALL STABLES.—The harness dressing prepared by Frank Miller & Sons is one of the most desirable articles for livery, express and private stables, for it is simply a finishing dressing and the best ever manufactured.—Adv.

"TACKLED A STURGEON.—There was a lot of fun in the Oswego River below the Northwestern elevator yesterday. When the big barge Resolute was going out her wheel came in contact with a large sturgeon, which was stunned by the blow and came to the surface, where he lay apparently lifeless. Several lumber shovers who were on the dock saw his sturgeonship and half a dozen of them jumped into a boat and went out to secure the prize. Among the number was "Alf" Moran, the wrestler. When the boat was alongside of the big fish "Alf" threw both arms around the smooth and eel-like skin of his sturgeonship and endeavored to lift him into the "punt." The sturgeon, however, was in no mood to be trifled with. The wheel of the Resolute had dealt him a hard blow and he was not feeling well. When he discovered himself in the clasp of the brawny longshoreman, he brought his big flat tail around with all his might, struck his captor full in the face, and with a parting kick slid from his embrace out into the river. The crowd laughed and "Alf" got mad. He was determined to capture the sturgeon if he had to go into the river and fight it out there. Grasping the oar he sculled out into the stream and renewed the contest. The sturgeon wriggled, twisted and squirmed, but it was no use. "Alf" had him fast around the middle, and the squeezing he received must have made his sides ache. To lift him into the boat, however, was another thing, and as the men present refused to lend a hand it was no easy job. At last "Alf" got his hands into the gills of the big fish, and with a mighty effort threw him into the boat, amid the applause of half a hundred longshoremen who had witnessed the contest from the docks. The fish was taken to "Tosser" Griffin's and found to weigh just seventy-one pounds.—Oswego (N. Y.) *Palladium*.

NEWFOUND LAKE.—Salem, Mass., June 5.—I noticed in your issue of June 3 an article entitled "Newfound Lake, N. H.," by "P. L.," which seems to be largely in the interest of the hotel keepers in the vicinity of the lake. I think your readers should hear the other side, or from the less fortunate ones who have visited this beautiful lake. I with several friends spent considerable time trolling the shores of this lake, and with all our best efforts we only succeeded in capturing one fish, and this one was the only one that took our bait while fishing there. We put in about 15 hours each day; from nearly fifty persons fishing at that time on the lake (and this was the height of the fishing season), I could not learn that more than one in ten had succeeded in taking a fish while I was there. Now, if our friend "P. L." will tell us how Mr. Geo. H. Fowler, of Bristol, N. H., succeeded in taking seventy-six fish weighing 684 lbs., we will gladly pay any reasonable price for the recipe, and as we do not wish to depopulate the lake in one season, and are perfectly willing that others should have a chance to take a fish, we will sign an obligation to leave off the seventy and content ourselves with the six fish. If it was possible that Mr. Fowler did or could take seventy-six fish in one season from so small a lake (which must have necessitated his going into the fish business, to say the least of it) there is no credit to him in the eyes of all lovers of our beautiful game fish, who will, wherever found, be more ready to protect and seek to increase and multiply them than to exert every energy to capture the greatest number possible.—BRUN.

CANADIAN DUTIES ON RODS AND GUNS.—June 6.—I have read with a great deal of interest the two communications in this week's FOREST AND STREAM regarding Lake St. John. A friend of mine fished there last summer and tells me it was the most interesting, exciting and satisfactory fishing outing he ever enjoyed. There is one matter of which I have seen no mention in print which the sportsmen of the United States should be acquainted with, and that is that the Customs authorities of Canada require a duty of \$7 to be paid on each rod, reel and gun. It is, it seems to me, rather a suicidal law for the Dominion of Canada, and I presume after having been in operation for a year or two will be repealed. In my own case, I obtained from the Customs department at Ottawa instructions to the Collector of Customs at Quebec to accept a deposit on rods and tackle, to be refunded on my leaving Canada. The commissioner wrote me that application for remission of duties were very numerous, as I can readily believe.—H. S. CHANDLER.

THE KANKAKEE RIVER QUESTION.

Editor Forest and Stream:

In answer to Mr. E. Hough's article in a recent number of the FOREST AND STREAM, in which article he dilates upon the beauty of the Kankakee River, the city of Moline, and relative to the fish and game laws not being properly enforced, I have a few remarks to make upon the subject.

I was once a citizen of Moline, and was appointed fish warden at that place in April, 1890, but since that time I have located at La Salle, Ill., where you will find me still fighting in behalf of the fishy tribe. Any one can testify as to my work at any point between Seneca and Henry, Ill. This, the Illinois River, is the home of the bluegill, but I think it will find more respect in the law in this territory this year than has been had for years past, and I am assured by the pole fishermen that the fish are much more plentiful and much more easily caught than formerly at this point.

I agree with Mr. Hough as regards the Kankakee River being a lovely stream, and think he will find as good fly-fishermen at Moline as ever handled a rod or cast a line in any stream in the State. Among those whom I might name, and who would be pleased to meet Mr. Hough should he again visit Moline, are Messrs. W. M. Durham, Col. F. Duryee, W. P. Watson, J. D. White, Fred Knight and numerous others.

As to lawless fishing, the river is practically a protected stream, taking into consideration the Illinois River, as I have made three seasons of nets this season, viz.: April 15, seven nets at Peru, Ill.; May 13, twelve nets between LaSalle and Hennepin; May 26, left LaSalle in company with two assistants, Messrs. Wm. Halen and Edward Shannon, at 8 A. M., and arrived at Henry at 4:30 P. M., a distance of thirty-five miles, in row boats, and confiscated two winged like and one trammel net. These latter nets belonged to parties who were in the act of illegal fishing, but upon our approach fled to avoid arrest. This shows that twenty-two nets have been confiscated by me since the close of the season. One must take into consideration the amount of work done and time involved in this, and all without recompense or remuneration for so doing.

I launched my skiff at Moline and traveled to the mouth of the Illinois, then down to Marseilles, and made an inspection of every dam on the river. I also served fishway notices on the parties owning or controlling these dams. What more could have been done? If, as you say, a company or association is formed to proceed with the work and bring legal proceedings for damages where fishways are not constructed, we can give the fish free passage up and down the river; but, until that time we are helpless. There are eight dams in the Kankakee River, viz.: Moline one, 6 ft. in height each; Waldron or Aroma one, 6 ft.; Kankakee one, 8 ft.; slack water navigation dam above Wilmington, 17 ft.; Wilmington one, 6 ft.; slack water navigation dam below Wilmington, 7 1/2 ft., and is open for fish; Feeder dam, 6 ft., then comes the first dam on the Illinois River, at Marseilles, 9 ft., and is without

fishway. There is a fish warden, Mr. M. R. Kelley, at the Feeder dam above mentioned, and whose post office address is Wilmington.

As regards the spearing of fish at Moline, Mr. Hough claims to have noticed a dozen or more spearing lights even inside the city limits. Let me ask if Mr. Hough could not have ascertained the names of at least one of the parties who were spearing and had them brought to justice? How often do complaints of like nature come to me from parties who know the facts, yet are not willing to give the names of those who persist in the violation of the law. And again, the writer of the article published admits that he purchased a bass weighing 4 1/2 lbs., and which had been speared. He must know that the purchase of or having of fish in possession which have been caught in an unlawful manner lays the purchaser liable to the law, and more especially when the unlawful act is known to have been so. Such acts do not have a tendency to stop the spearing, but on the contrary encourages it, from the fact that the spearkers find sale for what they catch. This cannot be gainsaid.

It has been my experience to find more trouble with parties who own or control club houses than with those who follow fishing as a means of livelihood. The former hold they have a more legal right to fish at any time than others, as they control, or claim to control, the water at the point where their club house is located. In this last I can and do speak from actual experience.

In speaking of the Fox River Association and its method of working, all are heartily in sympathy with it and we can see the benefit of it. Its members are to be congratulated for their efforts in behalf of the fish, and it would be well to have more of a like nature within the State.

In conclusion, I trust Mr. Hough will not in any way feel offended at these remarks, and I should be greatly pleased to meet him at any time. I shall do all that lies in my power to protect both fish and game. M. D. GREEN, Fish Warden.

LA SALLE, ILL.

THE FOLLETT PATENT AUTOMATIC FISHING ROD BUTT AND REEL has received the endorsement of our most expert anglers. The entire mechanism is contained in the butt, weight being so centralized that balance is given to the rod and no fatigue to the wrist experienced. The reel can be exchanged for different weight at pleasure. The brake is operated entirely by the hand holding the rod, leaving the other free to handle net or for other purposes.—Adm.

The Kennel.

All communications must reach us by Tuesday of the week they are to be published; and should be sent as much earlier as may be convenient.

FIXTURES.

DOG SHOWS.

Sept. 1 to 4.—Dog Show of the Youngstown Kennel Club, at Youngstown, O.

Sept. 9 to 11.—First Annual Dog Show of the Hamilton Kennel Club, at Hamilton, Ont.

Sept. 14 to 18.—Toronto Industrial Exhibition Association Third International Dog Show, at Toronto. C. A. Stone, Sec'y and Supt.

Sept. 22 to 25.—Inaugural Dog Show of the Montreal Exposition Company, at Montreal, Canada.

Sept. 29 to Oct. 1.—Third Annual Dog Show, in connection with the Central Canada Fair, at Ottawa, Ont. Alfred Geddes, Supt.

1892.

Jan. 13 to 14.—Second Annual Dog Show of the South Carolina Kennel Association, at Columbia, S. C. F. F. Capers, Secretary, Greenville, S. C.

FIELD TRIALS.

Nov. 2.—Inaugural Trials of the United States Field Trial Club, at Bicknell, Ind. P. T. Madison, Secretary.

Nov. 16.—Eastern Field Trials Club's Thirteenth Annual Trials, at High Point, N. C. Members' Stake Nov. 12. W. A. Coster, Secretary.

Nov. 30.—Central Field Trial Club's Third Annual Trials, at Lexington, N. C. O. H. Odell, Sec'y, 44 and 46 Wall street, New York city.

Dec. 14.—Philadelphia Kennel Club's Field Trials. Charles E. Connell, Secretary.

GREYHOUNDS AT CHICAGO.

Editor Forest and Stream:

One of the privileges which the dog fancier jealously guards and much enjoys, is addressing questions for information to the papers that publish a kennel department. Any person in good standing who seeks information either for himself or for another, and who advances his questions in a courteous and proper way, has the right to expect a courteous and intelligent answer from the paper consulted. In its "Answers to Correspondents," as well as in the matter of foot notes, the FOREST AND STREAM has always been well ahead of its competitors in this country. Its replies have been marked by ability, sound advice, conciseness and strict adherence to facts pertaining to the question involved. Evasive, misleading, unintelligible, inaccurate statement is something that the paper has always, since I have known it, left others to wallow in. When I recently addressed a few pertinent questions to your kennel editor about a wrong report, an erroneous award and certain incorrect and misleading statements that had unfortunately gotten into the paper, I had every reason to believe that his answers would be as they had been before—sound, explicit, relevant and correct. Instead of such answers you have, carelessly I hope, printed a foot note which I have no hesitation in saying neither FOREST AND STREAM nor anybody else can make sense of or understand, the foot note itself justifies this statement. Instead of answering the questions asked, clearing up matters, and telling us what is right and what wrong, your kennel editor has contradicted himself, beggared your readers, and left matters in a much worse condition than ever before. Surely Mr. Lacy does not realize what that foot note means to FOREST AND STREAM, if it is placed on record as it now stands. Therefore, may I again, in a most friendly way and for the benefit of those dog men who cannot understand that foot note, ask Mr. Lacy for relevant and explicit answers to the following questions:

1. Mr. Lacy tells us that he did not intend to write that a greyhound should have a short back, but that he meant to say "short loin." In view of the fact that he had already written about the dog's loin this seems strange; but what does he mean by telling us, after having distinctly stated that the loin should be "short," that "we still maintain that the short and strong loin, comparatively speaking, is what is required"? What are we to understand from these conflicting statements? Should the loin be "short?" as stated in the Chicago report, short in comparison with the length of the back or short in proportion to the length of loin seen in other breeds?

2. Is there not other evidence besides the Chicago report which goes to show that Mr. Lacy has called for short back when it should not be short?

3. Mr. Lacy tells us that the greyhound Mother Demdike is faulty in back and ribs. Will he kindly state in what respect she is faulty?

4. Mr. Lacy says: "To prove that we did not mean that a greyhound should have a short back it was only the week before, while judging at Boston, that we put back an otherwise good hound, Imperator, for that very fault." Now, as a matter of fact, Mr. Lacy did nothing of the sort, which is proved by his report on the greyhound class at Boston. This is what he said (FOREST AND STREAM, April 9): "Imperator by some mistake was either not in the ring or was sent out by the steward." The report goes on to say "though too short in back, etc." And Mr. Lacy asks me to accept this as "proof" that he "did not mean that a greyhound should have a short back." Does it not seem strange that a judge should put a dog back for having a short back when he never saw the dog in the ring? Will your kennel editor kindly explain just where the "proof" comes in?

5. In regard to the "wonderful rib development," Mr. Lacy answers as follows: "Rib development does not mean great spring of ribs, which a greyhound should not have unless he has the necessary chest development to support it." This is entirely too much for me. How could the dog have the "necessary chest development" to support "great spring of ribs" if he did not have the "great spring of ribs"? Mr. Lacy has overlooked the fact that the formation of the ribs has quite a little to do with the development of the chest. Will he kindly explain?

6. "Rib development," says Mr. Lacy, is "that length of back between the neck and the last rib" that "Stonehenge" speaks of. There is not a particle of evidence to show that when "Stonehenge" wrote of length of back he meant development of ribs or anything else. He intended to say exactly what he did say. Does Mr. Lacy seriously state that his allusions to "wonderful rib development," "rib development," etc., referred to the "length of back between the neck and the last rib"? He might just as well tell us that the length of head means length of tail. One statement is as reasonable as the other.

7. Mr. Lacy asked us to believe that Lord Neverstill, "like all of his breeding, is not well let down behind." The statement does a grievous wrong to every owner of dogs of this strain. Lord Neverstill comes of illustrious stock and from two families which are as well let down behind as any in the world. If the statement is indorsed by authority, or if a particle of genuine proof can be produced in support of it, will Mr. Lacy kindly name such authority and state where such evidence can be found?

I asked if Mr. Lacy and Mr. Fellows, who had awarded prizes to a prick-eared greyhound (not a greyhound that "occasionally" elevated its ears), would confer the same honors upon prick-eared greyhounds when shown in fairly good company. The answer was that another judge (the writer) gave third prize in a strong class of thirteen dogs to a specimen with a "half inch overhanging top jaw." It is only a few weeks since Mr. Lacy informed me that this dog was overshot fully an inch. Now he has it half an inch, and I am in hopes that next time he will get it right. But what has this got to do with a question for information courteously asked? Two wrongs do not make a right. The question is, Would those gentlemen again award prizes to prick-eared greyhounds shown in a class that is fairly good? I am quite willing to discuss my awards at the proper time and in the proper place, and do it in such a way that your readers will understand what I am writing about. CHAS. H. MASON.

NEW YORK, June 8.

[Notwithstanding Mr. Mason's formidable array of questions, they are only a reiteration of what was fully answered in our last week's issue. If Mr. Mason cannot understand our answer we know of no further remedy. Besides, the subject is of hardly sufficient interest to merit a newspaper controversy.]

Editor Forest and Stream:

I am very sorry indeed that my friend, Mr. Chas. H. Mason, should have been abused on my account, but I am now in a position to know that greyhounds had nothing to do with the matter. I know what caused the trouble, but am not at liberty just now to tell. If the editors of the daily papers referred to had asked my opinion, I should have told them that I consider Mr. Mason the best judge in America, if not in the world. I think he could detect a fancy point in a dog through a brick wall quicker than I could with a microscope.

About Elcho at Kingston, I will say that he did not have prick ears when in the ring, but when taking notes of the dogs on the benches I did see his ears elevated slightly, but not by any means a prick ear. My hobby is work. I gave first prize to the dog I thought could go the fastest and last the longest. It would have made but mighty little difference to me if he had shown prick ears. I have read of a variety of greyhound called Heatherjocks, they had prick ears or large upstanding ones, but I did not read that it hurt their running in the least. Of course, in a high class of greyhounds, other things being equal, I would peg the dog with prick ears back. The colt, champion Tex, had one prick ear; I exhibited him from Ottawa to Washington, and no judge ever caught him with his ear up when I was showing him.

I don't want any newspaper controversy with Mr. Mason, his guns are of too large a caliber for me. I have no time to write, as writing won't buy the kid a coat, but I thought I would set Mr. Mason right, as I know Dr. Mills had nothing to do with the letters to the Toronto papers. J. OTIS FELLOWS.

HORNELLVILLE, N. Y., June 7.

TWO MATTERS.

Editor Forest and Stream:

It gives me a great deal of pleasure to verify, in the most positive manner, your supposition that Dr. Mills had no share in the vulgar abuse showered on Mr. Mason in some of the Canadian papers. I holding Dr. Mills's letter, strongly denouncing the whole business and expressing his contempt for the low vulgarity of these attacks. Further, if I am not mistaken, Dr. Mills has condemned these attacks in the *Canadian Kennel Gazette*. Few things worry me more than to have men I know to be honest and aiming at the right for the right's sake, fall out, and while Mr. Mason and Dr. Mills will probably never agree in their notions as to dogs, they are in accord in contempt for crookedness of all kinds, and this bond should keep them at least respectful to each other, differ as much as they may. However, I suppose it is a necessary preliminary to knowing and appreciating Mr. Mason, to first have a fight with him, for really I do not now remember one of his many friends, who so thoroughly esteem him, who did not begin by a fight, and not a few found themselves in my fix of long ago, obliged to apologize to him for wrongs done him.

I think there may be another explanation of the waning interest of hounds in pursuing the trail of wolves than that suggested by Mr. Lort (vide your paragon page 400). Dr. J. B. Grimes, an old foxhunter, and one of education (not the rule with the foxhunter), told me that some years since a pack of wolves broke over into the neighborhood of Kingwood, West Virginia, from Hoyer's (or some of the other "wildernesses") of West Virginia, Maryland and Pennsylvania) and that upon attempting to hunt them with their foxhounds, they found the dogs entirely indifferent to the scent. Yet these hounds were thoroughly reliable on the trail of fox, deer or wildcat. It could not be fear of the quarry, for a hound that ever had a taste of an old "Tom" wildcat need not count a wolf a serious job to tackle, and although rather cowardly when not on chase, it is very rare that a hound shows signs of fear when aroused by the excitement of a hot chase, the exception of this being striking a hornet's or yellow jacket's nest. Crowder had killed two wildcats singly and got frightfully torn up at each kill, yet he would drop his tail and run his best at the first taste of any stinging insect. To return to following the wolf trail, I suspect that the reason for the indifference of the hounds is that the scent too closely resembles that of their own kind for them to recognize it as game, yet as hounds seem to be used for trailing wolves, both in our West and in Russia, there must be enough difference in the scents for hounds to be able to discern it. On this point some of your western readers should be competent to speak, and would do us a favor by giving us the facts as to how hounds trail wolves, whether naturally, or by special training. W. WADE.

HUTCHINSON, Pa., June 6.

DOG CHAT.

WE have noticed a decided improvement for several weeks past in the kennel department of the English *Fanciers' Gazette*, showing that there was evidently a wide awake writer doing the kennel pars. A Scotchman, Mr. J. B. Smith of Glasgow, has, it seems, taken charge of this paper's kennel interests. Mr. Smith is well-known in Scotland as a breeder and exhibitor of fox-terriers and a member of the Scottish Kennel Club. Before journeying down to London town, he was given a dinner by his friends in the Land o' Cakes, and judging by the encomiums passed upon him and the improved appearance of their kennel department, our English contemporary has made a good move.

Though the arrival of Scottish Prince has not created such widespread interest as that of Sir Bedivere, still it marks the advent of a dog that with age and proper handling is bound to make a great name for himself in this country. Mr. Samuel Mann, with Scottish Prince, Aristocrat and Altonette, arrived last Monday morning by the steamship Arizona after a rather rough passage of nine days. On visiting Col. Ruppert's temporary kennels at his brewery, the two noted dogs were, to all appearances, holding a reception, several St. Bernard men having come to get a peep at the cracks. Scottish Prince had, we were told, a hard time of it during the voyage, the first three days being very rough he was prostrated by seasickness and ate nothing for three or four days, and is now only just coming round. During the voyage he also broke out in several places and as he is out of coat as well, one cannot form a just opinion of his true appearance. He is, however, a magnificently built animal, exceptionally good on his pins, combining great bone with a more than ordinary height, very nearly, if not quite, 35in. at the shoulder. His depth of chest and breadth and depth of loin are very noticeable. His head, while not so short as some judges like them, has a great depth of muzzle and massive skull. His eyes are particularly good. His color is not so rich an orange as his kennel mate Aristocrat, who is also a dog of more than ordinary size and bone. Scottish Prince is by Prince Regent out of Moss Rose. His grandsire is champion Plinlimmon and his pedigree throughout shows winning blood on both sides. He was whelped April 24, 1889. He still looks puppyish and will need another year to get fully "set." Aristocrat is by champion Plinlimmon out of Lady Adelaide. His blood is also rich in champion sires and dams. This dog is aptly named, for his rich color and nice shadings and markings give him a look of quality to which his activity lends a jaunty air. His bone is excellent and coat could not be improved. His winnings make up a long list of firsts and specials, having, we understand, won more first prizes than any other St. Bernard last year. Col. Ruppert, Jr., certainly holds a strong hand with this pair. Aristocrat showed himself to be in good and healthy condition. We next proceeded to the stall where Altonette was kennelled. She unfortunately contracted distemper at the time of sailing, and Mr. Mann at one time had little hopes of landing her alive. She is, however, now over the worst part of it, and only needs careful nursing and fresh air. She is now almost a year old, and is certainly a bitch of great height, nearly 35in. we were told; she has also a roomy body. Her markings are very pretty, but there is still room for improvement in her head, which has hardly breadth and depth enough as yet. All she needs is age and good treatment. Altonette, as her name denotes, is by Alton out of Scottish Lady, was whelped June 20, 1890, and shows Nero III., Queen Jura and Plinlimmon blood in her pedigree. Some time since we published a picture of Scottish Prince, which, though he was only 18 months old when the photograph was taken, shows off his immense bone and massive head to perfection. These dogs will, unless Col. Ruppert alters his mind, be sent to his Duchess Kennels at Poughkeepsie next Wednesday. The sooner the better, as Prince and Altonette both need that exercise and fresh air which a run on a 75-acre farm will give them. Col. Ruppert, Jr., had some difficulty in getting the dogs through the customs, having to sign a bond of \$1,700. In conclusion we must congratulate this gentleman upon his pluck and enterprise in securing three typical specimens of the holy breed, and the St. Bernard breeders of the country will, we are sure, join with us in the hope that both Scottish Prince and Altonette will soon be in good condition again. They will both be put in a competent veterinary's hands at once.

Mr. Mann also brought over with him a ten-weeks-old pup named Heron for his father's kennel. This pup weighs already 98lbs. During his visit to England he saw all the crack St. Bernards, and expressed himself as much pleased with the treatment he received.

At a meeting held last Friday the Toronto Kennel Club, after reporting that their late members' show was a financial success, decided that the next competition be held the first week in August. Special classes to be judged only and their points explained. A smoking concert is announced at an early date. In May, next year, a general show of members' dogs will be held. Messrs. Davey and Kirk were tendered thanks for their services as judges at the last show.

From "Condensed Telegrams" in a recent issue of the *Sun*, we read: "Mrs. Charles Wheatleigh's pug Victoria still causes sorrow at Hempstead, L. I., by her continued absence."

The California Kennel Club is well pleased with the result of its recent show at San Francisco, especially as financially the show was a success. A much more ambitious attempt is promised for next year. The club now propose holding a field trial, and with that end in view a committee will be formed to hunt up suitable grounds within easy access of the city with a view to leasing the shooting privileges. The Pacific Kennel Club's trials will again be held at Bakersfield this fall.

At a meeting of the New Jersey Kennel Club, held Friday evening last, Mr. Peshall gave an account of the action taken by the A. K. C. and their refusal to admit him as the accredited delegate of the N. J. K. C. Mr. Peshall then tendered his resignation as delegate to the A. K. C. Thereupon the club unanimously refused to accept it. The club is fully decided to stand by their action, therefore Mr. Peshall is still their delegate-elect. The following gentlemen sent in their resignations as members of the club: Messrs. Pierre Lorillard, Jr., J. D. Shorwell, Rowland P. Kossbey, Benjamin Edge and Gerard Caesar. Mr. Peshall and Dr. Housning were appointed a committee to confer with the New Jersey State Fair Association to see if any arrangement could be made with them for a building suitable for the club to give a dog show this fall.

We thank the Seminole Kennels for a very pleasing photograph of their noted collie, The Squire. They write us that the demand for collies seems to be increasing, standing next in popularity to the St. Bernards. As this kennel have placed their dogs in the stud at prices that bring them within the reach of every breeder, we should certainly soon see an improvement in young stock that will be shown next year. There is every reason why the collie should become popular, for no other breed is more intelligent and good-natured. Leaving out of consideration their working capabilities, which cannot be surpassed by any other breed, they also, as companions of ladies and children or family pets, commend themselves to public notice. The collie trials which will be held by the collie club next year will serve to

draw attention to their useful qualities as an aid to the farmer. We have no means of informing ourselves as to the number of working dogs of recognized collie blood that there are in this country, unless those breeders who breed for work instead of bench, can give us some information on the subject. If any of our readers own collies which they use in farm work we are sure it would be interesting to have them tell us their methods of training and of the many intelligent traits their dogs display while out at their work. Many marvelous tales are told of their almost human intelligence, and from what we have seen ourselves on the moors and in some of the farming districts of England, we are almost prepared to swallow them without the customary seasoning.

"Whatever became of that greyhound you had?" "Killed himself." "Really?" "Yes, tried to catch a fly on the small of his back and miscalculated. Bit himself in two."—*Brooklyn Life*. Not short enough in loin, very likely.

Our increased list of kennel advertisements every week shows that breeders appreciate a medium by which they are sure to sell their dogs. Among the new ones we notice this week, we find that R. W. Sawyer has several St. Bernards for sale; Chas. D. Bernheimer is disposing of his fox-terriers; Chas. D. Berns several pointers; Geo. C. Cross a cocker bitch; Lone Star Kennels several pointers; M. C. Furst an Irish Setter bitch; William Ledward has several high class beagles and a pointer for sale. Frank Hope has a new advertisement and Dr. Glover calls attention to his vermifuge. In the stud, Rochelle Kennels' black and tan terriers.

We regret to hear that Mr. William H. Case, of Lockport, New York, has lost by poison his pointer bitch Flash. The loss is all the more unfortunate as Flash had the reputation of being the best broken dog in that part of the State.

We really should like to have some cheerful news from Ottawa, but it would seem as if this were impossible. "Clumber" writes us now that his Lass o' Beauty, which went the round of the past circuit, was killed the other day by a passing train. She was bred by the Duke of Westminster and in 1887 won second at Birmingham, only time exhibited in England. Over here she won first and special at Denver, Boston and Buffalo, and second New York and Chicago, to Lady Bromine.

On condition that he will run him in the coming field trials, Mr. Anthony presented the young pointer Ridgeview Beau, by Tribulation out of Bloome II., to Mr. D. C. Bernheimer, the owner of the fox-terrier Raby Trigger. Mr. Bernheimer will comply with the conditions, and we believe Mr. Short will take the dog in hand.

Mr. C. A. Stone informs us that the Collie Club has very kindly donated their silver medal, value \$20, for the best collie dog in the open class, and their bronze medal for the best bitch, owned by members of the Collie Club, to be competed for at the coming bench show of the Industrial Exhibition Association, to be held in Toronto, September next.

The Collie Club show held a week or two since in England seems to have been a miserable failure, only about eighty dogs being benched. At the same time the quality of the dogs present was of the best. We notice that in the challenge class Chestnut Hill Kennels' Christopher was second to Metchley Wonder, as he was not in his usual bloom. In the under two-year-old class this kennel took third with Wellesbourne Captain, who is said to be the best in the class but for his faulty carriage of ear. This kennel also took fourth prize in the puppy class, with Wellesbourne Shamrock, who wants time and more coat. In the under two-year-old bitch class, Wellesbourne Violet, reserve, is spoken of as a good one; she also won the special for the best, bred by exhibitor. Metchley Wonder beat Christopher again in the stud dog class, but in the brood bitch class Chestnut Hill scored with Bertha and also won the team prize. In the collie Derby, Mr. Stretch, who sold Christopher to Mr. Harrison, won first, second and third with his entries, thus making a new record.

At the Southport (England) show, Messrs. Toons and Symonds' black and tan terrier Beaconsfield surprised his friends by appearing in the challenge class, when he was thought to be in America. He won without competition. In the open class Mr. Lucy's Rhodes Oban beat the noted Derby Bess, Messrs. Toons and Symonds' Prince Regent taking third prize. In the novice class, however, Rhodes Oban was beaten by Monibel, and also had to give way to Prince Regent, whom he had beaten in the other class. The veteran Geo. Helliwell does not often make a mistake of this sort. The competition for the ten-guinea cup for the best dog in the show created great excitement. Those left in the final were the bulldog British Monarch, Yorkshire terrier Ted, the black spaniel Newton Abbott King and the sensational collie Sir Hector, who made his debut at this show. The five judges voted as follows: Newton Abbott King three, and the collie and bulldog one vote each. Quite a feather in the cap of the spaniel men. This is a competition where Sir Bedivere always held trump cards.

In Ireland speedy justice seems to follow those miserable fellows who wantonly shoot "man's best friend." In a recent trial the complainant stated that he was walking across a field where the defendant was sowing seed, the dog left his side, and in a minute or so a shot was heard, and on the complainant going to ascertain the cause he saw the defendant shot dead on the dog again. The dog died soon after the shots were fired. The defendant was fined \$5.25 and ordered to pay \$50 as compensation or in default to be imprisoned three months with hard labor in Belfast jail. A few decisions of that sort over here would have a beneficial effect on some people who think a dog a good target.

Mr. S. L. Boggs, we learn, has arrived in London with Messrs. Joe Lewis and W. H. Rutter, Jr., and by this time Messrs. Moore and Grosvenor will have also landed on terra firma. Messrs. Dole and Comstock are evidently lost in the wilds of Paris, as we hear nothing of them this week.

Dr. Mills writes us that we were quite correct in our supposition that he had nothing to do with the Canadian ambush correspondence *re* Mr. Mason. As a Canadian he was ashamed of it and regretted it, though it expressed after all the feelings of a very small number. A great deal of it appeared long before he was aware of its publication. He believes that judges should be chosen solely for their merit, and not because they reside here or there.

There are many English fanciers, and men who take a passing interest in dogs in this country, who will read with regret the news of the death of England's foremost sporting dog judge—Mr. William Lort. He died at his friend Mr. Assheton Smith's residence, Vaynol Park, Bangor, Wales. The English papers speak very feelingly on his death and characterize him as a fine British sportsman, an amiable man and as popular an English gentleman as ever lived. His long association with dog shows, from their early inception, had made him a familiar figure at these gatherings. As an all-round sportsman he had, it is said, no superior. He had made several journeys to the Arctic regions and it was only in our last issue we published a letter of his about hunting wolves on our Western prairies. He first acted as judge of pointers at the Birmingham show of

1860 and since then has officiated at more shows than any other judge. He was always in great demand at shows on the Continent and in 1878 he judged the sporting classes at the New York show, when we notice, by referring to the catalogue, that 55 entries appeared in the English setter open dog class and Irish setters were known as red or red and white setters. As a breeder of pointers, setters and spaniels he was well known, and *Stock-Keeper* tells us that a quarter of a century since there was no breeder that did not gladly secure a dash of the Lort blood into his kennels. His well-known Dip I. sired Quince, the grandsire of Mr. J. Cumming Macdonna's great field trial winner Ranger, and his strain of setters is very highly spoken of in Mr. Laverack's book. We cannot close this short obituary more appropriately than by showing the dogmen in this country the estimation he was held in by his fellow countrymen, by quoting from the above paper: "In fact, no man was ever more beloved than was Mr. William Lort. He possessed the courage of a hero, combined with the tenderness of a woman, his very weaknesses—and they were few, indeed—were virtues, as they invariably arose from his goodness of heart and sympathy with his friend or neighbor. No such record has yet been left behind him by any of the many who have passed away since the occasion of the first dog show at Newcastle in 1859—a record that is untarnished by a smirch of double-dealing, of avarice, or of treachery; a record that tells of troops of friends, of not a single enemy, and of a popularity among the outside public that has never been achieved by any other judge. Above all, Mr. Lort has borne away with him to the Silent Land, the sands of which must be trod by all of us, the noble reputation of having lived and died an English gentleman."

Mr. Heddy Chapman, who sold the St. Bernard bitch Hespsey to Mr. Diffenderfer, and who is the owner of Princess Florence, gave Mr. Shillcock \$5,000 for the youngster Sir Hereward, a son of Lord Bute. From all accounts this young dog is about the best now left in England.

In commenting on the new tariff laws relating to dogs, one of which compels the seller of a dog to enter it in the Kennel Club stud book, *Stock-Keeper* says: "There are difficulties here which our readers will readily perceive. A man may have sold a dog that has won a prize and thereby earned his title to a number, but he may have to wait months till the next volume is due and his number appears. Mr. Aspinwall (the secretary) hopes to surmount this obstacle by putting a signed memorandum on his pedigree form stating that the dog has qualified for admission in the stud book and will be entered in the forthcoming publication."

Mr. C. S. Wixom, who was sent home for repairs from the Cleveland show, is now quite himself again, although he has been a very sick man. He writes us that his team of dogs will have a lively time of it this fall what with coursing meetings, beagle trials and dog shows crowding each other so close.

We learn that twenty couple of harriers are now on the way to this country from England consigned to the Chestnut Hill Kennels, which will, we hear, devote considerable attention to this breed in the future. From *Cantine World* we hear they have been hunted regularly in Hampshire.

We have received the constitution and by-laws of the Mohawk Valley Poultry and Kennel Club. Their show will be held, as we have already announced, at Gloversville, N. Y.

Just as we go to press we have received a letter from Mr. Walter J. Comstock, who by the address we find is now with Friend Dole in Rome. He incloses an excellent picture of his new Irish terrier Crate, which we shall illustrate next week. Friend Dole also sends us a very lengthy epistle with lots of news, which must be reserved now for next week. He has bought the fox-terrier Dobbin for the Woodall Kennels; the bull bitch Magpie for Mr. A. J. Hatch, New Haven, Conn.; a small bull-terrier bitch, White Matchless, by Gully the Great, for himself, also a large-sized one named Lively Son; the others we have mentioned from time to time. They return to England July 15, and a week after sail for home. Frank says: "The most welcome thing we have seen in Rome was the *FOREST AND STREAM*, which Mr. Krehl kindly sent us."

In a letter from Mr. Huber to Dr. Glover we learn that the former gentleman has purchased the noted pointer bitch Sally Brass II. from Mr. Charles Heath.

We understand that owing to a change in the game laws of North Carolina, the coming trials may be affected. The open season commences Nov. 1 and closes Feb. 28. Davidson county, and consequently Lexington, where the Central Trials are held, is exempt from this law, but Guilford county, in which High Point is situated, will have to comply with the law unless some steps can be taken to include this county also in the exemption. This will seriously handicap some of the handlers in their preparatory work.

We learn from the *Detroit Tribune* that Messrs. Campbell & Blake's whippet Benbow made a record for himself on the Detroit Athletic Grounds last Saturday. He ran the 200yds. on a cinder path in 12 seconds, under careful timing. This is the dog that ran so well at London last fall. Mr. Blake also writes us that in the race last Saturday the wind was against the dog.

Our thanks are due to Mr. Geo. Bell for the excellent photograph of his greyhounds Jolly Ranger and White Wings. Mr. Bell is striking out in a new direction and expects two greyhounds from England shortly.

A. K. C. STUD BOOK ENTRIES.

Editor *Forest and Stream*:

I beg to send you the following comparative table, giving the number of paid entries received for the Stud Book and the *Gazette* for the first five months (Jan. 1 to June 1) of each year, from the first publication by the American Kennel Club. I think it will make interesting reading:

Stud Book.			
Year.	Fee.	No. of entries.	Condition.
1887	.50	971	Voluntary.
1888	.50	2,014	Compulsory.*
1889	.50	1,358	Voluntary.
1890	\$1.00	989	Voluntary.
1891	\$1.00	1,016	Voluntary.
* First year of Rule 2.			
<i>Gazette.</i>			
1889	.25	1,882	Compulsory.
1890	.25	1,235	Compulsory.
1891	.25	1,968	Compulsory.
A. P. VREDENBURGH, Secretary.			

THE BREEDER OF CHAMPION HESPER.—Putney Heath, England.—*Editor Forest and Stream*: Fearing that the same mistake may have occurred in your paper as in the London *Fanciers' Gazette* that the lately deceased champion Hesper (20819) was bred by S. W. Smith, I wish to inform you that is not correct, as this grand animal was bred by me. —SAMUEL SMITH.

MEETING OF THE NATIONAL BEAGLE CLUB.

Editor Forest and Stream:

The executive committee of the National Beagle Club held an adjourned meeting at 266 Washington street, on Thursday, June 4. The meeting was called at 8 P. M., President Brooking in the chair. The roll call showed Messrs. Berry and W. F. Rutter to be absent. After the reading of the minutes of the last meeting, which were then accepted, the report of Mr. Poyer, chairman of the committee to incorporate, was heard and accepted. Communications from J. W. Sleffen, C. A. Storie, C. S. Wixom, H. L. Kreuder and others were read and placed on file.

It was voted that the N. B. C. donate a cash special of \$5 at the Toronto show to be held next September for the best beagle in the show. It was also voted that a vote of thanks be sent to Mr. H. L. Kreuder of Nanuet, N. Y., for his exceedingly generous and courteous letter to the club in regard to the coming field trials, and that while the club has not yet decided on a place, a copy of the foregoing resolution be forwarded to him at once by the secretary.

It was moved and carried that it is the sense of this committee that a class should be added to the present standard providing for dogs 13in. in height and under. Such class to take the place of the 12in. or basket beagle class frequently made at the leading bench shows, and that the above change be voted for at the regular quarterly meeting of the club in July. The object being to bring the classes at the bench shows and field trials on an equal footing as regards size. On motion of H. V. Jamieson it was voted that the secretary get proof of running rule, as revised, printed and brought before the next meeting for approval. Meeting adjourned.

F. W. CHAPMAN, Sec'y.

MELROSE, Mass., June 7.

ON NOTES AND NOTIONS.—Editor Forest and Stream: Just one word for "Onlooker," who abuses me in claiming that a money challenge is not the fairest way of supporting the alleged superiority of a dog. I agree with him it is not, and as a poor man it is my last refuge, but it was Mr. Laidlaw, not I, who made the challenge. He offered to back his dog Oban against Amazezement for money. I merely accepted his offer. "Onlooker," in a spirit of antagonism to me and with misguided zeal, has probably slapped a friend in the face. Let "Onlooker" read again Mr. Laidlaw's money bluff in your issue of April 30, and he will wish he had not made himself so ridiculous in a widely-circulated journal like yours.—GEO. BELL (Toronto, Canada, June 8).

THE GREYHOUND CHARLES DAVIS.—New York.—Editor Forest and Stream:—I cannot refrain from referring to the many letters received, as well as personal expressions of sympathy, since the publication in your columns of the death of my greyhound Charles Davis. I would especially allude to the letter from Mr. A. W. Purbeck, of Salem, Mass., the owner of the famous champion greyhound Gem of the Season. His kind words were emphasized by an offer of the free services of Gem of the Season for my greyhound bitch Maud Torrington, all of which illustrates the very kindly sentiment existing between the owners and breeders of dogs.—ALBION L. PAGE.

KENNEL NOTES.

Kennel Notes are inserted without charge; and blanks (urnished free) will be sent to any address.

NAMES CLAIMED.

Prepared Blanks sent free on application.

Day Break. By N. McIntosh, Providence, R. I., for blue belton English setter dog, whelped Jan. 31, 1891, by Roy Monarch (Dashing Mousher—List) out of Blue Jennie (Royal Albert—Blue Nell). Little Dollars. By Eberhart Pug Kennels, Cincinnati, O., for pug bitch, whelped March 4, 1891, by champion Kash out of Beauty III.

Peggie Pride. By Eberhart Pug Kennels, Cincinnati, O., for pug bitch, whelped Dec. 4, 1890, by Eberhart's Cashier out of Flossie II.

BRED.

Prepared Blanks sent free on application.

Yum Yum II.—Nanki Poo. The Park Kennels' (Providence, R. I.) Japanese spaniel bitch Yum Yum II. to their Nanki Poo, Dec. 14.

Louie—Jasper. The Park Kennels' (Providence, R. I.) black and tan terrier bitch Louie (Beaconsfield—Nelly) to the Jasper (Sir Edward II.—Lloyd's Rose), April 12.

Queen III.—Salsbury. The Park Kennels' (Providence, R. I.) black and tan terrier bitch Queen III. (Ormonde—Bell's Saff) to their Salsbury (Beaconsfield—), March 10.

La La—Jersey. The Park Kennels' (Providence, R. I.) cocker spaniel bitch La La (Black Pete—Miss Nance) to J. P. Willey's Jersey (Obo II.—Darkie), March 20.

Sylvia—Midnight. The Park Kennels' (Providence, R. I.) schipperke bitch Sylvia (Midnight—Darkness) to their Midnight, March 4.

Bacchant—Regent Vox. W. G. Southgate's (Astoria, L. I.) fox-terrier bitch Bacchant (Bacchanal—Queen) to Wilton Kennels' Regent Vox (Tackler—Sandy Vic), May 25.

Princess Louise—Rifleman. Geo. Pangborn's (Brooklyn, N. Y.) fox-terrier bitch Princess Louise (Scarsdale—Wagner's Carrie) to Wilton Kennels' Rifleman (Result—Distaffina), May 22.

Annie—Rifleman. J. Lynch's (New York) fox-terrier bitch Annie to Wilton Kennels' Rifleman (Result—Distaffina), May 18.

Nannette—Regent Vox. Wilton Kennels' (New York) fox-terrier bitch Nannette (Warren Jim—Buz) to their Regent Vox (Tackler—Sandy Vic), May 15.

Florida Sire—Regent Vox. Chas. R. Doane's (Brooklyn, N. Y.) fox-terrier bitch Florida Sire (Scarsdale—Wagner's Carrie) to Wilton Kennels' Regent Vox (Tackler—Sandy Vic), May 19.

Village Belle—Rifleman. E. K. Austin's (Brooklyn, N. Y.) fox-terrier bitch Village Belle (Volo—Beauty) to Wilton Kennels' Rifleman (Result—Distaffina), May 22.

Nellie—Rifleman. J. McBride's (Fordham, N. Y.) fox-terrier bitch Nellie to Wilton Kennels' Rifleman (Result—Distaffina), April 27.

Sphinx—Rifleman. J. H. McCampbell's (Rutherford, N. J.) fox-terrier bitch Sphinx to Wilton Kennels' Rifleman (Result—Distaffina), April 26.

Daisy—Rifleman. C. Heimerle's (New Market, N. J.) fox-terrier bitch Daisy (Carroll—Nellie of Volkart) to Wilton Kennels' Rifleman (Result—Distaffina), April 22.

Nixy—Rifleman. O. H. Stickle's (Harrison, N. Y.) fox-terrier bitch Nixy (Tick-Tack—Malseland Festive) to Wilton Kennels' Rifleman (Result—Distaffina), April 15.

Wilton Dart—Rifleman. Wilton Kennels' (New York) fox-terrier bitch Wilton Dart (Regent Vox—Royal Dart) to their Rifleman (Result—Distaffina), April 12.

Nellie Boxer—Warren Tripper. J. J. Casbman's (New York) fox-terrier bitch Nellie Boxer (Saracen—Pan) to Wilton Kennels' Warren Tripper (Valens—Warren Tetsy), March 7.

Wilton Viola—Rifleman. Wilton Kennels' (New York) fox-terrier bitch Wilton Viola (Snufflok Coronet—Warren Violet) to their Rifleman (Result—Distaffina), March 6.

Positivity—Rifleman. J. C. Thompson's (Philadelphia, Pa.) fox-terrier bitch Positivity (Blemton Ravager—Malseland Phylis) to Wilton Kennels' Rifleman (Result—Distaffina), March 1.

Forest Dora—Granger. Rosecroft Kennels' English setter bitch Forest Dora (Dick Laverack—Forest Fly) to D. S. Gamble's Grover (champion Count Howard—champion Daisy Foreman, June 6).

Bonnie E—Bradford Ruby II. Eberhart Pug Kennels' (Cincinnati, O.) pug bitch Bonnie E (Bradford Ruby II—Viola) to their Bradford Ruby II. (champion Bradford Ruby II—Puss B), June 1.

Nattie—Eberhart's Cashier. Miss May Clark's (Cincinnati, O.) pug bitch Nattie to Eberhart Pug Kennels' Eberhart's Cashier (champion Kash—Lady Thora), May 20.

Wrinkles—Eberhart's Cashier. Mrs. H. Hammond's (Chicago, Ill.) pug bitch Wrinkles (Joe II.—Past Lake Virgie) to Eberhart Pug Kennels' Eberhart's Cashier (champion Kash—Lady Thora), April 10.

WHELFES.

Prepared Blanks sent free on application.

La La. The Park Kennels' (Providence, R. I.) cocker spaniel bitch La La (Black Pete—Miss Nance), May 17, eight (three dogs), by J. P. Willey's Jersey (Obo II.—Darkie).

Sylvia. The Park Kennels' (Providence, R. I.) schipperke bitch Sylvia (Midnight—Darkness), May 5, one, by their Midnight.

Queen III. The Park Kennels' (Providence, R. I.) black and tan terrier bitch Queen III. (Ormonde—Bell's Saff), May 15, four (one dog), by their Salsbury (Beaconsfield—Cbeetham Hill Rose).

Yum Yum II. The Park Kennels' (Providence, R. I.) Japanese spaniel bitch Yum Yum II., Feb. 15, five (three dogs), by their Nanki Poo.

Beverwyck Toddy. C. Rathbone's (Albany, N. Y.) fox-terrier bitch Beverwyck Toddy (Bacchanal—Bowstring), May 14, four (one dog), by his Beverwyck Rebel (Blemton Rubicon—Moonshine).

Beverwyck Blondaze. C. Rathbone's (Albany, N. Y.) fox-terrier bitch Beverwyck Blondaze (Warren Discord—Daze), March 21, five dogs, by his Beverwyck Rebel (Blemton Rubicon—Moonshine).

Beverwyck Rebecca. C. Rathbone's (Albany, N. Y.) fox-terrier bitch Blemton Rebecca (Blemton Rubicon—Moonshine), March 25, six (two dogs), by A. Belmont's Dusky Trap (Dusky Splinter—Spider).

Daze. C. Rathbone's (Albany, N. Y.) fox-terrier bitch Daze (Deacon Pincher—Diamond Dust), April 20, two (one dog), by his Beverwyck Tippler (Bacchanal—Blemton Thyme).

Blemton Bedlam. C. Rathbone's (Albany, N. Y.) fox-terrier bitch Blemton Bedlam (Lucifer—Village Belle), May 27, four dogs, by his Beverwyck Rebel (Blemton Rubicon—Moonshine).

Beverwyck Rita. C. Rathbone's (Albany, N. Y.) fox-terrier bitch Beverwyck Rita (Blemton Rubicon—Moonshine), June 2, two dogs, by John A. Logan, Jr.'s Pitcher (Brother Jim—Daffodilly).

Merry Duchess. P. H. Coombs's (Bangor, Me.) Yorkshire terrier bitch Merry Duchess (Chase Royal—Junio), May 25, four (two dogs), by his champion Bradford Harry (Crawshaw's Bruce—Beals' Lady).

Olga. G. S. Page's (Stanley, N. J.) deerhound bitch Olga (Dunrobin—Shelloch), May 23, four (two dogs), by J. E. Thayer's champion Olamshan.

Wrinkles. Mrs. H. Hammond's (Chicago, Ill.) pug bitch Wrinkles (Joe II.—Past Lake Virgie), June 4, five (three dogs), by Eberhart Kennels' Eberhart's Cashier.

Rumson Lilly. H. Johnson's (Fair Haven, N. J.) pointer bitch Rumson Lilly (Mainspring—Marguerite), May 18, seven (five dogs), by D. B. Keeler's Ben of Brandon (Croxeth—Blanchet II.).

Miss Boots. G. H. Barnes's (Detroit, Mich.) Irish setter bitch Miss Boots, May 25, eleven (seven dogs), by Prairie Mound Kennels' Ben of Brandon (Croxeth—Blanchet II.).

Malseland Festive. Wilton Kennels' (New York) fox-terrier bitch Malseland Festive (Bacchanal—Blemton Arrow), March 26, one dog, by their Rifleman (Result—Distaffina).

Bessie. W. Cole's (Fordham, N. Y.) fox-terrier bitch Bessie (Storming Jerry—Nellie Boxer), April 11, four (two dogs), by Wilton Kennels' Rifleman (Result—Distaffina).

Positivity. J. C. Thompson's (Philadelphia, Pa.) fox-terrier bitch Positivity (Blemton Ravager—Malseland Phylis), eight (four dogs), by Wilton Kennels' Rifleman (Result—Distaffina).

Dolly. F. J. Reilly's (New York) fox-terrier bitch Dolly (Regent Vox—Malseland Festive), April 26, three (one dog), by Wilton Kennels' Rifleman (Result—Distaffina).

SALES.

Prepared Blanks sent free on application.

Mount Zion Guy. Rough St. Bernard dog, by Mount Zion III.—Junio, by Mount Zion Kennels, Albany, N. Y., to N. C. Joers, Cleveland, O.

Leopold. St. Bernard dog, by Mount Zion III. out of Lady Gay, by Mount Zion Kennels, Albany, N. Y., to Capt. Jos. Kay, New Brunswick, N. J.

White Chief—Queenie whelps. St. Bernard dog, by Mount Zion Kennels, Albany, N. Y., to Mrs. John W. Charlestown, N. H.; another dog, same litter, to A. A. Meyer, Boston, Mass.

Mount Zion III.—Lorna whelp. St. Bernard bitch, by Mount Zion Kennels, Albany, N. Y., to Miss Jane Hopkins, Catskill, N. Y.

Baron. St. Bernard dog, by Scottish Prince out of Junio, by Mount Zion Kennels, Albany, N. Y., to Geo. H. Boyd, Cleveland, Ohio.

Scottish Prince, Jr., and Scottish Princess. St. Bernard dog and bitch, by Scottish Prince out of Junio, by Mount Zion Kennels, Albany, N. Y., to A. H. Moore, Philadelphia, Pa.

Yolcie. Rough St. Bernard dog, by Mount Zion III. out of Junio, by Mount Zion Kennels, Albany, N. Y., to Mr. Eberhart, Cleveland, O.

White Chief—Lady Bell whelps. St. Bernards, by Mount Zion Kennels, Albany, N. Y., two dogs and one bitch to Fred Schott and one dog to Geo. W. Schenck, Cleveland, O., and one dog to Chas. Crear, Albany, N. Y.

White Chief—Lady Bell whelps. Two St. Bernard dogs, by Mount Zion Kennels, Albany, N. Y., to H. B. Angell, New York.

White Chief—Gundred whelps. Rough St. Bernards, by Mount Zion Kennels, Albany, N. Y., one bitch to W. F. Aigeltinger, New York; one dog and bitch to Herman Batger, one bitch to Fred Schott and one dog to Frank DeLinde, all of Cleveland, O.

Nanki Poo—Yum Yum II. whelp. Black and white Japanese spaniel bitch, whelped Feb. 15, 1891, by the Park Kennels, Providence, R. I., to A. Foster, same place.

Minnehaha. Black and white and ticked cocker spaniel bitch, whelped Jan. 31, 1891, by Brush W. out of Renah W., by H. G. Arnold, Louisville, Ky., to C. A. Loud, Staunton, Va.

Little Lad—Cassidy whelps. Cocker spaniels, whelped Feb. 27, 1891, by H. G. Arnold, Louisville, Ky., a black dog to A. L. Orr and a liver bitch to C. Baker, both of Chicago, Ill.

Beverwyck Sambo. White, black and tan fox-terrier dog, whelped July 12, 1890, by Reckoner out of Beverwyck Hebe, by C. Rathbone, Albany, N. Y., to J. A. Chandler, Bangor, Me.

Beverwyck Fizz. White, black and tan fox-terrier dog, whelped June 20, 1890, by Bacchanal out of Bowstring, by C. Rathbone, Albany, N. Y., to Lieut. H. Carey, Halifax, N. S.

Beverwyck Beauty. White, black and tan fox-terrier bitch, whelped March 27, 1888, by Resolute out of Blemton Arrow, by C. Rathbone, Albany, N. Y., to T. C. Chalmers, Washington, D. C.

Beverwyck Beauty. White, black and tan fox-terrier bitch, whelped May 1, 1890, by Dusky Trap out of Blemton Arrow, by C. Rathbone, Albany, N. Y., to G. N. Bartlett, New York.

Beverwyck Rucpe. White, black and tan fox-terrier dog, whelped May 6, 1890, by Blemton Rubicon out of Daze, by C. Rathbone, Albany, N. Y., to Mr. Mason, Philadelphia, Pa.

Beverwyck Tommy. White, black and tan fox-terrier dog, whelped May 7, 1890, by Beverwyck Tippler out of Beverwyck Blondaze, by C. Rathbone, Albany, N. Y., to Thos. Hyde, Jr., Washington, D. C.

Blemton Rubicon—Moonshine whelps. Fox-terriers, whelped May 13, 1890, by C. Rathbone, Albany, N. Y., a white, black and tan dog to Mr. Vischer, same place, and a white bitch to C. S. Wheless, Yazoo City, Miss.

Beverwyck Rebel—Vizen whelps. Fox-terriers, whelped July 8, 1890, by C. Rathbone, Albany, N. Y., a white, black and tan bitch each to Mr. Walker, same place, and W. B. Lancaster, Weylesley Falls, Mass., and a tan and white dog to C. M. Munhall, Cleveland, O.

Beverwyck Rebel—Bowstring whelps. White, black and tan fox-terrier dogs, whelped July 15, 1890, by C. Rathbone, Albany, N. Y., one each to G. N. Bartlett, New York, and J. L. McDonald, Philadelphia, Pa.

ANSWERS TO CORRESPONDENTS.

There is no charge for answering questions under this head; we are always glad to give advice on the care and management of dogs; and we shall make this a special feature.

A. B. C., Washington, D. C.—Will you please inform me if there is an Irish setter bitch registered under the name of Pequot Squaw? If so I would like to know her number and breeder. Ans. She is not registered.

D. J. J., Brooklyn, N. Y.—I made an agreement with a person that for the sum of one dollar I should get the pick of the pups. As the bitch only had one pup, is the owner of the dog or the owner of the bitch entitled to the pup? Ans. As you are entitled to first choice you of course take the pup.

Pointer, Danville, Pa.—I would like to know the best method of breaking a dog of "gun shyness." Ans. As you have just bought Hammond's "Training vs. Breaking," I advise you to follow the instructions there given, which have proved successful when tried.

H. F. L., Lake View, Mass.—Can you give me the pedigree of bull-terrier Flip, registered in C. K. B. 2. Ans. Whelped July 12, 1890, by E. Dole, New Haven, Conn. Sire, Count. Dam, Nellie, by Paddy out of Grace, Count, by Marquis out of Kit, by Prince, Marquis, by Targuin (Mark-Eyed Victor—Puss) out of Jones's Puss.

Please give pedigree of English setter bitch Starlight (A.K.C. S.B. 12,272). Ans. Owner, W. Burd Patterson, Williamsport, Pa. Breeder, J. Yeardsley, Jr., Coatesville, Pa. Whelped Aug. 11, 1883. Sire, Rock, Jr.; dam, Dashing Kate, by Dashing Lion out of Queen Anne, by Carlowitz out of Queen Bess; Dashing Lion, by Dash

II. out of Leda, by Dan out of Lill II., by Dash II. out of Lill; Dan, by Duke out of Rhoebe.

W. H., Chicago, Ill.—Is there any difference between the Great Dane and German mastiff? Ans. No. All the different names, such as boarhound, Ulmer dog and Great Dane have been abolished in Germany, the dog being known now as the German mastiff, and commonly called Great Dane in this country. You will find all the information you require about the breed in a monograph published by the Great Dane Club, 505 Stock Exchange Building, Chicago, Ill.

L. VAN D., Gloversville, N. Y.—I have a found pup two months old that seems feeble in front feet the last three or four days. He is strong apart from that and eats good. I feed him lots of butter-milk and some scraps. I have been told it is from letting him run on the floor. His knees, after running around awhile, seem to swell and he is then unable to crawl. Ans. It is a little fever for his limbs. Give him a desertspoonful of bone meal in his food four or five times a week. You can procure the bone meal from Spratts Co., 239 East Fifty-sixth street, New York city.

A. R., Milwaukee, Wis.—If a pointer bitch should have a litter of pups by a full-blooded spaniel (first litter) and the next litter by a pure-bred pointer, would the first litter contaminate the second, or, in other words, would the second litter be pure bred? Ans. The bitch will be always marked in the back with one or two characteristics. At the same time we should consider pups from her, by a pure-bred pointer, pure pointers. It is a very nice question, with the balance of the doubt in favor of the pointer. We should advise you to at once drop pups of subsequent litters that show any signs of spaniel cross.

E. J. F., Marksville, Va.—I have a very fine pointer dog, of pure blood and magnificent build, also a first-class worker in the field. Will his pedigree, which I enclose herewith, entitle him to a place in the American Kennel Register? Ans. The American Kennel Register was purchased some time since by the American Kennel Club, and at present the only stud book is the one issued by that club. As your pointer's pedigree on the dam's side is wanting, you cannot register it in the A. K. C. stud book, as a pedigree for three generations is required. Should your dog win first prizes in many shows at shows recognized by the A. K. C. he can then be registered.

J. L., New York City.—Could you please tell me what ails my bull-terrier? Underneath the right eye the white hair is kept continually red from the water that runs out from his eye occasionally. Also his tail, the top of which has hardly any hair on it, looks somewhat like the dead twig of a tree, but on the under part it is thickly covered with hair. The tip of the tail is also visible where it was clipped. The dog is house broken, and as I keep him in the house I cannot understand it. Ans. Feed the dog nourishing food; a tonic is also desirable. Drop in the eye every night a drop or two of a weak solution of nitrate of silver, one part to thirty of water. Rub the bare spots on tail with balsam of peru.

W. H. M., Ogdensburg, N. Y.—Please let me know the pedigree of the fox-terriers Trap and Diamond Vic, owned in Hudson, N. Y., about 1884. Ans. Trap, whelped Feb. 28, 1880, Breeder, W. H. Cookson, Hudson, N. Y. Owner, Rev. F. M. Cookson, Glens Falls, N. Y. Sire—Recent—Vox, by Tackler out of Sandy Vic, he by Tweezers (Ryan—V)—Olive, out of Dandy, by Old Fowler out of Myrtle. Sandy Vic, by Dandy out of Sandy Venus; Dandy, by Brockenhurst Joe out of Fashion. Dam—Nellie, by Gamester (Young Tyke—Pearl) out of Vizen, by True out of Fussey. Diamond Vic, whelped Feb. 3, 1883. Sire—Curate, by champion Rector out of Vic, by Victor out of Flow. Dam—Gipsy, by Viper (by Prince) out of Vernon.

LURCHER, Cambridge, Mass.—1. Please describe a lurcher. 2. Are they necessarily bred from greyhounds and not from deerhounds? 3. Are there any in America? 4. Are they always bred from the first cross in England, or are they a separate breed? 5. Would there be any difference if they were bred from a bob-tailed sheepdog bitch and a deerhound dog, instead of from a deerhound bitch and a sheepdog? 6. Would it be safe to breed a collie bitch to a deerhound twice her size? Ans. 1. A lurcher is a dog commonly used by poachers as they will run by scent as well as sight, and what is more, they are not much afraid of the trail. They are as a rule a cross between a collie and a greyhound. From the collie they get the intelligence so useful and from the greyhound their speed. 2. A lurcher should not be too large, hence a deerhound cross is not advisable. 3. We do not know. 4. They are simply mongrels and may be the result of two or three crosses, but the collie and greyhound is the best and usual cross. 5. Not much, but the latter cross will be better.

A. S., Philadelphia, Pa.—What is the trouble with my St. Bernard bitch? She had her first litter of pups (only five) in March. Just before she whelped I discovered she had worms and gave her Glover's cure, two doses, following it by a homeopathic cure which I have given off and on up to the present time. She only nursed the pups, which were unusually large, five weeks. She got very thin, her hair came out with the lightest combing in handfuls. I discovered that she was covered with worms. She was apparently always hungry, and would run around for something to eat, but when given a bone, meat or anything else that she can carry, she will invariably bury it. I used Spratts soap and washed her daily till the lice were all gone. She is still thin, low spirited and seems tired and her hair still comes out. The pups are well and weigh 30lbs. apiece. 2. What is the average weight of a St. Bernard pup ten weeks old? Ans. A St. Bernard pup should weigh from 15 to 20 lbs. at ten weeks. 3. What is the best food for a St. Bernard? Ans. A St. Bernard should have a desertspoonful of cod liver oil either in the food or by spoon. Her system is no doubt run down. In a week or so you might try for worms, fasting the bitch for twenty-four hours, and if at all constipated give a spoonful of castor oil or syrup of buckthorn before fasting, and then give any of the vermifuges advertised in our columns. 2. 30 to 35lbs.

Rifle and Trap Shooting.

RANGE AND GALLERY.

REVOLVER SHOOTING IN ENGLAND.

ENGLAND, May 28.—The revolver shooting season has only just opened in England owing to the cold and wet spring, making the open air ranges very uninviting.

The best scores yet made at the English distance and target in open air shooting (20yds.) 2in. center to bulls-eye, highest possible score 49 are one of 41 and three of 40, all made by Mr. Walter Winans during the last few days, at the Sussex County Volunteer Range, and a score of 39 made by Mr. C. F. Lowe, at the South London Rifle Club range.

At the disappearing and sliding targets there has been no practice as yet.

At rapid firing (six shots in twelve seconds at 20yds.) which will be the novelty at the Bisley meeting this year, there has been very little practice, the best scores yet to hand were two of 25 points each, made in a high, gusty wind by Mr. Walter Winans at the Sussex County Volunteer range yesterday morning; the best of the two scores had all six shots in a 4½in. ring, making the English "record" for this style of shooting. It was shot in the presence of Mr. Sherratt, the range custodian, but was not for any competition, merely practice, so does not technically constitute a record.

BOSTON, June 6.—The regular weekly shoot of the Massachusetts Rifle Association was held at its range to-day, with a good attendance of riflemen. The shooting conditions were good, and some 200 scores were made by Cushing, Sydney, Daniel, and Wilder.

E. H. Foote won the bronze membership badge. For the next three weeks, while the new building is being erected, there will be no shooting conveniences at 20yds. Following are the best scores made to-day, distance 200yds., standard American target, re-entries allowed:

All-Comers' Off-Hand Match.			
H Cushing.....	90	M T Day.....	83
All-Comers' Rest Match.			
F Daniels.....	111	A H Ballard.....	104
J French.....	96	S Wilder.....	94
E I Blount.....	101	J W French.....	94
W P Thompson.....	108	T Warren.....	87
Revolver Match—30yds.			
H Severance.....	87	M T Day.....	71
C E Gray.....	74	M R Barber.....	68
A H Hunt.....	62	S A Wesson.....	67
GARDEN CITY RIFLE TEAM.—The Garden City Rifle Team met for their weekly contest Tuesday evening, June 2, at George McCune's Shooting Gallery, 146 South Halsted street, Chicago. Conditions were: 25yds., 25 shots each, open sights, free off-hand position, Massachusetts paper target, possible 300. W. J. Gibbs 280, Joseph Hosie 232, Mrs. Thornton 251, C. A. Hanks 250, A. L. Strensen 241, Geo. McCune 239, W. J. Myers 237, Thos. Ford 237.—C. A. HANKS.			

COLONEL LEBEL.—Nicholas Lebel, whose death was announced from Paris on the 7th inst., was born in a little village in Anjou, in 1836. He entered Saint Cyr in 1855, receiving his commission two years later. He was a captain in the Sixty-ninth Regiment of the Line when the war of 1870 broke out. He was taken prisoner at Sedan, and was attached to various infantry corps quartered in France until 1885, when he was appointed "director" of the shooting school at Chalons. Col. Lebel had access to patterns of different arms used in all civilized countries, and having a strong inventive genius, turned his energies in the direction of firearms, studying, comparing and experimenting, until in a wonderfully short time he produced the rifle that has become well known and the mechanism of the Lebel rifle, and prejudice from among officials, but through the influence of several officers of high rank, particularly of Gen. Tramond, the new rifle was finally approved of and accepted by the French Minister of War. Few men have done so much for their country as this officer, whose guns and cartridges are even now jealously guarded in the hope that the secret of their fabrication and composition will remain a secret. The new weapon has been distributed to nearly all the regiments of the French Army, after having been inspected, and at stated intervals they are counted, and the utmost circumspection exercised, with a view of preventing a single specimen from finding its way into alien hands. So carefully has the secret been guarded that it is stated the color of the powder used in the cartridges is unknown to non-commissioned officers and the mechanism of the Lebel rifle is a profound mystery.

PHILADELPHIA, June 4.—The regular weekly practice of the Philadelphia Rifle Club was held to-day at Queen Lane and was slightly attended. The light was very hazy and a tricky wind was blowing from 7 o'clock. Mr. J. J. Mountjoy made the top score of the season on the 1/2 in. ring target, while Mr. Chas. Molter made 60 points on the honor target. The score at 200yds., off-hand:

J J Mountjoy.....	21	18	22	18	10	12	20	23	175
H J Mehard.....	19	25	23	24	23	21	22	12	213
W Wurfflein.....	22	23	18	22	19	17	18	23	182
J T Oliver.....	25	22	17	22	18	19	21	18	203
	17	19	12	3	16	22	13	11	9
	21	0	15	0	18	19	13	15	16
	22	18	2	2	9	7	6	8	132

Honor Target.

C Molter.....	24	18	18	60	J J Mountjoy.....	11	16	11	38
J T Oliver.....	21	10	28	54	Mr Steibler.....	7	17	15	39
W Wurfflein.....	23	15	9	47	P Bernhardt.....	2	13	15	30
H J Mehard.....	18	9	16	43	J Yariok.....	5	15	4	24

Steibler and Bernhardt used muzzleloaders, all others Wurfflein rifles.

MEHIDEN, Conn.—The shoot met fixed for May 29 and 30 was postponed to June 10 and 20, Cause—Heavy rains.

THE TRAP.

Scores for publication should be made out on the printed blanks prepared by the Forest and Stream, and furnished gratis to club secretaries. Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

FIXTURES.

If you want your shoot to be announced here send in notice like the following:

June 8-13.—Regular Annual Tournament of the Illinois State Sportsmen's Association. W. L. Shepard, Sec'y, Chicago, Ill.
June 15-19.—Thirty-third Annual Tournament of the New York State Association for the Protection of Fish and Game, at Rome, N. Y. M. R. Bingham, Sec'y.

June 23-25.—Atlantic City Gun Club's Tournament, at Atlantic City, N. J. For programmes address Harry Thurman, Manager, Germantown, Philadelphia, Pa., or R. C. Griscom, Secretary, Atlantic City, N. J.

July 2-4.—Third Annual Tournament of Canastota (N. Y.) Gun Club. E. B. Roberts, Sec'y.

July 4.—Slater, Mo., Third Annual Tournament of the Slater Gun Club. Wm. Reid, Secretary.

July 4.—Shoot of the South Sea Gun Club, at South Norwalk, Conn.; sweeps, team shooting, inanimates, and other interesting events will be shot off; all are welcome; no one barred.

July 7-9.—Wellington Gun Club Tournament, assisted by the Inter-State Manufacturers and Dealers' Association, Boston, July 7, 8 and 9; \$1,000 guaranteed.

July 22-24.—Pearl River Gun Club Tournament. First two days bluebirds, last day, game birds. J. B. Bivell, Pearl River, N. Y., Aug. 20, Sept. 1.—Hackettstown Gun Club. Two days at Hackettstown, N. J. For programmes address James L. Smith, Hackettstown, N. J.

SARATOGA INTER-STATE.

SARATOGA, June 2.—As will appear in the following record the tournament of the Inter-State Association is a pronounced success. It would be hard to find grounds better adapted for a tournament than those of the Saratoga Gun Club. The field is perfectly level, with a clear blue sky for a background. A continuous screen ran the full length of the 10 traps, painted a dark green. The new improved Standard-Keystone ten-trap wire pul was used and gave perfect satisfaction. Also improving the appearance of the grounds, an artificial grass, the length of the score, protecting the shooters from the hot sun. An efficient force of scorers, clerks and cashiers were on hand and everything ran perfectly and smoothly. The Saratoga Gun Club spared no expense to make this shoot a grand success. The day opened up bright, clear and warm. The experts received an addition to their class in the person of Mr. F. D. Kelsey, of East Aurora, N. Y., and they received his own army of amateurs. The attendance was graced by the presence of Mrs. M. E. Lindsey (Wanda), who accompanied her husband. Herewith the scores for to-day:

First match, 10 singles, \$2 entrance, experts:

Miller.....	111011101	8	Kelsey.....	111111111	10

Extra No. 2: Buck 9, Peters 7, Badger 7, Collins 6, Andrews 9, Miller 8, Aggar 7, Mills 7, Barrett 7, Rust 5, Blackbird 6, Brooks 5, Parker 9, M. H. R. 7.

Total amount of surplus for to-day is \$203.90. W. Wolstencroft won first average of the expert class, \$2.3 per cent., \$40.78, which is a phenomenal score, it is doubtful if he has an equal in this country at expert rules; he is not shooting his usual steady style, but is shooting cool and deliberate. E. D. Miller won second average, \$3.3 per cent., \$40.40. In amateur class C. O. Barrett, of Boston, Mass., won first average, \$3.8 per cent., \$40.78, and E. Andrews second, \$3 per cent., \$20.40. One of the principal features of to-day's shooting was Mrs. M. F. Lindsey (Wanda) breaking 10 out of 15, expert rules. Mr. H. A. Penrose shot with experts for birds only, to fill up squad.

June 5.—The fourth day opened up with almost as large an attendance as the first. The men that shot through to-day cannot get enough shooting. B. F. Schurmeier (Hamline), Neaf Aggar and E. A. Andrews have shot over a 60 per cent. gat during the three previous days the management advanced them to the expert class.

Two were advanced to Expert Class at close of to-day's shoot, and will have to shoot with experts at unknown angles. Mr. H. A. Penrose and E. Collins, making the total number of advancements five: H. A. Penrose, B. F. Schurmeier, E. Andrews, Neaf Aggar and E. Collins. Total amount of surplus throughout tournament was \$233.70. The satisfactory and systematic arrangements of the grounds was due to the energetic efforts of Messrs. H. R. Levingston, W. A. Coster and Wm. H. Boakes. All the boys say they will stop at the Kenmore if they visit Saratoga again.

The Penrose squad tickets are very useful, taking the place of a squad-bustler. With manifold score blanks, squad tickets, blackboards and gong, this association's system of running a tournament is very complete. The next shoot of the association will take place at Boston, July 7, 8 and 9.

CANAJOHARIE GUN CLUB.

CANAJOHARIE, N. Y., May 30.—Canajoharie Gun Club, entrance, not including birds, \$1, divided 40, 30, 20 and 10 per cent. No. 1, 10 kingbirds, 5 kingbird traps, 16 and 18 yds. rise, American Association rules:

with her under-water form, to have been a "cigar" boat. However, though the design originally had very nearly this rounded home form with a "citadel" amidships, it was altered just before building to a more conventional form of topside and deck. She is 10ft. long by 30in. beam, and 15½in. deep under deck. She is of large displacement—probably 180lbs. to 150lbs. more than any other boat of her size—and is intended to be sailed by us. She is designed to carry a heavy centerplate and a live-in heavy owner, plus either ballast in racing or a full ashore camp outfit for cruising. The rocker in her keel is simply a continuous and perfect sweep from waterline aft under her deepest draft (8in.) up to waterline at stem. Her lines are round throughout. Her beam at waterline is considerably under that of her deck, and she has no bilge at any spot more than anywhere else. She has been likened to a Whitehead torpedo split in half horizontally; she is nothing like a kite runner the reverse. Her form is more reminiscent of our under-water form in Singapore (see page 6) than Singapore (or as they used to be some fifteen years back); but with such general likenesses all comparison ceases, as the intents and purposes of the present Nautilus design were first produced in fig-

ures on paper, with but casual consideration of the form they might demand. Nautilus has a heavy gun metal plate nearly amidships, and a very powerful drop-plate rudder; so that in truth the "tail may wag the dog." She has but little overhang at the bow and quarter sections, but she has considerable freeboard all over, and thus far has proved an exceedingly dry boat. She is rigged with balance lugs.

Stella is the last Severn; she was designed by Mr. Stewart. She is unlike the Charm in that she has a round section compared to Charm's flat V sections. She is considerably rockered at both ends. Her center-plate is rather small in area, and of light weight. Certainly in her new owner's hands she will come out fast, and in a way in which she is tooled away to windward of the big yawl in the match of the 18th in a blow, left no shadow of doubt as to her windward-eating qualities. When ballasted down her freeboard is none too great, and in rough water she would have a wet time of it, both on deck and below.

Vanessa is the Nautilus of 1888, with a centerplate of powerful size and weight. Her floor is a rising flat V, with a rather sharply rounded, 4 c. pronounced, bilge. She has very much overhang of bow and quarter sections, which comes into play in preventing or lessening plunging in rough water, but is somewhat detrimental to speed at great angles of heel. She has great capacity for carrying weight, and in addition to being fast under canvas, would be all in it as a cruiser. Her rig is balance lugs.

Urk is a large-model canoe, taking the utmost out of the club dingy way in which she is sailed. She has considerable hollow both forward and aft; she is stiff and powerful, without any ballast, but her best chance would be in light winds with plenty of sail, as her lines are hardly favorable to high speeds or sailing much heeled over. Lug rigged.

Other canoes there are which we have not space at present to notice; also there is probability of the past winners of the challenge cup, the Whim and Whirl, who are very much overhauled and displaced. "no ballast" canoes, and should they be entered, interest will run very high, as they will find their competitors tuned up to a much more perfect racing pitch this year than previously.—*Field*.

TO WINDWARD WITHOUT A RUDDER.

"THE hoisting sail competition, the prizes for which are to be presented by Mr. Zerega, is a canoe test in the right direction and should prove to be of great interest, not only to the competitors, but also to all those canoe men who can make it convenient to be at Bay Ridge on the afternoon of June 6. It is perhaps worthy of note that reefing is not considered among the points that count for the prizes. Therefore it may be inferred that this desirable feature of a hoisting sail no longer has value in the eyes of those who are likely to take part in the trials, or in the opinion of the gentleman who framed the rules.

"He would be a bold man indeed who would say positively that any canoeing feat was impossible, and yet we feel quite safe in venturing the opinion that there is not now in or near New York a canoe or a canoeist that can sail to windward and return without a rudder, and with the centerboard either up or down all the time—as the rules in this competition make necessary. There is no difficulty in tacking and working a canoe to windward without the help of a rudder, and with the board down; but how any canoe can be made to go bow first down the wind—centerboard down—is more than we can understand. It is to be presumed that a canoe cannot be used, although the rules do not say so. We would suggest to the gentleman who is to act as judge, and who is a canoe designer by the way, that he should make an attempt at sailing a canoe down the wind—board up or down—before the date of the competition, and his experience may suggest a change in the rules which will prevent this part of the programme being a dismal failure."—*See Bee Vaux, in The Week's Sport*.

COLLAPSIBLE CHANNELS.

THE first event in the history of the new 46ft. class is the failure of the iron channels of Minerva and Sayonara, the earliest of the fleet in commission. Before the first race, and under the strain of a little trial sailing, they quietly folded up and left the mast unsupported. Channels of any considerable width are a novelty in American yachts; the Harvey cutters Bedouin, Oriva and Wenonah have long narrow channels of wood; the old sloop Fanny has, as every one knows, two curious excrescences of wood that carry her chainplates, and the other old timers, Eclipse and Vision, have some curious specimens of smith work on the sides; but the only new yacht with wide channels prior to this year was Liris, hers being of steel plate and angles, and they have stood perfectly for two seasons. Tomahawk, Gossoon and Helen had channels, but not so wide as in the 46-footers. The channels on the Fife boats, Minerva, Clara, Yama and Barbara, are of steel plate, the centers cut out to save weight, but they are very long, and well stiffened by half-round steel abrest the chainplates. In the new Boston boats the channels are apparently of iron plate, comparatively short for their width, very much cut away, and without the stiffening pieces. That they are not strong enough in themselves seems proven by their behavior in these two cases, and we doubt very much whether the whole connection of the shrouds to the sides of the yacht in many of the newer yachts is not equally faulty; there seems no provision for distributing the strain of the shrouds over the whole side of the boat and also to the keel. In the older boats of a couple of years since with inside chainplates on the frames, there was far less strain, but still some cases of failure occurred, and a far greater strength is called for in the new racers.

YACHTS VERSUS TUGBOATS.

THE decision of Judge Benedict is one of the most important to yachtsmen that has ever been made, and in connection with that in the case of the steam yacht Lagoda, quoted in the FOREST AND STREAM of March 12, it places a pleasure vessel on exactly the same footing in the eye of the law as one engaged solely in trade. In these two cases Judge Benedict has decided that a pleasure vessel is entitled to all the rights granted to vessels by the rules of the road; and also that in case of damage the loss of time may be rated at a certain commercial value, even though the vessel be used solely for pleasure. The masters and pilots of tugboats, river and sound steamers may find very useful if not palatable reading in these two decisions, while yachtsmen have every cause for rejoicing that their rights have at last been so clearly defined, thanks to the spirited action of Mr. Center, of the cutter Medusa, and Mr. Watts, of the steam yacht Lagoda, who have fought their respective cases until a favorable judgment has been reached; in the first case in the face of the very lame and one-sided decisions of both the Supervising Inspector of Steam Vessels and of the local inspectors; and in the second case of the Commissioner who made a mere nominal award of a few dollars.

A CHANCE FOR COMMISSIONER BATES.

IF Commissioner of Navigation Bates finds the time hang idly on his hands at present, there is a wide field of usefulness ready for him in which he can make a partial amends for his authorship of the Frye bill and perhaps do a little to remove the very unfavorable opinion which he has earned from yachtsmen. The task we refer to is the compiling of a list of worn-out and otherwise objectionable names of yachts, and the drawing up of a bill prohibiting their further use. As a beginning we can suggest White Wings, Daisy, Marguerite, White Cap, Frolic, Fanny, Nettie, Mary, Ripple, Lurline, Mystery, Wanderer, Maud, Undine, Idler, Vision, Hattie, Emma, Ella, Lillie, Katie, Nellie, Restless and Meteor. If these names could be laid away for fifty or a hundred years, they not only would never be missed, but might come out at the end of that time with a certain degree of novelty.

CRUISING TRIM AND CLASS LIMITS.—An important question has arisen in connection with the races in cruising trim, which with handicap races will be the new features of several

clubs. Nearly all of the racing fleet are so near the class limit that while they can keep their places in the class by dint of close stripping for a race, they are well over the limit when in usual cruising trim. The question then comes up whether a yacht which comes to the line for a race with a waterline length of sail 30ft. 3in. is in the 30ft. or 35ft. class. It may with propriety be argued on the one hand that the measurement and classification rules recognize no difference of trim, a yacht must be measured in the trim in which she raced, and her length will then show her class. This is a literal construction of the rules, but on the other hand the intention of the clubs in offering prizes for cruising trim was not to re-class the boats, but to leave them in the classes where their official racing measurements have placed them in the past. What is needed to settle the question is a statement from the regatta committees which will show owners just where they stand.

COLOR OF YACHTS.—Mr. Prince has foregone his announced intention of painting the new Beatrix red, and American yachtsmen will be deprived of a startling spectacle. In England, however, some strange freaks in color are in fashion. No exception can be taken to a light mahogany topside, such as some of the racers show, in fact, it was a mistake not to finish Liris this way in her first season, but when one side of a yacht is painted black and the other white, as in the case of the 5-rater Glycera, the result must be surprising, though hardly so hideous as the striped black and white of Mayflower when she raced Galatea. Windfall, a new 5-rater, owned and raced by Mrs. Schenley, is painted a bright red.

A NOVEL RACING PLANT.—The latest development in the racing line is the invention of the two old and clever yachtsmen, Messrs. Paul Ralli, former owner of Yarana, and E. F. Quilter, the Balm, and together they have fitted up a big Thames sailing barge, the New Zealand, on which they can live in comfort and navigate from port to port, carrying the racing craft on davits.

THE MEDUSA-STAPLES COLLISION.

THE following is the full text of the decision lately rendered by Judge Benedict in the case of the cutter Medusa and the tug M. E. Staples. On behalf of the tug it was claimed that the yacht was in the position of an overtaking vessel, coming up astern of the tug and her tow at a speed of 6 to 7 knots, while their speed was but half as much. The claim of the yacht was that the two vessels were crossing, and also that whatever the position may have been, the steam vessel up to the last moment could have avoided the collision had she so desired. The evidence offered by the yacht as to the positions of the two vessels, their speed and the direction of the wind, was conclusive as to the fact that the two were sailing on converging courses, and that the tug without whistle or other warning continued her course until she collided with the sailing vessel. The decision is as follows: The decisions of the Supervising and local inspectors of steam vessels will be found in the FOREST AND STREAM of Feb. 6, 1890.

United States District Court, Eastern District of New York.—William H. Flannery vs. the sloop yacht Medusa. Robert Center vs. the tug M. E. Staples.

At the time of the collision which gave rise to this action the sloop yacht Medusa and the tug M. E. Staples were proceeding down the New York Bay above the Narrows on crossing courses. The yacht being a sailing vessel had the right to hold her course, and it was the duty of the tug, being a vessel under steam, to avoid her. Both vessels held their courses until collision was imminent, indeed inevitable, without prompt action on the part of the tug.

The liability of the tug for the collision is plain, and it is equally plain that the yacht was guilty of no fault.

The collision is easily explained by circumstances proved, which go to show that the tug acted upon the idea that because the tug was a steam vessel engaged in business, while the Medusa was a pleasure craft and able to change her course easily, it was the duty of the yacht to give way for the tug. This was a mistaken idea on the part of the tug. Pleasure yachts, while subject to, are also entitled to act upon the rules of navigation. There was nothing in the situation of these vessels to create an exception to the ordinary rules of navigation by which it is made the duty of a steam vessel to avoid a vessel under sail. The tug had a single boat in tow on a hawser 100ft. long. She could, by stopping her given the yacht room to pass without collision. She could by a slight change of her helm have removed all danger of collision. She was in possession of the power to avoid approaching vessels and that is the basis of the rule of navigation, and I discover nothing in the proofs upon which to base a decision that she was relieved from the rule. Therefore, by the navigation rules the yacht had the right to hold her course, and made it the duty of the steam vessel to avoid her, and this duty was in no way modified by the fact that the vessel she was approaching was a pleasure yacht able to alter her course without much trouble or loss.

The libel of the owner of the tug is therefore dismissed with costs, and in the case of the owner of the yacht a decree will be entered in favor of the libellant with an order of reference to ascertain the amount of the damage.

Hyland & Zabriskie for tugboat Staples.
Julian B. Shope for yacht Medusa.

THE WATSON CENTERBOARD 10-RATER.

THE Field speaks as follows of the new 10-rater Dora, designed by Watson for Messrs. Allan, owners of Doris. The new boat has sailed but twice, and her performance is not conclusive, but her two wins from such tens as Woodcock and Yvonne show her to be a very smart boat.

"The opening cruise of the Royal Northern Y. C. was memorable for the exceptional interest taken in the racing of the 10-raters, reinforced by the new centerboard cutter Dora, built by Adam of Gourock, from the design of Mr. G. L. Watson for Messrs. B. and R. Allan, who owned the well-known 10-rater Doris. Dora is so novel in form and construction that even judges doubted if she would do any good. In the only two encounters she had, with the keel 10-raters she has come out successful. But in the first of these at Rothsay, on the day previous to the Royal Northern match, the wind veered about, with Dora getting more than her own share of luck. In the Royal Northern match the breeze was fairly steady throughout, and while in the reaching Dora seemed to be making little of her rivals, in turning to windward from Ladda, off the south end of Arran, to Davaar, in the entrance of Campbell Loch, she fairly outwinded the keel 10-tonners, and left them fastest in the stronger breezes. Of course many more trials are wanted to show Dora really superior to keel cutters of the same tonnage. In the meantime her further performances will be watched with the keenest interest in Clyde, since they may mean a great revolution in yacht building. Dora has no resemblance in form to either Iverna or Amphitrite, which discarded their centerboards. With sharp appropriate very considerable beam, and with nearly the draft of a 10-tonner, the cutter has a natural stability that, with a heavy lead keel, keeps her more upright than the keel 10-tonners on the wind; and she does not jump in the head sea, as was expected. The racing in the other matches of the Royal Northern presented no features of interest. As was to be expected, the 40-ton cutter May, in the turn to windward from Ailsa Craig to Campbeltown, went to the front, and the 20-rater Windward had an easy victory over the out-classed and cruising cutters in the match."

A. P. E.—MARGUERITE.—The fast Cape Cod catboat A. P. E. has lately been brought to New York, her new owner changing her name to Marguerite, making about the twenty-first yacht of that name. Neither A. P. E. nor Mucilage were specially appropriate or euphonious names for a yacht, but each of these craft has made a reputation under one of them, and it is a pity that their identity henceforth should be entirely lost under the time worn names by which they have been rechristened. As they lie side by side in the Atlantic Basin, the A. P. E. appears as the Marguerite, while the Mucilage is transformed into the Iris. Both yachts, with appropriate such smooth topsides, hardly a seam showing, that it is a pleasure to look at them. Whether they will repeat the victories of their Eastern career in New York waters remains to be seen, but on the Upper or even the Lower Bay it ought to be no difficult matter to beat them with a boat designed for New York waters.

MARJORIE.

THE accompanying plans show the interior of the keel cutter Marjorie, whose lines appeared in the FOREST AND STREAM of May 14, and sail plan May 21. The yacht has a flush deck with a long and narrow trunk, the top of the latter being nearly flat and from 9½ to 13 in. above the deck, giving over 8 ft. of headroom in the cabin. The middle of the yacht is taken up by one large cabin, over 13 ft. long, but so arranged as to be readily divided into two rooms. The two transoms are 12 ft. long, each thus making two beds, while back of each in the wings is a large space for bedding and clothes, a curtain covering the opening. On the port side, back of the forward transom, is a closet, built up under the deck, while opposite to it on the starboard side is a folding washbowl. A movable bulkhead, in two halves, is so fitted as to ship in the middle of the cabin, completely shutting off the forward portion and making a ladies' cabin of it. In the main bulkhead, just abaft the mast, is a doorway, covered by a curtain. To port of this doorway is the icebox and refrigerator, communicating with the forecabin; while to starboard is the toilet and w. c. A single swinging door is hinged near the mast, shutting off the forecabin and toilet room at will. The forecabin has a hammock cot to port, and closet and stove opposite over the starboard locker. The distance from fore side of stem to center of mast, previously given as 10 ft., should read 9 ft. 1 in.

ATLANTIC Y. C. RACES.

THE twenty-sixth annual regatta of the Atlantic Y. C. will be sailed on Tuesday, June 16, being open to yachts of the New York, Seawanhaka Corinthian, Larchmont, Eastern, Corinthian of New York, Corinthian of Marblehead, Beverly, Hull and Rochelle yacht clubs. To be sailed in accordance with racing rules of the club over the regular club courses under the direction of the regatta committee of the Atlantic Y. C. The classification under Rule III. of the racing rules is as follows:

Rule III.—Classification—For club races yachts shall be divided into classes according to l.w.l., length to be determined in the manner specified in Rule V., providing for measurement for time allowance, which classification shall be as follows: Schooners—Class 1, over 90 ft. l.w.l.; class 2, over 70 ft. and not over 90 ft. l.w.l.; class 3, under 70 ft. l.w.l. Sloops, cutters and yawls—Class 1, over 70 ft. l.w.l.; class 2, over 61 and not over 70 ft. l.w.l.; class 3, over 3 ft. and not over 61 ft. l.w.l.; class 4, over 46 ft. and not over 53 ft. l.w.l.; class 5, over 40 ft. and not over 46 ft. l.w.l.; class 6, over 35 ft. and not over 40 ft. l.w.l.; class 7, over 30 ft. and not over 35 ft. l.w.l.; class 8, over 25 and not over 30 ft. l.w.l.; class 9, 25 ft. and under; class 10, open sloops; class 11, cat-rigged yachts. Any yacht which shall have been launched prior to the first day of May, 1888, exceeding the higher limit in any class by not over the fraction of a foot shall be included in that class.

The allowance for cruising trim under Rule IV. is as follows: Special allowance—1. For cruising trim: Yachts entering to sail in cruising trim shall be rated for time allowance at 94 per cent. of their racing length. Yachts so entered must sail in ordinary cruising trim, and carry their complete cruising outfit, except boats and davits.

Yachts will be rated for time allowance according to the following system, to the square root of the sail area add the load waterline and divide the sum by two. The result is the measurement for time allowance—the allowance to be calculated according to the tables in the racing rules. The measurements to be obtained as provided in Rule V. of racing rules, which rule is printed on the entry blanks. Entries must be in writing and filed with the chairman of the regatta committee, H. B. Howell, No. 109 Wall street, New York city, not later than 11 A. M., Saturday, June 13. The courses to be sailed are set out in Rule XIII. of racing rules. The start will form off the club house at Bay Ridge, and the finish at buoy 11, formerly 15, on the West Bank. The start and finish will be in accordance with Rule XIV. of the racing rules, and the preparatory signal will be fired at 10:30 o'clock A. M. The prizes to be sailed for will be the regular annual club cups; one prize in each class in which any yacht starts and completes the course. The racing rules of the Atlantic Y. C. may be obtained from Henry B. Howell, chairman of the regatta committee, 109 Wall street, New York city, and will be forwarded on receipt of entry or upon application.

On Tuesday, June 23 a special race for 46 ft. and 35 ft. classes of sloops, cutters and yawls, and for the yachts of the 25 ft. time allowance rating class will be sailed; open to yachts of the New York, Seawanhaka Corinthian, Larchmont, Eastern, Corinthian of New York, Corinthian of Marblehead, Beverly, Hull and New Rochelle yacht clubs, and of any other regularly organized yacht club, entries from which may be accepted by the regatta committee.

The prize in the 46 ft. class will be the cup presented to the club for this race by Vice-Commodore David Banks. The prize in the 35 ft. class will be the cup presented to the club for this race by Mr. W. W. Kenyon. The prize in the 25 ft. time-allocation rating class will be the cup presented to the club for this race by Commodore N. D. Lawton. These races will be sailed under the direction of the regatta committee and in accordance with the racing rules of the club, with the following exceptions: Three yachts must start with the intention of completing the course to make a race in a class. The starting signals will be given from the committee boat, and the preparatory signals will be given at 11 o'clock A. M. promptly. The start and finish for all classes will be in Gravesend Bay across an imaginary line drawn between two stake boats anchored northwest from Coney Island Point.

The courses will be: Forty-six foot class. From starting line to buoy 14, near Southwest Spit, keeping it on port hand; thence to buoy 12, keeping it on port hand; thence to Scotland Lightship, keeping it on port hand; thence returning to buoy 12, keeping it on starboard hand; thence to buoy 14 near Southwest Spit, keeping it on starboard hand; thence to finishing line. Yachts must keep to the eastward of buoy 9, on West Bank, and to northward and eastward of buoy 5 off the point of the Hook.

Thirty-five foot class. From starting line to buoy 14, near Southwest Spit, keeping it on port hand; thence to buoy 12, keeping it on port hand; thence around Scotland Lightship, keeping it on port hand; thence returning to buoy 12, keeping it on starboard hand; thence to buoy 14, near Southwest Spit, keeping it on starboard hand; thence to finishing line. Yachts must keep to the eastward of buoy 9, on West Bank, and to the northward and eastward of buoy 5 off the point of the Hook.

Twenty-five foot class. From starting line to buoy 14, near Southwest Spit, keeping it on port hand; thence to buoy 12, keeping it on port hand; thence around buoy 5, on the point of the Hook, keeping it on port hand; thence returning to buoy 12, keeping it on starboard hand; thence to buoy 14, near Southwest Spit, keeping it on starboard hand; thence to finish line. Yachts must keep to the eastward of buoy 9, on West Bank.

In the 46 ft. class, Rule IV. is suspended for this race. Clubtopsails may be carried, and may be set over working ones. Full professional crews may be carried. In the 35 ft. class, Rule IV. is suspended. In the 25 ft. time-allocation rating class Rule IV. is suspended for this race, and the special rules of the club with respect to this class will govern the race. Entries for these races must be made in writing and filed with Henry B. Howell, 109 Wall street, New York city, chairman of the regatta committee, not later than 12 M., Saturday, June 20, 1891.

A NEW YACHTING STATION.

IT has been a matter of frequent comment that with new yacht clubs springing up in all directions, and many with very fine buildings, that two of the leading American clubs have been content with town quarters only in New York, and no stations on the water. It is nearly fifteen years since the New York Y. C. abandoned its house at Stapleton, and six years since the Seawanhaka C. Y. C. gave up the house and basin at Tompkinsville. In this short time two clubs have come to the front by virtue of stations on the water; the Larchmont, with its fine house and grounds, and the Atlantic with a large new house and increased anchorage facilities. The subject of a station for the Seawanhaka Corinthian Y. C. has been only dormant during the carrying out of the town house scheme, and lately it has been revived with such success that a most desirable location has been found on Oyster Bay. At a meeting on Monday the club voted to purchase the property and erect a handsome club house with sleeping rooms, restaurant, etc., and the work will be commenced at once. The club will issue bonds to the amount of \$60,000, about \$7,000 of which will be used in cancelling its present bonds. At the meeting the racing rules were changed to allow three professionals in the 35 ft. and 46 ft., two in the 40 ft., and one in the 35 and 30 ft. classes.

CORINTHIAN MOSQUITO FLEET.—In the race of Memorial Day the Wetmore boat wins, Smuggler being the longer, as determined by a careful measurement last week. Cruiser also beats Olga by 5 m. 49, and Caprice wins in Class VIII. On June 13 a race will be sailed off Larchmont for yachts' boats, St. Lawrence skiffs and similar small craft. The C. M. F. has been very courteously tendered the use of the float and basin of the Corinthian Y. C. and also the house and anchorage of the Larchmont Y. C. during the season.

CUTTER "MARJORIE." DECK AND CABIN PLANS.

LARCHMONT Y. C. SPRING REGATTA, JUNE 6

THE spring regatta of the Larchmont Y. C. on June 6 mustered fifteen starters, but none of the classes were well filled. Only two schooners, Viator and Princess, started, while Jessica and Volusia were without competitors. In order to give Jessica a race Mr. C. W. Wetmore started Liris, with the agreement that only working canvas should be used. Mr. Wetmore himself sailed his new 25-footer, Mr. H. C. Ward sailing Smuggler against him.

Viator, Princess, Jessica, Liris and Volusia sailed from Larchmont, around a stakeboat in Hempstead Harbor, thence around a mark off Captain's Island and back, 21 miles. Smuggler, Nameless, Nellie, Dot, Aura, Mimette and No Name sailed around the stakeboat in Hempstead Harbor, thence around buoy off Matinecock Point and back, about 13 miles. Cruiser, Coyote and Edna went around buoy on Scotch Caus' Reef, off Rye Neck, thence to and around buoy in Hempstead Harbor and back, about 10 miles. The wind was N.E., moderate at times, but falling toward the end of the race. The start was timed:

Liris.....	12 00 32	Princess.....	12 04 37
Jessica.....	12 01 05	Dot.....	12 05 23
Mimette.....	12 01 19	Edna.....	12 06 18
Viator.....	12 02 09	Smuggler.....	12 07 18
Aura.....	12 02 32	Volusia.....	12 07 56
Nellie.....	12 02 47	Cruiser.....	12 08 53
No Name.....	12 03 55	Coyote.....	12 09 01
Nameless.....	12 04 02		

Jessica rounded the Hempstead mark with a lead of nearly 2 m., having passed Liris on the reach, but on the long leg to Captain's Island, both lying as high as possible, Liris did the better work, the times being:

Jessica.....	1 23 05	Liris.....	1 24 54
The schooners had to tack for the mark, rounding at			
Viator.....	1 33 20	Princess.....	1 46 30
Smuggler started astern of the Wetmore boat, but at the first mark had gained considerably, adding a little on the next leg to Matinecock. On the way home, off the wind, Smuggler gained still more, finally winning by over 5 m. The full times were:

HUDSON RIVER Y. C. ANNUAL REGATTA, JUNE 8.—The Hudson River Y. C. sailed its annual regatta on Monday in a very light breeze, the course being up the river from the club house to Spuyten Duyvil for the smaller craft and 3 makers for the larger, and return. Although unlimited crews and sandbags were permitted, only one boat of the twenty starters was capsized, the Lizzie F., and none of her crew were drowned. The times were:

Hotels and Boutes for Sportsmen.

When planning your annual tour remember that this company controls over 4000 miles of railway equipped in the most approved modern style, passing through a magnificent country noted for its unsurpassed facilities for sport.

A FEW OF THE PRINCIPAL RESORTS.

PORTLAND, Me. - For deep sea fishing.
ANDROSCOGGIN LAKES (near Bryant's Pond or Bethel). - Excellent trout fishing and game, large and small, of every description.

THE WHITE MOUNTAINS (via Gorham, N. H.). - For trout and varieties of game.

THE SALMON RESORTS of Quebec, New Brunswick and Nova Scotia (reached via Quebec).

LAKE ST. JOHN REGION (via Quebec). - For muskellunge, trout, caribou, bear, moose, beaver, otter, etc.

THE RIVER ST. LAWRENCE (in the neighborhood of the line for 400 miles). - For muskellunge, pike, bass, whitefish, pickerel, perch.

THE THOUSAND ISLANDS (via Gananoque or Kingston). - For pickerel, black bass, muskellunge, pike.

MYSTOKA LAKES. - The best place on the continent for fishing, shooting and camping. All varieties of fish and game.

PARRY SOUND AND GEORGIAN BAY (reached via Penetang, Midland, Collingwood, etc.) for black bass, pickerel, deer, partridge, bear, otter, etc.

LAKES ONTARIO, ERIE, HURON AND MICHIGAN (via stations at all principal ports).

LAKE SUPERIOR (via Collingwood, Warton, Sarnia in connection with steamship lines).

The charges for hotels, guides and camping at many of the fishing waters named above are extremely low. Full particulars of same, with many valuable hints as to best months and general facilities, are published in a pamphlet entitled "Fishing and Hunting Resorts of the Grand Trunk Railway," which will be furnished gratuitously on application to the Company's principal agents, or to the General Passenger Agent at Montreal, P. Q.

WM. EDGAR, Gen. Pass. Agent. **L. I. SEARGEANT,** Gen. Manager.

QUEBEC AND LAKE ST. JOHN RY.

ONLY rail route to the delightful summer resorts north of Quebec, through the **CANADIAN ADIRONDACKS**. Monarch Parlor and Sleeping Cars. Magnificent scenery. Beautiful climate.

Hotel Roberval, Lake St. John, recently enlarged, has first-class accommodations for 300 guests, and is run in connection with the "Island House," a new hotel built on an island of the Grand Discharge of Lake St. John, in the center of the "Ouananiche" fishing grounds. Daily communication by the new fast steamer across the lake. The fishing rights of Lake St. John and tributaries, an area of 20,000 square miles, are free to guests of the hotels.

For information as to hotels, apply to hotel managers. For folders and guide books to Thos. Cook & Son, 261 Broadway, New York; to Raymond & Whitcomb, 298 Washington St., Boston, and to ticket agents of all principal cities.

LAWS OF THE UNITED STATES AND CANADA
RELATING TO GAME AND GAME FISH.

H. M. QUACKENBUSH'S SAFETY CARTRIDGE RIFLE.

The Best Accurate Rifle Yet Offered for the Money

Whole length, 38in., weight 45lbs.; caliber, 22,100, for regular "BB" or long and short cartridges. We guarantee these rifles to shoot as strong and as accurate as any 22,100 Caliber Rifle made; besides, they are perfectly safe to handle, quick to operate, reliable in every respect, and will bear incessant use without impairing their efficiency in the least degree. The rear sights are adjustable, and the barrel can be instantly removed from the frame, making a handy arm to carry in trunk, valise or package. Each Rifle is tested before leaving our works, and is knocked down as above stated, and neatly packed in a neat, strong box. We also manufacture a full assortment of **Air Guns**, suited to meet the tastes and wants of every one. The quality of our goods has established them in all the principal markets of the world, and their superiority has induced the U. S. Navy to place them, with success, on their school ships. Illustrated Price List sent on application. Address **H. M. QUACKENBUSH, Manufacturer, Herkimer, N. Y., U. S. A.** NOTE—We stamp our name on each Gun we make. Send for Catalogue No. 32. Mention **FOREST AND STREAM**.

If you live in Boston, or New York, or Philadelphia, or Baltimore, or Chicago, or St. Paul, or Duluth, or any one of a hundred cities where there are gun and fishing tackle stores, you need not send to us for the **BOOK OF THE GAME LAWS**; your dealer has the latest (April) issue. Price 50 cents. Buy of your dealer.

FISHERMAN'S AUTOMATIC REEL.

When a sportsman finds anything which adds to his pleasure, without increasing his labor, he wants all his brother hunters and anglers to know of it and share with him the newly discovered "helper."

WHAT WE CLAIM FOR

The Automatic Reel.

FIRST—It will wind up the line a hundred times as fast as any other reel in the world.
SECOND—It will wind up the line slowly if the angler chooses.
THIRD—No fish can ever get slack line with it.
FOURTH—It will save more fish than any other reel.
FIFTH—It will prevent tye, lines and snells from being broken by large fish.
SIXTH—It enables the angler, and makes it desirable, to use lighter tackle.
These claims have been substantiated by the most skillful fishermen in America and Europe.

Improved
AUTOMATIC
REEL.

This reel is manipulated entirely by the hand that holds the rod.

OUR ADIRONDACK NUMBER.

THE issue of to-day consists of thirty-two pages, of which a generous proportion is devoted to papers descriptive of life and hunting experiences in the North Woods. The demands made on our space this week by the full report of the large and notable Chicago tournament has compelled us to defer to a later date two of the papers promised for to-day—Mr. J. H. Dudley's account of an Adirondacks excursion thirty-three years ago, and the story of camp life at Spruce Lake. In addition to these deferred papers we had in hand for this issue a charming chat by Mr. Chas. Hallock, whose text is the "Wane of the Adirondacks," and still another reminiscent chapter on the "Upper Adirondacks in '56," by our New Hampshire correspondent, "Byron." There is indeed a rich supply of material for another "Adirondack Number," which shall be forthcoming at an early date; and then we shall have made doubly good our promise of last week that the Adirondack literature given in these columns should be of such amount and variety that all readers might find in it something to their taste. Our experience to-day is simply a repetition of what has been the common experience of the FOREST AND STREAM with its special numbers. The announcement that a given issue would be devoted to some special subject has invariably brought to us a greater wealth of material than could be contained in a single number, thus happily and effectively demonstrating again and again the resources of the rich field from which the paper reaps its harvestings of good things.

The sketches printed to-day admirably picture the varied phases of life indulged in by the modern visitor to the North Woods. Ninety-nine out of a hundred Adirondack tourists resort thither for a pleasure season in which shooting and fishing have no actual part. Here more than anywhere else in the country, men—and women—who do make a pretense of going hunting or

fishing, go through the formality simply because these are the correct things to do. While hundreds visit Adirondack streams and lakes seriously intent on a creel of trout or a deer, thousands more have no thought nor taste for the rod and gun; and these thousands constitute the grand army of the summer visitors. With each successive year this host is taking firmer possession of the North Woods, advancing its outposts, intrenching itself in luxurious dwellings styled "camps," and in the ubiquitous, aggressive and domineering summer hotel. With every passing season the trout fisherman and the deer hunter find less and less available territory, and must go further and further and penetrate more deeply to find the primeval wilderness. And wildness itself no longer is free. The private fishing club and the exclusive game preserve are devouring the Adirondacks. Vast tracts are passing into their control; their trespass signs multiply with the years.

That there yet remain enticement and reward for the sportsmen in the North Woods is abundantly demonstrated by the writers who furnish the feast of entertainment to-day. Here are stories of sport, and successful sport, with the deer and the trout. Wisely employed, used with reason, the natural wealth of New York's magnificent wild domain may be conserved for generations to come. The primitive Adirondacks have passed away; sentiment may bewail the change, but common sense tells us that the rule of the greatest good to the greatest number must prevail here as elsewhere. That the region has been transformed from an inaccessible wilderness, visited only at expense of hardship and discomfort, and has been converted into a resort easy to reach and provided with every comfort of modern life—this is to say that the blessed influences of the woods have been extended to the multitude. And if only the American of this day and generation were more provident and thoughtful, both for himself and his children and for those who are to follow, there would be no conflict of interests between the several classes of visitors and outers who flock to the North Woods. In that vast park is room and to spare for all.

DEAD ALEWIVES IN LAKE ONTARIO.

THE Rochester Democrat of recent date announces the death of millions of fish around the shores of Lake Ontario, causing pollution of the waters and contamination of the air. It is stated that these epidemics occur every year, and the question is asked whether they are due to pollution by sewers, or other similar causes. An exchange commenting on the above statement of the Democrat pronounces the article sensational, misleading and absurd, which is putting the case rather strongly. The death of the fish annually in large numbers is granted. The theory that the late Seth Green introduced the fry of this fish into Lake Ontario is mentioned.

The fish referred to, however, is not the menhaden of the Atlantic coast, but the river herring, alewife or gaspereau. Its origin in Lake Ontario and in interior lakes of western New York is involved in obscurity. It is believed that it was introduced into Lake Ontario with shad, for it was not known to occur there until after the introduction of that fish. From the best information obtainable it appears that the alewife does not ascend the St. Lawrence from the Gulf. Into Cayuga and Seneca lakes, New York, there is reason to believe that the species has penetrated of its own accord. Alewives have been seen to go up the canal locks at West Troy, and Prof. Hamilton Smith first noticed them in the neighborhood of Seneca Lake in 1868, about the time the canals were opened, and thinks that they might have come into those lakes from the Chesapeake or Delaware bays, through Elmira and Painted Post.

The fish from the interior lakes are much smaller than those from Lake Ontario, and present a somewhat starved appearance. This was specially noticed in individuals which had been found dead in immense numbers. The spawning season of this alewife in Lake Ontario is in June and about Aug. 10 the fish disappear, presumably going into the deeper water of the lake.

It is claimed that the fishing apparatus used for the capture of edible fish destroys vast numbers of alewives. The dead fish from Seneca Lake had the air bladder abnormally distended, filling the greater portion of the abdominal cavity. This distention of the air bladder would naturally cause the fish to float at the surface.

A full account of the inland alewife was published by

Dr. Bean in the "Fishery Industries, U. S.," Section I., page 588. At the time his report was written the Utica Herald and the Rochester Union attributed the sudden death of these alewives and other fish to the explosion of dynamite, and the condition of the air bladder would seem to warrant this explanation. These newspapers stated that thousands of fish, not large enough for profitable sale or use, are destroyed in this way, among them black bass, perch, bullheads and sunfish.

Fish epidemics are only too common in various sections of our country. Florida, Massachusetts, Virginia, Wisconsin and Pennsylvania, as well as New York, have felt the fatal effects of extensive fish mortality. At Lynn, Mass., barrels of dead fish have recently been removed by the health officers from Butman's Mill Pond; their death is attributed to mill refuse.

This is a proper subject for investigation by fish wardens and fish protective associations, as well as for naturalists, and we hope it will receive prompt and careful attention.

SNAP SHOTS.

ANGLERS are probably not aware that many tarpon have recently been caught in traps at Crisfield, Md., where they were unknown to the fishermen until Capt. Robert Platt, commanding the Fish Commission steamer Fish Hawk, came along and told them what royal game fish they were taking in such ignominious fashion. We have seen some of the scales of the fish and there is no mistake about Capt. Platt's identification. The tarpon is to be found at Crisfield, and when anglers learn this fact it is probable that something more scientific than traps will be employed in its capture. Bluefish and hard and soft shell crabs were found in abundance also by the Captain. The possibilities of the Chesapeake are scarcely realized.

By a careless use of the term "wild animals," we forget to what an extent their wildness depends on man's attitude toward them. Game is sometimes said to know all about the open and close seasons, being wild and shy when the law is off, but more confiding in close season. It is wonderful to note with what slight protection the habits of deer may be changed in this respect. On Long Island, where the hunting season is exceedingly short, only ten days in October, the deer are very tame; two were observed unconcernedly feeding on the lawn near the Oakdale station, as the train sped by, one day last week.

Mr. D. D. Sammis, of Fire Island, who writes us that the Surf Hotel there will open on the 20th, adds that this is his thirty-sixth year. Here and there—though scattered at wide intervals it must be confessed, and in number more meagre every year—is a hotel man who knew and was known by the Frank Forester generation of sportsmen. What a flood of memories of those days comes to the greybeards at mention of the old guard; and what a company it would be if for one rare night the Fire Island house might be repeople with the fishermen who have made merry within its walls.

The tournament of the Illinois sportsmen is always an important event in the shooting calendar, and this year they have surpassed themselves. The magnitude of the meeting, its orderly conduct, and the intense interest manifested throughout combine to make it as a memorable occasion. Mr. Hough's admirable report of the meeting is given in full in our trap columns. If Chicago keeps on there will be a big time at the "State shoot" in 1893.

A petition is signing in Westchester and Queens counties, N. Y., asking the Commissioners of Fisheries to stock Long Island Sound harbors between Fort Schuyler and Rye Neck and Oyster Bay with striped bass and weakfish. The petition sets forth that those formerly abounded with game fish, but that now nothing but a scanty catch of coarse varieties rewards the angler.

ANY subscriber may supply a friend with a copy of the current issue of the FOREST AND STREAM by sending us on a postal card the name of that friend.

Beneath a basswood he a bass wooed, but the bass would not.

IN THE ADIRONDACKS.

THREE WEEKS ON THE RAQUETTE.

AT the foot of Raquette Falls, in the Adirondack woods, on a certain afternoon in late September, five Saranac boats beached their prows on the east side of the river. It had rained fitfully during the morning, but the sky was now clear and blue, and a light breeze was shaking the last remaining drops from the balsams that fringed the shore. First to spring out upon the bank was the guide, closely followed by his two hounds, Sport and Trail. Then came Henry, the stout-armed, who had pressed the guide hard in the long upstream row from the Indian carry, and whose boat, like the guide's, was loaded to the water's edge with camp equipage and provisions. Close after him came the "two Charleses," Charles the Short and Charles the Long, who had "spelled" each other with their heavy load against the current. Then came another mutually helpful pair, Uncle Jack and "Ich" (sawed-off for Ichabod), and last of all Frank and the Scribe, who from first place had quietly dropped behind to last, lest too long continued priority should dampen the already moist ardor of the rest, who were beginning to feel the effects of two days' steady rowing.

Willing hands soon unloaded the baggage, and while the guide was chopping his backlog and building the frame for his fire, the rest of us proceeded to unpack and get the tents in readiness to raise. We selected a high and dry knoll, about five rods from the water, and pitched one of the large tents. Then came about fifteen minutes for refreshments; after which we pitched the other large wall-tent, facing the first and about 15ft. from it. We then rigged uprights and a ridge-pole for a large canvas fly, and spread the latter over the space between the two tents, pinning down the edges of the canvas with heavy logs and stones. This gave us a continuous canvas inclosure some 36ft. long and 10ft. wide. Every gap was closed up with strips of drilling, which we had brought for that purpose; and when all was done our camp was as tight and windproof as a drum. We left a flap for a door in the fly, close to one of the wall-tents, and had it so arranged that it could be pinned up securely at night. But the greatest triumph of comfort was the little folding sheet-iron stove, which we set up on four stones inside the fly. The pipe ran up through the canvas (the latter being protected by a tin sheath), and was capped by an iron wire spark-destroyer. This had worked first rate, when we kept a man outside tapping it with a stick to loosen the soot. At other times it choked up like a baby with the croup, and filled the tent so full of smoke that even the dogs wept pathetically.

Speaking of dogs reminds me that I have only noticed the guide's team, Sport and Trail. We had two other hounds, contributed to the general fund of caninity (to coin a word) by different members of the party. One was old Jube, now in his tenth season, but tireless and ardent as ever. This veteran hound was the property of Uncle Jack, and had accompanied his master into the woods every season since he was a puppy. It is safe to say that no deerhound in St. Regis county has a more enviable reputation than old Jube. Nearly all the guides know him, and respect him, too; for Jube has brains and experience, qualities which are as rare in dogs as in men, and worth quite as much. It is impossible to cajole Jube into staying over night in any camp except that one where his master is; and in all his ten years of deer-hunting he has never lain out over night but once. The homing instinct is a prime quality in a deerhound, where so much depends on having the dogs at hand every morning to start fresh "races." Another of Jube's superior qualities is the almost human way in which he picks up a lost scent, not puzzling about the spot where he stops, as most hounds do, but leading off, head in air, and circling up the wind till he catches it again.

The other canine member of the party was one Hector, a small lemon and white hound with beagle blood in him. He ran all his races to water with the speed of the wind, and then, instead of returning to the starter to be put on a fresh trail, amused himself by running over the old track, in full cry, three or four times in succession. The fourth or fifth time seemed to afford him just as much amusement as the first, and it made no difference to the rascal how often the poor watcher on the runway was put in a fever of excitement and expectation, and then cooled down with April-fool suddenness. To Hector it seemed that the whole expedition was gotten up for his individual enjoyment; and certainly no dog ever had a better time inside of three weeks. He ran fifteen races 68 times, and developed such an appetite that in one week's time, by reliable computation, he ate four times his own weight of solid meat. And yet, in spite of such hearty feeding, his ribs stuck out so prominently that any one seeing him at a distance would suppose that it was only a dog's head and tail in parenthesis.

The camp, we have said, was pitched on the east bank of the Raquette River, just below the falls. Back of it, and up the river about an eighth of a mile, was McClellan's, a rough board house, devoid of clapboards, where dwelt the proprietor of the rapid's carry, a valuable privilege, but secured only by squatter's right. McClellan's was in the midst of a considerable clearing, the only one for many miles, consisting of some twenty or thirty acres of meadow and pasture. Through this clearing, and into the woods on the south side, ran the road over the carry—a perpetual slime bed in the dryest season, more slippery than hidden ice, and with ruts and sloughs striking down to Avernus.

The watch grounds were about equally distributed above and below the falls. When deer were started in the hills back of camp they were about as likely to run to water clear up to Cold River or Moose Creek as below, at Stony Creek or the Long Stretch. Therefore, men had to be stationed each day above and below, and one of our first moves was to transport two of our five boats over the carry, so that they could be used above the rapids. The various watch grounds in progressive order of remoteness from the camp were as follows: Above—Head of the Rapids, the Rock, the Elbow, Moose Creek, Pine Ridge and Cold River. Below—Bullpout Ledge, the Meadow, the Haybank, Palmer Brook, the Short Draw, Stony "Slew" Draw, the Long Draw, the Stretch and Stony Creek. Of course, we had not men enough to cover all of these watch grounds every day, but as there was hardly a day when other parties, from Wardner's or Mc-

Clellan's, did not occupy some of them, there were enough of us, generally, to hold our share.

We awoke after the first night in camp a trifle stiff and sore in the bones, owing to the scanty amount of balsam browse which we had had time to prepare and spread the previous evening. But a little stirring about and a good breakfast, consisting of all the camp dainties except venison, served to take the kinks out of us, and by 8 o'clock we were all ready to go on our runways. All our boats being still below the rapids the whole party had to be distributed among the lower watch grounds. Frank, who was familiar with the ground, having camped and hunted there the year before, piloted the party down stream, dropping off men and boats at various stations. Meanwhile the guide, with four eager hounds tugging by their chains at the rings in his belt, had started out over the hills to the east. Scarcely an hour had elapsed when a single shot, the signal agreed upon, announced to the expectant watchers that the first dog had been started on the first race.

All was now intense, but suppressed, excitement. Down the line of watchers, as the far-off sound of the hound's baying broke on the ear, ran the electric premonitions of buck fever. All eyes were strained up and down their respective stretches of water, every hand grasped the rifle with convulsive determination. Floating sticks and leaves and bits of foam assumed startling and vivid proportions, and more than one heart increased its pulsations with a wild jump as a bottle, set afloat by the conscienceless man at the head of the line, came gliding around the curves with the swift current.

In the meantime the hound's baying grew more and more distinct, softened now by some hollow between the hills, and again swelling forth clear and sonorous as the chase swept over the crest. Suddenly there was a shot—two more—another; then silence, broken only by the still hot baying of the hound, as he swept up the last ridge overlooking the river.

Who had been the lucky man? This was the query which flashed simultaneously through the minds of seven anxious and disappointed watchers. Meanwhile a strange boat, containing an elderly man and a boy, was pushing out into the stream, between the Haybank and Palmer Brook. The twain picked up a fine doe floating in mid-stream, towed her ashore, bled her, and then lifted her into the boat. About this time old Trail came down to water, and the man stationed at Palmer Brook hove in sight, churning up the foam with his efforts at the oars.

"We have shot a deer ahead of you," said the elderly man, "and will give you the hide and some venison if you want it. Our dog was put out on the same side, and we were watching for his race."

There was nothing for it but to submit to the law of the woods, which says that the deer belongs to the man who shoots it, though courtesy always yields the hide to the dog. We heartily wished the old man and his son had been anywhere else except slipping in between two of our watchers; but, as McClellan said when we asked him if he had any objections to our camping on his pre-empted territory, "This is a free country," and a man in the woods has a right to go where he pleases.

All the other races started that morning went away to Moose Creek and Cold River, and after three or four hours longer of monotonous watching we were all glad to hear the guides' three guns from camp, the customary signal for return. All the dogs had finished their races and returned except Hector. He was probably on the second or third trip over his and would see us later, although we did not know at the time that he was afflicted with this foolish habit of "doubling up" his races.

We had dinner, and then all hands turned to and cut and spread browse for a couple of hours. This gave us a soft and fragrant bed on which to spread our blankets and promised more peaceful slumbers than we had enjoyed on the previous night. Next in order the carpenters of the party built a table out of some saplings and a few old boards that had been left over from last year's camp. The rest cut wood for the little stove, put up a rude framework to rest the guns against, strung up lines and drove nails into the upright tent poles to hang clothes on, and busied themselves generally in making the camp more comfortable. When dusk came on we started a rousing fire in the little stove, lit our duplex-burner lamp and gathered with pipes and cigars about the fire to discuss the events of the day and plan for the morrow. It was decided that three men should go over the carry in the morning with two boats and watch the more important runways above the rapids. The guide took a lantern and went up to McClellan's to arrange an early carry for the boats and get the saddle of venison which the old man, who was stopping at the "hotel," had agreed to have ready for us.

Next morning we were up betimes, and had our first meal of venison. It was rather of a disappointment, being very tough and flavorless, but the guide assured us that it would be better when it got "ripe," if it ever had a chance to. Promptly at 8 o'clock McClellan's team appeared at the lower end of the carry, and three of us loaded on the boats and walked over the slimy mile-and-a-half carry through the woods. One man was left at the head of the rapids with a boat, while the other two went further up stream, one being left at the Rock while the other went on to Pine Ridge.

As luck would have it no deer were driven above this time, and the up-stream watchers had a whole undisturbed day in which to indulge in lofty meditation and suck their pipes. But below there was considerable excitement. Ich, the youngest of the party, had a buck driven in to him at the Long Draw. He heard no dog at the time, and was sitting all wrapped up in the "long, long thoughts" of youth and his rubber blanket (for it had commenced to rain), when there was a slight disturbance in the bushes near by, an almost imperceptible splash in the water, and the young man looked up and saw an antlered head in the stream, only a few yards from shore and swimming down toward him. Instead of sitting perfectly still and letting the buck get into midstream as he ought, he leaped to his feet and threw up his little single shot .32-caliber rifle. The deer saw the movement of course, and quick as thought turned for shore again. Ich fired, and avers that the buck jumped nearly his entire length out of water, while the blood poured down his neck in streams. It took a moment or two to throw out the exploded shell and get in another, and by this time the deer had reached the bank and with one leap vanished in the woods. Ich sent another ball after him just as he jumped, but the buck refused to accept the

invitation to remain, and crashed away through the fallen timber with the speed of desperation.

Uncle Jack, who was on the watch ground below, heard the firing and came up with his boat. He and Ich traced the deer through the woods to a big swamp, where they lost the trail and had to go back. They then got the dog and put him on the track. The hound followed the trail into the heart of the big swamp and then suddenly became silent. Perhaps he lost the trail in the deepening water, or may be he came upon the deer lying dead. Who knows? There is, unfortunately, a deal of this sort of heartless uncertainty in deer hounding. Further up the river things went more successfully. Long Charles, stationed at the Haybank, saw a big doe come into the river, about midway between his stand and the meadow. The man at the meadow saw it at the same time and came running down the winter road to get a shot, but Long Charles began to pump his repeater at seventy yards, and when the man from the meadow got within hearing distance, Charles pointed his finger at a floating object in the stream and remarked coolly, "There she is." This remarkable freedom from tremor was the more creditable to Charles the Long, inasmuch as this was the first deer he had ever shot at in his life. The meadow man now ran back for his boat, and in a few minutes the first deer of the hunt was lying on the bank. Rain now began to fall in torrents, and as all the other races seemed to have run to distant and unguessed of waters, there was a gradual assembling of drenched watchers at the camp. Dinner was cooked over a roaring fire in the little camp store instead of outside, and at an early hour the fragrant tobacco smoke began to curl itself in fantastic shapes about tales and jokes as old as Adam, yet destined to live and flourish as long as the race our sire begat. About an hour after retiring to our blankets, when all was still in the tents, save the cosy beating of rain on the canvas, up spake the youthful Ichabod in his sleep, and quotha, "It was a buck, I tell you! I know it was a buck, because it hadn't any horns." He was living over the never-to-be-gotten event of the morning. Morpheus had mixed his logic, but we were all too far down in the Valley of Nod to laugh at him.

The third day was an uninteresting and disagreeable blank. The weather was foggy and cloudy from morning till night, with occasional spurts of rain. Not one of the party saw a deer, or even heard a dog, except for a few minutes in the morning, when the races were first started. All seemed to lead away far to the southeast, and it was late at night before the dogs returned. The next day was Sunday, and we all lounged about camp, smoking, reading and doing odd jobs in the way of increasing the comfort of our lodging. The sun came out clear and warm during the afternoon, and some of us sought out sheltered places and enjoyed the unwonted luxury of a sunbath. A sportsman from the Ampersand Hotel had come up to McClellan's for a few days' shooting, and in the evening his guide, Jake Lordson, came down to arrange with us for the morrow's hunt. We agreed that the new man should stand at the Haybank, and that the two guides should put out the dogs together.

Monday dawned bright and warm—a royal day. We got an early start all around. Frank, Long Charles and the Scribe going above the rapids, while the rest of the party went below. As it happened, not a single dog drove his race above, and the trio above the falls had an opportunity to extend their Sabbath through another day of sunshine and calm reflection. But below there was much going on to stir the blood. The watch grounds were occupied as follows: Uncle Jack at Bullpout Ledge, Short Charles at the Meadow, the Ampersand man at the Haybank, John (a very welcome addition to our party) at Palmer Brook, Ich at the Short Draw, Henry at Stony Slew Draw, and Jake Lordson below, to catch off the dogs if they ran beyond the watchers.

The excitement began a little before ten o'clock, when Hector drove a large fawn into Short Charles at the Meadow. In this case, comparative brevity of stature seemed to conduce to buck-fever, for Short Charles shook to such a degree that he dropped nine shots out of his magazine into the water, standing at three rods distance from the fawn's head and failed to bag. The fawn climbed ashore, ran down to the New Yorker at Haybank, and, as he declared, jumped over his unsuspecting head, as he sat on the bank, into the river. He fired four times at it with buckshot and never touched it; then made a flying jump into his boat, nearly upsetting the tottish craft in the operation, and pursued the swimming fawn down stream. Just as the little animal rounded the bend and came in sight of John, at Palmer Brook—John having already raised his rifle to fire—the Sportsman hove in sight, directly in range with John's aim. John took down his rifle just in time, and the Ampersand man, swinging his boat around, put two more charges of buckshot into the fawn and killed it. At this the worthy John was very wrath, and swore an azure-colored oath to himself that he would shoot at the next deer he saw as soon as he saw it, and no matter where it was—any way to get even with the Ampersand "sport" for what he considered flagrant trespass on his territory. And even before his rash resolve had had time to cool, a doe was driven across the upper end of the "slew" where he stood. It was making for the river just above him, but John could not wait, and gave it three or four running shots at 100 yds. The doe, untouched, turned at once into the woods and sped down the river, again taking to the water just above Strong Slew Draw. This was Henry's watch ground, and he, waiting till the doe came nearly opposite him, finished her with a single shot straight through the brain.

Another deer, a yearling buck, was driven in below the Long Draw and shot by Lordson, the guide. This summed up the day's bag for the two parties.

Great excitement prevailed in camp that evening over the recital of the day's doings. Henry and John had kept "fifteen-minute diaries" of events, and these chronicles, with comments, were read, to the immense amusement of the audience. The following extracts will serve to show the terse and classic style of the authors:

"9:15 A. M.—All is quiet. A beautiful, sunny morning. The birds are singing all about me, and the breeze playing lightly in the balsam and tamarack [the original record had it 'ramatack'] trees. 9:35 A. M.—Nine guns above! What can be the matter? A brief pause, and then four guns more of heavier sound. I am watching intently for deer. . . 2:30 P. M.—Three guns from camp. Signal to return. 2:45 P. M.—The boys are coming up. Have told story of the sportsman's trespass. Wilkins is wild," etc., etc.

Short Charles was feeling pretty blue over the loss of his fawn, and Long Charles was rather inclined to twit him on it; but the rest of us prudently forbore, not knowing how soon our own turn might come. Jake Lordson again came down from McClellan's, and we arranged the morrow's stands before turning in.

The weather of the following day was simply superb—a dreamy Indian summer day, drunken with sunshine. The party divided as usual, three going above the falls and five below. The first race which any of us heard was run by old Jube late in the afternoon. He drove a large doe down just back of the Haybank, where I was stationed; but the deer winding me turned and ran down to the slew at Palmer Brook. John, whose ardor for long shots was now somewhat abated, was again stationed at his favorite ground, and this time let the deer come down into the river. Then, as he began to fire, buck fever seized him with its insidious grip, and, as he afterward expressed it, "One leg was as firm as a rock, but the other one shook as if it had the palsy." Affected as he was with this distressingly uncertain kind of equilibrium, it is little wonder that the worthy John fired five times at his doe without touching it. Then, as the frightened animal began to recede further and further

poor one) is that he saw nothing else in the shape of a deer during the whole trip.

Then followed a period of hard luck for the entire party, during which our supply of venison got very low, and we should have had to go back to canned meat at last if Long Charles had not followed the Scribe's example and shot another fawn. Curiously enough, he it remarked with respect to this fawn, it gave the heretofore calm Bostonian a bad fit of the tremors, so that it cost him fifteen shots to bring it to bag, and he would not have done it then had not the fawn, which had safely reached shore, come back into the river again to see what made the water yeast and fizzle so.

On the tenth day Trail and Hector both drove deer into a big swamp above the rapids, which, owing to high water, afforded an excellent opportunity for the game to play back and forth, constantly throwing the dogs off the scent. After the dogs had filled the swamp with music from 11 A. M. until 4 P. M., Short Charles left his station at the outlet of the swamp to come to me, I being stationed at the watch-ground above without a boat. Hardly had he taken me in when both dogs swept down toward the outlet of the swamp. We hastened down stream, but too late. The deer had taken to water long before we

bushes not two rods from Mr. J., and with one leap disappeared in the thicker woods beyond. As soon as J. had recovered sufficiently to catch his breath, he went back for the dog, put him on the fresh scent and returned to his watch-ground. But the doe never came back. Some of the party were heartless enough to hint that she lay down in the bushes, like the rest of us, to escape J.'s wild balls.

The thirteenth day was a lucky day, in spite of its ominous number and a drizzling rain. Ben Moody, who had been called home by his wife's sickness, and had sent us John Slater, returned from Saranac Lake the preceding evening, and we had two guides to put out dogs. Ben himself shot one of the deer running in the woods, and Short Charles abundantly retrieved his reputation by dropping another at the outlet of the big "slew" or swamp above the rapids. The deer came squarely upon him while he was sitting meditatively under his rubber blanket, with no dog in hearing. The deer and the man gazed astonished in each other's eyes for a moment, and then the man threw off his rubber blanket with a quick movement and raised his gun to his shoulder. The deer wheeled, but too late. A bullet went crashing through her brain, and she fell in her tracks without a struggle.

AT EARLY DAWN IN THE NORTH WOODS. FROM PHOTOGRAPH BY MR. A. AMES HOWLETT.

from him, he declares that he slammed the butt of his rifle down on the ground, said to himself, "See here, John R., brace up; you are acting like a fool," raised his rifle again, took deliberate aim and bored the deer through the brain with the sixth shot. To his intense surprise the animal immediately sank. He fired a signal of distress that brought the boat next him, and together they looked the water over without finding a sign of the doe. In about an hour, while the search was still going on, a boat coming up the river informed them that the watcher at the Short Draw had just pulled a floating deer ashore. Down to the Short Draw rowed John as fast as oars could take him and found that the Ampersand man had indeed rescued his doe, having seen it coming down stream with just an ear above water. That night John was jubilant, as he had to return to Rutland the next day, and realized that he had got his venison just in time.

On Wednesday, the succeeding day, our guide had to take John out to Saranac Lake, so two of the boys, Frank and Short Charles, determined to see what they could do in the way of putting out the dogs. They took compasses and lunch and started out eastward by the Dawson Pond trail; and, so far as the rest of us who watched could see, they did quite as well as a guide to the manner born. All the dogs were started, but only one drove to water in the river, and that one brought in a fawn, which was shot by the Scribe, whose only excuse (admittedly a

got there, and the dogs were standing up to their necks in the stream sniffing the breeze and howling. We caught them off and took them down to the carry in the boat.

The eleventh day was another Sunday, and was spent much as the previous one had been, except that Frank and Short Charles took one of the boats and went on a trip of exploration up Moose Creek. They reported a wild and beautiful country, with deer signs plentiful.

Our party was now augmented by the arrival of an eighth man, who came just in time to fill the large space left vacant by the departing John. This new member was Will J., one of the famous Vermont creamery butter men, who knew oleomargarine as far as he could see it, and hated it further. On Monday we gave Mr. J. the watch-ground at the Meadow, and fortune favored or rather tantalized him by sending in a fine doe just below his stand and half-way down the Haybank. Mr. J. began firing at 80 yds., and kept it up as long as the doe was in sight, and probably some seconds after, as wild balls singing among the trees down the river caused at least three cautious watchers to lie flat on the ground until the fusillade ceased. J. pursued his vanished deer on foot as far down as the Haybank, where two outside parties, a young lady and gentleman from Wardner's, were watching. They showed him where the doe had left the water, and J. went in to investigate. Suddenly and without the least particle of warning up jumped the doe from some

Short Charles was not twitted by Long Charles that evening. The latter had sat all day in a windy, exposed place, where nothing ran or swam except his nose. He had escaped buck fever, but came near having the chills.

The fourteenth day was cold and overcast, but no rain fell. Frank, who had not as yet seen a deer, went up to Moose Creek and took his stand where the streams meet. He declared that at one time during the day he heard fifteen dogs go by in a string, with a raven at the head of the line and a bird dog at the tail. He thought then that there was surely blood in the air, but if the raven smelled it, it was certainly not in the vicinity of Moose Creek, for the procession passed on out of hearing, and primeval silence settled down upon the woods again. No deer were shot this day, so far as we could learn. Three or four parties had dogs out below, and there was a very large party hounding at Long Lake, above. Henry said that the woods were so full of dogs the deer could not get through them to reach the water.

The fifteenth day was cold and overcast, with a suggestion of snow in the air. Not a dog had come back to camp from yesterday's long races except old Jube, and consequently he was the only hope of seven anxious men. Mr. J. went out on this day, taking one of the guides with him. Ben Moody put old Jube out on the big hill near the head of the carry, and he drove the first large buck of the trip into the lucky Long Charles, at the head

of the rapids. Long Charles shot once and twice without touching the antlered beauty, but his third ball struck in the upper part of the neck, on or near the spinal cord, and the buck doubled up in the water and was dead in an instant. Long Charles had no boat, but fortunately a party was just coming over the carry. Their boats had been brought over, but no oars or paddles; so they took neck-yokes, and paddling with these into the current, saved Long Charles's handsome buck from going down the rapids. He was a fine four-pronged fellow, and must have weighed considerably over two hundred.

Those of us who were down stream heard the signal for return fired four times at about noon. This indicated trouble in camp, and we all hurried up to learn the cause. It soon transpired. McClellan's lawless cows had paid a visit to the camp and left everything in a state of piteous desolation. The tents were half torn down, the dishes were trampled into the earth, boxes and bags were scattered and rifled of their contents. Among the things devoured by the ravenous herd were two large cakes of soap, eight pounds of sugar and three pounds of butter, one-half bushel of onions, two quarts of beans, half a bushel of potatoes, ten pounds of crackers, five pounds of meal, two dozen eggs, six pounds of fat pork, half a box of .38cal. cartridges and a sheet of biscuits. When Frank and Short Charles reached camp, one of the cows had just attacked the medicine chest and two others were pawing over the blankets to see if any portion of them were edible.

That afternoon Henry, who always made himself useful, took boat immediately and started for Wardner's to get fresh supplies. He walked across the carry, made his purchases, and then discovered that he had nothing in which to carry the groceries to his boat. A bright thought seized him. Off came his overalls. A bit of string around each ankle converted the garment into a bifurcated knapsack. In went the groceries, the top of the sack was tied up, and Henry marched back across the carry with a stuffed canvas leg over each shoulder. Conventionalities be hanged, when men are camping and out of supplies!

Uncle Jack found Hector and Sport at the Haybank and brought them up to camp, so that all the dogs were in on the evening of the fifteenth day, except old Trail. On the sixteenth day our three dogs ran two deer in above the rapids. Other parties were watching there, including a red-shirted guide by the name of Buck, and a man in a big con-skin overcoat. These parties persisted in traveling back and forth in their boats, following the dogs. At one time a deer was swimming straight down stream to one of our men, when around the bend flashed like a meteor the fiery shirt of the guide Buck. The deer saw it in an instant and turned for shore. The man on the runway fired at long range and missed, and immediately hot words passed between him and the peripatetic meteor. There was a red-whiskered man in the same boat with the red-shirted man, and how in the world they ever expected to approach a deer with so much high color at both ends is a puzzle. All they needed was a red boat to perform the proverbial feat of setting the river on fire.

Later in the day Jube and Hector drove a doe up the river. The race passed quite near to Frank, though he could not see the deer through the thick underbrush. As he was trying to catch the dogs off two shots came from Short Charles's watchground, above. Frank rowed up and found a nice fat doe lying in Short Charles's boat. This settled forever that gentleman's status as a rifleman, and he will never be jeered again for missing his first deer at three rods.

The next day was Saturday and the last of the hunt. Henry, Uncle Jack and the Scribe went above the falls, the rest of the party took stands below. It was a rainy day and very dismal. Early in the forenoon the red-shirted Buck and his red-whiskered companion again appeared upon the scene above the rapids. They had two dogs out, and were pursuing the same tactics as on the previous day. After they had passed Henry's watchground three or four times, righteous wrath began to rise in that individual's breast. He let them drop around the bend below him and then fired five shots at irregular intervals, as if popping at deer. Immediately the red combination swung around and the water was churned into foam as the carmine-shirted oarsman propelled his boat against the current. Henry sat upon his rock and laughed inwardly.

"Did you fire those shots?" asked Buck as his boat came opposite.

"I don't know as it matters anything to you if I did," was Henry's non-committal reply. "Look here, neighbor," he continued, "I have heard of your tactics and I have got your record down fine. Now let me give you a little piece of advice. If you put in an appearance when a deer is in my water I will fix it directly so that you can see the bed of the river through the bottom of your boat. You understand? Well, good morning." The red-shirted guide turned his boat down stream, grumbling, and did not appear on Henry's territory again that day.

Frank saw and shot his first deer of the trip at the Meadow—bagged it at the eleventh hour and came near losing it at that. He was in his boat when the deer first came down. He heard a crash in the timber and knew at once what it meant. Rising a little to look over the bank, the treacherous seat cracked, and the deer turned in an instant and dashed into the woods again. Frank thought it was lost for good, but the dogs were close behind, and the deer ran only about a quarter of a mile up stream, when it again came to water and began to swim down. When it had come within about 80 yds. of the watcher something startled it and it turned to go out. Frank risked three shots at long range, and the third proved fatal, just as the deer was raising its shoulders to leave the water.

Next day we broke camp, carrying three deer with us. A long, hard row brought us to Saranac village, at about six o'clock P. M., and next day we went out by rail to Plattsburg. Here the two Charleses, who had had most of the luck during the trip, treated the party to a supper at the Cumberland House. Next day we separated and went our several ways, full of kindly feelings toward each other and happy memories of our three weeks hunt on the Raquette. May it not be the last hunt we shall have together, when the mountains are crimson and gold with their autumn livery, and the grass whitens with morning frost, and the voices of the hounds, baying in leash at the guide's belt, echo through the woods like the horns of our Saxon forefathers, from whom we inherit this unquenchable love of vigorous and manly woodland sport.

PAUL PASTNOR.

PRIMEVAL ADIRONDACKS.

NOWADAYS one hears continually of such Adirondack resorts as Blue Mountain Lake, the Saranacs, Raquette Lake, Schroon Lake, Loon Lake, Keene Valley, Ausable Chasm and Paul Smith's to the entire exclusion of other points; we note their prominent visitors, their gay dances and high order of tennis tournaments; we catch softly whispered rumors of social matters in advance and are amazed at the quiet consummation there of big deals commercially; in fact the wilderness, once great for its primeval wilds and profusion of game, is fast being brought into narrower limits by a ruthless inevitable march of civilization. Railroads are building or being projected into the darker recesses of the forest, tempted alone by the revenue to be derived from lumbering interests, for passenger receipts would be for years insignificant. Unless arrested at once by wise State legislation the great danger from the woodsman's axe will be beyond reparation.

Beyond the range of civilization, off in the northwest reserve of the Adirondacks, silently nestles Smith's Lake. It is sixty miles east of Lowville, half of which distance can be made by water, and there is no great difficulty in transporting necessary baggage, provided one is prepared to pay not inconsiderably to teamsters and the after employment of guides. From other directions the lake can be reached, but not so easily as via Lowville. The next most feasible way is from Little Tupper's Lake, fifteen miles off, by carry and water. Like all the lakes and ponds of the region, Smith's Lake has many beauties. All around is a boundless forest of tall variegated trees, towering unbrokenly to the summits of the surrounding mountains. On three sides these rugged sentinels, like impassable barriers, wall in the lake, while on the other, where the stream from the Salmon Lake empties, grasses and pond-lilies grow out for some distance; this spot is much cherished by the deer as a feeding ground. Smith's Lake is quite irregular in shape, is some four miles each way and is shaped like the letter X; it contains seven islands, and even today upon Pine Island traces are apparent of an old Indian fortress. On the west side of the lake is a sportsman's lodge, the home for eight months of the year of James LaMont, one of the most fearless of hunters and as genial a forest companion as one could find. He is prepared to accommodate about forty persons in an always comfortable but decidedly backwoods manner.

Smith's Lake is nearly the center of a circumference of country not as yet thoroughly explored, consequently it has remained unmarred by the cruel axe. Nearest on the west is Harrington Pond, beyond which are Clear Pond and Bog Lake; on the north are Charley Pond and the Snell Ponds; on the east, by pushing up an eight-mile stream, one finds Mud Pond, then the Salmon Lakes, and finally Brandreth Lake; on the south, only three miles away, is grand, silent Albany Lake, six miles in length and conspicuous for its vast deer feeding territory. Directly back of LaMont's, two miles off, is Raynor Pond, a mere speck of water, and seldom visited because of the indistinctness of the blazing on the trees and the absence of a trail. It is fortunate for one's headquarters in the forest to be in proximity to other bodies of water, as an adjunct to sport and transportation; also is it fortunate to find mountains, lakes and streams existing as the intelligent hound would mould them were he to create an ideal hunting ground for the capture of deer. One thing is certain, Smith's Lake and its surrounding country is exceedingly well situated. There is no lake in the whole Adirondacks where one can feel so well pleased with the conditions for hounding deer. I have seen as many as eight separate drives into the waters at comparatively the same time; and perhaps there was not some sport for us then, too!

I left the vitiated air of New York behind me on the 20th of last September, bound on my fourteenth annual trip to those woods. With me were two companions, Charles L. Jacquelin and Felix A. Duffy, of New York, who were by no means unfamiliar with forest ways, while both were good at target and trap, as well as fairly excellent anglers. At Utica we took the Utica & Black River Railroad, and after a two hours' run arrived at Lowville about 9 A. M. After driving easterly from Lowville twelve miles we entered the forest; then the road was tough enough to jar one's bones and loosen one's tongue most savagely. By evening we pulled up at Jim Dunbar's, having stopped for dinner at Fenton's. Dunbar's, the only house at Stillwater, is well kept and a favorite place to many; there we got our first venison steak and a comfortable lodging.

In the morning we engaged two guides—Ren Town and Ed. Dustin, of Long Lake—who by the merest chance happened to have come there with sportsmen who they had brought out. It gave me an undreamed of opportunity of securing two of the best men in the region, men whom I had had before, who were familiar with my desires and who I knew could be relied upon in any emergency. They took us twenty-five miles up Beaver River to Munsey's place at Little Rapids, where a stop was made for dinner, and mighty well cooked and appreciated was it, too. A mile portage, seven miles up Albany Lake, another portage of a mile around more rapids, and we again put into the river; then, two miles more and we glided into Smith's Lake. What a glorious panorama it was.

We duly installed ourselves at La Mont's, for while there were bark camps at or near the lake, where one with a fire could be cheerful and comfortable; still, we decided to stay with Jim, for by stopping at such a place the guides can always give more time to their men. One should never take more luggage than is absolutely necessary. The guides carry their boats, oars and paddles, so, unless the carries are double-tracked, the remaining duffle must be transported by the sportsmen in big pack baskets strapped securely to the back, in which weight never decreases.

A deer hunt was very properly in order for the next morning. I went with Ren to Albany Lake, taking two of the four dogs with us, for Ren was going to "put out" somewhere between Smith's Lake and Albany Lake. At the former the others took up their watch ground, an extra boat having been secured from La Mont—thus covering all the likely points. However competent the man who looks for fresh deer tracks and unchains the hounds, the chances of success can be spoiled completely at the last moment by any noise at the watch grounds.

For almost an hour I waited, listening for sounds of

the hounds, or the splash of a deer driven far in advance of them perhaps. Never for a moment did my eyes wander from the shore where a deer was likely to be driven. What a zest to the sport were the faint notes that shortly reached me; then, it was verily exciting! Nearer and nearer came the sounds, every bound bringing out the tones more clearly; ah, this is glorious, for the almost inaudible murmur of but a moment before has now swelled into sharp, deep, unceasing baying. On, on, toward that expectant shore did the maddened racers rush. I heard the cracking of brush in the forest near the lake, a noisy rustling of the bushes, then a plunge, a splash, and the deer was in the water swimming for his life. I lost no time in seating myself in the boat and pushing off. Thank fortune, it was a buck, that I could plainly see. It was a fierce struggle for both of us, and I had to pull fast, especially when he heard me and veered over to the nearest shore at an increased speed. All this time Pompey, who had reached the lake, was far from an indifferent spectator, still keeping up an irregular barking. The buck almost had his feet on the shore when I got near enough to risk dropping the oars and to fire upon him. The ball entering the shoulder, instantly did its work. I had to row a full mile in this race, which was unusually risky because of the innumerable rocks, too low to show above the water and most dangerous even to a cool head. The satisfaction I felt over that victory was, I believe, somewhat justified. Soon Ren got back, and we dressed the deer and leisurely returned to Smith's Lake with our heavy load of game. The buck was a big fellow. Ren thought he would weigh fully 300 lbs. before dressing. The hide was in the blue coat, while on the head rested a five-pronged pair of prettily set antlers. All this time my friends on the other lake had not been inactive, a fair sized doe having been driven to them, they had lots of sport, too, but I say to their credit they drove her out unharmed. There is an unwritten law among true sportsmen to allow the does to escape. I am glad to be able to state that that law is stringently obeyed at Smith's Lake; indeed, Jim LaMont will have no one around his place who violates this custom.

Personally, I prefer killing one deer by still-hunting at sunrise or sunset on the border of a lake than six driven to me by the dogs. If by the stalking and jacklight methods the sportsman gets within shotgun range, above all let him not wound the poor escaping animal instead. Be it said in defense of hounding that it does prevent wounding and spares the does. I doubt if the game laws ever will be enforced rigidly in the Adirondacks, owing to the immense territory to be covered and the not infrequent leniency of constables toward favorites. Despite everything, however, the deer are certainly increasing; I base this statement upon the most careful information gathered from the most reliable sources and upon personal observations.

May and June are the months that always give most delight to anglers, and the Adirondack waters at such times give sport in plenty to those who know just where the speckled denizens abound and how to cope with them in cunning. Many spring parties go to the Smith's Lake section just as soon as the ice breaks up, prominent among them being Theodore S. Morrell, Esq., of Newark, N. J. Not only is Mr. Morrell an expert fisherman but, probably, he possesses as complete a knowledge of fish and their habits as any sportsman in this country; and who is there who will not vote him to be as jolly and good natured a companion as ever sat in a boat? Last May, Ren Town tells me, Mr. Morrell did some great fly-fishing for speckled trout at a spring hole in Smith's Inlet, six miles from Smith's Lake, where he used very light tackle, and landed some beauties as heavy as 3½ lbs.

There is little satisfaction, perhaps, in recording any other method of fishing except exploits in fly-casting; but as I have never done any spring fishing in the wilderness, and after daily trials during summer and fall have met with no success there, some other pen will have to interest the reader in that regard. Still, there verily was sport this year playing with these salmon trout at the mouth of the Harrington inlet, where the swift waters emptied over the mossy rocks into Smith's. Would that I could rename Smith's Lake, giving it some euphonious, poetic Indian name; for, as I recall that one spot and hear the roaring waters, I verily believe that for a little bit of lake scenery nothing in the whole North Woods surpasses it. My fishing was with one of the first split-bamboo rods Charley Murphy ever made, weighing 7oz., and many a fish did I capture ranging between 1½ and 5 lbs. One morning early, as Jacquelin was rowing me near to Fletcher Island, I threw out for a short troll with minnow bait; in a most indolent manner too, for our chances were unpromising. We had forgotten to bring either gaff or landing-net, or my predicament would have been spared. Never in my life did I have such a struggle. What vitality that fellow had! Surely it was the struggle of his life, too. Not knowing how firmly he was hooked I was obliged to use especial care, realizing the absence of needed appliances. Of actual time forty-two minutes were consumed before I dared allow my friend assist in landing him by cautiously slipping his hand behind the fish's fins. The scales showed his weight to be 6½ lbs. I would travel miles upon miles to have another such experience; and where, indeed, is the true angler who would not?

Few men sleep late in the forest. The change from the solemn dirge of the night to the gay joyous song of the morning, as note after note peals forth to welcome the rising day, is too exhilarating to admit of the continuance of slumber. A plunge in the lake relieves the slight lassitude which may hang upon one, and there are those who make such the regular order of the day; on the other hand, the guides say, that there are some persons who visit the woods who never enter the lake at all to bathe because of the coolness of the water, their alleged fear of water reptiles, or some equally absurd pretext. The story is told of a prominent Newark lawyer who, when at Smith's Lake, never washes as much even as his face, lest by temporarily removing a mosquito mixture his beauty and feelings might be hurt. My informant, never having seen our barrister out of the wilderness, and being recently introduced in Newark, was dumfounded at the change purification revealed, and for a while positively thought himself the victim of a practical joke.

At night people in the forest generally build log fires in front of their cabins. After Sept. 1 this is a positive necessity, especially if one's habitation be the open camp,

At such times sportsmen and guides gathering around form an extremely grotesque group. Stories are never more in order, and bear stories, deer stories, fish stories and general anecdotes float around promiscuously. And so do the midges, mosquitoes or black flies early in the season, but by the latter part of August these pests disappear entirely.

By reason of contact during the summer season with people from outside the guides have many of their rough edges worn off and are generally intelligent and obliging; still the majority of them are disappointing, if not almost worthless. An experience in camp is the only method of judging as to their merits or demerits. While I do not want to be severe about Adirondack guides, some of whom I regard with the strongest of friendly feelings, I do say most emphatically that there is a choice, and one cannot be too careful in making his selection, and well in advance, too. Nor should one seeking sport be unmindful of procuring good dogs and enough of them—after Sept. 1, when hounding commences, this is imperative. Instances are frequent where guides, reputed as first-class, are spoiled by employers. Fair dealing, appreciation and respectability in a sportsman far outclass closeness, indifference and vulgarity.

Bears never have shown themselves more frequently than during the season of 1890; yet there is no well-sustained reason why, except the claim that the mildness of the present winter had something to do with it. During our stay of one month eleven bears were seen at or around the lake by those stopping at LaMont's. While paddling on Harrington Pond one morning with Jacquelin and Duffy, I saw a good-sized fellow waddling leisurely along the soggy, moss-covered shore, about 50 yds. away; but before Jacquelin could bring the rifle to his shoulder he had disappeared behind some bushes, so the shots were of no avail. Mr. L. O. Crane, of Boston, his guide, Fassett, and LaMont set out a powerful steel trap for a bear on the Salmon Lake Stream. This they baited with putrid venison and the entrails from a deer. In place of fastening the ring at the end of the heavy chain to the trap, it was slipped over a clog or stout green piece of oak, 10 ft. long and 4 in. in diameter, which effectually prevents the beast from traveling far in the thick forest. The trap was visited on the following two mornings early by Fassett, but with no success in finding anything. On the third day he went again, and in a couple of hours returned with the news that a bear was in the trap; then all the people at Jim's hastily dressed and set out to see bruin captured, Fassett leading the string of boats. On nearing the trap the bear was startled, and standing up on his hind legs in a most formidable attitude, with his forepaws around a maple, he gave vent to terrible howls, a challenge to us to approach nearer I suppose. He was well caught by the jaws of steel just above one of the hind paws, and during the night must have made frantic efforts to free himself. After taking a photograph of him, Mr. Crane, standing off some 60 ft., put a bullet into his head just back of the ear, and dropped him to the ground without another struggle. We dragged the body to the boats, and the row back to the house gave us a big appetite that morning, and a live topic of conversation, too. While there is a bounty of \$10 for bear, one would have to expend twice that sum to go to Albany and claim the same; and, furthermore, neither bounty nor sale of hide would be at all alluring to a sportsman having such success.

Reu. Town, Dustin, and Fassett, while putting out the dogs near the Salmon Lake stream had a most remarkable experience. They were working around not more than a couple of hundred yards back in the forest when they noticed signs of some fierce fight of wild animals. The surface of the ground was much torn up, the leaves and ferns being brushed away, while a tamarac tree near by showed the imprint of some animal who had crawled up into it. Further examination a few yards off showed the ear of some beast protruding from a bed of leaves, and on brushing these away there lay a good-sized bear cub, perfect as far as its forward half was concerned, but with its hindquarters literally eaten away, and the backbone projecting raggedly out. It told a story to those intelligent hunters which nowadays is rare, that the other combatant was a panther. A trap was immediately placed on the spot, but caught no panther.

There are those people, and properly so, too, who dare not get very far into the Adirondack forests on account of the impossibility of prompt communication in case of necessity. Smith's Lake, notwithstanding its remoteness, has been connected with Lowville and interlying points by telephone, thus giving instant intercourse with the outside world, yet bringing it no nearer to the civilization we desire to leave on going there. Mr. Wm. H. Morrison, of Lowville, deserves considerable credit for his enterprise in constructing this line, for it can hardly be looked upon as a paying investment, and possibly was never so thought of. Mr. Morrison is one of Lowville's prominent merchants, and is the owner of LaMont's place at Smith's Lake, where he goes every summer.

A peculiar experience was enjoyed by Mr. R. H. Handley, from Long Island, a fellow boarder with us at LaMont's. Handley, who is a sportsman of no mean caliber, was watching one day on Albany Lake for a deer; it was the day, in fact, of our grand hunt, when we drove eight of them into Smith's and Albany. He had been very successful in getting deer previous seasons, so this year had his guide row up to the swimming animal; but only if he proved to be a buck, with an especially fine pair of antlers, would he kill him, otherwise he allowed the animal to swim gracefully to the shore unharmed. The dog with the loudest bay of all drove in a small two-year old buck, but not being what Handley desired he merely rowed up beside him. To his astonishment, the deer when patted on the head showed no timidity at all but rather drew closer to the boat and encouraged the petting. On pulling the boat positively away from the pretty fellow he followed. On reaching the shore he walked leisurely out of the water, stood for a moment at the edge of the forest, returned for more petting, then quietly went without any semblance of fear into the woods. He was assuredly a wild deer, and the only way to account for his singular conduct is that the deep-voiced hound remained on the opposite shore baying furiously all this time; perhaps, therefore, the deer, fatigued by a long chase, was alarmed and so sought safety with Handley, who harmed him not. None of the guides could remember ever having heard of such an odd exhibition of confidence on the part of a deer before, but the narration, nevertheless, is positively true.

Although not a powerful man in appearance, yet James LaMont is as muscular and wiry as any one that I have ever known of his build; in fact, he has the reputation of being able to cover more territory in the woods in less time than any one of the guides, no matter what the general conditions may be. Nobody disputes this claim of his friends, for occasional contests show him to be invincible where endurance and forest intelligence count for anything. One is always lucky when Jim will consent to pilot him in search of game. He is particularly entertaining, and the stories of his experiences—and they have been world wide—told in his quaint style, are of rare interest to people. Mr. Edward H. Litchfield, of New York, who hunts in the West nearly every year in the most extensive possible manner, went to Alaska last October, and having learned of LaMont's prowess, sent for him to go as a companion or body guard. Considering the extent of the trip, its expense, and the fine inducements offered to Jim LaMont, Mr. Litchfield paid a high compliment to my Adirondack friend, whom he had never seen until he sent for him. Mrs. LaMont is an educated and superior woman, and with two grown children, assist materially in making the backwoods lodging thoroughly comfortable and interesting. If any one wishes to communicate with James LaMont, his address is Smith's Lake, via Lowville. Of course, the mail by necessity is only carried in and out by parties, but during the season is fairly prompt.

Reader, go there! You will have a glorious time! When you return you will find yourself to be a wiser, a healthier, and a stronger man than you were before partaking of the hospitalities of that forest primeval.

RAYMOND G. HOPPER.

LIFE AT PAUL SMITH'S.

THERE is a tradition up here that the immortal story of "Johnny, get your gun," is one of the saddest origin. Johnny, it seems, had a bad lung, and it was his doctor's advice that drove him to get a .44cal. Winchester and come up here and go shooting for his health. Johnny obeyed; and Johnny moreover brought his wife with him.

It is indeed a curious state of affairs the way that all the world, when he comes into the Adirondacks, brings his wife with him. In a stay of two months at the famed and fashionable hostelry of Paul Smith's, only one man was found brave enough to say that he had left a loving and trusting wife at home, and he went about making affidavits that he had only done so because he had been summoned to the bedside of a nephew, who was not expected to live. Moreover, when the world and his wife elect to spend a month together here they brave it out oak and ivy fashion, so much so that the story teller of the house was one day forced to quote that beautiful tale that is told of the wife of one of San Francisco's most speedily rich railroad magnates. This simple little anecdote is to the effect that the first grand dinner party which this good lady ever attended was given to her. But when the square-jawed butler announced that "madame was served," and the host respectfully offered his arm to the guest of honor, that virtuous lady hunched him haughtily away. "Go 'long with yer," she cried, "take out your own wife!"

Once here, with a fair instinct of knowing what is good for himself, every man Jack takes out his own wife. He takes her out rowing, he takes her out fishing, and he takes her out gunning, always provided, of course, that she has not carefully looked the field over and concluded that she would prefer to stay at home and knit. In that case he takes out a guide or a dog, either warranted harmless; never by any chance another woman, saving only his wife's mother, who is warranted to sit solidly in the stern, while he, well aloft in the bow, thrashes the water with ineffectual oars. This, N. B., is supposed to be both good exercise and harmless excitement. It probably is.

The season here begins in June. In that balmy month, the snow being almost gone, save of course in the more sheltered spots, the guide shakes off his sloth and descends from the lumber camp, where he has only been chopping down trees, and goes into training. A man must expect to be in the very pink of condition who expects to carry wraps and lunch baskets for invalid ladies all summer. He must be sound in wind and limb, using care only not to combine power with good looks, for as Charley, the handsomest guide up here says, "It's as much as a man's life is worth to have to take some of the young women out. They seem to think every young fellow here came in on a load of hay some time last week, and never heard of love-making in his life. For my part, I'd give half my savings if I'd never have to take out another woman under sixty. S'help me, it's better to have 'em afraid something will happen to 'em than to have 'em afraid something won't!"

In June, also, the big trout, the exclusive family of kingfishers and three chipmunks that constitute the game of this famous hunting region allow themselves to be seen. Not for publication, necessarily, but as a guarantee of good faith, and to keep up the reputation of the place. There's a pickerel, too, over in Osgood's Pond, but he is something of an aristocrat in his way; he never shows himself, but lays low until he sees a \$1.50 minnie-gang coming, when he neatly bites it off with his sharp white teeth and adds it to his collection, which must be, according to the stories told of him, particularly extensive.

These simple preparations made, the Adirondacks are ready for guests. With the exception of Saranac and the logging camps, which in winter bear the same relation to the entire district that the breathing holes over a sheep's nose do in a snowdrift, everything and every one has hibernated. But with the arrival of the first letters and telegrams from the city all is comparatively gay. The guides begin to clear the camp and put everything in order. They build huts, put up tent-poles and tents, the ice house they have already seen to; they stock the cellars and the larder, make the beds, and have even the kettle smoking on the hearth, and the 5 o'clock tea-table in its accustomed nook. This is in the case of old campers. Men and women fresh from the wilds of New York are a little apt to lock the door after the guide has left and take the key away with them, to say nothing of a careful inventory of all boxes of sardines, all tea-cups and sticks of wood in the woodshed. When they get back there the next spring and find an uncomfortable and cheerless camp, while next door neighbors slide into the lap of luxury, they make up their minds to one thing, and that is that the Adirondack guide is as near as he knows how to be the salt of the earth. Honest, faith-

ful, sturdily American and self-respecting, he would no more betray his employer's trust than he would consent to call him his superior. The experienced guide won't even descend to tell fibs about game as the gentleman sportsman will do; nor yet will he tell a stranger that he might as well fish in a Union Square fountain as in St. Regis Lake. All he will do is to take the non-committal ground of saying: "Wall, you can never tell till yer try!" Those are his limits, and woe be unto the visitor who discloses himself to his guide as a man of less honor, Blessed innocent soul who will nurse a man with the delirium tremens for three weeks in a childlike faith that he is stricken with pneumonia, let him once feel that that man looks upon him as a servant, and the comedy is over. The same thing is true in a more marked degree in those who really hire as servants. Speak to the night watchman as he comes to your door with your 10 o'clock milk punch, and he swings himself into the rocking chair, puts his lantern well back between his legs and prepares to answer you! Let your red-cheeked chambermaid hear you have your regular morning cough, and with adorable frankness she will tell you "that if you knew what was good for you, you'd be at home with your folks while you could be, and not up there all alone!" While as for the waitress—a whole tableful of people were convulsed the other day when a very pretentious New York dame, who paraded the piazza all day in white kid gloves that came to the elbow and a \$50 white lace parasol, learned her lesson. She sat at the end of the table, her half-grown son at her right. Some delicious venison was brought, and she put one piece on the plate before her and waited for the waitress to pass it to her son. The waitress was watching her with her wondrous blue eyes. Madame touched the plate. "H-m?" said the waitress. "That is for Master George," said madame. "Huh!" said the maid, and with that drolly picked up the plate, slid the venison off into the boy's plate, shook off the dripping gravy, and with much manner returned it to its former place. Madame was a woman who had seen the world. "Will you have a potato, my son?" she said, and passed the dish herself.

In point of fact it is very rarely that you hear a good story told on a guide. Now and again you hear some legend like the one that is told on old "Hi Hathaway," but they are rare. And being rare it is very good, especially as it includes none other than Dr. Harry Loomis, the growing son of his father, the famous Dr. Loomis, the accepted authority on the subject of "The Tubercle Bug and His Works." Hi Hathaway is a native New Yorker who cut short a useful life as a blacksmith at the untimely age of sixty, then to turn a guide. Among the first to agree to pay him \$3 a day for his services was Dr. Harry, who engaged him for an extended trip. They were half way over Spillville Lake, which is so named because of the ridiculous way in which it will boil up in a minute if a puff of wind but strikes it the wrong way. The garrulous "Hi" concluded that in the son of the father he was sure to have a sympathizing listener, and forthwith confided in him how terribly he has always suffered from epileptic fits.

"What's that?" said Dr. Harry, as interested as even Hi could wish.

"Why, you see, I was just a saying that it was mighty orkword that a body couldn't never tell when one of 'em was coming on. You never feel safe, ezactly, 'specially if it's been 'bout so long since you had one afore."

"I should say as much," quote his companion. "By the way, what is that bush on the bank there—elderberry?"

"I 'speak 'tis," answered Hi shortly, for who indeed likes to be interrupted? "An' as I was saying—"

"I'd like to see that," continued Dr. Harry calmly, "row in there a minute!"

The boat grated on the shallows and with a flying leap the doctor was safe on the shore muddy and wet as a wounded blue heron, but perfectly satisfied to be out of an eighteen-inch canoe and off a lake whose foundation is of quicksand. The startled Hi looked as if he were to give him a sample fit then and there.

"That's all right, my friend," said the Doctor, "you may go back to the hotel and get your money, I'll wait here, if you please, for a guide that doesn't have fits."

With harmless little stories like these it is true the lazy guest will regale a late comer over his tea, but—faith!—they are nothing beside those the guide could tell on the guest if he only chose, and especially the guide about Paul Smith's. There is something about this name to which the average gentleman from Brooklyn—or Boston—rises as a trout does to a red-backle fly. He dreams of the sylvan haunt where President and Mrs. Cleveland dreamed the sunny hours away, and his imagination fairly kaleidoscopes in the effort to picture the time he's going to have. He lays himself out at his tailor's and he ruins himself at a gun and rod shop, and with a fine air of having been there before, many's the time, buys the best outfit for deep-sea fishing that, probably, ever came up over the Chateaugay R. R. In his fore-and-after cap he lies thoughtfully back in his chair as the train winds in and out among the charcoal kilns that sprinkle the hills and, though he doesn't say so, everybody knows he is as greatly disappointed as was a small boy of eight who came up this summer. "Mamma," said he, as the train slowed up at Bloomingdale, "I haven't seen a bear, not one!" and the disgust in his voice was an inch thick.

That is the way that the man from the city feels as the porter lands him and his guns and tackle, his hat-box, his Gladstone and his basket of champagne on the Bloomingdale platform, and the only thing that raises his spirits is the sight of the eight-horse Deadwood stage drawn up before him.

"Ha, ha!" thinks he to himself as he appropriates the topmost seat. "Now for a bracing ride through the woods. If I could only get out my cartridges I might get a shot." And then he thinks it's a little early in the afternoon for the deer to be running. That much he knows for keeps, but, ah, the ride he's going to have. Ah!

It has rained for two weeks, and it's a dry patch on the road where the mud and water is less than a foot deep. With one foot in the small of the driver's back, the other in that of the express agent and both hands fast in straps, the gentleman from the city enjoys an unmistakably "bracing" ride. Half-way there he is limp, even beyond surprise at the way the sober-minded horses leap up the hill and tear up before the hotel door as if they had come on a dead jump all the way from Deadwood city.

The driver smiles as he unties him and lets him down. A half-hour later, spirits up, in deer-stalkers, corduroys, and hunting boots, the gentleman from the city is pre-

pared to prance up and down the piazza and watch the hunters bring in their game. He seems hurt when they fail to appear, and as the prettiest girls in the house flash by him with bare necks and gleaming arms, "dressed for dinner," as the cannibals say, there's a look of innocent wonder in his eyes. He usually has sense enough, however, like Brer Rabbit, to "lay low an' say nuffin" until morning, save of course a haughty inquiry that he puts to the clerk if any of the guests are going out for deer that evening.

In the morning he hires a boat, no guide for him, thank you! and goes fishing. Between nine o'clock and two he has "chummed" the lake in front of the hotel thoroughly, and not a bluish to show for it. That afternoon he hires a good guide, and the guide in his turn takes him out back of the boat-house and talks sense to him. And the consequences are that he disappears from mortal ken for about two weeks, when he comes back with a fine year-old doe, and enough yards to last him all winter about "how he hunts caribou!"

Paul Smith's, be it understood by the uninitiated, is the most familiar place in the mountains, but at the same time no one has ever found a deer over a year old curled up asleep on the piazza chairs when he came down in the morning, nor do partridges come regularly to be fed with crumbs from your bed-room window. Instead, on the contrary, the most remarkable thing about the woods around this famous hotel is the total absence of animal life. Not a tree toad, not a rabbit, not even a "hoppergrass" disturbs the quiet of the pines. And as for the lakes and ponds about, what can you expect when you remember that there have been three or four hundred people at this hotel at a time this summer, and all more or less anxious to carry home a fish story? Paul Smith's is the gathering point of all the sportsmen as well as of those who want only amusement, but when they want game they have to go from five to fifteen miles to get it, usually by boat. Birch Hill, Bartlett's, Big Tupper's, these are the words you hear when the old story tellers get together, and those are the places where they go, and where they have successes. Even they, though, have their jolly good laughs on their brother man, for it was only last summer that a big broad-shouldered 6ft. surgeon came up from the New York Hospital to put in a week's fishing at Tupper's. Everybody liked him, he was so big and jolly, but all the same everybody roared when the constables chased him down to New York and wanted him back up here to be fined for catching and keeping trout less than 6in. long.

Next to the hotel itself, which is probably one of the very few in this country where nobody locks a door or a trunk, where nothing has ever been stolen, and where there is not a cigar in the case that sells for less than 15 cents straight, are the camps that face it. Smith's is at the northern end of St. Regis Lake, and the lake is 1½ miles long. Beyond this is Spitzfire, and beyond that again Upper St. Regis Lake, the three being their share of the 500 lakes that lace in and out among the mountains of this region. Old Paul Smith, the most charming old gentleman in the world, who came in here as a guide thirty-two years ago, and has probably never let the sun set a day since then without telling a better story than his neighbor, now owns 28,000 acres of woodland, the water power and his hotel, which began with one room and has now 300. On the first point that juts out into the lake at the left lies an acre of land which Col. Payne bought last year for \$1,500, and on which he proposes to build a cottage for his nephews and nieces, the children of ex-Secretary Whitney. At the right is the cottage of Dr. A. L. Loomis, a pretty house, with boat house and large private grounds. Dr. Loomis's oldest daughter left here last week to be married on Saturday to the son of Mrs. Loomis, who was formerly Mrs. Prince. His youngest daughter, Mary, is the heroine of the summer with a record of three deer. Straight away across the lake is Camp Hoff, wherein dwells young Hoffman, the son of Dean Hoffman, of Brooklyn, to whose family belongs the Hoffman House of New York. Young Mr. Hoffman is very tall and straight, with a deep bass voice and a crescendo laugh which certainly has a range of two octaves. On Sunday he always seats the people who come to the tiny Episcopal church and takes up the collection, and declares he takes sal volatile whenever by chance he hears the vulgar rattle of a coin on the plate, used as he is to only the modest "sish!" of the \$5 bill. At night his camp is as great a source of admiration to the people at the hotel as indeed is the wonderful milky way that on clear nights is so brilliant that it casts a gleaming shadow the whole length of the lake. Every night Camp Hoff is brilliantly illuminated with red and white lights that form a cross as gigantic as the towering pines. Other illuminations are attempted, but all pale before this "churchly symbol" of his father's calling. In Spitzfire Lake the most noted camp is that of Dr. E. L. Trudeau, the noted specialist in lung troubles, who has doubtless done more than any other man to give the Adirondacks the name they have for being a natural sanitarium.

But it is in the upper St. Regis that the tongue of the enthusiastic Paul Smith runs away with itself. "I never saw anything like it! There's not a foot of land on that lake for sale this minute, and there's not a man in it but what's a millionaire, and some of them ten times over. There's that camp there, do you mind, that camp rented this summer to H. McKay Twombly for \$5,000, and now he's bought land and has got seventy-five men clearing it and they will work all winter. There are the Stokeses, millionaires, all of 'em, and George Dodge, as nice a man as ever put his foot into a boat. There are the Lyman's, there's Whitelaw Reid's and there's the Garrett's. I tell you if there's a spot on the face of the earth where millionaires go to play at house keeping in log cabins and tents as they do here I have it yet to hear about."

And what Paul Smith has yet to hear about or yet to learn in the way of making money nobody here can suggest. His own last story indeed he tells on himself, and a good adaptation it is.

"By the way," he said, as he sauntered up in his inimitable way, thumbs in the armpits of his waistcoat, his soft hat over his ear and one eye shut. "I suppose you haven't heard about the guides, have you?"

Nobody had heard.

"Well it seems," said Paul, "that it's been a hard summer for some of the guides, and they took it into their heads to turn stage robbers. They held up the coachful that went away from here yesterday afternoon. But the driver he knew what they were up to. 'You want folks from Rainbow Lake,' he says; 'these folks just got away

from Paul, up here. You don't think he left 'em anything but their tickets to get home with, do yer? G'lang!'"

FANNIE B. MERRILL.

PAUL SMITH'S, 1890.

A REMINISCENCE OF 1866.

NOT long since, while in the barnloft, overhauling the contents of a box of what my good wife calls "plunder," I came across an old time shooting coat, cast aside years ago as having passed beyond its days of usefulness. This now decidedly antique garment was made up during the "late unpleasantness," while the writer was serving Uncle Sam, having charge of the post commissary at Louisville, issuing rations to the boys in blue stationed in or about Falls City and to the transient regiments passing southward on their way to the front. This same old coat saw much hard service thereafter, in many an expedition by land and water in pursuit of game, over a territory extending from the Adirondacks to the Illinois prairies and down the Mississippi Valley to the Louisiana swamps.

To-day, the once warm woolen lining bears unmistakable evidence of having furnished the off-spring of divers moths with bed and board, the buttons have gone to swell the collection on a string, manipulated by a pet daughter; and the remnants generally present a most forelorn appearance, but despite this, I was unable to resist the inclination to hold it out at arm's length, and there I fell to meditating on a dark brown stain which sundry washings and vigorous rubbings had signally failed to eliminate, and which is plainly to be seen, stretched diagonally across the back, downward from the left shoulder. This stain called vividly to mind a campaign in the North Woods, nearly a quarter of a century ago.

Four of us, a happy four indeed, filled with joyous anticipations of a right royal vacation, had gone in by way of Glens Falls, Chester, Newcomb and Long Lake, thence via Helm's on Forked Lake to Beach's Lake, near the northern end of which we established our camp.

Delightful were the days we passed there, restful, prolific of added vigor to minds and bodies. Our camp was just such a one as the good Nessmuk idealized—a haven of contentment, of rest from the cares and troubles of the world—absolute rest. We fished and caught an ample supply for creature wants, but nothing more. We wandered about the woods and paddled around the lakes exploring every hidden nook, each day affording some fresh source of enjoyment, until all too soon time was up, and perforce we returned to the haunts of plug hats, starched shirts and never failing gas bills.

The early morning hours usually found us out in the boats on one of the numerous lakes or "ponds," as the nomenclature has it, testing every device to lure the wary trout from the clear, cold depths; and when old Sol was doing his whole duty at midday, it needed no other inducement to urge us to seek some shady spot, and after lunch to rest, chat or perhaps read, till his more oblique rays warned us that the chances were again good for a bite. So after an afternoon of executive session with *S. fontinalis* or perhaps a lively laker, we would return to camp, cut the night's wood, eat such a hearty meal as only hungry anglers could devour, and then with a quiet smoke prepare to turn in and wage relentless war on the festive mo-quito.

One pleasant afternoon with Frank, a boon companion and as good a fellow as ever pulled a trigger or cast a hook, I started on an expedition to a small lake, some distance eastward from camp, for the express purpose of trying our skill on certain extra large trout which were reported to have their abiding place therein, for a supply of such was sorely needed to replenish our depleted larder, the solemn fact being, no fish, no supper. Each of us was filled with stern resolve, much like the boy of the story, who with laudable purpose was striving to dig out the woodchuck. So on reaching our destination, no time was lost in launching the boat and paddling out to a locality where the water was cold and deep.

With varying success we had at last brought to basket some seven or eight splendid fellows, when chancing to look toward the upper end of the lake, we saw a deer coming out of the woods into plain view on a small grassy marsh, which lay on either side of the inlet.

Fortunately I had my rifle in the boat, one of the old Colts six-shooters, a .44; and it was quickly planned that Frank should paddle toward the inlet as carefully and noiselessly as possible, while I was to retain my seat at the bow, ready for a fusillade.

The excitement was almost too much for me. It was still broad daylight. Sitting in a somewhat cramped position, afraid to move, lest some slight noise might alarm the watchful deer, every nerve at its utmost tension I felt liable to an attack of "buck fever" on the slightest provocation.

Silently we approached the goal and when some 150 yds. distant, I became fearful that a further advance might cause the deer to make a run for the woods, as it frequently raised its head to watch us, so after progressing perhaps 15 or 20 yds., I signalled Frank to "hold water" and steady the boat, then quickly elevating the rear sight and drawing a bead as carefully as might be, I fired. The deer was then standing in the shallow water a few feet from the shore, broadside toward us; and immediately following the sharp crack of the rifle we saw a splash in the water, apparently under the deer, which in an instant, with a few graceful bounds was out of sight in the fringe of low bushes surrounding the swampy ground and separating it from the denser growth of timber. "You've muffed it this time," shouted Frank; but after a short consultation we decided to investigate, and rowing up to the edge of the marsh we noticed a few short hairs floating on the water. This raised our hopes materially, so we landed and followed the recent track through the long grass, when just as we were about to enter the outer line of the bushes, a great spatter of blood on leaves and grass attracted our attention. Hastily but cautiously tracking the now frequent signs, we suddenly came in sight of our game lying dead at the foot of a tree.

A hasty examination showed that the ball had entered just in the rear of the left shoulder, and ranging slightly downward, passing out on the opposite side, doubtless falling into the water and causing the splash which was so noticeable from the boat.

It was not long before we had the deer suspended from a convenient limb and after partially dressing we carried it to the shore and placed it in the boat. Pushing off, we hurriedly paddled down the lake; it was long past sunset when the landing was reached and our craft was securely

beached. It was fairly dark when I shouldered the deer for a mile tramp to Beach's Lake, Frank carrying the rifle, rods and fish; and it was during this never-to-be-forgotten scramble through the woods, over fallen trees and every other known obstacle, that my old coat absorbed the blood stains which were there unto this day.

Of Frank's jokes, which I must confess seemed very untimely and altogether uncalled for on that particular march, and of our triumphant entry into camp, tired and hungry, I need not dilate; but, brother sportsmen, you who "have been there," I know you will not blame me for still cherishing the old coat and quietly enjoying the pleasant meditations which these recollections have induced. This was the only time I ever successfully stalked a deer, and with a boat. The wind was blowing down the lake, and this no doubt contributed largely to my success. This achievement has always been the source of a certain amount of pardonable pride, but I cannot help realizing that had it not been for Frank's handling the boat so skillfully, my chances for a shot would have been decidedly slim. Since that time I have frequently endeavored to repeat the experience and never but once succeeded in reaching reasonable rifle range, and then failed to score a hit.

I am growing old, but the love of the woods, the fields and the waters is as strong within me as ever, and each season finds me looking forward to an outing and making preparations therefor, with as much zest as in the years gone by. SENIOR.

ON A BLAZED TRAIL.

"ALL ready!" exclaimed our guide. "Got all your traps? One of you gentlemen strap this pack basket on my shoulders. Now we're off."

Our course was over rugged mountains covered with thick underbrush, whose foliage was tinted with autumn's sombre colors, drab and brown, a hue very fortunate for the deer, its shade being almost the same. We had a long and tedious journey of about fifteen miles to make before we could reach Otter Lake, at which place we intended setting out the dogs and commencing the hunt in earnest. On we trudged, now and then casting an admiring glance at the sturdy form and powerful physique of our guide, who, by the way, was a genuine backwoodsman and hunter, a real man. His business is not a profitable one but there was a vast quantity of sport in it for him. His light face and merry laughter, and his quaint and winning way of relating an exciting tale, have made him very popular in this pathless wilderness.

As we plunged deeper into the forest an occasional mirror-like lake would spring up before us, as if by magic, whose water was cool and sparkling; in fact, the surrounding region was studded with the grandest lakes in the world, romantic in everything but their names. It was near the shore of one of these lakes that we encountered our first and largest deer.

We had not traveled more than five or six miles when we noticed that the dogs were getting very uneasy, seemingly anxious to break away from the strong arm that kept them in leash. Several times they halted and sniffed the air, thus showing, as our guide informed us, that the game we were in search of was not far distant, and that we had better station ourselves along the shore of the lake, about one hundred yards apart. This being done he took both hounds and started to find the trail, we in the mean time patiently waiting the issue.

We made ourselves as comfortable as circumstances would permit. I was located on a fresh runway, evidently used the day before (judging from the clear impressions on the earth) and stood the best chance of getting first shot. However, I could not be positive, as deer are very tricky animals. Owing to the terrible gurgling and rumbling of a large waterfall close by me, I knew that it would be absolutely impossible to hear the approaching bay of the hounds.

Three or four hours elapsed, I was beginning to feel very tired and was about to arrange my coat for a head rest when an object in the distance attracted my attention, which, upon coming closer proved to be a magnificent buck, the finest specimen I had ever seen. He waded gracefully through the water and when within about five rods of me turned and walked toward the shore. Having a good Winchester repeating rifle of .44-cal., it seemed as though it would be impossible to miss my aim, but nervousness got the better of me; raising the piece to a level with my shoulder and taking, as I thought, an excellent sight, I pulled the trigger, but to my dismay it failed to respond. Examining my rifle I saw my mistake, the trigger was at half cock. Instantly leveling it again, fully assured that everything was all right, I fired, the ball striking the deer in the back of the neck and slightly wounding him. He staggered for a moment and before I could raise my piece, made a spring over the alders that fringed the shore of the lake and was gone. Jumping to my feet I pursued the course he had taken as near as possible, thinking perhaps that the loss of blood would soon weaken him and thus impede his progress.

Following the trail for half a mile, I suddenly came across our guide, who, extremely amazed at my unexpected appearance, chuckled at my "peculiar way of chasin' that air chunk of venzon, and that I might's well stayed where he sot me, 'cause the game had tuk to water by this time."

He had hardly completed his sentence when both hounds shot by. We endeavored to stop them, but it was of no use; they were bent on following up the trail. Shortly afterward they came back and we started them on anew. Both dogs were off in an instant, and our guide then directed me to a large rock at the northern end of the lake, there to watch until he should give the signal for all to assemble and continue the journey.

I had not gone more than 300 yds., when suddenly I heard the cracking of brush. Stopping short and peering into the dense forest my eyes encountered a deer but a short distance away. Sighting my piece, I fired, causing the animal to leap once or twice high in the air and then fall heavily on the ground.

Examination proved him to be dead. To my amazement I recognized the same buck that I had previously shot at not more than twenty minutes ago. I was also surprised to see that my second discharge had struck in nearly the same spot, but the ball having glanced had come out through the right shoulder.

The delight of that moment I shall never forget. I had actually killed a deer! The next thing to do was to inform the rest of the party. I fired five rounds, which soon brought them to the spot. Then followed the usual

questions. "Is it a deer?" "Where is he?" "Where were you when you saw him?" "Whereabouts is he shot?"

Following the line of blazed trees we soon found ourselves—very much to our delight, for we were already tired and worn out with the experience the day had brought forth—on the shore of Otter Lake. It was indeed a beautiful lake, hemmed in with the noble pine and tamarack, through whose lofty tops the sun's last rays shone, presenting a sight which will not very soon be forgotten.

Our guide from among the alders that surrounded us brought a beautiful canoe; we stepped in; the little craft, propelled by the strong arms of its owner, shot through the water, and before we knew it we were landed on the opposite shore.

Our place of encampment was situated on a high knoll not more than five rods away from the lake, commanding a fine view. A broad brook whirled and danced past our camp, and just below it gurgling and foaming the swift current leaped some 15 or 20 ft., then fell, forming a deep hole from which many a speckled trout had been caught. Curious little water wrens made the stream their home, they plunged fearlessly into the water, evidently enjoying the sport. An occasional flock of wild ducks would fly swiftly by, breaking the dead silence with the loud flapping of their wings. The fragrant odor of the fir trees acted as balm to our tired senses and slumber soon overtook us.

As the first beam of morning's sun kindled the day I arose and taking my rifle strolled along the thickly wooded lake shore. Growing weary of this I changed my course and walked along the bank of the brook. Looking at the trees I noticed that a number of them were freshly blazed. Curiosity induced me to follow in their line, which led me through thick underwood and dangerous swamps. Here I halted and gazing around I descried a deserted shanty which evidently had not been built more than three or four months. Upon going closer and looking in I discovered to my astonishment a black bear stretched out full length and staring at me with an evil look. I was momentarily stunned. Advancing cautiously until within about five rods of him I knelt and pulled the trigger, there was a tremendous report and a pressure as though something heavy had fallen on me.

My rifle dropped out of my hand and I sat there on the ground fully ten minutes before I understood the situation, then I arose and gave a look at the shanty, but my game had disappeared. Picking up my rifle and examining the breech, I saw that the head of my cartridge had blown off. Nervous and excited with what had happened I concluded it would be better to return to camp, but to my discomfiture I was unable to find the path I had taken. I fired and shouted but no answer came. Three-quarters of the day had passed and yet I had not found my path. At last night came on and I constructed a rude hut of pine boughs and bark to shelter me.

I passed a restless night, my dreams were anything but pleasant. I remember one in particular in which I was wrestling with a large bear near a deep precipice, and in falling broke my ankle. I awoke confused to find my covering had fallen on me during the night, and a large limb from a decayed spruce had blown down and struck me on the leg. Extricating myself from such uncomfortable quarters, and oh, so hungry, I once more proceeded. Walking until noon I struck a long swamp which I remembered having crossed on our journey to Otter Lake. Nearing the end I saw a piece of white birch stuck to a tree on which was written:

Follow the blazed trail and you are safe.

Ripping this valuable piece of information off the tree and thrusting it into my pocket I pushed forward with renewed vigor. The trail led me to a lumber camp, where, upon inquiry, I was informed that our guide had arrived hours before and had just gone back to see whether I had turned up. One of the choppers fired a few rounds from his rifle, which soon brought the whole party, who were overjoyed to see me. We ate a good meal of the lumberman's "old stand by," pork and beans, and took a short path to the village.

By chance we ran upon a large buck, which was killed by our guide. At length we arrived at our destination in good spirits and none the worse for the long tramp we had taken. After dividing the spoils we departed for home.

To this day I still treasure that little slip of birch bark, on which is written with the end of a cartridge, "Follow the blazed trail and you are safe."

W. P. ANDERSON.

THE ST. REGIS CAMPS.

NOWHERE in the entire Adirondack region are the camps as numerous or as elaborate in their appointments as on the lakes immediately in the neighborhood of Paul Smith's Hotel, over 100 being situated within a radius of three miles from the hotel. This house is on the northern shore of the lower, but most northerly, of the two St. Regis lakes. Between these two, connected with them by narrow streams or runways for the water—"slews" the natives call them—is Spitfire Lake. North of Smith's about one-half mile is O-good Pond. The banks of these lakes are owned by private individuals, who have erected upon them permanent camps, some of which have cost many thousands of dollars. Land on their shores is variously held at from \$2,500 to \$10,000 an acre.

The camps on the Lower St. Regis Lake, owing to the proximity to the hotel, are mostly day camps, being simply delightful resting spots, which certain guests of the hotel own and where they picnic.

The camp of E. A. Hoffman, Jr., is by far the most picturesque of these on this lake. The camp is situated on the southern shore, and at night is illuminated by lanterns so arranged as to form a large cross, distinctly visible from the hotel, one-half mile distant. Mr. Hoffman runs his camp with military regularity, and the sunrise and sunset notes of his bugle are one of the features of the lake.

The finest camp on Spitfire is owned by Mr. S. T. Drake, the Game Commissioner. This is situated on the north-west shore of the lake, and consists of a series of buildings connected by verandahs; the interior of which are decorated with woodland and hunting scenes and the heads and skins of game.

The next lake, the Upper St. Regis, is the favorite one for camps in this region, if not in the entire Adirondacks.

To the right of the entrance from Spitfire, and adjoining the summer resting place of the writer, is the camp of Hon. Whitelaw Reid, the main building of which is a log cabin.

In front of these camps is Brick Island, which contains about twenty acres, and is owned by Mr. Anson Phelps Stokes. Here is a little village of artistic buildings and snow white tents, which face the western shore of the lake, from which rises Mount St. Regis, with its rugged wild scenery of tangled bush and its wealth of pine trees.

On Pine Tree Point, the northerly end of the lake, was erected last year at great expense the camp of Mr. H. McK. Twombly. Between this point and the entrance to Spitfire are camps owned by Messrs. Edward Penfold, A. W. Durkee and Charles T. Barnes, of New York. On the last camp is a very fine tennis court, and the inclosed yard containing several deer. Among the campers on this lake may be mentioned Robert Garrett, Robert Hoe and Edward Mitchell. The camp of the last named gentleman will be occupied this year by the family of Mr. Robert W. Stewart, of the Meadowbrook Hunt.

The handsomest camps in Osgood Pond are owned by Mr. Hans Beatty and Mr. A. D. Juillard. In all these mountain homes the sleeping apartments are tents, generally about 14 ft. square, covered by different colored flies, and erected upon platforms raised about 3 ft. from the ground.

In addition to hunting and fishing in which the gentlemen take part, races between the yachts and steam launches, also rowing contests between the guides are of frequent occurrence. And at evening, the myriad lanterns and the camp fires give a gala appearance to the scene, which is enhanced by the songs of rowing parties with their accompaniments of banjo and guitar.

The attractions of this form of life in this beautiful region is easily explained by the fact that the camps are near enough to a base of supplies to be enabled to set good tables, and sufficiently removed from each other and the busy world to give their occupants zest for their invigorating life *al fresco*, and its varied sports.

L. C. WHITON.

NEW YORK, June 15.

ANTOINE BISSETTE'S LETTERS.—IX.

M'sieu Fores Strim:

"Ah 'll want for tol' you question, but Ah dunknow 'f you 'll want for ast me some answer of it. Probly you 'll was, probly you 'll ant. Dat was depen' of haow you 'll felt, or if you 'll ant know, wal, Ah 'll goin' tol' it."

What was it mek some mans dat gat some dogs be so moch was as hees dog was for graowl an' bit some oder mans dat gat some dog, hein?

If every boddee ant say hees dog was de bes' of every man's oder dog, he goin' jaw at it an' cuss lak hol' tunder an' litlin, an' 'trow hees hat an' jump on it, an' pull off hees hown hair an' lif hees' de sit of hees traouser.

An' if de judge of de dog meetin' ant say every dog was de bes' an' he 'll gat all de priffick pint, den dey was all mad at it an' call it hol' foolish, ant know dog from cats, dat he was be buy up or hees hown dog was oncle of de dog he give prineum, or hees waf cousin hown dat dog, or sometings or some oder tings too numeery for mentioned.

All de tam de dog dey was quarly 'baout, he jes' stan' an' laft inside of it, an' tink what foolish dat mans was be. De dog ant care what dogs de mans was say was bes', so long he 'll gat some 'nough for heat an' good place for slept, an' go huntin' sometam or have leetly faght once of a while. When he 'll have dat, he fan aut which dog was de bes', more quicker sometam as was 'greably of hees feelin'.

Ah 'll b'lieve dat was de bes' way for de mans for settlin' it, if he ant willin' for de dog do of it so. It ant bealwys dat it can be settlin' by de dog, so it will stay of de man.

Ah 'll spik you some histry of dat. Ah 'll b'lieve Ah 'll tol' you some of mah yaller bob-tail Tom Hamlin. Dar was sometam of dat dog was very remarkably. It ant hees pint, mos' all de breed of dog gat too much pint, so was mek troublesome for de judge decide of it, but mah Tom Hamlin, he 'll ant gat only but two pint, bese of it plain for see. One of it on one hees en' of it, de oder on hees oder en' of it.

One he use for smell, de oder for wag. Dat pint was short, but he mek up for dat in de quick motion of it, an' he wag up more as half hees body wid dat t'ree ninch of tail. You 'll ant gat for look an' felt all over dat dog for hees pint of it.

But dey ant be hees mos' remarkably. Ah 'll bet you head he could beat more zhonny kek, slept more of de daytam an' mek more bark of de night as mos' ten dog you 'll never see, an' he run lak streaked litlin', yes, sah.

Wal, one day las' fall, he 'll ant felt so appetite for slept as mos' always, an' he 'll took motion for go up to de store where dey use to call de Forge Village, but it ant gat some forge for paoun' iron some more naow, honly blacksmi' saup an' sawmill.

Dey ant grea' deal go on but loaferin', an' one of de mans dat was keep mos' busy of dat hees nem was de Peter Square. He 'll wored mos' off all de paint of Chapin's caounter where he 'll sit of it, an' w'en de back side of h'es traowser ant rag, it was patch, an' den de patch be some more rag pooty soon.

Wal, dat feller gat a leetly bulldog, white all over 'cep wen he go in de burnt hwood after hwoodchuck an' black hees self all up an' a black patch all over one heye of it. Dat was a pint, Ah s'pose probly.

Wal, Peter Square an' hees dog was on de store wen Ah 'll gat dar. An' he begin for mek fun to mah Tom Hamlin, but Ah 'll ant care honly mans ant lak for have it hees dog mek funs to more as heeself, ant it?

More so, too, 'cause his dog was so humbly, hees heye red lak he 'sit up nights an' drink whiky en esprit, an' hees under jaw steek aut 'fore tudder one lak he was try for bite off hees hown nose off, or peck his toof wid hees nose of it. An' Ah 'll tol' hem 'f dat was hamsome dog, Ah 'll lak bes' humbly dog, me. Den he 'll said he bet hees dog leek mah dog more quicker as Ah 'll can say cider. Ah 'll said, "dat ant more quicker as Peter Square could drink some ciders." Den he say he bet de ciders hees dog leek mah dog in jes' one minute.

Den Ah 'll said Ah 'll ant bet honly for fun, an' it ant funs for have mah dog leek an' have for pay for cider too, but Ah 'll ant bleeved his dog can leek mah dog an' Ah ant care 'f Ah 'll do drink some cider an' have heem pay for it.

Den he 'll said "All raght. Sio it, Tagger!"

Ah 'll said almos' more as quicker he did, an' very laoud an' hugly, "Go home, Tom!"

Hees dog jump for mah dog, but mah dog ant be dar when he was. Bah gosh, he 'll ant dog any more, honly long yaller streak pintin for mah baouse lak some litlin was mek off hees min' for stroke it!

Hees dog foller pooty hard for feefy, probly forty rod, jes' honly a white nub on de behin' end of de yaller streak, an' den he come back for gat hees beef he lef' an' blow very hard 'fore he can gat it.

Den Peter Square say "Le's have it dat ciders," an' Ah 'll tol' heem "Yes," an' we 'll go in back en' of store, for you know it was prohibit for sol' cider here, dat was for say, you mus' go where someboddee can' see for buy its an' den you 'll swear you 'll ant never bought it. Dat was what dey call prohibit law. an' mos' ev'ry boddee alway, vote for it all de tam in Vairmont, an' steek right to it. It mek it seem lak every man was good temperin man, an' all the tam git what he want.

Wal, we drink off our cider an' Peter Square he 'll said, "Antoine, you 'll goin' pay M'sier Chapin for dis."

"What for Ah 'll pay?" Ah 'll tol' heem.

"Cause mah dog leek you dog," he 'll said.

"He ant leek it an' Ah 'll ant goin' for pay for no ciders."

"He 'll ant leek it?" he 'll tol' me.

"No, sah," Ah 'll said, "he 'll ant. Mah dog leek you dog, seh. 'He go fast' est he taire you dog all up so he can' breeze, you dog can' ketch mah dog for chaw of it, so he ant able for leek it."

Den dat Peter Square he call me great many kan' o' Caynock, no any of it good kan.

"Ah 'll tink fus' Ah 'll leek Peter Square. Den Ah 'll tink haow 'f Ah do Ah 'll ragged all hees close wus as dey was, an' mek hees waf grea' deal of troublesome for mend it. An' dar was nodder t'ing Ah was consider dat Peter Square was pooty beeg, strong mans, an' Ah 'll hol' mahsef in, an' took mah tobac un' my codfeesh an' do jes' lak mah Tom Hamlin. An' Ah b'lieve if Peter Square try he 'll gat leek jes' sem lak hees dog."

So you see what Ah 'll say in de begin was correck dat de dog can' always be depen' of for settlin' de dis-pute of de howner, 'cause you 'll see after all it was so plain case, Peter Square speek to it his dog leek mah dog an' Ah 'll b'lieve dat ciders ant pay for yet. Your truly, A. B.

P. S.—Mah frien' M'sier Mumsin he 'll read me some verse dat say:

"Leet dog deli't for bark an' bit",

It was hees natur' to."

An' Ah 'll say it was better for true 'f he say:

"Leet dog deli't for bark an' bit",

So was hees master too."

Hein?

A. B.

Natural History.

FULVOUS TREE DUCK IN MISSOURI.

THE tree duck, so called, really belongs to the sub-family *Anserinae* and is therefore zoologically a goose; but its general appearance is duck-like, and no one but an ornithologist would suspect its actual position among the birds. One of our St. Louis correspondents was so fortunate as to secure a specimen of this interesting duck last fall in Missouri, where it has not previously been known to occur, and he has presented it nicely mounted to the National Museum, at the same time stipulating that the readers of FOREST AND STREAM shall be informed of the occurrence of so rare a bird in a new locality. We present, therefore, the letter to Dr. Bean, announcing the discovery of the duck and the reply of Mr. Ridgway, acknowledging the receipt of the specimen and giving a list of localities in which the species has been obtained, together with a brief note of its distribution in general. We trust that other readers of FOREST AND STREAM may continue to inform us of their discoveries in regard to the distribution and the habits of animals and plants which they meet in their travels.

ST. LOUIS, Mo., Feb. 10.—Dr. T. H. Bean.—Dear Sir: While duck shooting last fall at New Albany, in southeastern Missouri, I killed what was then to me a new duck, but which I have since identified as *Dendrocygna fulva*, a South American bird, if I have placed it right, and I think I know nearly all of the North American ducks. Is not this a rare bird so far north? I have mounted the skin and would present the same to the Smithsonian if it will be of any use to that institution. This fall while shooting at the same place I killed a specimen of Barrow's golden eye. Unfortunately this duck, or more properly drake, was about half picked by one of the boys in camp when I discovered it. He is rare so far east, is he not? Yours very truly, FRANK W. SPARKS.

SMITHSONIAN INSTITUTION, Washington, June 12.—Mr. Frank W. Sparks, 2516 North Broadway, St. Louis, Mo.—Dear Sir: I write to thank you, on behalf of the National Museum, for the very fine specimen of the fulvous tree duck (*Dendrocygna fulva*) which you had the kindness to present through Dr. Bean. Besides being a very acceptable specimen on account of its good preparation, it is particularly so from the very exceptional locality which it represents, being, so far as the Eastern United States are concerned, much the most northern example on record—Currituck Sound, N. C. (a single accidental specimen), Louisiana and Texas being the most northern localities for the species known to me, except in California, where it is not uncommon as far north as Stockton. It has also been taken near Carson, Nevada. A very singular fact in the geographical distribution of this species is its abundant occurrence throughout Mexico and again in southern Brazil, Paraguay and the Argentine Republic without being found in any part of the very extreme intermediate territory. Regarding your capture of Barrow's golden eye in Missouri, this is not so remarkable, as specimens have previously been taken in the vicinity of St. Louis, in Kansas and in southern Illinois. These localities represent, however, about the southern limit of the winter range of the species, which is a northern and not a western bird as you seem to regard it. Yours truly, R. RIDGWAY, Curator, Dept. of Birds.

FLANDERS GUN CLUB.—The Gun Club of Flanders, L. I., has purchased a large tract of forest land suitable for a game preserve, including a fine natural trout stream. Among the game birds on the place are many English pheasants. Eggs of Chinese pheasants, which were first imported into Oregon, where they have thrived, have been obtained, and will be hatched under domestic fowls. The Chinese pheasants, it is expected, will thrive on Long Island.

Sea and River Fishing.

THE FULL TEXTS of the game fish laws of all the States, Territories and British Provinces are given in the *Book of the Game Laws*.

ON THE NORTH SHORE.—VII.

[Continued from Page 413.]

BY 11 o'clock we reached the Lizzard Island, which is owned by Capt. Ganley, who has an extensive fishery here, and embarked in our sailboat for Jackson's Cove, on the main shore, some three miles distant. There was only a light breeze to aid us, and consequently our progress was quite slow; in fact to make any kind of headway one of the boys was compelled to help with the oars. We had gone about a mile when, inquiry being made about our overcoats, which were missing, it was ascertained they had been left on the tug. Of course that necessitated a return. In the meantime the tug had steamed out and was on her winding way to Dog River. Giving the signal of distress she soon overhauled us and the coats recovered; and in addition got a tow within half a mile of our destination, which place we reached about noon. We found most charming camping grounds on an immense rock of two acres or more, which is united to the shore by a little spit of sand of about 100ft., over which the waves ran in a heavy blow.

The rock was really a gigantic boulder of irregular shape, with two lofty crowns and two depressions, which had been scaled from the top by a thunder-bolt, probably, and which were now reservoirs for the rain and the spray of violent tempests. On the inner side, and near the water's edge, was a small cluster of cedars, which had sprung from the soil lodged in the crevices. In the center of this growth was an open space, on which we pitched our tents, and a lovely place it was, affording not only shade but a cozy retreat from cold and violent winds. Once over the sandy spit and you are at the base of a granite mountain which is a picture of the wildest grandeur imaginable. Spruce and cedar are sparsely growing, while in the underbrush on the mountaintop the huckleberry is found in great abundance. The granite of this lofty pile was a strange confusion, blocks weighing many tons being scattered along the uneven terraces, having, doubtless, been forced from the mountaintops by the expansive power of frost, which scientists say has a leverage of thirty thousand pounds to the square inch. The seam once open nature steps in and does her work with apparent ease. Prostrate on the declivities rocks are met at every turn decaying trees, while as many more are erect, with their naked limbs appealing as it were to heaven for resuscitation. In the crannies and little juttings on the sides grasses, small bushes and wild flowers have taken root and unfold their verdure and beauty undisturbed by the wrath below. Out to the very edge of the wave-washed rocks young birches and pines, too, have stationed themselves to catch the fresh mists that arise. It would, indeed, be difficult to conceive a scene with greater beauty of lake, mountain and wood than is presented at Jackson's Cove.

While our men were getting the tents in place, Ned and I took our rods and commenced casting from the giant boulder. My second cast rose a trout which I was fortunate enough to impale, and then after the usual battle, he capitulated. The dilemma now was to net him, and as I could not get close enough to the water's edge, fearful of slipping off the declivitous rock, I shouted to Joe, who put in an appearance at once. He took the net and, like a monkey, slipped down the smooth rock and skillfully landed him. He was no baby trout, I assure you, for he weighed 8lbs., and was a true knight of the red and spotted garter.

Joe returned to his work and I to my pleasure, but before he had fairly resumed his labors, I had another of the same order, struggling frantically for liberty. Again I shouted, and once more Joe came and landed the trout, which was about the same size as the other. Both of these were placed in the little lake on the boulder, which answered capably as an aquarium.

As Joe left this time he cautioned me not to call him again, saying:

"Trout bite so fast never get tent up."

Ned was on the other side of the boulder, entirely out of view, and what he was doing with the *fontinalis* I was unable to say. In about a quarter of an hour another beauty was struck, and this being a small one of about a pound, I concluded not to bother Joe, so I worried him until he could not move a fin, and then very carefully pulled him up the smooth side of the rock, and added another to the aquarium.

Ned now showed up, and stated that he had received but one rise and missed that, and when I referred him to the little lake on the rock as evidence of my good luck, he was very agreeably surprised. I insisted on his casting in my lucky pool, and at it he went in a most industrious manner, sending his flies on the rippling surface with the lightness of a falling snowflake, but they came not to the attractive lures. I, however, received a savage response to a cast of mine; and striking home the barbed steel, had a fight on hand with a mottled warrior of no mean dimensions. He displayed a heroism in his mad rushes and plunges that won my warmest admiration. My little Chubb split-bamboo never did more loyal duty, for it held him to his work in a business-like manner that made his heart grow faint and his struggles weaker and weaker. He tore around quite awhile, indulging in every trick he was master of, but in vain, for the little rod yielded to his terrific rushes with a suppleness and strength that was quite remarkable, and when it came to giving him the *coup de grace* it displayed its perfection of marvelous workmanship. I could then have embraced the honest rod maker and told him what a credit he was to the guild. Fifty battles or more I had fought with that remarkable rod on this trip, and with savage warriors of the deep that ran from 2 to 5lbs., and not a thread had frayed, not a joint weakened, nor had its balance or whipliness in the least showed signs of failing. Last summer I smashed two rods of celebrated makers on this coast, probably from awkwardness, and must confess I had this little rod in the same dilemma on several occasions, but it stood the racket nobly.

In my admiration for the little bamboo I must not lose sight of the captured trout, which was lying a few feet from the edge of the rock with his spangled sides turned to the surface. Not wishing to call Joe away from his

duties, I requested Ned to take the net and land him. Ned essayed to encircle the trout in the meshes, but could not get quite near enough to do it. I advised him to crawl a little further down the inclined rock, but the fear of a plunge into the icy water disheartened him, and he prudently declined the hazardous feat. Not wishing to lose the lovely darling, I called him to take my rod, and after handing it to him, I got down on all fours and crawled close enough to secure the toothsome fish, though I must admit I felt uncertain as to whether the trout was to come out of the water or I to go into it. Ned was all of a tremor when he saw me performing the monkey-act, and after I had crawled back with the glittering prize, it being a 4-pounder, he said:

"There's no fool like an old fool."

"Admitted, though nothing ventured nothing gained."

This capture ended our fishing for the day, as we had all we desired for the present, and as we intended to make a trip down the coast for another raid in the morning we did not care just then about having a surfeit of sport. Our trout in the aquarium showing signs of departing life, we took them out, and rapping them over the head, carried them to camp, where we turned them over to the cook with instruction to have them cleaned at once and placed on the ice we had brought with us from the Lizzard.

During our absence the boys had got everything in splendid condition and a meal was under way.

Joe showed us a gill net for whitefish, which he had found hanging on a suspended pole. It was in a rather demoralized condition, but he said he would set it that evening and try and secure a few whitefish by way of a change in fish diet. He never did, however, for about 5 o'clock that afternoon an Indian with his wife and two children in a canoe showed up and claimed the net, though stating at the same time that he did not care for it and that Joe could have it if he desired. Joe did nothing with the net, nor did he take it away, and for aught we know it may now be rotting on the rocks where it was left.

In this family that camped on the rocks a short distance from us was a young child that had been severely burnt by its upsetting a kettle of boiling water. It was constantly crying from the severe pain it suffered, and by way of alleviation advised it being anointed with lard, with which we freely supplied him. He applied the remedy, and it at once relieved the child of the great pain under which it had been suffering. He was exceedingly thankful, and that evening to express his gratitude gave us a large dish of huckleberries, which he had gathered on the mountain top. We reciprocated by giving him some salt pork and hard tack. He stated that in the bay in our immediate vicinity he saw that afternoon plenty of trout, but that he could not induce them to take his bait. Joe said the Indian had come all the way from Michipicoton, where he lived, on purpose for trout, the eighteen cents per pound being the incentive. He was said to be the best hunter on the lake, and had made last season three hundred dollars with his traps and gun.

That afternoon, when Joe was over on the main shore gathering some firewood at the base of the mountain, he reported when he returned that he had seen a snake over 3ft. long. It must have been a harmless one, for no one unless a naturalist ever, to my knowledge, saw any other kind. Agassiz says the following reptiles occur about Lake Superior: *Tropidonotus sirtalis*, *Tropidonotus erythrogaster* (a species allied to *rigidus* from Lake Huron), *Bufo americanus*, *Rana halecina*, *Rana sylvatica*. "These three species occur as far north as Nepigon Bay, and a circumstance, which has struck me very forcibly, is the remarkable size of the specimens observed in these high latitudes."

That evening after supper the boys indulged on the sandy spit in some athletic sports. First they tried the hop, skip and jump, which they kept up for over half an hour. John always took the lead in this, but Joe, being ambitious, tried his best to defeat him, and asked for trial after trial, until finally Ned and I, who were acting as umpires, decided in John's favor. Next they tried throwing, with one hand, a stone of about 15 or 20lbs. weight. In this John was also successful. Joe now insisted on the back throw, and badly defeated John at it. Joe declared that he had never been beaten in the back throw, which is simply a throw over the head, and had thrown against all the Indians at Goulay and Baschewanung bays. The Michipicoton Indian was a delighted spectator of the games, but could not be induced to participate in them. Ned said he saw him the next day, when he thought he was unobserved, pick up the stone the boys had been using in their trial of skill, and throw it at least five feet further than the champion, John. Probably he did not consider our boatmen foemen worthy of his steel.

The day had been an exceedingly delightful one, but at sunset it began to blow from the northeast in enormous sighs, as if pausing to draw breath. All night it blew, and in each pause could be heard the answering moan of the rising surf, as if the rhythm of the sea moulded itself after the rhythm of the air; as if the waving of the water responded precisely to the waving of the winds—a billow for every puff, a surge for every sigh.

ALEX. STARBUCK.

PLEASANT LAKE, N. H.—*Editor Forest and Stream*: I wish to correct, through the columns of your paper, a statement which appeared on page 374 of your issue of May 20, under the heading of "Pleasant Lake." Your informant stated that 45,000 trout had been placed in Pleasant Lake this year. As that number would be unreasonable for a comparatively small lake, and in a community where there are other lakes nearly as well adapted to the production of trout might give just cause for a feeling of jealousy, I wish to state the exact plant made in Pleasant Lake so far, which was 10,000 salmon last year and 4,500 *aureolus* and 20,000 salmon this year. This is a generous allowance, the exaggeration of which is needless.—B. H.

SPRINGFIELD, MASS.—A merry party of sportsmen, consisting of a dozen members of the Springfield Fish and Game Club and their friends, left last Thursday evening on the Montreal express for Amabelish, Can. From two to four weeks will be spent in this delightful region by the members of the party, which includes E. L. Brewer, E. M. Coates, D. N. Coates, E. H. Sterns, C. A. Nichols and W. H. Gilbert, of this city; W. H. Clark, of St. Louis; C. H. Bryan, James Rice, DeWitt James and A. Smith, of New York, and Herbert Fenner, of Providence,

ANGLING NOTES.

NOW that the weather has become more settled the fish have settled down to serious business, and the reports from the different fishing waters are very much more encouraging. Those who have visited the far off waters of Maine and Canada tell great stories of trout fishing, and from the Beaverkill, nearer home, comes the encouraging news that a prominent angler of this city, Mr. Geo. B. Taylor, killed a handsome trout, weighing 2lbs. 11oz. This noble specimen of the speckled trout was taken under Mrs. Voorhees's dam, Beaverkill Beach.

Dr. Kidd, of Newburgh, who with Col. Higginson, Homer Ramsdell and some other friends, has been after the bass in Ulster county, reports the following score for one day's fishing: Forty-two big-mouth bass weighing 104lbs. The seven largest were as follows: One 5½lbs., two 5½lbs., one 5lbs., one 4½lbs., one 4½lbs., one 4lbs. The following day they took thirty-two bass weighing 81lbs. 6oz., the largest of which weighed 7lbs. 5oz. These were weighed in the presence of a number of Newburgh gentlemen on the club scales. They were taken with live minnows.

The weakfish are also showing up in good shape at Broad Channel and are running up to 5 and 6lbs. weight each. One gentleman took over ninety fish in a couple of days' fishing last week.

Fortunately for anglers the black flies seem to have almost disappeared this season, at least so far they have not worried the visitors to the woods at all. What a few warm days will do remains to be seen.

The fires along the railroad to Lake St. John are assuming serious proportions and destroying an immense amount of property, including valuable timber lands. This is an example of what will happen in the Adirondack region before long. It is the most serious objection to the projected railroads that they seem bound to spread fires every season that it happens to be unusually dry.

Mr. Chas. F. Imbrie, of the firm of Abby & Imbrie, has been appointed foreman of the Grand Jury. While this is a great honor which he fully appreciates, it will unfortunately cause him to lose a little his fine fishing at the Southside Sportsmen's Club, which is now at its best.

Hon. John A. Brandreth reports that about 300 bluefish were caught off Rockaway beach, June 11. They ran in weight from 3 to 7lbs. each. SCARLET-IBIS.

JUNIATA BASS.

PORT ROYAL, Juniata County, Pa.—*Editor Forest and Stream*: Memorial Day, the opening date of the small-mouthed bass season in this State, as usual was rather cloudy and threatened rain. However a goodly number of modern Waltons betook themselves to the banks of our "blue Juniata," which on that day was true to its name, and in fair condition for fishing. The results of the first day's campaign fell short of the fishers' expectations, which were rather good-sized owing to the apparent favorable conditions, and good sport was expected.

The writer heard of several only very lean catches, and the owners of these reported the bass as being very indifferent indeed to their bait.

I afterward learned that among the bass taken on the first day, a number were still heavy with spawn; I also noted, myself, during a stroll along the river two weeks since, several bass in the shallow water near the shore, yet on their beds.

These facts no doubt account for the lack of interest the bass are at present showing to the anglers' bait. This lateness of the spawning season seems to be unusual and I have not heard, nor can I give a reasonable explanation of it.

From the base of one of the piers of the Thompsonstown bridge, last week was taken a very fine bass, said to have weighed 4lbs. The toll-taker who has his perch-like house on one of the piers, reminding one of a certain character of Scott's in the "Monastery," declares that he frequently sees a bass in the water below that is fully as big as a roe shad, and will weigh 6lbs.; if this noble specimen can be induced to materialize on one of our expert's hooks and to pull his estimated weight on the impartial steelyards, he will no doubt lay claim to be one of our finest. The bass in this locality do not run over 6lbs., and a 6lb. fish itself is of rare occurrence.

ONYJUTTA.

TROUT IN PIKE COUNTY.

LAST Friday afternoon in New York, two men with rattling tongues and beaming and expectant faces, their hands full of rods, creels, valises, waterproof coats, their pockets stuffed with various paper parcels, could have been seen hurrying down Chamber street to catch the 3:30 boat.

Last night these same two young men came up Chambers street, and the electric light disclosed the fact that their valises looked thin, their pockets lacked the paper parcels, their rods got tangled with their creels as they flopped easily against their legs. Their faces, however, were still beaming and more brilliantly than before, though their features were in repose. They did not notice the smiles nor hear the remarks of the passers by, as the yawning covers of their fish baskets disclosed their emptiness. Their tongues, too, were quiet, but there was a light in their eyes as of success and contentment.

Why? Well, go and do just as they did. Get all your tackle together and purchase a lot more flies and things if you have the money. Tell your friends you are going trout fishing and that they will be remembered and then buy an excursion ticket for Rowland's, Pa.

But you say these men brought back no trout, so how did they spend the time during those three days? Thompson would answer that he drove them to a stream rushing and resting through the rocks and woods and told them to fish down two miles, when he would drive and prepare luncheon, and then they were lost for three immortal hours!

Lost, you say? Yes, but only in the overwhelming breath of freshness and purity that nature's lungs poured forth about them.

But what did they catch, say you? The softness of the

Fishculture.

MY EXPERIENCE IN AMATEUR FISHCULTURE.

I HAPPENED a year or so ago to be living near a large landed proprietor, who, fond of fishing, and especially fond of interesting occupations, had taken up pisciculture as a hobby. He had a good deal of water running through his estate; there was a river abounding in grayling—a fish of very delicate flavor, ranking, I believe, next to trout, and affording capital sport with a fly—a lesser quantity of trout, and in spite of efforts to get rid of them, a plentiful sprinkling of pike. Besides this there was a brook fairly well stocked with trout, and also some minor streams.

My friend, who shall be called Mr. Hungerford, proposed to me to join in his venture, he making all the outlay, I giving my interest, society and help, rather a one-sided bargain, perhaps, but we became partners and called ourselves a company. There was great talk of pecuniary profits, but I regret to say that owing to various calamities which befell our enterprise during the three seasons it lasted these were untasted, the only persons benefited being the fishermen, whose sport was of course increased. Perhaps there is nothing that requires so much constant care and everyday attention to make the thing a success as the hatching and rearing of fish. Change of temperature, flow and clearness of water, delicacy of handling, all act to an almost incredible degree in making or marring the undertaking. For instance, should a temporary stoppage in a pipe occur, or the cleansing boxes cease to act for a single hour, it is not only a few of the eggs or of the young fish which are lost, but the whole number in your hatching boxes.

The trout that we reared came to us in ova from Switzerland, generally about the end of January; the ova came in various stages of advancement, sometimes in so early an one that the probability of their fertility was mere guesswork; while at other times the black specks, afterward acting as eyes, were plainly visible.

To those who have had no opportunity of studying this subject, I will explain that the ova when first taken from the fish are in the form of nearly transparent globules about the size of a medium pea, with a few tiny spots of golden oil, which is the last thing to disappear while hatching, for the oil acts as nourishment to the fish both before and after hatching out.

To receive 10,000 or 12,000 eggs, to unpack them with such gentleness from the mossy layers that not one should be lost or bruised, to count and distribute them evenly in the boxes—resembling small troughs, with removable, perforated zinc trays—was the work of hours. Apart from the excitement, I was glad that this only occurred perhaps two or three times in a season, for it invariably resulted in rheumatism or a severe cold in the head for my partner or myself. The atmosphere of the fish house, with its constant running water and close proximity to the river, was the very embodiment of cold and damp; indeed, in cold January the open air was a summer atmosphere as compared with that of the fish house. Once started, our daily duties were to test and cleanse the water, which, being from the river, had always a certain amount of sediment fatal to the ova (in our third season we had spring water for hatching purposes); this sediment had to be carried off by means of charcoal and sponges in the upper boxes before the water flowed into those containing the eggs; then the eggs which had clustered were lightly brushed apart by means of a feather and the bad ones removed every morning to prevent fungus—a most deadly enemy.

This removing the bad eggs, which were easily distinguished by a crescent of opaque white forming in the globule, was a most tedious business; each one, of course, had to be removed separately by means of nippers made of fine copper wire, and to seize a small white ball in water without touching its neighbors is no joke. However, we both got very deft at it in time and astonished our numerous visitors by the rate we got them out. We required all our dexterity when it was time for the grayling eggs to come in. This was rather later in the year, about April, and was really more interesting work than the trout; for Mr. Hungerford, by means of turning off the river, netted the grayling and pressed the eggs from the fish.

There was a good deal of risk in taking it in hand from the very beginning like this, and we had as many as several hundred of bad eggs to remove daily from the boxes. We were rewarded, however, for our cold labor by enriching the streams with several thousand young fish the following year.

I believe a good deal of curiosity and amusement was indulged in by the country people about a lady working hard and taking a keen interest in such an occupation as this; indeed, some never quite understood it and looked upon me pityingly! Sometimes when the work was particularly dirty, and my partner so absent minded or engrossed with the fish, that whole troughs of water were suddenly emptied nearly over me, I wondered myself at taking up an accomplishment not generally included in the list assigned to young ladies, and put it down partly to relieving the monotony of country life in the winter and partly to the pleasure I had in the company and conversation of Mr. Hungerford. In his absence from home, which occurred pretty often, he trusted everything to me. One year he distressed me rather by going away just as a consignment of ova was expected from Switzerland; they were to arrive late in March or early in April, and he left me with most minute directions how all was to be arranged. They were to be unpacked immediately upon arrival, whatever time that might happen to be. One bitterly cold, wet morning I was awakened rather before seven by a message from the head keeper to say that the fish eggs had come by the mail train—how soon could I be at the fish house. The very word of fish house so early in the morning made my blood freeze; however, I suppressed my desire for another doze, and hastily dressing started off to my cold task.

It passed through my mind as I hurried along that it was the first day of April, though the weather might have belonged to November. I found the keeper, a fat, good-tempered man, in the most distressingly-cheery spirits; he had carefully unnailed the box, he said, and must now be off, as Mr. Hungerford had wished me to manage the counting and spreading entirely. How the man's eyes twinkled! He evidently did not mind early rising. A momentary fear seized me—the first of April—could it be—but no, I examined the foreign label, it was right even to the date, so I set to work knowing every moment to be precious while I traveled ova. I got off the upper layers of moss, and congratulated our luck on their damp and fresh appearance, as it meant well to the eggs. Next came the cotton wool, which I lifted, and my eye was caught first by a roughly-written placard, "*Doucement, ma chère, nous sommes les œufs de poissons d'Avril.*" and carefully arranged underneath were rows and rows of peas. I had a mortal longing, as you Americans say, to "cuss and swear," my feelings being intensified by the sight of the keeper's convulsed face round the corner of a window.

How I hated that worthy man for weeks afterwards! Never had I felt so thoroughly "sold" as at that moment. This ghastly joke nearly made me resign partnership, as it became the event of the neighborhood, and I was unmercifully chaffed over it. In spite of my rage I was forced to admire the way in which Mr. Hungerford had planned it all, even to getting the hatching boxes in order before leaving home. In describing my grievances I have let my pen run wild, and I must hush out and rear our fish in another paper.

The time taken by the ova in hatching varies slightly with the temperature of the water, sudden cold keeping them back, and *vice versa*. I think, however, that we found grayling to take about three weeks to a month, and trout about a month to fifty days. From beginning to end it is most interesting to watch the gradual development of a spot of what is, to all appearance, yellow oil. We used a linen manufacturer's testing glass, which is a most powerful help. From day to day there is some change, at first a mere enlargement of the yolk, then a faint outline betokens the backbone; a few days and the head with hollows disproportionately big, for the eyes, is plainly visible; again a few days, the egg now contains a moving object, and two large, but by no means lovely, black eyes, and there is a discernible bright red dot, which on close inspection proves to be the heart in violent motion. At last some morning when peering into the boxes to find any bad eggs, one's heart is gladdened and excited to perceive the first fish, such a queer, ugly, lively little creature, the chief part of him being the yolk sac attached to the under part of the minute form, some day to be a fine two or three pound trout. This sac, which causes the fish to move in a most awkward manner, being twice the bulk of its body, lasts a considerable time, providing natural sustenance. As it becomes more pointed at the sides, and shrinks into the body, the arteries, heart and veins become more distinct, the fish, at first quite transparent, becomes darker in color and more lively in habits. When the sac disappears food must at once be provided. Much to our delight we always had a good many cripples among our alevins (the young fry with yolk sac). I say to our delight, as it was most amusing to study their infirmities, knowing them to be suffering no pain. Some had two heads, some wound round and round like the mainspring of a watch, while others had only half or three parts of their body. These and a certain number of weak ones we deposited in a box apart, as they only lived in good health until feeding time, when the two-headed ones couldn't decide with which mouth to seize their food, and the mainsprings lacked power to wind it round; so they died and served as food to their older brethren, if we had any on hand. Feeding is certainly the most touchy point in fishculture, and during the first two years we lost hundreds while gaining experience. Finely grated liver and egg was their first meal, but the remains so quickly decompose and corrupt the water that it requires most careful management. We were much pleased at discovering a fine river-weed alive with the most minute caterpillars, which we supposed to be their natural food, placed abundantly in the boxes; the fish ate with avidity, and we were enraptured at the thought of the labor saved, until next morning, when we found that a firm web had been woven by the imprisoned insects, and half of our young fry strangled. It was a sad shock, but we didn't give up the weed; we placed it in the boxes above and let the caterpillars work slowly through a fine wire netting, the fish waiting eagerly below for their dainty prey. We had considerable difficulty in getting the weed out of the river after we had exhausted the edges; it was tolerably easy for my partner with high waders, but in his absences, when the men had left work, or on Sunday, and I had to grapple with it unassisted except by a boat hook, I felt inclined to leave the fish to take their chance, or to fish for the weed by moonlight with the help of the waders, when the hidden gaze of poachers would be all I should have to encounter. In captivity fish are very easily tamed, especially trout, owing to their excessive greed. Certain ones would come at our whistle and take a spider or fly from our hands; indeed they were not discriminating and rose eagerly at the end of a grumpy thumb. It was about now, when the fish were feeding that the misfortunes, which put pecuniary profits out of the question, began. Once, leaving a cover half off a box of ova, we found it nearly all gone. Threatening vengeance, we set a water trap, and caught, we hope, the culprit, a rat, fat and well liking, and no wonder if he had, unassisted, swallowed a couple of thousand fish eggs. This accident made us unusually cautious and we hoped to elude more of these treacherous enemies.

There were 6,000 strong trout about an inch and a half long, some of which Mr. Hungerford proposed to advertise at a guinea a hundred, I think. The advertisement was in the *Field*. Our pockets were ringing with imaginary gold, when—ill-fated man—my partner, hurriedly called away one evening, left the fishhouse with the treasure exposed, and in the morning 300 scared, unhappy trout represented our 6,000 of the night before. Intending purchasers were sadly informed of the calamity, and our hopes were over for that year. The way in which a rat catches live fish is most wonderful; if it were water rats it might appear fairly simple, but the destroyers of our happiness and fortunes were common barn rats, who gnawed their way in through the woodwork of a window 3ft. from the ground. When about 2in. long we transferred the fish into yearling ponds, over which were suspended the contents of a "game-keeper's larder," dead beasts and birds of prey; the maggots from their decaying bodies fell at intervals and were watched for and welcomed by the fish. Here again ill-luck attended us; 5,000 trout were put into three small, well guarded ponds, with concrete bottoms, and 7,000 into a large pond with a gravel bottom. The following year we set aside two days with great pomp for recovering the fish, and a select party was invited to witness "the liberation into the river of 12,000 trout." The very idea was enough to make a fisherman's blood leap through his veins. Picture to yourself, reader, 12,000 trout of a year's growth in a couple of years time. What work for your top joint, what yarns for your less fortunate friends. But wait, the water runs off from the ponds, a fish is seen and caught, only a perch, no doubt the trout lurk at the bottom, a few more fish are caught, this time pretty little dace and still no trout. Where are the 5,000? The water is all off now, except from a square hole of about 3ft., out of which it must be baled. Faces are growing very long, anxiety holds our breath; the only occupants of the hole are three pike about a foot long. They had come down through the grating in ova, and, growing rapidly, the trio had among them devoured every single trout. Killing is no word for their death, my partner literally "smashed" those pike, finding half trout in them in process of digestion. Well? There are still the 7,000 in the big pool, but I no longer felt enthusiastic; in vain my partner assured me that pike could not possibly find their way there even in the egg; I could not enter keenly into it, and when the findings were only 11 out of 7,000, with no pike by way of explanation, I hardly felt surprised. The unhappy members of that company walked off silently in different directions, the subject was carefully tabooed by mutual delicacy of feeling and no real cause was assigned for the loss. Deep mud and poachers were privately vouchsafed by the keeper as a reason, but there was no proof of the latter, and if the former were the cause, where were the corpses?

These were our only known disasters, we turned a great many trout and grayling into small streams to work their way to the river, with less chance of enemies, and when a three year older or thereabouts comes to table, we fancy it is one of our rearing. Very probably it was comfortably hatched under a stone in the river bed, but "where ignorance is bliss, 'tis folly to be wise," and we well deserve any comfort of this trifling nature in reward for our many trials in fishculture, don't you think so? P. P. S.

ENGLAND.

FOREST AND STREAM, Box 2,832, N. Y. city, has descriptive illustrated circulars of W. B. Lethbridge's book, "Wild Fowl Shooting," which will be mailed free on request. The book is pronounced by "Nant," "Glean," "Dick Swiveller," "Syllable" and other competent authorities to be the best treatise on the subject extant.

mossy rocks that gave in so shyly to them; the gray shadows of the dipping branches, as in play they chased each other across the surface of a pool; the whiffs of countless blossoms as they fought for favor; the scamper and dip of squirrel and bird, and the innumerable harmonies and melodies that sing when man and earth are in accord.

As for trout, they caught enough for a meal or two and a few bass for the poor woman a mile down the hill, and leaving a serviceable pair of unmentionables for Thompson, here they are back at their desks, where it would be better for them to center their attentions.

F.L.N.

THE METABETCHOUAN RIVER.

Editor Forest and Stream:

Seeing the notes sent in in response to your "Where to Go Fishing," I cannot refrain from saying something in regard to the Metabetchouan River. When one reaches the city of Quebec on his way to the country of the ouaniche, the famous Lake St. John region, he hears on all sides the wonders of the Grand Discharge as the center of the best fishing grounds. The reasons are best not given why he should not go there, but let him try it. Then on his return stop at Chambord Junction and take one of the shaky old buckboards to S. Bovins, on the Metabetchouan River, and try the fishing here, and unless his experience is far different from mine during the past few seasons he will find the fish of the river heavier, harder and longer fighters and much more beautiful than those of the Grand Discharge.

If any of my friends and I here include all who love to cast the fly wish to enjoy a day with these most noble game fish, and at the same time have a view of the river scenery, which is unsurpassed, let them try the Metabetchouan River and they will not fail to take ouaniche in number and size to suit the most critical. I will gladly give any pointer as to the region or guides which past experience may have acquired. EDWIN R. LEWIS, M.D.

WESTERLY, R. I.

FOR "FOREST AND STREAM" READERS.

WE have secured, for the private information of the readers of FOREST AND STREAM, knowledge of a number of streams and lakes easily accessible from this city, where we believe that good fishing for trout and black bass may be had. The information, much of which comes from private sources, we are not at liberty to print, but we shall be glad to furnish it without charge to any reader of FOREST AND STREAM who will apply for it, either personally or by letter.

A CANADIAN TROUT.—Toronto, June 1.—In a lake which empties into the Montreal River, and through which I traveled by canoe ten days ago, we caught with a troll twenty trout, the smallest 3lbs., the largest 8lbs. They are shaped like the speckled brook trout. There is a soft fin or excrescence on the back next the tail. The fins, tail and flesh are blood orange in color. The back is dark, the belly white, the sides speckled with silver and gold spots. Some of the fish are reddish brown and some considerably inclined to gray or silver hues. The fish grow to 40lbs. in weight. The officers of the Hudson's Bay Company call them speckled trout. Some people say they are silver salmon. This is a fresh-water lake, 300 miles north of Toronto. The water is very clear and cold, 600ft. deep, resting on a pebbly bed. The fish do not attempt to leave the lake, though it has two outlets; they are never found out of it. The large 40lbs. fish are caught in the fall of the year with night lines sunk deep in the water. The fish is more beautiful than the speckled trout of the brooks, and I say it advisedly, its flesh is more juicy and finely flavored. Please inform me what kind of fish they are.—S. R. CLARKE. [We think this must be one of the large trout known in our catalogues by name only—probably Ross's trout, described by Richardson. Would it be possible for Mr. Clarke to send us a specimen, or at least the skin of a large one? The skin can be sent dry or in salt. Little is known about the trout of the region referred to in the above communication. We know the lake trout and landlocked salmon occur there, but nothing more.]

DEATH OF AMASA WARD.

SOUTHBORO, Mass., June 11.—*Editor Forest and Stream:* The many readers of your paper, who, in seasons past, have been entertained at Hell Gate Camp on the Dead Diamond, will hear with profound sorrow of the death of Amasa Ward, which occurred at the residence of Oscar Fletcher, near Colebrook, at noon, Wednesday June 10.

All winter he had been ailing, and early in March his condition was such that his friends became alarmed, and they determined to remove him from his camp to a place where he could have proper medical attendance. Accordingly they placed him upon a moose sled and dragged him out to his friend Oscar Fletcher's, about midway between Colebrook and the Diamond Ponds.

A physician was immediately summoned, and upon examination he pronounced his case hopeless; a cancerous stomach was the chief factor, but the disorders were complicated. He failed rapidly, but his indomitable resolution which had pulled him out of many a perilous place was just as prominent as ever, and he fought the destroyer to the last. Thus in the 49th year of his life passed to the "happy hunting grounds" one of the best and truest men who ever blazed his way or cleared a carry through the woods.

Brothers of the angle and the rifle, the many pleasant days which we have spent with "Injun" shall be as ever fragrant flowers, which at the touch of memory shall bloom again in rich perfume.

I would suggest, for I knew and loved him well, that all that is mortal of him be taken to the old camp and be allowed to moulder with that earth, which to him was consecrated ground. What could be more fitting? There he had spent the years of joy and hardship; there he had welcomed the return of old friends, and there under the silent stars, with no requiem but the sad cadences of the stately spruce and pine, should be his final resting place.

DOG SHOWS.

Sept. 1 to 4.—Dog Show of the Youngstown Kennel Club, at Youngstown, O.
Sept. 9 to 11.—First Annual Dog Show of the Hamilton Kennel Club, at Hamilton, Ont.
Sept. 14 to 18.—Toronto Industrial Exhibition Association Third International Dog Show, at Toronto. C. A. Stone, Sec'y and Supt.
Sept. 22 to 25.—Inaugural Dog Show of the Montreal Exposition Company, at Montreal, Canada.
Sept. 23 to Oct. 1.—Third Annual Dog Show, in connection with the Central Canada Fair, at Ottawa, Ont. Alfred Geddes, Supt. 1892.

Jan. 13 to 14.—Second Annual Dog Show of the South Carolina Kennel Association, at Columbia, S. C. E. F. Capers, Secretary, Greenville, S. C.

FIELD TRIALS.

Nov. 2.—Inaugural Trials of the United States Field Trial Club, at Bicknell, Ind. P. T. Madison, Secretary.
Nov. 16.—Eastern Field Trials Club's Thirteenth Annual Trials, at High Point, N. C. Members' Stake Nov. 12. W. A. Coster, Secretary.
Nov. 30.—Central Field Trial Club's Third Annual Trials, at Lexington, N. C. C. H. Odell, Sec'y, 44 and 46 Wall street, New York city.
Dec. 14.—Philadelphia Kennel Club's Field Trials. Charles E. Connell, Secretary.

BEAGLE TRAINING.

Editor Forest and Stream:

Your correspondent "Quester," in your issue of May 21, asks a question as to the training of beagles and whether it is desirable to have them under control. He further says that the field trial rules, meaning, I suppose, those held by the National Beagle Club last year, say that a beagle should be under control and he agrees with them in that matter. I don't believe any intelligent person will for a moment dispute that control of a beagle is of as much importance as control of anything else that has come to be one of man's servants. If you have no control over your dog you might as well go hunting with a wild animal, for neither would be of any use to you, but would bolt at the first opportunity that offered. I don't think, therefore, that it is the question of control so much as the amount of control that is desirable that puzzles our amateur friend, and although by no means an oracle on the subject, perhaps a short description of how I train my beagles would be of some little interest to your many readers.

We will suppose you have bought a puppy or young dog from four to six months old. After taking him from his box and feeding and watering you should place him in his kennel, which, by the way, should have at least 100 sq. ft. of yard for him to exercise in. Commence by always feeding him yourself, and before you give him his food give a long whistle to attract his attention, then feed him. Repeat this whistle until you can call him as far as he can hear you, and always either feed or pet him when he comes. Your puppy, being six months old, is now at the proper age to break to lead. Take a collar of good, strong leather about an inch wide, buckle it on his neck, and let him wear it for a few days until he gets accustomed to wearing it. Then go into the yard with a light chain, and while he is playing with you snap it into the ring in his collar. After a while he will feel the restraint of the chain and will either jump and howl or lie down and roll over: in either case wait until he has become calm, then begin to walk round the yard slowly, dragging, if he will not come, the pup after you, stopping frequently to speak to him and coax him to you. It may take you several days or you may break him in a single lesson to lead, but make him do it cheerfully, not dragging behind nor pulling ahead, but leading quietly with a slack chain. This last will take some little time, but it can be accomplished with a little patience.

You have now got puppy to lead nicely and by attending to his feeding yourself got him to know you and recognize you as his master. Now, supposing him to be seven or eight months old, you should take him to the field with you. Start with him some morning or evening, as the scent lies strongest then, and take him to some place where you are sure to find plenty of rabbits and walk slowly around trying to start one for him. He will follow you about for a while, and then, as the novelty of the thing wears off, will make short trips into the brush himself. Always give him plenty of time, and as his confidence in his ability to find you again grows, he will go further and further away, until he stumbles on his first rabbit. Now, if he is a lively, active dog, he will, as soon as the rabbit starts to run, begin to chase him. It is a curious fact that, while a beagle may come on a rabbit, cat, woodchuck, or in fact any small animal, he will hesitate to attack it if it keeps perfectly still; but the sight of any fleeing object seems to create an intense desire to chase it.

If you have an old trained dog with you, that the pup knows, it will lessen the labor of training the pup by one-half; but as many of those who buy a puppy have no old dog to help them out, I will not provide for that contingency at this time, beyond saying you should follow the old dog as far as possible and endeavor to get your puppy to run with you. In an incredibly short time he will get to know that when he hears the bay of the old dog something is up, and after he has run with him once or twice he will catch the scent, and the rest is merely practice.

But to return. We will suppose you have just started a rabbit and your pup has seen it, if he does not chase it at once, run slowly after it yourself, calling to the pup and let him know by your actions you wish him to chase it. More than likely he will chase this rabbit as hard as he can until he loses sight of him, then he will go bounding round looking here and there for his lost quarry. Stand perfectly still as near the place you saw the rabbit disappear as possible, and let your pup cast round. If he comes in to you, give him a pat and then send him away with a wave of the hand. It is quite likely he will take the trail before long, and more than likely run it mute for a short distance; but never mind, don't hurry him now, as he is not just sure that he is doing right.

[TO BE CONTINUED.]

Editor Forest and Stream:

"Quester" asks the question, should a beagle be under control (when in the field), and adds, the field trials say yes and so do I. Well, I will not say that "Quester" and the field trials know nothing about it, as that would be incultus, but I do say that I have yet to see a well-trained beagle while on the scent of a hare that any man can call off, yea, he might yell until he was voiceless and for all a good beagle would be still on the trail. I know of no other plan of getting a well-trained beagle off a trail than heading him and catching him. With me this is just what takes some of the pleasure away in hunting with beagles. I am often ready to start for home but the little scamps are not, therefore I have to catch them and tie them up as caught, which often takes an hour or two. As I always drive to covert, which is some distance away, I cannot leave the dogs to find their own way home. "Quester" writes that he is of opinion that a beagle should hunt like a setter or pointer,

that is, quarter his ground and hunt systematically. I am of opinion that it is not possible to teach a beagle to hunt like a setter or pointer, and if it were possible to do so I fail to see of what advantage it would be. A good and well-trained beagle when taken to any place where hares frequent will, upon being released, hunt up a fresh scent, start the game and hunt it until killed or follow the trail a reasonable time. My plan when training a pup is to take the young dog out when 7 or 8 months of age, not before, with an old, very slow dog, the slower the better, for if the young dog lose or miss the old one he will hunt his trail, giving tongue like mad, and take no notice of the trail of the game. Never take a pup out with the pack, for if you do, ten to one, he will, when out, hunt and tongue the pack instead of the game, and you will never break him of the habit. Of course, beagles from good hunting stock will train and break themselves, if taken out frequently where game is plentiful, but the best and easiest plan is as I have stated above, to take the pup or puppies out with a slow old dog. And do not expect too much of a young beagle until he is full two years of age. A few beagles make good hunters when one year old, but the majority do not become first-class hunters until they have reached two or more years. I am glad to see by FOREST AND STREAM that the dear little beagle is coming more into notice. Men wishing dogs to be under control when hunting hares and rabbits had better use spaniels.

H. B. N.

COOKSTOWN, Canada.

Editor Forest and Stream:

I never bred nor trained a beagle, but I have hunted over a few, and as field steward of the National Beagle Club's first field trials I had a good opportunity to see what was wanted and what was not.

A beagle to win must certainly be under better control than the majority of those were at the trials, and even the winners, I will wager, will be under better control at this year's trial. Supposing you go out hunting in some new country and your train leaves at a certain hour. Ten minutes before the departure of the train you find your dog, he is hunting, but not on trail. You whistle, your dog looks up at you, gives his tail an extra swish and disappears in the bushes. Tableau—dog missed, train missed and a walk home. Had he been properly trained he would have come to heel and your wife would not have cried her eyes out thinking you had blown the top of your head off. At the last trial, I have a distinct recollection of a rabbit seen by the handlers, dogs were called, one responded to the call and immediately picked up the trail. The other paid no attention to his owner and got left. I don't accuse anybody, both had an equal chance, I only state circumstances as they occurred. In another instance one owner yelled himself hoarse and discovered the other man's dog but made no impression on his own.

"Quester" asks, "Should a beagle hunt like a setter or pointer?" I. e., quarter his ground and hunt systematically? I say certainly, but the beagle should show rabbit sense, the same as the setter shows bird sense—I. e., he should hunt the likely places first. "Some say no, that trailing is the primary object." I remember at the last trial, a little bitch, a sure trailer, striking a trail and pottering around until everybody got tired of watching her. We all went on ahead, two or three other dogs ran around her but failed to find anything. They moved on and started and ran two or three rabbits before the bitch gave tongue. She finally found her rabbit but the others by quartering and hunting over more ground had found three in the meantime. Which was the best dog?

NAMQUOIT.

ECZEMA.

THERE seems to be such a very vague idea among kennel owners of the difference between eczema and mange in dogs, that we think the following very able article on the subject in the English *Kennel Gazette*, will enable our readers to form a good idea of this troublesome skin disease. The writer says:

"This is an inflammatory condition of the skin, attended by redness, papules (pimples), vesicles (small blisters), and, in some cases, by pustules. It generally terminates by the skin becoming dry and scurfy. This latter is called squamous eczema. The cause, in most cases, is due to constitutional disturbances, though it may be the result of local irritation. The disease may affect any part of the animal. All dogs are liable to it, though some breeds are more predisposed than others, particularly long-coated ones, and especially Dandie Dinmonts. Of the short-coated dogs, Manchester or black and tan terriers suffer most frequently. The causes are over-feeding and insufficient exercise, weakening diseases—particularly distemper—and improper feeding—such as keeping a dog on milk and oatmeal diet, or debarring them entirely from meat. In some cases, too much meat will induce an attack. Intestinal irritation, the result of worms, or indigestion will induce it, and local irritation, the result of mange or the application of stimulating embrocations. No doubt many cases are due to hereditary predisposition; and I think I am correct in saying that, of all breeds, Dandie Dinmonts seem the most predisposed."

This is a form of dry eczema that resembles very much psoriasis. It generally appears in circular patches about the head, face, legs and body of a pup when about three to five months old; in fact when the teeth are being changed. This is a most obstinate disorder and frequently resists treatment for months.

The question is often asked, Is eczema contagious? I consider that I am right in saying that it is not in the ordinary sense of the word. At the same time I think it is running a certain amount of risk to allow a healthy dog to sleep in close contact with one suffering from the disease during the moist stage, for I have seen the acrid eczematous discharge when it has come in contact with healthy skin set up a good deal of local irritation resembling true eczema to a degree. Such cases, however, yield quietly to treatment. The disease is not confined to any locality, as any part of the head, body or legs may become attacked. There is certainly a greater tendency for the skin adjoining mucous membrane—as around the lips—to become more affected than other parts, and also the eyelids. The soft parts of the skin, such as the flanks, the inside of the thighs and the bend of joints, as the front of the elbow, and the hock, are favorite seats of the disease. The prominent parts of the different joints that come in contact with the ground when a dog is lying down very often become affected.

There are three varieties of eczema: E. simplex, E. rubrum, and E. impetiginodes. Simple eczema is the most common and the easiest to cure. It consists of a crop of vesicles, or small blisters, on an uninfamed skin. In these cases the contents of the vesicles either become absorbed or dried up, and the skin is left dry and scaly. In some instances, where successive crops appear, the disorder becomes troublesome. In eczema rubrum the skin is very inflamed, extremely irritable, and somewhat swollen. A crop of vesicles, as in the previous form, appears, the little blisters break, and discharge, the parts becoming moist. After a time the discharge dries up, and small scales form or the parts are covered with thick scales. The ordinary disease known as red eczema, or mange, which is often seen in white coated dogs when the hair turns of a rusty red color, is not a form of eczema at all. It is a skin affection, in my opinion due to some vegetable or animal parasite, and is really contagious. In the third form, eczema impetiginodes, the vesicles run on to pustules, which discharge a thin, sticky fluid. This soon dries, if the dog is prevented from licking, and crusts of a yellowish-green color are formed. This form resembles

eczema, as a rule, passes through three stages. First, the skin is red, inflamed and swollen. Secondly, small red papules are formed. These soon develop into vesicles, which usually break, making the skin moist, or the contents of the vesicles become absorbed. In either case the skin becomes subsequently dry and scaly. This latter condition of the skin is called the third or squamous eczema, but is really only another stage of the disease. There is a fourth stage in some cases, namely, E. impetiginodes. The vesicles here become pustular, break and discharge, and subsequently form crusts. The irritation, the result of the disease, varies according to the extent and severity of the attack. In E. rubrum the irritation is almost intolerable during the early stages; and the dog is licking, biting and scratching continually. This subsides as the skin becomes dry and scaly. The loss of hair in eczema is not so much due to the disease as to the rubbing, scratching and biting.

The treatment must depend on the form the disease assumes. What would be a suitable application during the early stages would be useless, in fact do harm, later on when the skin has become scaly. Internal remedies are quite as important in the treatment of eczema as lotions etc., for it is by these means that we try to eliminate the disease from the system. During the early and inflammatory stage, when the skin is red and heated, and also when the patches of the skin are covered with vesicles, cooling and drying lotions, such as the following, should be tried:

No. 1.	
Goulard's extract of lead.....	1dr.
Wright's solution of coal tar.....	2drs.
Distilled water.....	8oz.
Applied frequently with a piece of sponge.	

No. 2.	
Prepared chalk.....	2oz.
Lime water.....	8oz.

Apply the same as No. 1.
When the lotions are not found suitable, or cannot be conveniently applied, one of the following ointments may be tried:

Glycerole of subacetate of lead.....	1dr.
Vaseline.....	1oz.

Well mix and apply three or four times a day by being gently smeared over the parts, or

Milk of sulphur.....	1scr.
Mercurial ointment.....	15grs.
Benzoated lard.....	1oz.

Well mix and apply about three times a day. In some cases, when the discharge is free and the skin is very moist, especially in cases of E. impetiginodes, it is necessary to dust the part freely and often with some drying absorbent powder like the following:

Powdered boracic acid.....	} Equal
Pure oxide of zinc.....	
Precipitated sulphur.....	parts.

This should be continued until a crust or scab has formed. A few days afterward, when all inflammation of the skin has disappeared, olive oil should be applied to the crusts to remove them. With respect to the internal remedies, aperients during the early period of the attack are always necessary. For this there is nothing better than Epsom salts. For a very large dog like a St. Bernard or mastiff the dose should consist of from one ounce to an ounce and a half, which may be given dissolved in four ounces of water. For dogs the size of a collie six drachms is sufficient. Terriers may have from two to three drachms, according to size, and small toy dogs a scruple, given in warm water or milk. As the taste of this medicine is rather objectionable I find it a good plan, in some cases, to add some sugar or treacle. The purgative should be repeated about once a week, so long as the disease continues. When the dog makes a difficulty about taking the salts some such pill as the following may be given instead:

Calomel.....	2zrs.
Barbadoes aloes.....	8zrs.
Gingerine.....	¼gr.

Mix and make one pint.

The dose for large dogs should be three pills, and for collies, etc., two; terriers, one pill. In addition to the aperient medicine, some such mixture as the following should be regularly given and continued for some time:

Sulphate of magnesia.....	1½oz.
Sulphate of iron.....	1scr.
Bi-carbonate of potash.....	1½oz.
Water.....	8oz.

Doses: St. Bernards, collies and other dogs of similar size, one tablespoonful; large terriers, as Airedales, a dessertspoonful; small terriers, as fox-terriers, a teaspoonful; little dogs, half a teaspoonful, repeated twice a day. If the dog is not feeling well, from five drops to half a drachm of compound tincture of gentian may be added to each dose. With regard to the treatment of the dry, or squamous form of the disease, ointments are required to soften the skin and thus remove the scurf or dandruff, and to somewhat stimulate the growth of hair. For this, I find there is nothing better than the red oxide of mercury ointment, diluted with vaseline as follows:

Red oxide of mercury ointment.....	1dr.
Vaseline.....	6drs.

Well mix these, and apply with gentle friction to the bare and rough places. When the condition of the skin does not improve with the ointment the following may be tried; the *huile de cade* applied to the part with a camel's hair brush and allowed to dry. This may be repeated a few days with a soft brush. Arsenic given in some form is almost indispensable to complete the cure of eczema. It is often, by mistake, given in the early stages of the disease, but it is best not to administer this medicine during the inflammatory period, but only when the skin has become dry and scaly; then it often proves a specific. Fowler's solution or the solution of arseniate of soda are the best preparations. The dose of either is about the same. Commence with one to five drops, according to the size of the dog, then, after a week, gradually increase the dose to three or ten drops. This medicine should always be given in water, and either with the food or immediately afterward. Should a dog, while receiving this medicine, show signs of its physiological effects by the membrane of the eye becoming red, the eyes watery, loss of appetite, sickness or diarrhoea, and loss of condition, the arsenic must be immediately stopped. After a few days, when the symptoms described have passed off, it may be given again, but, as at first, commence with the minimum dose.

[The further treatment of this disease will be continued in a future article.]

It seems very queer that with so many shows being held in England, the Kennel Club does not step in and make some alteration in the way late entries are now accepted. The rule of our A. K. C., though nobody believes that it is always strictly lived up to, has, however, a good moral effect. At Malden show the secretary writes mournfully to the papers that they are giving 253 prizes in the open classes and the entries amount to only 200. The great Leeds show is also in a similar box, and with such a schedule as they issue there must be some ulterior cause for this delay on the part of exhibitors. The question naturally arises, are dog shows in England being overdone? This is a question that need trouble our show committees very little; our long summer interval gives all a chance to recuperate and tackle the shows again with renewed vigor.

DOG CHAT.

AS stated last week in Dog Chat, we received letters from Messrs. Comstock and Dole just as we were going to press. As a good deal of interest attaches to their movements and the dogs they have bought, we cannot do better than publish a part of Friend Dole's letter. Although we have already given the names of several of his purchases, still there are many particulars connected with them that will be news. He writes: "The next thing is to tell you that both Mr. Comstock and I have been well every minute since we left New York, and we were nicely treated by all the doggy men in England; nothing was too good for us, and we were nearly done up when we left England, with their many kindnesses. You have no doubt seen in the English papers that I have bought quite a number of dogs. I have—and most of them of the highest order. The prices of several were very high, but then they are the right ones, and can win in England as easily as they can in America. The following are all of them and the people I have bought them for: H. M. Stanley (bulldog) for Mr. R. D. Winthrop. This is a grand young dog who will improve a lot. He is only 16 months old, and by the time of the New York show he will make it warm for the Yale ascot. I also sold Mr. Winthrop a bull bitch, Pretty Crimer. She is not a show bitch, but is in whelp to Hotup, a litter brother to Stanley. I am quite sure she will throw a good pup. The Dandie Dinmonts I bought for Mr. E. Brooks are fine. King o' the Heather is a mustard, whelped June 13, 1889. He has never been beaten, which you know is quite remarkable. The bitch, Heather Madge, whelped March 17, 1888, has also done quite a lot of winning. Not only that, but she is the dam of Darkie Dully, who is the best Dandie Dinmont puppy seen for a long time. As she is now coming in season Mr. Brooks will be sure to breed some good ones. I may say that the judge, Mr. Weaver, who judged at Gloucester, told me he thought King o' the Heather the best Dandie in England; but then, you know, the American judges have a way of knocking such good ones. I have also purchased for the Woodall Kennels the fox-terrier Dobbin. He is a grand young dog, has only been shown once, but was not then in form. This dog was bred by Mr. Timne, who is winning all before him just now, and is a litter brother to Mr. Timne's Newcome, which Mr. Rawdon Lee thinks the best fox-terrier in England, and as another fox-terrier judge thinks Dobbin as good as Newcome, I think I am safe in saying that the Woodall boys have another warm one. Dobbin was whelped in June, 1890, and is by the noted Venio. I received a commission from Mr. Edward Maurice, of Yale College, for a good pair of dachshunde. I have bought Janet, the best bitch living, and good judges say the best ever seen. I purchased her from Mr. Harry Jones, who is at the top of the tree in this breed. The dog I have not got yet, but will have him on my return to England. You can depend upon seeing the best red dog here. I may add that Janet is also a red one. When you buy the best they have in any breed you have got to pay for it. Now the last one I have bought for others than myself is the bull bitch Magpie. She is for Mr. Andrew J. Hatch, of New Haven, Conn., and I am keeping her in England till she is bred to Mr. Ellis's Guido. For myself I have bought a very nice small bull-terrier bitch, White Matchless, by Gully the Great. She is in whelp to a son of Bendigo; also a large bull-terrier bitch, named Lively Lou. She is by a son of Bendigo, and is in whelp to Gully the Great. I expect some winners out of this litter; both of these bitches are now safe in my kennels in New Haven. I have also bought the bull-terrier bitch, The Shrew, by Gully the Great; she has done a lot of winning and is a very talking bull-terrier. The last but most important purchase is the bull-terrier Gully the Great, who is the sire of more winners than any bull-terrier in the world. I have been after this dog for a long time, and after seeing the stock that he has got I made up my mind to have him. Gully has a brown mark on the side of his head. He is a big dog, weighing 52 lbs., and taking him all round he is the best bull-terrier I have seen in England, as a show dog. This dog cost more than twice as much as any bull-terrier I ever bought. I shall put him at stud, and I hope the bull-terrier men will use him as he is a wonder as a stud dog. He is the sire of White Queen, who holds the challenge cup, White Wonder, Diamond King, etc. I may say that \$750 have been offered for White Queen. Gully is only 4 yrs. old, just in his prime, and I hope he will be able, with the bitches we have, to breed one good enough to send to England and win. I have owned some good bull-terriers, but I think Gully will do more for the breed than any bull-terrier ever imported. I have a lot to tell you about our trip and will let you know when we sail. We shall be back in England July 15, when we shall have another week to look round and will have time to fill a few more commissions. I may add that some of the best bull-terrier bitches are booked for America. With kind regards to all from yours truly, FRANK DOLE."

Mr. Pitts, of the Mohawk Indianola Kennels, in sending us his Kash—Bonsor stud advertisements, informs us that Bonsor arrived in good condition, and that he is well pleased with him. He thinks he will make a good cross on Kash bitches.

Mr. Bradford S. Turpin, who is a most enthusiastic beagle owner, and who spends a good deal of his time in pursuit of the elusive bunny with his pack, writes us that his Belle Ross and Clyde, both well-known beagles, are now in fine shape, though the latter contracted distemper after the Boston show, and will run again in the N. B. C. field trials. Belle Ross should give a good account of herself, as for a young bitch she showed excellent hunting sense in the last meeting, winning, among other prizes, the special for the best trailing throughout the trials.

Mr. A. W. Pancoast, of Auburndale, O., writes us that the spaniel mentioned in our issue of June 4, as arriving on the S. S. Europe, destination unknown, is the black and tan cocker spaniel Little Prince, out of Lady Nell, and whelped Aug. 17, 1887. Little Prince has proved valuable in the stud, being the sire of Crown Prince and other good winners in England. He is the winner of the following prizes: Second Alexandra Palace, second Brighton, first Southampton and first Birmingham, all in 1889. As Spratts Patent had charge of the little fellow during his journey, it is needless to say that he arrived in the best of condition.

We have received a letter from Mr. Edward Brookes, of Boston, Mass., stating that his Dandie Dinmont terriers King o' the Heather and Heather Madge have arrived at his kennel. They are at present out of condition, but he is well satisfied with his new purchases, and especially with the dog. He expects to show such a team of Dandies at New York that has never yet been seen in this country.

Mr. Frank Hope, of Philadelphia, writes us that he has removed to new and more commodious quarters in order to keep pace with his increasing business.

It is rumored, says "Cheerful Horn," "that \$500 was offered and refused for the pug Royal Duke of Rozelle at the Glasgow show, and America is hinted as the source of the offer. It would seem a if pugs were coming again in popular fancy in this country.

We note that Messrs. Comstock and Dole have been elected associate members of the English Kennel Club.

We are informed that Messrs. Oldham and Wilmerding were not present at the meeting of the N. J. K. C., which is

FIRST PRIZE WINNING IRISH SETTER "RED RIVER GLENCHO,"
Owned by Mr. R. H. Burr, Connemara Kennels, Middletown, Conn.

said to have unanimously voted for Mr. Peshall's reelection as delegate to the A. K. C.

The subject of our illustration this week is the Irish setter Red River Glencho (A. K. C. S. B. 14,472), owned by Mr. R. H. Burr, Middletown, Conn. He is by Glencho out of Lyda Belle, and has won three first prizes. Mr. Burr tells us that he is also a thorough workman in the field. He was purchased from Mr. George Covert, of the Killarney Kennels.

Mr. Charles, who shipped the thirty-nine barriers to Philadelphia on the S. S. Michigan for the Chestnut Hill Kennels, must have had a pretty hard time of it, as he did not know till Tuesday that the ship sailed at daybreak the next day. At 5:30 in the afternoon he called on Spratts Co. for a ton of biscuit to be delivered that evening for feeding on the way out. Spratts were equal to the emergency and dog, food and everything went on hand by 10:30 P. M. that night. *Fanciers Gazette* tells us that Mr. Charles, who is Mr. Harrison's manager on the other side, sent a special attendant out in charge of the hounds, and they will ere this no doubt have been received at the Chestnut Hill Kennels.

The founder of the Newton Abbott strain of spaniels, Mr. T. Jacobs, has certainly beaten the record for long prices in this breed, for he has just sold a black spaniel bitch that has not been shown yet, to a Mr. Wallard for \$2,000.

"Nanquait" writes us that the first number of a new paper will be issued in San Francisco, Cal., June 15, called the *Pacific Sportsman*. It will be issued monthly.

From the Imperial Kennels, Chicago, Ill., we have received a very neat leaflet, setting forth the many virtues of their great Dane, Imperator. We can now boast at least two most excellent specimens of this breed in this country, and the struggle for supremacy between this dog and Melac will always be interesting.

We learn from our Kennel registry that the Oriole Kennels had sold the fox-terrier bitch Blemton Marjoram, that have done some winning, to Mr. James W. Kerr, Philadelphia, Pa. She has been bred to Pitcher.

We are pleased to see that the discussion now going on in our columns on "Beagle Training" is being conducted in such an amicable manner. It also shows how numerous are the friends of the little hound. We should be pleased to have the opinions of such old breeders as Messrs. Pottinger, Dorsey, Phoebe, Krueger and others who hunt the hare in covert and open.

The bulldog Bedgebury Lion, again beat his old antagonist British Monarch at the Southampton show held a fortnight since.

Mr. Symonds has received letters from Mr. Toon and Geo. Thomas explaining Geo. Hellwell's seeming inconsistency in reversing his decisions in the black and tan terriers at Southport. It seems Prince Regent, Mr. Symonds' dog, showed himself very badly in the open class and may have been suffering at the time from his bad cough. Rhodes Oban beats him in head, but is beaten in legs and leg markings and general symmetry by Prince Regent.

The Forest Beagle Kennels have lost the young bitch that was to run a match with the Glenrose Kennels' bitch Ulla in the coming field trials.

If Mr. Lamb is lucky he should be able to make money out of his new purchase Margharita, whose importation we noted recently. It seems that Marchioness of Bute, a daughter of hers by Lord Bute, at two shows scored seven firsts and three gold medals, and now has just been sold for the largest price ever paid for any dog in Scotland.

Rochester, N. Y., is taking measures to mitigate what is called the dog nuisance in that city. Mr. Canahan, of the Humane Society, has the matter in hand, and will prepare the necessary penal ordinances for remedying the evil complained of. So no doubt before long Rochester will be blessed with the ubiquitous dog catcher, who for so many cents per head will give the inhabitants a chance to redeem their pets from the pound at a much advanced rate. In New York the Mayor has placed the pay this summer of dog catchers at 40 cents per dog, and in view of the decided stand taken by some outraged citizens last year, it is to be hoped these grasping gentry have been taught the lesson, that a full licensed dog in proper care has rights which must be respected.

Our thanks are due to Mr. C. G. Browning for a very pleasing photograph of his noted red and white cocker dog Cherry Boy, by Ebony out of Fanchon. He has an unbeaten record this year, taking first at New York, Boston and Lynn.

A new product of dog shows has in the natural order of events been evolved in England—the traveling assistant secretary—as *Canine World* puts it. This is Mr. Beauclerk, who has proved himself so apt in this particular branch that he now makes a business of attending to the clerical work of different shows.

Mr. Chas. Trevena, Redruth, England, is selling off his kennel of noted greyhounds. Among them are the noted dogs Comet and Maid of Cefn, Rushing River, Telephone and Blue King.

We see that Mr. Geo. R. Krehl, editor of the English *Stock-Keeper*, was proposed for membership in the English Kennel Club by Mr. Shirley and seconded by Mr. Arkwright. He was elected.

We are notoriously short of good mastiff judges, or at least those who are available, so it is welcome news to hear that a well-known mastiff man is coming from England to take up his residence in America. Who is he?

The members of the Pet Dog Club who are interested in the projected specialty show in November, are hard at work arranging preliminaries. It is stated that the greyhound and fox-terrier clubs will join in the movement, and the Spaniel Club will hold a special meeting next week to discuss the advisability of their lending a hand. It certainly is the only way in which specialty clubs can hope to hold a show, that is by amalgamating, and come out of it with any prospect of success, as evidenced by the shows held by the Fox-Terrier Club, which have proved dire failures in the past, although the greyhound show certainly proved an unexpected exception to the rule. We hear that the Garden can be secured for \$2,500 for three days, or on the share principle, they to be paid before any one else.

Several Russian wolfhounds have arrived in London from Moscow, and are said to be very good specimens.

The fox-terrier bitch Donna Dominie, that lowered the colors of Hutton Baron at Southampton show, is described in *Stock-Keeper* as a heavy-marked bitch with bigish ears and a trifle full in eye, though her expression is good, and her body and limbs capital; a really nice bitch. She won the special for best smooth (challenge dogs barred).

At a meeting of the Old English Mastiff Club, held May 29, in London, the committee appointed to arrange another specialty show, reported that, in view of the large number of shows to be held on the only available date on which the Crystal Palace could be had, it was considered advisable to abandon the idea for this year.

At the Toronto bench show, Sept. 14 to 18, there will be several greyhound and whippet races which will add materially to the "fun of the fair." The stakes announced are: Grand greyhound sweepstakes, \$5 entrance, divided into 50 per cent. to first and 40 per cent. to second. To this the Association will add a silver medal valued at \$20, to be known as the champion and running medal, open to all. Greyhound race, 300 yds., \$15 to first, \$7 to second and \$3 to third. Whippet race, 200 yds., \$15 to first, \$7 to second and \$3 to third. There will be no extra entrance charged in these races, but all the competing dogs must be entered in the regular classes in the dog show. This a very good move, and will no doubt afford an acceptable change from the usual monotony of the dog show.

We understand that Kingston, Ont., is to have a bench show after all, the dates, Sept. 1 to 4, having been chosen. There is some doubt as to whether the Midland Central Fair will be held this year; if it is, the show will be held in connection with it. If not, the dog show will be held independently in the Kingston Skating Rink. The Canadian circuit this fall will certainly allow ample opportunities for all kennels to take in some of the shows at least. A trip to one of the fair shows is often more amusing than those in the spring. There is more to see and the prizes are every bit as good. The dates chosen by Kingston will, unfortunately, conflict with those of Youngstown, O. This is to be regretted, although we do not think it will make any material difference in the entries. The circuit so far announced will be Kingston, Youngstown, Hamilton, Toronto, Montreal and Ottawa.

For the benefit of those of our readers who are interested in Great Danes we give an extract from the London *Field* report on the dogs at the Frankfurt (Germany) show just held: "Great Danes headed the non-sporting groups. In brindled-colored dogs, Harry Gaisburg, the winner, is a well-made hound, possessing grand limbs and typical head. Mr. Ulrich's Hidalgo Doos is rather shorter in head, and not quite so massive, otherwise a very nice hound. Moro is coarse, and Orion (M Lutz) thin in condition. The winning bitch, M. Cohen's Fila Hansa, a nice brindle, shown in grand condition, had not a very easy win, for, although Menka von Stuggart (Knödler's) is a little smaller, she is equally good in head and bone, and moves better behind. Elvira was much better than Dido, placed fourth, for the latter is thin in thighs, and not very good in action. In reds, M. Ulrich's Halfdan Doos was certainly the best, and he won with something in hand from Kratz Teras, who beat Herman Cesar for third money. Falka-Plavia, a fine upstanding dog, with typical head and sound limbs, won easily in the division for blues; and in harlequins there was nothing better than German, who won in dogs; he is rather plain in head, otherwise a fair specimen. Fritz is too straight behind; but Diana Dordrecht, who won in bitches, has a beautiful head, rare limbs, and good quarters, though in size she was beaten by Felicita, who falls away behind." There was also a class made for Hanoverian bloodhounds, which we are told are very much appreciated in Germany from a show point of view, though not very typical or characteristic, varying as they do in type, somewhat resembling a cross between a pointer and an Airedale terrier.

We took another trip up to the Ruppert brewery, Wednesday, to see how the noted St. Bernard emigrants were coming along. Scottish Prince is much better, though his loin seems to trouble him a bit and, of course, the intense heat retards his complete recovery. Aristocrat is acting as if he liked his new country and is looking well. Altonette has seemingly almost fully recovered from the distemper and only needs the change of air to the country, which they will all get early next week. Col. Ruppert, Jr.'s kennels, at Poughkeepsie, will be ready for the dogs next Saturday. Several applications have been made for Prince's services but he will not be used for several weeks yet. We also learned that Empress of Contooceek will whelp in about two weeks and this will be, we believe, the last litter sired by poor old Hesper. They ought to be something very good.

On June 3 Messrs. Hudspeth & Collier, counsel for Mr. C. J. Peshall, obtained from Judge Andrews, of the Supreme Court, an order on the American Kennel Club to show cause why a peremptory mandamus should not issue against the club, requiring it "to remove the disqualifications imposed

upon the relator, and to reinstate and restore him to the rights and privileges he enjoyed before such disqualifications were made." The order was made returnable on June 8. It was served on the secretary. Mr. Vredenburg then obtained an order requiring Mr. Peshall to give bond in the sum of \$250 for costs, on the ground that he was a non-resident; and the date of answer was postponed from the 8th to the 18th. The principal grounds on which Mr. Peshall asks reinstatement, as set forth in his affidavit are, that under the rules of the A. K. C. the Executive committee had no authority to disqualify him, that he was not present at the September meeting at which the disqualification was imposed, had had no notice that his case was then to come up, and was not given an opportunity to make a defense.

During this extreme heat it behooves all owners of large kennels, and small ones too, to see that their dogs have pure air to breathe and that the floors of the kennel are kept sweet and clean. As an aid to this, Cynolia will be found an excellent preparation, and not alone this, but it will also rid the dogs of fleas which are doubly troublesome this hot weather.

New kennel advertisements still keep coming in and this week we notice several very important ones. The Westminster Kennel Club advertise their celebrated pointer King of Kent in the stud and A. E. Pitts his noted pugs ch. Kash and Bonsor. Those for sale are: Fox-terriers in Toronto; Edmund H. Osthaus has pointer puppies and so has Jas. B. Turner; G. B. Chesapeake Bay dog; Connemara Kennels and F. H. Perry—Irish setter puppies of excellent blood and an "ad" appears for a cocker to tree partridges.

We note that Dog-catcher John Blake, of Newtown, has been prosecuted for keeping fifty dogs in the pound three days without food or water. The cruelty of some human beings really passes all understanding. Such men should be treated to a little of their own medicine.

Le Chenil falls into a not natural error in thinking that only Americans pay exorbitant prices for St. Bernards, terming Mr. Shillcock an American when noting his purchase of Marvel. Mr. Shillcock is a "Brum," and as such is most thoroughly English, you know. But the richest thing is that in the next paragraph. We find that at the Toronto show "Deux dames, Mlle. Whitney et Mme. Mason," will officiate as judges.

"Fritz" Emmett, who has contributed to the amusement of two continents and was one of the most popular actors on the stage, has joined the majority. Dogmen will feel more than interested in the news of his death, as he was at different times the owner of several noted St. Bernards. The giant Rector, for which he paid \$4,000, a great price at that time, and Bayard, Jr., for which he is said to have given \$2,000, once called him master. His most important purchase, however, was the great Plinlimmon, for which he parted with \$5,000, and may be said to be mainly responsible for the exorbitant prices at which crack St. Bernards are now held. Plinlimmon appeared on the stage in his play of "Old Uncle Joe." His sale of Plinlimmon to Mr. E. H. Moore is a matter of recent history.

At the last moment we hear that the sire of sires, the St. Bernard Prince Regent, has been purchased by Mr. W. C. Rieck, of the New York *Herald*, who already owns champions Hector and Flora II. Prince Regent is the sire of Princess Florence, Scottish Chief and other crack rough-coats. Mr. Rieck must have paid nearly \$9,000 for this dog, and has certainly secured a bargain. He is expected to arrive in about ten days, when we shall be able to give more particulars. He is by Plinlimmon out of Miss Meg and a grandson of Duke of Leeds, and is about 5 years old.

NOTES AND NOTIONS.

WHY do writers use *noms de plume* that clearly convey knowledge of their identity? I cannot see why in such cases the writer might not as well give his name at once, as write "The Publisher of the Working Sheepdog Stud Book," or "The Owner of —."

Mr. Mason's recent article on "The Greyhounds at Chicago" is a notable instance of writing, worth writing, it being but too true that much "writing" had better have been left unwritten. I think it is within bounds to say that one-half the matter contributed to our kennel press contains nothing of interest or value, and that the half of this one-half is division of his personal grievances or a magnifying of some of his belongings. We have had twin monuments of this sort, one being the intensely silly proposal of having a perambulating tombstone emblazoning the killing of a dog by A. Otis, with some exceedingly disrespectful allusions to the killer, and the other a maudlin squinting about the death of some dog, beginning with "What heart did not stop or what breath go slow at the news of the death of Old Black Joe?" In both these cases the object of writing was writing. Mr. Mason's article is notable in being a well-digested, synthetic, instructive article, leading to thought and knowledge on the subject treated of, and great is the pity that so little of that kind of writing appears in our kennel papers.

Mr. Mason is in error, however, in implying that restiveness under criticism of dogs is a special characteristic of American dog owners. A gentleman connected with the English kennel press writes me that a good straightforward show report is what he wants and sometimes gets, but that he always gets notice of discontinuance of some stud dog advertisement when he publishes a frank honest report, adding some pungent statements as to the future destination of "fanciers" as compared with those of "sportsmen," a most disrespectful disposition of the "fanciers." There is this important distinction between fanciers and sportsmen in England, the former being "in it" for gain and the latter for pleasure, and perhaps this distinction accounts for the variation. But with us I fancy it is more personal vanity that stirs up the owner of the criticised animal than aught else.

THE ONLOOKER.

AMERICAN SPANIEL CLUB MEETING.

A MEETING of the executive committee was held at 115 Broadway, New York city, on May 18, 1891. Present: Messrs. A. C. Wilmerding, E. M. Oldham, A. E. Rendle, W. T. Payne, R. P. Keasbey. Mr. Wilmerding in the chair. The minutes of the last meeting read and approved. The treasurer's report, dated Feb. 25, 1891, for the year ending at that date, was read. Moved and seconded that the report be received and laid on the table. Carried.

The president appointed Messrs. Rendle and Keasbey a committee of two to audit the treasurer's accounts and report.

A letter was read from the New England Kennel Club in regard to the \$10 special offered at their last show.

Moved and seconded that the secretary confer with Mr. Whitehead in the matter of the New England Kennel Club special, to see if full conditions (explaining that the \$10 for Classification No. 3 must be offered as from the American Spaniel Club) were sent to them, and also to give the secretary power to act in the matter. Carried.

A letter was read from Mr. Whitehead tendering the Stud

Dog trophy to the club. Moved and seconded that the thanks of the club be tendered to Mr. Whitehead for his generous gift. Carried.

Moved and seconded that the \$20 special offered at the Chicago show for Classification No. 1 be paid. Carried.

Mr. Morris presented to the committee a proposition in regard to a bench show to be given in New York in the fall by the specialty clubs, and asked the Spaniel Club to take part in it. Moved and seconded that Messrs. Rendle and Keasbey be a committee to consider and investigate the matter. Carried.

A letter from the secretary of the English Spaniel Club was read, stating that a committee had been appointed by them to confer with a committee of the American Spaniel Club in regard to settling upon a uniform standard of points.

Moved and seconded that the president appoint, in addition to the executive committee, four other members of the club to act with them and confer with the English Spaniel Club committee on the question of standards. Carried.

The president appointed Messrs. J. F. Kirk, J. P. Willey, Chas. H. Mason and Andrew Laidlaw for such committee.

Moved and seconded that the \$10 special offered at the Cleveland show by the Spaniel Club be paid. Carried.

The following members were duly elected: W. B. Palmer, Woodstock, Ont., nominated by Mr. Oldham and seconded by Mr. Rendle; Jas. L. Little, Brookline, Mass., nominated by Mr. Rendle and seconded by Mr. Payne.

A communication from Mr. James Watson was read tendering his resignation as the Spaniel Club delegate to the American Kennel Club and also as vice-president of the Spaniel Club. Moved and seconded that Mr. Watson's resignation be accepted. Carried. Mr. E. M. Oldham was nominated and duly elected as delegate to the American Kennel Club.

A communication from Mr. George Bell to the president and committee in regard to the judging at the Cleveland show was received, and on motion of Mr. Rendle and seconded by Mr. Oldham it was resolved that the communication of Mr. Bell be returned to him with the statement that the club had no jurisdiction in the matter.

Moved and seconded that the committee proceed to open the mailed ballots for judges. The president appointed Messrs. Oldham and Payne as tellers.

The ballots were opened and the tellers reported that the following ten gentlemen had been elected: A. C. Wilmerding, J. F. Kirk, Chas. H. Mason, J. P. Willey, Jas. Watson, E. M. Oldham, Andrew Laidlaw, J. Otis Fellows, William West, George Bell. On motion the meeting adjourned.

ROWLAND P. KEASBEY, Sec'y.

ROUGH ON BARKS.—*Editor Forest and Stream:* For the benefit of any of your readers who are troubled with a dog that persists in howling or barking at night, when there is no necessity and consequently keeping the house hold awake, I will describe a little device which, if not abused, will generally succeed in quieting the "howl of Rome" or restraining yapping puppies, who after separation from the family, delight the ear with "Home, Sweet Home" in canine *crescendo*. That there are many ways of effecting a cure I am well aware. But they nearly all entail getting out of bed or other evolutions, whereas with my invention, as is usual with such "Keelyan" fabrications, you touch the button and the machine, detective, electrical or otherwise, does the rest. Now do not think I am trying to get you to sink well weighted money in a revolutionizer, but just simply buy an ordinary, loud ringing electric bell and enough wire to reach to the couch on which your calm and sweet repose is sought for. All you have to do is to fix the bell close by the dog, place the button beside your pillow, connect the wire, and when the serenade is well under way give a good sharp ring. It must be sudden and short, and be very careful he does not get used to it. On receiving the shock he will shoot for his kennel, imagining the ghosts of oft chased rats and cats have combined for revenge, and lie as quietly, and perchance as coolly, as some dog owners narrate the wondrous waifs also, searing birds, and in fact it might be applied in endless different ways. The writer is likely to pay a visit to English shores soon, and would be pleased to take over or bring back any dog, any one might wish to get over safely under special care.—PRO CANIS AMOR.

A POINTER FROM "HICKORY."—Columbus, O.—*Editor Forest and Stream:* On April 2 there appeared in FOREST AND STREAM, a challenge from Mr. Isgrigg to run any dog a three days' race with a market hunting dog, a grandson of old Gladstone, on neutral ground. "We will either give or take expenses, money and dog ready at any time." Now, I accepted this in good faith and put up the money, \$250, came here half way and on neutral ground and remained here from April 27. Am I not justly entitled to the \$250 to cover part of my expenses? I have had no word from Mr. Isgrigg.—J. R. PORCELL.

KENNEL NOTES.

Kennel Notes are inserted without charge; and blanks (unfilled free) will be sent to any address.

NAMES CLAIMED.

Prepared Blanks sent free on application. Master Dick Bendigo, Cresson, Jay Emm, Jr., Old Skelp Iron Queen Bendigo II. and Lady Vesuvius. By John Moorhead, Jr., Pittsburgh, Pa., for white bull-terrier dogs and bitches, whelped May 24, 1891, by Master Dick out of Queen Bendigo. Belle Mark. By Jas. E. Hair, Bridgeport, Conn., for black, white and tan English setter bitch, whelped September, 1890, by Reverdy (Gath) Mark—Rosa out of Princess Belton (Yaie Belton—Polly Blue). Lansdowne Kennels. By Geo. D. B. Darby, Lansdowne, Pa., for his kennels of fox-terriers.

BRED.

Prepared Blanks sent free on application. Lonnie Bijou—King of Kent. E. H. Osham's (Toledo, O.) pointer bitch Lonnie Bijou to Westminster Kennel Club's King of Kent, May 28. Kleapa—Kash. L. Dresbach's (Columbus, O.) pug bitch Kleapa to A. E. Pitts's champion Kash, May 23. Ruby N.—Bonsor. Mrs. J. V. Newton's (Toledo, O.) pug bitch Ruby N. to A. E. Pitts's Bonsor (champion Diamond—Miggle), May 8. Mack's Juno—Leslie. W. B. McClood's (Hyattsville, O.) pointer bitch Mack's Juno (Rex Morgan—Fleet) to Hon. G. H. Barger's Leslie (Spot Dash—Imported Belle Randolph), June 3. Drumlin Isle—Renown. Kilmarnock Collie Kennels' (Boston, Mass.) collie bitch Drumlin Isle (Alice—Rosa) to their Renown (Metley Wonder—Dray Miller), May 31. Phyllis—Kilmarnock Chief. Kilmarnock Collie Kennels' (Boston, Mass.) collie bitch Phyllis (champion Rex—Jennie Nettles) to their Kilmarnock Chief (Metchley Wonder—Vandy Lily), June 10. Onota Belle—Red River Glencho. R. H. Burr's (Middletown, Conn.) Irish setter bitch Onota Belle (champion Chief—Bizzreen) to his Red River Glencho (champion Glencho—Lyda Belle), June 11. Youla—Sir Bedivere. A. C. Shallenbarger's (Alma, Neb.) St. Bernard bitch Youla (Victor Joseph—Navada) to E. B. Sears's Sir Bedivere, June 5. Blanton Marjoram—Pitcher. Jas. W. Kerr's (Philadelphia, Pa.) fox-terrier bitch Blanton Marjoram (champion Lucifer—champion Marguerite) to Oriole Kennels' Pitcher (Brockenurst Joe—Waffordilly), May 12.

Bonnie Juno—Einstein. J. E. Hair's (Bridgeport, Conn.) pointer bitch Bonnie Juno (Kennel—Imported Juno) to Dr. F. B. Downs's Einstein (Underwriter—Kate Claxton), May 7. Belle Mark—Shenstone. J. E. Hair's (Bridgeport, Conn.) English setter bitch Belle Mark (R. verdy—Princess Belton) to his Shenstone (Don Gladstone—Heather Belle), June 8.

Mena II.—Shenstone. W. C. Knott's (Stamford, Conn.) English setter bitch Mena II. (Rock B.—Mena) to Warwick Kennels' Shenstone (Don Gladstone—Heather Belle), June 13.

Toody—Bradford Harry. Geo. W. Dixon's Yorkshire terrier bitch Toody to P. H. Combs's champion Bradford Harry (Crawshaw's Bruce—Seals's Lad), June 4.

WHEELPS.

Prepared Blanks sent free on application.

Barmad. E. H. Osham's (Toledo, O.) pointer bitch Barmad (King of Kent—Hops), ten (six dogs), by Hempstead Farm Kennels' Duke of Hessen. Dot Smirle. Corktown Cocker Kennels' (Ottawa, Ont.) cocker spaniel bitch Dot Smirle, May 22, six (three dogs), by Rideau Kennels' Obba. Enone. Corktown Cocker Kennels' (Ottawa, Ont.) cocker spaniel bitch Enone, Feb. 5, five (four dogs), by W. H. Morgan's Bounce. Fleet. H. K. Devereux's (Cleveland, O.) pointer bitch Fleet (Dash—Spot), June 10, ten (three dogs), by Westminster Kennel Club's champion King of Kent. Gypsy. J. Wilson's (Bridgeport, Conn.) English setter bitch Gypsy (Prince Foreman II—D. una Inez), May 20, one bitch, by Shenstone (Don Gladstone—Heather Belle). Fanny B. J. Ellis's (Bridgeport, Conn.) English setter bitch Fanny B., April 20, eight (two dogs), by J. E. Hair's Shenstone (Don Gladstone—Heather Belle). Fan. Fred Lewis's (Bridgeport, Conn.) English setter bitch Fan (Nig—Lendine), April 18, eight (four dogs), by J. E. Hair's Shenstone (Don Gladstone—Heather Belle). Nellie McGregor. W. J. Hamilton's (Canaan Four Corners, N. Y.) collie bitch Nellie McGregor (champion Rex—Juno), June 14, six (three dogs), by Jas. Watson's champion Clipper (Eclipse—Nesta).

SALES.

Prepared Blanks sent free on application.

Jack. Fawn, black points, mastiff dog, whelped Sept. 15, 1888, by champion Moses out of Sandverct Bessie, by E. K. Talcott, Morzan Park, Ill., to Mrs. Chas. Wild, Baraboo, Wis. Davis. Dokero. Silver fawn pug dog, whelped July 30, 1889, by champion Kash out of Fair Inez, by A. E. Pitts, Columbus, O., to Eberhart Pug Kennels, Cincinnati, O. Dollars. Golden fawn pug bitch, whelped March 4, 1891, by champion Kash out of Beauty III, by A. E. Pitts, Columbus, O., to Eberhart Pug Kennels, Cincinnati, O. Lady Thurman. Apricot fawn pug bitch, whelped March 15, 1888, by Silver Shop out of Daisy, by Eberhart Pug Kennels, Cincinnati, O., to E. Watrous, La. on, Ill. Earl. Golden fawn Italian greyhound dog, whelped Oct. 15, 1891, by Prince out of Victoria, by Eberhart Pug Kennels, Cincinnati, O., to C. V. Griffith, Anderson, Ind. Chequesset Tara. Pug bitch, whelped March 23, 1889, by champion Dudd out of Tara, by Mrs. Tyler, St. Paul, Minn., to James Bowden, New York, N. Y. Rex III. Black, tan and white collie dog, whelped July 8, 1890, by champion Gilderov out of Buttercup II, by W. J. Hamilton, Canaan Four Corners, N. Y., to A. S. Haight, New York. Brant—Jill whelps. Black cocker spaniel dog, whelped March 18, 1891, by Dr. Nicol, Cookstown, Ont., three to C. M. Nelles, Brantford, Ont., and one each to L. J. Flower, Bloomfield, N. B., and A. P. Lewis, New York, N. Y. Blanton Marjoram. White, black and tan fox-terrier bitch, whelped April 20, 1888, by champion Lucifer out of champion Marguerite, by Oriole Kennels, Youngstown, O., to Jas. W. Kerr, Philadelphia, Pa. Montrose. Black and tan Gordon setter bitch, by Malcolm's Whip out of Countess of Devonshire II, by Harry Malcolm, Baltimore, Md., to Mr. Smith, Tyb. O. Beverwyck Rebel—Beverwyck Toddy whelp. White, black and tan fox-terrier dog, whelped July 22, 1890, by O. Rathbone, Albany, N. Y., to C. M. Munnah, Cleveland, O. Belle of Vaneboro. Lemon and white pointer dog, whelped Dec. 30, 1890, by Ben Adair out of Rose Graphic, by Chas. D. Roberts, Lexington, Va., to Geo. W. Ross, Vaneboro, Va. Zuck. Red Irish setter dog, whelped April 12, 1891, by Connemara Kennels, Middletown, Conn., to Wm. J. Pinckney, New York. Lady Ruby. Orient fawn pug bitch, whelped Sep. 17, 1891, by Braden Ruby II out of Pearl, by Eberhart Pug Kennels, Cincinnati, O., to D. A. Tweedie, Slaughter, Wash. Tina. Aluse and white Italian greyhound bitch, whelped Jan. 11, 1891, by Peter out of G. p, by Eberhart Pug Kennels, Cincinnati, O., to C. V. Griffith, Anderson, Ind.

ANSWERS TO CORRESPONDENTS.

There is no charge for answering questions under this head; we are always glad to give advice on the care and management of dogs; and we shall make this a special feature.

V. B. M., Raleigh, N. C.—There must be some obstruction, but without seeing the dog we could not prescribe; better have the vet. examine it.

E. W. B., Clyde, O.—I wish to learn the names and addresses of the parties who registered Black Dick, No. 181, and Gypsy, No. 210, both in the stud book. I wish to know their pedigrees, if possible. Ans. Neither dog is registered in the stud book under those numbers.

A. D., New York City.—1. Please prescribe for my four months' old puppy, he has three or four red spots on body, each spot about the size of a quarter; they do not seem to annoy the dog. 2. Do you think that the hair will grow again on the afflicted parts. Ans. Read the article on eczema in this issue.

A. O. M., Albany, N. Y.—Please inform me how I must proceed to have my bitch and puppies registered in the A. K. C. and where I must send for blanks to have same done. Ans. Your bitch must have an authentic pedigree for three generations, unless she has won two first prizes or been placed at any field trial recognized by the A. K. C. and she is to be entered. For further information and blanks apply to A. P. Vredenburg, 44 Broadway, New York city.

C. V. Y., Appleton, Wis.—I have a cocker spaniel, three years old, in apparently good condition, that is troubled with a thick, ropy matter forming over one of the eyeballs, making the eye appear white or opaque. By rubbing his eye with his paw he will get it loose, and after a time remove it, but it will form again, and eye appears tender to the touch. What can I do for him, if anything? Ans. Keep his kennel perfectly clean. Cleanse the eye frequently with a solution of ten grains of borax and an ounce of camphor water. Apply once a day with a camel's hair brush, the following:

Aqua distil. 5 i
If the eyelids stick together apply a little lard or vaseline. Feed light but nutritious food, such as milk, broth, etc. If this does not cure him have a veterinarian examine him.

A. C. U., Marblehead, Mass.—Please publish pedigrees of following greyhounds: Lord Neversett, Prima Donna, champion Memnon, Harmony. Ans. Lord Neversett, by Jester out of Squirrel, by Banker out of Queensberry, by Dundin out of Lady Mark; Banker, by Glissad out of Bleekinslop Lass; Jester, by Parmigan out of Gallant Foe, by Captain Antonio out of Maggie Smith; Parmigan, by Contango out of Petronella. Prima Donna not registered. Memnon, by Caliph out of Polly, by King Theodore out of Polly, by Master Walker out of Playful; King Theodore, by Regan out of Garcia; Caliph, by Improver out of Charmig May, by King Death out of Chloe; Improver, by Patent out of Cordelia. Harmony, by Double-shot out of Clio, by Badger out of Mosler's Fan; Badger, by Spar out of Tully Doughtot, by Riot Act out of Sunflow; Riot Act, by Master McGrath out of Lady Stormont; Sandow, by Sunlight out of Senate.

J. W., Cambridge, Mass.—1. My fox-terrier dog while out walking along a road the other day was bitten by another fox-terrier dog, also on chain. They were separated before any serious damage had been done. My dog's skin was only just broken, and I thought no more of it for a day or two, when it began to swell. I put some vaseline on it. The scab hardened and this morning the swelling broke, and a large quantity (about a teaspoonful) of reddish, stringy matter came out. I squeezed out as much as I could and washed it off with vaseline. Is it useful to use dog bites (this was a sort of pinch) to mature, and have I done right? Is there anything more that should be done? 2. Is such a thing suggestive of rabies or other dangerous effects? Ans. 1. Clean the wound and apply a hot bread poultice to draw any remaining impurities. Then apply a little Friar's balsam and the wound will no doubt heal up very soon. Your dog very likely needs some blood purifier, try Glover's, and give him a teaspoonful of syrup of buckthorn every other day for a week. 2. Not necessarily.

T. C. New York City.—1. Is an English setter, two years old, too old to be broken? 2. Can you give the address of a good trainer residing in the city? 3. I have a setter that coughs and sneezes whenever exercised. His discharges are very offensive and dark colored. He is rather thin but has a good appetite. Do you think my setter has the distemper? 4. I have a staghound that is troubled with the mange. I wash him regularly with Buchanan's mange cure, but his skin has turned to a darkish color. His appetite is excellent, and he takes all the exercise he can get. 5. Where is a good place for fox hunting near New York City? I mean for a day's sport. 6. Is kerosene oil good to preserve the glossy coat on a setter? 7. Is there a sportsman's club in this city that a young man of moderate means could join? Ans. 1. No; but it is not generally advisable to start at that age. 2. There is no one that we know of in this city, trainers generally reside in the country; consult our advertising columns. 3. Possibly. Give him a 3-grain quinine pill every night for three or four days, also a dessertspoonful of syrup of buckthorn alternate days for a week. 4. Very likely the hair is killed; it is not likely it will grow again, rub stable vaseline on it. 5. We know of no place. 6. Yes, mixed with olive oil, apply sparingly. 7. We do not know of one, but write to B. Walter, Maiden Lane, New York City.

H. McF. New York City.—Will you please prescribe for my nine months old setter puppy, symptoms about as follows: Nose at times (especially after eating or exercising) fevered and dry, coat starchy, and will not lay smooth, most noticeable about the neck and ears, appetite is good, and he gets all he will eat of bread and milk, oatmeal, meat broths, etc., but keeps quite thin. I think he does an unusual amount of stretching, sometimes bowing the back and then stretching. For a few days I noticed an unusual shading of the head and a slight black discharge from the ears, indicating canker. Would this ear trouble keep him so thin and cause the rough, starchy coat, and what would you prescribe? I notice that he gets up when lying down and moves from one place to another, and that he drops rather than lies down. Eyes keep bright and spirits are fairly good. Ans. This condition no doubt arises from canker of the ear. Syringe the ear carefully with warm water and castile soap several times a day, then dry the inside of the ear thoroughly as far as you can reach with a soft cloth. Apply the following mixture morning and night: Goulard's extract of lead 1oz., glycerine and carbolic acid 4oz. (of the strength of 1 part carbolic acid to 5 parts pure glycerine) and finest olive oil 44oz. Shake well before using and drop into the ear, kneading the roots of the ear so that it will be sure to reach every part, also rub some of the oil on the inflamed skin if it is inflamed. Keep the bowels open with syrup of buckthorn. Feeding all right.

ANSWERED BY MAIL.—B. de C., J. D. E., and M. A. V.

Rifle and Trap Shooting.

RANGE AND GALLERY.

THE SCHUTZENBUND TOURNAMENT.

St. Louis, June 13.—The event of the week has been the seventh tournament of the Western Shooting League of North America, or the Schutzenbund, as the Germans call their organization, which is one of the largest of its kind in the world, having nearly 8,000 members. The president of this association is Henry Pins, and the secretary Chas. Schweickardt, both of this city.

On Tuesday, June 11, the various societies in attendance gave a grand parade through the principal streets to the Union Grove, where the shooters took the train for Crève Coeur Lake, where the tournament was held. The rifle range at the lake is 200 yds. and 7 targets were provided with prizes as follows:

Kehr Target.—Contains in the middle of the 12th black center an inner 6th. Large black center called "Blacttchen." The shots on this 6th. Blacttchen count for 2 points and are shown by means of a green paragon. The shots on the 12th black center count for 1 point and were shown with a white flag. The double ticket for 20 shots costs \$2.25, the single ticket for 20 shots \$1. The points on double ticket count double, but not in the premium. For 125 points a gold medal; for 300 points a lady's gold watch; 4 cents for each point over 300. Besides this, 25 prizes from \$30 to \$1, and 10 premiums for the most points.

Man Target.—The first ticket (5 shots) \$2, each following ticket \$1; 75 cash prizes; first prize \$60.

Field Target "St. Louis."—This target is of oblong shape, 18in. high, 15in. wide, contains 14 half inch circles, counting from 1 to 15. The center is 4in. high and 1in. wide. Tickets of 5 shots, unlimited, cost: First ticket \$2, each following ticket \$1, but only one prize, the same as on the man target, will be awarded to each shooter; 60 cash prizes; first prize \$80.

Union Target.—From \$3,000 to \$5,000 will be awarded on this target; 3 shots on this, 3 on the St. Louis target and 5 on the King target (are only sold for this) cost \$10.

Stitch Target.—Sixty cash prizes will be awarded. Tickets in combination with union target.

King a get.—Forty-nine cash prizes. Tickets in combination with Union and Stich targets. Only one ticket, entitled to 5 shots allowed. The shooter making the highest score on this target will be honored with the King's medal.

Team Target.—To be shot by teams consisting of six members of the society. All societies having more than 25 members are entitled to an additional team for every 25 members; 10 shots to each member of a team, \$18 per man as their admission fee. To the highest individual score of each team will be awarded a gold medal. The admission fee, less 10 per cent. to cover expenses, will be divided among the team. (As shown above) making the 8 highest scores.

Tuesday.—The shooting on Tuesday was at the Kehr target for medals and watches. As soon as a shooter made 125 points he was marched off and decorated with a gold medal. The first man to score 125 points received the gold medal was Gus Zimmermann, of New York, a member of the famous Zettler Rifle Club. At the close of the day's shooting 45 contestants had won medals, and some having scored 300 points were awarded ladies' gold watches as follows: Gus Zimmermann, New York; J. Braun, Joliet; S. Mamer, Joliet; B. Walther, New York; Louis Sicher, St. Louis; Mat Gindele, Cincinnati; N. Koyer, St. Louis. The best shooting of the day was done by the members of the New York and Joliet delegations.

Wednesday.—The shooting on this day was somewhat interrupted by showers, but as the shooters had covered booths no serious delay was caused. In addition to the Kehr target the Schutzenbund gold medal was awarded to 43 contestants, the first to make the score being F. M. Priester, of St. Louis. Ladies' gold watches for 300 points were awarded to 35 shooters, the first to win being H. Pipenbaker, of Joliet.

Contest at the man target brought out some fine shooting, breaking the record. B. Walther scored 98 and Gus Zimmermann 97 points out of a possible 100. Both of the winners hail from New York.

Thursday.—The weather was good on this day, and there was a largely increased attendance at the tournament. One of the leading German singing societies attended and gave a fine programme of vocal music. The great attraction of the day was the shooting at the team target; 16 teams of 6 men each took part in the contest, which occupied most of the day. The first prize, \$60.55, was awarded to the team of the Cincinnati Rifle Club on a score of 172 points. Mat Gindele winning the team medal by a score of 212 points. The Joliet Schutzen Verein team won the second prize, \$43.41, by a score of 115 points. Fritz Bartenmuller taking the team medal on 217 points. The third prize was won by the St. Louis Schutzen Verein by a score of 1,144 points. M. Kac r taking the medal for 207 points. The fourth prize, \$29.06, was earned by the Milwaukee Schutzen Verein by a score of 1,109 points. S. Mermer taking the medal on 208 points. The St. Louis Pistol Club carried off the fifth prize, \$24.22. Wm. Bauer making the best single score of the contest, 218 points, for the team medal. The Davenport Schutzen Verein stood sixth. The Greenville Off-Hand Shooting Club scored 1,029 for seventh place. The Indianapolis Target Shooting Association took the eighth prize by a score of 1,028 points. The other teams stood as follows: St. Louis Sharpshooters 1,013. Phil Schuck leading at 182; Chicago Sharpshooters 991. Fred Torgensburger 186; Omaha Schutzen Verein 961. F. Fuller 197; York Schutzen Verein 955. Corners 182, Hensch 182; South St. Louis Schutzen Verein 936. Fred Wagner 174; South St. Louis Turners 884. Wm. Till 169; South St. Louis Sharpshooters 743. G. Roth 190.

Good shooting was also done on the field, union, king and Stich targets. There were 32 medals awarded for those scoring 125 points on the Kehr target and 26 gold watches for those scoring 300. Friday.—The weather was again ideal that could be desired, and some excellent shooting was done. There were 143 contestants for the king medal, which was won by Louis Schweickhofer, of St. Louis, who scored 113. Herman Arnabuster, of Ann Arbor, scored 131, but lost in the shoot-off. L. J. Selhring, of Joliet, took third place with 118, but was knocked out by Franz R. Manns, of Indianapolis, who scored 108, placing his last shot one point closer to the center than Selhring's. Gus Zimmermann of New York also scored 108, tying Selhring on his last shot, but falling two points behind on the second last shot. Valentine Link, of Peru, Ill., came up to the 108 notch, but his last shot only scored 20 and he took sixth place. J. Gamlich, of Fort Smith, also reached 108 and tied Gamlich on his last shot, but fell behind on his second.

There was also shooting at the man target, but no one reached the record made by Zimmermann and Walther on Wednesday. The contests on the field and Stich targets are close ones and will be decided on Saturday. Gold medals on the Kehr target were awarded to 11 shooters and gold watches to 31.

The shooting closes to-day, Saturday, at noon, after which the score will be verified and the prizes awarded. Up to Friday night the receipts from entries was over \$5,000, representing over 3,000 shooting tickets and about 150,000 shots.

Bernard Walther, of New York, has offered to put up a \$500 forfeit on a challenge of \$1,000 for an off-hand shot for 100 points at a 12in. target at 200 yds. range between 10 men, including himself from the New York Zettler Club against any other 10 men in the United States.

The Compton Hill Gun Club will give a two days' tournament at bluecock targets July 4 and 5. The officers of the St. Louis Gun Club are at work arranging a programme for the same date, which will take place at Compton Avenue Park.

ABERDEEN.

REVOLVER SHOOTING IN ENGLAND.

Editor Forest and Stream:

This morning the first "highest possible" of the season was made at the regulation 2in. center at 20 yds. (government ammunition and trigger pull), it was shot by Mr. Walter Winans with a Smith & Wesson .45cal. revolver at the Sussex County Volunteer Rifle Range, which was kindly put at his disposal by Col. Tamplin, the commanding officer. It was shot before Mr. Short, the range superintendent, who marked and kept the score. Mr. Winans shot on after making the rise shot, putting on three more sevens, this makes, with two shots he fired just before, a score of 69 out of a possible 70 for 10 shots, the best on record 10-shot score for an amateur (the late Ira Paine having made a highest possible 10 shot score, the writer believes, in 1889) in England.

The enclosed diagram shows the shots, those with a cross being the shots fired before and after the rise shot "highest possible." The full score stood 69.

BRIGHTON, May 30.

Editor Forest and Stream:

There is a curious fact about revolver shooting which I have never heard of anywhere else but myself mention. This is that, at times, before I put up the revolver I feel I will make a bad shot, I do not mean the last shot of a good score, when one is naturally anxious not to spoil it, but often quite early in the score when I am shooting well and feel as if I could almost put "ball on ball" I find one shot cannot "let off" well, there is no use putting down the revolver and taking a fresh aim. I will feel I can't get a good "let off." After this shot I can "hold" and "let off" again as well as ever.

I have never experienced this in rifle shooting, there, unless I am not well, I can force myself to hold straight and pull off properly. Can it be that taking the recoil on the lower muscles of the trigger finger in revolver shooting affect them temporarily, still that would not make a single shot in a series be difficult and yet enable me to make a central bulls-eye the next shot with ease.

I should greatly like to know if any other revolver shots have experienced this trouble.

W. W.

SYRACUSE, June 10.—The regular shoot of the Syracuse Rifle Club took place at the range in Onondaga Valley this afternoon. These scores were made in the several contests, 10 shots, decimal target, off hand: Diller 81, Sullivan 75, Ball 47, Smith 52, J. N. Knapp 63, Cately 48, Koehler 61, Re-entry: Stillman 70, Ball 58, Smith 64, Knapp 61, Lathrop 61, Robotham 50, Cruikshank 46, Rest match, Taber 90, Frazer 84, Robotham 78.

HARTFORD, Conn.—The Franklin Rifle Club will hold a prize shoot at Union Grove June 27, rain or shine, commencing at 9 o'clock. \$150 in cash prizes.

THE TRAP.

Scores for publication should be made out on the printed blanks prepared by the Forest and Stream, and furnished gratis to club secretaries. Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

FIXTURES.

If you want your shoot to be announced here send in notice like the following:

June 15-19.—Thirty-third Annual Tournament of the New York State Association for the Protection of Fish and Game, at Rome, N. Y. M. R. Bingham, Sec'y.

July 2-25.—Atlantic City Gun Club's Tournament, at Atlantic City, N. J. For programmes address Harry Thurman, Manager, Germantown, Philadelphia, Pa., or R. C. Griscom, Secretary, Atlantic City, N. J.

July 2-4.—Third Annual Tournament of Canastota (N. Y.) Gun Club. E. R. Roberts, Sec'y.

July 4.—Slater, Mo., Third Annual Tournament of the Slater Gun Club. Wm. R. Reid, Secretary.

July 4.—Shoot of the South Side Gun Club, at South Norwalk, Conn.; sweeps, team shooting at inanimates, and other interesting events will be shot off; all are welcome; no one barred.

July 4.—Third Annual T.ournament of the Towanda Rod and Gun Club, at Towanda, Pa. Sweeps, stakes and guaranteed purses.

July 7-9.—Wellington Gun Club Tournament, assisted by the Inter-Sports Manufacturers and Dealers' Association, Boston, July 7, 8 and 9; \$1,000 guaranteed.

July 22-24.—Pearl River Gun Club Tournament. First two days bluecock, last day live birds. J. J. Blauvelt, Pearl River, N. Y.

Aug. 12-14.—The Missouri State Amateur Shooting Association Annual Tournament, at Lexington, Mo. G. A. Sturges, Sec'y.

Aug. 30-Sept. 1.—Hackettstown Gun Club. Two days at targets. For programmes address James L. Smith, Hackettstown, N. J.

EMMETTSBURG, IOWA.

ALGONA, Iowa, June 4.—A very fine tournament took place at Emmetsburg, May 27-28, under the direction of Messrs. Wilson & Shadbolt. The weather was fine, but quite a south wind was blowing most of the time, which made the shooting somewhat difficult. Among those present were Grim, of Clear Lake; Smith, Durant, Sessions and West, of Algona; Sundstrom and S. einburg, of Bancroft; Georgeson, of Stor. City; Eddington and Cramm, of Sheldon; Stone and Vann, of West Bend. The live birds were very fine, every one of them left the trap as if it had business somewhere else. Everything was done that could be done to make it pleasant for the shooters. Six fine averages were put up for those shooting through the tournament. First was won by Grimm, second by Smith, third by Sundstrom and Shadbolt, fourth by Georgeson, fifth by Wilson, sixth by Steinberg.

Shoot No. 13, 7 live birds:

SEVENTEENTH ILLINOIS STATE.

CHICAGO, Ill., June 8.—The man who fired the first gun in the first tournament of the Illinois State Sportsmen's Association, even though he had been a seventh son of a seventh son, born with the veil and gifted with the power of second sight, could never have prophesied largely enough to cover the actual dimensions of this the seventeenth annual recurrence of that interesting fixture. Not even last year, successful as the State shoot was then, was wanted the success of this. Certainly nothing in the record of the year at the trap, uneventful as it has been in the matter of great tournaments, gave any promise of a shoot like this. The reason for this, barring the insufficient facts of plenty of money prizes and plenty of hard but ill-fung of the ablest sort by a strong executive committee, is not just at present apparent, but this plain fact is obvious that the first day of the Illinois seventeenth annual tournament showed a short, far and away the best that has been held in the United States at any time within the past year, or within a time much further back than that in these days of waning attendances at tournaments. This much can be said, and is said by men outside of the reach of local prejudice. It might not be well to say too much about Chicago, lest it cause envy in alien bosoms, but it is nevertheless the case that the happy club men of this city are to-day shaking each other by the hand and giving vent to such expressions as that "there is but one city in the world that can give a good shoot," or "Chicago leads the world at every station." We will be forced to give the big and vital city credit for dividing the record when the record was already broken, but after that let us be courteous as well as just and say a word of praise for the executive committee, Messrs. C. B. Burdick, Don J. Nichols, and Edward J. Edwards, Messrs. Rowe, Hoffman, Marshall and Shepard, for the Audubon Club as host in general for the year, and for everybody who has pulled a wire or rolled a stone hereto. These, aided by Chicago and by the rare faculty of the American shooter to know a good thing when he sees it, have helped Chicago make a tournament which is a success, a pleasure, a money and a very good thing. There is some small, but important, but incoherent over all this, but we hold the tournament. The Illinois tournament is always measured by the great Board of Trade diamond badge shoot. Illinois men will compare one year with another only by contrasting the entry in this shoot with that of the other year. Last June the entry in the Board of Trade contest was 78, very much larger than that of the year before, which is 65, in my memory serves me. This year the entry in the great shoot crept easily up to 78 and passed it with a rush. "It will go 90," said the confident and I went 100 almost within the moment. It crept on beyond that, 110 125 130, and finally toward evening, when the last squad was called up, it stopped at 122. If any other State shoot is going to put a claw mark higher up the tree than that we shall be obliged to guess at it only feebly. The L. C. Smith cup race at targets is another regular event of this tournament which is of great interest. This year it was about a third larger than it was last, the entry being closed at 77.

The flattering programme for the open to all tournament brought in an exceptionally large attendance from other States. Dr. Miller is on from Amanda, O., Mr. J. R. Pumphrey from Columbus, O., and Mr. Fred North from Cleveland, the latter bringing with him the latest bluecock trap, sprung by electricity, and with a rotating base, which permits a change of angles at every shot, a pretty contrivance, which will be in practical use at Milwaukee next week. A few moons ago, when everybody was running to the monopoly of the rapid fire system, this journal was in a vain effort to popularize the more conservative and the mechanical nature of such a sport, now mechanical skill is brought to bear to keep pace with a sentiment which has run ahead of manufacturer and journal alike. The press, and first and most of all FOREST AND STREAM, deserves the credit for the growing taste for skill, readiness and marksmanship qualities in inanimate shooting. There will be no bars here, however, against the professional shooter, and the professional shooter, Heikes, of course shooting here, Tucker, McMurphy and Courtney are all expected in, and Duer, Powers, Carnecross and many other high grades are all mingling freely with the newer ones. Jim Elliott is on from Kansas City, others from that city are hoped for. Messrs. Merrill and Clements are over from Milwaukee, and indeed every State of the immediate portion of the West is represented to greater or less extent. The delegates from outside of Chicago the delegates are both numerous and strong. From Keishburg Club are present Mayor Tom Marshall, one of our State sportsmen of the best sort, with his associates Messrs. O. H. Lloyd, E. Deterline, L. Churchill, Ed Elliott and Frank Black. Mr. Tom Ladin, another of the pillars, is up from Geneseo, with Messrs. Harbison, Reese, Barr, Booth and Jaques. From Jackson, Mo., Messrs. Straw, Strickland, Baker and Duer. Indeed from all the Illinois clubs belonging to the Association the representation is very flattering, and will appear more fully in the record of the club team shoot.

The grounds at Watson's Park, at Burnside Station, never looked so well. The club tents served to fill out the array of buildings, nobly the new work of the Burnside Club tent on the extreme left the inviting Audubon Club tent, and the handsome edifice of the Gun Club, where the regular refreshment of early custom are offered without money and without price. John Watson is the king of live bird handlers, as to-day's trapping would show, but he never rose a grade in popularity quicker than he did this week when he announced that he had put in the King of the live bird traps, and the work was done, and the boys with the ring ropes being necessary after the big brass balls, he rolled in upon the birds that would have been under the old ground trap and scare-rope plan. The birds were up to a good average for this year, which is not of the best in live bird annals. They were not squabs or culls, but good healthy, strong birds.

Beside the center of interest at the live bird score, there were two sets of traps and five or six more, and the boys and the lovers of inanimate things shot off events and ties. Like Watson's son, Watson's son, presided over the cash and scores here, and did about three men's work. Great as the Illinois State shoot is, it is not great in system. The scoring arrangements were not well perfected, and the press accommodations, as usual, were of the meager, kind, and cold-looked sort. The press, however, is about able to take care of itself.

The referee for the live bird contests was Mr. H. J. Edwards, now of Spink county, Dakota, but once a Chicago shooter. Mr. Edwards is an old-timer, with the frosts of several Octobers on his head, and age, experience and character alike brought him and his decisions a perfect respect. The rules shot were the Illinois State Association's, conservative, and it always had an idiosyncrasy enough to make a few rules of itself.

Al-though shooting went on steadily all day on the Board of Trade badge shoot, that event was only about half finished this evening. The scores will therefore be given later in corrected form. The shooting was done in squads, 5 birds down per man.

THE TARGETS.

Peoria blackbirds were used. The shooting began early and was kept up till late. The following are the scores of the day:

Sixth programme contest, 15 Peoria blackbirds, 35:
J. L. Wilcox.....011100111111 12 J. Partington.....101111111111 14
W. S. Duer.....111111111111 14 J. E. Pumphrey.....101111111111 12
C. M. Powers.....111011111111 13 J. E. Heimes.....101111111111 12
J. W. Taylor.....101101111111 11 F. Black.....101111111111 12
A. J. Atwater.....101111111111 11 T. Marshall.....101111111111 12

Four men were tied straight, Messrs. Heikes, Schick, Eich and White. These agreed to divide the money, viz., 60 per cent. of the proceeds of next year's shoot, and the tie was not shot for the money. Much interest was evinced in the shoot, and the spectators, nearly all, Heikes missed his first tie bird. Schick repeated that performance and joined Heikes on the same bench. Eich courteously went them one better, missing two out of his five tie birds. R. C. White, of Geneseo Club, remained in, and he broke his five straight, and secured the birding and shooting of the birds by instinct. He is not particularly graceful shot, but he is a forward at the score in the awkward old style, but he gets there just the same. Thus the Smith cup again leaves Chicago. Black, last year's winner, is for unate this year, taking for himself and club \$285, 60 per cent., or \$221 being his individual winnings. The men in the 19 hole divided the money, taking \$20 each and shot out for the Smith cup. The winning and shooting of the birds, 25 tie birds, beating Flickenger's 21, Marshall, Wooster and Straw fall out at the 5 notch. The ties on 18 divided the money and tie shot out for the mere and tie. E. M. Gardner, of the Pullman Gun Club, winning 19 out of 20 tie birds. The ties on 17 shot at 5 tie birds, eight men then remaining in, viz., G. Kleinman, W. H. Hale, C. H. Knowles, W. G. Payson, L. Willard, J. R. Kinder, C. D. Bicks and R. E. Franklin. These then drew out 25 tie birds, each by agreement, and a shot down for the remainder of cash and merchandise. W. H. Hale, of the Amboy Club, winning with 10 straight in the tie.

Thus closed the shooting of the day. The weather was perfect. All present seemed satisfied in every way.

Tuesday, Second Day, June 9.

The 8:20 train in the morning brought out a crowd of shooters, and from then till evening the shooting was incessant. The weather was beautiful, pleasant, a light rain in the afternoon detracting but little from the comfort of all. The spectators were numerous, and some new faces appeared among the shooters. Harry McMurphy was on hand, and S. A. Tucker also, while much to the surprise of his friends, that well known rouser "Tee Kay," of New York, appeared upon the scene. Mr. C. W. Parent came up from Marshall, Mo., and saluted many friends. Mr. Parent says that they are organizing a new State association in Missouri, a State amateur league, whose first tournament will be held in August.

The tar of traps filled a large score list early in the morning, and at noon, when the hungry and thirsty shooters sought the tough lunch counter run by seven Ethiopian cutters, or strolled under the hospitable roof of the Gun Club, Audubon, Evanston or Ft. Dearborn for a bite and a sup, the guns were still going on in this first shoot. Then came a little lull at inanimate, not from lack of shooters, but for some one to manage the shooting. The pounding soon became pretty regular, however, and a very good day was run off at the targets, though the heavy entries made the number of events very limited.

The Board of Trade shoot continued to be the focus of attention, as it well deserved. This is the largest live bird entry at ground traps of which any record can be obtained. At no previous year since the plunge traps and wild birds has there been so large an entry in the State tournament here, and there never was so genuine an enthusiasm in shooting matters.

So large a shoot necessarily caused some, and each contestant under the hospitable roof of the Gun Club, Audubon, Evanston or Ft. Dearborn for a bite and a sup, the guns were still going on in this first shoot. Then came a little lull at inanimate, not from lack of shooters, but for some one to manage the shooting. The pounding soon became pretty regular, however, and a very good day was run off at the targets, though the heavy entries made the number of events very limited.

The pounding soon became pretty regular, however, and a very good day was run off at the targets, though the heavy entries made the number of events very limited.

First contest, for the Board of Trade diamond badge, emblematic of the individual championship of the State, the winner of the badge this year to receive the proceeds of next year's tournament, 10 live birds, entrance \$10. First prize, diamond badge, value \$500; second, value \$210; third, value \$130; fourth, value \$80.

 There were 18 men tied for first on 10 straight. The interest was intense as the shoot began, and probably 250 or 300 people gathered about the range, the shooting on other parts of the ground being practically abandoned. Before the tie shooting began it was agreed by the tie men to draw out \$40 apiece and to shoot off for the remainder. From the first bird up to the tenth the men fell out rapidly. When L. L. Schick, Cairncross and Eich were the only ones left in, betting was about even as to which would win, Kleinman having missed and Wooster thought also a rather dangerous man, having gone out on a fast driving bird to the left. Ladin missed a rather easy one, then Cairncross got too far back on a fast white bird and sat down. Eich and Schick then shot another bird apiece and agreed to divide the remaining money and to shoot off on course for the diamond badge. Eich was now offered on Schick, and that pleasant giant from Mr. Pulek's seemed to warrant it, for he was steady as a clock. "Merry June," however, was centering the birds every time, and caught some fast left-quarters in great shape as they started before the wind, so that honors were easy. On his 22d bird Mr. Schick was not quite in the right place, and so closed his plucky battle. Mr. Eich saved right on through the 25 straight in the ties, and amid a storm of cheers and congratulations retired the winner of the chief trophy within the power of Ill. in a blow upon a sportsman. The ties on 5 birds per man:

Shooting was continued until dark in the ties on 9, there being thirty-four tied men. At dusk six men remained in, and these had concluded not to continue, as it was so late and as the birds were growing rather dull and slow, it was determined to finish this tie on the following morning. It is well that the tournament began on Monday. By the time this shoot and the big club team shoot is over it will be near the close of the week, and there will be small room for any open tournament for the non-residents.

TIE TARGETS.

As before remarked, the heavy entries made long shoots. Only 3 events were run off, the total entries hovering closely around 70 that a shoot was nearly an all day affair. The company was hot. No bar. C. W. Budd to-day completed a run of 126 targets straight. The scores:

Extra sweep, 10 Peoria blackbirds, \$2: Duer 10, Flickenger 7, Taylor 8, Merrill 8, Gardner 10, A. W. Reeves 8, Powers 10, White 10, L. Reeves 5, Heikes 10, J. Humphrey 8, St. John 8, Geo. Kleinman 10, Ambrose 10, Englund 8, Walpert 8, M. G. V. 7, J. A. Rube 10, A. W. Rube 10, Sherer 5, Burmeister 7, Fahnestock 9, Presley 7, Cardee 5, Barr 10, Budd 10, Price 6, Toland 7, Hamline 10, Babcock 9, Shilling 9, H. Babcock 10, Cairncross 10, Kiefer 6, Wooster 9, Black 10, Baker 7, Rex 9, Marshall 8, Miller 9, Elliott 9, Cop 9, McMurphy 10, Willard 9, Wilcox 9, Adams 8, Jefferson 6, Schick 10, H. K. Knicker 7, Burke 7, Deterline 7, T. C. K. 7, R. B. 7, E. 7, Deterline 7, Franklin 9, Phillips 9, Burke 6, Steg 10, W. Willard 10, Leopold 10, Royce 9, Spanger 9, Bluecock 7. Ties on 10 shot out and Duer, Heikes, Budd, Hamline, Hamline, H. Babcock, Cairncross, Black, McMurphy and Willard did first, \$50.85. Ties on 9 shot out and Englund, Fahnestock, Miller, J. L. Wilcox, Franklin, Royce and Spangler did, second, \$30.45. Ties on 8 shot out and R. C. White and Ambrose, \$21.

Fourth programme contest, 12 Peoria blackbirds, \$3:

THE CONVENTION.

Shortly after 8 P. M. the regular annual convention met at the Palmer House. The attendance was large and the meeting was a good one.

Dr. N. Rowe, president for the year, was in the chair. His address was read by the secretary, as follows:

GENTLEMEN—As the president of the Illinois State Sportsmen's Association, I have the honor and pleasure of welcoming you to our seventeenth annual convention.

The Association having been formed for the protection of fish and game and for the elevation of sportsmanship, it is pertinent that these objects should be considered.

The path of the game and fish protector, as I know by experience, is not strewn with roses, and it requires a stout heart and strong faith in the ultimate triumph of the principles which influence the efforts for the protection of game and fish to persevere in a cause which I regret to say has heretofore brought to it so little practical support. It has been said that hell is paved with good intentions, and this is not far from the truth in the case of the fish and game protector, but the zealous laborers in it are few. Those who work to save the game and fish from extermination have the wishes for success of a large majority of those who fish and shoot, I believe, but wishes are poor support. They cost nothing and mean nothing, beyond, at the most, moral support, and moral support is the weakest and most inefficient factor possible in accomplishing anything.

It is the duty of the fish and game protector to inform them, and having the most supreme contempt for it, I prefer open opposition to it, for opposition stimulates to renewed exertions. "I am with you" means nothing unless behind the sentiment is the motive power which the words convey. Let us apply this practically. Suppose a house belonging to one of you should catch fire; your neighbors assemble and as they you they are "with you"; but if it around and do nothing. You sit and watch the fire and save the property? No. But on come two or three who rush in and save what they can. Are not they worth more than a million of those who are "with you," but do nothing? Moral support has been the curse of game and fish protection. What is wanted is practical support. The history of the cause is a record of suggestions of what should be done, but is barren of the evidence of a united effort to do it. Napoleon declared that the only victory was on the side of the heaviest artillery, and I think this applies to fish and game protection as well as to battles. If the men who should be most interested will not work in unison and with determination to provide better protection to fish and game, why should they expect that others should do what they are not willing to do.

The protection of game and fish from extermination is a common cause, in which every man who shoots or fishes should be interested. No man can afford to neglect this duty, and no man should be right to participate in the pleasure of taking and shooting it. No man has a right to be a drone and profit by the labor of others; and I say to you gentlemen that just so long as apathy and lack of personal and practical efforts for the protection of game and fish continue, just so long will the present conditions of affairs exist. No man should feel that he is the axis around which the world of game and fish protection revolves, and that if he should withdraw his support the whole fabric would fall to pieces; but every man should feel that he is an important factor in the matter and his support is needed.

John Randolph of Virginia was like all Virginia gentlemen in those days, a connoisseur in horses, and was regarded as an exceptionally good judge. While in Washington, representing his State in Congress, some enthusiastic horsemen, anxious to get what they regarded as the highest opinion on the subject, called on him to inform them of the three most important characteristics in a good horse, and his reply was Action! Action! Action! So I say to you that the three most important factors in game and fish protection are Action! Action! Action!

The trouble has been too much talk and not enough action. Dickens in his pen portrait of Wilkins Micawber gave to the world a faithful portrait of the game and fish protector and fisher in action. I feel that Wilkins Micawber was prolific in advice to others on the methods necessary to attain success in life, and was ever ready to give it. He preached economy and the necessity imposed upon a man to keep his expenses within his income to avoid ruin and misery; but he neither took his own advice nor practiced what he preached. On the contrary, he was conspicuous for his reckless improvidence, his consequent pecuniary embarrassments and numerous devices for relieving them, and was always "waiting for something to turn up." He was ever ready to borrow when he could, but was not so ready to repay the coin he borrowed; with him an I O U settled an indebtedness.

His friend Thomas Traddles had twice rendered him substantial pecuniary aid, aggregating \$41 10s. 11½d. Micawber was very exact to his creditors, and as far as he was honest, and at the time he borrowed he intended to repay, fully expecting "something to turn up" to enable him to liquidate his obligations.

Having failed in everything he had undertaken, his latest venture, selling corn on commission, resulting the same as his previous business experiments, he accepted an offer from Uriah Heap to become his confidential clerk, and it was necessary for him to leave London to go to Canterbury to fill this position. The second has not yet arrived. Micawber's temperament was barometrical; at one moment his spirits were elevated and at the next correspondingly depressed; and one of his many peculiar characteristics was indulging in grandiloquent rhetoric.

Before leaving London he invited his friends, David Copperfield and Thomas Traddles, to spend an evening with him at his house. Concluding an affecting and grandiloquent speech, Dickens relates he thus delivered himself:

"One thing more have I to do before this separation is complete; and that is to perform an act of justice. My friend Mr. Thomas Traddles has, on two separate occasions, put his name, if I may use a common expression, to bills of exchange for my accommodation. On the first occasion Mr. Thomas Traddles was left—let me say, in short, to the mercy of the law, and the second has not yet arrived. The amount of the first obligation (being Mr. Micawber's rather fully referred to papers) was, I believe, 23, 4, 9½d; of the second, according to my entry of that transaction, 18, 6, 2. These sums united make a total, if my calculation is correct, amounting to 41, 10, 11½. My friend Mr. Copperfield will perhaps do me the favor to check that total."

"I leave this metropolis," said Mr. Micawber, "and my friend Mr. Thomas Traddles without acquitting myself of the pecuniary part of this obligation, would weigh upon my mind to an insupportable extent. I have therefore prepared for my friend Mr. Thomas Traddles, and now hold in my hand a document which accomplishes the desired object. I beg to hand my friend Mr. Thomas Traddles a bill of exchange for 41, 10, 11½, and I am happy to recover my moral dignity and to know that I can once more walk erect before my fellow-men."

Among those who shoot and fish we find a very large number of Wilkins Micawbers, for no one can deny that he has not met them, and many of them. Indeed the history of our State Association and our methods of game and fish protection prove it. We constantly see great efforts made to pass laws, and after they are passed much mutual congratulation, and much grandiloquent rhetoric, followed soon, however, by corresponding apathy, and, like Micawber, "waiting for something to turn up" to enforce them. The law-breaker is quick to perceive that the interest in the protection of game has waned, and is as quick to take advantage of it. By and by the terrible slaughter falls again into a flame the smoldering ember of the law, and through the flames the law is hauled over and patched up, and immediately the law is hauled over and patched up, where supposed to be weak; there is much self-congratulation, and, like Micawber, each gives his I O U to enforce it and also, like Micawber, never redeems his obligation; and all are "happy to recover their moral dignity and to know that they can once more walk erect before their fellow sportsmen."

What has been said on what has been the result on the game? Take the state of Illinois alone. Was there ever a portion of the world more prolific in game than this State? I won't go back to the memory of the oldest members of this Association, but only as far back as the life of the Association. Compare seventeen years ago and now. What a change! I am well aware that with the increase of civilization the large supply of game of necessity must have decreased. But the increase in population, and the consequent increase in the number of shooters. The redemption of marshes and their utilization, as well as other wild lands, for agricultural purposes, has driven the game from its originally secluded breeding places into the open, where, deprived of its previous opportunities for protection against its natural and unnatural enemies, it can be killed with comparative ease. Thus the increase in population and the consequent increase in the number of shooters, and the consequent increase in the number of shooters, have contributed to the destruction of our smaller game, by cutting so close as to destroy often nests with unhatched eggs in them and leaving little or no cover for the protection from hawks

and other natural enemies, of the young broods of those nests that escape destruction. The improved firearms have contributed their share, and the game slaughterers, and law-violating pot-hunters and deer-slayers, have done no end of damage against them. Their portion has been done thoroughly.

While these engines of destruction have been at work, nothing effective has been done to counteract as far as possible their injurious effects. We have passed laws, but as they could not be made self-operative, they have, in a very large number of instances, failed to accomplish their object. In short, we have built the engine, but omitted the motive power.

As to what practical and wise protection will do, I have only to refer to the result of protecting prairie chickens in Illinois for two years. As you are well aware, the prairie chicken had become almost extinct, and I am frank to confess that I held the opinion that it must ultimately disappear with the Indian and the buffalo, owing to civilization and agriculture having absorbed its former habitat, and that the proposed protection would not save it from extinction; but, favored the measure, desiring that anything should be tested which promised to save it from extinction. The result you know well. The year before last, the first year of the expiration of the prohibition period, and last year, the shooting was as good in Illinois as in any section of the country I heard of, and superior to a large majority of places where there was reason to expect it would be better. This fact shows that game soon accustoms itself to a changed condition of circumstances, and with protection from its destroyers will not become extinct.

What I have said of the diminution of game in Illinois applies to almost every other State, and our Territories also. What deep regret the retrospect brings! The outrageous destruction of our game is equalled only by the reckless extravagance of our national legislators in giving away our public lands. Only if every American citizen were to realize that the game of the American man incapable of procreating, could such prodigality with the birthright of not only the unborn American, but the born American, be justified. Truly can the future historian in referring to the wanton waste of our game and lands exclaim: "Improvident heirs to a great estate; you squandered your principal instead of keeping it productive of a perpetual income." Recognize that it is difficult to make an economist of the present generation, and that the only American man incapable of procreating, could such prodigality with the birthright of not only the unborn American, but the born American, be justified. Truly can the future historian in referring to the wanton waste of our game and lands exclaim: "Improvident heirs to a great estate; you squandered your principal instead of keeping it productive of a perpetual income." Recognize that it is difficult to make an economist of the present generation, and that the only American man incapable of procreating, could such prodigality with the birthright of not only the unborn American, but the born American, be justified. DOWN THE SUSQUEHANNA.

case, however, this same programme, the same plain and well known conditions followed by the same disorganised results, has been regularly followed since the annual June regatta became an established fixture in 1879. New York Bay inside the Narrows is a very poor place for a sailing race of any kind, it has been abandoned by nearly all the yacht clubs, who have gradually worked down the stream from Hoboken until they were well outside the Narrows, and canoeists would find it fortunate if they too could get out of its light and fickle winds and strong tides and eddies. It is a difficult matter on most days in summer to sail one really good race of 6 or 8 miles in a morning or afternoon off Staten Island, and it has proved practically impossible to sail a series of three or four races with any degree of punctuality. In spite of this fact the club has always followed the same programme for its regatta. The great event is the unlimited sailing, which is first, or nearly so, with two or three other sailing races, junior, unclassified, etc., added. The majority of the men are entered for the unlimited race, and many of them on that account will enter none of the miscellaneous events, the canoes are rigged for sailing early in the day, and it is too much trouble to strip them for paddling. The friends of the club have always stood by it bravely, there has been no lack of rowers, sailors and canoeists, and sweethearts, with canoeists from other clubs who have been passing the Staten Island ferry to visit the old house at St. George, or the later ones further down. There is usually, as on Saturday last, a very good attendance by 2 P. M. of visitors who are specially interested in canoeing or canoeists. Some time after this hour the great sailing race is started, the fleet gets out in a strong tide, the wind falls, and the boats drift one way or another, nobody on shore knows what those aloft are doing or what the result will be. The guests become tired and bored, and when after an hour or two the competitors come straggling in under paddle or in tow, a number of them have left in disgust with a very poor opinion of the canoe. The men are tired and disappointed, and not in a humor to enter the next day, a poor showing of paddling by two or three crews is made, with a few rowers and a few sailors, and the evening comes. The programme is unfinished, the guests have departed with a disappointed, and the officers and members of the club are left to a sad realization of the fact that the affair has covered them with anything but credit.

There are many old members who can bear witness that this is a faithful record of the majority of the past regattas of the club, and the case is worse and sadder than in 1880. In those days there were a number of canoeists who still used the name of canoeing—Vaux, Munroe, Whitlock, Cooke, Stephens, Norton, Bailey—and these men could be relied upon to start in the paddling, tandem, upset and other miscellaneous races which afford so much sport to spectators. As machine racing has been developed and expanded by the club, to the neglect of paddling, they have either dropped entirely out of racing or have made a specialty of match sailing, they no longer start in the general races, nor have new men come in to take their places. The result is that while the sailing canoe of 1880 is a far more efficient machine for negotiating the tides of the Upper Bay than that of 1880, and makes a much better showing when there is any wind at all, the general standard of the regatta is still lower than of old.

The worst drawback that canoeing in America had to contend with arose from the attempts to sail races with the light keel canoes of the early seventies in the strong tides of New York Bay, the result being to spread the opinion among the very men who might have become recruits to the new mosquito navy, that the canoe was a worthless toy. No one could draw such a conclusion from a race of the kind, for the modern fliers, even on the Bay, but such races are very seldom seen as a spectacle, the regatta, and the result of such displays as the present are merely to injure canoeing as a sport. In the face of this plain and indisputable fact, the New York C. C. has followed the same course year after year, until it has become a serious question whether, if no other programme can be arranged, it would not be best to drop the annual failure that bears the name of a regatta.

If the club considers that the regatta is a failure, there is a way of remedying the present evils that is certainly worth trying. In the first place, the regatta committee should issue an order that no canoe is to be taken out of the house under sail during the afternoon except to start in certain specified events. And at the same time every member should be requested to appear in a rowing or canoeing outfit, which in a club of some 100 members should bring out a goodly number. The programme might include such races as single paddling, senior and junior; tandem paddling, hand paddling, club fours, paddling upset, a most popular race; hurry-scurry, if the location admits; standing paddling, duck chase, gymnastics, tournament, tug of war, and a number of these, or sailing upset, manuevering, and racing on deck. The courses for the various races would be laid out so as to give the best possible race, but first of all to keep within view of the club house, even though a turn be necessary. The courses for the hand and standing paddling, upset, hurry-scurry and such events will be directly in front of the spectators; while the nature of the events is such as to allow them to see the race, and the events are all most popular with such an audience as a canoe regatta attracts.

A strict enforcement of the rule that no canoe shall go out under sail will prevent the usual excuse for not entering any but the main sailing races, and the men thus kept ashore will very gladly take part in the general programme. If the time from 2 to 4 P. M. can be given to a selection of six or eight of the above races, every one of which can be understood by persons entirely ignorant of the nice points of match sailing, there would be no objection, if the wind held, to turning the sailing fleet loose for a review under sail, or the unlimited race; but the proper time for the latter, which of course cannot be dispensed with entirely, is on a separate day, when the entire afternoon can be devoted to the regatta, and the men who come to see it under its true name usually understand the undertakings, and the regatta is a failure they are not specially disappointed; and they depart with very different feelings from the ignorant guests who are invited to a sailing match under the disguise of a regatta, and who waste an afternoon in seeing no more than was shown on Saturday. It can hardly be expected that one such experiment as we have outlined will undo the wrongs of years, but it will bring out a whole field of crack paddlers and canoe experts, but it can be tried, and it would be persisted in for two or three seasons it will give an impetus such as is greatly needed to all-around canoe handling, and will bring into the races many old hands who have no use for the special sailing machine that is killing legitimate canoeing and giving nothing in its place.

The New York C. C. occupies a peculiar position in American canoeing, as the oldest and one of the largest clubs, and for many years the leading club in every way. From this position it has certain responsibilities which are shared by none of the younger clubs, and which, it is said to say, it has not lived up to. It could and should have continued to exert a powerful and beneficial influence on American canoeing, an influence which certainly is not visible at present. With a large membership, a fine new club house, and a location that has many advantages, especially that of accessibility from New York, it is merely a large local club, and in no way the power that it once was. At home its influence is directed almost exclusively to racing under sail between the club house and Clifton Buoy, its boats being fitted out for that purpose to the exclusion of every good quality of a canoe. Abroad it ranks as one of the best, but its influence is confined to a handful of sailing experts, with not a paddler in the club. At this time, when every club which aspires to more than local prominence finds it necessary to work in close unity with the American Canoe Association, the New York C. C. has practically disappeared from the scene, and the regatta of that body last year the showing was better than for a long time. Last year the club had a fair attendance of members in camp, but not since 1884 has the New York C. C. sent a representation to the A. C. A. Meet that it could really be proud of. In that year, under Com. Munroe, with a club camp and a full quota of men in the attractive forms of a green, the New York C. C. challenged comparison with any present, and the regatta, though the members have always been present, it has been usually as individuals, un-officered and not as representatives of the club. There is not a canoe club in this country to-day with the possibilities and the future before it of the New York C. C., but if either are to be realized it must be through hard and earnest work, and in many directions other than machine racing on New York Bay.

YONKERS C. C.—The regatta of the Yonkers C. C. on June 6 resulted as follows: Single paddling race, half mile—Uno, H. L. Quick, first; Alpha, P. B. Rossie, second. Paddling upset race, 100 yds, with turning—Alpha, P. B. Rossie, first; Mixx, D. G. Holbrook, second. Tandem paddling race, half mile—Uno, H. L. Quick and Louis Simpson, first; Collette, P. B. Rossie, second. H. Haviland, second. Tournament—Wm. H. Haviland and Louis Simpson in Dolphin. One hundred yards swimming race—Louis Simpson first, Robt. Egar second.

Canvas Canoes and how to Build Them, By Parker B. Field. Price 50 cents. Canoe and Boat Building, By W. P. Stephens. Price \$5.00. The Canoe Aurora, By C. A. Neide, Price \$1. Canoe and Boat Building, By C. B. Vaux, Price \$1. Canoe and Camera, By T. S. Strick, Price 1.50. Four Miles in a Sloop, By N. H. Bishop, Price \$1.50. Canoe and Camp Cookery, By Seneca, Price \$1.

THE north branch of the Susquehanna River was talked of in the club at the beginning of the canoeing season, and was booked as the next cruise. The season having opened, the boys dropped out one by one and I was left, either to make the cruise alone or give up the idea entirely. Since I had enjoyed former trips alone my mind was soon made up, and as the month of July came slowly around I was busily at work overhauling my outfit. That I had once the good sailing and cruising canoes is not to be doubted, as any canoeist who has a Russian Vesper model can testify. My outfit consisted of several oiled canvas bags, containing camp utensils and blankets, and one extra bag for provisions, and in the water-tight, towage was clothing and personal effects used and carried by all cruisers. I also carried a canoe-tent which had seen plenty of service.

Shipping my canoe to Wilkesbarre, Luzerne county, Pa., on Monday, July 14 I followed it on Wednesday, and on the arrival laid in a stock of provisions. Packing my canoe I showed off from the steamboat landing on my lone voyage upon as beautiful a day as a canoeist could wish. The river at this point is very deep, having been dug out to allow the steamers to ply up and down, carrying coal and other freight between the towns below on the coast and the head of the river. All the way down to the Nanticoke dam is a good sheet of water, interspersed here and there with a few islands.

A slight breeze had sprung up and the pennants stood out, making quite a spread and attracting considerable attention from the passengers on the many double-decked steamers that I passed. To the right, along Plymouth and Nanticoke, could be seen the coal brokers and the long strings of the many mines for which this part of the country is noted.

The wind, getting stronger, and blowing as it did, directly up the river, made paddling anything but pleasure, and being on the Nanticoke dam, to make the canoe move at all one had to put some muscle into play. Arriving at the breast of the dam I found the shute giving up the idea of running the chute, I paddled across to the head of the canal, passing and counting over fifty canal boats, tied up waiting their cargoes of coal.

Going up to the lock-keeper to ask for a lift in making a portage, he informed me that it would be a better plan to be locked through from the river into the canal, and then make a carry some distance, where there was only a distance of a few feet between the canal and river. Waiting some time for a boat to leave the lock, I was at last put through and soon was looking out for a suitable place to make a portage. I finally found a good place, the river being about thirty feet distant from the canal.

Having passed the canal boat which left the lock before me, I awaited the mule driver, a tall, lanky, bare-footed fellow and asked him for a lift. Together we made the portage, he at the stem and I at the stern, he in the tow while the bridling forth remarks such as "Not too fast, now, Mister! Don't rush the mourners," etc.

Giving him fifteen cents, I said, "Here is a little change, you can buy three cigars." "Yes," replied he, looking at it, "five times three," and then bidding me good-bye, he started on a run down the towpath after his mules.

Getting seated comfortably I moved off and found this part of the river low but very rapid, not, however, too low to allow me free passage. Old Sol was shining into that valley with all his force, and it was getting very uncomfortable, a breeze that I had against me on the dam above having blown itself out, so there was not the slightest ripple on the river's glassy surface. Cruising along the shore at a good rate, and at a reasonable distance, I ran across to an island opposite the village of Shickhany, which I afterward discovered was the name of the place, on looking at my chart, and there decided to camp for the night.

This spot is an ideal camping place, most beautifully situated on an island in the middle of the river, with a large mountain rising up behind the river on the left, towering above at least 1,000 ft., and on the right the town of Shickhany with a mountain range in its rear. The river makes several large turns, as looking to all points of the compass one can see nothing but mountains, the river seeming to have no outlet.

Taking the luggage out of the canoe and pulling it up on shore under a bunch of shady willows, I made a fire for supper. While waiting for the water to boil I made a bed of hot coals, I put my fly-rope together, and in a short time had my fly-rope in landing three nice specimens of Susquehanna black bass, caught from the shore of the island. While cleaning the fish I was surprised by a visit from an old fisherman, and in answer to my inquiry if the fish were very plenty about here, he replied that they were this summer, and invited me to the other side of the island to see his ever taken out of the Susquehanna.

Returning, I soon had supper prepared, and sat down on the ground and relished a good meal after the hard paddle during the day. Throwing some large logs on the fire, I sat down on a rubber blanket and lighting a pipe, my silent but consoling friend, the katydid, the screech owl, the whistling thrush, and the night heron, all took an active part. When about midnight the canoe tent and turn in, I heard the cry of a wildcat on the mountain side. Recalling a story written by Wm. Murray Graydon on "Down the Susquehanna," I happened to think that I was camped on the same island that his party had had a terrific fight with a mountain lion, which necessitated a second look at my firearms before throwing myself into the cockpit of my canoe for the night.

Thursday, July 17, 6 A. M., found me astir, arousing the dying embers of the camp-fire in preparation for breakfast.

Putting things in ship-shape condition after breakfast I launched the canoe and paddled down to Moccanaqua, which is 16 miles by rail below Wilkesbarre, where I made a short stop. Remarking, I cruised down the river on the left shore, the river being rapid and shallow in some places, but I had little trouble in getting through. Running in on shore and making a bridge at Berwick, 10 miles below Moccanaqua I went into town and made some purchases. Directly below the bridge are the Berwick rapids, a little troublesome in low water, but no trouble will be experienced by taking the raft channel in the middle of the river. Writing the boat of the rapids for to my rear I fastened the paddle to the back and prepared to make a light lunch, allowing the canoe to take its own course. Cruising along on the left shore saw a suitable camping site on a small island, and running across to the lower end made camp. Examining my chart, I found that I had made 16 miles, it being only 2 o'clock.

Spreading my blanket on the ground, I laid down and must have fallen asleep, for I was awakened by the noise of the wind beating against the tent, and they were washed up on the shore. Awakening to the realization of what was coming, I made every effort to stir my tent over the cockpit of the canoe, when a thunderstorm broke upon me in all its fury. The thunder and lightning was terrible, the rain coming down in sheets, driving in against the tent with such violence that it was difficult to hold it. The wind being so violent, the tent was fastened, and as especially severe, the air seeming to be full of electricity, and as afterward learned doing great damage in the surrounding country.

Looking out through the small window in the tent I could see the whole surface of the river covered with foam beaten by the wind and rain, and the large white caps rolled and flung up on the shore. The storm lasted fully an hour, and when it cleared up and the sun came out I found the tent and the canoe had been blown to the hills. I witnessed one of the beautiful sunsets that are often to be seen along the Susquehanna.

After some difficulty with the wet wood I prepared a fire and made supper. Finishing supper, I paddled across to Creasy, which was just opposite the island, and chatted with several of the coal brokers at dusk, and then re-embarking I crossed to the island and turned in.

Friday, July 18, opened up with a clear and beautiful morning. After taking a good bath in the river in the cool of the morning I started a fire and then crossed the river for some fresh milk. Returning I soon had breakfast underway, which was dispatched with a good appetite. Clearing away the remains I again started my voyage, the day being somewhat swollen on account of the rain of the day before, but must have been extended through the country above, giving me no trouble in passing over the rapids and the rapids that abound below Creasy. Keeping to the left shore, I skirted along at the base of the mountain, resting over and anon on my paddle, to admire the wild fascinating mountain scenery and to breathe in large draughts of the exhilarating air, in the river, and the healthy perfume thrown out by the pine trees growing along the shore, bordering the river. Every living being in the country surrounding seemed to be asleep. Not a sound was to be heard save the alternating dip of my paddle as I moved along. In fact it was loneliness personified. All the distance from Stonytown Ferry, one mile below Creasy, down to Bloomsburg, nine miles below, I saw not a living creature, except a few birds, and the birds were scarce and mud, along the shore in search of their morning meal. The channel in the river was clear all the way with the exception of a small rapid and a stretch of low water 100 yds. above the Catawissa bridge, four miles below Bloomsburg.

Running on shore by the side of a cool stream of spring water I had a light lunch, I then crossed the river to avoid the bend but

encountered very low water and had to recross. During my several cruises I have always found the best channel on the side of the river bordering a mountain, and so far on this trip I found that it held true.

[TO BE CONTINUED.]

ATLANTIC DIVISION MEET, JUNE 27-JULY 6.

THE following programme and camp circular have been sent out within the past week:

To the Members of the Atlantic Division A. C. A.:

Permission to occupy the old camp site at Cheesapeake having been secured, your committee would call the attention of all the division to the accessibility of the location. It is within about 34 miles across the Bay from Perth Amboy, N. J., the Central R. R. of N. J. and Pennsylvania R. connect with, and run their trains over this road, making frequent and easy communication with the camp; the steamers Meta and New Brunswick leave New York daily for Perth Amboy and have ample accommodation for canoes. Those who come from the southern part of the division can have their canoes and duffle come by canal from Philadelphia or Trenton, and are not obliged to make the distance from camp when they arrive at South Amboy. It is hoped that many members of the division who cannot spend their days during the meet at camp will arrange to send their duffle to camp, and go back and forth from New York each day, spending the nights at camp, and as many days as possible.

It is proposed to have steps from the level of the beach running up to the bluff where most of the tents will be pitched, also to have a number of oyster floats run out from the beach, so that it will be possible to land at all tides without getting into the mud, which will be appreciated by those who were in camp two years ago.

A grocer and butcher from Perth Amboy will call at camp each day and deliver what goods may be needed by those who provide their own food, and we trust that every member of the division that can, will be in camp at least for a day or two.

The camp will open on Saturday June 27, and break up Monday July 6. All mail should be addressed to care of Atlantic Div. A. C. A., Camp South Amboy, N. J.

The Ladies' Camp will be located at the same place as at our last meet at Cheesapeake, and stairs to the beach will be provided for them also.

If any of those who intend being at the meet, are desirous of having a board floor for their tents, and will advise Dr. E. W. Kitchell, Perth Amboy, N. J., the boards will be provided at as low a cost as possible.

The Atlantic Division map which accompanies the circular will give those who are not familiar with the location an opportunity to study the map, and we trust that every member of the division that can, will be in camp at least for a day or two.

B. H. NADAI, F. W. KITCHEN, W. F. LAWRENCE. } Site Committee.

RECORD EVENTS.

No. 1.—Paddling, 1,000 yds., straightaway.
No. 2.—Sailing, 446 miles.
No. 3.—Combined: paddle, ½ mile; sail, ½ mile; paddle, ½ mile; sail, ½ mile; paddle, ½ mile; sail, ½ mile—3 miles in all.

OTHER EVENTS.

No. 4.—Paddling, any canoe, one mile.
No. 5.—Paddling, tandem, one mile.
No. 6.—Paddling, club fours, ½ mile.
No. 7.—Upset Paddling, 200 yds.
No. 8.—Hand Sculling, any canoe, paddle, run.
No. 9.—Swimming, 500 yds.
No. 10.—Sailing, Novices, 1½ miles.
No. 11.—Sailing, "General purpose" canoes, 3 miles.
No. 12.—Sailing Upset, ½ mile. Each canoe must carry two sails, and before passing a mark to be placed ½ of a mile from finishing line, the sails must be placed ½ of a mile from the water line to be righted and crossed in the water sail.
No. 13.—Sailing, man overboard, ½ mile. Each canoe must carry a passenger, and before passing a mark to be placed ½ of a mile from finishing line, passenger must be dropped overboard and canoe continue around home buoy (either way), then return and pick up passenger above finishing line and cross as usual.
No. 14.—Sailing, "General purpose" canoes, 3 miles.
Mr. Geo. P. Douglas advises us that the steamer has been chartered to carry the Sunday School of Christ Episcopal Church, of Belleville, on a picnic to Boynton Beach, Sewaren, on June 27; and that with the approval of Vice-Com. Dorland he has made arrangements by which canoeists may go from Newark to Boynton Beach, but six miles from the camp. The fare for man and canoe \$1.25, but the man must carry his own gear, and the boat must be carried by Mr. Douglas as soon as possible at 133 Liberty street, N. Y.

THE EASTERN DIVISION MEET.

THE meet of the Eastern Division was held at Tyng's Pond, in Dracut, near Lowell, June 5 to 7, the races being on Saturday resulting as follows:

1. Paddling, 34 mile.
Heath, Wamesit C. C. 1
Perry, Tatassit C. C. 2
Perkins, Vesper C. C. 3
This race was very closely contested, Mr. Heath winning by but a foot.

2. Combined sailing and paddling, 3 miles:
Paul Butler, Vesper C. C. 1
David S. Goddard, Vesper C. C. 2
J. A. Gage, Vesper C. C. 3
Howard Gray, Vesper C. C. 4
H. D. Murphy, Shub-Shub-Gah C. C. 5
3. Tandem, single blade, paddling, ½ mile:
Rife and Heath, Wamesit C. C. 1
W. L. Perry and H. D. Murphy, Shub-Shub-Gah C. C. 2
Perkins and Lawton, Vesper C. C. 3
4. Upset sailing:
Paul Butler, Vesper C. C. 1
Howard Gray, Vesper C. C. 2
H. D. Murphy, Shub-Shub-Gah C. C. 3
5. Paddling:
H. D. Murphy, Shub-Shub-Gah C. C. 1
Lamon, Vesper C. C. 2

In upsetting their canoes both men lost their paddles and were obliged to dive overboard again and recover the blades. The finish was close, Murphy winning by but half a length.
7. Sailing, man overboard, ½ mile, prizes presented by the Lowell & Suburban Street Railroad Co.:
Paul Butler, Vesper C. C. 1
D. S. Goddard, Vesper C. C. 2
H. D. Murphy, Shub-Shub-Gah C. C. 3
Howard Gray, Vesper C. C. 4
Winthrop Taylor, Vesper C. C. 5
8. Visitor's race prize presented by Vespers:
H. D. Murphy, Shub-Shub-Gah C. C. 1
Crosby, 2
Conroy, Wamesit C. C. 3

The prize off-red by the Vespers for this race was a unique and beautiful punch bowl supported by three dolphins. In the races Paul Butler sailed the Wasp, Dr. Gage the Owl. Mr. Goddard sailed the Butcher, and Mr. Gray, making a very creditable showing. Howard Gray sailed the V. Herman Murphy sailed his new Harris boat, Igwana.

On Saturday night a big camp-fire was lighted, and the jollities of the evening were similar to those which all men attending the A. C. A. meet are familiar with, and which the men who have never seen a meet cannot appreciate. Sunday afternoon the Boston men left for home, but the camp did not close till Monday.

The Owl, under the command of Dr. Gage, had the unlimited sailing in hand, but on the run to the finish her misadventure pulled out of the deck, leaving him in third place at the finish. The mess, as furnished by the railroad company, which controls this lake, was very fine, hence there were no disgruntled ones at the camp.

James W. Cartwright, Jr., Robt. P. Webber and Herbert W. Richards composed the regatta committee.

A. C. A. MEMBERSHIP.—Eastern Division: W. Seward Webb, New York; J. Warren Ellard, Winchester, Mass. Central Division: John S. Patel, St. Joseph, Mo.; Perry Parker, Lowell, Mass.; P. W. Wiggin, Lawrence, Mass.; A. H. Robinson, Lawrence, Mass.; Mass. Kimball, C. Colby, Lawrence, Mass.; F. L. Leighton, Law, Lawrence, Mass.; C. T. Briggs, Jr., Lawrence, Mass.; W. C. Murphy, Lawrence, Mass.; Howard E. Hayden, Boston, Mass.; Atlantic Division: Asa Bird, Gardiner, Garden City, N. Y.; George Austen, Gardiner, Garden City, N. Y.

Yachting.

11. Massachusetts, Fall, Dorchester Bay.
7. Brooklyn, Fall, Gravesend Bay.

YACHTS VERSUS TUGBOATS.—Last week we published the final decision in the case of a collision between a yacht and a tugboat, an affair which resulted in no very serious damage. This week we have news of a very much more serious disaster of the same nature, the cutting down of a yacht at night by a large and powerful tug in the Hudson River near the upper part of New York city, two of the party on the yacht being drowned. Thus far but one side of the story has been told, and it is too soon to place the blame, but if it appears that the tug was to blame, there is no punishment too severe for the pilot in charge.

HANDICAP AND CRUISING TRIM MATCHES.—Our comments last week on this subject have been answered by a letter from the secretary of the regatta committee of the Corinthian Y. C. of New York, inclosing the first proofs of a series of rules for handicap matches, and also rules for cruisers' matches, drawn up by the club for future use. We are unable to find space for them this week, but they will appear as soon as possible, as they are a proof of general utility.

GLORIANA.

THE principal interest and excitement of the opening racing season is centered in the 40ft. class, and of the dozen competing boats no other has been watched and discussed to the same extent as the Herreshoff craft, Gloriana, owned by Mr. Morzan. It is an old trick of the Herreshoffs to have a surprise of some sort ready to spring on the yachting public in the June regattas; once it was the famous catamaran, another time the swift launch Stiletto, again the smaller launch Henrietta; and though in this case the new venture has been described in print and her possible performances discounted, so that a win will cause no surprise, her work will be the chief feature of the week's races.

It is needless to say that she is thoroughly original, the Herreshoffs are no mere copyists, and if she succeeds they may fairly claim all the credit. Her model is unlike all the rest of her class, and as seen aloft she is by no means remarkable for beauty. The forward overhang is not only very long, but lacks grace and symmetry, the topsides are round and full, and the counter long, wide and flat. The bulwarks are of oak, about 5in. high amidships, and with no rail or cap; the topsides are plain white from waterline to plank sheer, and there is not a line of carving or gilding to relieve the full, heavy look of the boat. On deck and below, however, two points are noticeable, the workmanship is good, a neat and workmanlike finish to joiner work, etc., and the predominating consideration has been utility rather than style. The deck is of 1½in. matched boards, in a single thickness, but covered with painted canvas, making a strong, tight and serviceable deck. The interior is very handsomely finished in plain butternut wood, there being a large room for the captain on the starboard side abreast the mast, a very light and roomy main cabin, and a ladies' cabin aft. The composite construction, with the full model, gives a great deal of space below. There are no channels, the chainplates being inside the skin and apparently amply strong. The rigging is fitted with turnbuckles, the barrel of each being a steel tube with a slot on each side through which split pins may be inserted in the screw ends to prevent them turning. The bowsprit bits are of special design, made of steel plate, while the gammon iron is rather heavy, with two iron or steel braces from it, their after ends forming eyes through which pass the wooden bowsprit fid, thus throwing a strain on the gammon and stem head instead of on the deck frame. A capstan of special design, fitted for chain, is placed just abaft the bowsprit, being geared for two or three speeds. The main sheet bits are in the form of timber heads in the deck nearly amidships, while about the deck are two sizes of composition skeleton cleats in plenty. Like the rest of the class, there are no riding bits of any kind visible. There is a shoal cockpit of good size aft, with an oak coaming taking in a large piece of the deck for seats. The tiller ships in a brass socket attached to the rudder head, which is of metal working in a brass tube, this socket sliding on a short curved track. There are two travelers for the main sheet, one about 4ft. abaft the other. The most peculiar detail on the yacht is the main boom gooseneck, which is a sort of combination revolving spider band. On the mast is a collar of iron with two flanges about 2in. apart. Around this collar and between the flanges is a strong ring of composition, carrying on the after side two jaws or lugs between which the end of the boom is secured by a horizontal bolt, while on the fore side is the spinnaker boom gooseneck and socket, and on each side are four belaying pins for halliards, etc. The boom and ring move together, the latter moving around the mast, being held from rising or falling by the flanges mentioned, while as a matter of course the spinnaker boom and the pins and halliards partake of the same movement. The fittings throughout are mostly of composition in place of iron or steel. The boat is one of the shortest in waterline length, but more than makes up in sail, carrying a very large rig. The boom, gaff and yards are hollow.

NAPHTHA AUXILIARIES.—The auxiliary naphtha launch is becoming quite well-known, but those built thus far have been designed from the engine room, so as to speak, rather than from the deck, the engine being the main reliance, with the sails merely auxiliary. Two interesting experiments are now being made with a different end in view, the sailing power being the leading feature, with the engines as the auxiliary. The keel sloop Nyssa, formerly Gleam, built by Wood Bros. in 1882, a boat well-known to all our readers, her lines having been published in the FOREST AND STREAM of May 1, 1884, was out last week at Winttingham's yard, where an 8 h. p. Ofeldt engine was placed in her, the 15in. screw being set in her deadwood just forward of the stern post, with an alteration of the latter. The yacht, which is 27ft. 9in. l.w.l. by 11ft. 2in. beam, will be used in a small harbor on the Sound, which is reached only by a narrow and crooked passage, a bad place to leave or enter with a foul tide or wind; and the engine is intended to take her in and out without delay, and also to aid her in a calm. The screw is four bladed, being fitted to disconnect and turn when under sail. No great speed is likely to be realized, but the possibility of getting somewhere at a certain time will compensate for the space and dirt of the machinery. Mr. A. Cary Smith has lately designed a somewhat similar auxiliary for the builders, the Gas Engine and Power Co., a craft 33ft. 6in. l.w.l. by 10ft. 8in. beam, 6ft. 6in. draft, and fitted with the usual cruising rig, to which is added a naphtha engine in the run, with a two bladed screw which may be turned to house in the deadwood when under sail. The stern post is nearly plumb, but stops above the screw, with a wide and not very deep rudder. In the bow is a tank holding 210 gallons of naphtha. The interior arrangements are of the conventional sort in a cruising cutter.

THE 25FT. CLASS.—Considering that but two boats are yet afloat, and that two races only have been sailed, a remarkable degree of interest is manifested by yachtsmen about New York in the new 25ft. corrected length racers. Prizes are offered for them in all directions, and their owners can find races at any time. Mr. Center, of the Seawan' aka O. Y. C., has offered a prize for the class, and the Douglaston Y. C. announce another, the gift of Mr. Andrews. Unfortunately this latter club has chosen a date—July 4—which has by long usage been secured to its opposite neighbor, the Larchmont Y. C., a fact which is likely to work to the detriment of the younger club in the matter of entries. The fixtures are well filled up, but the club would be the gainer, even at this date, by choosing another day.

LADIES AT THE TILLER.—On Saturday last a lady formed one of the crew of two in a boat in the regatta of the Corinthian Mosquito Fleet at Larchmont, and on the same day a race was sailed on Tuxedo Lake in which each of the fleet of catboats was steered by a lady. These fair skippers were doubtless emulous of the lady sailresses of the Solent, though they can hardly claim to rival the skill of the latter. It is one thing to sail the regular club pumpkineed on Tuxedo Lake and another to handle the tiller of a 2½-rater, such as Babe, Troublesome, M'iss and the other craft sailed by ladies on the Solent, and it requires no small amount of skill and daring to race them in bad weather.

THE PILOT BOAT AND THE WHALE.—The story told in that melodious ditty, the Torpedo and the Whale, is commonly supposed to be a mere fiction of the inventive librettist, but a recent occurrence near at hand proves that if not an actual truth to the letter, it may at least be founded on fact. In the present case the scene of the tragedy is transferred from the North Sea to the Atlantic Ocean, about 360 miles east of New York, the date being June 7. This whale, a finback, "big of bone and strong of tail," was in company with two smaller ones, heading N.E. and traveling at about 10 knots, when a strange object was sighted dead ahead. Though ignorant of the nature of this new fish, the whales charged gallantly forward, the largest one finally giving battle to the intruder, in which battle he came off second best, receiving a severe cut in the head, which ended his career. The unknown opponent was nothing less than the old Actæa, once a schooner yacht and now New York pilot boat No. 15, in charge of Pilot Keely. Her helmsman had sighted the whales half an hour before meeting them, and changed the course to avoid them, but they too shifted their helms and ran deliberately for the boat. The two smaller ones dove under in time, but the big fellow was a little too slow, and the forefoot of the schooner cut into his back. He gave one flurry with his tail, striking the vessel a blow that made her tremble from knighthead to taffrail, and then disappeared astern. The pilot boat continued on her way seaward, and in due time Pilot Keely was set aboard the An her liner Caledonia. On June 10 the Caledonia passed the body of a whale, supposed to be the one struck by the Actæa.

A GREAT SINGLE-HAND RACE.—On June 17 the most extraordinary singlehand race ever attempted was started from Crescent Beach, near Boston. The course is across the Atlantic Ocean, to any point of the British Isles or Europe. The boats are the Sea Serpent, 14ft. 1½in. over all; 5ft. beam, 2ft. hold, 2ft. draft; and the Mermaid, of the same dimensions. Capt. Josiah W. Lawlor will man the Sea Serpent and Capt. Wm. A. Andrews the Mermaid. Each boat has a most complete outfit for the long race. Even though both of the foolhardy navigators should succeed in making land alive, no good can follow from the undertaking, and it is a pity that men as bold and skillful as these two are known to be can find no better use for their time. The only good thing that can be said about the whole matter is that the attempt is at least honest, and not a mere sham for the sake of advertising some newspaper.

ANCIENT AND MODERN MODELS.—Mr. Edward Burgess has sent to Capt. J. W. Collins, of the U. S. Fish Commission, the lines and sail plan of the famous fishing schooner Fredonia, which Mr. Burgess designed. Capt. Collins intends to have made for the Fish Commission exhibit at the World's Fair a rigged model of the Fredonia, which will be complete in every detail, and represent in miniature the latest developments in the form and rig of the New England fishing clipper. Placed in contrast with the old-time ships of the Spanish, Portuguese, French and English fishermen, who visited the cod banks of the Western Atlantic soon after the discovery of America, or side by side with the tub-shaped "heel-tappers" of ancient Marblehead, or even more recent productions of the ship builder's art, this model will show most emphatically the strides made in the design and equipment of fishing craft during the past four centuries.

A NEW SCHEME FOR CLUB STATIONS.—In place of one large house and station on the water for the New York Y. C., a scheme has been devised by S. Nicholson Kane, of the regatta committee, for the establishment of a number of small stations in addition to the float in New York and the house and float at Newport. At each of these a small house and a float will be built, with a keeper in charge, who will care for mail, supplies, etc., for yachts. The proposed points are Whitestone, Glen Cove, New London, Shelter Island and Martha's Vineyard. Such stations would prove a great convenience to cruising men, but the expense of their maintenance would foot up to a considerable total in the case of six separate establishments, as proposed, including the existing one at Newport.

YACHT CRUISING ON THE ST. LAWRENCE.

Editor Forest and Stream:

From Lake Champlain down the Richelieu River a yacht drawing not more than 4ft. would have no difficulty in passing. As westerly and southwesterly winds prevail at this season of the year, and moreover, as it is down stream, a sailing yacht could get down well enough, independently of towage; but unless its owner had either personal knowledge of the river or much caution and a very sharp eye for the appearance of the surface of water where it runs over reefs or boulders, pilotage might be needed. In the latter case it might be well to arrange to the eastern of some one of the many towns of empty lumber barges returning from Whitehall to Montreal or Ottawa for their loads. If time were no object to the party, it would be found a pleasant sail from Sorel to Montreal, or rather to Longueuil Church and ferry on the south shore of the St. Lawrence, opposite Montreal, a couple of miles down, and below the rapid currents of the harbor proper. The writer sailed his schooner yacht, a pretty deep draft, for inland river work, from Sorel to Longueuil in the first half of a day; but this was with a ripping easterly breeze (after nearly a week spent at Lake St. Peter waiting for it). It is questionable whether even a light draft boat and fast, that could work in close to shore and in the eddy of the narrow islands, would make headway worth while if beating against the wind up the currents between Sorel and Longueuil. It needs a strong northerly or easterly wind to sail in with ease, and in the case of calm or wind other than those mentioned, it would be better to stick to the more prosaic but decidedly more certain tow.

From Longueuil up theachine canal a harbor tug would be necessary. The towage cost from Lake Champlain toachine canal lock entrance I should consider to have been very successfully negotiated if kept within the limit of \$20, and it might easily go a few dollars over that.

From Montreal upward to Ordensburg I consider a tow a necessity. It might, through prevalence of westerly winds and calms, take half the summer to sail up, notwithstanding that in all the lockage and canal races, horse tows are always available. There are two "transportation companies" that have frequently returned tows of empty barges from Montreal to Kingston—based on the Thousand Islands—each having, I think, seldom less than one or two such tows a week. The cost to the writer for towage on the trip of his boat between these points was—including tips to French Canadian barges to secure their friendly co-operation in locking—some \$70; but a 24ft. boat, being less than half the length of his, or roughly, less than ½ the weight, should surely not get through for half the money.

From Ordensburg westward it is nice and easy sailing up the river, and through the Thousand Islands into Lake Ontario. A copy of the U. S. survey chart of that portion of the St. Lawrence would, if one had no pilot on board, be a necessity. By the aid of these excellent charts, alone and without the least previous personal acquaintance with the channels, the writer sailed there in a 2½-rater, a 24ft. draft, through the Thousand Islands from Lake Ontario to Ordensburg four times, without the least uncertainty anywhere as to the proper course to take, so accurate are these charts in the smallest details. It goes without saying that it is needful to be accustomed to interpreting a chart promptly and accurately if one dispenses altogether with a pilot. The U. S. Lakes Survey office is at Detroit; by writing there the map can be purchased at very moderate cost, the U. S. Government issuing them as a public benefit, at a low price. When one considers the vast amount of labor it must have taken to get the information they embody, and the style in which they are executed, one cannot help thinking it will take some generations of their consumption to approach the defraying the cost of their production. One of these maps will give "K." a better idea

When planning your annual tour remember that this company controls over 4100 miles of railway equipped in the most approved modern style, passing through a magnificent country noted for its unsurpassed facilities for sport.

A FEW OF THE PRINCIPAL RESORTS.

PORTLAND, Me.—For deep sea fishing.

ANDROSCOGGIN LAKES (via Bryant's Pond or Bethel).—Excellent trout fishing and game, large and small, of every description.

THE WHITE MOUNTAINS (via Gorham, N. H.).—For trout and varieties of game.

THE SALMON RESORTS of Quebec, New Brunswick and Nova Scotia (reached via Quebec).

LAKE ST. JOHN REGION (via Quebec).—For ouananiche, trout, caribou, bear, moose, beaver, otter, etc.

THE RIVER ST. LAWRENCE (in the neighborhood of the line for 400 miles).—For masacalouge, pike, bass, whitefish, pickerel, perch.

THE THOUSAND ISLANDS (via Gananoque or Kingston).—For pickerel, black bass, masacalouge, pike.

MUSKOKA LAKES.—The best place on the continent for fishing, shooting and camping. All varieties of fish and game.

PARRY SOUND AND GEORGIAN BAY (reached via Penetang, Midland, Collingwood, etc.) for black bass, pickerel, deer, partridge, bear, otter, etc.

LAKES ONTARIO, ERIE, HURON AND MICHIGAN (via stations at all principal ports).

LAKE SUPERIOR (via Collingwood, Warton, Sarnia in connection with steamship lines).

The charges for hotels, guides and camping at many of the fishing waters named above are extremely low. Full particulars of same, with many valuable hints as to best months and general facilities, are published in a pamphlet entitled "Fishing and Hunting Resorts of the Grand Trunk Railway," which will be furnished gratuitously on application to the Company's principal agents, or to the General Passenger Agent at Montreal, P. Q.

The New York Herald.

IF there are any sportsmen so wise that they cannot learn something from this little book, their modesty prevents their fellow men knowing it. The compiler seems to have thought of everything from managing fine guns to snelling hooks, tying knots and skinning eels. He has chapters on rifles and shotguns, hunting and trapping, fishing, camping, dogs, boating, yachting, camp making, cooking, surgery and medicine, and one headed "miscellaneous" seems to include everything which the others have omitted. His paragraphs number more than six hundred. Newly fledged sportsmen who go out for more than a few hours will find it to their advantage to put this book in their pockets, or, better still, commit it to memory before they start.—*New York Herald*, Oct. 20.

This note refers to "Hints and Points, compiled by Seneca." Published and sent on receipt of price (\$1.50) by the Forest and Stream Publishing Company.
DAVIES & CO., 1 Finch Lane, Cornhill.

Canoe and Camp Cookery.

By "SENECA."
A practical cook book for canoeists, Corinthian sailors and outers. Practical because the author gives explicit and intelligible directions for preparing such dishes as he has himself actually tested in camp and on a cruise. This is just where the recipes differ from the absurdly impracticable dishes given in some so-called camp cookery books. The cooking outfit is described, and numerous hints on camp economy add to the value of the work. Cloth, 98 pages. Price \$1.00.
NEW YORK: FOREST AND STREAM PUBLISHING CO., 318 Broadway.

By GEORGE BIRD GRINNELL ("YO.")

Cloth, 417 pages. Illustrated. Price \$2.00.

Pawnee customs and beliefs are richly illustrated by the folk-tales and in the copious notes Mr. Grinnell gives an uncommonly spirited account of Pawnee life in peace and in war. There is an account of the defense of a Pawnee village by 200 sick men, cripples, old men and squaws, against 600 Sioux warriors, which for sheer gallantry and indomitable pluck will match almost anything in military history. The Pawnee warriors were all away at the time, and the Sioux counted upon an easy victory. But the Pawnee cripples and women actually beat them off after a hard day's fighting, and at last so terrorized them that the bold assailants fled in panic and sustained a heavy loss. Mr. Grinnell also has written a picturesque and vivacious sketch of one of the last Pawnee buffalo hunts, in which the Indians commonly reverted to primitive weapons and usages, often hunting quite naked with no other arms than their bows and arrows. A particularly interesting part of the book is that which treats of the Pawnee doctors or medicine men. The statements of Mr. Grinnell show the possession by some of these men of a kind of skill in sleight-of-hand far beyond that usually attributed to Indians; some of the facts here described are as puzzling and unaccountable as those performed by the famous jugglers and fakirs of Hindostan, while one of their tricks is a close parallel to the East Indian mango feat. . . . Those who desire to learn of the many other wonders done by the Indian doctors must refer to its pages for themselves. As it is certainly one of the best works on Indian life, legend and character that has been written for a long time, it should obtain a wide circulation.—*N. Y. Tribune*.

FISHERMAN'S AUTOMATIC REEL.

When a sportsman finds anything which adds to his pleasure, without increasing his labor, he wants all his brother hunters and anglers to know of it and share with him the newly discovered "helper."

WHAT WE CLAIM FOR

The Automatic Reel.

FIRST—It will wind up the line a hundred times as fast as any other reel in the world.

SECOND—It will wind up the line slowly if the angler chooses.

THIRD—No fish can ever get slack line with it.

FOURTH—It will save more fish than any other reel.

FIFTH—It will prevent tips, lines and snells from being broken by large fish.

SIXTH—It enables the angler, and makes it desirable, to use lighter tackle.

These claims have been substantiated by the most skillful fishermen in America and Europe.

ANSWERS TO CORRESPONDENTS.

JUNE DAYS.

IN June, "if ever, come perfect days," with skies of purest blue, flecked with drifts of silver, fields and woods in the flush of fresh verdure, the streams winding among them in crystal loops inviting the angler with promise of more than fish, something that tackle cannot lure nor creel hold.

The air is full of the perfume of locust and grape bloom, the spicy odor of pine and fir and of pleasant voices, the subdued murmur of the brook's changing babble, the hum of bees, the stir of the breeze, the songs of birds. Out of the shady aisles of the woods comes the flute note of the hermit thrush, the silvery chime of the wood thrush; and from the forest border, where the lithe birches swing their shadows to and fro along the bounds of wood and field, comes that voice of June, the cuckoo's gurgling note of preparation, and then the soft monotonous call that centuries ago gave him a name.

General Kukushna the Siberian convicts entitle him; and when they hear his voice, every one who can break bounds is irresistibly drawn to follow him, and live for a brief season a free life in the greenwood. As to many weary souls and hampered bodies there, so to many such here comes the voice of the little commander, now persuasive, now imperative, not to men and women in exile nor wearing the convict's garb, but suffering some sort of servitude laid upon them or self-imposed. Toiling for bread, for wealth, for fame, they are alike in bondage, chained to the shop, the farm, the desk, the office.

Some who hear, obey and revel in the brief but delightful freedom of June days spent in the perfumed breath of full-leaved woods, by cool water brooks and rippled lakes.

Others listen with hungry hearts to the summons, but cannot loose their fetters and can only answer with a sigh, "It is not for me," or "Not yet," and toil on, still hoping for future days of freedom.

But saddest of all is the case of such as hear not, or,

hearing, heed not the voice of the Kukushna, the voices of the birds, the murmurous droning of bees amid the blossoms, the sweet prattle of running waters and dancing waves. Though these come to them from all about, and all about them are unfolded the manifold beauties of this joyous month, no sign is made to them. Their dull ears hear not the voices of nature, neither do their dim eyes see the wondrous miracle of spring which has been wrought within their touch.

Like the man with the muck-rake, they delve on, intent only upon the filth and litter at their feet. Sad indeed must it be to have a soul so poor that it responds to no caress of nature, sadder than any imposition of servitude or exile which yet hinders not one's soul from arising with intense longing for the wild world of woods and waters when Kukushna sounds his soft trumpet call.

SALT-WATER FISH WANTED.

THE petition now circulating among residents of Westchester and Queens counties, New York, asking the Commissioners of Fisheries to begin the distribution of marine fishes in Long Island Sound, in the vicinity of New York, is another evidence of the growing interest in the methods, and satisfaction with the results of modern fishculture. The petition refers to the great decrease of game fish in the Sound during the last 25 years, and the Commissioners are requested to restore the supply, particularly of striped bass and weakfish, in the interest of salt-water angling. The practicability of artificial hatching of both of these fishes has been demonstrated, so that no difficulty need be experienced in obtaining a supply for stocking the waters. There are other matters, however, which require consideration before the distribution begins. Are the conditions favorable now to the growth and reproduction of striped bass and weakfish in the waters which the petitioners desire to improve?

Are the causes of the present scarcity of these fishes known and capable of control? Certainly, if proper conditions for the support and multiplication of the fish exist, or can be provided, the rest of the task will prove easy, and the success of the undertaking need never be in doubt. If, however, the spawning grounds have been broken up, the food destroyed or driven away and the waters polluted so as to become unfit for fish life, no amount of restocking will accomplish the restoration of the rich fishery of a quarter of a century ago, and money expended for that purpose will be wasted. We are thoroughly in sympathy with the movement for the improvement of the waters of Long Island Sound, but advise a careful study of the region before the particular line of effort called for involves much outlay of time and funds.

TO THE ANGLERS OF THE WORLD.

IN addition to the unprecedented and magnificent display of tools, tackle and all the appliances of angling that will be made by the manufacturers and dealers of the world in the Angling Exhibit at the Columbian Exposition of 1893, it is confidently expected that anglers, as a class, will willingly do their share toward making the exhibit a success in every way. Almost every angler can contribute something interesting or instructive. Anything relating even remotely to the gentle art, is desirable, as angling books and other literature, paintings, photographs, drawings, models, trophies, etc., also specimens of abnormal fishes, or heads, fins or scales, etc., of exceptionally large ones; home-made or primitive rods or other tackle; curious articles of tackle used by savages, barbarous or semi-civilized nations or tribes. Every article sent will be catalogued in the name of the exhibitor, and upon application space will be provided for its proper installation, and proper care will be exercised to insure its safety.

Any angler wishing to add something to the general stock of the Exhibit, and who desires to make application to have it displayed, can address Dr. James A. Henshall, U. S. Fish Commission, Washington, D. C.

REV. E. L. STODDARD, rector of St. John's Episcopal Church, Jersey City Heights, believes that if city newspaper editors will go fishing on Sunday they should not be deprived of "benefit of clergy"; so, the other Sunday, he had a special 5:30 A. M. service for Editor Benson of the Jersey City Evening Journal; and at its conclusion wished his parishioner a happy day on the water,

SNAP SHOTS.

THERE is a favored region beneath the sky of Texas where the residents shoot quail to eat, and not for fun; they pot them on the ground, a bushel at a time, and have no nonsense about it. A New York sportsman happened to visit this district, and undertook to reform the shooting morals of the community by teaching his friends to shoot on the wing. The natives simply thought him a fool to waste the good chances at game on the ground and to wait till the birds were in the air. The only individual who was thoroughly pleased with the new style was the cook of the establishment, whose disagreeable duty it was to prepare the birds for the table. He was in high glee and prated loudly of the true sport of wing-shooting, because by that mode there were fewer birds for him to make ready.

The thirty-third annual meeting of the New York Association for the Protection of Fish and Game, held at Rome last week, was marked by a large attendance and lively enthusiasm. The shooting clubs were on hand in force; the entry in the first match very nearly approached that of the great Board of Trade contest at Chicago the week before. The Rome gathering was distinctly a tournament, and not in any sense a convention, as that term would be understood by one of the old-timers. There was neither time nor inclination to take any action respecting the purposes of the Association as indicated by its title. The customary resolutions, this time relating to the Adirondacks, were adopted, but the chief business of the evening meeting was to determine the choice of meeting place for 1892. A Syracuse correspondent sends us a note, which we print, calling attention to this lack of interest in fish and game protective effort. This correspondent was in former years an active member of the Association. He shares the regret of many others that the original purposes of the organization have been so far forgotten. This is not finding fault in any degree with a shooting association; the feeling is that while there is an abundant field in New York for the work of a game and fish protective society, it is a public misfortune that no such organization exists. Is there room for it? Is there work for it to do? And, are there men ready to organize it? Perhaps our Syracuse friend will give us his views on these points.

Judged by all conventional standards, Gloriana is about as homely and unprepossessing as wood can well be made; in fact, it would seem as though Mr. Herreshoff had set out deliberately to violate all recognized canons of grace and beauty, in order to emphasize more fully the superiority of Gloriana in the essentials of speed and ability. Whether or no she was made intentionally ugly or it came about merely through indifference, the fact remains that she was considered so up to the beginning of last week. Since then, however, she has improved greatly in appearance if one may judge from the many chance comments at all the races, until we are reminded of those familiar words of Pope:

"Yet seen too oft, familiar with her face,
We first endure, then pity, then embrace."

A few more victories like those of the week, and half the fleet will be in the builder's hands for remodelling, longer ends, bows padded out, tailboards and figure-heads chopped off, and gold stripe painted out.

The famous Minnetonka Lake has become so shallow that its attractiveness is seriously endangered, and the people of Minneapolis are earnestly considering the project of putting a dam across Minnehaha Creek. This will mean the destruction of Minnehaha Falls, rendered famous by Longfellow; but whatever of sentiment may attach to this waterfall is more than offset by considerations of utility; for Lake Minnetonka is the center of a vast summer resort interest, with steamboats, and hotels and cottages.

"Uncanoeing" is a word for which the FOREST AND STREAM claims admission to the dictionaries as applicable to the man who has no taste for paddle or canoe sail. It is something of a curiosity, too, as it contains the five vowels.

One of the comments most frequently called forth on all hands by Gloriana's performances is that Mr. Morgan has at last found what he deserves for his spirited and persistent pursuit of yachting.

The Sportsman Tourist.

TEGE YAIKWAY.

The Utes of the Colorado Valley speak of the close of the day as *tege yaiKWAY*, literally interpreted, the death of the sun.

LOW hung the sun over the southern Wahsatch mountains. Far to the east stretched soft shadows over the great, gray, sleeping desert, that is rudely cut in twain by the turbulent Colorado. Across the gray were green ribbons, where sinuous streams wandered leisurely from snowy cañons to the Escalante. Sometimes the silvery willows were hemmed in by the deeper verde of lucerne fields, where the succulent clover was purpling with the first promise of bloom, and sometimes by the golden green of young wheat. There were little settlements over which hung the haze of the evening smoke. There were garden spots and orchards, pink and white in their wealth of fragrant loveliness. For, in part, the waste had been redeemed and the hand of man had brought beauty from ashes. No longer did the gentle winds, that ever thrilled with the warmth and life of the far distant Pacific, linger around the brown teepees of the Utes; no longer did they brush the crimson petals from the cactus; no longer did they carry northward the odor of the sage; no longer did they caress the dun deer and the fleet-footed antelope. For the face of nature was changed and her children had not where to hide themselves.

Putting out from the main range, so far that it seemed almost an isolated giant, stood Kaiparowitz—monarch among the ancient hills. White were his locks, but black the rugged furrows of his brow and face; for man, the civilizer, had no reverence for kingly grandeur, knew no beauty, saving that which bore the imprint of a human mart or mint. When the winds of autumn moaned among the sapless boughs, shook down the pine nuts, and set the withered leaves a dancing, fierce fires had flamed among the trembling aspens and gnarled cedars, and the mantle of verdure had been changed to a pall. When the warmth of February brought forth the tender grass to veil the unsightly scars, the flocks and herds grazed for a few short days, grazed till the desolation was, if possible, more dreary than before; grazed, then passed up, to pick, ere they could bloom, the buds that peered above the melting snows.

Low hung the sun. Awful in his loveliness, piteous in his marred features, sat Kaiparowitz upon his throne. His voice was deep and solemn. It was as the echo of the thunder peal among the mountain tops; as the clash of the avalanche among the cañons, and the sound swept down upon the plain as the far-off roar of an angry lion. The men at work in their fields heard it, but they understood not. Looking mountainward they said:

"If it rains to-night there will be another week's feed for the sheep."

High up on the slope of Kaiparowitz was a small cañon. It had been untouched by fire and so difficult was it of access that herders passed it by. Here fell the rays of the setting sun. Beside the spring that bubbled from the moss-grown stones were violets and spreading phlox and mimulus. Further removed, beneath the lordly pines, the mountain heather and the columbine swung their half-opened chalice. Now and again the silvery strain of the thrush rang out upon the evening air. Then it was hushed, as though the timid bird feared lest it should call the attention of man to the sacred spot. From the lower hills came the discordant clang of sheep bells. The thrush heard. Out of the foliage she came, up into the blue she sailed, but she saw no other refuge where she might rest her weary wing and, sad of heart and silent, she came back to the shelter of the aspen.

Near the spring, wrapped in a tattered blanket, crouched a human form. From the low-branched rose bushes the grouse peered at it, their liquid eyes looking astonishment but not fear. About it sported the white-tailed hare and to it the red squirrel chattered, but it heard not, neither did it see. Even the deer, coming down to water, turned not from it. Why should they? Did they not recognize a certain kinship in the motionless clay? Did they not feel that for some men comes an end like to the end of lower species in the great catalogue of animate creation?

Yes, the form had been a man, and the flickering spark that was about to pass into the dark mid-world still kept it man. From the muffled head came a feeble, sepulchral moan:

"*Tegenerriva; shepkai.*" (I starve; I freeze.)

Often had Agawitz, leader of the Utes, lain on the frozen ground, faint with hunger, and not a word of complaint had passed his lips. As a warrior he had lived. More than half a century had gone since he had led his painted band across the foaming river and returned with the plume of the eagle on his crest and the scalp of many Navajo braves in his belt. He had led his followers northward to drive the white invaders from the hunting grounds of Santaquin. From the very peak above him he had traced the course of the first immigrants to southeastern Utah, and behind the hill, kissed by the setting sun, he had left the log cabins of the Danish settlers without a living occupant to tell the story of the dreadful massacre. He was an old man then; yet, since that day many snows had come and gone, and he lived on, homeless, alone; but now the end had come.

Perchance, as he shut the landscape from his glazing eye, he lived again his passionate youth. Perchance, in that last awful hour, he saw something of the future and could tell why he had been left, the withered tree in the clearing; why, when tribe and friends were gone, he had begged his daily bread from door to door; why, with the instinct of his race, he had come here alone to enter into the mystery of mysteries. Perhaps he realized something of a wondrous plan, that leads higher and higher, until mankind are one in spirit and a common brotherhood works out its ultimate destiny in peace, goodwill and boundless love.

Agawitz shivered. Then he was consumed with maddening thirst. The blanket dropped from the feeble form and the cold wind scattered the few gray locks that once had been a crown of glory. Gone was the war plume; gone the belt, decked with the quills of porcupines, stained with the blood of many battles; gone the jasper-headed arrows; gone the fire of youth; gone the

strength of manhood. He tried to rise. He could only crawl toward the water. Before him there was something white. He looked it over. It was a mountain sheep. Many a time had he hunted the beautiful creatures among the snowy cliffs of Kaiparowitz, but the rifle of the invader had slain them one by one, and the herds of the invader had robbed them of their native pastures, until this, the last, had sought a quiet spot to lay him down and die. In the mire he had fallen, and one of his great horns was imbedded in the mud, while the other, gnarled and shattered, was clutched by Agawitz in a final effort to drag himself nearer to the stream.

A ray of warmth penetrated the gloom of early evening. The old Indian raised his head. Behind the Wahsatch the sun was sinking to rest and the shadow covered the valley.

"*Tege yaiKWAY*," he murmured, and there came a mist before his eyes. The trembling limbs refused to move. There was a gasp, a quiver, and the tired head found its last pillow on the white hair of the mountain patriarch.

Down to the spring came a doe to drink. Her step was slow, for her new-born fawn was close by and she was wary. She raised her nostrils. Perhaps even now she was seen by one of those monsters that spoke with the voice of many thunders and whose stroke was as that of the lightning among the pines. No, this lovely spot had not been discovered by civilized man. She bent her head. From the brush came the crack of a rifle and the echoes were lost in the mutterings of the approaching storm. Her four limbs straightened. One bound and she lay dead, while the bullet sped on and there were brown feathers beneath an aspen tree and a crimson spot on the silvery branch where the thrush had sung her last song.

From the cover of a bullberry thicket stepped a herder. His gun was on his shoulder and he whistled a merry tune. Giving the dead Indian a kick, he proceeded to bleed the deer, saying as he did so:

"Pretty poor condition, but then it's out of season. Beats mutton for a change, anyhow. If it warn't for them irrigating ditches I'd have a mess of trout instead of a deer, but they aint run up much in the last few years."

Then he cut off the hindquarters, yet warm and throbbing, put them in a sack and strode down to his camp, leaving the fawn to starve, or, in mercy to itself, to fall a prey to some wandering lion, if one yet remained amid the universal destruction.

Tege yaiKWAY! Great drops, the tears of mother Nature, fell upon the upturned leaves, and black-robed Night drew her kindly veil over the desolate furrow on the brow of old Kaiparowitz.

SHOSHONE.

ESCALANTE, Utah, May 17.

ON THE NORTH SHORE—VIII.

(Continued from Page 456.)

AS we expected from the gloomy indications of the night, the morning opened with rain, accompanied with constant thunder and lightning. We, however, succeeded in catching two trout after breakfast from our camping rock, and then reeled up to await more propitious weather. Joe took one of our rods, and accompanied by John with the landing net, went along the shore and tried rock fishing. They returned in about an hour with one good-sized trout. Joe stated that he had two on at once, and if he had been in the boat would have doubtless saved both of them. The boys after their return went into their tent, closed it and slept till 1 o'clock. We did not think it necessary to wake them, having concluded to let them sleep till their pangs of hunger called for some relief. Joe, when he opened the tent, was astonished to find it so late. It made little difference to us, as we had been profitably employed during their slumbers. Ned, who had been toying with his little bags of tackle that morning, lost his knife, and also found sand in his Frankfort multiplier, a very poor place indeed to keep such a gritty article. He, however, was fortunate in recovering his knife a few hours after and was in ecstasies when he had the reel relieved of its sand, for anything that would give him an opportunity of handling any article of his impedimenta was his fount of joy. Ah, Ned, you are an incomparable genius, and if you had only lived in the days of the "Master of the Angle" you would have come down to us in history as eminent a celebrity as Dame Juliana Berners, or even the "Great Master" himself.

It rained nearly the entire day, with an occasional cessation, which gave us an opportunity to do a little fishing from the rock, and which resulted in the total of two trout, one having fallen a sacrifice to Ned's rod and the other to mine.

We indulged in our usual pleasures of cards and reading during the rain, but our greatest delight was sitting in the apex of the huge boulder when there was a cessation of rain and watching the storm clouds as they marshalled their battalions and coursed along under the blue vault. The Sogards and adjoining islands were clearly defined in their lines of tender green, Gargantua and the mountains had taken on a purple hue, while between them and Leech Island the lightning continually flashed in dazzling splendor. New and grand beauties in cloud-life were constantly arising, while the darkened waters, wild in their rage, battled against the iron-clad coast with a violent fury that sent columns of heavy spray into the foliage that fringed the lake. Anon the thunder would growl; a sharp crackle of lightning salute you; a manifest increase in the high wind be felt, and then came down the rain that sent us hurriedly to cover. And so the day wore along into a night of livid flame, roaring thunder, battling waves and beating rain, that would shake the nerve and appal the soul of the most resolute. Ned after he had wrapped himself in blanket, cried out in unison with the unfortunate Lear:

"Blow, winds, and crack your cheeks! rage!
Your cataracts and hurricanes spout
Till you have drenched our steeples!"

The morning was one of gray gloom, with a cold north wind, and a lake displaying a heavy swell, the effects of the tempestuous night. We were not overjoyed with the prospects, but determined as soon as we had partaken of breakfast, to venture forth for the trout. Joe was quite tardy that morning, as he did not fancy pulling the boat in the teeth of a head wind. As soon, however, as he was through with his work, we gave the word for the departure, and into the boat we all got, and along the

rocky coast coursed, casting our flies as we progressed. As soon as some convenient rocks were reached on which we could stand and cast, we all went ashore except John, who was left in charge of the boat.

Ned had great advantage over me on the rocks by wearing rubbers, while I had nothing but my heavy-soled boots, with which to clamber and walk over the smooth blocks of granite. I, however, with due caution, managed to get along without a slide into the cold waters of the lake. Ned, owing to his equipment, could run over the rocks like a monkey, and reach desirable positions that were not available to me with my heavy boots. Several times when I saw a very inviting place that could only be reached in stocking feet, off would go my boots, and down I would crawl. It was a little inconvenient, but the enthusiasm which takes possession of one in these pursuits will tempt to almost any hazard. Ned was very lucky that morning and caught about two fish to my one. He took out of one place without moving four magnificent trout that ran from 3 to 4 lbs. I saw one leap a foot out of the water for his fly, and also observed him frantically plunge out after he got the hook in his quivering jaws. Ned was in high feather over the number of the handsome trophies he had captured, and would have remained and camped out all night if I had not insisted on a prudential return. The wind had changed and was rapidly increasing every minute, and was also dead ahead. Joe, who was also eager for the necessary return, says to Ned:

"If you no go now, you not go at all."

"Bah! We can walk back," replies Ned.

"What you do with the boat?"

"Pull her up on the rocks."

"Then some Indian steal it."

"Oh, no; Indian always honest."

"May be so, may be not."

"If you're afraid of the thieving Indian, back it is."

And then Ned winked at me at the honest satire he had heaped upon poor Lo! We hurriedly got into the boat and the boys pulled away at the oars quite vigorously. It was only two miles to camp, but it was against very heavy wind that was growing stronger all the while. We had caught ten of the spangled warriors and were fully satisfied with the two hours' angle.

The sky was now displaying a dismal hue of slate-colored vapor, while an iron-gray freckled sea was rolling hollow and confusedly, evidence enough to satisfy us that the remainder of the day would be spent in camp, if not in our tents. The boys were glad and somewhat fatigued when they reached Jackson's Cove, for it was an hour's hard pull over a sea anything but gentle.

In the afternoon we tried the ragged edges of our huge boulder in front of the camp, but the waves were too frightfully wicked for *S. fontinalis* to be on the *qui vive* for flies of bright tinsel and feathers gay.

When I returned to camp I found Ned changing his clothes, he having accidentally slipped into the lake from the boulder. Fortunately for him, a huge rock in the water close by checked his rapid progress, or else he would have been completely immersed. As it was, he escaped with a light baptism.

The half-breeds that afternoon gave a concert with their violin, much to the annoyance of Ned. I saw Joe in his tent sitting on the ground, with his back against a box of provisions, fervently sawing away with his bow, while his dreamy eyes were turned heavenward as if invoking inspiration from the patron saint of the lyre. I called Ned's attention to the picture presented, and so convulsed was he with the sight that he laughed till his sides ached. In addition to Joe's musical accomplishment it is to be added that of the terpsichorean art. When he was not fiddling or otherwise employed, he was practicing his pedals in graceful (or) curvatures, endeavoring to imitate Ned, who on one occasion rattled off an Irish jig that completely captivated the boys as well as myself. That evening after supper, Joe and John went to the crest of the boulder, and there, under a gray sky and to the music of the waves, Joe danced till dark.

Ned was up quite early the next morning, and intently scanned the horizon with a view of making the "probabilities" for the day. On asking for the result, he stated, in university phraseology that I never gave him credit of possessing, "There is a blue sky, with drifting mother of pearl clouds, a gentle west wind, a lake in silver-tinted ripples, mountains gleaming in gold, and an atmosphere *ad gustem*."

With such a glorious condition of the elements, I was prompted to arise that I might also enjoy a morn so richly clothed in splendor. The sad thought that Lake Superior was such a capricious coquette intruded. So often have I seen an auspicious morn turned into a tempest in a few short hours that I have lost entire confidence in her bright promises. We, however, determined to enjoy the golden weather while it lasted, and immediately after breakfast started with boat up the shore, in hopes of capturing a few foolish trout through mere "rickish knavery." We coasted along an exceedingly rocky and irregular shore, that looked the very abiding place of the scarlet-hued dudes. Reaching a range of high rocks, that gave us fine facilities for shore fishing, we landed and commenced the work of decoying. It was not long before I had a rise, and a pound trout as the result. My lips curled in contempt at the insignificant size of my first victim, for it was the stalwart warriors and a royal battle I sought. I left this bed of nurselings and sought other grounds, in hopes of getting a finny foe that would tax my skill to the utmost. I soon reached a very inviting place, a debris of shattered rocks with numerous lines of dark water, that I would have wagered a kingdom contained a freckled Naiad or two. Securing a good foot hold on the flinty rock I had reached, I sent my flies sailing on a mission of duplicity. I saw them fall lightly in the desired spot, and a savage swirl broke around my stretcher. I responded quickly, and was sadly disappointed at my failure to connect with the inquisitive trout. I steadied myself for another cast, and then lifting my flies from the surface, once more dropped them in the same place, when another tigerish plunge ensued, which resulted in the sweet music of the running reel—a sound ever delightful to the patient angler. The astonished trout tore around at a fearful rate, giving me a combat I shall ever remember. It was plunge and dash, reel up and reel out, and a dive down and a leap up—a truly marvellous acrobatic exhibition that I not only keenly enjoyed but deeply admired. The skill and duplicity of cunning man, however, finally triumphed over the dauntless heroism of the stubborn and gallant warrior.

When Joe, who had netted him, laid him on the

weather-stained rock, he presented, in his gleaming coat of rainbow dye, as lovely a picture as eye of angler ever dwelt upon. He was a trifle over 4lbs. Ned, who had been working the rocks above me, had also met with fine success, for he exhibited, on my joining him, three lovely specimens that ran from 2½ to 3½lbs. Since we had started for camp the wind had been raising and it had now worked the sea into a very lumpy condition. John, who had been left in charge of the boat, and who was a short distance from us on the shore, had hallooed several times; but we were too intent on our pleasures to give heed to him. Finally he came running along the shore and informed us that the boat was being heavily pounded on the rocks by the sea, and that we must either return to camp with him or he would be compelled to leave us in order to protect his boat. The plea being a good one we at once reeled up and began the tramp over the moss-covered rocks to the boat and returned to camp, satisfied that Ned's rosy predictions of the weather in the morning were all a fraud and a delusion and that Lake Superior was as cruel a coquette as reputed.

We had the remainder of the day to spend in camp, while the lake was furiously tossing the white caps and battling against the rocky outworks of our quarters. Ned did a little darning, while I played a game of solitaire, and the boys busied themselves in gathering firewood at the lower base of the mountain, and in preparing the noonday meal, which to them was always a pleasure, from the fact that it was a feast of good things which their banquet-board at home knew not. Having won two games out of three with the gentleman with whom I played solitaire, I was satisfied to relinquish the game and then got down to Balzac's fiction "The Two Brothers," with a decided relish of its closing pages. Ned having completed his darning, in the meantime got out his little bags of tackle and selecting some feathers—red, of course—gave an additional tint or two of ruby to a few flies, that made them look as red as a turkey-cock. He was dead gone on that color and believed that it was invincible as a decoy. If he changed his fly at my suggestion he was sure to return to his first love—the lobster-colored lure—in a very short time. I had a world of fun out of his penchant for the mantling color and worried him at times when the trout disdained his flaming lures on his big bushy flies. When in luck he would invariably cry out, "It's red, red they want."

"For heaven's sake, then, give 'em red and plenty of it," I advised. Sure enough, when we went ashore for lunch, on would go another red feather, sometimes two. He was evidently a red-headed avenger and proposed to make his finny victims die in gore.

Again the morn opened with a bright sun that crimsoned lake and land, while the arch above was lovely in small white clouds rich in prisms with "the rainbow lights that kindled in their skirts." It was the birth of a golden day.

"The waking dawn

When night-fallen dews, by day's warm courtship won,
From reeking roses climb'd to kiss the sun;
Nature, new-blossom'd shed her colors round,
The dew-bent primrose kissed the breeze-swept ground."

Our destination that morning was Blind River, a small stream some two miles above the camp. It was really a prospective trip, though we always had an eye single to a roving or poisoning trout. We had no sooner started than we began to realize a breezeless lake as well as a glowing sun, indications that our victories, while this condition of things lasted, would be counted in the unit column, and low down at that. As we coasted along we earnestly cast, and the only reward between the camp and the river was one rise which was missed, and one which yielded a small trout under a pound. Our hopes suddenly vanished, and I began to think our return would not be heralded with waving of banners and beating of drums.

Ned was confident the river would bring us some victims, but as we entered it my heart sank within me, for it looked anything but trouty. I did not even make a cast in it, so confident was I that there was not a fin to be obtained in its waters. Ned, however, who was in the bow, kept his flies going from one side of the river to the other, while I sat "a mere looker on in Venice." We had not proceeded very far before Ned had a wolfish leap at his fly, that so completely unbalanced him that he missed it. As quick as thought my rod was in hand and my flies going to the very spot where Ned had aroused the savage trout. No soon had they struck the surface than another magnificent rise was had, and this time the greedy trout was in trouble.

"That's my fish," said Ned, who had been appalled at my greedy tactics.

"Pray excuse the trifling brigandage; it was merely the result of impulsiveness."

"All right, you are forgiven."

"There is another there."

And sure enough there was, for Ned hooked one on his first cast. There we were, both playing fish at the same time, and from the way they battled I judged them to be weighty ones. I had mine killed and netted in short order, always believing a minute to the pound sufficient time. Ned was always a believer in the same thing as to time, and soon had his "Jim Dandy" boated. Neither ran under 3lbs., but oh! so dark were they, that their crimson spots were nearly obliterated, and even the inside of their mouths and gills was of the same color. I never saw trout marked so darkly before, but understand they take their color from the waters they inhabit. The water here was of that dark amber color, similar to that in all the rivers that empty into Lake Superior.

I was soon at work again, received another rise and another fish, and Ned ditto. This was indeed a lucky revelation to us. The pool in which we caught them was not over 5ft. deep, nor over 20 wide and looked nothing like a home for trout. They seemed to be alongside a dead tree that was lodged close to the bank, and which was shaded by some overhanging maples. We concluded after we had caught the last two to give the pool a rest, and so floated back to the mouth of the river and remained there some twenty minutes, when we again approached it and took out two more, and this time we went up stream as far as the ripples, which was some forty rods or more distant, and there rested.

Once more we ventured to the preserve, and again secured two, the result of our first cast. Off we floated and another rest, and then we return to the famous pool and both have fish simultaneously. Ned this time had a monster that looked as if he were fully 6lbs. and had a battle-royal with him that he deeply enjoyed. Mine was

no slouch of a trout, for he fought so hard that I was constantly compelled to be on the *qui vive*. He finally capitulated after a resort to every stratagem he was master of, and then Joe took his lordly proportions into the net. Ned's monster had by this time struggle so fiercely that he lay panting on the gleaming gravel with Ned devouring him with admiration, and wondering whether he should stir the patriarch for another round.

"What a darling," says Ned.

"Yes, but be careful that he don't trick you."

"Guess I'll stir up his lordship."

Ned did stir him up, and his lordship making a savage dash under the boat and getting the line tangled on a log escaped, leaving the unlucky angler a perfect picture of despair.

ALEX. STARBUCK.

SAMMY CALHOUN.

ONE evening in May, I strolled up the road with a cigar after supper, and sat on the wall at the brow of the hill. The shadows were setting thick in the lowlands and the valley beneath was a vast, dark chasm, with the farther rim approaching the horizon just gilded with the afterglow. Farms, rivers and moving things were swallowed up in that gulf and the light came straight across and touched us on the hill. The shrubbery, pushed hard by a few warm, unseasonable days, had a slightly jaded premature look, but the grass was in all its unmatched tints of early spring, soon lost from tender yellow to steely blue. The blades were moist from the afternoon rain and the earthworms were groping out in the damp. A glance, roving for something else to gloat upon before the night should overflow from the brimming valley and engulf us too, intercepted a figure coming over the brow. A figure in a light weight overcoat held loosely across, unbuttoned. You would know it by that gesture, a bachelor of uncertain age, with a youngish twist to his gray mustache, and a melancholy cast of countenance; a man of some peculiarities; he is not gregarious; he makes few acquaintances and they must ripen into friendship or drop off. He sat beside me on the rock and gathered up his coat collar.

"Well what's the matter Sam? Look unhappy."

"Oh, same old story. Tired of city life. Treadmill, treadmill. Sick of people. Go out on an evening sometimes, and meet some more. Constant stock of appreciation on tap; features arranged in the attitude of a smile, well meaning smile, inane. Applaud an ordinary piano and laugh immediately at things. Oh, I can make out to keep this up through the winter, Jeff, rubbing shoulders with them, but when the spring comes"—and Sam leaned forward and gesticulated confidentially toward the shadows and forgot all about me—"when the spring comes with a breath that I can trace back to the northern slope of a hill, not densely wooded, where it lingered over the moss and twigs till it caught the odor among the leaves of the modest arbutus, or stopped by the wayside to turn every leaf of a gnarly wild apple and scatter its petals, then, then—oh Jeff, there's a fever of rebellion, dormant all winter, that comes up in the spring like the pulse of the sap." I laughed right out. I had to laugh.

"Now Sammy, it isn't the woodsman in you at all, that talks like that, it's only the poet. We all stare at the sunset that way sometimes. Now what would you do Sam if you could get over that horizon?"

Sam felt that he wasn't being appreciated and shook his head, but then concluded to make the best of it and smiled.

"Well Jeff, I'll tell you. There's a brook with an unknown source that tumbles over mossy logs in little cascades, and leaps from rock to rock and makes swift descents in long smooth slides and rests in deep dark pools and bubbles over, gaining strength and volume to emerge in a natural meadow where the deer come to drink and beavers build dams. It goes swimming across the meadow, disappears in the woods and at length reaches the haunts of man. But, oh Jeff, the trout up there in the meadow or in the pools! They're different. They have more freckles I believe. Brave, alert chaps with lines of speed; regular aristocratic pirates."

"Ever been there, Sam?"

"No, I heard of it out West that time, but they told me it was right over in the next county. Up in New Hampshire I traced it till a guide told me it was 'just over the mounting'; but my vacation was done. One summer in Maine I thought I'd found it. I had just wet my line all elated to find myself in a meadow where the foot of man had never trod, when along came a denizen and told me it was no good. 'All fished out,' he says, 'all fished out, but they is a brook—' So Jeff, that's where I want to go when you see me looking over the horizon."

JEFFERSON SCRIBB.

Natural History.

THE POSSUM "SULLS."

Editor Forest and Stream:

Replying to "Aztec" in your number of June 6, concerning the word "sull," in relation to the well-known idiosyncrasy of the Great American O'Possum ("the only native-born American whose name begins with an 'O,' and he got ashamed of it and dropped it"), the verb of "sullen" is "sulk," and "sull" is the negro corruption of "sulk," and that's all there is in it.

Many a dark, drizzling night (the best for the purpose), when I was a small boy, have I gone forth with my favorite negro "possum hunter," Ellis, one of the plantation hands, and his two faithful "possum dogs," in the old ante-bellum times; and with great exultation have I gone back to the house at 2 or 3 o'clock in the morning and waked up my parents to show the fine live possum I had in a bag. Ellis owned the dogs and did all the work of catching the possums, but always gave me the finest one to "tek up to de house," with great pride in his craft. The possum was generally "treed" in a small tree, which we could sometimes bend down or climb, and capture the animal before the dogs could get a hold of him and bite him. Sometimes the tree had to be cut down, when there was a wild scramble to rescue the possum before he was mutilated by the dogs. Occasionally the game was caught on the ground by the dogs without being treed, when it was killed before the hunters could interfere.

It was always desirable to capture the possum without his having received any hurt, as he was then put into a chicken coop and fed on civilized fare for a week or two before being killed for the table. The negroes of the South, at least in Mississippi, seem to have given up possum hunting entirely since they became freemen. In old times "possum dogs" were highly esteemed by them, and there were numbers of them to be found on every plantation. But now one never hears of a "possum dog" among the negroes. I have an idea that they look back upon this nocturnal sport as one of the badges of slavery, when night was the only time they could call their own, except an occasional holiday, and then they were not allowed to own guns.

Now, nearly every negro owns a pot-metal shotgun or old musket, and he spends much of his time wandering about, accompanied by a string of three to six or eight "curs of low degree," in search of "Br'er Rabbit" or "Br'er Squirrel," but eschews possum hunting at night, of which we, who were the sons of slave owners in the old times, cherish fond recollections, as among the youthful romances of old plantation life.

COAHOMA.

FLORIDA HUMMINGBIRDS.

ST. AUGUSTINE, Fla., June 14.—*Editor Forest and Stream:* The blighting effect on fruit and vegetables of our last year's late frost is very well known, but it is not so well known that it played havoc among the hummingbirds. It was a warm winter and the early opening of spring brought out the flowers and started myriads of these little creatures on their journey toward the north. Then came that blighting frost—which they could stand, but the "death of the flowers" was too much for them and they were picked up dead and dying everywhere. They came in unusual numbers and seemed to be nearly all males. After the frost but few were seen, either male or female, and I feel quite anxious to know whether any great diminution in their number has been noticed in the North. This spring but few have been seen about this place, on their northward journey, and I fear their ranks have been sadly thinned.

Hummingbirds are generally supposed to be extremely timid and almost untamable, but when their confidence is won, which is an easy matter to those who understand them—they are very fearless and the loveliest little pets in the world. We tame them nearly every season, and they come to us anywhere around the place, and when the doors are open make themselves perfectly at home, even in the house. A year or two ago I called my wife's attention to the first one of the spring, as we were sitting on the piazza, and when I called him he came at once and examined each of us carefully and then flew off. I saw at once that it was one of our pets of the previous year, so I went in and prepared a small bottle of sugar and water, and it was but a few minutes before he returned and at once took his dinner as he had been accustomed to. Unfortunately he had a mate who was bossing him and dragged him northward after he had paid us but two or three visits.

Between the frosts, taxidermists and milliners I fear they'll be almost exterminated in a few years.

DIDYMUS.

BIRD NOTES FROM TAKOMA.

THE vernal migration of birds in this locality has been characterized by much of interest to the field ornithologist. In many respects it has differed widely from the two preceding springs, that is, of 1889 and 1890. Birds that were very abundant then proved to be very scarce this year, and *vice versa*. But that fact will not be a new one to any ornithologist who has studied the migration of birds in any one limited locality for three or four consecutive seasons. The fact is generally explained, however, by the usual remark that "the season opened late," or it was "due to the late rains" or some similar explanation. The writer is of the opinion though, that the day is far ahead of us before our knowledge shall be sufficiently full to account for such differences. Meteorological conditions undoubtedly have much to do with it, but the absence or abundance of certain bird foods, as insects or fruits, must also have their influence, as do the many changes brought about by civilization. The balancing of the harmonies in nature is very delicate, and as I have hinted, our knowledge of the same still very crude and meagre. Now last year there were a great many species of birds that nested in this vicinity, and as a rule they laid full complements of eggs, while on the other hand the spring just passed has been characterized by a marked change in that particular. Few birds have built, and for some unknown reason they have not laid their full sets of eggs. Nests of robins, wood thrushes and cardinal grosbeaks, so far as my experience goes, did not contain more than three eggs each, and the nest of one wood thrush was found wherein the bird only laid two eggs and then hatched them; the same for a cardinal grosbeak. Although I have missed hardly a day in the woods and fields this year, I failed to find the nest of a single catbird; over the same ground last year I personally knew of the existence of twenty or more. When the catbirds came on this year, they came on almost at a single appearance, and in considerable numbers, disappearing almost as suddenly. Perhaps the clearing out of much of the low underbrush during the intervening summer about Takoma Park had something to do with this, but I am strongly inclined to believe that it was not the only factor responsible for the difference. During the spring of 1890 the black-poll warblers (*D. striata*) were by no means of common occurrence, whereas this year they appeared toward the latter end of May in hundreds, and the woods seemed to be alive with them on certain days. In the Smithsonian grounds, on a dark cloudy day, I counted upward of a dozen in one large tree. There must have been some special food to have attracted them in such numbers, for, for other causes I have been totally unable to discover them.

Some time during the middle of the last-mentioned month I shot, not far from my house, a very nice specimen of a male rose-breasted grosbeak, the first one I have taken for a dozen years or more, and the only one I have ever seen in this neighborhood after a residence of over two years. Mr. Ridgway, however, tells me that he has seen them frequently in the Smithsonian grounds. On May 2 an old male passenger pigeon (*E. migratoria*) flying quite low down and due northeast passed within a short distance of my house. *Rara avis*, are your days numbered in our avifauna? When I was

a boy I shot them in Connecticut until my shoulder ached. There is another bird that is becoming very, very scarce in these parts, and that is the Baltimore oriole; and still more its congener, the orchard oriole. Both species of cuckoos have been remarkably scarce this year; I have not seen a single specimen, and my oldest boy only one yellow-bill.

Being out on May 19, I espied high up in a poplar tree one of the finest scarlet tanagers I ever saw alive—an old male. He was hammering away at something on the upper side of a large limb, and I walked under him until only the butt of his left wing was exposed, which I shot at with No. 13 shot from a .22 collecting gun. Down he came like a flaming meteor, breaking his thigh bone of the same side in his fall. First I thought to kill him for a specimen, but he was too handsome, and I carried him home to give him a trial in a big roomy cage. At the present writing both bones have knit without any perceptible deformity, and he promises to be one of the most interesting bird pets I have ever kept. He thrives on the yolks of hard-boiled eggs mixed with Bishop's prepared food, and catches flies as they pass through his cage like a good fellow. Much to my surprise, he had not been in the cage a fortnight when he recovered his voice, and is now nearly in full song. He is a beauty, without a green feather in his plumage.

And so it goes, the older I grow the more fascinating do such studies and pursuits become to me, and I shall never weary of them. I am afraid, however, that this letter has already passed the limitations of your space, but you must let me enter one word or two about the purple grackles and the English sparrows.

I never fully realized until this spring how many young birds in the nest, of many species, the grackles (*Q. quiscula*) killed and devoured. When one of these birds discovers a nest containing fledglings, he is not content until, during the absence of the parent birds, he has stolen and eaten every one of them. The number they kill and consume all over the country must be immense. They destroy and eat hundreds of English sparrows when the latter are at this tender age. I have seen them do it over and over again. Crows do the same thing, but by no means not so often.

This spring I have watched with especial care and interest the manner in which the English sparrows met the advent of the spring birds from the south. After taking many notes the fact was forced upon me that the English sparrows are not nearly so much responsible for the decrease, if decrease there be, in the abundance of many of our song birds, as are the boys in any locality. I refer strictly to that class of boys who constantly shoot small birds with one of the many new patent air or spring guns now in vogue. All in one day I noted a catbird, a brown thrasher, a white-throated sparrow and a sapsucker (*S. varius*) whip and drive off, single-handed, as many individuals of the English sparrow; while a young fiend, a boy belonging to a good family and who should have been better instructed, was bragging to his companions that he had shot and killed that week, with his (wretched) air gun, seventy-two kinglets (*Regulus satrapa* and *R. calendula*) and no inconsiderable number of other species. I took the pains afterward to prove the truth of his statement, and found that it was substantially correct. This practice has become fearfully prevalent in the suburbs of our cities, and in my opinion will drive out the native birds five times as fast as the sparrows can accomplish it. Worse than that, for the boys actually destroy them.

R. W. SHUFELDT.

TAKOMA, D. C., June 9.

RECENT ARRIVALS AT THE PHILADELPHIA ZOOLOGICAL GARDEN.—Purchased—Three phylander opossums (*Didelphys philander*), one whistling swan (*Cygnus americanus*), two Indian pythons (*Python molurus*), two ground rattlesnakes (*Crotalophorus mitchilli*), three coach-whip snakes (*Basiliscus flagelliformis*), three black snakes (*Bosmanus constrictor*), one red king snake (*Ophiodon dolatus coccineus*), one black hog-nosed snake (*Heterodon platyrhynchus niger*), one indigo snake (*Spilotes eremicus*) and one common king snake (*Ophiobolus getulus*). Presented—Two red foxes (*Canis vulpes fulvus*), five old opossums (*Didelphys virginiana*), twelve young opossums (*Didelphys virginiana*), one bald eagle (*Haliaeetus leucocephalus*), one sparrow hawk (*Buteo swainsoni*), one yellow bird (*Chrysomitris tristis*), five screech owls (*Scops asio*), one pair ring doves (*Turtur risorius*), one long-tailed duck (*Harelda glacialis*), four alligators (*Alligator mississippiensis*), one Mexican pine snake (*Pituophis sayi mexicana*) and two crowned-horned lizards (*Phrynosoma coronata*). Exchanged—One three-toed box tortoise (*Cistudo carolina tringula*), one red-eared terrapin (*Pseudemys elegans*), one Amy's ring-necked snake (*Diadophis ameyi*) and one milk snake (*Coluber obsoletus confinis*). Born—Three American bison (*Bison americanus*).

Game Bag and Gun.

THE FULL TEXTS of the game laws of all the States, Territories and British Provinces are given in the *Book of the Game Laws*.

ON AN ENGLISH PRESERVE.

WINNIPEG, Man., June 18.—*Editor Forest and Stream*: Last month, on my way from the East, after leaving Fargo, which, by the way, is becoming quite a rendezvous for sportsmen, I noticed that all through northern Dakota the prospects for game for the coming fall shooting were unusually good. The mild winter has been favorable for the preservation of prairie hens, which, all along the route to Winnipeg, showed up in lots of from two to five at short intervals on both sides of the track, representing four times the usual amount of Jack Frost's spring leavings in this rigorous section.

Plover were plentifully interspersed with an unusually small scattering of Wilson snipe and ducks.

In discussing the game situation with Mr. Hine, the well known skillful taxidermist of this place, he said it was the same all through Manitoba; that all around the suburbs of the city the game could be seen mornings and evenings, in bunches of four to six, dancing and cutting up all sorts of comical diodes. Late reports from all sections coincide that the hatchings of chicken are large, broods averaging rather over than under ten.

The writer was much interested in examining the choice specimens of English game that Mr. Hine was busy mounting, and also in the narration of the manner in which he obtained them on several of the best shooting reserves in England, principally on Lord Lonsdale's estate, at Lowther Castle, Penrith, Westmoreland county, extreme north of England.

When Earl Lonsdale was here in '88 and '89, a pleasant acquaintance was formed with Mr. Hine, who fur-

nished him information regarding large and small game in the Northwest, and also mounted all of his lordship's specimens secured during his fourteen months' trip north, including several heads of musk-ox and other rare Arctic specimens. Before leaving the city the Earl extended an invitation to Hine to come over to England and shoot over his preserves. Accordingly last November he started and soon after arriving at Usk, Wales, he advised Lord L., who immediately wrote him to come on at once to take part in a battue shoot at Lowther Castle as his guest. After shooting a few days in Wales the trip through England was made in good time for the appointed shoot at the beautiful grounds of Lowther, with its park of ancient oak foresting teeming with deer and pheasants in the copse, and beyond a background of splendid mountain scenery, the whole estate embracing many miles in extent.

Twelve guests, all crack shots, constituted the shooting party, and they were accompanied by their valets and servants. Each shooter was provided with two guns, which were loaded by attendants as fast as discharged. The guns used were light weight, 12 to 20-gauge, all of the most expensive make. The twenty-five game keepers and over one hundred beaters started in advance of the shooters at early morning, and during the week's shoot the game was secured in a radius of from two to five miles from the castle, the shooters being stationed about 100 yds. apart, surrounding the cover to be beaten. The beaters, with their sticks and shouts, flush the game, consisting of pheasants, woodcock, partridge, hare and rabbits. The shouts and calls of the beaters, the rush of game, the general fusillade of guns, the retrievers with their carts seen through the smoke collecting the dead and wounded game, constitutes a lively and exciting scene smacking of a military engagement.

The daily 1 o'clock lunch, with its accompanying interesting conversation and comments on the sport, was an agreeable hour's interlude. Different tents were allotted to guests, game keepers and serving men, according to their class. Events culminated with military precision, and the viands were abundantly served in first-class style. During the five days' shoot some six thousand pheasants, with perhaps a duplicate number of hare, rabbits, woodcock, partridges and pigeons, were slaughtered and distributed among guests and friends. The pheasant's flight is slow at starting, but by the time it reaches the open where the shooters are stationed, they are in very swift flight, and a novice is apt to secure more, tail feathers than meat when first firing at the gorgeous incomers. Usually pheasants on preserves are raised from eggs imported or collected and hatched by domestic fowls, but these birds were naturally bred, and as it was late in the season they were full grown and afforded capital sport. The woodcock were shot mostly in cover and ravines. They are nearly twice the size of our American cock, being similar in their habits and markings, with the exception of the bars from bill to tail. The cock shooting of Wales and England is first-class sport, as the birds are wilder in their flights than their American cousins. On being flushed the first time they fly swift and far, resembling the flight of our birds when flushed the third or fourth time. The partridge is a compact, gamy little bird, similar in habits and formation to our quail, being about twice the size, or a third smaller than our ruffed grouse. The hares are about the size of our prairie hare or jack rabbit, being shorter in the legs and weighing from 6½ to 10 lbs.

"Billy" Hine shoots about six months in the year, and has shot over most of the hunting grounds of America. This preserve shooting was a novelty greatly enjoyed, and it occurred to the writer that the readers of *FOREST AND STREAM* might be interested in the above description as well as regarding trap shooting at English trained blue-rocks, which were a surprise to friend Hine, who had no idea that birds could be trained by blank shots to get away so rapidly at the opening of the trap. They are shot at with light guns at from 25 to 35 yds. rise, and the birds will carry out of bounds a large dose of shot, making it more difficult to secure large scores than in this country under our rules and privilege of using large-bore guns.

WAYLAND.

IN THE ROCKIES.

MY old friend Dan, with whom I have so often shared the fortunes and disappointments of the hunt, happened to be spending a few days with me. Knowing that he was always ready for the chase (and often our hunt has been only a chase) I said to him, "Look here, Dan, it is just 12 o'clock. When I came across from Gladstone to Wolf Creek a few days ago—that day when I fired thirty-five shots at those two old bucks and never touched a hair, and after firing my last shot at them had to walk off and go home, leaving them standing laughing at me—I saw a number of tracks of single deer, right fresh, just across Wolf Creek, only a few miles from here. Now I know those deer are living in that locality, and will be out feeding toward night. I believe we can get one if we try. What do you say? Is it a go?" "Well," said Dan, "I am afraid it will be more of a wild goose chase than anything else. However, I'll go." "All right. You go out into the field and catch Charley and Dolly and saddle them, while I get us a bite to eat, and we'll be off. Hurry now."

So it happened that at 1:30 o'clock of a clear, crisp November afternoon two men arrayed in customary ranch costume and mounted on horseback, might have been seen striking up toward the foothills of the Rocky Mountains, the one armed with a .44 repeating Winchester rifle and the other with a .45-70 Marlin.

For several miles our path led us up the mountain, through a low pass and down the other side to Wolf Creek. Crossing the creek we rode up an old wood road, through scattered timber on either sidehill. So far no signs of game, save a few tracks where a jack rabbit had crossed and recrossed the trail, where a flock of prairie chickens had been running to and fro close to the bushes, and where a coyote had wandered aimlessly about seeking what he might devour.

"Now, Dan, you watch your side of the road and I shall watch my side. It was right there, just ahead of us, I saw, when I passed here a few days ago, where a bounding big buck had come down to drink, and it was on that sidehill yonder that Adams saw fifteen deer when he was hauling poles day before yesterday. At the foot of that wooded knoll, about a mile to our right, is where Willis fired so many shots at that big band last week without getting a single deer."

Riding carefully on a little further, Dan says, "I believe we had better tie up here and make a detour. You go up that gulch to the right and strike over into the open park. Then keep to the left up along the foot of the wooded knoll, pretty high up. I shall go straight up this gulch and work around to my right and meet you on top of the hill."

"The Charley securely. We don't want to walk home." Look at that pheasant on the log. Couldn't you behead him nicely. However, he is perfectly safe as far as we are concerned, for we have made it a rule when deer hunting, never to shoot at anything but deer, so we may not be misled.

I take off my coat and gloves and leave them by the horses. I am all business now. The air is crisp and clear. There is just snow enough to dampen the leaves and twigs, so that when stepped on they do not rattle like a rattlesnake. Everything is still as death. My blood tingles in my veins. I am in my element. I am happy. Quietly I advance to the head of the gulch and, taking off my hat carefully, peep over the hill till I can look out through the scattering trees of the park. Not a thing in sight. The snow covers the ground as a white sheet, unruffled. Half a mile ahead of me is a runaway crossing from Wolf Creek to the mountains. I shall head for that. Perhaps a deer may have passed along it to the water. Halloo! Sure enough, there's the runaway, and I should say it had been traveled. Could any of my sheep have gotten away and come in here? Look at those tracks. It must be sheep. A closer inspection discloses their real nature. The track of a sheep is wider and shorter than that of a deer. It's deer, and no mistake. The tracks are going every way. They have been feeding here. There is where they came in, down that sidehill. I'll go and look at their trail and see how many there are. Why there can't be but seven or eight. That's enough. Look here, these tracks are old. They are half filled with snow and must have been made during the storm, about eleven o'clock. It is now three and they have four hours' start of me. I have but two hours in which to catch up to them. Guess it won't pay to follow these. Yes, I will. They are going just exactly to the hill where I agreed to meet Dan. I shall go there and keep my appointment. Here they go; they are beginning to string out a little. Now they scatter; and here they began to feed again. The side of the hill toward which they are feeding is covered with scattered pine trees, growing closer together toward the top, with groves of fir here and there. At the top of the hill is a high rocky cliff, so steep that no animal could climb it. They must go round one way or the other. Not a spot on that sidehill escapes my notice, I am too old a hunter to expect always to see a picture deer. Too often have I mistaken a deer for a stump or rock, and rocks and stumps for deer.

See! Here is a fresh bed, and there, a few feet distant, is another. Look at the fresh footprint in this one. There is no snow in that track, and those leading from here are very fresh. Surely now, the game cannot be very distant. They went away slowly and feeding, showing no signs of fear. How true the old saying, "Where ignorance is bliss, 'tis folly to be wise." Caution is redoubled while ascending the hill. Already I am halfway to the top. Above me there is a low ridge of rock. If I can but reach that point unobserved I may be in sight of my game.

Careful now, a broken stick, a false step, the least noise and all may be lost. I peep over the rocks—no deer in sight. What is that peculiar odor? The wind is blowing toward me and I surely scent a deer. I know now that they are not far off. I have often had occasion to notice the fact that under favorable circumstances I can wind a deer, especially a large buck, several hundred yards distant. I cannot be mistaken in this case; and yet, from where I stand a deer within shooting distance could scarcely escape my notice.

A quick glance toward the top of the next ridge discloses the head and horns of a large buck. For an instant he stands looking at me and then vanishes. See, there he bounds up the hill among those trees. Shall I shoot? No; it would be a chance shot and I can't afford to risk it. To my surprise, on reaching the point where he had been standing, his tracks were the only ones along the ridge, those of the band are far below. Look! What is that object behind that treetop below me? It moves a little, and I see it is the creeping figure of a man. He crawls, he stops, looking fixedly ahead; now he moves! only to stop again and lie flat down, still looking steadfastly toward the ridge just in front of him. There is no mistaking the man or his actions. It is Dan, and he sees or has seen the deer.

Eagerly I turn my searching gaze toward the place where I know the deer must be. Not a sign of any kind which would denote their presence rewards my gaze. Surely they are there somewhere. See how still Dan lies. He dare not move a muscle. I am confident that he and the deer are looking straight at each other. Something is moving now along that ridge yonder among those trees. Yes, there he is; a large buck. He suspects no danger near, as he browses among the bushes. There is another deer, and another, and a little further down the hill stands a very large doe looking intently at that still, peculiar looking log, or is it grass or what? Now and again I see her sniff the air. But no, my darling, the wind is not in your favor to-day. Your long ears and delicate powers of scent avail you nothing. Your curiosity and yonder log (?) will be the death of you.

Watching my chance I slip unobserved behind a low fir bush. The deer are 350 yds. distant—too far for a sure shot from my little gun. Oh, how I want to talk! Not yet, my pet; we will watch that deer and Dan a little longer and see how their game will end. It did not last long. The deer decided to satisfy herself as to what that queer-looking gray thing was. So wagging her tail a few times she trots bravely forth, followed by two of her friends, who had been by this time attracted by her strange behavior. She stands quivering, not knowing which way to go, but she would just as soon go back as go any other way. I have waited on Dan till patience ceases to be a virtue, so here goes. Hark! a shot! Dan has at last reached his limit of endurance. The doe jumps high up the air, turns and runs back. Too late, my dear? Your last race is run. Blindly rushing forward she suddenly turns short off down the hill. A tumble, a roll, a slide, and her beautiful shapely limbs, which have so swiftly and safely carried her over many a mountain and through many a swollen stream will bear her up no longer.

The rest of the band are now in full flight. Under ordinary circumstances it would have been useless to have followed them, but for two reasons I was now willing to risk a few hundred yards of a chase. I believed that the old doe which Joe had just killed was the leader of the band, and without her they would not go very far. There was a big buck in the band, but deer do not follow a buck very well. Then again, just beyond where we had first seen them the sidehill was bare of trees and from a little rise of ground beyond I knew I could see quite a long distance up the side of the mountain. I concluded to trail them to the top of the ridge. So, leaving Dan to hunt up his doe, I struck out. On reaching the top of the ridge no deer were to be seen anywhere. Had they run straight ahead I must now see them climbing up yonder sidehill. Ah! here is their track turning to my right. They made a digression, as my teacher used to say, and are heading for a low pass which leads into the next gulch. Shall I follow them? Now I wind them. They can't be very far. If I hurry I may catch them on the other side of the hill. Stumbling, slipping and breathless I had almost reached the pass, when I saw the deer coming back on their old trail and looking for their leader—or for me. They found me, but only exhibited to me seven heads and necks—one the head of the monstrous buck, the rest were does. All in a bunch they stand eager and excited, ears erect and nostrils expanded. Shall I shoot? At a distance of one hundred yards, at that moment, a deer's head was a very small mark. While I hesitated they withdrew, dodging back over the hill. I hastened up the hill, almost reaching the top when here they come trotting back. I was now nearly on a level with them and could see their whole bodies. Again they bunched, facing me; but the buck was gone. The six deer were about seventy-five yards distant and standing so closely together that their bodies seemed to touch each other. For a moment my eyes feasted on the sight, which to me was a handsome reward for the toils of the ascent. Here is your picture deer but far grander, far nobler—so wild, so fearful, so inquisitive, so full of life and beauty—reminding one of the words of the Arab in his farewell to his steed, "My beautiful, my beautiful, which standeth proudly by." But now was no time for soliloquy. Deer or sheep had to furnish the camp with its winter supply of meat.

A shot, a fall, a scatter, bunched again, a second shot, a frantic leap by a young doe, and like leaves before a tempest driven they turned and fled. Two does are not yet satisfied, so leaving the other three they turned back and climbed still higher up the hill. How proud they looked! Was ever peacock prouder? With head and tail erect they trot around as you may often have seen a horse when turned out to pasture after a few days rest. Now a jump on all fours, now they stand, stamp their feet, hesitating, not knowing which way to flee. I am excited and out of breath. Watching a chance when they were standing 150 yds. away I shot. They jumped, separated, and again joined each other. Another shot, and another, and another. At length, disgusted at my ill luck I dropped on to my knees and taking careful aim had the satisfaction of seeing one of the deer jump high up into the air and then they both fled down the hill followed by a wild bullet to hasten their escape. One hundred yards and one of them grows faint. She reels, she circles, she falls; and with one convulsive struggle she is dead.

Retracing my steps to where I first shot, there lay a fine yearling doe quite dead. Taking the trail of the wounded deer I at once found blood sign, and in a short distance found him lying where he had fallen, never to rise. The rest of the deer I saw in the distance crashing through the dry poles. Dragging the last deer, a yearling buck, to the first one, I went after the other one, and finding it dragged it also to the same place. Hearing the shooting Dan had come up and wanted to know where the deer were. I soon showed him three. "My," he said, "you did do well! I wish I had gone with you. But I had no idea you would catch up with them." "Well, Dan," I said, "I am sorry you were not with me, for you missed one of the grandest chances in your life to get a deer."

It was now after sundown and we were six miles from home. So, hastily dressing the deer, we dragged them down into the gulch and hung them up high and dry. Dragging the first deer to the same place we hung it up with the others. It was a monster blacktail doe, as large as any doe I have ever seen. We did not weigh her, but she must have dressed close to 175 lbs. The others were two yearlings—buck and doe—and one two-year-old blacktail doe. Washing our hands in the snow, we hurried down to the horses. On the way, of course, Dan had to listen to every little detail of how each deer was killed. Dollie and Charlie were mighty glad to see us, as they had about decided to camp out and eat fir boughs that night. Old Charlie whinnied for us when we came in sight; but Dollie did not like the smell of blood on my coat sleeve, and would not for some time let me mount her. Less than an hour's ride landed us again at camp. It was now half-past 7. While we ate our supper and smoked our pipe, we lived over again one of the most successful short hunts I have ever had. The next day we took a wagon, and hauling our deer to camp, we hung them up with the three I had killed a few days before. Delighted with the prospect of plenty of fresh venison for a while, we were now willing to go back to our work.

DEERBOURNE.

MINNESOTA NOTES.—Preparations are well under way for the survey of Itasca State Park, the last Legislature having passed a bill appropriating thirty-five sections of land around Lake Itasca for this purpose. This means as much to the people of this State as the much-talked-of Adirondack Park to the people of New York. There are about 100 beautiful lakes embraced within the proposed park limits. The killing of all kinds of game is prohibited, and the taking of fish otherwise than with hook and line at the legal season. The general care and supervision of the park is for the present vested in the State Auditor and a commission appointed by the Governor. Down at Cromwell last week two men were out in the woods, and coming across two moose they killed them in defiance of the law. Information has been lodged against them, and it remains to be seen if the law will be enforced or not. In such cases the fine cannot be less than \$50.—MYRON COOLEY (Detroit City, Minn., June 15).

PARADOX GUN.—Nutley, N. J.—*Editor Forest and Stream:* For the information of "B. R." of Buffalo, who desires to be enlightened as to the "Paradox" gun made by Holland & Holland, I would say that it is described by Sir Samuel Baker in "Wild Beasts and their Ways," as follows: "It is a smooth-bore slightly choked, but severely rifled for only 1½ in. in length from the muzzle. This gives the spin to the projectile sufficient to insure accuracy at the distance mentioned (100 yds.). The No. 12 Paradox weighs 8½ lbs. and carries a bullet of 1½ oz. with 4½ drs. of powder. It shoots No. 6 shot with equal pattern to the best cylinder-bored gun." If "B. R." desires further information and will write to me I shall be pleased to answer to the best of my ability.—C. J. GAYLER. [This gun was described and targets printed in our issue of Aug. 5, 1886.]

"WINCHESTER GUN CREASE" does not sound nice, but it is said to do the business, and that is nine points of the merit of a gun-rust preventive. The Winchester have used it themselves, and whatever is good for them ought to be good for other people.

Camp-Fire Glickerings.

"That reminds me."

IN Florida the past winter a favorite practice among the boarders was to throw out baited lines from the wharf and leave them over night. Mr. K., who was much averse to fishing on Sunday, was taking an early walk on the morning of Feb. 22, which happened to be the Sabbath also. Seeing a large fish at the end of the line he took hold of it, and, forgetting himself, pulled in what proved to be a channel bass, which weighed nearly 27 lbs. He proudly exhibited it, but was sorely troubled to find that he had caught a fish on Sunday. The boys plagued him a good deal, when he finally evolved the following: "It is wrong to fish on Sunday, but I find on looking it up that this is Washington's birthday, a national holiday, therefore Sunday don't count, and that lets me out."

Sea and River Fishing.

THE FULL TEXTS of the game fish laws of all the States, Territories and British Provinces are given in the *Book of the Game Laws*.

QUEEN OF THE ROD.

Editor Forest and Stream:

Your issue of May 15 contained an account of the catching by Mrs. Geo. T. Stagg, of Frankfort, Ky., of a tarpon weighing 305 lbs. This, certainly, is a most remarkable achievement, but I will tell you of another capture by the same lady, equally as exciting and skillful.

It was my pleasure to be with Mr. and Mrs. Stagg for two weeks this winter on Capt. Vail's boat, the Rock Lodge, at Jupiter, Dade county, Florida. We were fishing every day; the principal catches being bluefish and channel bass. During all this time Mrs. Stagg caught the greatest variety and largest fish, and in all my experience I have never seen a lady handle fish from boat or shore with as much skill. Sharks were very numerous this winter and we caught some big ones with the regulation tackle. Our house-boat was located about half a mile from the inlet and ocean beach and at the junction of the Loxahatchie and Indian rivers.

A big sawfish had been caught in the net of one of the natives, and Mrs. Stagg concluded she must have one to add to her already big string. On the morning of March 21 Mr. and Mrs. Stagg and the guide, Wells, started for Sawfish Bay, about half a mile above our boat on the Loxahatchie. I had been out to the beach bathing, and on my return to the boat was told that Mrs. Stagg had made fast to a big fish, and that from the deck I could see the whole performance. When I first saw the fishing party they were about a quarter of a mile off, and had evidently worked the fish down the river about the same distance from Sawfish Bay. We all came to the conclusion it was a sawfish, and a big one. It became evident after a while that, if the fish was landed, some assistance would be necessary, so Commodore Hughes, of New York, well known to eastern yachtsmen, started out with the mate in a yacht tender, armed with a harpoon spear. The fish was now in mid-stream and making some desperate, long and deep runs. Mrs. Stagg stood up in the stern of the boat handling the big load in a masterly manner. Her heavy tarpon tackle was put to its greatest strain; at times the tip of the rod would be drawn clear to the water, so fast was the run of the big fish. Wells, the guide, an expert boatman, had all he could do to keep the stern of the boat in the right direction. The fish was doing all of the towing, and, in the first forty minutes, had brought the boat down opposite our landing, fully half a mile. The commodore, in the meantime, was trying his best to get a crack at the big fellow with the harpoon. Only once did he succeed in getting even a chance and then the water was so deep I thought we would have to fish for the commodore, as he nearly went out of the boat in his effort to land the harpoon.

The fish was now evidently making for the inlet, and we knew if he succeeded in reaching the swift water of the channel the jig was up. The party was now opposite the steamboat dock and several boats had joined the procession, keeping at a respectful distance, however. All of the natives and visiting sportsmen to the number of about thirty were on the dock, and many were the shouts of encouragement and prayers for the successful landing of the big fellow. Twice the fish ran under the boat and we thought he was surely lost: but good tackle and good judgment will land a whale, and we were gratified to see that Mrs. Stagg still had the best of it. Down stream they all went, straight for the inlet. The water here was deep and it was simply hang on and trust to luck. If the fish ran into the shallow water on any of the numerous sand bars he was pretty sure to be captured; if he kept the channel straight out, he was lost. Now it was that skillful work on the part of the fisher and the boatman gradually worked the fish out of the channel and into the shallow water. Over an hour had passed since the

first strike and the boats were nearly half a mile below us. The fish could now be plainly seen from the boats and it was apparent that he had met his match and was fast tiring out. Now was the time for Commodore Hughes to get in his work, and as the big fellow stopped for an instant to gather his strength, down went the grail and he was captured. A big shout went up from the spectators and we waited for the big one to be towed in with considerable expectancy. An hour and ten minutes was the time of the battle, and the fish had run more than a mile. When we hauled him out on the landing we showed the largest shark any of us had ever seen caught with rod and line. He weighed 253 lbs. and was 8 ft. 4 in. long. No need to stretch these dimensions, the story is big enough in its truth.

When the train came over from Lake Worth that afternoon the hook had not been taken from his mouth and the rod with the line were standing near the big fish. I doubt if one-half of the seventy or eighty people from the train, few of them fishermen, believed that any such fish was taken with so light a tackle.

When Mrs. Stagg first struck the fish, she as well as the others in the boat, thought they had a sawfish. It was about fifteen minutes before the captive disclosed himself enough to discover his identity.

I am anxious to hear Mrs. Stagg's account of the catching of the big tarpon. I doubt, however, if she had a much harder fight than she did that day on Loxahatchie. Mr. Stagg about this time purchased from Commodore Hughes the handsome little cruiser Tarpon, and Mr. and Mrs. Stagg shortly after left for the Gulf, where their success with the silver king is now a matter of history.

W. H. CASE.

LOCKPORT, N. Y., June 6.

ANGLING IN CANADA.

A DOZEN members of the Springfield Fish and Game Club of Springfield, Mass., arrived here in great style on Friday last, on their way to their angling headquarters up the line of the Quebec and Lake St. John R. They came all the way here by special car, and went up to Chambord on a special train. The party consists of E. S. Brewer, president of the club, D. N. Coats and E. M. Coats, of the Monarch Parlor Car Company, D. W. James, of New York, C. A. Nicholls, of Springfield, Chas. A. Bryon, of Brooklyn and H. W. Fenner, of Providence, R. I. They enjoyed splendid sport, and most of them have now left for their homes. Another party of the same club is expected here by another special car to-morrow, and will include Col. V. M. B. Edgerly, president of the Massachusetts Mutual Life Insurance Company, Louis H. Orr, president of the Springfield Printing and Binding Co., Walter H. Wesson, of Smith & Wesson, Mr. Cheney silk manufacturer and Dwight O. Gilmore, proprietor of Gilmore's Opera House.

But the principal Mecca of American anglers just now is Lake St. John and its immediate surroundings, where fishermen are just now matching their finesse against the warlike ouananiche or fresh-water salmon. Mr. Boswell made a large catch last week at the mouth of the Ouitchouan, but his fish were comparatively small, averaging but 2½ lbs. each. The larger fish are now to be had at the Grand Discharge or in the Peribonca River. Anglers may be interested in knowing what flies have been successful at the Grand Discharge during the present month. As a rule these fish do not take a very large fly. In fine weather the black-gnat has proved a killing fly, and on darker days a taking bait has been a bright body with gold or bronze stripes, partially covered with green fuzz, and having white wings. The Childers, the Jock-Scot and the green-hackle have also been very successful flies, and with some anglers the silver-doctor is a favorite. Take these and a few more of the same kind up with you to the Grand Discharge, secure a guide and a canoe, and if you know anything at all about casting a fly and playing a fish that knows how to fight, above all if you can appreciate a foeman worthy of your steel, you will long cherish a fond remembrance of your visit to the home of the ouananiche. But go loaded for bear, and by no means forget to have with you a few extra leaders and tips.

I have just seen an afternoon's catch of Lake Edward trout brought to town yesterday by two Quebecers. It weighed 50 lbs. in all, and included six fish of 4 lbs. each and upward, and all beautiful specimens of the true *Salmo fontinalis*.

Salmon fishermen are passing through Quebec almost daily on their way to the famous streams of the North Shore or of the Baie des Chaleurs. Messrs. Alec. Denistown, of Edinburgh, and T. B. Cartwright and Hope Brooke, of England, are here now on their way to the Mingan River. Mr. Walter Brackett, of Boston, the famous painter of fish pieces, who is also an artist at killing the salmon, left to-day for Tadoussac, to fish his pools on the Marguerite.

If the Canadian Parliament adjourns early enough, Lord Stanley, the Governor-General, will join his family at Stanley Cottage on the banks of his salmon stream, and there Prince George of Wales will be again their Excellencies' guest. There are at present upon the Caspédia River R. G. Dun, of Dun, Wiman & Co., New York, and Mrs. Dun, E. W. Davies and Mrs. Davies, C. B. Barnes, F. Nicholls, C. E. Strong, G. Hecksher and J. N. Skelton.

Dr. Green and G. F. Smith are fishing the Bonaventure River; B. Dutton, of Boston, the Little Pabos; Thos. Murdoch, of Chicago, the York River, and J. C. Tappin, H. A. Tappin and C. L. Tappin, of New York, the Dartmouth.

Sir Charles and Lady Hunter are at Gaspé, and the Grand Pabos is being fished by Brent Good, president of the New York Lyceum Company and by H. Newton, Geo. M. Hard, G. H. Richardson and others.

Mr. W. C. Whitney, who was Secretary of the Navy in the Administration of President Cleveland, passed through Quebec yesterday, accompanied by his brother-in-law, O. H. Payne, and Mr. M. H. Hanna, on his way to the Godbout.

Mr. Harry Sanford, of New York, returned yesterday from Chicoutimi, where he has enjoyed some splendid trout fishing.

E. T. D. CHAMBERS.

QUEBEC, June 19.

A BOOK ABOUT INDIANS.—The FOREST AND STREAM will mail free on application a descriptive circular of Mr. Grinnell's book, "Fawcett Hero Stories and Folk-tales," giving a table of contents and specimen illustrations from the volume.—*adu*.

DOGS THAT CAUGHT CRABS.

I HAVE seen mention in the FOREST AND STREAM of one dog that caught suckers and another with a preference for catfish. It seems a singular thing for a dog to develop a taste for fishing, but then the accomplishments of the good all-around dog are many, and I feel sure he has one or more surprises to spring upon us one of these days. I do not for a moment doubt either of these dog-fishing stories, for I once knew two dogs that took great delight in catching crabs, not soft crabs, but lusty, hard ones, capable of making a good fight.

When about twelve years of age I used to spend my vacations at a large farm on a tributary of the Chesapeake Bay. Besides myself there was another boy and two dogs at this house, the other boy, like me, staying for his vacation, while the dogs were permanent members of the family. One of the dogs was a large Newfoundland, as all black, shaggy water dogs are commonly called, and the other was one of those medium-sized, puzzling combinations of short hair and no particular color—probably an all-around dog, at least as far as concerned his breeding. One day I noticed the large dog wading about in the shallow water at the foot of the yard and evidently searching for something. I found that he was looking for crabs. When a crab was discovered he would prance around it, and after making several attempts seize it in his mouth and bring it up on the beach, and then play with it, much as a cat does with a mouse, until the poor crab was either dead or helplessly exhausted. He seemed to do this for the mere sport of the thing, barking all the time in a tone that denoted excitement rather than anger. He never ate the crabs after killing them. The crabs fought back to the best of their ability, and it was often difficult to say which had the tightest grip, dog or crab, for the crab would fasten on to some portion of the dog's mouth with both of his powerful pinchers and it would require much shaking before he would drop off.

Here was a great find for us boys. Some distance below the house was a small cove. Here, secure from observation, we would dip up crabs in a net and turn them out in the shallow water of a sandbar for the dogs to fight. The smaller dog had no great love for the water, but he was of such a pugnacious nature that he readily took a hand at the game when he found there was fighting in it. We soon had him initiated. As for the larger dog, I think he picked up the accomplishment through diving after stones and oyster shells that were thrown into the water for him.

I must confess that I am now ashamed of the part I took in this useless destruction of life simply for the amusement of two boys and two dogs, but it is hardly fair to hold a boy responsible for all the misdeeds opportunity and the devil suggest.

W. L. HALL.

FISH OF MAINE WATERS.

THE trout season in northern New England and Canadian waters is at a standstill for the present. The black flies and mosquitoes have the field. Sportsmen lately returned complain bitterly of their fierceness, and say they have never seen them worse. Mr. N. G. Manson, Jr., who has just returned from Richardson Lake, Me., where he has been to superintend the erection of his camp on Cherrytree Point, found the flies remarkably bad, with mosquitoes far too plenty. He went with the view of taking in some fly-fishing also, but the flies kept him from trying but one day, and that a cool and rainy one. Then he found trout abundant and rising freely, but he and Oscar Cutting were driven from waters and into the camp, after catching fourteen trout in a few minutes' fishing. He finds that his lot is better and more sightly than he at first supposed. Back a few rods from the water he will get an elevation of some 30ft. On this ridge he proposes to set his camp.

The landlocked salmon season is proving to be a remarkable one in all of the Maine waters. The catch at Sebago was a good one, with some large fish. At last it has been established that there are landlocked salmon in Moosehead. The Commissioners put fry into these waters six or seven years ago, but since that time very little has been seen of them. Indeed it had come to be a popular belief with sportsmen visiting Moosehead annually that there were no landlocked salmon there. But the success of Mrs. Barber, of Madison avenue, New York, who has been there with the Rev. Dr. Van Dyke, has changed the notion. She has landed a landlocked salmon at Northwest Carry that weighed 4½ lbs. This salmon, as suggested above, must be about six years old.

Mr. Baeman, ex city architect of Boston, naturally feels very proud of his landlocked salmon, mention of which has already been made in the FOREST AND STREAM. He feels proud of it because it is the largest fish of that species that has ever been taken below the Upper Dam—8½ lbs. He feels proud of it because he took it with a fly, since the theory has all along been that landlocked salmon would not rise to the fly, neither in the Rangeley Lakes nor in the Sebago waters, though rising freely in the proper season at other Maine waters. Commissioner Stanley has always persisted that landlocked salmon would rise, under proper conditions, and now it is proved that in the pool below the Upper Dam they will rise. Mr. Bateman at first supposed that he had a big trout on his hook, and indeed continued to think so till the huge fish began to make tremendous rises out of water and into the air. An excited eye witness suggests that the fish went out of water 15ft. at a lunge. When Mr. Bateman found that he had a salmon on his fly, in his own words, it took the strength all out of him. When the fish was landed, after a fight of over an hour, Mr. Bateman was a happy man. It proved to be a male fish, with a tremendous hook on the lower jaw, indicative of the breeding season. It was shown in Appleton's window in Boston, and is to be mounted.

In the upper Rangeley waters also they are getting landlocked salmon. Judge W. P. Whitehouse, of Augusta, Me., is ahead with a salmon weighing 10½ lbs., which fish gave him a most remarkable fight. It also beats the record of salmon in Rangeley waters. He came out of the water four times before yielding to the rod. The wind was blowing a gale at the time the fish was hooked, and though the Judge is an expert with the rod, it seemed as though he was to be beaten. Reports say that it was two hours and fifty-five minutes from the time the fish was hooked till he was landed. Mr. Whitehouse also took a 4½ lb. salmon, and another of the Timberlake party took one of 4 lbs.

Commissioner Stanley is reported to have said that nearly twice as many landlocked salmon have been taken at Weld Pond this year as usual. A young lawyer from Dixfield has taken one weighing 6½ lbs., and others have done almost as well. In this connection it will not be out of place to say that the commission has planted about 100,000 landlocked salmon at Sebago and Rangeley this year. The clubs at Rangeley and Lake Umbagog have raised some 300,000 trout, and these the commissioners have assisted them in planting. At Orland the Government has about 150,000 young salmon. These will be kept till one year old, or better able to take care of themselves, and then they will be turned into streams in the State below the pulp mills, or at such points as to be out of the influence of the deadly pulp chemicals. The interest in fishing in Maine waters is increasing very rapidly, and something must be done to keep up the supply. Commissioner Stilwell feels very badly about the attitude of the pulp manufacturers in regard to the salmon interest. He is better pleased with the results of the salmon fishing at Bangor this year than last, however.

Mr. John Fottler, Jr., of Boston, and secretary of the American Seed Trade Association; Alden Spear, president of the Boston Chamber of Commerce, and Mr. W. Barbour, of New York, have gone salmon fishing on a tributary of the St. John, at Gaspé, P. K. They will be absent several weeks, and expect to find some excellent fishing. The salmon stream is a noted one, controlled by Mr. Fottler and Ivers W. Adams. They are soon to erect commodious camps and make other improvements.

The members of the Kineo Club have returned from their annual trout fishing trip to Moosehead. They are thoroughly browned from the effects of their outing, and report a splendid time, though the fishing was not quite up to their expectations, especially the fly-fishing for brook trout.

SPECIAL.

A NEW MINNOW BUCKET.

A NEW and ingenious minnow bucket has been patented by Mr. Thos. M. Darrah, of Wheeling, W. Va. The contrivance consists of two buckets, one contained within the other. The outer has no peculiarities. The inner is of perforated sheet metal or wire-cloth, with a hollow compartment or air-space above. This air-space causes the bucket to float, and when the angler has reached his

fishing grounds he sets it into the stream or lake and it floats on the surface while the water passes freely through it. A false bottom is raised by rods, which pass up through the air-chamber portion; by this means the minnows are lifted up to the top of the water and there you have them for selection. Still another and smaller receptacle is hinged to the minnow bucket and fits snugly within it; this is for crawfish or frogs. Altogether Mr. Darrah's device is handy, compact and calculated to add materially to the fisherman's convenience. With an aerating attachment the thing would be complete.

SURPRISES WITH TROUT.

A BROOK TROUT thirteen inches long is somewhat pretty nice. While not exactly rare, such catches are much less common than generally supposed. When an enthusiastic disciple tells of a recent big catch, "several of them running over a foot," unless you know the man—know him tolerably well, in fact—it will be safe to set the limit at 11in. Of course, it will often happen that, knowing the man, one will be inclined to discount an inch or two more. A funny thing about these whoopers is that they are often taken from whence least expected, and by means of apparatus in whose company the angler, properly so called, would feel very uncomfortable.

The other day a little urchin hooked a 13-inch trout from a raceway running through the heart of this largest village in Orange county. Like a true son of Yankeeedom, the lad took the unexpected as a matter of course. Plenty of scientific anglers will repeatedly during the season whip our trout-abounding streams without landing anywhere near so fine a fish. Yet look at the boy's gear. Not the little birchen rod and horsehair line of the simple urchin, but a last year's bean pole, a few yards of eel line, with a hook of generous dimensions, the lure being a fat angleworm. An onlooker of betting proclivities would have been willing to stake gold against copper that no fish of sufficient ferocity to tackle that formidable bait ever ventured into the artificial waterway.

The writer's experience admonishes against wagers of this kind. I was under eight when I took my first trout. He was a large one and pulled so violently on the line that I let him have it; however, the fates had it that he should not escape. The scene was a farm in May many years ago, where unmixed with drudgery life was full of joyous incident. A streamlet ran within a few yards of the kitchen door, the flow from a few near by springs. At a boggy spot an old log lay half buried in the soil; under this the water passed forming a deep hole which swarmed with minnows.

One day I lay upon this log fishing for chubs with hook and line but no pole. The line was a three-stranded braid

of grocer's wrapping twine. The hook was a largish one, and as the game were small, I had to depend on sight to tell when one of the nibblers took hold of the bait in just the right way. The current kept drawing the bait under the log, where finally a fish "as was a fish" seized it.

After the first tremendous jerk the line was still. I had distinctly seen the whisk of a broad tail, but not knowing the anatomy of that animal I thought I had hooked a muskrat. I lowered my face almost to the surface of the water to look under the log. To my horror I beheld a great fish darting, as I thought, straight for my nose. I threw back my head with a yell that brought my mother on the scene. The string had slipped from my hand, and a rod or two further down we discovered the splendid fish turning and struggling among some prunings which had been thrown into the water and in which the line had become tangled. Encouraged by my mother I waded in and secured my first trout. I never saw another trout, large or small, in that stream.

A short distance from where I lived the main brook that ran through the hollow was crossed by the highway, and here on almost any day throughout the summer several large trout might be seen leisurely pulling against the stream in the deep water under the bridge. These trout utterly disdained the baited hook. When it came near them they quietly moved aside. Throw a stone at them and they darted into the wall of the bridge, only to appear a few minutes later further down, gradually working up to their favorite position.

I had spent a great many hours the previous summer watching the maneuvers of these mysterious trout. Shortly after the capture of the big trout as above related, I secured a pole about as flexible as a railroad tie. Having lengthened my braided line I tied it on and went to the bridge. The water was slightly roily and in greater volume than I was accustomed to see. Trout were discernible under the bridge, but I saw several just below. Standing on the bridge I baited in plain sight and lowered the pole almost perpendicularly. As the bait approached the group of fish one of the largest leisurely moved forward and took it. An instant later he was wriggling in the dusty road. I never was able to do it again, though I tried many and many a time.

One more and I have done. "It was in the bleak December," or possibly November. The frost had not yet struck into the ground, although the air was cold and flurries of snow had already made their appearance. The owner of the adjoining farm was a spiritualist, and under the guidance of mediums had sunk a number of shafts in quest of minerals. Not far from the line fence one of these was begun, but had to be abandoned on account of striking a spring. The result was a wide pit with several feet of water, which had an escape under ground and appeared again in a spring further down the slope. Of course this was no place to fish, but I was just wise enough to know that the principal reason why I was so forcibly enjoined against going to the place was fear that I might fall into the water. My father was plowing in the adjoining field when I cautiously approached the pit and looked down. What I saw did not much surprise me; indeed it rather served to strengthen certain private convictions of my own. On the yellow sand through which the water was bubbling lay a large black trout. I ran home for my tackle and got the fish with the first cast.

Hurrying to my father I exhibited the trophy in triumph. He was incredulous, and leaving the horses accompanied me to the pit. After hearing my explanation he took the fish from my hand with an expression of disgust, flung it into the midst of a patch of briars, and without comment returned to his work. I never quite understood whether he disbelieved me or thought there was something uncanny about the trout, which was strangely dark-colored, owing probably to some property of the water.

How did the fish come to be there? Possibly he managed to wriggle from the talons of some bird of prey and chanced to reach the water before being retrieved. The fish hawks frequently drop small fish on which no trace of talons are visible.

B. F. HENLEY.

PORT JERVIS, N. Y.

R. R. GUIDES AND FISHING RESORTS.

Editor Forest and Stream:

On May 11 there appeared in the New York Times a letter over the signature of a Mr. Gardner Ladd Plumley warning the public against our sporting book known as "Fishing and Shooting." It is the aim of this company to give reliable information to the public and not to publish anything that is liable to mislead them. Mr. Plumley called here before he rushed into print with his grievances, and I explained to him that if the information as given in our guide book was wrong and we could be so convinced, we would only be too glad to change it in subsequent issues of the book; but in order to ascertain how near correct he was I wrote to our general passenger agent, who in turn referred the matter to a Mr. W. R. White, barrister at Pembroke, Ont., who lives in the immediate neighborhood of Bissett's Creek, and who is a noted sportsman and thoroughly familiar with all the streams in that part of the country, and I beg to give you below his reply:

Mr. O. McKay, Company's Agent at Bissett's Creek, has asked me to write you respecting the enclosed file of correspondence. I have fished at Bissett's Creek with a friend for years back and have always had very good sport indeed. It may be a little over the mark to say the trout average a pound, but I have taken a great many trout weighing a pound and over a pound. The majority of the trout run from half a pound to a pound. I am speaking now of the waters within two or three miles of the station. Some seven or eight miles further up the creek trout are frequently taken over a pound, so that the average in taking the whole stream into consideration may be taken at about a pound. I do not know who Mr. Plumley's Pembroke correspondent is, but this I can say, namely, that Mr. J. H. Burritt, barrister at Pembroke, and myself have done more fishing in Bissett's Creek than any one in this vicinity, and Mr. Burritt will if necessary correct or te my statements. Bissett's Creek is not a small wooded brook from 12 to 20ft. wide, but is a good broad rushing stream that in Ulster and Sullivan counties would no doubt be called a river. I should say the average width of the stream would be from 50 to 150ft., with good rapid-flowing shallow water, with deep pools, and much plenty of room to make as long a cast as I am satisfied Mr. Plumley would wish. If Mr. Plumley is really desirous of getting hold of monstrous trout, which seems to be his aim, you can say to him that the waters round here are fairly packed with them, many of them weighing 2 to 4½ lbs.

From this you will readily see that the party to whom Mr. Plumley addressed his letter has evidently been trying to mislead him.

E. V. SKINNER, Gen. East. Agt.

OFFICE CANADIAN PACIFIC RY. CO., NEW YORK, JUNE 20.

CHICAGO AND THE WEST.

CHICAGO, Ill., June 17.—From this time on it will be illegal in Illinois to take fish through the ice with hook and line. The "ice bill" has passed and is a law. So far as can be learned in the confusion at this date, the Legislature having adjourned only last Saturday, the "ice bill" seems to be the only fish or game bill that got through, although the synopsis of bills passed mentions "No. 202; the fish and game law."

Now, this "ice bill" has a history. Nobody has heard much about it, because very little has been said about it, for obvious reasons. The "ice bill" was a FOREST AND STREAM bill, and it is now a FOREST AND STREAM law. The first of last January an article appeared in FOREST AND STREAM describing the butchery of game fish perpetrated every winter by the ice fishers of the Fox Lake region, and giving chapter and verse about it. No other paper had ever turned a hand to stop this butchery. The matter was brought up before the Fox River Association. Dr. Bartlett admitted that he had had no idea of the extent of this outrage. Mr. Hertz gave further details as to the extent of the outrage. The result was that a bill prohibiting ice-fishing in this State was quietly drafted a little later. No flourish of trumpets was made, but this bill went to Springfield in the right hands. Every member of the Illinois Legislature had a copy of FOREST AND STREAM in his hands containing the story of the ice-fishing investigation. Coroner Hertz is an ardent fisherman and sportsman, prominent in Fox River Association always, and unselfishly interested in the protection of fish in the Fox Lake country. He has friends also in the Legislature, and so had other friends of the bill. Senator Knopf and Mr. Wilk, of the House, both labored faithfully for this measure, and as a total result it passed, much to the enthusiasm of that faithful commissioner Dr. Bartlett. Immediately upon the fact being known, the latter at once wrote Mr. Geo. E. Cole, president of the Fox River Association, as follows:

STATE OF ILLINOIS, 37th General Assembly, House of Representatives, Springfield, June 12.—Friend Cole: Bill No. 202, "Fishing Through the Ice," just passed, and I write this from reporter's gallery. They are now considering the Chicago three mills tax bill, and in great confusion. Net results of season's work, appropriation same as last season and fishing through the ice bill passed. That is all. For past two days it has been very doubtful whether general appropriation bill, in which our appropriations are, would pass, but after two conferences it finally went through. I will try and be in Chicago on Monday or Tuesday. I must get a day's rest; I have been up night and day for the past week here. Very truly,
S. P. BARTLETT.

Here is a case where FOREST AND STREAM scented and located an outrage on good sporting morals in this region. investigated it, and led the way by reforming it by way of the law. After able men have secured the passage of the law, the very existence of the bill having in the meantime been kept a secret, FOREST AND STREAM again takes a hand, and scoops its competitors by publishing the news of the passage of the bill, something no other paper, even the dailies, seems to have dropped on to at all. The history of the ice bill is no discredit to this paper, especially as this seems the only protective measure passed by the Legislature this year. It's a little tough on the other papers, but aside from that it is rather a matter for congratulation.

And now will our friend Geo. Clark, on Lake Maria, and Mr. Paddock, and Mr. Savage, and some others who fish for the market in winter and sell tough accommodations to anglers in the summer, please roll up their lines and listen to law where they wouldn't listen to reason? I hope some of those fellows will fish ahead next winter, for I want to see them jerked galley-west for it, as they will be if they try fishing through the ice again. The lakes will be watched next winter.

Thus there will be cut off—for this form of lawlessness is easily detected and easily stopped—one of the very greatest and gravest sources of destruction of fish in the Fox Lake system. The little visit to Lake Maria last January was worth the while.

So much for practical protection around Chicago, and so much for those who cry out against the difficulty of doing anything in such matters. It is true, the sportsmen did not get their game bill through after all their fight with South Water street, but they may win another year, and there ought to be no let up. The sportsmen are gaining ground every year, and they will win their fight.

It would be almost stereotyped to credit the Fox River Association with the success of the Ice bill, but after all is said, it is there that the credit belongs. Let me add a few letters from their warden, Mr. Buck, to show further what protection can do toward practical protecting. The Burton's Bridge seining was reported to the writer, who carried the report to Mr. Cole, who ordered Mr. Buck to investigate. The latter wrote as follows:

ELGIN, Ill., June 3, 1891.—Mr. Geo. E. Cole, Chicago: I have just got home from up the river and the lakes. I heard they were spearing fish and went to see what there was in it. They are using grab-hooks at McHenry Bridge, Burton's Bridge and Cary R. R. Bridge, and the men and boys whom I saw using them said they had not seen a spear used or a jacklight on the river this summer. I did not hear of a seine being used, and there are lots of men along the river that would tell me if they had heard of any seining. The fishermen along the river and at the lakes say there was never as good fishing or as many good fish caught as this year, and give the fishways the credit of it.—F. L. BUCK.

ELGIN, June 6, 1891.—Mr. Geo. E. Cole, Chicago: Your letter just received. They have the fishway at So. Elgin done. I just returned from there. That finishes the river. I suppose you saw my report in regard to Rock River. At all of the places they agreed to put in fishways just as soon as the water went down a little so they could go at it. I think from what I hear there has never been as good fishing on Fox River as there is now. There has been some complaint of seining down around Aurora, and I have been down there three times and got no evidence of actual seining. I will go up the river to-night and see what there is to the report of seining at Burton's Bridge.—F. L. BUCK.

ELGIN, June 8, 1891.—Geo. E. Cole, Chicago: Friday I went back up the river and gave the matter of seining a thorough investigation. There has been no one seining in the river, but I heard they had been seining in some of the small lakes near the river. One party of four went to Griswold's Lake, which is near Burton's Bridge, and were going to seine it, and Mr. Muzzy, who owns most of the land around the lake, made them leave. He did not know any of them, but said they came from Palatine. He said that he had heard they had been at Swan Lake and Diamond Lake, but that is as far as he knew. I shall go this week around all the lakes in Lake county and see what I can find out. I

will go on horseback and get all the information I can.—F. L. BUCK.

In all this there should be encouragement for those interested in the growth of protection of fish and game, and the more especially for the young Kankakee association. The latter, for a youngster, is feeling very cocky these days. Next week, in all probability, Dr. Bartlett, Mr. Cole and Warden Buck will run the Fox and Illinois rivers from top to bottom, inspecting the fishways. As soon thereafter as Mr. Cole can get away, the Kankakee association's fishway committee will run that stream and see what they can do on that stream to help matters. It will be a pleasure to have something to say about all this work, just as it is a pleasure to have something to speak thus cheerfully to-day of the condition of fish protection in this region. Out here we believe that we are doing pretty well on fish matters. On game protection we have not so much to show, but it is probable that the two associations at present most prominent in this work here, the Fox and Kankakee River associations, will eventually with aid of the Illinois State Sportsmen's Association be able to accomplish a great deal in protecting the game birds. The protective sentiment is growing in this region for some reason or another.

June 18.—The Fred Taylor party mentioned earlier have returned from the Little Oconto. They are said to have taken between 2,000 and 3,000 trout.

From a Wisconsin paper that "a party consisting of Vet Graves of Appleton, Otto Kuemstead and F. C. Charlesworth caught 2,881 trout during a week's fishing in a stream near Kaukauna."

A gentleman connected with the Big Four road came down last week with a box of trout that curled everybody's hair that looked at them. There were several which weighed over 3 lbs. each and the total average was away above 1 lb. This box of trout has caused trouble in the minds of two well-known railroad men of this town, and to-night or to-morrow these two will head north after some of those big trout. They will not divulge the locality, but say if I wish to go along I can do so. It seems that the first railroad man told everybody but his fellow railroad men that he got these trout about 1,000 miles from where he really did catch them.

Last week Messrs. Gammon, Nicholls, Cribben, Thompson and Gowenlock got back from their muscullonge trip to Lake Vieux Desert. They report the best time they ever had. They got seven muscullonge, one running as heavy as 2½ lbs. Charlie Gammon got one 52 in. long and thinks it weighed over 30 lbs. They brought home over 900 lbs. of fish, the bass, wall-eyed pike and pickerel being very abundant. They had bad weather.

Yesterday two heavy muscullonge, I should think over 20 lbs. each, were on exhibition in front of the Wisconsin Central city ticket offices. They were caught in Fifield Lake, where no lunge had been known to exist.

E. HOUGH.

NOTES FROM SYRACUSE.

Editor Forest and Stream:

The glory of the New York State Sportsmen's Association for the Protection of Fish and Game seems to have departed. It is now nothing more than an organization for trap shooting. In its better days it exerted much influence in the work of protecting fish and game, and now that it has many children throughout the State who are doing excellent work, it ought to be stronger than ever. The father has deserted the children, and the only hope now for the procuring and enforcing game laws is in the children. The State Association is worthless. Ought not a new association to be organized, with the one purpose in view of protecting fish and game and to aid in propagation? Ought there not to be a general head, with local associations as auxiliaries? Thus a very strong organization could be made, and inestimable good accomplished.

But it may be that the new president of the Association, Horace White, of this city, will reorganize it and restore it to oldtime usefulness. He is a young man, energetic and persevering, and knows the necessity which exists for giving the Association new life.

There is now excellent fishing in the vicinity of Syracuse. Game protectors have of late rendered faithful service, and anglers bless them for it. Oneida Lake, twelve miles to the northeast, has no superior and but few equals for breeding. Large catches of pike, pickerel, perch and occasionally a muscullonge and other fish, are made. Indeed, the fishing has not been so good in many years. Skaneateles Lake, twelve miles to the southwest, 500 ft. above the city, has yielded up many fine salmon trout. This lake is sixteen miles long, with an average width of about a mile, and very deep—600 ft. at one place of measurement. The southern end of it lies between high and precipitous rocks. The water is very clear and cold, a fit home for the trout family.

Onondaga Lake, north of and near the city, will soon afford excellent bass fishing. It empties into the Seneca River, through the waters of Seneca and Cayuga Lake pass to Lake Ontario. Perhaps no better bass fishing can be found anywhere than this river affords. Chief Justice Ruger, Justices Andrews and Vann, of the Court of Appeals, and County Judge Northrup think so, and none know its choice places better than they.

The trout brooks of central New York have been more than ordinarily prolific. In fact, it is a season of surprising "luck" for anglers in all waters.

As the season of vacation approaches, it is apparent that an unusually large number of Syracuseans will go to the Adirondacks, not alone for pleasure, but for the healthful benefit to be had there. Nature offers every inducement to partake of the health and strength-restoring remedies so pleasantly and freely offered there. The season thus far—and the most promising part of the season is over—does not offer unusual inducements to the angler. It has been very dry, and the streams, rivers and lakes reached their minimum depths very quickly, and became warm so speedily that trout seemed to lose their bearings and failed to spend the usual time near and upon rapids, where they are always looked for during a few days in the spring. The black flies are there just the same, however, and will hold possession until early in July, when their number will rapidly lessen daily. How that great forest will be thronged with people in August! And as they contemplate their surroundings, how they will wonder that people can be content at Saratoga and other places where dress is of the first necessity.

Of course, the St. Lawrence River is a favorite resort for Syracuseans. It is but four hours distant and the rail-

road fare is cheap. But the fishing is not now what it once was. Last season fish were scarce where years ago they were most plentiful—and there will continue to be a scarcity so long as net fishing is allowed. The great hotels along the river are anticipating the coming of more people than ever before. Since the New York Central management possessed itself of the Rome & Watertown R. R. attention has been paid to making time tables for the convenience of the public. During July and August and a part of September a vestibule train is to be run direct between New York and the Thousand Islands. Such a train will also be run between Buffalo and the Islands, via Syracuse. The St. Lawrence River is unusually low for this season of the year. Do you believe in the theory that more water runs underground from Lake Ontario to the ocean than that which passes through the St. Lawrence? It is said that this theory is made a fact by estimating the quantity of water which Lake Ontario receives and calculating the quantity which the river discharges. The difference is made the basis for estimating the dimensions of the subterranean channel. I have never seen this channel, therefore I do not affirm the truth of this scientific theory. The most striking proofs which I have seen of scientific averments in relation to the river is the effect of supposed glacier action upon the rocks which constitute the foundation in the water of nearly all of the islands. These show unmistakable signs of smoothness, which comes from both heavy pressure and movement, as of a glacier sliding slowly along. And still another theory may be interposed. We are told that time was when the water of that river was two hundred or more feet higher than it is now; so high that there was no Niagara Falls, perhaps; at a time in the long gone past when there was a mountain barrier at Little Falls, that interesting place on the Central and West Shore railroads, a few miles east of Utica; at a time when the present site of Syracuse was 150 ft. lower than at present, as shown by the discovery of a cedar log at that depth while putting down a salt well. But I am trenching upon a subject to which there is no end.

The drought experienced throughout the State, and particularly in central New York, has been disastrous in almost every way, incidentally to hunters and yachtsmen, neither of whom have had their usual sport. Until within a day or two, the entire rainfall since April 1 was not a quarter of an inch. Farmers have suffered severely, and discomforts because of a want of rainwater in the household have been widely experienced. But if "one extreme follows another," what shall we anticipate for July and August? DACL.

SYRACUSE, June 20.

CANADA'S TAX ON AMERICANS.

ROCHESTER, N. Y., June 20.—Editor Forest and Stream: I have just returned from a week's muscullonge fishing in Rice Lake, Canada, and noting Mr. H. S. Chandler's communication in a late issue on duties on rods and guns, I would mention that I had a long talk with one of Canada's customs officers, and there is no duty on rods, especially as there were at least a dozen rods on the same boat with us and there was no notice taken of them by the officers. There is, however, a duty on guns and ammunition of 15 per cent., and this officer said he had never known of a case where the amount had been refunded. There is also a charge of \$5 for each rod before allowed to fish in any of the inland waters. The one I have reads thus, "The holder of this permit is allowed to fish in Rice Lake and tributaries from 16th of June to end of season (Jan. 1, 1892). Not transferable." Signed Charles Gilchrist.

I would say that this permit was \$2 per rod (or man) up to 1889. Last year and this year it is \$5.

DEE ARR ESS.

ST. LOUIS NOTES.—A St. Louis fisherman recently caught a 6 lb. carp in the Mississippi River. The United States Fish Commission some time ago stocked the river, and the recent catch is the result of that effort. The late Illinois Legislature passed a bill providing for the punishment of any person hunting upon the premises of others without leave. St. Louis sportsmen should beware of the irate farmers who had the bill passed. Word comes from our neighboring town of Springfield, Ill., that the Spring Lake Shooting and Fishing Association has purchased at tax sale 5,900 acres of land for \$3,000 twelve miles south of Pekin, Ill., and will buy 9,000 acres at private sales to make the grounds 15,000 acres in extent. This is the same venture I noted some weeks ago. Heavy rains and high waters have prevented any angling for the past two weeks with rod or line.—ABERDEEN.

NORTH WOODS NEWS.—North Woods, N. Y., June 22. More large trout have been caught this year than for years before, while trout from 1 to 3 in. long can be dipped up in a landing net, so numerous are they. Several broods of young partridges are in the woods near this place. Eight or ten deer have been seen loafing around here. One was seen within ten rods of Harris Odit's house. Two bears were killed by the Flansburg boys during the last six weeks. The rain of a few days ago put out several forest fires, which threatened a number of square miles of hardwood forest. There is a deal of hard feeling against the Adirondack League by the natives of this country for prohibiting hunting or fishing on League lands.—WOODCHUCK.

PIKE COUNTY, PA., NOTES.—Under date of June 16, Hon. Henry C. Ford, president of the Pennsylvania Fish Commission, has written that the trout streams of Pike county are all too low for good fishing, owing to the drought. Black bass are not yet biting freely, and will not do so until after July 10. Mr. Ford caught two in one day, weighing 3 and 2½ lbs., and one of 4 lbs. on another day. The upper Delaware is alive with shad, which have ascended as far as Hancock, N. Y. Every pool in the river is full of them, and Mr. Ford has seen them disporting by hundreds. Mr. Van Gordon saw them in the river above Port Jervis.

PLEASANT LAKE.—Editor Forest and Stream: In the article on Pleasant Lake, N. H., in May 20 issue, the number of trout fry placed at 45,000 should have been 25,000, the error being due to a misunderstanding on the part of your correspondent from his informant. In justice to Commissioner Hodge the correction is respectfully submitted.—BYRON.

WATERTOWN, N. Y.—We are catching a few black bass here. I picked up 9 yesterday afternoon in the Oswegatchie. Up Black Lake, 14 miles south, two boats (three men) are reported catching 72 on Tuesday last with minnows.—PACK BASKET.

Fishculture.

OHIO FISH COMMISSION.

THE Ohio Fish and Game Commission, consisting of Dr. J. A. Henshall, Cincinnati; E. D. Potter, Toledo; J. H. Newton, Newark; W. R. Huntington, Cleveland; and Henry Graefe, Sandusky, met at Toledo, Monday, June 8. Mr. Graefe is a new member, succeeding C. V. Osborn. The board was reorganized, and the following officers were elected: Dr. J. A. Henshall, president; Henry Graefe, secretary; Geo. W. Hull, chief warden; Wm. Lanz, superintendent of hatcheries.

The work of the Commission this year has been very satisfactory. In April 40,000,000 young whitefish were deposited in Lake Erie from the Sandusky hatchery, and in May 15,000,000 pike-perch were successfully hatched and planted in the same lake. The superintendent, Mr. Lanz, with his assistants lately visited Fox Island and Gros Ile, in Detroit River, obtaining a large quantity of sturgeon eggs, which are now in process of incubation; part of them in floating boxes in Detroit River and part in the hatching jars at the Sandusky hatchery. A great deal of interest is manifested as to the result of these experiments, as the sturgeon is becoming quite rare and is in great demand.

A railroad fish-car is being built for the Commission by the Litchfield Car Company in Illinois. This car will be utilized almost entirely for stocking the interior waters of the State with black bass, rock bass, calico bass, croppies, wall-eyed pike, and other desirable game and food fishes, which will be obtained from overflowed lagoons and bayous along the Mississippi and Illinois Rivers.

THE DELAWARE RIVER SHAD.—We have from Col. John Gay, of the U. S. Fish Commission, who has just returned from the station at Gloucester City, N. J., the following interesting notes on the shad. As in all the other great shad rivers, the number of eggs obtained for artificial propagation was much smaller than was expected; but more eggs have been deposited naturally in the upper waters than for many years. The shad have ascended more than 300 miles and the river has been restored to its normal condition, by means of the fishery at Lackawaxen, for the first time since 1823, and is to-day the best shad river in the country. One of the peculiar features of the run in the lower river was the large number of big female shad and the scarcity of males, followed by a long run up river before spawning. This is attributed to the low temperature during May. On account of the drought there is nothing but cold spring water flowing into the upper river and the temperature has been very low; the warmer surface water usually supplied by rains was lacking and the anglers have felt the effects of the singular natural conditions.

PENNSYLVANIA FISH COMMISSION.—Mr. George H. Welshons, the well-known newspaper correspondent, of Pittsburg, Pa., has been appointed a member of the Pennsylvania Fish Commission, to succeed Mr. J. V. Long. The Commission is now distributing landlocked salmon several months old from the Allentown hatchery. Many thousands of brook trout are yet to be sent out.

The Kennel.

All communications must reach us by Tuesday of the week they are to be published; and should be sent as much earlier as may be convenient.

FIXTURES.

DOG SHOWS.

Sept. 1 to 4.—Dog Show of the Youngstown Kennel Club, at Youngstown, O.
Sept. 9 to 11.—First Annual Dog Show of the Hamilton Kennel Club, at Hamilton, Ont.
Sept. 14 to 18.—Toronto Industrial Exhibition Association Third International Dog Show, at Toronto. C. A. Stone, Sec'y and Supt.
Sept. 22 to 25.—Inaugural Dog Show of the Montreal Exposition Company, at Montreal, Canada.
Sept. 29 to Oct. 1.—Third Annual Dog Show, in connection with the Central Canada Fair, at Ottawa, Ont. Alfred Geddes, Supt.

1892.

Jan. 13 to 14.—Second Annual Dog Show of the South Carolina Kennel Association, at Columbia, S. C. F. F. Capers, Secretary, Greenville, S. C.

FIELD TRIALS.

Nov. 2.—Inaugural Trials of the United States Field Trial Club, at Bicknell, Ind. F. T. Madison, Secretary.
Nov. 16.—Eastern Field Trials Club's Thirteenth Annual Trials, at High Point, N. C. Members' Stake Nov. 12. W. A. Coster, Secretary.
Nov. 30.—Central Field Trial Club's Third Annual Trials, at Lexington, N. C. O. H. Odell, Sec'y, 44 and 46 Wall street, New York city.
Dec. 14.—Philadelphia Kennel Club's Field Trials. Charles E. Connell, Secretary.

MASTIFF JUDGES.

Editor Forest and Stream:

In "Dog Chat" you say that mastiff judges are scarce with us. Permit me to kick. They are only scarce at shows, there being plenty in the country. It goes without saying that Mr. Mason is a tip top judge of the breed, but the American Mastiff Club seems to care for everything more than for good judges of their breed; and a certain show club and certain exhibitors prominent in the A. K. C. take trouble to advise shows that they will not exhibit if Mr. Mason judges any breed. Mr. Chas. E. Wallace is an excellent judge; I never saw mastiffs better judged than when Mr. Wallace judged at Newark show. Mr. W. N. Rolinson, of Boston, is a first-class judge; he has known more famous mastiffs of the present and of the older days than any man in America, and I can only think of Messrs. Nichols, Hanbury, Mellor and Wynn in England that may have more knowledge of this than Mr. Rolinson, and in addition Mr. Rolinson has the true "dog eye" needed in a judge. Mr. E. H. Moore judged mastiffs with complete satisfaction at Boston this year. No man living has more accurate ideas of mastiffs, or can discern merit and failings quicker, than Arthur Trickett. And Mr. Watson is a good judge of mastiffs, although I have not seen his work in that line for so long that I cannot speak as thoroughly of him as of the others; but it is certain that he could not butcher up classes as some pet judges do.

For small shows that must have one judge for all, I can point out Mr. John Davidson, who knows a dog thoroughly and cannot go far wrong. "Uncle Dick" knows more than the alphabet about pretty much all breeds of dogs and has the distinction of being the first to put C. O. D. to the front. A knowledge of the innate modesty and love of retirement of his Majesty, the editor, prevents me from en-

larging on his abilities. Out West there is Mr. Chas. E. Bunn, who has as accurate an idea of mastiffs as anybody I know of. I know he formed the truest estimate of C. O. D. of about any critic I heard, noting among other things the overdone merit of her deeply sunken eyes. Unless I am much mistaken Mr. George Wilson's knowledge of mastiffs comes in close to his most complete knowledge of greyhounds, black and tans and collies. My own opinion is that Messrs. Mason, Rolinson, Trickett and Wallace are the equals of any specialist mastiff judges in the world. Oh, I assure you, mastiff judges, and good ones, are plenty enough, but as long as some clubs estimate the capacity of a judge to arrive at sound conclusions as one of the least of his merits, his "sassiety" standing or good fellowship with them being the main consideration, we will have the uniform butcheries that have prevailed at New York for years; and as long as exhibitors vent their petty spite by boycotting a judge, even when they have no interest in the breed he judges, we will not see merit to the front until the "Evil Spirit, Bakbon" is more a public feature.

W. WADE.

HULTON, Pa., June 20.

[We wrote: "We are notoriously short of good mastiff judges, or at least those who are available."]

AMERICAN KENNELS.—I.

DUNROBIN KENNELS.

TO one who has been compelled to spend the week at a desk, a run into the fresh air of the country is indeed a treat. The leaves on the trees look greener and the grass seems brighter after a lengthy sojourn in the city. At any rate, these were my thoughts as I rattled along in the cars of the Delaware, Lackawanna & Western road up the steep grade to Summit, N. J., in company with young Mr. George Shepard Page, who had invited me to see his kennels. The journey did not seem long—it never does when one meets a

the wire partition meekly lowered his head between his forelegs and waited to be scratched. I scratched him, enjoying the novel sensation as much perhaps as the coon, but from different motives, while Lufra looked on in disgust, and elevated her lips with an expression that boded ill for the coon did he venture outside. Sharing the coon's compartment is a skunk, whose "vindictiveness" has, happily, been rendered abortive.

Behind the house and ranged along a dense wood which affords ample shelter from the sun, are the kennels, a sketch of which, without the runs, appears below. This building has quite a rustic appearance, being built to one-half its height in rough stone, the rest and the roof is of wood covered with bark, the roof overhanging several feet. Inside I found four compartments about 10x12ft., with cemented floors, which in this weather afford a cool resting place for the dogs. About 3ft. from the floor are the sleeping benches, which run the length of the kennel, and which can be folded back or not, as desired. A flap door leads into the several yards, each of which is about 12x30ft.; then in turn open into a large room of about half an acre, half of which is dense woodland, affording a cool retreat for the dogs on the hottest day. The fences are about 6ft. high and composed of large mesh wire, not large enough for a deerhound's head to slip through, but quite so for a greyhound, as poor Charles Davis found to his cost, leaving Maud Torrington the only greyhound on the place. Along the front of the kennels and divided from the fence by a breadth of 10ft. is a high outside fence, which was made for a jumping ground, and also affords a double boundary wall, a useful thing where deerhounds or greyhounds are kept.

Maud was in the first compartment, and as she bounded toward us I thought I never saw her looking so well. As hard as nails and without an ounce of superfluous flesh, she looks fit to run any time. During the past season, though she was not in as good trim as she might have been, she held her own in the ring with the best of them. Her breeding is unknown. She is a handsome, well-made, fawn and

DUNROBIN DEERHOUND KENNEL.

man with tastes congenial, one who is fond of dogs and horses, for one never seems to tire of talking on such subjects. A kennel editor must make himself familiar with what is going on in all breeds of dogs. One moment he may have a call from a man who thinks there is no subject worth discussing but St. Bernards. To this one must he talk knowingly of the Bedivers and Plinlimmons, and enter into all the pros and cons of dewclaws, depth of muzzle and dark shadings. The office boy comes in to say Mr. Highland Chief wishes to see you—this is a greyhound man—and instantly one's thoughts must take the "curve," and long, lean heads, rib development, and all the other intricacies of a greyhound's make up are discussed, along with pedigrees and so forth, that only an expert on the breed is expected to know, and which the poor editor finds hard work to separate in the long list of breeds he is called upon to discuss in the course of a week. This is digressing, I know, but it all leads up to the subject of our chat—deerhounds and greyhounds.

The spring shows and the awards made by the different judges; guesses at the reasons for their decisions; whether such and such a dog would beget stock likely to in any way equal himself, etc., etc., all came up for discussion. We had just drifted nicely into horses and the anticipated merits of a yearling that Mr. Page has bred, in whose veins ran much Hambletonian blood, and which he is impatient to see between the shafts, when even I heard the brakeman call—Summit. We were quickly seated behind two sturdy looking trotters of Morgan blood, who showed their appreciation of the excellent roads by bowling along at a fast gait, which quickly carried us over the two and a half miles which separate Stanley, where Mr. Page's home is situated, from the station. The road has been gradually rising until, when the gates of what has been termed Stanley Park were reached, a splendid view of the surrounding country can be seen. As we drove up we were greeted by Dunrobin Lufra, who is the only one allowed the privilege of the house. This is a nice dark brindle bitch, by old Dunrobin out of Countess Zina, one of Mr. Thayer's bitches. She has nice body formation, but is rather small-sized; she boasts a pleasing and well-shaped head. She has been bred to Bruar, of whom I shall have something to say further on.

As my time is limited we make for the kennels at once, and crossing the lawn my attention is drawn to an enclosure in which two rustic looking little huts afford shelter to, in one compartment, some white rabbits, the property of a younger brother of Mr. Page's, and in the other I saw the sharp snout of a coon poked through an open window. After a little whistling his coonship trotted out, and climbing up

white bitch, and her loin now looks as strong as the proverbial "beme." Imported early this year she was shown at Binghamton, winning first, following this up with another first at the National Greyhound Club's show in February, a second at New York, firsts at Baltimore and Pittsburgh quickly followed, and then she was reserve to Gem of the Season in the challenge class at Boston.

In the next compartments we found such well-known deerhounds as Argyle, Duncan, Bruar, Alida and Bevis, all seemingly on the best of terms, though occasionally Duncan and Bruar have a little misunderstanding. I will take them in the order named. Argyle has been seen in public several times. He is by Dunrobin out of the old bitch Shelloch, and was whelped January, 1889, Mr. Page bred him. Argyle seemed in rugged health, as befits a deerhound. His excellent head, chest, loins and legs were very noticeable. Argyle's winnings are second 1890 and vhc. reserve 1891, at New York. These dogs have most of them been described in the different show reports, so that it is needless to go into their good or bad points, as this is not a bench show report but just a little friendly dog chat. Next to claim our attention is Duncan, a fine upstanding dog, with whose points behind the shoulder little fault can be found, and who is exceptionally strong in loin. He was also in good condition. Duncan is about a year older than Argyle, but claims the same percentage. He is not as good in head as Argyle. He won vhc. at New York last spring. Then I turned to Bruar II., who is a new one, and a fairly well-made dog with excellent body, legs and feet, and a good head. He is by Bruar was whelped Dec. 23, 1887, and is by Mr. Edward's Jock out of Duchess of Wellington's Lady Garry; Jock, by Edward's Gunner out of Edward's Dora Belle; Lady Garry, by Momi II. out of Lufra. This dog came from the Duchess of Wellington's kennels. He won first and special at Binghamton and third at Pittsburgh, 1891.

Alida put her nose in my hand and as I turned to look at her I recognized another of the New York entries. She is also by Dunrobin out of Shelloch and a litter sister to Argyle. She took reserve at the last New York show, second at Baltimore, and first at Pittsburgh, 1891. She is just a fair, useful bitch. Bevis, by Chieftain out of Countess Zina, cannot be said to be a credit to his sire, as he does not compare with the others.

We then turned to the adjoining yard, which contains the puppies and bitches with whelp. This is a large yard, 150 by 25ft., which runs well into the cool woods. Here we found three pups by Bruar out of Shelloch. One, a dark brindle, bids fair to have an excellent long head but is not so good in body as one of the others. There were two dogs

and a bitch, the dark one Mr. Page will raise and will dispose of the other two. Then we walked into the kennel house which has three compartments, about 9 by 12 ft., with a bed at the ends. Small doors led from them into nice sized runs. In the second compartment we disturbed an old friend, a deerhound familiar to many show goers—Olga, one of the best in the country and a member of the challenge class. Little fault can be found with this bitch, excepting that her hocks turn in a trifle. She is also by Dunrobin out of Shellock, but of an earlier litter still than any of the others. She was whelped in October, 1886. Her winnings include firsts at New York, Utica and Rochester 1889 and challenge Baltimore 1890; challenge reserve New York and challenge prize Baltimore, Pittsburg and Birmingham 1891. She was suckling two sturdy month-old pups by champion Clansman, and from this union of blood a good result is expected, and their heavy bone and lengthy heads even now seem to warrant it.

In the next compartment was what may be termed the miscellaneous class—one is a poodle which is spending the summer in this cool retreat; there were also a brace of setters and a dropper, useful-looking animals, though not of bench show form; a rather stout-looking beagle, one of Friend Phobus's noted stock, as it is by his Jupiter; a sort of a beagle-dachshund was also pointed out to me as being a terror to the neighboring rabbits and an "all-day-and-night" dozer. A St. Bernard pup by Nero P. out of Gypsy completed the list. Then we passed through the yard again to the kennel where the bitches in season are safely housed. It is a neat little frame building, having a small yard in front, surrounded by a very high wire fence. In this we found Shellock, the sturdy matron of the kennel and the "widow" of Dunrobin, whodidd last year. She was whelped in 1882, and is by Ossian I. out of Brenda. Her breeder was the Duke of Sutherland, from whose kennels also came Dunrobin. Shellock will be bred to Bruar II. Another bitch, Minna, by champion Chieftain out of champion Olga, was with her, and she will have the society of Duncan. Adjoining this compartment was the food and cook house, with cemented floor, on which stood a large cooking boiler, and the numerous barrels of feed showed that the dogs need have no care for the morrow. This about completed the list of dogs if I except a couple of "varminty" looking fox-terriers, whose yellow, muddy-looking coats showed their recent acquaintance with a woodchuck's retreat. These terriers employ their whole time burrowing for woodchucks, rabbits and rats; and, by the way, Bruar is said to have quite a penchant for the rodents, too, and shows himself as active as any terrier in their pursuit.

Mr. Page has his dogs under excellent control, and when the inmates of the large kennel were let out for a run, his cry of "All in!" brought them all obediently back to their respective kennels. I cannot leave this part of my story without remarking that the kennel floors and yards were remarkably clean, reflecting credit on the kennelman, who, unfortunately, will return, in a month or so, to England. Going down the hill we passed through the stables and cow houses, where several horses and four or five Alderney cows are kept. Then we crossed to the deer paddock, certainly an appropriate adjunct to a deerhound kennel. Here I saw three pretty fallow deer which the Duke of Sutherland presented to Mr. Page, senior. They came from the Duke's magnificent park at Trentham, England. Then we came to the poultry house, built on the same design as the main kennel, that is, roof and sides covered with bark. Fowls of several fancy breeds are to be seen. Further on down the fields we came to an ornamental duck house, set at the edge of the wood. Separate runways lead the ducks to four different ponds supplied by a mountain spring. In the first little pond were quite a number of those charming little woodducks; in the others were Muscovies, Aylesburys and Rouens. It was now time to drive to the station, and jumping into young Mr. Page's stylish sidecar, the Morgan horses trotted along gaily through some very pretty lanes and by-ways, Mr. Page handling the ribbons in good style. An hour was happily spent in catching glimpses of handsome villas and still more beautiful scenery, the drive ending all too soon with a race with the train, which I just caught. The journey home left me ample time to ruminate over what I had seen and the pleasant afternoon I had spent.

H. W. L.

BEAGLE TRAINING.

Editor Forest and Stream:

What is a perfectly trained beagle? Is he a dog that is under control, or is he a dog that disappears as soon as he enters the woods and roams at his own sweet will here, there and everywhere? In my opinion, the perfect hunting beagle should follow at heel till ordered on; he should hunt the thicket or swamp into which he is sent, and should come to his master's call at once unless he has a hot track.

One of the first beagles I ever owned I taught to "go on," "come in," "charge" and "heel." The little fellow obeyed well, and it is a fact that I never owned or hunted with a beagle that gave as much sport as he did. If I saw a rabbit, Jip would come to my call; if I wished to change my hunting ground, he would follow at heel; and many a time have I made him charge while I crawled down to a grass hole for a shot at black ducks. He was under good control unless he had a hot track, and then neither threats nor entreaties could make him leave it till the rabbit was started and held.

"Brocton," in your issue of June 4, in speaking of such a beagle as I have described, says: "They would be useless, inasmuch as they are not built for long runs, and they would be so much under control that they would get tired hunting and be looking for orders." I cannot follow his reasoning, and my experience does not justify his theory. Many a time Jip ran a fox or hare twelve or fifteen hours; he never was "tired hunting" and never "was looking for orders," but if I gave the orders he obeyed them. The comparative value of different methods of training can be learned only by matching dogs trained in different ways against each other. I hope "Brocton" will go to the next N. B. C. field trials with two or three of his best dogs. He will have a hearty welcome, fair play and a good time, and may the best dog win. To those who have had little or no experience in training beagles let me offer one word of advice—don't whip a young dog under any circumstances, and don't be easily discouraged. While it is true that some beagles will hunt when six months old or even younger, yet there are many which will not run till they are fully developed. I remember a dog which finally became one of the best hunters I ever saw, which would not hunt or even notice a rabbit till he was almost two years old. This last winter I had in my pack a couple of pups from splendid hunting stock. I took them out week after week, and the only thing they hunted for was a sunny spot and a bed of dry leaves; they took absolutely no interest in the hunt and I was discouraged. But when the season was almost over they suddenly found out what they were there for, and the way they hustled the rabbits from that time on was surprising and delightful. I hope to have one of them at the next field trials. BRADLEY.

Among the new kennel advertisements this week, we notice that A. C. Krueger has a little of everything—beagles, game fowls, etc.—for sale; Dunrobin Kennels, deerhound pups; C. K. Kent, an Irish setter bitch; F. H. Hayes, foxhound pups; H. L. Kreuder, beagles, grown dogs and puppies; Willow Brook Kennels, pointers; H. P. Fairbanks, Irish terrier pup; M. F. Fisher, a pointer; C. E. Glass, English setter pups, and P., a fine great Dane dog.

DOG CHAT.

THE National Greyhound Club is not doing anything by halves. They have just cabled the order to Messrs. Elkington Bros. of London, England, for a very much improved medal to that we spoke of some time since. The die will cost \$450, including duty of 33 per cent., and will be first-class in every respect. For the same design Tiffany's price was \$750. We also hear that the Eastern Coursing Club will hold a meeting at Bergen's Island, in November. A number of jacks have been turned down and they will be started in the natural way to avoid all clamor on the score of cruelty.

We must remind our readers that communications to insure insertion the current week should reach us by Tuesday, and as much earlier as possible. Several interesting letters are left over this week on that account.

Mr. A. D. Stewart, president of the Hamilton Kennel Club, writes an indignant letter to the Toronto *Daily Mail* about the action of the Canadian customs in regard to their new rule. It has always been the custom to allow American dogs entered for exhibition purposes to come into Canada free of customs duty, and they have also been allowed to go from show to show in bond while in Canada, so long as they were returned when the circuit was over to the port from which they originally came. This rule was a just and wise one, and gave general satisfaction, nor did any one dream for a moment that it would be changed. Upon his going lately, however, to the Collector of Customs in Hamilton to make arrangements with the customs authorities for their coming show, he learned from that gentleman that the Minister of Customs had decided to change the old rule and had issued an order in its place, to the effect that in the future, dogs belonging to a foreign exhibitor must be returned to the place from which they were originally dispatched at the close of each show at which they were entered. The consternation which this foolish law will cause among American exhibitors can be easily imagined, and no less so among the Canadians themselves, who know very well that outside of spaniels, greyhounds and English setters they can make a very poor showing, comparatively speaking. In fact, unless the law is repealed, it sounds the death knell of most Canadian shows. The principal show will no doubt receive support, but it would be too much to expect American exhibitors to undergo the expense of going home after each show. Some of them could not do it and get back in time for the next one, to say nothing of the effect it would have on the dogs. Mr. Stewart has written to all the show secretaries in Canada to make strong protests to the Minister of Customs against the obnoxious rule. He has also secured the interest of several influential members of the House of Commons and has interested Senator Sanford, himself a dog lover and breeder, in the matter, so that it is more than likely some good will result. Americans will await the outcome with anxiety.

It is not often a typical toy black and tan comes out, but when it does its praises are sure to be sung by those who understand the difficulty of obtaining such specimens. Mr. Alfred George's Perfection is said to be aptly named, for it has all the attributes of a large-sized black and tan with the minimum of size.

Several men, including Mr. E. H. Moore, have been nibbling at the smooth St. Bernard Lola IV., but she has at last fallen to Mr. Gosling's lot, after \$1,500 had been refused for her. She is only fifteen months old and has never been beaten. She is a daughter of Mr. Poag's Watch out of Lady Grafenried.

Messrs. E. H. Moore and Jean Grosvenor are reported as attending the Maldon and Leeds shows, the first named show, by-the-way, provided a special train for exhibitors, the press and judges. Mr. Moore, it is said, is holding off a bit, and certainly he can afford to. It would seem almost waste of money to try and better the stock now in this country.

Mr. Clarke, of fox-terrier fame, has lost his bitch Recherché from milk fever. She had whelped to Rational, and some of the litter is being raised by the aid of a cat and a foster-mother. There seems to be a run on the lion and the lamb business just now.

A telegram from Mr. J. Shelly Hudson, shows he is very much elated over a litter that his English setter field trial winner, Bohemian Girl, whelped on the 23d, by champion Dad Wilson. Mother and eleven pups are doing splendidly.

We hear that Mr. G. C. Cross, of Rochester, N. Y., has exchanged his cocker bitch Phyllis with Mr. J. J. Paterson, of Batavia, N. Y., for his fox-terrier dog Clincher, by Ebor's Splash (champion Splinter—Floss) out of Brokenhurst Belle (imported Brokenhurst Trimmer—imported Barmald). Though not a year old, Clincher has won first at Elmira and Canadagua.

Mr. Rutter, Jr., who is now in England, writes that he has seen nothing in the beagle line that he would care to bring over. Perhaps Mr. Krehl can put him on the right track.

The harriers that came over for the Pennbrook hunt are bench winners as well as good fielders. The following are the pedigrees of some of the more noted of the hounds: Sampler, sire Messmate, dam Skillful; Flatstaff, sire Forester, dam Crimson; Lightning, sire Flasher, dam Lightning; Whirlwind, sire Woodman, dam Egotist; Graceful, sire Remus, dam Graceful; Beneft, sire Dashaw, dam Bribery; Flourisher, sire Foreman, dam Affable; Haughty, sire Hermit, dam Remnant; Lightfoot, sire Corsair, dam Lavender; Truelove, sire Tomboy, dam Courtley.

On our way home from the Dunrobin Kennels we were surprised to see Messrs. John and Luke White board the train at Orange. They had been placing some more of the stock in their Fredricksburg laud enterprise. John White says he has some good ones for the coming trials, and Luke says there will be nothing to down a "pick up" he has spotted, which he will run in the All-Aged Stakes. It is an English setter, and though it lacks a pedigree, its nose is all right.

We understand that the Seminole Kennels, not content with securing the best collie stock in this country, have been making overtures to Mr. Krehl with a view to purchasing old champion Eclipse. Needless to say that Eclipse and Geo. R. Krehl are inseparable, both in name and reality, and the great sire of long, lean heads will end his days in England.

A new Barzoi has come out in England, Mr. K. Muir's Korotai, said by one reporter of the Maldon show to be, perhaps, the best ever seen in England. He is described as an immense white dog, with fawn markings and with extraordinary power in his loin and hindquarters. His head is exceedingly well shaped and, unlike most of the dogs of this breed, he stands quite straight on good feet and has an extra good, dense coat. He was not in tip-top shape, as he has only been in England about a fortnight. He was bred by Mr. Gleboff, vice-president of the Moscow Kennel Club.

It must be very gratifying to the family of the late Mr. William Lort to hear of the many encomiums which have

been passed upon him since the news of his death came with such a sudden shock. A writer in the English *Field* now proposes a subscription with a view to putting in a memorial window in the church, or brass in the graveyard of which Mr. Lort is buried. Such a proposition will no doubt meet with a ready response from pointer and setter men the world over.

Last week we heard of a spaniel taking to its bosom a leveret, and now in the *Field* a correspondent writes of a Sussex spaniel becoming the foster mother of a litter of ferrets three weeks old, whose mother had died. They were being fed by the keeper in a box near the fire when the bitch jumped into the box and claimed them henceforward as her own. She has not had pups lately.

The specialist clubs have been agitating the question in England to have the kennel club recognize their wins for championship honors on the same basis as those of the Kennel Club shows, the National dog show at Birmingham and the Scottish Kennel Club shows. It seems now as if they would succeed in their efforts, as an extraordinary general meeting of the Kennel Club is to be held shortly to consider the question of admitting into the present rule the sentence—"or such shows held by specialist clubs as the committee of the Kennel Club may determine."

We are indebted to a Philadelphia correspondent for the following description of the Swiss Mountain Kennels' new dog King Regent: "Hearing that a son of Prince Regent had just been received by the Swiss Mountain Kennels, I ran out to Germantown to see what he looked like. Generally one has to acknowledge a feeling of disappointment, especially so in the case of much-heralded dogs. It was therefore quite a pleasure to see something very far ahead of what I expected. King Regent is his name, a decided improvement on Mountain Jack, by which he was known in England. Grand in size of head and black facings to his symmetrical blaze, he is set off very strikingly by a broad collar and white legs and tail tip, his body color being a rich orange. Standing 33in. and scaling 180lbs., gives one about the best idea of his size. Early forcing alone stopped him from being a champion, and as his faults are not transmittable I look to a great future for King Regent, who is now only two years old. In head he reminded me very much of Hesper, while in body he has the length and size of Plinlimmon. The day before I was there he had been successfully mated with Lady Plowden, a very nice Plinlimmon bitch owned by Mr. J. F. Hall, of this city."

How the English dogs can stand the hammering they must get attending the numerous shows that are held during the summer is a mystery to those not in the swim. They certainly must be kept up artificially and consequently this must in time affect their system to such an extent that no wonder some of the dogs that have done their time on the other side, go to pieces when they come over here and feel the want of their "bolster."

Mr. Sears called upon us Thursday last and said that the great dog, of course we mean Sir Bedivere, was in fine condition now, barring his coat, which has not yet come in. We trust he may regain the coat he has lost, for this is at all ways the experience of English dogs with heavy coats, though champion Hesper proved an exception. Mr. Sears' new kennel, which from what we hear will excel anything of its kind in the world, not excepting the Sandringham Kennels in England, is well under way, most of the stone work being completed. It will, we are told, cost quite \$13,000 when completed. This is a large sum to lay out in such a building, but then we always have a respect for the man who thinks there is nothing too good for his dog.

Although the *Fanciers' Gazette* did not know that Prince Regent had been sold for America, his colored picture in their summer number comes at an appropriate adieu. We say adieu, for it is not likely that this dog will return to England again, at least not in exchange for English sovereigns. His new owner, Mr. Rieck, will, we are sure, appreciate his bargain better than that. We felt rather elated over the fact that *FOREST AND STREAM* was the first to publish the news of his sale. Prince Regent was whelped Feb. 9, 1887, and is consequently a little over four years old. Last week in our hurry to get the news in we had to write from memory. His dam, Miss Meg, although an excellent specimen, could never be shown on the bench, owing to an accident in her puppyhood, and to get something worthy of her and her illustrious blood she was mated with Plinlimmon. As the sire of Earl Roseberry, Duke of Armadale and Lady Gladwin, in addition to those we mentioned last week Princess Florence and Scottish Prince, his record is second to none. Mr. S. W. Smith, into whose kennels most of the cracks seem to naturally gravitate at some period of their lives, had a big offer for the dog from Mr. Anderson, of Chattanooga, Tenn., who wished to own one of the handsomest dogs in the world. The dog came over here, but was immediately lost sight of, so far south, one or two bitches only going down to him. Then he was sent up last summer to Mr. Sawyer, in Menominee, Mich., and last winter, after numerous efforts, Mr. Smith succeeded in getting the dog back again. His services were in such demand that he proved a little gold mine. When Mr. Smith was over here he hinted that though he did not want to "hawk" him round, he could be bought at a certain figure. At this sum Mr. Rieck cabled he would take him, money to reach Mr. Smith in one hour. The whole business, thanks to the Commercial Cable Co., was transacted in less than five hours. He leaves England next Saturday on the Arizona and will arrive about next Monday week. This dog is said to stand close on to 35in., and that he has great bone and is altogether a very typical St. Bernard we know, as we had the pleasure of seeing him when he came over in 1889. We trust that Mr. Rieck will have the success that his pluck deserves, for with the aid of a good bitch or two of the same blood from which, by the aid of Prince Regent, such grand specimens have already been obtained, he should repeat. The *Fanciers' Gazette* give an excellent colored picture of this dog.

The summer number of the *Fanciers' Gazette* makes very interesting reading. Special articles on dogs are given by several well-known men, and the "American Kennel World" is treated of by "Blemton," and this we wish we had space to set before our readers, as it is well worth reading. An excellent picture of H. Panmure Gordon, the great Mogul of the Scottish kennel world, constitutes an admirable frontispiece.

We clip this, however, from the editor's "Midsummer Night's Dream." Speaking of American buyers, he writes: "But the American demand is no new one. Some years ago we heard a story, in which poor Sandall prominently figured, that is well worth reading. An American gentleman was in Europe, and among other novelties he desired to pick up were a few tip-top Yorkshire terriers—these for a friend. Not being a judge himself, he did the best thing possible, namely, consulted a newspaper editor, who introduced him to Sandall. Nothing could suit that erratic member of the fraternity better. There was a good trip, with all expenses paid, and so the American and journalist journeyed down to Bradford, arriving there on a Saturday. But it looked as if the trip was to be in vain. American dollars were scattered afar off, and the 'point' was rigid. A happy thought came. Going to one of those houses where doggy men do congre-

gate, Sandall obtained mine host's co-operation. The word went round that a show of Yorkshires was to be held, with liberal prizes, and the chance of good sales. Accordingly, on the good Sunday evening there were gathered nearly two-score dogs, from which the required number were selected, and at a cost, inclusive of prizes and expenses, not more than had been asked for one specimen before. This much for the wit of one man."

We hear that all Mr. Heywood Lonsdale's setters and pointers will be sold at Aldridge's in July. Several commissions have, we believe, gone over from this country and Canada.

At the Leeds show it would seem as if the black and tan terrier Beaconsfield had met his Waterloo. From advice we have seen it would show that English judges are apt to make mistakes as well as the benighted Americans. At Leeds he met champion Pearl, Derby Bess, Broomfield Empress and Prince Regent, which were placed in the order named. He was, however, not noticed in the money, only getting the Field. The Field says: "The black and tan terriers are all well known. Here Beaconsfield, who should have won, met ignominious defeat; he was the best in the class." "Sirius," in *Canine World*, "He may have gone off a little, but his type cannot be ignored, and the decision was as unaccountable as it was capricious." Prince Regent is described in *Stock-Keeper* as a nice-colored dog, wanting time. He was second in the novice class. In a letter which we have seen the writer expressed his opinion that Beaconsfield had nothing to go against except Derby Bess and ought to have won. The same letter says that George Thomas and Joe Lewis were told by Mr. Ashley, the judge, that he was very sorry about it and he really could not explain it, but he missed seeing the dog (Beaconsfield) or he would have won.

At last we have heard something of Messrs. Boggs, Rutter and Lewis, who certainly since they left this country have followed out the injunction not to let their left hand know what the right is doing. They have now purchased from Mr. Edwin Powell, Jr., of Shrewsbury, several fox-terriers. They are Diver III, winner of many prizes and cups; Rowton Flirt (Rowton Drake-Desirée), in whelp to Rowton Warrant (Venio-Sentence), and a promising young bitch in Rowton Safety (Stipendiary-Hatfield Pansy). This information we learn from a marked copy of *Stock-Keeper*, kindly sent to us by Mr. Boggs. The basset Rowton Wags was also purchased.

Spaniel men in this country will be interested in the news of the death of a dog that certainly to a great extent founded the excellent strain of cockers in this country, and as a sire and prize winner exceeded all others the world over. We refer to Mr. Farrow's champion Obo. He was twelve years old when he died. His first show was in 1880 at the Crystal Palace, and his last at the Jubilee show in 1887. As an instance of his merits as a show dog he once beat all classes as the best dog in the show at Newmarket. He was invaluable to his owner, Mr. Farrow, in the stud, as he was the sire of prize winners without number. Lilly Obo, shown at the Agricultural Hall show with others from his kennel, is said to be the most typical cocker ever shown. In speaking of this dog's death *Stock-Keeper* says: "We are often being told of the grand cockers seen at American exhibitions, and we wish to take nothing from our friends across the water, but the fact remains that champion Obo is sire and grand-sire of half of their prominent winners; indeed if we go carefully through the list of American winning cockers during the past seven years, certainly 75 per cent. of them belong to this strain." Mr. Farrow would never part with the dog, and we are told that an enterprising American when he found he could not purchase him, offered \$525 for the free use of him for two years and insure him. It would be interesting to know who this was. To show what perseverance will accomplish, it is said that from eight weeks old to about seven months he was subject to one fit after another, but strange to say after that age he never had a day's sickness. He was whelped June 14, 1879, and was bred by Mr. Farrow, who also bred his sire and dam.

IRISH AND CORDON SETTER FIELD TRIALS.

Editor *Forest and Stream*:

I desire to call the attention of every one interested in Irish or Gordon setters and field trials to the fact that the clubs interested in the above breeds have just about decided to hold their trials in North Carolina, and on ground where birds are known to be plenty.

Judges who cannot possibly be said to be prejudiced in favor of one breed or another will be employed, the rules will be those that have been evolved from years of trial by the large clubs, and in every way the Irish and Gordon Setter Field Trials of '91 will be a practical way of demonstrating where the best of these breeds are. It can hardly be expected, though, that a few men, deeply interested in the success of the trials though they are, will put their hands in their pockets and provide the purse to compete for. Those who intend to run dogs and others who may not run any, but who want to help make the trials a success, should either join one of the clubs or contribute something (say \$5 to \$25) toward the purse. Unless they do, the stakes will not be worth running for. Now is the time to put the shoulder to the wheel; get your entry to work, especially if it is a Derby candidate, and send \$5 toward the trials to Dr. Davis, treasurer Irish Setter Club, Philadelphia, Pa., or to L. A. Van Zandt, treasurer Gordon Setter Club, Yonkers, N. Y.

If after all the talk there has been from all quarters about "unprejudiced juries," "our own grounds," "Irish setter trials for Irish setters, judged by Irish setter men," etc., etc., there is not a practical demonstration this year, the owners, breeders and boomers of these dogs had better keep quiet. Come, gentlemen, ante up.

YONKERS, N. Y.

KENNEL NOTES.

Kennel Notes are inserted without charge; and blanks (unfilled free) will be sent to any address.

NAMES CLAIMED.

Prepared Blanks sent free on application.

Handicap. By F. B. Zimmer's Gloversville, N. Y., for white, black and tan beagle dog, whelped June 5, 1891, by Jack Bannerman (champion Bannerman-Kate) out of Chimes (Laick's Rattler-Zimmer's Blue Bell).

Groveler and Grumbler. By D. E. Peters, North Baltimore, O., for black, white and tan foxhound dogs, whelped Aug. 12, 1890, by Dick II. out of Lady Sport.

BRED.

Prepared Blanks sent free on application.

Gertrude P.—Ormonde. W. C. Gunn's (Chicago, Ill.) mastiff bitch Gertrude P. to C. E. Bunn's Ormonde (champion Victor Hugo-champion Caubrian Princess), Dec. 9.

Elmer.—Ormonde. C. E. Bunn's (Peoria, Ill.) mastiff bitch Elmer to his Ormonde, Dec. 26.

Eadguth.—Ormonde. C. E. Bunn's (Peoria, Ill.) mastiff bitch Eadguth to his Ormonde, Jan. 6.

Lady Cobrey.—Ormonde. C. E. Bunn's (Peoria, Ill.) mastiff bitch Lady Cobrey to his Ormonde, Feb. 20.

Brantette.—Ormonde. C. E. Bunn's (Peoria, Ill.) mastiff bitch Brantette to his Ormonde, March 14.

Lotta.—Ormonde. C. N. Powell's (Omaha, Neb.) mastiff bitch Lotta to C. E. Bunn's Ormonde, April 30.

Lady Baglan.—Ormonde. W. W. Tracy's (Detroit, Mich.) mastiff bitch Lady Baglan to C. E. Bunn's Ormonde, May 1.

Theo.—Belle. C. E. Bunn's (Peoria, Ill.) mastiff bitch Theo to O. J. Reynolds's Belle, May 27.

Lady Berkeley.—Tack. M. A. Vite's fox-terrier bitch Lady Berkeley to G. R. Preston's Tack, May 15.

Twinkle.—Royal Krueger. F. B. Zimmer's (Gloversville, N. Y.) beagle bitch champion Twinkle (champion Lee-Juliette) to Horner-Harmon's Royal Krueger's champion Royal Krueger (champion Bannerman-Cora), June 2.

Lizetta.—Hundesport Bergmann. J. Roquois Kennels' (Tonawanda, N. Y.) dachshund bitch Lizetta (Malt II.—Gypsey) to W. Loeffler's Hundesport Bergmann, May 13.

Bernard Beauty.—Count. J. F. Parker's (Portland, Me.) St. Bernard bitch Bernard Beauty to G. W. Patterson's Count (champion Apollo—champion Miranda), March 8.

Lydia.—Count. G. W. Patterson's (Lake View, Mass.) St. Bernard bitch Lydia (Beauchamp—Dell) to his Count (champion Apollo—champion Miranda), March 22.

Sarah.—Count. P. Hurley's (Worcester, Mass.) St. Bernard bitch Sarah (Ben—Lady Bernard) to G. W. Patterson's Count (champion Apollo—champion Miranda), June 1.

Dell.—Count. G. W. Patterson's (Lake View, Mass.) St. Bernard bitch Dell (Everest—Sequa) to his Count (champion Apollo—champion Miranda), June 10.

Beauty.—Drum II. D. E. Peters's (North Baltimore, O.) foxhound bitch Beauty to H. E. Cook's Drum II., June 16.

Salva.—Beaufort. F. J. A. Brier's (Buffalo, N. Y.) mastiff bitch Salva (Hord Caution—Bess) to W. K. Taunton's Beaufort (Beau—Lady Isabel), June 16.

WHEELS.

Prepared Blanks sent free on application.

Cheerful Girl. Chas. Rheinhardt's greyhound bitch Cheerful Girl, May 8, nine (four dogs), by Jas. Black's Prince Albert.

Wanda II. Wm. Shumacher's greyhound bitch Wanda II., April 1, seven (two dogs), by Jas. Black's Prince Albert.

Grace Briant. Jas. Black's (Sheepshead Bay, L. I.) greyhound bitch Grace Briant, May 23, eleven (five dogs), by his Prince Albert (Maclure—Briant Lady).

Lady Teale. G. W. Patterson's (Lake View, Mass.) St. Bernard bitch Lady Teale (champion Victor Joseph—Orgar), May 23, seven (two dogs), by E. B. Sears's Plinlimmon, Jr. (champion Plinlimmon—Princess Beatrice).

Chimes. F. B. Zimmer's (Gloversville, N. Y.) beagle bitch Chimes (Laick's Rattler—Zimmer's Blue Bell), June 5, three (one dog), by R. Hillebrand's Jack Bannerman (champion Bannerman—Kate).

Vick. F. B. Zimmer's (Gloversville, N. Y.) beagle bitch Vick (Racket II.—Norah), June 17, four (two dogs), by G. Laick's Rattler (Chancellor—Cares—).

SALES.

Prepared Blanks sent free on application.

Ormonde.—Eadguth whelp. Mastiff dog, by C. E. Bunn, Peoria, Ill., to C. S. Tuley, Lyons, Ill.

Renzo. Mastiff dog, by Ormonde out of Coco, by C. E. Bunn, Peoria, Ill., to J. W. Craig, Rialto, Cal.

Lore. Black and tan dachshund bitch, whelped April 10, 1891, by Hundesport Zaenker out of Alice, by W. Loeffler, Milwaukee, Wis., to Jacob Faib, Sr., West Bend, Ia.

Hazel. Black and tan dachshund dog, whelped Feb. 22, 1891, by Hundesport Zaenker out of Lina K., by W. Loeffler, Milwaukee, Wis., to Jacob Faib, Sr., West Bend, Ia.

Ludwig. Black and tan dachshund dog, whelped Feb. 22, 1891, by Hundesport Zaenker out of Lina K., by Wm. Loeffler, Milwaukee, Wis., to Philip Conrad, Hartford, Conn.

Bavarian King. Black and tan dachshund dog, whelped Feb. 22, 1891, by Hundesport Zaenker out of Lina K., by W. Loeffler, Milwaukee, Wis., to R. L. Surtees, Brighton, Mich.

Polly. Black and tan dachshund bitch, whelped Feb. 22, 1891, by Hundesport Zaenker out of Lina K., by W. Loeffler, Milwaukee, Wis., to E. Schwarzkopf, same place.

Zanherl. Black and tan dachshund dog, whelped April 10, 1891, by Hundesport Zaenker out of Alice, by W. Loeffler, Milwaukee, Wis., to H. Harris, Rock Island, Ill.

Nero. Fawn, black points, mastiff dog, whelped August, 1890, by Berkshire Canton out of Zetta, by F. B. Zimmer, Gloversville, N. Y., to Alfred Palmer, Salem, N. C.

Tenor. White, black, tan and blue ticked foxhound dog, whelped April 10, 1891, by Tiger out of Freckled Nell, by F. B. Zimmer, Gloversville, N. Y., to J. Miller, same place.

Lottie. Black, white and tan foxhound bitch, whelped April 10, 1891, by Tiger out of Freckled Nell, by F. B. Zimmer, Gloversville, N. Y., to L. A. Helmsold, Saxonsburg, Pa.

Harkaway. White, black, tan and blue ticked foxhound bitch, whelped April 10, 1891, by Tiger out of Freckled Nell, by F. B. Zimmer, Gloversville, N. Y., to Jos. Tutz, same place.

Flora. White rough St. Bernard bitch, whelped March 27, 1891, by Ben Hur out of Silma, by Andrew Smith, Maud, Pa., to J. F. Kammerer, Germantown, Pa.

Messenger. White and orange tawny rough St. Bernard dog, whelped March 27, 1891, by Ben Hur, Sr., out of Silma, by Andrew Smith, Maud, Pa., to O. F. O'Neill, Philadelphia, Pa.

Zinet. Mastiff bitch, by Baldu out of Elgiva, by C. E. Bunn, Peoria, Ill., to John W. Craig, Rialto, Cal.

ANSWERS TO CORRESPONDENTS.

There is no charge for answering questions under this head; we are always glad to give advice on the care and management of dogs; and we shall make this a special feature.

G. W. H., New York City.—Will you please inform me where I can find parties who take dogs to board and train? Ans. Consult our advertising columns.

New Max, Albany, N. Y.—Will you please inform me how many people have died in this country in the last ten years from hydrophobia? Ans. We do not know.

A. W. G., Boston, Mass.—I have a fine pointer dog, by Beppo III, out of my Sal. This Joe is between 3 and 4 years old. He has a fine appetite, eats dog bread or scraps, but is almost always sick at his stomach after eating, throwing up a portion of his food. He has a good deal of exercise and looks well, but has this annoying habit. Can anything be done to cure him of this disease? Ans. Give the dog the prescription given in answer to R. A. A. J. in this issue.

T. G., Vineland, N. J.—Will you be kind enough to refer me to some person who deals in dogs or who sells them on commission that I could probably get to dispose in this manner some St. Bernard dogs, both grown dogs and puppies. I wish to show them for sale (or have them offered) in New York city, but know nothing personally of the reputation of the various dealers there. Ans. Your question will be answered by mail. You had better advertise in this paper.

J. B., New York.—How many persons have died in the United States of hydrophobia in the last ten years? 2. How many have died in England in ten years from the same cause? 3. A has a valuable dog who bites B, having never before bitten anybody, can B collect damages? and can B make A kill the dog? Ans. 1 and 2. We do not know. 3. No. In the State of New York it has been ruled that every dog is allowed one bite, and in any case there must be a warrant from a court before A can be compelled to kill the dog.

F. R. G., Laconia, N. H.—What shall I do for a pointer dog, two years old, that is somewhat deaf? I think it may be the effect of distemper. He is not totally deaf, but he speaks louder than to other dogs. Is obedient when he hears and a very promising dog. Ans. There is little hope of any cure, and without an examination we can hardly prescribe. Keep the dog's system up by nourishing food and provide a kennel free from draughts. Syringe the ears carefully with warm water and then examine for signs of inflammation, and let us know the result.

M. O., Annapolis, Ind.—Will you kindly inform me how the name Laverack is spelled or applied to strain of setter dogs, and whence the appellation? Also whether the red Irish setter is considered the best or favorite dog for hunting purposes. Ans. The name is Laverack, and is derived from the fact that an Englishman named Edward Laverack originated the modern strain of English setters, which was named after him. Irish setters are not thought by the majority of sportsmen to be so amenable to training as either English setters or pointers, owing to their headstrong disposition. Of course there are exceptions, and did they receive as much attention at the hands of sportsmen and trainers as the more popular breeds, they would no doubt be equally as well in the field. As it is at present the breeds mentioned are the best.

W. D. W., St. Louis Mo.—I have a great Dane dog 16 months old, imported from England last winter. What kind of food would you consider best for him in this warm climate? Would you recommend Spratts dog biscuits? 2. Can you also inform me where I could get a copy of Dalziel's work on "British Dogs"? Ans. 1. You will find either of the different kinds of dog biscuits advertised in our columns an excellent and handy food. Feed dry if the dog will eat them; if not, soak them by pouring hot water over them and feed when cooled. Vary the diet with milk

ton broth, in which vegetables should be boiled, and add rice or stale bread. Avoid oatmeal and cornmeal in summer. 2. Dalziel's "British Dogs" is out of print, but is now being republished by him in monographs, the collie, fox-terrier, St. Bernard and greyhounds are the breeds treated on so far. For an all-round book on dogs we can recommend Vero Shaw's "Book of the Dog." Price \$3. We can supply it.

R. A. A. J., Ottawa, Canada.—I should be exceedingly obliged if you would tell me of something that will set my black field spaniel dog to rights again. He is about a year old. Had distemper very badly about New Years, and has been more or less sickly ever since. He was in apparently good condition until a week ago, when he went off his feed almost altogether, and what little he does eat he vomits almost immediately. He is also very costive. He will often stand for several minutes at a time, while his whole body will be of a continuous tremor. At such times he very often becomes very red and bloodshot about the eyes. Sometimes he has a very bloated appearance about the stomach and loins. Any advice as to how I should proceed in the case will be thankfully received. Ans. His stomach is deranged and indigestion indicated. Give a teaspoonful of calomel magnesia in milk. Then feed simple and easily digested foods. Raw beef, chopped fine, and raw eggs mixed together. Feed a little at a time, and as he begins to retain the food feed bread and milk, also broths in which rice and stale bread should be soaked. Feed often and a very little at once, then gradually get down to three and then two meals a day. Also give this preparation:

Sofe bicarb.
Pulv. rhei.
Sacch. pepsin.
Pulv. zingiberis.
Bismuth. subnitrat.
Pulv. cubebæ.....aa ʒiij.

Dose.—One-third of a teaspoonful after eating, in milk.

Rifle and Trap Shooting.

RANGE AND GALLERY.

TWO TARGETS.

By a mistake this diagram was printed last week as of one made by Mr. Walter Winans. It is a diagram of a target made by a

14 year-old sharpshooter, of Brewer, Me., with a Stevens' .22cal. rifle, at 12 yds., off-hand, 12 consecutive shots. The target made by Mr. Winans is given below, and we reprint the letter from our last issue:

Editor *Forest and Stream*:
This morning the first "highest possible" of the season was made at the regulation 2in. center at 20 yds. (government ammunition and trigger pull), it was shot by Mr. Walter Winans with a Smith & Wesson .45cal. revolver at the Sussex County Volunteer Rifle Range, which was kindly put at his disposal by Col. Tamplin, the commanding officer. It was shot before Mr. Short, the range superintendent, who marked and kept the score. Mr. Winans shot, on after making the rise shot, putting on three more sevens, this makes, with two shots he fired just before, a score of 69 out of a possible 70 for 10 shots, the best on record 10-shot score for an amateur (the late Ira Paine having made a highest possible 10 shot score, the writer believes, in 1889) in England.

The enclosed diagram shows the shots, those with a cross being the shots fired before and after the rise shot "highest possible." The full score stood 69.

BRIGHTON, May 30.

BOSTON, June 20.—A few members of the Massachusetts Rifle Association visited the range to-day. Next Saturday all the record matches will close and the following Saturday a new list of matches will be put on. Following are to-day's scores, distance 200 yds., Standard American target: 200-Shot Rest Match—J. Francis 111, T. Warren 108, W. Conway 104, M. T. Day 104, A. H. Ballard 102, J. B. Hobbs 101, A. S. Hunt 98, D. N. Winn 94, E. Snow 94. All-Comers Off-Hand Match—W. Charles 80, J. B. Fellows 78, M. T. Day 77, O. Moore 76, A. S. Hunt 76, A. B. Cooke 73, J. B. Hobbs 66, D. Martin 63, D. N. Winn 62. All-Comers Best Match—F. Daniels 114 and 111, W. Peters 104, A. B. Cooke 104, M. T. Day 102, D. Martin 100, J. B. Hobbs 100, A. H. Ballard 98, D. N. Winn 95, A. N. Mann 90.

THE ST. LOUIS SCHUTZENFEST.—The money receipts of the Schutzenfest were \$7,298, \$4,000 more than taken in at the shoot a year ago. Some idea of the shooting done may be had from the fact of there being nearly 180,000 shots fired during the tournament. The winners of the tournament were declared as follows: King target medal, L. Scheigkoff, St. Louis, who made 113 out of 125 points. The \$200 prize on union target was won by Martin Kacer making 68 points out of 75. Henry Stockman, of Omaha took the \$150 prize. He made 68, but his shots were not so near the center as Kacer's. Dr. M. T. Thibault, of Highland, Ill., took the third prize \$125 on 65 points. Mat Gendler, of Cincinnati took \$100 making 65 points. On the stick target, J. Montgomery, of Cincinnati took first prize \$60 making three centres in 3 shots. A. Rendege, of Belleville, Ill., won \$50. F. Lendl, of St. Louis took third. At the trap target on which Walter and Zimmermann, of New York broke the record making 97 and 93 points each, and took first and second money, R. Halley, of Perry made 99 and 100

Parker hammerless gun, with 90 out of 95 shot at.

Promptly at 8:30 A. M. the contest for the Lefever Arms Co. diamond medal was opened upon the rapid firing set of traps. The lowery weather of yesterday seems to have had no effect upon the spirits of the boys, and although it is threatening rain again, the contestants are all upon the grounds and eager for the fray. The entry list for the Dean Richmond trophy shows eleven clubs.

Yachting.

THE JUNE REGATTAS, 1891.

THE many races of the past week, both about New York and Boston, have proved hardly less disappointing than those of last year, and in no cases have the turnouts been such as to realize the old idea of a regatta. The competitors have been few in number, and so divided, as a matter of necessity, as to make little sport in any but one or two classes, while the large fleet of steam yachts and non-racers that forms such an important part of the usual spectacle in the races on New York Bay, and even about Marblehead, has dwindled to very small proportions. It is safe to blame the weather for almost any failure, and though it is very doubtful whether in any case the display would have been better, it is at least a fact that both the New York and Seawanhaka Corinthian races were poorly served in this respect, while the Massachusetts and Eastern clubs fared no better. The weather of the week has been most remarkable, opening with two days of such intense heat as New York seldom experiences, the Atlantic day, Tuesday, being the worse; the Marine and Field Club on Wednesday was more endurable, but by Thursday, when the New York regatta was sailed, there was a complete change, the day being rainy and positively cold, the heaviest winds and squalls being in demand on the waters, while the racing men were in a most uncomfortable plight all day. This same violent change brought nothing less than a gale and heavy sea off Nahant, where the Massachusetts Y. C. was ready for the Bunker Hill day regatta which long ago became famous under the club's old name of Dorchester, while the Eastern Y. C. fared little better on Friday.

On Saturday, New York, New Jersey, and the Seawanhaka Y. C. had a light and fluky day, so cloudy and threatening in the morning that but few spectators and yachts turned out to see the race. Apart from the weather, the proposed races have awakened but little enthusiasm on the part of owners, and the display of racing yachts was hardly better than last year, which is saying very little. The comparatively few of the various classes arranging special classes for cruising trim or with handicaps have met with little success, and but few of the classes, either racing or in cruising trim, have filled fairly. The new boats, of which so much has been written during the winter, are not yet ready, nor are their owners, for the most part, in any great hurry to start them, the result being that in the East the class has not raced at all, in spite of the special events arranged for it; while in New York but five boats have started. The 40ft. class has hardly displayed a sign of life, even in the cruising classes; and though the 35ft. has done a little racing in the East, it is very dead in New York, though a few 35ft. boats have started. All of the clubs succeeded in making up enough entries to fill the usual entry card provided for the club steamer, but that was as far as it went; the boats remained simply did not start and a very large number never intended to. The only events of the week that are in the least worthy of notice are Gloria and Smuggler; the new Herreshoff 46-footer has sailed away in every case with the greatest of ease from her class and the greater part of the fleet, while Mr. Bourry's little 25ft. corrected length racer has done much the same in a smaller way.

NEW YORK Y. C. ANNUAL, JUNE 19.

The weather of Thursday was anything but pleasant, even in contrast to the extreme heat of the previous days, as the cold drizzling rain and sharp wind savored but little of June and its roses. Much as the ladies and the lookers-on might grumble, the yachtsmen had no complaint to make, as there was a strong N.E. breeze and a good tumble of sea in the Lower Bay and about the Hook. To the disappointment of all comers, Gerry was not able to be present, owing to Miss Gerry's illness, she being on board the Electra, so the regatta committee, Messrs. S. Nicholson and Kane and D. B. Fearing, took ship on a tugboat for the day. The conditions of the race were as follows: In each class \$200 for first, \$75 for second. Prizes in cruising trim, in each class \$150 for first, \$50 for second. Prizes of equal value will be offered for keel schooners. Cruising trim—Anchors on the bow and cables bent; cruising complement of boats carried; cruising deck, cabin and galley fittings and fixtures in place; topsail extending above the truck, or beyond the end of the gaff, barred. At least two yachts must start in each class. In each class the first three yachts shall receive two prizes. The prize will be cups or money at option of winners.

The start and finish was off buoy 11, all going and returning by way of the Southwest Spit, the forties going around Scotland and the others around the Hook Lightship. Only the keel schooners started. Marguerite, with a small cutter on board, for regular prize, and Dauntless, Gevalia and Victor in cruising trim. Katrina and Shamrock were present to represent the 70ft. class, with the four 46s, Gloria, Mincola, Nautilus and Jessica. Gloria had entered in the 40ft. class in cruising trim, and on Wednesday night, at the special request of the regatta committee, Mr. Wetmore put in Liris as a substitute. Only the 46s and the 40s were entered, but declined such company as a cruiser, preferring to go up and beat the class in the 45. When the start was given Liris came to the line, but Gloria was not visible, though she was met later off the Hook sailing about. Liris started alone, and the committee very justly decided to exercise the discretion allowed them and gave her a prize for the sail over. The amusing part of the 40ft. business was that Ventura finally came in a steamer that she went outside the line and did not have her time taken.

The start was made at about 11:15, the 46 and 40ft. classes going away first, Mincola being in the lead; Gloria being steered by her designer, Mr. N. G. Herreshoff. The smaller yachts carried lower sails only, but when the Lower Island jibebees were set, Gloria sailed like a small cutter for a moment. As the boats took reaching for buoy 14, the familiar old buoy No. 10, Gloria soon overtaking Mincola, the two fighting hard for the lead, and finally luffing well off their course, being obliged to bear away for the buoy, and thus giving the other two a small gain. The times at buoy 14 were:

Gloria..... 11 59 25 Liris..... 11 58 10
Mincola..... 11 56 27 Jessica..... 11 58 15
Nautilus..... 11 56 28 Ventura..... 12 01 05

Before going outside Nautilus stopped to house her topmast, while Mincola lowered her working topsail, but little Jessica carried her jibebees well, and as for Gloria she walked out across the seas with her second cuttop sail aloft. After leaving Buoy 14 she had no use for Mincola's society and very soon she was off going her way alone and leaving Nautilus to fight it out with the white Burgess boat. This she did for some time, Jessica gaining on both as they headed through the seas that were now running fairly high, but the game finally came to an end when well outside by Mincola luffing up, then heaving to with staysail across her and main sheet flowing, soon lowering mainsail and running in under her staysail, and then she was off. The time of giving up was leading Nautilus, but the latter had gained considerably on her. Both were taking the seas in a way that must have been very comforting to Gloria, as her hull bow, like that of a Norwegian priv, was riding over the waves, making the best weather of any.

By this time the larger division, led by Katrina, was with the advance guard, the Dutch girl having beaten Shamrock very badly, and adding to it each minute as the latter felt more and more of the sea and wind. The smaller yachts were timed at the Scotland:

Gloria..... 12 57 00 Jessica..... 12 05 50
Nautilus..... 1 05 00 Liris..... 1 05 10

The run in was devoid of any interest, being merely a procession in both classes, the times being:

SCHOONERS—90FT. CLASS—REGULAR PRIZES.
Start. Finish. Elapsed. Corrected.
Marguerite..... 11 28 53 4 04 16 4 35 23 4 35 23

SLOOPS AND CUTTERS—70FT. CLASS—REGULAR PRIZES.
Katrina..... 11 28 59 3 34 27 4 05 28 4 05 28
Shamrock..... 11 29 42 3 40 28 4 14 47 4 15 52

SLOOPS AND CUTTERS—61FT. CLASS—REGULAR PRIZES.
Hildegard..... 11 25 54 Withdrew.

SLOOPS AND CUTTERS—46FT. CLASS—REGULAR PRIZES.
Gloria..... 11 16 05 2 34 08 3 18 03 3 18 03
Jessica..... 11 18 58 2 48 17 3 29 24 3 25 16
Nautilus..... 11 16 18 2 45 38 3 32 21 3 31 22
Mincola..... 11 17 30 Disabled.

VENTURA..... 11 17 30 Withdrew.

KEEL SCHOONERS—FIRST CLASS—CRUISING TRIM.
Dauntless..... 11 28 44 Disabled.
Victor..... 11 29 04 Withdrew.

SCHOONERS—FIFTH CLASS.
Gevalia..... 11 17 45 Withdrew.

SLOOPS—40FT. CLASS—CRUISING TRIM.
Liris..... 11 16 14 2 51 41 3 35 26 3 35 26

Gloria allowed Nautilus 59s, and Jessica 4m. 8s. Dauntless lost her mainmast head off the Hook and was towed in, while Mincola took a tow up the Bay. Katrina gave Shamrock a very bad beating, while Gloria served her class in the same manner.

ATLANTIC Y. C. ANNUAL, JUNE 16.

Tuesday morning was intensely hot, with little wind, a S.W. breeze broken by the Staten Island hills, so that it came across the Bay from Jersey as a westerly wind, while about the Narrows and from there out to the lightships it was nearly S.W. The usual courses were sailed, starting off the club house and finishing off Buoy 11, formerly 15. All above the 55ft. class went by way of the Southwest Spit around Scotland and Sandy Hook Lightships; the 55 and 46ft. classes went down the Swash Channel, passing a stakeboat at Buoy 8, and around the same ships; the 40 and 35ft. classes went down the Swash and around the Scotland, while the smaller classes rounded the markboat at Buoy 8. The starting line was a very poor one, being in the middle of a large fleet of yachts at anchor, some of which at least might have moved without trouble and given the racers a little room. When the race was started at a little after low water, there was a nice breeze, though not nearly enough considering that club topsails were barred, and the fleet stemmed the tide at a very fair speed. The first over was the schooner Gevalia, followed by Shamrock and Hildegard, each sailing alone in her class, then Marguerite with Deser Gardner on board. The first of the 46s was Nautilus, on the weather bow of Anaconda, while Gloria covered the latter's weather quarter. Jessica crossed alone, but with Mincola close after her; then came Marguerite (A. P. E.) Clara and Eurybia, the rest being strung out, with the little Smuggler last.

Nautilus was sailed by Mr. Maxwell, Gloria by Mr. Morgan; Mincola by Mr. Belmont and Capt. Harry Hall; Jessica by Capt. Henry Clara by Mr. B. A. Alley, with a Corinthian crew, and Anaconda by Capt. Joe Ellsworth.

All carried jibtopsails, reaching away for the Narrows on the starboard tack in a long line. Shamrock had a easy lead, but Gloria soon passed Nautilus and Anaconda, and was close to Hildegard, the second of the single-tickers. Mincola passed Buoy 11, formerly 15, at about 12:15, and then she passed to windward of the Maxwell boat and took the lead after a short battle. Clara was doing very poorly, and Anaconda had a long lead on her all the way down the Bay, but neither were anywhere near the flying 46-footer, who, with the launch Daisy hovering about her, was rapidly nearing buoy 8, where they were timed:

Anaconda..... 12 10 30 Tigress..... 12 28 55
Gloria..... 12 12 22 Polly..... 12 30 18
Mincola..... 12 13 45 Kathleen..... 12 36 30
Nautilus..... 12 14 40 Sanna..... 12 37 00
Jessica..... 12 15 25 Indra..... 12 40 00
Clara..... 12 25 25

Marguerite and Gloria had got well up into Sandy Hook Bay, in company with Shamrock and Hildegard, the wind all about the Hook being very light. As Gloria neared the Hook the others drew up on her a little, and in the lighter air Clara came up with Anaconda, the two being even when the Scotland was finally passed. The times at the mark were:

Gloria..... 1 05 30 Jessica..... 1 13 30
Shamrock..... 1 10 00 Hildegard..... 1 13 35
Mincola..... 1 10 00 Anaconda..... 1 14 10
Marguerite..... 1 12 00 Clara..... 1 14 40
Nautilus..... 1 12 40

The wind was light all the rest of the way to the outer mark, which was rounded:

Gloria..... 1 38 20 Nautilus..... 1 44 45
Shamrock..... 1 39 20 Anaconda..... 1 46 00
Marguerite..... 1 39 50 Clara..... 1 46 15
Mincola..... 1 41 45 Jessica..... 1 47 05
Hildegard..... 1 44 30

They jibed around and came in all the way on a reach, the whole race being but a reach out and in, with no beating. The only show of excitement in the race was over the two old rivals, Clara and Anaconda, this being the first race that Clara has sailed since she left Capt. Barr's hands. In the first part she did very poorly, but finally worked up to Anaconda on the last of the way out, and although the white sloop outran her coming home, and finished ahead, she was not able to save her time, Clara finally winning by 34m. Gloria gained on the way home as she did going out, and was 3m. 10in. ahead of the next boat, Mincola. The full times were:

The last boat had hardly finished before a very severe thunder squall swept over the fleet, the rain falling, and the fleet reached the moorings, and no damage was done.

Mincola was not measured, but takes second place, while Jessica comes between her and Nautilus. Tigress easily led her class all day, taking first place. She, as well as the rest of the 35ft. class, sailed in cruising trim, but Kathleen omitted to carry a boat, thus forfeiting the allowance due her for cruising trim. The race for the catboats was looked forward to with much interest, owing to the reputation of three of the entries, the local boat Bijou and the Cape cats Mucliege and A. P. E. Owing to the absence of the steam yacht Electra, Mucliege, now named Liris, did not start, and Bijou was beaten by the other Cape boat. At the same time the 25-footer Smuggler, though sailing alone, beat the three cats over the same course. The members and guests of the club were out in numbers on the steamer Cygnus, while the tug Idlewild carried the regatta committee, Messrs. Henry J. Gielow and Fleet Captain Church.

SEAWANHAKA CORINTHIAN Y. C. ANNUAL, JUNE 22.

Saturday was a decided improvement in weather over Thursday so far as the spectators were concerned, clearing off by the time of the start, after a cool and lazy morning. The racing men, however, had good cause for grumbling, as there was but a draft of air from the S. at the morning, while the fleet was becalmed inside the Hook for some time on the way out. The breeze improved after this, but never carried much weight, and with no race in any class but the 46ft., the day was very tame, as Gloria repeated her professional performances of Tuesday and Thursday. The two new 25-footers were present, with the Burgess cutter Beth in the 25ft. class, the new box slooping like delicate toys as they wheeled about, but they were soon left behind by the fleet, and the spectators saw nothing of their race. There had been wild and unverified rumors in each of the previous races of the presence of a phantom ship from Boston, the new Sayonara, and also of the Fife cutter Uvira from Newport, both being entered; but neither was seen or heard of until Saturday morning, when Uvira materialized, but with a low and unsteady intention of staying Sayonara still remaining a myth. The left the 46s, and Jessica, with Liris in the 40ft. and Clara in the 35ft. classes. The latter this time had a new competitor, the famous Ventura No. 2, of Bronx River origin, but the debutante crossed the line with her number up and a boat in tow, drawing out of the race after a half hour's sailing, in which she was beaten boat for boat by the 55ft. Nameless, the second boat present. After waiting a while for wind, the start was made off Craven's Shoal Buoy at 11:40.

Fortunately the tide was still ebbing, so the yachts were able to beat down slowly to Buoy 14, Gloria chasing Jessica and finally taking the lead from her. The times at Buoy 14 were:

Gloria..... 1 09 17 Clara..... 1 21 31
Nautilus..... 1 12 14 Liris..... 1 29 11

For the next half hour the leaders drifted about between the Southwest Spit and Sandy Hook, Gloria making the most headway and working out some distance from the point of the Hook, when Nautilus finally caught the breeze and hugged the shore closely, and sneaked out with the least possible hindrance from

the strong flood tide now pouring in. Jessica was hopelessly left by the Spit, becalmed until the others were far ahead. There was a moderate air as they reached out to the Scotland, the times being:

Gloria..... 3 33 39 Jessica..... 3 40 30
Nautilus..... 3 37 21 Liris..... 4 02 37

Miranda found the calms too much for her, and with no competitor she did not go over the course. The fleet ran in with No. 1 jibtopsails set, breaking out spinakers at Buoy 14. The full times were:

SCHOONERS.

Nameless had a very bad start, being jammed in the tide on the wrong side of the buoy, and she never made up this handicap. The regatta committee included Messrs. Walter C. Kerr, M. M. Howland and J. Langdon Ward. The steamer Cepheus accompanied the race with the club members.

CORINTHIAN Y. C. OF NEW YORK ANNUAL, JUNE 22.

The last of the club regattas was that of the Corinthian Y. C. of New York on Monday. Though the entry list was not specially large, it was none the less interesting, the classification of the club on corrected length grouping the boats differently from the other regattas of the week, while three of the boats were spectators. The chief of them was the long-jacked-for Sayonara, which after various delays by the way had finally reached New York. The second was the Fife cutter Uvira, built last year for Halifax, N. S., and now owned by Mr. F. P. Sands, of Newport, a boat of different dimensions from the rest of the Fife family in America. She is practically 3ft. longer and 9in. wider than Minerva, but with the same sail plan. The third new one was a nondescript from Long Island Sound, one of Mr. Clapham's original "creations" of the Bouncer type, the Chippewa, a new boat. The classes and starters were:

SECOND CLASS—SLOOPS AND CUTTERS. S.R. Feet.
Gloria..... E. D. Morgan..... 54 17
Sayonara..... Rayard..... 54 17
Jessica..... W. O. B. Macdonough..... 50 22

THIRD CLASS.
Liris..... C. W. We more..... 49 00
Uvira..... F. P. Sands..... 48 00
Marquita..... August Belmont..... 48 49
Broncho..... Mr. Hartley..... 41 00

FOURTH CLASS.
Kathleen..... Wm. W. Jick..... 39 20
Delvyn..... M. R. Schuyler..... 36 10

FIFTH CLASS.
Chippewa..... Jos. E. Grudough..... 25 50
Beth..... E. H. Jewett..... 26 71

SIXTH CLASS.
Smuggler..... L. J. Bourry..... 24 94

SEVENTH CLASS—CABIN CATS.
Lacksm..... C. McK. Loebert..... 31 48

EIGHTH CLASS—CABIN CATS.
Nadine..... C. M. Feit..... 27 50

TENTH CLASS—OPEN BOATS.
Sea Gull..... R. & L. Lade..... 22 30
Donnybrook..... Frank Lader..... 22 35

The start, from one gun, was made below the Narrows, the tide being half down, with a light southerly breeze. The two larger classes started together, and the smaller 5 minutes later. The gun was fired at 12:30, Gloria going over within 25 seconds, while Jessica, steered by Mr. Lovejoy, was 15 seconds later, with Sayonara 25 seconds later. Marquita was the first of her class, Liris being 3 minutes late and Uvira 4½ minutes. The smaller boats made a very good start. The 46ft. class carried cuttop sails, the forties only jibebees.

As a matter of course, Gloria held her lead as they beat down the Bay. Not far from the start Chippewa, sailed by Mr. Clapham, made a couple of quick tacks near to Smuggler, the result being a collision in which Smuggler was damaged. The other track Young Mr. Clapham was knocked overboard, but picked up by Smuggler, which sailed up so close to Chippewa that he was able to step aboard, after which she withdrew from the race. The times at Buoy 14 were:

Gloria..... 1 23 00 Marquita..... 1 33 55
Jessica..... 1 25 51 Liris..... 1 36 20
Sayonara..... 1 26 47 Broncho..... 1 45 45

Freeing a little for Buoy 5 the yachts reached out, with considerably more wind, then hauled up for the Scotland, where they were timed:

Gloria..... 2 16 05 Uvira..... 2 32 12
Jessica..... 2 25 09 Liris..... 2 36 00
Sayonara..... 2 25 43 Marquita..... 2 36 24

The fleet ran in with large jibtopsails set and balloon foresails on those who had them, being timed at Buoy 14:

Gloria..... 3 01 33 Jessica..... 3 12 02
Sayonara..... 3 12 45

After jibing at the buoy spinakers were set to starboard, the last leg being quickly made. The full times were:

Fleet Captain Belmont offered as special prizes a silver cup to the amateur helmsman of the winning yacht—each of them a silver cup to each amateur on the crew of the winning yacht in the second class.

The regatta committee included Messrs. Charles S. Davison, E. B. Clarke, W. H. Plummer and Wm. Gardner.

ATLANTIC Y. C. SPECIAL RACES, JUNE 23.

Though a light weather race, the contest of Monday for the special prizes offered by the Atlantic Y. C. was the most interesting of the series of races on New York Bay. The day was clear and bright, the yachts could be seen over all of the course, and they showed to the best possible advantage, all carrying the full allowance of kites. While the wind was very fluky and uneven, this only added a little excitement by bringing the second boat at times very near the leader. The prizes were a silver cup valued at \$500 for the 46ft. class, the gift of Vice-Com. Banks, of the schooner Water Witch; a silver cup given by Mr. W. V. Kenyon for the 35ft. class, and one given by Com. Lawton for the 25ft. corrected length class. At the last, in addition to the Banks cup, the club very generously decided to add a second prize of \$100, as it was a foregone conclusion that Gloria would take the first prize.

The work of putting a new mast in Mincola had been pushed at Wintingham's, and was completed on Tuesday morning, much of the ironwork being replaced by new.

The weather was warm and hazy, with no wind off the club house, but the yachts started down about 10 A. M. for the starting line in Greased Bay, the committee tug following at 11 o'clock with Sanna and Kathleen in tow. When Owl's Head the first of the breeze was felt from the northwest. The stakeboat was anchored half a mile below the Narrows, the three courses being by way of the Southwest Spit, around the Scotland and Sandy Hook Lightships for the 46ft., around the Scotland for the 35ft. and around Buoy 5 for the 25ft. After waiting for 4 time at the line a light breeze from the N.W. sprang up, and the start was made. About the line were Gloria, steered by Mr.

BEVERLY Y. C.

THE 170th regatta, first open race of the season, was sailed on Wednesday, in a very strong northeaster, which at one time blew a full gale. In the first class the old Mattie met the new Elna, built by Johnny, for Mr. Stetson, of the Olney. Mattie, single reefed, found the weather to her liking, and easily disposed of the larger boat, who carried double reefs. In second class Mist, Widgeon and Anonymous met the old champion Surprise, who has been fitted out again for racing. Widgeon and Mist started with a single reef, others with two. Mist carried her exceedingly well and won handsly. Widgeon did very well. Elna was forced to take in another reef and lost much time, tearing her sail. Surprise was not in. In the third class eight boats started, though, as in the second, most of the new boats were not ready. At the end of the first round the wind had increased to a full gale, and the boats which started under two reefs found they had more than they could carry. For some minutes it was a good exhibition of carrying on sail, but the majority were forced to stop and reef and in several cases pump out the boats.

Phenomenon, a new and very fast boat, built by her owner, was first to reach the judges' boat at end of the first round, but evidently had forgotten there was a second round, and lost fully a minute before starting again. Elna was second, closely pressed by Tycoon, a boat sailing her maiden race. On the second round Tycoon lost time by getting in irons. Elna did wonderfully well and took first place.

Courses, 10 1/4 miles for first and second classes, 8 1/4 for third, 5 for fourth. Weather, thick and misty, wind N.E. storm:

	Length.	Elapsed.	Corrected.
Mattie, Howard Stockton.....	28.10	2 05 15	1 56 55
Hector, E. C. Stetson.....	28.10	2 08 28	1 59 43

Winners—Class 1, Mattie; Class 2, Mist and Widgeon; Class 3, Elna, Phenomenon and Tycoon. Judges—T. S. Edmunds and W. Lloyd Jeffries.

THE ST. LAWRENCE Y. C.

THE St. Lawrence Y. C. began its fourth active season on May 23 with a cruise up Lake St. Louis, which finally developed into a sweepstakes race, in which Dream, a sloop of 32.15 c.l., won from Valda, 25.1 c.l., by 2m. 55s. corrected time, over a very difficult eight-mile course.

On the 15th inst. the first series races of the season for the 29ft. and 24ft. classes was sailed, and this was at once the first race sailed over the new club course, from the club's new house, and the first contest under the club's new rules making corrected length the basis for classification. The 29ft. class was the only one that filled, for although two 24-footers sailed the course they did not enter. The four boats, which made up the 29ft. class are in many respects the pick of the club's fleet. Chaperon, the biggest of the lot, so big indeed that she goes beyond the limit of the class, and is only permitted to sail in it by virtue of special legislation, is a compromise cutter, designed in 1890 by Mr. A. E. Jarvis, of Hamilton, for Mr. E. S. Clouston. She has been this year equipped for racing in the most thorough manner, having been given a 10-hp. motor, a special outfit and a most beautiful suit of Ratsey & Lapthorne sails, including a Union silk top-sail which is a marvel. Frolic is a 26ft. sloop, built by Mumm, of Bay Ridge, a very powerful and heavily rigged craft, with plenty of lead outside. The third racing boat in point of size is Mollie Bawn, a 24ft. l.w.l. compromise, designed by Burgess and built by Lawley, of South Boston, which is the latest and best of her class. Valda is a very powerful little craft, with plenty of lead, but somewhat lower down than is customary in local boats, whose owners have a wholesome fear of the bottom on such a shoal sheet of water as Lake St. Louis, and a mongrel catrig of a somewhat extreme type. The least, but not the last of the lot is the Valda, the 24ft. l.w.l. sloop 21. Angel built in 1890 from Mr. G. H. Duggan's design for the gentleman who built her, and who took her to the outside in the shape of a good big chunk of lead this year, out otherwise in very much the same condition as she was last year, when she was never beaten.

There was the usual delay at the start and the first gun did not go until 4 o'clock. At that time there was a fresh whole sail breeze from the west, with enough southing in it to enable the boats to point their bows by the shore, and the Valda, looking so threatening that some of the boats sent down their clubs and set jib headers. The start was as follows:

Boat.	Designer.	Steuersman.	C.L.	Start.
Mollie Bawn.....	E. Burgess.....	W. Kavanagh.....	25.93	4 05 34
Valda.....	G. H. Duggan.....	S. H. Duggan.....	24.01	4 06 05
Chaperon.....	A. Jarvis.....	E. S. Clouston.....	30.02	4 10 10
Frolic.....	W. Mumm.....	W. Mumm.....	26.04	4 06 50

Valda took the weather gage at the start and soon drew ahead of the fleet, with Chaperon close behind her. Mollie Bawn laid up much closer than the rest of the fleet and was soon well to windward of it, but astern. It was close work until the Chateaugay Buoy was rounded, and the whole fleet did it on two tacks. On the reach in Valda set a balloon and Chaperon and Frolic sailed up jibed, the three being so pretty well together that they were a job around the Pointe Claire Buoy and a close reach out to the Chateaugay Buoy, during which Valda and Chaperon indulged in a luffing match, during which Frolic came up on them fast. Spinakers went out to port when the run home began, and then Valda began to draw away from Chaperon and got a safe lead in for the long reach under ballons from the Valois Light Buoy to the finish line. At the time of this race, perhaps the best ever sailed on Lake St. Louis, were as follows:

	Elapsed.	Corrected.
Valda.....	2 06 00	2 00 21
Chaperon.....	2 06 45	2 06 45
Frolic.....	2 09 20	2 07 57
Mollie Bawn.....	2 15 45	2 12 00

Valda thereupon won the race for the Commodore's cup, and a first prize pennant by 45s. elapsed and 6m. 24s. corrected time, and Chaperon wins a second prize pennant by 1m. 12s.

On June 20 the A class boats, over 29ft. c.l., and the 24ft. class have their first race, when Dream will for the first time tangle Lulu, the winner of the trophy in last year's first class.

CORINTHIAN Y. C. OF NEW YORK.

STANDARD RULES FOR HANDICAP AND CRUISERS' MATCHES.

Handicap Matches.

I. Handicaps must be limited to yachts belonging to the club giving the match.

II. The handicapper or handicappers must be a member or members of the club.

III. The handicapper or handicappers shall have entire control and management of the match.

IV. Handicaps shall be open to yachts of any rig.

V. The class or classes embraced in handicaps should have wide limits as to size of boats—viz.: If classed by tonnage: 1. Under 10 tons. 2. Ten tons to 50 tons. 3. Fifty tons to 100 tons. 4. Over 100 tons. If classed by l.w.l.: 1. Under 30ft. 2. 30ft. to 60ft. 3. 60ft. to 100ft. 4. Over 100ft. If classed by "sailing length": 1. 25ft. and under. 2. Over 25ft. and under 50ft. 3. Over 50ft. and under 80ft. 4. Over 80ft.

VI. Handicap fees of 10 per cent. shall be charged (except in the smallest class, for which the fee shall be \$2.50), and be distributed among the non-amateur members of the crew of the winning boat in the class.

VII. The handicapper or handicappers must prepare on the day preceding the match, three scales of allowances, for light, moderate and hard weather respectively, and place them in sealed envelopes, marking the envelopes correspondingly.

VIII. The handicapper or handicappers shall give no information concerning the allowances to any person.

IX. The start shall be a "single gun" start.

X. Immediately after the starting gun the handicapper or handicappers must destroy unopened two of the three scales of allowances, retaining the one judged best suited to the weather, without breaking the seal until the last yacht competing has finished the course.

XI. Handicappers must have no personal interest in any yacht sailing in a match under their direction.

XII. The scale of allowances replaces all time allowances and all deductions for differences of rig.

XIII. On entry each yacht must declare (for the guidance of the handicappers) whether she will sail as a "cruiser" or "racer." If the former the club rules respecting "cruiser matches" must be strictly complied with.

XIV. Protests must be delivered in writing addressed to the sailing committee of the club within twenty-four hours after completing the course, and the sum of fifteen dollars must be lodged with any protest to be absolutely forfeited to the use of the club if the protest be held by the sailing committee to be frivolous or vexatious.

Cruisers' Matches.

In all races sailed by the club which shall be open only to "cruisers" the following special rules in addition to the club sailing regulations shall apply:

I. Yachts exceeding 40 and under 72ft. s.l. shall carry a boat on deck of not less than 10ft. length and 5ft. dia. beam; yachts exceeding 72ft. s.l. all their usual boats.

II. No extra hands (except a pilot) beyond the regular crew of the yacht are allowed (this does not prevent the presence of friends, nor their assisting in sailing the boat, provided no more persons in all are on board than the yacht customarily carries on cruises and can properly accommodate).

III. If a yacht shall be hauled out within two weeks next preceding the race.

IV. Chain cables shall be carried in the chain locker or other usual place.

V. No ballast shall be shipped or unshipped at any time within one week preceding the race.

VI. Platforms shall be kept down and bulkheads standing.

VII. No yacht shall be eligible for a "cruisers' match" which has started in any open race (i.e., any race other than "squadron runs," "cruisers' matches," "handicaps" or "in cruising trim" races during the then current season).

VIII. Measurement for classification for cruisers' races are to be taken when the yacht is in a condition complying with these rules; but no yacht shall be excluded by reason of an excess over her class in weight, length, or other particulars.

N.B.—Special attention is called to those portions of Sailing Regulations, Nos. 11, 13 and 18, which are not superseded by the above special rules and which therefore also apply, viz.:

"XI. Boats, etc.—These boats shall not be carried below deck and must have oars lashed in ready for immediate use; each yacht shall also carry two rowlocks. Life buoys ready for immediate use within reach of the helmsman.

"XII. Fittings and Ballast.—No water shall be started from or taken into the tanks after the signal to start has been made; no more than the usual anchors and chains shall be carried during the race and these must not be used as shifting ballast or for altering the trim of the yacht; after starting the ballast shall not be shifted or trimmed in any way whatever during the race. A race re-sailed shall so far as this rule is concerned be considered a new race.

"XXXI. Cruising Trim.—When yachts are ordered to sail in cruising trim the following rules are to be strictly observed: 1. No doors, tables, cabin skylights or other cabin or deck fittings (davit excepted) shall be removed from their place before or during the race. 2. No sails or other gear shall be put into the main cabin in yachts exceeding 30ft. s.l. 3. Anchors and chains suitable to size of yacht shall be carried; one anchor at usual place on the bow, which anchor shall not be unshackled from the chain before or during the race."

Attention is also called to the club regulations concerning the crews allowed to be carried by club yachts while cruising which apply to these races and supersede Sailing Regulations No. 12 in relation to crews, as follows:

"Crews. II.—Cruising yachts are allowed to carry in addition to any steward or cook and sailing master (where the owner does not act as such): a. If less than 72.0ft. s.l. one hand for every 12ft. thereof and one for any fraction of 6ft. b. If over 72ft. s.l. one hand for every full 9ft. thereof."

SEAWANHAKA CORINTHIAN Y. C.

THE following general orders have been issued:

GENERAL ORDERS No. 1.—New York, Jan. 19.—Mr. Frederic Tams, appointed fleet captain and will act upon the discharge of his duties at once. GEORGE H. B. HILL, Com., S. C. Y. C.

GENERAL ORDERS No. 2.—Flagship Miranda, New York Harbor, June 15.—The vessels of the fleet will rendezvous in Oyster Bay Harbor, the summer station of the club, for the squadron cruise, on Wednesday, July 1. Captains will report aboard the flagship at 9 o'clock P. M. The cruise will last one week. The squadron will remain at Oyster Bay on Thursday, the day appointed for the special race of this club at that place. The day of stationing the fleet will be on Friday, the day of inspection of the property of the club there and the site for the new club house. Captain A. P. Montant and Captain E. M. Townsend have kindly extended the use of their piers and floats to the members of the club and their guests. On Friday the squadron will proceed to Larchmont Harbor to attend the race of the Larchmont Y. C. on the 4th. The subsequent movements of the squadron will be decided upon at the meeting of the captain. First and second prizes in money will be given to the sailing masters of the yachts declared to be in the best order during the cruise, by judges to be appointed by the commodore. Captains intending to join the squadron are requested to notify the fleet captain at the club house, East 32d street, at as early a date as possible. By order of the commodore, J. FRANCIS TAMS, Fleet Captain.

The special race will be sailed on July 2, off Oyster Bay, when a prize of \$100 will be offered in a 48ft. class, and one of \$25 in the 24ft. class, or the race will be made a sweepstakes at the option of those entering. The entrance fee is to be \$25 and \$15. The courses for the several classes and other rules are:

For the 48ft. Class.—Starting between the committee steamer and a stakeboat anchored at the mouth of Oyster Bay, around red can buoy on Cow's Reef off Sippican Point, leaving it on port hand; thence around black spur buoy on Matinick Point, leaving it on port hand; thence around red can buoy on Cow's Reef, leaving it on starboard hand; thence across the starting line—35 nautical miles.

For the 24ft. Class.—Starting between the committee steamer and a stakeboat anchored at the mouth of Oyster Bay; thence around red can buoy on Cow's Reef off Sippican Point, leaving it on port hand; thence around black spur buoy on Matinick Point, leaving it on port hand; thence across starting line, keeping to the northward of buoy on Center Island Reef—15 nautical miles.

The compass course from the starting line to Cow's Reef buoy is about northwesterly, 34 west.

"A one gun start" will be given at 11 o'clock A. M. precisely, without regard to wind or weather, fog excepted. At 11 o'clock A. M. a blast of the whistle will be given and the club flag hoisted, this will be the starting time for all yachts.

The following exceptions to the racing rules are made for this race: Full professional crews may be carried without restriction as to number, but no helmsman must be carried at anchor. Sail and compasses may be carried mates. Club topsails may be carried. In case of a walkover in either class the value of the prize will be reduced one-half.

LARCHMONT Y. C. SPRING RACES.—A special race will be sailed on Tuesday, June 30, open to all yachts measuring from 50 to 60ft., racing by the handicap, with allowance to windward or leeward, and a Larchmont measurement, rules and allowance to govern the race, except that there will be no restrictions as to sail, crew or helmsman. The club will offer a \$250 cup for first prize, with a second prize in case four or more yachts enter and start. The annual regatta will be sailed on Saturday, July 4, over the usual club courses. The club at the annual meeting decided that this regatta be a handicap, the boats to be sailed being those of the club, and experienced yachtsmen, selected by the regatta committee, and it is specially requested that owners intending to compete will send their entries to the regatta committee at as early a date as possible. A general compliance with this request will aid the handicapping committee and conduce to the success and interest of the regatta. C. W. Wetmore has presented the club with three cups, to be competed for by yachts of 25ft. and under, racing l.w.l. The first race for these cups will be held on Saturday, Aug. 1.

SIESTA.—The Herreshoff steam yacht Siesta, has been used by her owner, H. H. Warner, of Rochester, on the St. Lawrence River, where about a year since she was in collision with the schooner Annie Foster, of Kingston, Ont. The schooner, which was valued at \$7,000, was sunk, and a claim for that amount was made on Mr. Warner, which he declined to pay. The schooner was kept clear of Canadian waters until the evening of June 10, when she grounded near Horseshoe Island, two miles from Kingston. A boat crew pulled to Kingston for a tug, and the Olivia Gordon went to the yacht's assistance, pulled her off and towed her into Kingston, where the officers were awaiting her arrival. She was held until Mr. Warner gave bonds for \$10,000, when she steamed for America waters.

COOPER'S POINT Y. C.—Editor Forest and Stream: The fifth annual race of the Cooper's Point Y. C. was sailed on June 18 to Reedy Island and return. At 10:20 A. M. the signal was given for the start, the boats crossing the line in the following order:

Wilkins, W. Humphries 10 30 00 Eckman, D. Late..... 10 34 50 Ethel, Com. Dresser..... 10 33 30 King, W. Kinsey..... 10 34 30 Burton, G. G. Wilkins..... 10 34 30 Clark, J. Bagley..... 10 34 30 Ebb tide, wind, fresh SW, the Burton soon took first position, reaching Deepwater Point (34 miles) on the ebb tide, a good run for any kind of a sailing craft, and four or more miles ahead of the fleet. The wind died out with the waning tide and she came to anchor. In the meantime the King, Clarke and Wilkins fishing out a light air from somewhere, came down in the slack water joining the Burton in the order named. On the beat down, the Ethel capsized below Lincoln Park 12 miles from the starting point, and the Eckman kindly went to her assistance, which virtually threw her out of the race. Just here, and as the boats progressed the wind increased and the sea ran higher. All the boats left in the race and carried all their cotton, although sometimes almost completely submerged. As the night grew a little the crew deserting ship taking refuge under the shady trees near by. The Clarke did the same; while the King and Wilkins continued on and enjoyed the race, the former arriving at Cooper's Point 4:56 P. M. (17th) Wilkins 5:55, Clarke 7:23, Burton 7:23. The King made a run in 30 hours 32min., beating the Clarke's record of last year by 3 hours 25min., and the Old Man will be the first to make a run in 30 hours. The boat will be classified according to the crew deserting ship taking refuge under the shady trees near by. The Clarke did the same; while the King and Wilkins continued on and enjoyed the race, the former arriving at Cooper's Point 4:56 P. M. (17th) Wilkins 5:55, Clarke 7:23, Burton 7:23. The King made a run in 30 hours 32min., beating the Clarke's record of last year by 3 hours 25min., and the Old Man will be the first to make a run in 30 hours. The boat will be classified according to the crew deserting ship taking refuge under the shady trees near by. The Clarke did the same; while the King and Wilkins continued on and enjoyed the race, the former arriving at Cooper's Point 4:56 P. M. (17th) Wilkins 5:55, Clarke 7:23, Burton 7:23. The King made a run in 30 hours 32min., beating the Clarke's record of last year by 3 hours 25min., and the Old Man will be the first to make a run in 30 hours. The boat will be classified according to the crew deserting ship taking refuge under the shady trees near by.

CORINTHIAN NAVY REGATTA.—The open regatta of the Corinthian Navy, Long Island Sound squadron, will be sailed off New Rochelle on Saturday, 27th inst. The race will be sailed in all classes, open to all yachts. The boats will be divided into the 25, 22, 20, 18 and 16ft. classes, and subdivided on type as follows: Cabin sloops and cutters, yawls, pole mast sloops, catboats and periaugers, and open yawls, catboats, sloops, periaugers and canal yawls. St. Lawrence skiffs, canoes and rigged rowboats. Boats exceeding 25ft. sailing length, but not exceeding 25ft. l.w.l. will be admitted to the 24ft. class, and boats exceeding 22ft. l.w.l. will be admitted to the 22ft. class. The club will be divided into two classes, according to their corrected length, and open boats by their load water-lengths. In all classes where two or more boats start a prize will go to the winning boat, and where five boats start in a class a second prize will be awarded. The Triple Squadron Cup, offered by the Long Island Sound, East River and New York Bay squadrons of the Corinthian Navy, will go to the boat winning in all classes where two or more boats start. The cup must be won twice before becoming the property of the winner. The Center Trophy, donated by Mr. Robert Center, will be awarded to the boat that carries no more than two persons aboard during the race. Forty-five per cent. will be awarded for speed, twenty per cent. for rig, twenty per cent. for handling and fifteen per cent. for condition. The judges for the competition are Vice-Admiral Tabor, Commodore and Volant. All entries must be made with Mr. W. L. Hicks, chairman of the regatta committee, Glen Cove, L. I., not later than 3 o'clock on the afternoon of the 26th inst. Mr. E. T. Smyth, N.Y.C.: Jos. W. Gibson, C. N., and Admiral Charles M. Connelly, C.N., will be the judges of the race.

CORINTHIAN MOSQUITO FLEET.—The third regatta of the Corinthian Mosquito Fleet will be sailed off Larchmont on Saturday, June 27. Members of other clubs owning mosquito craft are cordially invited to enter. The club will be divided into the 18ft., 20ft., 22ft., 24ft., 26ft., 28ft., 30ft., 32ft., 34ft., 36ft., 38ft., 40ft., 42ft., 44ft., 46ft., 48ft., 50ft., 52ft., 54ft., 56ft., 58ft., 60ft., 62ft., 64ft., 66ft., 68ft., 70ft., 72ft., 74ft., 76ft., 78ft., 80ft., 82ft., 84ft., 86ft., 88ft., 90ft., 92ft., 94ft., 96ft., 98ft., 100ft. classes, and those under 15ft. l.w.l. Boats exceeding 25ft. l.w.l. but not exceeding 25ft. corrected length, will be admitted to the 24ft. class. Open cockpit boats will not be classed with cabin boats. The course for boats 18ft. and over will be about 13 miles, and those under that length about 7 miles. The start will be made at twelve o'clock. Prizes will be awarded in all classes where two or more boats start. When four or more boats in class start a cond prize will be awarded. The prizes will be on exhibition at the house of the Larchmont Y. C., and will be delivered to the winners the following week. A subscription cup, value \$75, to be called "The Corinthian Mosquito Fleet Champion Cup for 1891," is offered to the 25ft. sloop class. This is to be sailed for in the regular regatta of the Corinthian Navy, and if found necessary the races will be arranged to determine the winner. At least two boats must start and finish. A certificate of measurement must be filed with the entry with the regatta committee of all boats on or before the morning of the race. The officers of the Larchmont Y. C. have cordially extended the use of their house and floats to owners of boats entering this regatta. Mr. Theodore Ledyard, New Rochelle, N. Y.; Mr. E. S. Grant and Mr. J. M. Williams make up the regatta committee.

BARBARA.—"During the past week many matters of doubt have been solved regarding the Barbara. In the first place, the Barbara in racing trim floats safely within her lines. Again, she carries her sail splendidly, and in last Wednesday's half-gale she stood up well and sailed splendidly. In her "off wind" work she is very fast. Now the Barbara can be reasonably looked for to defeat the Cassia in a good many races. Over a 21-mile course, she was a good deal to give a Life boat, built to race under our rules."—Boston Herald.

MIRAMICHI Y. C.—This club has re-elected the old officers, namely: John C. Miller, Commodore; J. L. Stewart, Vice-Commodore; R. Loggin, Rear-Commodore; George Watt, Secretary-Treasurer. The Queen's birthday was celebrated by a meet, the yachts cruising to Black Brook after a picnic at Middle Island. Two new yachts have been added to the squadron and the club is in a sound condition, financially and otherwise.

BOOKS RECEIVED.—Massachusetts Y. C. year book.

Canoeing.

DOWN THE SUSQUEHANNA.

[Continued from page 447.]

AS I came abreast the mouth of Roaring Creek I saw a tent pitched on a nice spot in the midst of a grove of trees, and, making a noise, several heads appeared and hailed me ashore. I found them to be a party of jolly fellows from Shamokin; after accepting their hospitality and having a chat, I bid them good-by and started off.

The river was very wide below Roaring Creek and the wind and the waves seemed to be holding high carnival. I crossed about one mile above Danville, which is 10 miles below Catawissa, and the whitecaps were pitching and rolling so high that they were constantly washing over the deck, being kept out of the cockpit only by buttoning my rubber apron tightly to the coaming. Below Danville the river was very rapid and made good time, a canoe being able to travel the distance to the head of the Sunbury dam. Running up a small creek opposite Elpp's Run I struck camp.

I took the baggage out of the canoe and piling it against a tree, gave the craft a cleaning out, also taking a bath myself in the cool creek water which at the mouth was about 8ft. deep. While hunting firewood further up the river I came across a place where there had been a camp. The place was vacated, as there were benches, a wooden table and plenty of straw, everything indicating that there had been some person or persons camping there a short time before. Instead of carrying the wood back I retraced my steps, returning with the canoe and outfit and was soon nicely camped. As it was early in the evening I put my rod together and lit a few grubs and went down to the creek and caught three large catfish and one very large catfish. This catch helped to make an excellent supper.

While clearing the table paraphernalia I was startled to hear the rumbling of thunder. Going down to the mouth of the creek I could see it raining several miles below, and as the wind was blowing up the river I was confident that I would get some rain, and get it I did, as it rained during the whole night, but being well sheltered under a thick growth of trees, and my tent shedding the water like a duck, I was kept perfectly dry. The mosquitoes that night were holding a little circus of their own in my tent, chased in by the rain, and I passed a pretty bad night of it. Saturday, July 19, brought forth a beautiful morning, despite the rainy night. After a bath in the creek I cooked a hearty breakfast, feeling my outfit exposed to the air and my canoe tent in the sun to dry in the meanwhile. Finishing breakfast, I paddled down the creek into the river, and soon came to Sunbury. After

I put the hatches on and batted them down, I went up into Sunbury and got some mail and some news of the outside world. When I came back I sat on the shore opening my letters, and was soon surrounded with a crowd of inquiring people. My name being mentioned, I was surprised to see a friend of mine from Lewisburg, and after some hesitation on my part I decided to spend Sunday with him.

Storing my canoe in the Iola boat house, we took the train to Lewisburg, which is situated on the West Branch of the Susquehanna, nine miles from Sunbury.

Sunday was just the kind of a day I had wished for. It was raining and was very disagreeable, making a pleasant way to stay indoors, for I did not care to show the people the latest wrinkles in trousers, as the ones I had on were the only ones I had with me on the trip, and my sailor shirt and blouse was not the nicest suit to promenade with on a Sunday.

Monday, July 20, found us taking the train to Sunbury. Soon after our arrival at the boat house I was to be seen bowling along under full cruising sail for the breast of the dam.

The river at Sunbury, where the North and West Branches meet, is at least 1/4 miles wide, and is a beautiful sheet of water. Numerous steamers ply to and fro, some running up to Northumberland and return, carrying passengers.

Arriving at the dam, I lowered sail and went through the raft chute, which is a narrow cut in the dam, with the water rushing through like an express train. The river below the dam is very rocky, which necessitated my stowing the sail under deck. For a half mile below the dam I experienced no end of trouble with the shallow water and the sharp ledges which extend the width of the river.

Below this stretch of rocks I got into better water, where I allowed myself to float and enjoyed the beautiful scenery that borders the river on both sides. Crossing the river one mile below Selingsgrove Junction, to avoid the fish dams and baskets that are thrown up promiscuously and without regard to the law on all sides. As it was about noon I made a stop on an island opposite Selingsgrove and took lunch and enjoyed the shade of some water birch trees.

Re-embarking I kept to the left shore to Fisher's Ferry, 2 1/2 miles below Selingsgrove bridge, where I again recrossed the river having been told by a fisherman that the better channel lay on that side. I found very deep water toward the right shore and throwing in a spoon after some trolling I landed two salmon weighing probably 3 lbs. each. At Port Trevorton, 4 miles below Fisher's Ferry, I made a stop and bought some fresh bread, butter and eggs.

The old piers that supported the Port Trevorton bridge still stand like so many monuments, all the way across the river, some of them showing the work of the floods, large stones having been knocked out and the mortar and cement loosened in many places. Below the port it kept me busy dodging in and around these many fish dams that are scattered all over the river.

Working my way over to an island below Herndon, which is on the opposite side of the river from port, I hauled the canoe up on shore and made camp, as the afternoon was fast drawing to a close. In searching for firewood I struck up on a clearing on the island and down on the middle I saw that it was inhabited, as I saw a farmhouse. When I had gathered enough firewood for supper and for the night I took a tin bucket and went down to the house after milk.

While returning with my bucket of milk I was set upon by a dog, who, coming as he did from behind me and not giving me any warning, scared me so that I came near losing bucket and all. I went it hard work to keep that rascal away from me, and he only went away after I drew my revolver and shot to scare him. The report of the revolver then got me into trouble with the farmer, who declared I intended to kill his animal. Peace was finally restored, and I went away. With good fresh bread, butter, eggs, two salmon and coffee, what canoeist is there that handles a paddle that could not make a good supper.

The evening drawing to a close, I piled some heavy timbers on the fire and soon turned in, the night being very dark and looking like rain, not a star to be seen in the whole sky.

Tuesday, July 21, I arose about 6:30 A. M., and was not able to see an object 50 ft. away on account of the heavy fog which had settled over the river. Passing the time in numerous ways till 8 A. M., the sun coming out drove the fog before it. I left the island, and when passing the house on the lower end I fired my revolver, making the old man appear at the door in an instant.

At Georgetown, one mile below Herndon, I kept to the left shore to avoid the dangerous McKee's Half Falls, which are a succession of ugly rapids. These falls are on the other side of a large island opposite Georgetown. Many an accident has happened there, and they are at all stages of the water an ugly place to go through.

Below Georgetown the river is swift, but clear of rapids, all the distance to Mahantango, five miles below, and at this place I was hailed by a fisherman. Drawing up alongside of his boat, I chatted with him awhile, and he cautioned me to take the other side of the river all the way to Halifax.

MARINE AND FIELD AND M. A. C. REGATTA.

THE event of the summer canoe racing was the joint regatta of the Marine and Field Club, of Bath Beach, and the Manhattan Athletic Club Canoe Department, sailed on June 20 on Gravesend Bay. The details of the racing are given in the following complete summary. The day was very satisfactory on the whole, the clouds being dispersed by the warm sun early in the morning, and though there was not enough wind, the races were all sailed through. The officers of the day were: Referee, Robert J. Wilkin, Brooklyn C. C. Judges, Com. Walter U. Lawson, A. C. A.; Vice-Com. L. V. Dorland, Atlantic Division, A. C. A.; and Com. L. V. Seaver, Knickerbocker C. C. Timers, William J. Swan, M. A. C., and William R. Haviland, Yonkers C. C. Clerk of the course, Richard Hobart, Lanthé C. C. Regatta committee, C. K. Wooster, M. and F. C.; William Whitlock, M. A. C.; Arthur Hurst, M. and F. C., and Wm. S. Elliott, chairman, M. and F. C. and M. A. C.

Event 1.—Twice around triangle, unclassified sailing race, 3 miles:

	No.	Start.	Finish.	Elapsed.
Nomad, A. Hurst, M and F.....	21	10 16 10	11 32 00	1 15 50
Restless, H. P. Allen, M. and F.....	22	10 14 30	11 22 09	1 07 21
Kwo-ne-she, W. Brownell, Crescent.....	23	19 10 00	11 20 42	1 05 27
Vim, J. Johnson, Orianta.....	24	10 14 40	11 21 40	1 07 00

Kwo-ne-she first prize, Vim second, Restless third.

Event 2, tandem paddling race, straightaway, 1 mile:

	Beam.	Start.	Finish.	Elapsed.
Cricket, Palmer & Douglas, Lanthé.....	28	11 31 55	11 40 35	8 40 00
Uno, Quick and Simpson, M.A.C.....	30	11 31 55	11 40 48	8 53 00
Jonah, Collins Bros, Bayonne.....	37	11 31 55	11 41 10	9 15 00

Event 3, Marine and Field senior sailing race, distance 4 1/2 miles, triangle three times:

	Start.	Finish.	Elapsed.
Wasp, Paul Butler, Vesper.....	12 44 35	1 16 31	50 31
Nesta, D. Goodsell, Yonkers.....	12 45 21	1 19 56	53 55
Cricket, L. B. Palmer, Lanthé.....	12 44 47	1 20 16	54 15
Seabright, W. T. Wintringham, B'klyn.....	12 46 23	1 21 06	55 06
Bee, D. D. Goldard, Vesper.....	12 49 58	1 21 08	Fouled.
Ure, Wm. Whitlock, M. A. C.....	12 44 25	1 21 53	55 33
Kitt, F. M. Sinclair, C. A.....	12 45 57	1 22 45	..
Tempest, G. P. Douglas, Lanthé.....	12 45 18	1 23 28	..
Eclipse, F. M. Dunnell, Brooklyn.....	12 45 00	1 23 39	..
Bonnie, C. B. Vaux, Yonkers.....	12 47 26	1 25 03	..
Aztec, W. W. Howard, New York.....	12 50 52	1 25 32	..
Eros, F. C. Moore, Knickerbocker.....	12 48 16	1 25 52	..
Torment, H. H. Smythe.....	12 50 01	1 26 53	..
Kismet, C. J. Stevens, New York.....	12 50 52	1 27 23	..

Event 4, 4 1/2 miles, triangle course, three times, Marine and Field cup race:

	Start.	Turn.	2d Turn.	Finish.
Bee, Vesper.....	3 22 24	3 35 46	3 35 46	3 49 46
Wasp, Vesper.....	3 08 30	3 22 34	3 35 44	3 49 52
Tempest, Lanthé.....	3 22 55	3 35 55	3 39 09	3 50 40
Guenn, M. A. C.....	3 24 31	3 38 26	3 39 06	3 52 06
Kitt, A. C. A.....	3 23 45	3 38 02	3 39 15	3 52 15
Torment, Brooklyn.....	Foul first turn.
Bonnie, Yonkers.....	3 26 54	3 41 41	3 41 41	3 55 33
Nesta, Yonkers.....	3 23 35	3 38 50	3 41 42	3 54 52
Uno, Yonkers.....	3 22 10	3 35 40	3 35 40	Fouled.
Beta, Yonkers.....	3 23 40	3 42 04	3 42 04	Withdrawn.
Torment, C. A.....	3 27 19	3 42 16	3 42 16	3 56 17
Eclipse, Brooklyn.....	Withdrawn.
Seabright, Brooklyn.....	3 26 45	3 41 45	3 41 45	3 56 19
Eurylda, M. and F.....	Foul first turn.
Kismet, New York.....	3 28 65	Withdrawn.
Aztec, New York.....	3 24 63	3 39 32	3 41 50	3 54 50
Eros, Knickerbocker.....	3 25 10	3 43 20	3 43 20	3 58 03

Event 5, five times around triangle, Manhattan A. C. Challenge Trophy, 7 1/2 miles:

	First Round.	Second Round.	Third Round.	Fourth Round.	Finish.
Uno.....	4 25 16	4 39 24	4 53 24	5 05 09	5 18 40
Beta.....	4 25 22	4 41 50	4 55 15	5 08 14	5 21 02
Eros.....	4 25 20	4 44 45	4 54 03	5 09 35	5 22 30
Aztec.....	4 42 13	4 55 23	5 09 32	5 23 50	5 37 32
Kitt.....	4 41 18	4 55 50	5 09 20	5 24 44	5 40 44
Eros.....	4 42 19	4 56 47	5 10 36	5 25 38	5 42 38
Torment.....	4 43 29	Withdraw.
Nesta.....	4 44 45	Withdraw.
Tempest.....	4 25 25	4 39 03	4 53 00	Withdraw.	..
Cricket.....	4 49 15	Withdraw.
Seabright.....	4 42 33	Withdraw.

NEW YORK C. C. SANDY HOOK RACE.—Editor Forest and Stream: I am informed by Mr. W. S. Elliott, of the Marine and Field Club, and also by the canoeing editor of the FOREST AND STREAM, that the notice of the Marine and Field Canoe Regatta of June 20 was sent to your office prior to the receipt from me of

the notice of the New York C. C. club race to Sandy Hook for the same date, although the notice of the Sandy Hook race was published two weeks before the notice of the Marine and Field regatta. As the New York C. C. has no desire to hold races on days claimed by other organizations in its neighborhood, I beg to announce that the race to Sandy Hook, as set for June 20, is withdrawn. Wm. WILLARD HOWARD, Commodore New York C. C. (Stapleton, S. L., June 17.)

MASSASOIT C. C. JUNE 14.

THE Massasoits held their first races of the season off the club house on June 14. The weather was good; just enough wind to make things lively and put the men on their mettle. The first event was a paddling race from the Cow Pasture to the Wigwam, and was contested by eight men. The fight, long and arduous, between the five leading men resulted in the triumph of Charles Ellis, Lyons taking second place. The course was some three-quarters of a mile in length, and the race was won in 12m. 10s.

The sailing race was over a three-mile triangular course, and was for the club perpetual challenge plate, in the possession of V. B. Johnson, owner of the Vee Bee. He was the favorite in this race until he ran on a pile of ballast and cut several holes in the Vee Bee, which were an effective drag on her speed-making qualities. The Vee Bee led the procession over the first leg of the course, followed by Sappho and Ullie A. On turning round the point between the first and second divisions of the course the Ullie A. took first position, and ultimately came in a winner, beating the Altie by 30sec. and the Frolic by 45sec. Although V. B. Johnson did not, through an accident, sustain his reputation of owning the fastest boat in the club, he had the satisfaction of knowing that the winning boat was one built by him. The second boat, also an amateur-built canoe, having been constructed by its owner, J. T. Ball. The fact that these boats, built by the members, succeeded in outdistancing professionally-built boats, is one which the members feel proud of. The perpetual challenge plate is the one presented to the club by Messrs. J. A. and G. A. Frizzell, J. J. Kelleher and V. B. Johnson, and is only to be held for two weeks without being subject to challenge and contest. The present holder's right is to be again disputed on June 30.

Several casualties happened before and during the race. Elaine (J. J. Kelleher) was prevented entering the contest by a capsize, and Landers in the Minnie E. was practically not in the race from a similar cause. The Ullie A. also had an accident, breaking her sliding seat during the race. JAMES J. BROOKS.

NEW YORK C. C. REGATTA—AN APOLOGY.

Editor Forest and Stream: I was the starter of the New York Canoe Club races, referred to in the enclosed clipping from your paper of this week. The propriety of a full apology, in your next issue, for the objectionable statements, will, I trust, be apparent to you, without argument. Very truly yours, EDWARD C. DELAVAN, JR.

New York, June 19. [The above letter has caused us to look carefully into the actual facts of the case, and we can only conclude that our statements were incorrect, and did an injustice to Mr. Delavan; for which we tender a full and ample apology. We are moved to this solely by considerations of justice, and not by any fear of the aforesaid club revolver.]

TORONTO C. C.—The opening race of the Toronto C. C. in the form of a sealed handicap was sailed off the Island Park on June 6 in a light east wind over the usual triangle course. The fleet got away well together, but Jacques, in the Waif soon took the lead, with Sparrow and Ford following in the order named, maintaining their respective positions throughout the race. On the handicap being opened Iredale, who sailed an open leeboard canoe, was declared the winner, with Fortier second and Ford third. The club is to be congratulated on the large number taking part, there being 12 competitors out of an entry of 14. The first of a series of three races takes place on June 20, when the new boats recently purchased by some of the members will be given a chance to distinguish themselves. The annual regatta will be held near the Island Park on the Saturday following.

ANSWERS TO CORRESPONDENTS.

W. H. T., Brooklyn, N. Y.—Wild doves are protected at all seasons in New York State. [Other answers crowded out.]

FOREST AND STREAM, Box 2,832, N. Y. city, has descriptive illustrated circulars of W. B. Leffingwell's book, "Wild Fowl Shooting," which will be mailed free on request. The book is pronounced by "Naut," "Glean," "Dick Swiveller," "Syrillene" and other competent authorities to be the best treatise on the subject extant.

NAMES AND PORTRAITS OF BIRDS, by Gurdon Trumbull. A book particularly interesting to gunners, for by its use they can identify without question all the American game birds which they may kill. Cloth, 220 pages, price \$2.50. For sale by FOREST AND STREAM.

H. M. QUACKENBUSH'S SAFETY CARTRIDGE RIFLE.

The Best Accurate Rifle Yet Offered for the Money

Whole length, 33in., weight 4½lbs.; caliber, 22,100, for regular "BB" or long and short cartridges. We guarantee these rifles to shoot as strong and as accurate as any 22,100 Caliber Rifle made; besides, they are perfectly safe to handle, quick to operate, reliable in every respect, and will bear incessant use without impairing their efficiency to the least degree. The rear sights are adjustable, and the barrel can be instantly removed from the frame, making a handy arm to carry in trunk, valise or package. Each Rifle is tested before leaving our works, and is knocked down as above stated, and neatly packed in a neat, strong box. We also manufacture a full assortment of Air Guns, suited to meet the tastes and wants of every one. The quality of our goods has established them in all the principal markets of the world, and their superiority has induced the U. S. Navy to place them, with success, on their school ships. Illustrated Price List sent on application. Address **H. M. QUACKENBUSH, Manufacturer, Herkimer, N. Y., U. S. A.** NOTE—We stamp our name on each Gun we make. Send for Catalogue No. 32. Mention FOREST AND STREAM.

LYMAN ACCELERATING SHOTGUN CARTRIDGE

EXPERT

The "EXPERT" is charged with a perforated cake of especially prepared powder, which burns progressively—the only correct method of availing of the power of powder in guns. Shot started easily, with rapidly increasing velocity and least recoil, and without stringing. Perfect combustion, little smoke, harmless dry ash residue. Cake burns in shell; no flying, heated grains to cut barrel of gun. Cakes made by machinery; greatest uniformity of pattern and penetration. No nitrates, decomposing, or changeable chemicals! Detonating impossible! Shotted cartridges, or Blanks containing powder cake only, for sale by

PAWNEE HERO STORIES AND FOLK-TALES.

With Notes on the Origin, Customs and Character of the Pawnee People.

By **GEORGE BIRD GRINNELL ("YO.")**

Cloth, 417 pages. Illustrated. Price \$2.00.

Pawnee customs and beliefs are richly illustrated by the folk-tales and in the copious notes Mr. Grinnell gives an uncommonly spirited account of Pawnee life in peace and in war. There is an account of the defense of a Pawnee village by 200 sick men, cripples, old men and squaws, against 600 Sioux warriors, which for sheer gallantry and indomitable pluck will match almost anything in military history. The Pawnee warriors were all away at the time, and the Sioux counted upon an easy victory. But the Pawnee cripples and women actually beat them off after a hard day's fighting, and at last so terrorized them that the bold assailants fled in panic and sustained a heavy loss. Mr. Grinnell also has written a picturesque and vivacious sketch of one of the last Pawnee buffalo hunts, in which the Indians commonly reverted to primitive weapons and usages, often hunting quite naked with no other arms than their bows and arrows. A particularly interesting part of the book is that which treats of the Pawnee doctors or medicine men. The statements of Mr. Grinnell show the possession by some of these men of a kind of skill in sleight-of-hand far beyond that usually attributed to Indians; some of the facts here described are as puzzling and unaccountable as those performed by the famous jugglers and fakirs of Hindostan, while one of their tricks is a close parallel to the East Indian mango feat. . . . Those who desire to learn of the many other wonders done by the Indian doctors must refer to its pages for themselves. As it is certainly one of the best works on Indian life, legend and character that has been written for a long time, it should obtain a wide circulation.—N. Y. Tribune.

FISHERMAN'S AUTOMATIC REEL.

When a sportsman finds anything which adds to his pleasure, without increasing his labor, he wants all his brother hunters and anglers to know of it and share with him the newly discovered "helper."

WHAT WE CLAIM FOR

The Automatic Reel.

FIRST—It will wind up the line a hundred times as fast as any other reel in the world.

SECOND—It will wind up the line slowly if the angler chooses.

THIRD—No fish can ever get slack line with it.

FOURTH—It will save more fish than any other reel.

FIFTH—It will prevent tangles, lines and snells from being broken by large fish.

SIXTH—It enables the angler, and makes it desirable, to use lighter tackle.

These claims have been substantiated by the most skillful fishermen in America and Europe.

In the Stud.

HENMORE SHAMROCK

(Muskerry—Avoa), imported Irish setter at stud. A thoroughly trained all-round field dog of high merit and first prize winner. Fee \$30. Stud card on application. F. L. CHENEY, Pittsfield, Mass.

CONNEMARA KENNELS.—FINE IRISH setters. At stud—RED RIVER GLENCHO, fine field dog and first prize bench winner. Fee \$30. Puppies—A beautiful litter, strong and healthy from prize stock. Testimonial says, "Irish pup purchased of you, now 8 mos. old, points and retrieves like old dog. It is natural for him to hunt." R. H. BURR, Middletown, Conn.

In the Stud.

WYOMING KENNELS.

The LARGEST and BEST kennel of ROUGH-COATED SAINT BERNARDS in the world, comprising the following noted STUD DOGS:

Champ. SIR BEDIVERE (19451).

Acknowledged by the best Judges to be the most typical and perfect St. Bernard living. Winner of 33 first and special prizes, all in the best of company. Prizes include The One Hundred Guinea Challenge Cup four times, the Halsey Trophy twice, and the Deacon Challenge Cup twice. Stud fee.....\$150.00

Champ. PLINLIMMON, JR. (6864).

This grand young dog is a son of the world-renowned Ch. PLINLIMMON, and although only a little over three years old, is the winner of 27 first and special prizes, and sire of some good stock. Stud fee.....\$50.00

LOTHARIO (18271).

This grand headed young dog is by the famous Ch. VALENTINE out of that well known bitch SAFFRON. He is the only son of Ch. Valentine at stud in America, and from his breeding, and low stud fee, should be much sought after by St. Bernard breeders. Stud fee.....\$25.00

St. Bernard Puppies For Sale.

A select stock most always on hand, sired by the above dogs out of prize-winning bitches, at reasonable prices.

WYOMING KENNELS, Melrose, Mass

JAS. E. GREEN, Manager.

FOX-TERRIERS IN STUD.

Champion Baby Mixer.....\$15
Russly Joker..... 15
Reckoner..... 15
Suffolk Risk..... 10
Pitcher..... 25

Puppies for sale from these celebrated dogs out of famous matrons.

HILLSIDE KENNELS,

LANCASTER, MASS.

COUNT NOBLE--GLADSTONE--SUE.

AT STUD. FEE \$25.
PAKTANG, the '86 Derby Winner.
The only known dog of any reputation by Count Noble out of Gladstone--Sue bitch. His puppies are not excelled by any. He is large size, healthy and a fast dog with the most delicate nose. Parties having good bitches, desiring to produce the perfection of the field trial strain of English setters should address for pedigree and particulars.

Moorefield Breeding and Training Kennels.
W. T. IRWIN, Kennel Manager. CHOLA, AMELIA CO., VA.
Standard Bred Trotter, Jersey Cattle and Rough-Coated St. Bernards for sale.
Address A. H. Moore, 1711 Spring Garden st., Phila., Pa.

FAMOUS PUGS AT STUD.

BONSOR. Fee \$20
Winner of over 50 prizes in England.

Champ. KASH, Fee \$20
The sire of many winners.

A. E. PITTS, Columbus, Ohio.

AT STUD. FEE \$50.

KING OF KENT

(A.K.C.S.B. 6264).

Sire of the phenomenal field trial winners, Rip Rap, Zig-Zag, Tapster and Maid of Kent.
Pointer Puppies for sale.

JAS. MORTIMER,
Supt. Westminster Kennel Club,
Babylon, L. I.

Mastiffs and Bloodhounds.

IN STUD: W. K. Taunton's Champion Boanort. His success as a stud dog and his record on the show bench for the last five years prove him the greatest and best dog living. The only kennel of English Bloodhounds in America. Choice ones for sale at all times, or imported. Mastiff pups from the Albion and Beaufort litters, also out of well known and proved breeders of champion and great prize winners. Photographs, 25 cts. J. WINCHELL, Fair Haven, Vermont.

MASTIFFS AT STUD.

Ormonde, ch. Victor Hugo ex ch. Cambrian Princess. Winner of second, puppy class, Crystal Palace; first and challenge cup, South Hampton, Eng.; first Cincinnati, first Cleveland. Pups by Ormonde from Phaedra, a prize winner in England and America; also from Eadgyth and Elmet, granddaughters of Beaufort and Orlando. Photos 25c. each. CHAS. E. BUNN, Peoria, Ill.

ROCHELLE KENNELS

Black and Tan Terriers.

At Stud—BROOMFIELD SULTAN (20,668).

ADDRESS Box 562, New Rochelle, N. Y.

IN THE STUD.—THE ETHAN ALLIN SETTER Al, fee \$25. Al was bred by the late Mr. Allin and trained on ruffed grouse by his handler. Two puppies by him for sale. Address F. L. NICHOLS, 54 Taylor street, Springfield, Mass. If

YORKSHIRE TOY TERRIER.
Champion Broomfield Harry, described in show reports as "best Yorkshire in America." Pedigree and winnings free, photos 50c. A limited number of his puppies for sale. P. H. COOMBS, 1 Exchange Block, Bangor, Me.

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, \$4 A YEAR. 10 CTS. A COPY.
SIX MONTHS, \$2.

NEW YORK, JULY 2, 1891.

VOL. XXXVI.—No. 24.
No. 318 BROADWAY, NEW YORK.

CORRESPONDENCE.

THE FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. Communications on the subject to which its pages are devoted are respectfully invited. Anonymous communications will not be regarded. No name will be published except with writer's consent. The Editors are not responsible for the views of correspondents.

ADVERTISEMENTS.

Only advertisements of an approved character inserted. Inside pages, nonpareil type, 30 cents per line. Special rates for three, six, and twelve months. Seven words to the line, twelve lines to one inch. Advertisements should be sent in by Saturday previous to issue in which they are to be inserted. Transient advertisements must invariably be accompanied by the money or they will not be inserted. Reading notices \$1.00 per line.

SUBSCRIPTIONS

May begin at any time. Subscription price for single copy \$4 per year, \$2 for six months. Rates for clubs of annual subscribers:

Three Copies, \$10. Five Copies, \$16.

Remit by express money-order, registered letter, money-order, or draft, payable to the Forest and Stream Publishing Company. The paper may be obtained of newdealers throughout the United States, Canadas and Great Britain. For sale by Davies & Co., No. 1 Finch Lane, Cornhill, and Brentano's, 430 Strand, London. General subscription agents for Great Britain, Messrs. Davies & Co., Messrs. Sampson Low, Marston, Searles and Rivington, 188 Fleet street, and Brentano's, 430 Strand, London, Eng. Brentano's, 17 Avenue de l'Opera, Paris, France, sole Paris agent for sales and subscriptions. Foreign subscription price, \$5 per year; \$2.50 for six months. Address all communications

TO A TRESPASS SIGN.

SCENE: A wood. An old man with a fishing rod speaks:

WHAT strange object is this which I behold, incongruous in its staring whiteness of fresh paint and black lettering, its straightness of lines and abrupt irregularity amid the soft tints and graceful curves of this sylvan scene? As I live, a trespass sign!

Thou inanimate yet most impertinent thing, dumb yet commanding me with most imperative words to depart hence, how dost thou dare forbid my entrance upon what has so long been my own, even as it is the birds' and beasts' and fishes', not by lease or title deed, but of natural right?

Hither from time immemorial have they come at will and so departed at no man's behest, as have I since the happy days when a barefoot boy I cast my worm-baited hook among the crystal foam bells, or bearing the heavy burden of my grandsire's rusty flint-lock, I stalked the wily grouse in the diurnal twilight of these thickets.

Here was I thrilled by the capture of my first trout; here exulted over the downfall of my first woodcock; here, grown to man's estate, I learned to cast the fly; here beheld my first dog draw upon his game, and here, year after year, till my locks have grown gray, have I come, sharp set with months of longing, to live again for a little while the care-free days of youth.

Never have I been bidden to depart but by storm or nightfall or satiety, until now thou confrontest me with thy impudent mandate, thou, thou contemptible, but yet not to be despised nor unheeded parallelogram of painted deal, with thy legal phrases and impending penalties; thou, the silent yet terribly impressive representative of men whose purses are longer than mine!

What is their right to this stream, these woods, compared to mine? Theirs is only gained by purchase, confirmed by scrawled parchment, signed and sealed, mine

a birthright, as always I hoped they might be of my sons and my son's sons.

What to the usurpers of our rights are these woods and waters but a place for the killing of game and fish? They do not love, as a man the roof-tree whereunder he was born, these arches and low aisles of the woods, they do not know as I do every silver loop of the brook, every tree whose quivering reflection throbs across its eddies; its voice is only babble to their ears, the song of the pines tells them no story of bygone years.

Of all comers here, I who expected most kindly welcome, am most inhospitably treated. All my old familiars, the birds, the beasts and the fishes, may fly over thee, walk beneath thee, swim around thee, but to me thou art a wall that I may not pass.

I despise thee and spit upon thee, thou most impudent intruder, thou insolent sentinel, thou odious monument of selfishness, but I dare not lay hands upon thee and cast thee down and trample thee in the dust of the earth as thou shouldst of right be entreated.

To rid myself of thy hateful sight, I can only turn my back upon thee and depart with sorrow and anger in my heart.

May'st thou keep nothing but disappointment for the greedy wretches who set thee here.

PRESENT PROGRESS IN YACHTING.

JUDGED by the usual standards, the present season is an exceptionally dull one in the yachting world. After the bustling and exciting era of international racing from 1885 to 1887, a certain reaction was but natural; and this, aided by the disputes over terms and conditions, has resulted in the entire cessation of international racing. With the removal of its chief stimulus, the famous 90ft. sloop class, so called, has gone out of existence as quickly as it appeared, thus robbing the racing events of New York and Boston of their most important feature. It might be supposed that, though international racing has stopped, and the special class created for it has at the same time disappeared, the result would be merely a return to the regular racing in all classes that was the leading feature of American yachting up to the time of Genesta's challenge; but so far from this being the case, it is only too evident such general racing as was in vogue even five years since has died out in America as it has in Great Britain. On both sides of the Atlantic the same state of affairs is found, the large schooners, cutters and sloops, whose names were famous up to 1884, have dropped entirely out of racing, while nothing of corresponding tonnage has been built to take their places. New boats have appeared, it is true, but only in the sizes under 46ft., the great majority in fact being but diminutive racing machines.

This year in America the largest class is the 46ft., while in England the corresponding class, 20-rating, has borne the brunt of the racing for three years.

With international racing at a standstill, with the 90ft. sloops converted into cruising schooners, and with hardly an avowed racer in the old fleet, the only hope of sport has been grounded in the new 46ft. class; and this hope has been rudely dissipated by the manifest superiority of one boat to most of her fellows. Looked at from the standpoint of large yachts and large fleets, the season is a most disappointing one, nor are the whole cause of the evil, and its complete remedy so clearly discernible as to promise much better for next year.

To those most familiar with yachting, a bright side is visible, and in spite of the decadence of racing in the larger classes it is a question whether yachting was ever more prosperous and flourishing than to-day. A proof of this may be found in our yachting columns every week in the season, especially at the dates of the summer holidays. Complete as our reports are, they cover hardly half the races sailed, many being purely of local interest, but each one testifying to the existence of yachts and yachtsmen in their respective localities. The increase in every way is noticeable, new clubs established, new houses built, new members added, new boats built and raced. Our exchanges tell the same story from all parts of the country; on the Pacific coast, on the Great Lakes, and on the rivers and other inland waters. The work is going on steadily and quietly, there is nothing sensational about it, and it attracts far less attention in print than would be accorded to the news of a new racer or of a threatened challenge for the America's Cup, but it is none the less real

The result of the great Cup races was to attract the attention of the whole nation to yachting, to bring in new recruits and to lead to such vast improvements as may be seen in every club fleet. Though the cause has ceased to exist, the effect still continues, and with renewed force; the men who found their pleasure four years since in merely watching the races of Volunteer and Thistle, have since then been busy at home in organizing yacht clubs, in providing themselves with yachts and in sailing races.

It will be a glad day for every yachtsman in the country when another international race is started off New York or Marblehead, or when the regattas of the great clubs can muster sloops and schooners in all classes in such numbers as to make a race for each class, but in the meanwhile the work has not stopped, but is going on with an earnestness and vigor that must be productive of the most important results before many years.

THE NEW YORK ASSOCIATION.

THE communication from Gen. D. H. Bruce relative to the New York Association for the Protection of Fish and Game has a twofold claim to careful reading and respectful consideration. The subject is one of utmost importance, and Gen. Bruce is admirably qualified to discuss it. Closely identified with the Association in past years, he represents that class of its members who have watched with genuine regret the gradual falling away of the organization from its original purpose, its alienation of interest from fish and game protection, and its ultimate conversion into a purely trap-shooting association.

Neither Gen. Bruce nor any other friend of the Association as it was has any quarrel with trap-shooting; but all regret that this sport should have crowded out attention to the purposes for which the society was established. We believe, too, that he represents a large number of New York sportsmen who would gladly join in a movement to restore the protective features of the existing organization or to establish a new society with similar aims. We would be pleased to have some expressions of opinion from those who are interested, and particularly from the present officers of the New York Association.

SNAP SHOTS.

WE are informed by Dr. Henshall, who has charge of the Angling Exhibit at the coming World's Fair, that the manufacturers and dealers, both in this country and England, are responding nobly to the invitation to participate in that exhibit, and that it bids fair to be not only the largest, but altogether the most varied and comprehensive display of everything pertaining to angling that can be imagined. Dr. Henshall will be in New York during the first half of July and will visit the manufacturers of, and dealers in, angling goods of this city and vicinity; his address will be at the office of FOREST AND STREAM.

"When I was a boy" is a phrase which is often the key to a good story, a reminiscence, or a comparison of the old ways with the new. Those of us who use the rod or the gun are given to telling of early experiences as sportsmen or fishermen, when we tramped the fields undogged by thought of care or work and went fishing fancy free. The files of the FOREST AND STREAM are rich in these relations. And now, for a "Special Number," to be published at a date not far distant, we propose a series of such reminiscences. There must be a score or more of readers of this note, whose hairs are silvered with the years, who have something worth the telling of the fields and the streams and woods life of those golden days.

Dr. Joseph W. Alsop, of Middletown, Conn., who died last week, was identified with the Middlesex County Association, which was one of the pioneer societies to lease shooting and fishing privileges. Dr. Alsop took an intelligent interest in promoting the cause of fish and game protection, and his influence will be missed in Connecticut.

A disappointed fish peddler was belaboring his slow but patient horse in a street in Georgetown, D. C., the other day, and calling out his wares at intervals as: "Herrin', herrin', fresh herrin'." A tender-hearted lady, seeing the act of cruelty to the horse, called out sternly from an upper window, "Have you no mercy?" "No, mum," was the reply, "nothin' but herrin'."

The Sportsman Tourist.

ON THE NORTH SHORE.—IX.

[Continued from Page 155.]

NED'S lament over his loss was truly touching, language being too feeble to express it. He said he never was so sure of a fish before; in fact, had counted him as if he had been in the boat, and was flattering himself that it would be the prize trout of the trip.

"Don't count your fish until you have caught them!"

"For if you do you're reckoning false,
Your calculation's out;
Within the boat you'll stand quite blank,
Outwitted by a trout."

"That's cruel, but deserved, for I now believe I made an awkward mistake by allowing him to get his second wind, instead of making him stand up and fight."

I agreed with Ned in this view, believing that it is always the proper tactics to make a fish fight, and not allow him to recover strength or composure by a rest.

We continued alternately fishing and resting that pool, until we had caught thirteen trout that ran from 3 to 4 lbs. It looked like a bloody slaughter of the tinted innocents, and had we only ourselves to provide for it might be so considered, but Ned being desirous of sending his family at the "Soo" a mess of these toothsome beauties, it was simply a delight that seldom falls to the disciple of the gentle art. Wicked waste we never tolerated, for time and again had we reeled up and ceased our sport when we might have quadrupled our catch.

We took our lunch on the sandy beach near the mouth of the sinuous river, and under some bright maples that were casting a grateful shade, and where a magnificent landscape of wild, entrancing beauty met the eye at every turn. Leech Island and the Lizard loomed up just south of us, with their foliated tops in crimson; the towering mountains of granite that range toward Gargantua were regal in balsam, fir and spruce; the murmuring river gently flowed along its grassy banks o'er bed of shining sands; the great wreaths of snowy clouds lazily floated in the blue vault, while the lights and shadows develop on the high hills and in the valleys as the sun rises and courses to the west. It is here, as elsewhere, that one must have the great mental qualities of a good observation and lively imagination to enjoy such pictures as this rugged coast presents. Then the perspective of these mountainous ranges, the solitude of the deep forests and the calm and tumult of the great lake grow upon you, until you fully realize:

"Masses of crimson glory,
Pale lakes of blue, studded with fiery islands,
Bright golden bars, cold peaks of slaty rock.
Mountains of fused amethyst and copper,
Fierce flaming eyes, with black o'erhanging brows,
Light floating curls of brown or golden hair,
And rosy flushes, like warm dreams of love."

After we enjoyed an hour or two in luxurious idleness and lunch Ned, proposed that we attack the pool once more, as he thought there was still a chance of again deceiving that freckled monster with another of his lurid flies. Making no objection, we took to the boat under a burning sun and again ascended the stream to the quiet pool. On arriving we both strove hard for a rise, but it failed to materialize. Finally we bade adieu to the pool and went up to the ripples to give Joe a chance to try some of the falls about a quarter of a mile above. The road was through a tangle of trees, and we wanted none of it, but would await the boys' return. The crashing we heard them making through the dark forest, as they pushed on, satisfied us that their road was everything but rocky.

In about an hour they returned, bringing six puny trout about 6 in. long, which we regretted had not been returned to the stream when alive. Joe said there were plenty of that kind at the falls, but the flies which he used were too large for such tender infants of the brook. Not being after such Liliputians, we again turn the boat down stream, and when reaching the pool gave it our last trial, but not a ripple broke the smooth surface. Ned was of the opinion that the pool had been entirely depleted of all but his escaped trout, and he probably had retired to the great lake to nurse his wounded jaw.

We found a very quiet lake and an exceedingly hot sun as we coasted along. I did not attempt a single cast en route, having had a surfeit of it at the pool, and Ned was inclined the same way, leaving Joe to weary himself with his futile whipping of the waters.

I was much interested in the formation of the rock along the shore and in the water. There were many rounded forms of granite, gneiss and other igneous rocks, massive and grand, like mighty boulders welded together. Several places the lake disclosed the igneous rock, with the quartz veins of a few inches that ran in squares and angles, making the entire mass, in consequence of the two distinct colors prevailing, like a tessellated floor. When the water quivered from the oars or any gentle breeze, your imagination, if a lively one, could picture colossal castles and panoplied knights, battlements and arches, giants and dwarfs, forests and flowers, groves and grottoes and the like, *ad infinitum*.

It was a hot trip to camp, and more than once I bathed my aching temples with the cool water. Not a ripple or leaf stirred. It was a dead calm, and the lake a looking-glass. Joe, who had been industriously casting, yielded to old Sol's influence with the remark:

"It's too hot and quiet for trout."

I was glad when we reached camp and the shade, for the glancing rays of the sinking sun burnt us so severely that the skin peeled from our faces a day or two after.

The next morning we sent the boys with the trout to the Lizard Island, with instructions to pack them well in ice, and ship on the tug to the Soo—they being directed by card to Ned's family there—and return at once. They managed, Indian-like, to idle the entire time away, not showing up till noon.

In the afternoon we went to Sand River, some four miles distant, and fished all the way without obtaining a single rise. The weather militated against us, it being warm and breezeless, and consequently not a quiver on the lake. With this condition it is simply an accident if you secure a trout.

On ascending the river we were agreeably surprised at its picturesque enchantments. It comes from the hard

rocks of lofty hills, flavored with the cold breath of those higher regions, leaping and tumbling in rills and cascades that go joyously through sloping forests, from terrace to terrace, until it expands and becomes a torrent of no small proportions that composes itself with a quiet murmur ere it dimples the lake. In the aggregate, Sand River is a poem in foam and ripple, rock and foliage, and is assuredly in harmony with Tennyson's idyllic brook that sings its way down the vale, "in little sharps and trebles." Here the

"Cultured slopes,
Wild tracts of forest ground, and scattered groves,
And mountains bare, or clothed with ancient woods,
Surrounded us; and, as we held our way
Along the level of the glassy flood,
They ceased not to surround us: change of place,
Producing change of beauty ever new.
Ah! that such beauty, varying in the light
Of loving nature, cannot be portrayed
By words, nor by the pencil's silent skill:
But is the property of him alone
Who hath beheld it, noted it with care,
And in his mind recorded it with love!"

We made a few casts at the first falls a short distance from the mouth of the river, and had a rise or two from some of the infantile trout with which we failed to connect. Satisfied with our experience and amply repaid by the imposing beauty of the foaming river, we turned to camp, hoping that the waning evening which was now displaying a thunder cloud in the west, might reward our efforts with a trout or two.

Coming to some declivitous rocks, we went ashore, and ascending them tried hard to lure some of the dainty tribe that reposed in the creviced depths below. It was a flat failure, not a response being obtained. Once more we depart, and just as we reached some magnificent waters ahead, I received a feeble rise and was compensated with a trout of about a pound. This was all the attractive place would yield. Again we go ashore, and this time Joe, who was using Ned's rod, struck a trout, which he killed like an artist, that weighed fully 5 lbs. In speaking of the capture the half-breed said:

"I send flies way out—big fellow make water—miss 'em—me wait while and den me see 'im by rock. Me stoop down so he no see me, then me throw flies o'er 'im. He take it—wait a bit—den me pull, and then away he go. Me let 'im go far as he want. Den me reel up, and by jingo he cut de water worse dan ebbber. Den me pull 'im in and he go again. Me tink neber tire fish. Me try once more and den I git 'im. Heap fun me had with 'im."

Joe gloated over him, for he had as much pride in an exploit of that kind as we had, and always looked at them with admiring eyes.

I am evidently in the *consommé*, as my favorite flies remained unnoticed. I soon tire of the weather-beaten and moss-covered rocks, and request another move. Along we go, Joe casting from the bow and I from the stern, and a moment before we reached camp I struck a 2-pounder and secured him, and Joe immediately after captured one about the same size. This concluded the sport of the day, for not another of the vermilion dye rose to investigate our tinsel and feathery deceptions.

The thunder cloud which we noticed in the early part of the afternoon had assumed a threatening appearance which indicated rain soon. The air was now stormy with a southwest wind; mists were hurrying in great armies; a blaze of quivering light comes down upon the face of the mountains and o'er the waters; while the deep blue shadows cast from the wind-tossed clouds are beautiful beyond compare. Along the stupendous cliffs the thunder rolls,

"While freighted echoes, in the gorges round,
Waked for a moment, calling each to each
With fainter voices, sink again to sleep."

The drops begin to patter, and then a retreat to the tent is made, where our supper is served. After Ned had sung a song or two and enjoyed a pipe of tobacco, we sought the comforts of the bed, where we soon fell into deep and restful sleep.

The rain had steadily fallen during the night and was tinkling away in the morning when we arose. It was evident we were to be confined to camp that day, for there was not a sign of blue to be seen, nor a ray of hope upon which to base a foundation for bright skies. We took our breakfast in tent, and as cup after cup of the invigorating beverage disappeared with the toothsome dishes, we philosophized on the unpropitious weather which was the rule and not the exception since we had been in camp. Under such distressing conditions home was talked of, and a programme made out for our return. Our boatmen, after they had satisfied their rapacious maws and cleaned and put away the breakfast dishes, took to their tents and their blankets, and there remained till it was time to prepare the noon meal.

We had our usual rubber of crib, and then sought the pages of fascinating fiction. Ned had finished his "Lorna Doone," and was now absorbed in a sea novel, the scene of which was laid in the frozen ocean, and developed the resuscitation of a bloody pirate after having been frozen over forty years. He thought it a highly absurd story, but when I gave him the tangible evidence of a scientist relative to the suspended animation of a frog entombed in a flinty rock for a thousand years or more, he then thought the forty years of the frozen slumberer a mere bagatelle, and continued the work with additional interest. I had also taken to a new work, being another of Balzac's, entitled "La Cousine Bette." I must confess a revolting feeling took possession of me as I waded through its repulsive though fascinating pages.

We made numerous studies of the horizon that morning in hopes of seeing a patch of blue or lighter clouds, but the prospects gave no indications of better weather soon, so we bade adieu to trouting for that day and possessed our souls with gentle patience. Ned tiring of his frozen pirate, left him to his slumber, and by way of relief got his little bags of tackle and toyed with them quite a while, much to my infinite amusement. That morning he had a row with Joe because he neglected to make some hot cakes, which were a standard breakfast dish with us.

Joe winced under the severe castigation, and was sulky the entire day, and no doubt only waited an opportunity to balance accounts with the fiery Ned. We had the arsenal, however, and stood ready to quench any incipient revolution he might organize. The day, however,

wore away without the red flag being unfurled, and gentle peace once more spread her wings o'er camp and court.

After dinner John came running in from the woods with a rabbit in hand, being one he had caught in a snare set the day before. It looked as if it was half-starved, so emaciated did it appear. We concluded after viewing its faded symmetry that we were not a bit fond of rabbit, and the boys had arrived at about the same conclusion, for they never as much as mentioned it, and we never ascertained what became of poor bunny. It probably was served as a midnight lunch for the ravenous twain, who were ever hungry. ALEX. STARBUCK.

IN JUNE.

"June, dear June, now God be praised for June."

IT has always seemed to me that those fair lines must have come from a true angler, and that, too, while wandering rod in hand along some purling brook "all of a summer day."

I think I can see the author of them letting his hackle float gently down into the mysterious depths of one of those gurgling caverns 'neath the alders, a second's pause, an opalescent flash in the warm sunlight, a short quivering of the rod, and the prize is his. It must, I think, have been at just this precise moment the poet uttered that tender tribute to our fairest month as he slipped the old fellow safely into his creel.

As I write, the battered case that has held my duffle for so long stands near me awaiting its annual filling; and around about it lie scattered my old friends—my rods, my corduroy coat, long ago turned to mouse color, the creel with its leather backing, and last, but not least, those ancient standbys, my wading shoes—all of them friends tried in many an hour of need and found true. It would fill a volume to give you even half their history. Many of them are getting old—worn out with hard work—and yet they seem to say "Come, try us again; we will bring you comfort—luck." It is after all your old things which are dearest to you. The new rod, spick and span in its new dress of polished metal and scarlet silk, is but an experiment—a mere apparatus—until it has become dear to you through day after day of faithful service. It is then that it becomes your friend. It is association which binds, novelty can do little more than delight. And so in a few days the kit will be packed and another fortunate mortal will be on his way to wet a line in the heart of our North Woods.

Last year my good friend the State Forester and myself found food for reflection over our last summer's trip to the headwaters of the Hudson and down Cold River. This year we intend to widen our circuit, going over our old route and continuing around to Newcomb, and so on back to Keene Valley. So you shall hear from us later.

And that reminds me that there are hours during the long, drowsy days in camp, when the sun burns hot and the big fellows seek the bottom near the cool spring. When we stretch out under the shade of our slant and listen to the yellow jackets droning over the remnants of our dinner. When the half-burned logs lie hot under their bed of ashes, and our bark roof curls under the rays that drive even the scampering chipmunk to his hole.

It is then I say that we often feel that time is being wasted and are wont to say, "Is not this forsooth a most excellent time to send a line of greeting to THE STREAM?" If you asked our excuse we would be obliged to own up to an acute attack of pure laziness, for often before we know it we are both of us snoring away, and awake only to find the pond shining in the yellow evening light, while here and there upon its placid surface a widening ring tells of some unfortunate wanderer. It is then we convince ourselves that if we want a painful for supper we must hustle.

F. BERKELEY SMITH.

Natural History.

EARLY NEWS.

The sparrow told it to the robin,
The robin told it to the wren,
Who passed it on, with sweet remark,
To thrush, and bobolink, and lark,—
The news that dawn had come again.
—Anna M. Pratt, in July St. Nicholas.

ABALONE AND SQUID.

YESTERDAY Mr. Duarte, who keeps the fish market here, kindly called at my room at this hotel to give me some information about the fish found on this coast, when I asked him some particulars about the abalone, the shells of which are found in such abundance in all the shops here, and when polished are indeed very beautiful, presenting various brilliant colors. He says: "There are two varieties of this species of shellfish found on this coast, commonly designated as the red and the blue from the colors exhibited when the shell is polished. The red is much the largest and the most abundant here, while the blue predominates further south, say in the neighborhood of Santa Barbara. Both are edible when properly prepared, but are not in common use among the Americans, who do not understand the mode of preparing them, while the Mexicans make of them a dish which is admired by all. It is tender, juicy and of fine flavor. [This I can vouch for, for I have eaten of it.] To prepare this properly the abalone is removed from the shell, to which it is firmly attached for a space of from 1 to 4 in., according to the size. It is then pounded sufficiently to reduce it almost to a pulp, but not so violently as to break it into pieces. It is then boiled from six to eight minutes, when it is taken from the pot, cut into small pieces, dressed with butter and proper seasoning and served hot. If it is boiled too long it becomes tough and practically not edible.

"They are generally taken among the rocks along the shore at low tide. The implement used is made of iron, from two to ten and even fifteen feet long. On one end a hook is turned and the other is chisel-shaped. They are found adhering to the rocks, sometimes on top, but more generally on the sides. They adhere to these seats with great tenacity. When found the shell is lifted above the rock, when the chisel end of the implement is thrust in under the shell and with a quick motion they

are readily detached, when they are brought in by the use of the hook at the other end. If the chisel is not properly inserted at the first effort, they settle down upon the rock with such tenacity that they cannot be separated from it without breaking the shell to pieces.

"When undisturbed a part of the animal extends out beyond the shell, and by this part its locomotion is effected; but when the projecting part is drawn within the cell, the latter is brought down upon the rock with a force which is truly surprising. This force I imagine to be that of suction or atmospheric pressure, and it is exerted with equal facility whether the rock be smooth or rough or indented.

"They can crawl up upon the rocks with facility, though progress is very slow. When detached from the rock they tumble about in the boiling surf, so that one would think that they must be dashed to pieces, while they seem to enjoy it. Sometimes several are found together adhering to each other for a short time.

"When brought to land and one is laid upon its back, and is allowed to be quiet for a short time, a portion of the animal will extend out beyond the shell and feel for some object to assist it, and when found it will turn itself over.

"In some parts of the coast they abound in great numbers and several hundred pounds of them are frequently captured at one tide.

"These fish have a commercial value now. They are taken in great numbers by Chinamen, who prepare them by cutting them into thin sheets when they are dried, and packed and exported to China, where they are in good demand at about 25 cents a pound. No doubt, the custom house reports would show the extent of this trade, which would be interesting, as it must be very considerable. The shells are of very little commercial value to the fisherman, as only a portion of them are thick enough for polishing. The polishing of these shells is something of an industry here and the sales to visitors is very considerable.

"I have often examined the stomachs of these animals to ascertain the food upon which they subsist. This seemed to be principally, if not entirely, vegetable. The undigested portion of the contents of the stomach clearly revealed the presence of sea weed or kelp. It may be they procure animalculæ from the water, but of this I could find no evidence, though the microscope might disclose it."

I then asked him for some information about a little fish, which I understand was taken in great numbers in this bay by Chinamen, called the squid.

"Yes," he said, "they abound here in incredible quantities and are taken with the greatest facility. They are little fellows, six to ten of which will weigh a pound. In structure they are something like the devil fish, with a number of arms. They are from two to four inches long and about as broad. These arms are short, not more than an inch long, perhaps, and have not the powers of adhesion and contraction like their great cousins, which are sometimes found in this bay. They will adhere to the finger with sufficient tenacity to raise them up, but they very soon drop off. They are captured at night by the aid of torches or lights by which they are attracted to the surface. One light is provided for three boats, and they are so attracted by this that the surface becomes fairly alive with them, when they are surrounded by a net from which they are scooped into the baskets in the boats. Only last night in this way four hundred basketfuls were brought ashore, each containing from 200 to 225 lbs. of the fish. These are dried and exported to China also, but not all. Many are thrown upon the grass to dry, but if a rain comes on them they are spoiled, and to such an extent does this occur that an intolerable stench loads the atmosphere in the neighborhood, but when properly prepared and dried a market is found for them in China. They are prepared by the women and children, who cut them open, take out the viscera, and wash them clean, when they are carefully dried and packed for export. An active woman can prepare from two to three basketfuls in a day. In Spanish these little fellows are called calamari, but here they are more generally known as squid."

Mr. Duarte told me that his oldest son, Santa Maria, is in the service of the U. S. Fish Commission, with duties to report on fishes of this coast, and no doubt his reports will embrace the subjects of this conversation with Mr. Duarte.

JOHN DEAN CATON.

THE BOY AND THE BIRD'S NEST.

THERE is to the average boy, probably, no more fascinating recreation than collecting bird's eggs. The time was when a few blue and white and speckled eggs, strung together upon a thread put through a hole in each end, out of which the contents had been carefully removed, made a curious and pretty ornament of the country boy's home. The time also was when such a collection was accumulated by the accidental finding, at long intervals, of the nests of our pretty feathered summer visitors. Then, such a thing as a systematic hunt for eggs was not dreamed of by the breezy boy who tramped the fields for pure enjoyment. It was only when some startled ground bird or song sparrow fluttered from its nest near his tramping feet or curly pate, that he was seized with a desire to add an egg or two to the little collection hanging upon the wall of his room. Of late years, however, the city boy has caught the idea, and now it is quite the correct thing for him to exhibit to his admiring friends quantities of eggs which his acute sight and daring have enabled him to possess. Of course, it is all wrong; no one doubts that the Legislature did a wise and timely thing in putting the robbing of bird's nests, except for scientific purposes, without the pale of the law. But the healthy excitement which a hunt for eggs produces, together with the delight which all youths feel while breathing the free untainted country air, are two powerful incentives to be resisted by the boy of to-day. Then again, perhaps a certain inevitable degree of thoughtlessness is responsible for his failing to realize that when he wantonly robs a bird's nest he becomes a criminal, just as surely as does he who steals from his neighbor. I recognize the enormity of his offense, but I plead in extenuation his youth and priceless light-heartedness and love for the fields and woods. You, stern gray-haired man, whose memory has well nigh lost its record of those bounding, care-free days of yore, judge not the boy too harshly. I am competent to speak for him, and I bear witness to all the temptations which allure him out of the hot and dusty city to the fragrant retreats, blossoming orchards and

mysterious woods of the green, cool country, in quest of the unlawful prize. I know what it is to lie concealed in the tall, swaying grass and nodding flowers, upon the brook side, watching for a hint from the warbling thrush as to the whereabouts of its nest. I also know what it is to survey, in triumph, the surrounding landscape for miles in each direction from the top of some tall old hemlock or pine, which I have gained after a desperate climb, torn by sharp branches, and rough bark, and assailed by cawing crow or screaming hawk. Because for years I was one of the most enthusiastic egg collectors in our town.

I never thought of anything but the exhilaration which swept over me, as I penetrated the secret of the goldfinch or matched my cunning against that of the killdeer, and came off victor. I never thought of the black letter which made my success a misdemeanor; I never dreamed that I was a criminal, when, after an hour's struggle and many futile attempts, I cut a hole in some tall old stub, large enough to permit me to insert my hand and draw forth the beautiful eggs of the nuthatch or the red-headed woodpecker. I was a conqueror, who in the face of almost insurmountable difficulties had proven to my companion that I was a fearless climber and determined collector.

Napoleon, as he saw the flying wreck of the allied armies at Austerlitz, was no more proud a victor than was I when, after hanging forty minutes with my left hand and my feet, and cutting with a knife in my right hand at a hard walnut limb, I descended to the ground with two oriole eggs closely clenched within my stiffened fingers. It took nerve and muscle to do those things; and it took patience and skill to mark where the bobolink had hidden her nest, or where the vireo had hidden hers in the densely interwoven foliage of some mighty maple or poplar. Of course some of my acquaintances remonstrated with me for despoiling so many homes. But to all such I commended a perusal of the Great Law Giver's words upon the subject; and the twenty-second chapter of Deuteronomy and sixth and seventh verses never failed to silence even the most tender-hearted girl who endeavored to show me the error of my ways. For did it not read, "If a bird's nest chance to be before thee in the way, in any tree or on the ground, whether they be young ones or eggs, and the dam sitting upon the young or upon the eggs, thou shalt not take the dam with the young, but thou shalt in any wise let the dam go and take the young to thee, that it may be well with thee, and that thou mayest prolong thy days?" Of course that settled the question; and I was not again disturbed by him or her against whom I once quoted that respectable authority.

In the days when I collected I always had a companion whom I will call Norm. We were enthusiasts, and each was so peculiarly gifted as to make our "hunting in pairs" most profitable. Never have I seen in any one such wonderful sagacity as would lead my chum straight to a nest upon the ground, when no bird had risen, nor anything more than a "general possibility" given him a hint as to its locality. I have many times seen him walk almost directly up to a nest, after telling me that he should doubtless find one in that vicinity. Bobolink, groundbird, nor meadow lark, could conceal their homes from Norman's eyes. But he could not climb very well, nor could he discover a nest in a tree, if it was at all cunningly secreted, although I might try to point it out to him. On the other hand, I was a good climber, and had much the same sort of faculty that he had, but in a lesser degree and in a different direction; I could pick out the one tree in a dozen which would contain a nest, and so never took the pains to examine every one that spread its alluring branches near our path. Such absolute confidence had we in each other that as we walked across a farm, through meadow, orchard and grove, he paid no particular attention to the trees, nor would I to such birds as arose from the ground, knowing that he never failed to discover the nest; while he never undertook to search out one in the shrubs or treetops. So thoroughly did we do our work that when we came home at night we knew that it would be of no use for us or any one else to take that tramp over again. This faculty of guessing out a nest was doubtless the result of months of carefully observing the habits of the birds, united with untiring watchfulness.

What a vast amount of knowledge, long since forgotten, concerning the ways and wiles of all the birds, did we acquire; and how readily could we tell from the exterior of the nests what birds had built them. For instance, the dauntless kingbird, the most fearless protector of its home and young that I ever knew, always twined a small piece of white wool into the under side of its nest; otherwise it resembled the robin's, but I never saw one of all the dozens I have clambered for without that mark of identification. Then the cedar-bird, or, as it was known to us, the cherry-bird, made its nest almost entirely of dry grass, without the plastered, muddy appearance which marred the external beauty of the robin's nest. And here let me describe the most curious nest I ever saw. I discovered it upon the bank of the river, snugly concealed in a small clump of bushes, and at first glance called out to my companion that I had found a "yellow-bird's" nest. It was quite deep, however, and carefully removing the three little eggs, so exactly like those of the canary, I took it down and proceeded to examine it. Upon tearing off the top portion, I was surprised to see a second nest under it, containing a cowbird's egg, far decayed. I then remarked that the nest still looked out of proportion, and further investigation disclosed still a third nest under the second. This had been built by a song sparrow, and contained three of its eggs, besides that of another cowbird. The problem was soon solved; the song sparrow had deserted her home upon finding the stranger's egg therein, and subsequently some other bird had built over it, only in turn to be ousted by the vagrant cowbird. This second nest had been the ground floor for the last builder, which I suppose had deserted because of the abominable stench emanating from the structure. Had it not been for that, I should have preserved the triple nest as the greatest curiosity of its kind I ever saw or heard of. At one other time I found a double nest, it was a robin's, which had been overbuilt because of the notorious habit of the unprincipled cowbird. The latter's egg I found securely encoiled within the two mud floors, and it too was decayed and noisome.

I do not know what feelings actuated my companion in his walks with me, but it was a pure love of nature that prompted me to thus go about reading and studying the secrets of the birds. And when I was searching for

a nest, it was to me a contest between the instinct and natural cunning of the bird and my own skill and sharpness of vision, and after I had found the object of my hunt its contents were lawfully and justly mine, if I could get them. It will not be necessary for any logician to point out the fallacy of my proposition, nor to show wherein my reasoning was erroneous; it was at that time conclusive, and that is all that can or need be said.

It was always a matter for amazement to both Norm and I to note the varieties of birds which wore the plain little brown jacket of the common song sparrow. I think that our collection showed more than twenty kinds of eggs, taken from nests in trees, in holes, in shrubs and on the ground, all laid by birds which an ordinary observer would have said looked exactly alike. The eggs were all shades of blue, white and gray, and were sometimes speckled with red, yellow or black, and sometimes plain clear white or blue.

The names of some of these little brown birds we never learned, as we were not scientific collectors; but they were all of the same general size and appearance. Over 120 different kinds of eggs did we get together, if I remember rightly, while we collected; we did not buy any, and we never sold an egg, though some were given to us by friends. The collection was kept at my home, and no other hands than ours were ever suffered to touch the glass case which exposed our treasured spoils to view, yet sheltered the fragile things from harm. After a long day's tramp we would repair to my own snug little room, where the eggs were carefully blown. This was sometimes done with a small blow pipe, but usually by pricking a hole in each end of the egg and expelling its contents by blowing directly from the mouth. It was a dainty operation, requiring much time and boundless patience; and many a valued egg have we smashed by using too much force. Of course, after a few weeks the egg usually lost its bright and delicate tints; but finally we began to treat them in a more scientific manner. We put a little isinglass into a large-necked bottle and poured in enough cold water to cover it; this was allowed to stand until the next morning, when some hot water was added, which instantly dissolved the isinglass, and made a most admirable varnish for the inside of the shell. After having injected some of this mixture into the empty egg and blown it out again, the shell always retained its fresh and beautiful tints, which mark the new-laid egg.

There were in our collection many eggs peculiar for their remarkable appearance. For instance, we had a blackbird's egg upon which was a perfect likeness of a blackbird, perched upon a twig; then there was an oriole's egg showing a most wonderful picture of an oriole's hanging nest. There were few birds breeding in our locality upon which we did not levy contribution, and what rare and beautiful eggs we had. The nighthawk, whose "nest" we found on the flat gravel roof of a tall building in the city, two eggs, so closely resembling the small stones that we well nigh failed to see them at all; the great-crested flycatcher, whose identity was unknown until more than a year after we had found its singular looking eggs in the top of a little decayed tree (how frightened Norm was when he drew out with the eggs half of a snake's cast-off cuticle; he always abhorred snakes); the golden-winged woodpecker, or as we choose to call it, the high-hole, whose marvelously white egg was ever a thing of beauty, all these had to pay tribute to our perseverance and enthusiasm.

I well remember the day when I brought that high-hole's egg down from an immense dead tree that rose straight in the air 50 ft. or more. The trunk was perfectly denuded of bark, and only two or three sharp, short horns showed where the last limbs had been. The nest was less than a foot from the top, and as I clasped the huge trunk, clad in my spurs, and with a large jack-knife in my pocket, preparatory to a hard climb and some harder whittling, Norm called out to me half seriously, "Good-by." The old trunk was as firm as a rock, however, until I had climbed half way up or more; then I could feel it tremble with every vigorous punch of the steel spurs. I reached the top, cut out the nest, which went deep into the tree, took the only egg it contained, and in descending came down on the opposite side to the one upon which I had gone up. Imagine my horror as I arrived at the middle of the old trunk, to find that for a space of 3 ft. it was completely hollow, and that the entire upper half upon which I had been actively at work for at least twenty minutes, was sustained in the air by a thin shell of wood, apparently not more than half an inch in thickness; while even that, for a third of the way round, was broken in. I do not think that I ever before lost my nerve while climbing, but when I made that discovery I grew faint and sick. In less than a month afterward the upper part of the old stump fell to the ground, where it was only a miracle that I had not been hurled with it. But neither Norm nor I ever met with an accident in all the time we tramped and climbed for eggs. Whether clinging to the face of some tall bluff, digging for sand swallows' or kingfishers' nests, or climbing to dizzying heights for hawks' or crows' eggs, we always successfully reached *terra firma* again. But many times our hands were torn and bleeding, and our clothing nearly ruined, from some desperate feat with the climbing irons; and how often were our most earnest efforts unrewarded by the sight of the hardly sought for prize.

Four years did we collect, and then time, advancing us all too rapidly toward man's estate, brought to us more serious thoughts, and fewer opportunities to complete the never-finished collection. Useless to narrate how accident, and decay, and vermin gradually destroyed the fruit of so much hard, yet pleasant labor, until no eggs were left but the dozen or so with which we had commenced. They, too, went finally, by theft, and never since have I taken a bird's egg from its nest. But others took our place in the fields and woods, and while I have never seen so good a private collection as our own, I have no doubt that far more eggs have been taken by individual collectors. And I have no reason to doubt that in this thoughtless passion for egg collecting, and not in the pugnacity of the English sparrow, lies the secret of the great depletion of the ranks of our feathered friends.

D. F. H.

OSWEGO, N. Y.

A BOOK ABOUT INDIANS.—THE FOREST AND STREAM will mail free on application a descriptive circular of Mr. Grinnell's book, "Pawnee Hero Stories and Folk-tales," giving a table of contents and specimen illustrations from the volume.—*Adv.*

THE BEAVER AND HIS SUNKEN WOOD.

Editor Forest and Stream:

In a part of a series of articles on "Practical Trapping," published in the FOREST AND STREAM, April 2, Mr. R. V. Griffin mentioned the fact that such of the beaver as inhabit houses with sub-aqueous entrances, have a way of laying in their winter supply of food-wood by first floating it to, then sinking it in caches near and convenient to their winter quarters; but he stated that no hint had ever come to him as to how this was done. In your issue of April 16 the writer ventured to say, upon the word and observation of an old trapper popularly known as Andy Reefer, that this is no mystery, at any rate to the beaver, as they suck the air from the cells of the wood, which then, filling with water and giving the denser material preponderance, will sink it. It will be observed I was careful not to claim credit for original discovery of any kind, for as much as I have been in the woods I have never had the good fortune to observe this interesting animal alive; but inasmuch as the matter has been "scouted," I do claim now the credit of grasping the probable and practical way of doing it—and this is not much of a claim either, for it seems to me a matter that ought to be sufficiently obvious to any one versed even a "little bit" in natural philosophy.

But now comes one "Arefar" (in FOREST AND STREAM, June 11) under the caption "How Was it Done?" and treats the matter in such a flippant way that it would not be worth noticing were it not admitted into the pages of the sportsman's journal, that—with all its faults—I love the best. If this gentleman, then, will follow these instructions he will find how it is done:

Cut a clean twig of some living growth of about the same density as the wood required for beaver food—in diameter and 3 or 4 in. long will do for the experiment—and having filled a basin, or better, a stone crock, with water, submerge one end of the stick and suck with your breath at the other until the air is drawn out; then before letting it go put your mouth also under water so as to submerge the whole of the stick, making it impossible for the air you have drawn out to enter again. If the wood you have experimented upon be of the same general density as that the beaver uses for food wood (for some woods will sink quite readily and others even the beaver would hardly be able to "down" in his way), and if your power of suction has been sufficient it will sink and stay sunk until you want to raise it again.

BERLIN.

BOB WHITE IN SPRING.

IN the early twilight the heavens show no evidence of the late shower, but on earth the effects are seen in a myriad of sparkles on leaf and blade; the sun has disappeared from view some time before, but a crimson reflection still shows on the distant clouds, promising us fair weather on the morrow.

Sitting on the vine-hidden porch of the old stone homestead house, we drink in the cool, purified air, and with our eyes feast on the scene of refreshed nature as it lies before us in the verdant stretches of highland and meadow, which reaches far away to the river and mountain, the latter terminating the view.

Presently, during a lull in the conversation, we are pleasantly startled by the old familiar and well-rounded whistle, *bob-bob-white, bob-bob-white*, and we think what to us is or can be sweeter than this charming note. What renewed interest the landscape before us at once takes on, and what visions of a cozy, well-filled nest or a proud quail-mother flit through our brain!

To the sportsman, or even to the nature-lover, could anything so fully complete the outdoor picture, as the knowledge that the author of the clear, sweet call, proof positive of quail life, was included in the scene?

The next thought comes with some anxiety as to whether or not the birds are permanently located, attached by family ties, and if so, where? Whether in meadow, grain or grass field. We hope that by good luck they have chosen either of the former, and that if by an unlucky chance they have nested in the grass, trust that they and their numerous family may pass out therefrom ere the keen knives and grinding hoofs approach.

And so may they be spared till the golden fall comes round, when with wings outspread in a brave flight, fulfilling their end in the regular way, they finally enter the paradise of quail. ONYJUTTA.

THE BUFFALO IN NEBRASKA.—Chicago, June 15.—In the dispatches I notice the following: "The people in the vicinity of Blanche enjoyed a genuine buffalo hunt last Monday, says the Imperial Republican. A buffalo supposed to have escaped from Buffalo Bill's ranch at North Platte strayed into that neighborhood and an exciting chase began. After running a number of horses down the animal was captured and held for a reward. Buffalo Jones's herd of eighty bison is now grazing on land about two miles from McCook, and is attracting hundreds of sightseers." Mr. Jones is engaged in some irrigating ditch work in Nebraska, but it had not transpired earlier that he had moved his herd up from Kansas. E. HOGUE.

FULVOUS TREE DUCK IN MISSOURI.—Under date of June 20 Mr. Sparks wrote us that the true locality of the fulvous tree duck referred to in our issue of June 18 was New Madrid and not New Albany, as he informed us in a previous letter. Mr. Sparks furnishes the following additional information about the specimen: "This bird was one of three that passed over a small overflow pond a few miles south of the town of New Madrid, Mo., where I was shooting. The other birds 'using' on the pond at the time were mallards principally, with a few pintails and bluewing teal. The most notable feature about this bird when flying was its great length of neck and unusual spread of wings."

COLORS OF SCREECH OWLS.

Editor Forest and Stream:

I am busily engaged in a study of the color phases of our screech owls, and to reach anything like satisfactory results will need a large amount of material or notes from ornithologists in every section of the country, and invite their hearty co-operation in assisting me with the work in hand. No information is too meagre to be useless, and all will be thankfully received and acknowledged. I append a set of questions, the answers to which, together with any additional information, may be addressed to me at the Smithsonian Institute.

1. Give State, county and town where observations were made.

2. State number of screech owls that have come under your notice.
3. Give number of specimens in the gray, red and intermediate phase.
4. Give number of males and females represented in each phase.
5. From your observations which phase is most common in your section of the county.
6. Have you made any notes regarding breeding birds and young, as to the character of the young when fostered by a gray female and a red male; by a red female and gray male; by both parents either red or gray; or by union of intermediates *inter se*, or with either red or gray phase? If so, please give full account. E. M. HASBROUCK.

SMITHSONIAN INSTITUTE, Washington, D. C.

Game Bag and Gun.

THE FULL TEXTS of the game laws of all the States, Territories and British Provinces are given in the *Book of the Game Laws*.

THE NEW YORK ASSOCIATION.

IT may be said that every good citizen of the State of New York has more or less of interest in the preservation of its fish, game and forest from ruthless destruction. And it must be just as freely admitted that with no power to stay the hands of ravagers, certain destruction must result from their acts. Is it not, then, the duty of good citizens to interfere, to adopt and put in operation such means as shall preserve to the people that which rightfully belongs not to the few but to the many?

For many years the "New York State Association for the Protection of Fish and Game" breastathed much opposition in its efforts to carry out the purposes for which it was organized, and succeeded in accomplishing work that was excellent and lasting; but when it had in considerable degree triumphed over prejudice which was mere vapor, it seemed to tire of the work it had undertaken and gradually deteriorated into an association for trap-shooting, so that of late years its influence for the main purposes for which it was organized have not been much felt in the Legislature or elsewhere. This fact is deeply regretted everywhere, and the feeling is quite universal that something should be done in the way of effecting a State organization of influence and power, one which will command the confidence of the public and be felt in the Legislature.

It is one thing to recognize the importance of such an organization, another thing to perfect it. It needs to be upon a broad basis and should include strong men among its large membership. Not only must fish and game be cared for, but our forests require protection from the inroads of speculators and peli-seekers. Other and hardly less important subjects need careful attention, and the best thoughts of the best minds should be secured for the consideration of all of the many questions which would naturally come before them for determination.

If it be generally admitted, as it must be, that a State organization is essential to the welfare of the State, then the question arises, How can it best be made? Shall an attempt be made to infuse new life into the old association, or shall the Fur, Fin, Feather and Forest Association of New York, or the New York Brotherhood for Natural Protection take its place? How can the most effective elements be brought into co-operation in the most effective manner?

The association should have a large and well scattered membership, so that interest in it might be felt in all parts of the State. It should be made attractive to prominent men who are deeply interested in the subject, so that its meetings and acts might attract public attention and approval. Perhaps I can but express the outline of such an association as I have in mind, by placing the suggestions which I have to make under a series of headings, as follows:

1. Let its active membership consist of the Forest Commissioners, the Game and Fish Commissioners, the Senate and Assembly committees on game laws, its various standing committees and delegates from all of the clubs and associations in the State organized for the protection of fish and game. There are other people who are so much in sympathy with such work that they would naturally be added to such membership.
2. Conspicuous in its councils should be an advisory committee to be appointed by the president each year, whose position should be honorary. It should consist of such number of men as the president might choose to select, his choice, in the first instance, to be made from among those whose days for pleasure on field and brook have passed, but whose enthusiasm remains unabated, and in the second instance, from men of mental worth, in full sympathy with the objects of the organization, and whose attendance would not be likely to be otherwise secured. These should be selected in such number as the president might desire.
3. The State officers and members of the Legislature should be members of the association *ex officio*. They might not all attend the annual meetings, but such as desired to do so should meet with a cordial welcome.
4. There should be several standing committees—on finance, legislation, care of the forests, game and fish protection, business to come before the association, general welfare, adjudication, and others which would suggest themselves in the natural order of procedure. These committees should hold semi-annual meetings, and be active, as occasion might require, during the entire year.
5. The committee on general welfare might properly be composed of the Forest and Game Commissioners. They occupy important positions before the public, and in the discharge of their respective duties they would feel the support of an efficient association and would naturally desire its prosperity. Their activity as members would be demanded.
6. Some plan would be perfected by which those whose interests are in the preservation of the Adirondacks could be brought into active co-operation. A "hotel association" and a "guides' association" could be made to represent the Adirondack sentiment.
7. A somewhat "vexed question" in the minds of some would, no doubt, be as to when annual meetings should be held and under what conditions. There are many who would prefer them in June, with field exhibitions to follow. There are others who would be glad to have them held in Albany some time early in the session of the Legislature, so that their power might be directly felt by that body.
8. But if it should be thought that as there could be no field sports in January, attendance upon meetings would be greatly lessened, then it would be the duty of such

advisers to devise some plan under which the association could meet and transact its business with deliberation before the opening of the field sports. The business of the association must be paramount to its pleasures if it would not repeat the history of the present State Association.

9. Full reports of every meeting should be printed in pamphlet form for the use of members. If field sports should be connected with the meetings, then a full record of them should be kept, and a plan devised for recording the names of those attaining certain grades of excellence, and the giving to all such a token of the association's approval for their proficiency.

10. Provision should be made for exhibitors of sportsmen's goods at the annual meetings. It would be possible to make some exhibitions attractive, useful and popular.

11. The location of the president should not be restricted to the place of meeting. The association should be free to choose the best man for the place from any part of the State and continue him in office at its pleasure. The vice-president might properly be chosen from the locality and act in the place of the president in making local preparations for a convention.

Now, while I have not wholly divorced a business meeting of men intent upon doing good work for the people from trap-shooting and fly-casting, I am in duty bound to say that in my opinion there should be an association which will give proper support to game and forest protection, even though it must neglect field sports to do so.

Field sports must be made secondary if the good work for humanity is to be done by one and the same organization. Our game protectors need moral as well as legal support; our grand Adirondack region is going to swift destruction because public sentiment does not crystallize itself and stop it. The Legislature is more or less indifferent because there is little of political power exerted to force it to action. Indeed, politicians who care for naught but politics play with the very interests which lovers of nature should protect. If those in this State who love nature, the field and the brook, will come together resolved upon combining their influence and determined to have the rights of the people protected, they can command the action of Legislature, and effect results which all the people will applaud. We must have more and better legislation or soon we shall have ourselves to blame for the loss of nature's gifts in mountain, stream and field, all gone to the ill of avaricious speculators, or to the keeping of men whose wealth gives them advantages over the poor, which makes nature herself weep.

I hope the readers of FOREST AND STREAM will interest themselves in this subject, and if they find my outline of a plan for relief from evils complained of either crude or impracticable, that they will point out the faults and suggest improvements. I am sure that no gentleman better understands existing needs than the new president of the present association, Mr. Horace White. It may be that in accepting the presidency he did so with the expectation of restoring it to old-time usefulness. He is young, vigorous, capable and practical minded, and withal full of determination, so that if he should undertake to bring the dead to life it is quite certain that a miracle would be performed. Doubtless every one of the readers of FOREST AND STREAM would read with rare interest anything on this subject which he might contribute. D. H. BRUCE.

SYRACUSE, June 27.

NEWS FROM THE YELLOWSTONE PARK.

YELLOWSTONE NATIONAL PARK, June 22.—*Editor Forest and Stream:* About six weeks ago the Government scout and soldiers stationed at Soda Butte arrested T. S. Vandyke, a hunter and trapper who for years has been furnishing Cooke City with game. He was found asleep in his camp on Laman River—east fork of the Yellowstone. In his camp was found two beaver traps and other outfit. The party making the arrest removed his arms, field glass and Kodak. With the camera they took several shots at him while yet asleep. He was taken into Ft. Yellowstone, where he was held for 34 days and his property confiscated. He says he is loser about \$350—for that is the sum at which he values his horses and outfit.

Captain Anderson, acting superintendent, will leave nothing undone to prevent depredations in the Park.

In addition to his own troops, Captain Anderson has the assistance of Captain Frank A. Edwards and his troop of First U. S. Cavalry, who are stationed at the Lower Geyser Basin for the summer. The roads and trails are carefully guarded and patrolled by the scouts and soldiers; a sharp watch for fires is maintained, although there has been but little danger from this source since there has been so much rain lately. Rain has fallen every day for the past seven weeks, mostly in passing showers, but some days the rain would last for hours. These storms are usually snow on the higher levels of the Park. Occasionally the snow would reach as low as the altitude of the Mammoth Hot Springs—6,000ft. The rain has been accompanied with very low temperatures, frost and ice have formed every night at many of the hotels and camps. The cold weather has kept down the insects and mosquitoes, gnats and other pests have not been very troublesome. The light snow fall of the past winter was not enough to afford sufficient moisture for the country, but now that the rains have fallen, we are having the best grass crop for years, giving abundance of feed for the game during the coming winter. Not only has the Park been benefited, but the whole country has not seen such abundance of grass for years past.

The new forest reserve is practically an addition to the National Park, making it one degree of latitude long and one and a half wide, except a corner on the northeast which was left off to avoid taking in any settlements or mineral country adjacent to Cooke City.

Within the new reserve three new mining camps have been started. One on the divide between Clark's Fork and Stinking Water. It is at the head of a stream called Sunlight, where it heads up against the North Fork of Stinking Water. This is a silver quarry camp. Very little work was done on any of the mines last year, and as they are still under snow the miners can do but little prospecting.

A placer camp has been started on a branch of Jones' Fork of Stinking Water; this stream—the branch—heads against the South Fork of Stinking Water and runs north, joining Jones' Fork a few miles east of the Park boundary

line. Seven miles of the stream has been taken up by the miners, and quite a number of men are at work ground sluicing. From a man who passed through the Park a few days ago we learn that very little gold has been seen. One "clean-up" did not pay the miners half wages; he claims that but a small portion of the ground claimed, if any, will pay to work. He also says that this year will prove if there is anything worth working for. If not the camp will be abandoned by October. Nothing is known here about the third camp, which is said to be near the headwaters of Graybull River, and is a placer camp. It is claimed that the silver camp has some very valuable mines or prospects, and many think they will not be taken in when the lines of the new reserve are surveyed. If they are valuable mines and on the reserve, every effort will be made to have the lines changed so as not to include them.

A fire destroyed over seventy tons of baled hay at Ft. Yellowstone (Camp Sheridan) a short time ago. For a time it looked as though it would be impossible to save the buildings. Fortunately the wind was not high and in a favorable direction. This fire was supposed to have been started by tramps.

The Government is expending over \$50,000 on buildings and improvements for the new fort at the Mammoth Hot Springs. A large force of men and teams are employed laying foundations and getting material on the ground. Hundreds of men and teams are at work for the Government and contractors on the new wagon roads. More work will be done and more miles of road completed this season than ever before in the Park.

There are now at the Mammoth Hot Springs a few animals belonging to the National Zoological Park captured by the Smithsonian hunters. These are elk, antelope, bear and foxes. All animals captured will be held at the Hot Springs until after the tourist season closes. They can be seen by all visitors to the Park.

Small bands of buffalo are reported, and quite a number of young, showing the number of these animals in the Park is increasing.

I constantly see accounts in the papers about Robert Ray Hamilton, who was drowned in Snake River a few miles below Jackson's Lake, Wyoming. It is said that he has been seen this time in the National Park; the man who claims to have seen him did not speak to him. Mr. Hamilton was accidentally drowned while trying to ford Snake River last summer; his body was not found until ten days after. A party of gentlemen from New York, who were camped near where he was found, recognized the remains; the cold water had preserved them from any change. As there is no settlement within over a hundred miles, he was buried at Jackson's Lake, within a short distance of a hotel and sportsman's resort in which he was interested. Since then sensational writers have been having him appear in all parts of the world. Others have drowned him all the way from Jackson's Lake to the mouth of the Columbia River. It is a pity he can't be allowed to rest quietly in his lonely grave beside Jackson's Lake. Mr. Hamilton was the eighth man drowned in Snake River last summer. Every season sees several persons drowned in the swift mountain streams of this section, but very seldom within the boundaries of the National Park. Most of the guides know and understand the danger of attempting to ford the streams when they are at all high or deep. The parties who are drowned are always alone, are without guides, and do not know their danger or the strength of the currents.

The game in and about the Park are very kind to show themselves to visitors. Very few people have been through this season who have not seen some of the wild animals. Bears appear to congregate about Mt. Evans and the Blacktail country, eight having been seen in one day. One large one killed a small grizzly cub that was chained up at Yancey's Station. The cub was intended for the National Zoo. Another large bear that had been around the hotel at the Lower Geyser Basin was captured in a trap and sent to the Smithsonian Institution.

H.

A STREAK OF LUCK.

IN hunting, more often than in any other pursuit or recreation, does the unexpected happen, and, in fact, one of the chief charms of the sportsman's holiday is this very uncertainty as to what beast or bird of sport his next step in the jungle will bring him face to face with. Nor is the most elaborate preparation at all likely to be followed by corresponding success; on the contrary, how often does the hunter, with but a single cartridge in his belt, or with an empty rifle on his shoulder, find himself suddenly confronted by the grandest specimen of the very animal he is in search of, which a month of effort has brought into sight.

Though all lovers of the chase and of the wilderness have more days of lost toil and effort than those of bright success, yet, naturally enough, all love best to remember the red-letter days of legitimate sport, and it is these same red-letter days that are most often written up.

All this comes naturally enough, and it is one of these same sunny days of the hunter's life which I wish to picture for the readers of our dear old journal.

Once again the venison had disappeared from the cabin, and the usual clamor arose from the kitchen, and although but three cartridges were found in the belt, and the sun was within an hour of setting, once more the old Sharps was shouldered and the old uncle turned his moccasined toes toward a timbered ridge to the southward of the cabin, in the hope that a deer might be found before dark. Express balls were in each cartridge, with a full shell of 120 grs. powder behind each.

The ridge was covered with scattering trees of large timber, and the intervals grown up with brush and small pines, very little open ground to be found. This dense cover made good hiding grounds for deer during the day and I hoped that as nightfall approached they might be found feeding in the openings, when the chance for a good shot was quite probable if they could be approached in silence.

Strolling slowly along up the ridge, following a cattle trail which enabled me to proceed silently, I reached a point about a mile distant from the house, when feeling one of my moccasins becoming loose I sat down upon a log to adjust the lacing.

While seated, and still busy with my moccasin, one of the wretched little red squirrels common to our pine timber caught sight of me and forthwith began to chatter loudly and persistently, and an eagle perched upon a tall tree near by noticing me now for the first time screamed

loudly; another squirrel joined the serenade and the eagle's mate just then arriving from the lake, a few miles distant, perched near the first and joined in the reigning pandemonium until the old woods rang again. (These red squirrels are one of the very worst pests the hunter in our mountains finds to annoy him. Almost invariably their chatter, which is shrill and continuous while the hunter is in sight, will "give him away" to the deer, if any are near by, as they have long since learned to regard the squirrel's chatter as a note of warning.)

Suddenly the loud snort of a frightened deer a few rods to the left notified the squirrel of the success of his mean trick of intermeddling, and as the deer dashed away I ran forward a few yards to some rising ground in an opening in the hope of getting a flying shot. Nothing was to be seen, as they managed to keep well under cover, and after waiting a long time in the vain hope of their still showing up, I slowly journeyed on, muttering anathemas at the little meddling wretches who have so often on similar occasions contrived to rob me of success at the very instant of its culmination.

The sun had set and night was coming fast. Reaching at length the crest of the ridge, where it breaks steeply down into the valley of the Colville River, I paused upon its summit and took a long and careful survey of all the hillside, far as an opening appeared among the trees and rocks. At length something was noticed about 250 yds. distant down the hillside, which in shape looked near enough like a deer to cause me to watch it intently; after a long interval of scrutiny a slight movement of its head satisfied me, and taking as careful aim as possible in the waning light I let drive.

Away went the deer with its flag bravely flying, and was soon lost to view among the trees, yet just the last jump made while yet in sight appeared to be a staggering one. Hurrying carefully and silently down the hill toward it I had gone about 50 yds. when another deer was seen to stop in its run along the hillside and stand about 100 yds. distant, looking nervously about from side to side in search of the hidden enemy. I did not want more than one deer, but I was not at all sure yet that I had got one, and taking a quick aim, fired again. The same result exactly followed. After a short run with uplifted flag it disappeared, and its last jump seemed awkward. Reloading I started in pursuit, when I saw still another deer running up the hill from below toward the one last seen, and when within about the same distance from me as was the last one shot at, it stopped. With my last cartridge in the gun I fired again and he fell in his tracks.

Hurrying down I found both the others, each within 50 ft. of the spot where last seen. While rejoicing at this unexpected streak of pure "luck," I regretted the unnecessary killing, yet of course felt bound to shoot until I felt sure of meat. And let no sportsman bewail any supposed waste of good meat. Not a pound of it was wasted, our neighbors gladly assisting us in disposing of it.

And now came, to me, the strangest part of the whole adventure. Night was coming on rapidly, and in my haste to dress the three deer I stood the faithful old Sharps up against a small pine, and hurried to the work. When ready to return no gun could be found, although I hunted vainly while the fading light lasted, and not until my son and I came in the morning for the game did we find that while busy with my work the rifle had fallen from its place and slid down the steep hillside among the brush and grass, and only by another streak of luck was it found at all, as I could not be certain which of all the trees on the hillside was the one against which I had leaned it.

ORIN BELKNAP.

SIX YEARS UNDER MAINE GAME LAWS.

IX.—THE JOCK DARLING CASE.

NO game case of this State has enjoyed the notoriety of this, and none seems to have been less generally understood. Did it check hounding? Did it crush Darling? The full force of the negatives can be appreciated only by those very intimate with Maine game matters for the past year.

On account of the misapprehension which prevails regarding what was accomplished and the personal prejudice involved, it is of all the game cases on record the most difficult to explain. Few are so bound up in the personality of an individual, and few depend for their influence so little upon the facts and pleadings recorded by the court, so much upon what forms no part of the court record; for, as a legal decision, this case accomplished nothing of importance, but as a power to affect public opinion it had a weight entirely independent of and not commensurate with the court ruling. The case was decided in favor of the State, yet nothing that has ever happened in eastern Maine, not even the dog-killing, has done so much to hurt the Commissioners as the Darling case. The Hammond case, famous as it was, fell far short; for the injustice there, though flagrant, rested on a point of legal interpretation, while here it lay on an abuse of legal methods, for which, as the State was the prosecutor, the Commissioners were popularly held responsible.

The great interest which attaches to the case arises from the fact that with good ground for procedure, in a cause and against a man, both believed to be in the wrong, the case could have been so handled as, against popular prejudice and an adverse court decision, to win to both the cause and the man more tolerance and good will than they ever had enjoyed before. How this occurred will be shown. For the rest it need only be said that the principal charge on which the case rested was nowhere denied or doubted, and the decision of the court was manifestly just. Darling had for years been openly engaged in deer hounding. That he should be capable of overcoming the opposition which was very strong against him, of maintaining his insecure position and strengthening it, of winning good will which seems to be continually increasing, indicates an ability with which he is not popularly credited. It has been to his advantage that he has been under-rated by his enemies, but personal justification and personal conviction stand equally apart from the purpose of these papers. In speaking of Mr. Darling's character it is enough to say that he is better thought of near home than away from it; that his candor and honesty are believed in by those who know him, and that he is not and never has been an outlaw as is so frequently declared. This being admitted, what follows will not be hard to understand. As a review of the principal facts of the case in hand I will quote portions of two accounts published at the time in the newspapers,

BANGOR, Me., Nov. 4.—The officers say the arrest of "Jock" Darling, the Lowell hunter, whose arrest for illegal hunting was reported in the *Herald*, is the most important capture made for years. Well-laid plans were made by Commissioner Stilwell and Detective William McNamara, of Boston. They claim to have secured enough evidence to prosecute to the full extent of the law.

They were out each day with the dogs, "Jock" putting out the dogs twice each day for three days, the guides doing the business the other two days. They killed four deer, one each themselves, Darling one and a guide one. They came upon Darling after the dog had run the deer into the water, just after he had shot him. They heard the report of the rifle, which was still smoking when they came up, and the deer was still warm. McNamara says they were obliged to kill the deer to accomplish the purpose for which they went there.

As the offense was committed in Hancock county, they were obliged to go into that county to swear out warrants against Darling and his guides. The warrants were sworn out and assistants were obtained. On their way to Darling's camp they met Darling in the town of Lowell and immediately arrested him. "Jock" wanted to go to his house to change his clothes and get his overcoat, which the officer consented to, but said one of them must go with him. But "Jock" insisted on going alone, which the officers would not agree to, and he was accordingly handcuffed, and Officer Davis volunteered to bring the old man to this city, while the others kept on to the camp in quest of the guides. Darling in some manner sent a warning to the guides, so they disappeared before the officers arrived. Darling had \$700 with him when arrested. Darling is charged with hunting deer with dogs, keeping dogs for that purpose, and hunting and destroying deer on Sunday.

The second, from the Calais (Me.) *Times*, gives some additional particulars. Both these extracts may be considered as official, since, aside from internal evidence, one comes from Bangor, the home of Commissioner Stilwell, and the other from Calais, the home of Game Warden French, who laid the plans, which Mr. Stilwell approved and McNamara executed. (The italics are not in the original.)

Darling's camp on Nicasitons Lake is very difficult to reach, and is a sort of stronghold for poachers. It is fifty miles from any railroad station, and to reach it one must travel over a rough road. McNamara, accompanied by Swanton, of Milbridge, made their way to the camp with much difficulty, and engaged quarters with Darling. They hired his guides and dogs to hunt deer with, paying well for them. They remained five days. When McNamara and Swanton had obtained all the evidence they wanted, enough they thought to convict Darling on some twenty or thirty cases, they left the camp. As the offense was committed in Hancock county they were obliged to go into that county to swear out warrants against Darling and his guides. Accordingly they went to Bucksport, where the warrants were obtained. Constable George Davis and Sheriff James Swanton, with a formidable party, set out for Nicasitons Lake. On their way to Darling's camp they met Darling in the town of Lowell and immediately arrested him.

Darling was arraigned at Bucksport, Monday, before a trial justice. The justice found Mr. Darling guilty and fined him \$40 for the deer which it was charged he killed, and \$10 for each of the deer which the other parties admitted that they killed. He was also fined \$50 a day for keeping dogs to hunt deer two days, the whole making \$280. On the question of costs there was some argument. Mr. Voss [Vose] suggested that the case of bringing seven men from Milbridge to Nicasitons Lake to arrest Jock Darling be charged to the prisoner, to which Col. Hutchinson [Hutchings] objected, and said that any one officer could have arrested Mr. Darling without a bit of difficulty. The cost question finally went over for the counsel to talk over and see if they couldn't decide upon something satisfactory. The case was appealed and will come before the Supreme Court at Ellsworth on the 8th of April next. Other cases stand against Darling. The officers who went to Nicasitons to arrest the guides found that they had taken the alarm and fled. They will be captured later.

From these accounts it will be seen that a Massachusetts detective, not a Maine warden, was employed to collect proof, which of course was perfectly right; that this man then swore out warrants, which was not at all right according to our laws. Then seven men were sent all the way from Milbridge in the southeastern part of Washington county to Nicasitons Lake in the northern part of Hancock county, via Lowell in Penobscot county—a long and roundabout journey, and expensive because train communication can be had only part of the way. What the object of this was it would be difficult to discover unless to add to the expenses and force the prisoner to pay them, as was actually attempted, for there was no possible good that they could accomplish. If the object was to arrest Darling's guides by force in the woods, there were not men enough sent; otherwise there were too many, since one unarmed man with a warrant could do more than a posse. If it was supposed that this number was necessary to overpower Mr. Darling singly, there was an entire misapprehension of his character. In like manner the use of handcuffs, though probably intended as an irritation, had no sufficient excuse. It was the officer's duty to keep his prisoner securely, yet in insisting on this point there was shown the same misunderstanding of Darling's position. Resistance to authority is no part of his plan, as lack of control is no part of his disposition. His word would have been the only guarantee needed; because had he attempted escape he could have been held on a graver charge than the one for which he was arrested, and had he wished to make the attempt he could have done it as well with the manacles as without them. Finally, the refusal to allow him to change his clothes was either a piece of short-sightedness or another unnecessary annoyance. According to the report published at the time, from information which must have been derived from official sources, Mr. Darling had above \$700 on his person at the time of his arrest. From a number of sources I am informed that he offered to deposit this with the officers as security, if they would permit him to change his clothes. There is every reason for believing the statement. Without questioning the officers' reasons for refusal, it is none the less true that the favor might have been safely granted. Here was full indemnity to the State against personal loss, and no real danger of any loss. Darling knew that the charge was a violation of the game law; that the penalty could not be anything more serious than a fine. Even if he had determined to abscond, leaving his money, he would be doing it on uncertainties, since he did not know the specific charge, and would be making himself the outlaw he had falsely been declared to be, thus practically forfeiting his home and all his other property.

The indignity of this treatment, which had to be admitted, reacted strongly in Darling's favor; and his non-resistance and refusal to accept interference in his behalf left the officers to bear the odium of unnecessary severity. Then it was found that he was arrested on defective warrants, and on these warrants fined not only for keeping dogs and for killing a deer himself when in the employ of McNamara (though here the employer is always looked on as responsible for the action of the guide), but for the three deer that Swanton and McNamara killed themselves. This was outdoing justice's justice, even as we get it in Maine game cases.

But these were not all nor even the greatest of the indignities offered. I had heard from a number of sources

the account of his arrest and trial, but this winter, wishing to get a continuous and accurate account, I wrote Mr. Darling about it. He also called during the winter, the first time I had seen him for many years. From his letter and oral statement the following account is compiled. Full references were given me for substantiating the different points, and I believe the account to be correct.

"At the time Stilwell sent McNamara to Niatowis Lake to get evidence against me," he writes, "I had a sick daughter in Massachusetts. I had been there to see her, and the doctors told me that she could not live but a short time. The rest of my family was there with her. I felt so bad that I could not bear to stay there. I went home and McNamara and Swanton came to my house and wanted me to take them to Niatowis, deer hunting. I took them to the lake and stopped one day. They hired each of them a guide and killed three deer. I killed one the day I was there. They killed two on Sunday and I went home Sunday. Before I went I saw them from the house at the lake kill two. I sat on the steps of my door and saw them shoot them. McNamara stopped two days after I came down and hunted and then went directly to Bangor, etc., and swore out four warrants for me and several for other parties and then went to Milbridge and got a warden and seven men all told and started for Niatowis. I was at home watching the mail and the telegraph, expecting any moment to hear of the death of my daughter, when those men came. They told me that they had a warrant for me for violation of the game laws. I told them all right and I wished to see it. They would not, and took out handcuffs. I told them that such things were uncalled for, but they told me to have them on."

In the conversation on the subject, Mr. Darling said that he wished to go to the post office to get his mail, being anxious to hear from his daughter. He was forbidden to have his mail at all. He insisted upon it, and at last was permitted to go, the officer of course accompanying. Some men about the post office wished to remove the handcuffs, but he refused. He did, however, ask one of them to go up to the lake that day, which was done.

"They put them on," the letter continues, "and started me for Bangor with one man, and the rest went to the lake. When I got to Olamon I demanded the warrant to read it. I declined to go further until I read it." This of course was simple enough. Had he wished to do it, Darling could at any time have leaped from the open wagon, and the officer would have been unable to secure his prisoner again. At last the warrant was given him. "I read it. It was for killing four deer, and three of them was killed by them while with their guides." At Olamon they stopped for dinner. Mr. Darling requested to have the handcuffs removed while he ate. The officer would not do it. He refused to eat unless it was done, and for the third time that day the officer yielded. Before this, however, a well-known man, whose name was given me, not a resident of the place, offered to cut the link with a cold chisel. "But," writes Mr. Darling, "I wanted to let those men show themselves in full and I would not have them taken off, only when I ate dinner. I was taken to the jail in Bangor on Friday night and held until Monday, and then taken to Bucksport for trial, fined for killing four deer and keeping dogs in my possession, etc. I have forgotten the amount of the fine, costs, etc., but I appealed."

The confinement in the Bangor jail for two days was the worst part of the insult. Bail was offered by different men whom he named, and could have been had to any amount required; but it was refused. What possible excuse could there be for this? The charge was only a violation of the game laws; the fine at the most less than the amount of ready money which the officers knew Mr. Darling had in his possession; and unexceptional bail could have been obtained to any amount. The fact that the State was the prosecutor did not improve the situation. Instead of prosecution, some declared that this was persecution. Of the foul condition of the jail at that time, the insufficient food and the wretched quality of the same, and the exposure to contagious disease, Mr. Darling gave a full account, which has been fully confirmed by others, among them Mr. Robert Jordan, the secretary of the Bangor Y. M. C. A.

On Monday Mr. Darling was taken to Bucksport, in Hancock county, for trial before a trial justice. Why this particular man was chosen, whether he was there at the time or not, I cannot say, but he was not a trial justice. He had been one formerly, but had lost his commission by moving out of the county, from Bucksport to Bangor. There is no doubt of this, as it was to have been one of the fundamental points of cases to be brought against Darling in the Supreme Court. The quality of the justice rendered can be seen from the fines imposed for deer which Darling did not kill, but saw the officers themselves kill on Sunday, which being close time in this State, made them liable to the fine. The fines and the costs, I am told, were made to amount to over \$600. In addition, as has already been said, the warrants on which this was done were worthless. McNamara was not a warden, and no one but a warden has the right to prosecute in a game case until fourteen days after the offense; according to section 18 (not quoted in the *Book of the Game Laws*): "After fourteen days from the commission of any offense hereinbefore named any person may prosecute by action, complaint or indictment, unless such warden or deputy has prosecuted therefor." Yet McNamara swore out his warrants within a week of the time that he first reached Niatowis.

At the Supreme Court at Ellsworth four complaints were brought against Darling, one for using dogs and three for killing deer. The latter were not McNamara's original cases but others substituted for them. None of these were tried, two being not prosed and one quashed as defective. The dog case was tried and the verdict given in favor of the State. Now comes the much vexed question whether Darling was fined or not. He paid \$100, which is the sum set as the maximum fine for keeping or using dogs, but he paid no costs. The case was concluded on a Saturday, the other cases were to be brought up the next week. Whether they would have gone in favor of Darling or against him, whether he would have begun action against his accusers for grounds which were certainly good, cannot be told; for the judge and the counsel on both sides after conference agreed to settle this case and dismiss the others on payment of \$100 without costs. Mr. Darling rather reluctantly consented. He had two drives of logs which needed his attention, as this was in April,

and though he wished to bring the matter to a decisive issue the loss would be more than the satisfaction to be derived. Mr. Darling himself claims, and all those not personally hostile to him grant, there was a settlement, not a fine proper. "It may be entered on the docket at Ellsworth as a fine," said his counsel, "I do not know; but it satisfied all the cases and did not include costs."

No game case that we have had, on which so much depended, ever was so indecisive as this. It did nothing. It is even a little uncertain whether Darling actually was fined. He was found guilty of using dogs which no one denied, but the possible effect of even this was neutralized by the part which McNamara played. He was to appear before the April term of the Supreme Court as the principal witness against Darling; but at that time there was some little doubt as to the value of his testimony. In February, 1890, he was tried at Ellsworth on the charge of perjury. "In summing up the evidence he [Judge Redman] charged that McNamara was an unprincipled man working for money only, and unless he were punished the life and property of any citizen was in danger. Judge Clark held that there was probable cause and ordered the defendant to furnish bonds in the sum of \$800 for his appearance at the April term of the Supreme Court." But if he were convicted, Darling could not be; if he were acquitted, unless by the fullest proof, his testimony, whether true or untrue, would fail to affect the public at large. Without entering into the details, it is enough to say that by a disagreement of the jury McNamara was qualified to be sworn as witness in the Darling case.

We need not review the various points already given, which combine to make this case unique among those that are monumental for their injustices. The effect upon a people who love to see fair play does not need to be described; but more than anything else, what affected those who had any interest in game matters, was that the same might be tried at any time upon any one, whether innocent or guilty. It was not Jonathan Darling who was ill treated, but every man against whom there was ill will or from whom there could be any profit derived. Had it been a matter of interpretation, this would not have been so; the first case would be the last, and no one need fear; but this case was a precedent of the sort to be dreaded, a menace that the same might at any time be repeated.

FANNIE PEARSON HARDY.

OTTAWA, Kansas, June 12.—A farmer in the next county east of here was plowing in a field by the side of a brush patch, and becoming tired he sat down on a stump close to the brush to rest. In a few moments he saw a fox slip out of the brush and catch a mole close by, and it was soon followed by another fox, which tried to take the prey from its mate. Finding that quarreling over the prey was useless, the first fox, which was a female, ran off and disappeared in the brush. Watching carefully, the man saw where the fox went into the brush, and on going to the spot found her lair. He returned next day with some help and dug down to the nest which contained eight young. As foxes are rare in this part of the country he took them to town and disposed of them very easily.—F. B.

THE IDEAL MANUFACTURING Co. publish a very useful handbook of their numerous loading tools, among the new articles described being tools for loading rifle cartridges, and adjustable moulds for patched bullets, a bullet sizer and a loading flask. The flask holds 4 lbs. powder, and measures out the powder in any required number of grains from 3 to 135; it is also graduated in drams, from 1/4 dr. to 5 dr. The flask has many merits which must insure its general adoption and use. The handbook supplies a convenient table of dimensions of round and grooved bullets as made by the several manufacturers for different arms; and there are useful hints about loading and caring for firearms which every user of a gun or rifle will do well to read.

THE LEFEVER ARMS Co., of Syracuse, N. Y., are out with a handsome catalogue of their excellent guns. It gives full list and descriptions of all the styles of the Lefever guns, with many hints which will be valued by gun users. Here is a way to load buckshot: "First put in powder and wad as above, then procure shot of size wanted, being careful to see that they chamber a little loose in muzzle. Put in one layer of shot and fill cavities with light, fine substance, like bone dust or fine sawdust, and repeat till three layers are placed in shell. This prevents the shot from swedging or getting out of shape when leaving muzzle of gun and gives best results."

WHICH IS THE OLDEST NEW YORK CLUB?—Oswego, N. Y.—Some of the enthusiastic members of the Leatherstocking Club of this city claim theirs was the first club organized in this State for the protection of fish and game. This club was organized March 20, 1860, with these officers: Hon. David P. Brewster, President; Frederick T. Carrington, First Vice-President; John Stevenson, Second Vice-President; Dudley Forling, Secretary. Will you kindly ask members of game clubs of the State to forward to you the date of their organization, that it may be determined whether this claim of seniority is well founded?—OSWEGO.

A NEW HAMPSHIRE DEER CASE.—Berlin Falls, N. H., June 15.—Frank Lang, Jr., and Spurgeon Lockhart, of Milan, were arrested to-day, on complaint of Fish Commissioner Hodge, and brought before Judge Chamberlain. Both pleaded guilty to killing one deer last March. Fines and cost, \$65.—COOS.

J. F. IVES, formerly of Meriden, Conn., and well known to Connecticut shooters, has accepted a position with Mr. H. C. Squires, to take charge of his bicycle department.

NORTHAMPTON QUAIL.—If the writer who sent note on quail served out of season in Northampton will supply his name (not for print) the note will be published.

SUNDAY TRAIN TO MOMENCE.—The Chicago & Eastern Illinois Railroad placed in service June 14 a Sunday train between Chicago and Momence, leaving Chicago at 3:32 A. M., and returning leave Momence at 8:45 P. M., thus affording anglers a fine opportunity to spend a day on the Kankakee River.—*Adv.*

Sea and River Fishing.

THE FULL TEXTS of the game fish laws of all the States, Territories and British Provinces are given in the *Book of the Game Laws*.

THE TROUT'S APPEAL.

Don't visit the commonplace Winnepesaukee, Or the rivulet Onoquinapasekasasagnot, Nor climb the summit of bare Mouslaunk, And look eastward toward the clear Umbagog.

But come into Maine to the Welokennebacook, Or to the saucy little river Essiqualsagook, Or still smaller stream of Chiquassabunticook, Then visit me last on the great Anasagunticook.

—Bangor News.

CASTALIA REVERIES.

Editor Forest and Stream:

I have not for a long time read so interesting a series of articles as those of Mr. Hough, describing the most remarkable trout preserve in the country, if not in the world. It reads like a reverie of an active and gifted mind. I had last season intended visiting this celebrated preserve with a view to the securing of unmistakable evidence of the success of one of my long-time pet ideas, of the preservation of this matchless game and food fish. Painful physical disability has thus far prevented the much desired visit. My only opportunity of viewing the celebrated stream has been from a train of cars. For nearly forty years I have heard of these waters in connection with trout, although Mr. Hough, for perhaps more properly some of the Castalia club members, appear to think I am mistaken. In 1854 I became intimately acquainted with Wm. J. May, at that time, I believe, city editor of the *Cleveland Herald*. Late one afternoon he came into my office and told me if I wished to see a nice lot of my pet fish to visit a certain drug store fronting the public square. I soon went to the store, and there saw in a tray-shaped dish mixed with broken ice, some fifteen or twenty (according to my present recollection) brook trout that would average 4 lbs. each. Dr. Ackley, of the Cleveland Medical College, was present and showing them to visitors, he having caught part of them. I asked him where they were taken, and he replied that Dr. Garlick and himself caught them in Cold Stream, near Sandusky, and that they were in the habit of going there every season, and always with success. This incident is as vividly impressed on my memory now as if it occurred but yesterday, and with good reason, too, for these two gentlemen were at that very time engaged in the first successful effort in this country for the artificial propagation of fish (trout). And it was from that I received my first practical lessons in the fascinating pursuit which I have ever since endeavored to keep fairly abreast of. There is no possibility of my being mistaken in this matter of the Dr. Ackley episode.

And now I wish to say that Cold Stream and the Castalia Stream are one and the same. And I will further say, that I saw in Columbus last season some old men, interested in the lake fisheries (as I subsequently learned), and heard them say that there had been trout in that stream as far back as they could remember, and that it was no unusual thing to take them in nets off Sandusky. I asked the member of the Legislature from that district about it, and he told me that he was born and brought up in that region, that there had been trout there from his earliest recollection, and that he had heard old people say they were always there. Mr. Hough raised a query as to my age. Well, I am on the shady side of sixty-five, and I was only a student in "fishculture" when in Cleveland. I lived in Ashtabula county in my boyhood days for several years, some four miles from Lake Erie. On the farm where I lived there were two pronounced ridges, the lowest depression between being perhaps twenty feet below the highest ridge and nearly half a mile from it. In the edge of the mighty virgin forest then standing there a large spring of the purest soft cold water burst from the head of a shallow ravine, and passing along the depression nearly due west, received accessions from some smaller springs. The little stream thus formed contained some wide places of perhaps eight or ten feet, but in most places one could jump across it. It was shaded by bushes most of its length after it left the forest, and it emptied into Ashtabula Creek not more than a mile from its source. This little stream contained brook trout when I lived there fifty-five years ago. On a farm adjoining this there lived at that time an old man named Hill, the most remarkable hunter and fisherman in all the region and a pioneer settler there. He sat by our fireside many a long winter evening and told of his hunting and fishing triumphs in the region about. I heard him say that many of the small streams contained trout, but that the clearing of the land was also clearing the streams of trout; so it seems that fifty or more years ago, these matchless students of nature, the old woodsmen, understood the most prolific cause of depletion of trout streams. What was true then is true now, and to an increased extent, for the streams are not only raised in temperature to an extent fatal to trout, but they are also polluted in a multitude of ways too numerous to mention here.

How can we restore them? By restoring the streams to their primitive condition, and in no other manner. This is the gospel that I have been preaching for fully fifteen years past and I have, in consequence, been denominated a crank on that subject. I still endure, however, and have lived to see my oft-stated plans practically carried out and with phenomenal success. Of course, there are not many such locations, with accompanying conditions existing, in this country as Castalia, but there are numerous locations which approximate thereto and many of them will some time be occupied by angling associations. I have in several instances been consulted by parties who wished to organize movements of this kind and I think Mr. Hough's valuable articles will be likely to awaken an interest in this entirely practicable matter of establishing trout preserves in accordance with nature's matchless methods in many parts of the country, now almost entirely depleted of trout and where hundreds of thousands of dollars have been totally wasted by fish commission methods. And I wish to again repeat here, that artificial hatching, with all the attending trouble and expense, is entirely unnecessary.

I am writing this with physical discomfort, between intervals of couch-rest. In conclusion, I wish to say, that

there is no "mystery" about the Castalia stream and nothing "baffling or unknown" to those familiar with the geology of the region.

In looking over what I have written I find that I have omitted to mention a visit which I made to the old farm in Ashtabula county in 1862. I walked down the road which crossed the little trout stream, about one-fourth of a mile from the head spring. I think it was in July. I found at each end and under the bridge a stagnant mud hole and not a drop of water running in the gravelly bed which thirty years before contained a living stream of the purest sparkling water, through which the pretty trout darted wherever a person chanced to jump across. The timber and bushes were all gone and this told the brief story of the lost stream. I had in my boyhood days plowed and harrowed many an acre adjacent thereto and upon every square rod turned up stone implements of the aborigines, showing it to have been an ancient camping ground of those people.

MILTON P. PEIRCE.

COLUMBUS, OHIO.

CHICAGO AND THE WEST.

JUNE 27.—To-night a pleasant party starts to float the Kankakee from Mak-saw-ba Club to English Lake Club. There will be four boats, containing Messrs. Abner Price and John Gillespie, of English Lake, and Messrs. W. P. Mussey, W. G. Payson, Geo. Holden, Geo. Andrews, J. P. Card and John Watson, of Mak-saw-ba. Fishing and a good time for a couple of days are intended to make the features.

The Kankakee Association has gone to work. Last Wednesday State Fish Warden F. L. Buck, under direction of Mr. Cole, who is taking care of northern Illinois fishway matters for Commissioner Bartlett, started for his trip of inspection along the Kankakee. An idea of the lame and impotent condition of our State appropriation may be had when I say that Mr. Cole generously advanced the money necessary for this trip, depending upon the young Kankakee Association to reimburse him, as it certainly will do. Mr. Buck struck his first snag at Momenca, from which place he wrote as follows:

MOMENCE, June 2.—Geo. E. Cole.—DEAR SIR: There are two dams owned by W. R. Shelby, Grand Rapids, Mich., Chas. W. Cass, 10 Wall street, New York, and rented to the F. W. Cook Brewing Co., Evansville, Ind., M. Krows, manager. The Chicago and Eastern Illinois R. R. have an injunction against them interfering with or in any manner changing the dams, and the case is now pending before the Appellate Court. H. Worcester, the agent for Cass and Shelby, says that if the R. R. Co. will release as to the putting in of the fishways, he will see Mr. Shelby and have the work done at once.

I would like to have you or some one go to the office of the C. & E. I. R. Co. in Chicago, and see if they will not release as to putting in the fishways. They have an island here where they have picnics and make the fishing a feature of their advertisements in regard to the same. I will write also to Mr. Shelby and explain the case, and see what he wishes in the matter. The fishermen are very enthusiastic in the matter and are ready to join the Association.

As regards Mr. Heimbach I think he would be just the man for the place as he is well acquainted and I think will enforce the laws. As I can't do more here until I hear from Mr. Shelby and whether you can get the release, I will go to Kankakee. You can write to me there.

F. L. BUCK, State Fish Warden.

The C. & E. I. general solicitor was visited at once. He explained that the Momenca dams were put in 40 years ago under a State grant and thought them therefore exempt from fishway claims. He said that the injunction applied only in the summer months, when any opening of the dams meant a lowering of the water in the backwater where all the picnic parties went boating. If the fishway would not disturb this he had no objection to its going in. He would like to see a diagram showing just what the fishway would look like. Mr. Buck was at once written to and asked for a drawing and specifications, and at this time it is thought that the outcome will be that the fishways will go in at Momenca without any fight or friction.

Dr. H. M. Keyser, President of the Momenca Fish Club, takes Dr. Bartlett, of the State Fish Commission, to task roundly in a local paper for what he styles serious shortcomings in the official work. Dr. Keyser concludes:

The secretary, Mr. Bartlett, draws big pay, that is all the aid the fish clubs get. Let the fish clubs petition to the Governor for his removal, and some live active man put in his place, then you will see the fish as plenty as in former years.

I have never met Dr. Keyser, but he will not take amiss a few words on my part, which it would be much amiss not to utter. I take it Dr. Keyser does not wish to make himself a disturbing element in a movement where harmony or diligence now dwell. I take it he wishes to really protect the fish. Yet this latter he will not do, and he will really become simply a disturbing element if he insists upon such statements as the above. The Fox River and the Kankakee River associations are all the real aid Dr. Bartlett has in his work; the rest is all advice and abuse. These two associations simply swear by Dr. Bartlett, though recognizing very plainly his purely human proneness to promise almost anything to "keep peace in the family." He is a peace-loving man, albeit an honest, hard-working man. He has made this State work what it is. The State work, Commissioner and associations together, is doing splendidly now. No State in the Union is doing so much on the same amount of money. To divide the present Commissioner and the associations would be to stop the work short. It seems not to be known that the unaided State appropriations would not do half of what is doing now. Why not? Because friends of the work are working for nothing. Take Dr. Bartlett away, and you cut off these friends, these men who have worked instead of complaining. It is the right thing to leave these things all just as they are. A change would set back the work in this State ten years or stop it altogether. Now is the time, therefore, to do a little thinking about such things.

I am sure Dr. Keyser does not wish to be unfair or wide of the truth in any way. I do not believe that he wishes to boom his own chances for that "big salary." If by any chance he should happen to get that salary he would be the most surprised man on earth. The plain fact is that the drawer of this "big salary" gets absolutely no salary at all. Dr. Bartlett works for nothing, and he works hard and knows more than many fish commissioners do. Is this fact known? It is true that there is an appropriation, \$20,000 to cover the work for two years, but none of this can go to Dr. Bartlett as salary. He has a little property of his own, and the U. S. Government pays him a small salary, but outside of this he does this work because he loves it. Is this the man to be "removed," and is this the time to talk about that? I don't think Dr. Keyser will think so now.

The fact is, that one man cannot cover this whole State, see to the hatchery, see to the seining of young stock fish, see to the fishways, see to all the violations of all the law in all the waters, and all that on an appropriation of one-third of what this State should make. First and most of all he needs help. The Kankakee Association, and not Dr. Bartlett, is asking cash help and active assistance of all the clubs along the Kankakee River. This help is practical. No use to complain of what has not been done. Let us go to work now and do it, so that no one else can complain. That is the idea. There never was a time like this for those who honestly wish to see the Kankakee protected. I class Dr. Keyser among those, of course, and I know he will swing the Momenca Club into line heartily and with no ill feeling toward even the much abused and yet largely innocent State Fish Commission. Word comes up from Mr. Durham, the Momenca banker, for some of the blanks for membership of the Kankakee Association. We hope up here to see Dr. Keyser's name come in among the first, and we believe that Momenca, at present at the head of fish navigation, will be at the head of the river towns in backing this protective work. It will go.

Protective matters are pushing ahead here now. The movement is revived to oust that odious anomaly, Brusewitz, game warden of Chicago. Last spring FOREST AND STREAM published the petition for his removal. This will go to Governor Fifer before the end of the month, together with one asking the appointment of Mr. M. R. Bortree as warden for this city. Mr. Bortree will present a pleasant contrast to the present incumbent incubus. He will work, and he knows how to work. Politics never did a more ridiculous act than in the appointment of the man Brusewitz as warden. The governor gets "wards" and "wardens" mixed in his mind, perhaps. Brusewitz controls about 100 votes or so. He admits that he couldn't tell a quail from a prairie chicken. The Chinese must go.

June 29.—Mr. John Henderson, of Clay Center, Wexford county, south peninsula of Michigan, writes me that a party of fishers from Cadillac lately caught 800 trout in four days on Slagel Creek, near Clay Center. Frank Wherry, late a State game warden, told me that this stream had some very heavy trout in it.

E. HOUGH.

NEW ENGLAND WATERS.

MANY of the later trout fishermen to return are reporting better luck, especially in larger fish. Mr. Mark Hollingsworth has got back to Boston with a big trout; in fact about the biggest of the record thus far. He took a few days before he left the Upper Dam, Richardson Lake, a trout that tipped the scales at over 8 lbs. It seems that this trout was something of a lucky one to him. He, with three of his friends, formed a pool, each putting in \$5, all of which the catcher of the largest trout for the day was to have. Mr. Hollingsworth was out only a short time when this big trout was brought in, and the others cheerfully surrendered the money in the pool. There are also rumors of a trout weighing 9 lbs., taken from the same lake a few days later, but this rumor is not yet authenticated.

The devastation of the forests in celebrated fish and game sections of the Provinces is terrible, and at last reports the danger was not nearly over. In several instances the flames have burned over great tracts of country, extending over from Canada into Maine. Game and game birds and the large game animals have doubtless been destroyed in great numbers. These creatures have fled before the flames into the very face of the small settlements. At Dalhousie Junction, in New Brunswick, a large moose was driven out of the woods, and became entangled in a fishing net and was captured by the local fishermen. The worst feature of the fires raging is the claim, in several instances, that the fires were at first kindled by fishing and camping parties. Here is a very important lesson that every sportsman should heed. The greatest care should be exercised in regard to kindling fires. In fact fires should never be kindled, except from actual necessity for cooking and for comfort, and then the location should be very carefully chosen near the water's edge, where there is little material for the fire to smoulder in, and where there is plenty of water for quenching the flames on every occasion when the camp ground is to be left for no matter how short a time.

The catches of small trout from the streams begin to be reported, and it is plain that the destruction of fingerlings is not yet done. Rev. C. E. Tedford, with a Kingfield friend, is reported having taken 104 trout from Rapid Stream, in Franklin county, one day last week. A gentleman who saw the fish says that the catchers had more reason to be ashamed than proud of their fish. It seems that Quimby Pond, in the same county, is being shamefully fished for numbers this year, the record already showing over 1,000 little fish that should have been let alone altogether, or else put back after being taken. The same sort of fishing is going on in Kennebag Lake and all the ponds around, though occasionally a fair-sized fish is secured. A couple of Boston fishermen went to the ponds near to Bemis Stream the other day, and they found the trout running so small that they declined to stay. Others were taking the fish and calling it rare sport, however. The same sort of fishing is being done at Seven Ponds. There has been some pretty good fishing in the lake at Bemis. Mr. L. E. Packard has taken a trout there that weighed 5 lbs. Mr. Roberts, who was with him, took two weighing 6 lbs. each.

E. M. Gillam, commercial editor of the Boston Advertiser, lives at Beachmont for the summer. He dearly loves to take his dogs along of a morning and dig a mess of clams for breakfast, and later he will have his gun with him. He is somewhat fond of fishing, though not yet a full-fledged disciple of the gentle Izaak. He with a couple of friends went down to the sea the other day after codfish and mackerel. They started at 4 A. M. the morning after Saturday evening, and were to be back at 9 o'clock, but 4 o'clock scarcely brought them. The fact is they were in a dory rigged with a sail, and on the springing up of quite an off-shore breeze they found it rather difficult beating up against the wind. Finally an unlucky flaw of wind upset the dory and they were spilled into the water, with all of their catch of codfish and a mackerel or two. The other two could not swim a stroke, and they clung to the overturned dory for dear life. The sail completely covered Mr. Gillam, but he pluckily resolved to get out from under it, and sounded down until he found the water was scarcely up to his chin. He then shouted to the other boys not to be

alarmed, and soon he persuaded them to assist in righting the boat. This done, he dove several times and brought up a part of the lost codfish. The worst part of the catastrophe was that they were overturned in sight of their homes, and their agonized wives at first supposed that the water was very deep. Mrs. Gillam, though a great deal frightened at first, told her husband when he came ashore to go and get his hair cut in order that the next time he was capsized it would not hold quite so much salt water. He has wisely taken up with her advice. Nice fresh codfish, fried, was on his bill of fare for breakfast on Monday morning.

Mr. C. Z. Basset, of Geo. B. Appleton & Co., and his friend, Mr. G. N. Smalley, were remarkably successful on their trip to the Rangeley Lakes for trout, from which trip they returned last week. They spent the most of their time at Toothacher Cove, Cuspsuptic Lake, and there they had their best success in fishing. Charley Soule was guide. They took five trout that tipped the balances at very nearly 5 lbs. each, and they had a number that would weigh 4 lbs. The number that they caught of a smaller size was great, but they saved nothing of less than 1 lb. Would that other sportsmen would follow their good example.

Reports have it that in Flood's Pond, in Hancock county, Me., there are trout that closely resemble the celebrated Sunapee trout of Sunapee Lake in New Hampshire. They are there termed "laker" and "silver trout." They do not generally exceed 6 lbs., but occasionally they are said to have been caught of 12 and 15 lbs. weight. Here is something for the scientists to investigate, since the reports thus far received are not entitled to the fullest confidence. A few landlocked salmon fry were put in last year, but there are said to be no togue in the pond.

Never has the registry of names been greater of sportsmen en route and returning from the Maine trout lakes. This is especially true of the Rangeleys and Moosehead. The question is, Where are all the trout to come from to half satisfy all of this motley crowd? It is of no use talking, a great many of them must go away with no trout, and greatly displeased. Such is fate. The trouting craze is on the increase, and whether it has about reached its height no man can tell.

It seems that Fish Commissioner Henry O. Stanley has enjoyed a very pleasant fishing trip to Swan Lake, in Waldo county, Maine, and that to him too much credit cannot be given for unearthing some very remarkable fishing in that lake. It seems that for a long time it has been understood that there were big trout in the lake, though within a few miles of the city of Belfast, but that it was understood that nobody had ever succeeded in getting any of them. But Mr. Stanley's skill seems to have brought them to the net, and now others have been enjoying the sport. Report has it that one morning before breakfast Mr. Stanley took five trout from that lake, weighing about 4 lbs. each. This set the fishermen crazy, and others have had good success. Mr. Stanley has also taken a landlocked salmon from the lake weighing 7 lbs., and he considers this one from the fry that the Commission put into the lake six years ago. Here is a lesson in the value of trout and salmon culture, and one that sportsmen have got to come to acknowledge. It is stocking and restocking that is going to keep the possibilities of any fishing at all in existence, against the enormous strain of the excessive fishing that is now going on. Then when it is considered that a salmon—and the Maine Commissioners say, a trout as well—will reach the enormous growth of 7 lbs. in six years, the outlook need not be so very discouraging after all. But restocking has got to be done.

SPECIAL.

ANGLING NOTES.

IF there is any one question that troubles the fly-fisherman more than another it is why trout rise so early one day and perhaps the next utterly refuse the same fly. It is natural to suppose that they take the fly because they are hungry and want food. Yet judging from the way they act, it appears sometimes as if it were only mere caprice on their part; something like the way we pick at olives or salted almonds between the course of a dinner.

Who can explain the well-known fact that trout rise freely to a fly during a snow storm and leave off at once when the snow stops falling? Or why do they commence to rise all over a stream at a certain hour, which often happens to be right in the middle of the day, and stop as suddenly as they began?

In wild streams, where they are rarely disturbed, trout will rise to anything that touches the water, and a bit of red flannel wrapped about a hook will take as well as the most elaborate fly ever tied. But the more they are fished for the more fastidious they become, until on some streams nothing but the most delicate leaders and small, well-dressed flies will coax them.

Of course when torpid in the early spring, in streams running with snow water, the trout seem utterly to refuse all artificial flies, and even the worm or minnow must come pretty close to their noses before they will notice them. This is easily explained and quite natural, and one can also readily understand that the cool evening and early morning is favorable to fly-fishing. The reason we so readily take large trout after dark is also quite plain; these fish are old and shy and naturally lie hidden away under banks and overhanging trees, and do not feed in the daytime as a rule. When the waters are low and clear this is particularly noticeable. One singular whim that trout indulge in, is their fondness, exhibited at times, for unusually large or bright flies. I have known trout, in a small stream where flies dressed on 10 and 12 hooks were generally killing, to refuse them utterly and take a salmon fly on a No. 3 hook; but the next day when this experiment was tried it did not work, and they took only the small flies.

Certainly some flies, like the scarlet-ibis, Jenny-Lind, silver-doctor and the like, do not resemble anything in the shape of natural flies, and yet they are great killers. One of the most curious freaks is the fondness the trout in Lake Colden have for black-gnats, which fly they take at night, in preference to miller and coachman flies.

Every angler meets with many curious instances of this kind, and experience teaches us that at the end of our first season we knew (?) more about trout than we ever have since.

SCARLET-IBIS.

HAUNTS OF THE OUANANICHE is the title of a pamphlet issued by the Hotel Roberval, at Lake St. John, and containing information for visitors to the lake.

A JULY OUTING.

WE started on July 3, 1890. "We" in the present instance meant a party, some fishermen, and others not, but all bent on enjoying the hills, lakes and streams of Canada to the utmost, and consisting of Dr. W., a leading dentist of R.; Miss P., of Catskill, N. Y.; Miss Emma, a cousin, and Sam and Jess, brother and sister respectively of the writer, and last, but not least, the writer and his better half, all of R. Our destination was Burleigh Falls, in the Province of Ontario, Canada, and we had decided to try and survive the discomforts of hotel life, as some of the ladies were averse to camping. We found the discomforts were agreeably absent, Mr., our landlord, and Mrs. Holmes doing their best to make everything agreeable and succeeding in so doing.

Starting from the Port of Charlotte we crossed Lake Ontario in about the worst storm I ever experienced; during the night the rain poured in torrents, and what with the thunder, lightning and the rolling of the boat we got but little rest, Miss P. getting the full benefit of a bad leak in the deck above her berth. Morning with a clear sky and a warm sunshine dispelled the gloom from the ladies' faces, and a pleasant ride of a couple of hours more brought us to the sleepy old town of Port Hope, where we spent several hours waiting for a train to take us northward. We enjoyed a pleasant ride from Port Hope to Peterboro through a country that is better to visit than to dwell in, and made another stop, finally reaching Lakefield, a small village at the terminus of the railroad at about 7 o'clock in the evening. Here we were informed that we must wait until morning before going up the lakes, and not liking the idea we skinned around a bit and found Capt. Reynolds, of the steamer *Cruiser*, willing to make an evening trip to Burleigh. Getting our outfit on board the steamer we were soon making our way up the Otonabee River. As we left the river and entered Clear Lake, the moon made its appearance, and what with the watching the shining waters and listening to Capt. Reynolds's description of points of interest on land and water, we had one of the most enjoyable rides imaginable through Clear and Stony lakes to Burleigh Falls, where we found supper and rooms in readiness for us.

The following morning found the whole party up at sunrise eager to try the bass, and being of the order of fishermen who sometimes fish with bait, we supplied ourselves with the legendary "vum" and a small quantity of helgramites or dobsons, and all went to the dam, about fifty rods from the hotel, where the bass (small-mouth) bit voraciously; and we made a good catch, the ladies getting considerable experience in bass fishing, but few bass.

The next few days we spent in finding the place where the "big ones" held forth, and found their headquarters at the mouth of a small creek at the head of Burleigh Bay.

The second day after our arrival a couple of the Queen's subjects arrived from Toronto, and showing evidence of a willingness to adopt Mr. Blaine's scheme of reciprocity we joined forces, and between us made life miserable for the fish during the day and for the inmates of the hotel at night, for we tried to sing.

The muskallonge fishing was poor, we catching but four or five during our stay, but the bass fishing was the best I ever found. Toward the last of our stay, when we had given up killing any large muskallonge, two gentlemen, Mr. L. and Mr. K., from R., came to the hotel eager for battle, and engaging a guide, started out in spite of our assurance of no "lunge" to try for a big one. They returned late in the evening, and on hearing our "I told you so," escorted us to the icehouse and exhibited to our surprised gaze a splendid catch, the largest weighing nearly 20 lbs. We wilted, but decided after a consultation to start next morning and not return until we had wiped away the disgrace of being defeated by the newcomers. Our Canadian friends joined with us, and we determined to do or die, and made up our minds that if one boat could catch six muskallonge four boats could catch four times six or twenty-four, as per Robinson's practical arithmetic. Well, we fished and we fished, but not a "lunge" did we strike; and in succession, as our strength and patience became exhausted, we returned to the boat house, leaving our English friends, who were bound to stick it out; but they too soon followed us, and their faces already well scorched by the hot sun, grew more luminous as they told the story of our wrongs.

It seems that on starting around the head of the lake just after we left them, they were hailed by a native, who exhibited a fine string of muskallonge, and offered them for sale, which offer was indignantly refused, upon which said native, thinking they were trying to beat him down on the price, informed them that if they did not take them "he could easily sell them to a couple of gentlemen to whom he had sold some the day before," and on questioning him our friends found how L. and K. had caught their fish and the kind of bait they had used. The native had the "lunge" strung on a piece of willow, and all had marks of the gillnet on them; on hearing these facts our friends speedily followed us, and informing us of the "sell," we agreed to meet the two champion fishermen in a body, and give them a rousing reception.

We had not long to wait, for L. and K. soon came in and laid before us another nice lot of fish, and looked to us for more compliments. We examined the fish, and found the net marks on all, as our English friends had said, and at an agreed signal stepped back and listened to an address from M. of our party, on the success of the "silver bait" as illustrated in the case before us, which, while not as scholarly as one of Cicero's, was at least effective. L. and K. at first denied our charges, but finding the proof overwhelming, beat a retreat and sought the friendly shelter of the bar-room, leaving M. and the rest of us masters of the field. After that we fished for muskallonge no more, nor did we see L. and K. bring in any during the rest of our stay.

Burleigh Falls is, I think, one of the pleasant spots in Canada for the fisherman and lover of woods and waters. It is located between Stony and Lovesick lakes, a short, rapid stream connecting them. The chief beauty of the place, the falls, has been destroyed by the ruthless hand of civilization and the Italian laborer, the Canadian Government having made a passageway for steamboat travel through the entire chain of lakes, and where the falls once roared and tumbled there stand two substantial locks, to let passing boats from Lovesick Lake into Stony Lake below.

The time for our outing had expired, the largest fish taken had succumbed to the superior skill (or perhaps it was the strength of the trolling line) of Miss P. The "big one" had been lost by H. My wife had eclipsed the rest in the use of rod and reel, and we rather sadly bid good-by to our host and English friends and turned our faces homeward, spending our return journey in recounting to each other experiences with fish whose weight and fighting powers increased with every mile placed between us and the scene of conflict. Not long after our return to R. we were notified of the impending union of H. and Miss Emma, which only goes to prove that fish is not the only game at Lovesick Lake.

In spite of the above, the single members of our party may decide to risk another outing at Burleigh. T.

GREENWOOD LAKE.

A WEEK ago Friday afternoon I visited this beautiful sheet of water for the first time, and I had a pleasant and successful day's fishing, making the Brandon House, which is charmingly situated, my headquarters. My valise failed to materialize, but a reel and other necessities were generously loaned me by mine host, and Saturday morning found me in a boat with a lively cargo of minnows and frogs. I had never cast with a frog before, and it took some time to get my arm, an 8oz. fly-rod and a big frog, to work as they should. My boatman quickly pulled up into an arm of the lake where the water was shallow, and I began heaving. The morning's catch was 8 bass and 2 pickerel. Two of the bass were 2-pounders and the others fish of a trifle more than a pound in weight. Two or three small ones were thrown back. One bass in particular gave me a great deal of sport. He lay under a pile of brush quite near the shore, and the way he snapped off a frog was artistic in the extreme. Four times, at intervals of ten minutes each, he rose, but I failed to hook him each time. The boatman said I did not strike hard enough. I said if I could get his nose out of water again I would strike sufficiently hard, and I did, for I broke my butt. I hooked the bass though, and pulled him in hand over hand. There may have been more than one bass under that brush, but I think not, as his method was unmistakable.

In the afternoon we drove back over the hills five miles to a trout brook, which is leased by the proprietor of the Brandon House. It is a small brook at best, and there had been so little rain that the greater part of it was unfishable, as the water was almost stagnant, not enough current to carry the bait down stream. The trout though were there in thousands, and it was worth my while to drive there just to see the fish. Out of two holes 20ft. square, perhaps, and 3ft. deep I "yanked" 16 trout, all above 7in. long, and some half-dozen nice fish, including my first rainbow trout. Further down the brook and quite near the road was a small dam, and from the shallow pool above I caught 2 fish on flies, and then we drove home. It was an interesting trip altogether, and I hope to repeat it. F. LIN.

MINNESOTA NOTES.

THE last Legislature passed a very good game bill, with the exception of allowing spring shooting of ducks and geese—otherwise it gives general satisfaction. The bass fishing opened up in fine shape in this vicinity, but for some reason the past week or so has been very poor. The first time Stephens and I went out we caught 14 in two hours in Muskrat Lake. Others did equally as well, while some strings ran into the half-hundred and over.

Becker county has passed a stringent fish law, intending to break up the netting and seining, which are doing so much damage—but probably the law will be a dead letter, as so many special laws are. Yet, unless something is done to enforce a law of this kind our boasted fishing will be only a tradition.

Otter Tail county has a very strict law, expressly forbidding the netting of fish and the shipping of any out of the county. But I saw in the daily papers this morning this item: "During the past three months thousands of pounds of black bass have been netted and seined and shipped away. Some of the best lakes are full of nets, and were even so through the spawning season."

At Preston Lake, in this State, such things became unbearable this spring, so the farmers organized a patrol, caught six of the lawbreakers and had them fined. So hope is not entirely dead.

Two or three parties are ready to start Monday morning after bass, to be gone three or four days.

Mrs. Stephens has beaten Stephens and me so far, as she has made one double catch of two bass that weighed 3lbs. each, and the other evening while we were out on Detroit Lake she caught and landed a fine small-mouth, where none have been caught in two years.

When Stephens and I returned from the North Shore we found Charlie Dix looking very blue. At first I thought it was envy—but no. "I've been down to Franklin with three other fellows for three days, and it rained all the time and the wind blew and we only caught 25 bass." His voice trembled and the tears stood in his eyes as he told the tale. MYRON COOLEY.

DETROIT CITY, Minn., June 13.

NEW HAMPSHIRE WATERS.

Editor Forest and Stream:

Trout fishing in Millsfield ponds has been very good the past few days. Large catches have also been made in Success and other ponds in Dummer and vicinity.

Hon. Edward Spaulding, of Nashua, has just returned from Parmachenee Lake and reports excellent sport there and on the Magalloway. COOS.

MILAN, N. H., June 16.

Editor Forest and Stream:

I must thank the FOREST AND STREAM for its notes on the Sunapee fishing. Being in this region on a visit, and inspired by the articles in the "STREAM" I came out here to-day for a short outing for the landlocked salmon, and have had excellent luck. My success, however, did not compare with that of Mr. J. P. Allds, of Norwich, N. Y., the president of the Chenango Fish and Game Association in that town. Mr. Allds succeeded in capturing a noble salmon, which when first caught weighed 15lbs., and three-quarters of an hour later showed 14½lbs., the equal, if not ahead of the Sunapee record. It was caught on a 7½oz. Abbey & Imbrie trout rod. LOGAN,

A NEW RANGELEY RAILROAD.

Editor Forest and Stream:

The Phillips & Rangeley R. R. is now completed and trains will run regular trips by July 1. This railroad is to be a wonderful convenience to tourists and anglers visiting the Rangeley Lakes, as well as to sportsmen who penetrate the deep resources of the great forests of Maine to hunt the bear, moose, caribou and deer which abound in these regions.

We find here the largest brook trout in the known world, up to 12lbs. and over, also the *Salmo aguassu*, or landlocked salmon, in abundance, and this season especially large catches have been made all through the lake region.

Hotels are established in convenient places on all the lakes, and steamboat lines run on every lake, making such connections that parties may pass through all the lakes in a day. Thus a person may leave Boston in the morning, strike Rangeley at night, pass through all the lakes the next day and the third day go back to Boston via Bethel and the Grand Trunk R. R. or vice versa, first take the G. T. R. R. at Portland, arriving in Bethel at 9:33 A.M., reaching Umbagog—the most southerly lake of the Rangeley group—26 miles, in the early afternoon by Lane's daily stage or by private team.

But the tourist will be prone to linger on the way from Bethel to the lakes to explore the many wonderful curiosities of nature in this wonderland of Maine.

Bethel is in the midst of the White Mountain range, almost surrounded by high mountains, with hundreds of trout streams in every direction and marvelous views on every hand.

The Bethel House, kept by W. F. Lovejoy & Son, is one of the best hotels in the State, and is generally crowded in the heated season. The Grand Trunk Railroad is very popular, employing as it does the most obliging and agreeable of agents and conductors. Eight passenger trains leave Bethel daily—four going south and four north.

Not far from the village bears are very numerous, and deer come even into the very village.

The round trip to and through the lakes from Bethel and return by the Phillips & Rangeley, Sandy River, Maine Central and Grand Trunk railroads would be as interesting and comfortable a trip through a lake wilderness as can be found in any civilized country on earth.

When it becomes known to the sporting and tourist world that a round trip through all the lakes can be made, with Bethel as a southern outlet, on the Grand Trunk and Rangeley on the northern end out through the Phillips & Rangeley Railroad, we believe the trip will be very popular, and no one would think of going back the same route they went in on, but make the voyage through the lakes. J. G. RICH.

BETHEL, Me.

"QUEEN OF THE ROD."

Editor Forest and Stream:

I was particularly interested in the achievement of Mrs. Geo. F. Stagg, of Louisville, Ky., with the large tarpon, and none the less so in the account of her later exploit with the 253lb. shark as recounted by W. H. Case in current issue. Well does she deserve the title, "Queen of the Rod." And if be added to this "The Expert Oarsman," "The Crack Shot," "The Perfect Camper," the list will be nearly complete, from the sportsman's standpoint. I have in mind a trip made up the Mackinac country several summers ago, and of a camping trip made by a party of us from the Les Cheneaux Islands to Spider Island, Prentiss Bay, where some tall bass fishing was done. Mr. and Mrs. Stagg were of the party, and I shall never forget her untiring energy with the oars and rod, as well as of her thought of the inner man at camp. I am with Mr. Case in being anxious to hear from Mrs. Stagg through these columns of her sport with those Southern monsters, and I am sure the readers of dear old FOREST AND STREAM would not be slow of appreciation. Will not Mrs. Stagg give us the benefit of all this sport with her description?

Here is an example worthy of emulation surely by our feminine friends. Fearless on land or water, and as ready and apt with rod, gun, rifle and oars as the next of us. W. W. BLAKE.

BALTIMORE, June 27.

RED SPOTS OF BROOK TROUT.

HOW many red spots does a *Salmo fontinalis* have? On April 29, in Big Northwest Pond, on the Megantic Fish and Game Club's preserve in Maine, I took a brook trout weighing about seven ounces. As he lay in the landing net I was struck by the number of bright red spots on his sides, and although he was smaller than I would under ordinary circumstances have kept when fishing in those waters, I killed him and carefully counted the red spots which I found ran in five rows. Not content with my figures, which were a great surprise to me, I gave the said fish to my guide when I returned to camp and requested him to count the red spots. His figures agreed with mine and were 55 on one side and 60 on the other. The next fish I took was of the same size, but had 5 red spots on one side and 6 on the other, and was like the average fish. The trout in this same Big Northwest Pond have very red flesh and are delicious eating, but do not run to any great size. Have any of your readers ever noticed a larger number of bright red spots than this record?

Had I been asked the question, "How many bright red spots does a brook trout ever have?" I should have unhesitatingly said, "Never more than 20 or 30 on a side, and more frequently less than 20." ROBT. B. LAWRENCE.

NEW YORK, June 24.

THE GRAND TRUNK RAILWAY publishes a new edition of its "Guide to Fishing and Hunting Resorts" reached via its lines. The information has been compiled specially for the purpose from notes furnished by the company's agents, and the localities described are Ontario, Quebec, Michigan, Maine and New Hampshire.

THE GREENBRIER CLUB, consisting of Capt. Jas. Bumgardner, Messrs. R. P. Bell, Geo. Beall, C. L. Cooke, Wm. H. Weller and F. R. Webb, with Otis Dunning in charge of the commissary department, have been on their annual pilgrimage to the upper Greenbrier, in Pocahontas, W. Va., for trout.

ROCKY MOUNTAIN GRAYLING.

IN our issues of April 23 and May 21, 1891, we published some brief notes and queries of "T. J. A." concerning a grayling in Idaho and Montana. Our correspondent has recently forwarded a specimen of the fish for examination, and it proves to be an actual grayling (*Thymallus*

tricolor), the common species of the Au Sable River in Michigan. The individual sent was one of the two taken April 13, in the Big Hole River, Montana, with a white grub found in decayed railroad ties. In June, according to our correspondent, the grayling bite readily at the fly. We give herewith an illustration of the fish from the "Fishery Industries."

ROCKY MOUNTAIN GRAYLING (*Thymallus tricolor*).

THE SOUTHSIDE SPORTSMEN'S CLUB.—We have received a copy of the twenty-fifth annual report of the Southside Sportsmen's Club, of Long Island. The club has reached the limit of its membership and is in the full tide of prosperity. The executive committee report that the number of trout killed in 1890, including rainbows, reached a total of 7,781, the largest in the history of the club; 113 quail were killed and a great many were left over at the end of the season. Fifty dozen quail were turned out during January and are being cared for by game keepers. During eighteen months the keepers have trapped and shot the following among other destructive animals and birds: 16 foxes, 24 raccoons, 110 opossums, 10 skunks, 23 minks, 17 weasels, 12 cats, 261 muskrats, 50 hawks, 11 owls, 27 kingfishers, 131 jays and 35 crows. During the open season of ten days from Oct. 1, 22 deer were shot in the immediate vicinity of the club property and two wounded ones were afterward found dead in the grounds. There are now 75 deer in the preserve, but unless the laws of the State are amended so as to protect the deer, it is probable that most of these now owned by the club will be destroyed by pot-hunters. The fish committee report the following fish in the preserves on Oct. 25, 1890: 5,616 brook trout, three years old; 6,133 two years old, 11,245 one year old, 1,070 large rainbows, 5,127 yearlings, making a total of 29,191 trout. During 1890, 7,510 brook trout, weighing about 3,000lbs., were killed. Artificial hatching and stocking of the waters was begun fifteen years ago; the fish had been almost exterminated and only about 300 fish were killed in a season. The total weight of trout killed during the fifteen years was 29,671lbs., and besides this \$5,000 worth of fish have been sold in the markets and for stocking other waters. During the last season 800,000 eggs were taken, a much larger number than could be handled in the club's hatchery, and on this account 60,000 were exchanged for 2,000 yearlings from the Tuxedo Club, and 50,000 for 10,000 brown trout.

RAINBOW TROUT IN THE MISSISSIPPI.—We have recently received from Dr. S. P. Bartlett, Secretary of the Illinois Fish Commission, a letter addressed to him by Mr. David O. Reid, of Moline, Ill., relating to the capture of a member of the salmon family in the Mississippi River at that place. Mr. Reid writes: "There was caught here on Monday, in the Mississippi, a member of the salmon family. Its length was 14in., the body completely covered with small scales, the general color white, adipose fin well developed and distinct. The tail strong and very trout-like. The fish was beautifully and freely spotted from head to tail and down to the median line with small, distinct black spots; the dorsal, adipose and caudal fins were profusely spotted. After death a faint line of color was noticed on each side of the body. Have the kindness to inform me what it is and where it came from." From the above letter, which Dr. Bartlett forwarded to us in order that the fish might be identified, there is little doubt that it was the rainbow trout, *Salmo trideus*. In a subsequent letter to Dr. Bartlett, Mr. Reid suggests that the fish may possibly have come from a hatchery in Missouri, where experiments with the trout and salmon of the Pacific slope are being carried on. Mr. Reid may have in mind the successful experiment of Mr. Montgomery, at Verona, with eggs of the rainbow obtained from the U. S. Fish Commission. The new hatchery at Neosho is having remarkable results with the same trout, having forwarded yearling examples measuring nearly one foot in length. Of all the Western trout this is best adapted for transplanting in our warmer rivers.

A CANADIAN TROUT.—Toronto, June 22.—I omitted to mention one important peculiarity of the fish referred to in my former letter of June 1, namely, that they have no scales. The adipose dorsal fin is dark brown, the same color as the back. The fish are shaped like the speckled trout. The most prominent of our fish dealers here, to whom one was shown, pronounced it a mountain trout, which, I believe, is only another name for the speckled trout. Though not claiming to be an ichthyologist I am inclined to believe that they are the speckled trout. The shading of the spots is different, but that can be explained from their habitat—a large, open, sun-kissed, wind-tossed lake. The largest we caught last May trolling weighed 8lbs., but the Hudson Bay Co. assured me they had been taken five times that weight. The ordinary brook trout is dry, but these are moist, firm and sweet and are pronounced by connoisseurs superior to their congeners of the brooks. They are caught in Lake Tamagami and one or two other lakes in the same region. The only way of getting there is by canoe with Indian guides. It is four days' journey from Sturgeon Falls, owing to the tremendous current of the rivers ascended and the thirteen portages in the route. From Mattawa a day and a half by steamer takes the tourist to the mouth of the Montreal River, which is 2½ days' journey by canal from the lake. I cannot promise you a specimen until October, when I next expect to visit the lake. Then you will have an opportunity to pronounce on what is, in my estimation, the finest fresh-water fish in North America.—S. R. CLARKE.

THE STEELHEAD IN LAKE ERIE.—On May 30 last Mr. D. P. Vroman, of Put-in-Bay, Ohio, took in one of his pound nets a strange trout measuring 17in. in length. He presented it to the U. S. Commission of Fisheries through Mr. J. J. Stranahan, Superintendent of the Put-in-Bay station. The fish was forwarded to Washington, where it was found to be a steelhead salmon, or Gairdner's trout, a California species recently introduced by the Commission into tributaries of Lake Erie. This is the first specimen of the kind, so far as known, that has been taken since its introduction. The size of the individual (17in.) and its fine condition give promise of success in the attempt to acclimate this valuable trout in the Great Lakes. The steelhead salmon, or Gairdner's trout, has been known in E. stern markets for some years, especially in the early spring months, March and April, when it figures as Kennebec salmon and brings a high price. It is very common in the mouths of rivers and is sometimes caught in the bays in large numbers, associated with the salmon of commerce. In Alaska it spawns in the early spring, continuing as late as June. In shape the adults resemble the Atlantic salmon more than any other species, but the nearest relative of this trout is the rainbow trout of California. In our Salmon and Trout Supplement, of April 4, 1889, is to be found a figure of the young of this trout and a brief sketch of the species.

PORT JEFFERSON, LONG ISLAND.—Game is doing well. I never go for a drive without seeing quail and lots of rabbits; and the other day a fine male woodcock was picked up in town, which had flown against a wire or something. I have been over to Smithtown two or three times, but did not get much; shall try it again this week if a good cloudy stormy day comes along. You are pretty sure of getting some small trout on the worm in the mill pond. I hear vague but good reports from Ronkonkoma. Will write when I have personal experience. By the way, there is a pond here alive with goldfish and carp, some of them quite large. Can any of your readers advise me how to catch them? I am going to bend on some very small hooks to fine gut and bait with boiled wheat or a paste of bread and cheese, letting the line lie on the bottom. This is a right pleasant place, and not as hot as I expected. I like it far better than the South Side. If any of your readers want information I shall be happy to let them know.—GRAY JOHN.

OTTAWA, Kansas, June 12.—There has been a club organized at this place lately for the purpose of seeing that the laws for the protection of fish in these waters are enforced. It starts out under the name of "Franklin County Fishing Club," with the following officers: President, J. C. Shomo; Vice President, I. M. Reed; Secretary and Treasurer, F. B. Humblin, all of Ottawa, Kansas. Rewards will be paid for information leading to the conviction of any person violating the laws for the protection of fish in Franklin county, and for this purpose quite a large sum has been raised. A great part of the fish sold in this city and vicinity are caught illegally in nets, and the first work of the committee will be to see that this is stopped. This river is as good as any in Kansas for fish, and as soon as the traps and nets can be disposed of there must be a marked increase in game fish to be caught here. There has been so much high water this spring and summer that fish have had a chance to ascend the stream without much interference, and those who go fishing for croppies report favorably. Catfish and drum are the most common fish during the high water, and some very large ones are being caught this week.—F. B.

PENSACOLA FISHING.—Pensacola, Fla., June 22.—This city offers more attractions for the lover of outdoor sport than any city of its size in the United States. Fresh-water streams within distances of one to three miles surround us on all sides, and are full of fresh-water trout (bass), bream, perch, pickerel, etc., while the bay offers the finest of salt-water fishing—fine strings of trout, chapers, sheepshead (mullet with net), spade fish, in fact all fish that are usually caught in salt water. The most famous fishing ground, however, is in the vicinity of the celebrated Fort Pickens, some ten miles from here by boat, just inside the bar and opposite the Navy Yard and Fort Barancas and the lighthouse. In my next I will give you an account of some of the trips of our little club in the Pirate, our 19ft. 6in. long, 1ft. beam cat-rigged flat bottom boat. Our last catch consisted of a heavy squall from the S.W., three redfish weighing 10, 14 and 15lbs. respectively, besides any quantity of other fish too numerous to mention.—A. C.

ROCKPORT, Mass., June 9.—Hake are very common in this locality at the present time. Boys have caught as many as fifty in a short time from boats near the break-water. The fish are known here as old England hake, one of the common species of *Phycis* of this bay. Codfish of good size are taken freely from the rocks along shore. Rev. W. B. Smith caught one at Gap Head which weighed about 9lbs.—B.

LAKE ONTARIO BLACK BASS.—Oswego, N. Y.—Fishing has been very good on the south shore of Lake Ontario in places frequented by the gamy small-mouthed black bass. It was not known until about ten or twelve years ago that bass could be taken with a rod at many places near the shore. At certain times in the season these fish appear in large numbers and take a minnow or spoon savagely. When hooked they will fight hard, jumping frequently from two to three feet out of the water, and shaking their head with the apparent endeavor to free themselves from the hook. The lake bass are lighter in color than those taken from the Oswego River. I send you herewith a photograph showing a catch made by two rods in part of two days' fishing, total weight 147lbs. They were taken by Mr. C. A. Tanner and Mr. Ball, of the Jewel Belting Co. of Hartford, Conn., in a two days' fishing trip at Dempster.—OSWEGO.

VORACIOUS LITTLE EELS.—About June 1, when Mr. Joseph Kenby was depositing a shipment of young shad in the Susquehanna River, at Fite's Eddy, for the U. S. Fish Commission, he saw a singular sight. Near the edge of the water along shore wriggled a mass of small eels containing millions of individuals. With a bucket he dipped up nearly fifty at a scoop; the creatures were about 4in. long, and were called "black eels" by fishermen. Some of them were put into an aquarium containing goldfish, which they immediately attacked and killed, penetrating their bodies at the vent. A little terrapin was next assailed, but as he was somewhat of a "tough," he was not fatally injured before rescue. After these signs of depravity the eels were dumped out on dry ground to roast in the sun; but they burrowed into the mud and were seen no more.

BLACK BASS IN NEBRASKA.—Norfolk, Neb., June 23.—I have taken thousands of pickerel in the slack waters and bayous of the Big Sioux, Missouri and Elk Horn of Nebraska, but never until this season have I had any sport with the large-mouthed black bass. My friend, Gus Satter, and I, received permission from the genial owner of a large cattle ranch, ten miles south of this town, to fish in one of his lakes. The first day's capture with only spoon hooks was two 4-pound pickerel and sixteen black bass averaging 2lbs. The second trip to this beautiful place netted us sixteen bass ranging from 2½ to 4lbs. This I think is fair for Western waters. Our generous host and the owner of the ranch and lake are the Owens Brothers, to whom we are indebted for our fine sport.—T. H. T.

JUNE TARPON.—The Tarpon Springs, Fla., *News* of late date reports lovers of piscatorial sport ought to visit the mouth of the Anclote and 'Cootie rivers if they wish to have some fine sport. A great number of tarpon have been caught this week, some measuring 6ft. Capt. Kendall and Mr. DeGoliere returned from a two weeks' sailing cruise as far south as Sanibel and around Pine Island. They called at all principal shell beaches, had lots of fishing at the Passes and a thorough good time generally.

A FLY STORY.—A note from Messrs. Abbey & Imbrie's establishment the other day reported: "I caught two specimens of the 'Lord-Baltimore' fly in our store this morning with jungle-cock shoulders—complete. I think they must have escaped from our fly-drawer, I cannot imagine where else they could have come from. I have heard (L. Cypress, Jr.) that flies have been so well tied that they had taken wings and flown away. This is no 'fly story,' for I have them pinned up on the wall to prove above.—W. H."

WHITE PERCH AT RIVERDALE, MASS.—Perch were plentiful in the mill pond at Riverdale last fall, and large quantities have been caught there this spring. Two men caught 83lbs. in about two hours one morning. Some of them are large, one weighing over 2lbs. The perch seem to bite best early in the morning and at nightfall, sometimes continuing during the evening, it is said, until 10:30. Live minnows are generally used for bait, although shrimp appear to suit the fish best.—E. F. L.

ROUND MOUNTAIN LAKE, Me., June 16.—Parties now at the lake are having first-class trout fishing. The weather is beautiful in the woods. I see by the papers they are having forest fires in Canada and some parts of Maine, but there is none in this vicinity.—E. S.

POT-LUCK FROM EXCHANGES.

WE have found a defect in the game law passed by the recent Legislature. Hunting quail, partridge, woodcock and other game birds with a bag of salt is not specifically forbidden and the wanton youngsters who have caused such destruction among our song birds and game birds by salting their tails can keep right on in their deadly work without fear of punishment or molestation.—*Manitowoc (Wis.) Chronicle*.

Since I became a citizen of Indiana I have traveled more than twenty-five thousand miles between New Albany and the trout streams of northern Wisconsin, and have taken many thousand trout, but while following the meanderings of the streams with rod of exquisite beauty and jeweled reel, I am no more happy than when a boy with hempen line and alder pole I made not altogether fruitless efforts to capture the beauties in the stream within sight of my happy home.—*Correspondence New Albany (Ind.) Ledger*.

No deputy game warden or local officer could be secured to punish Grand Haven fishermen who were defying the law as usual this spring, so Warden Hampton had to try it himself. He went out on Spring Lake one night recently and soon found two men in a boat netting fish. They resisted arrest, and then, taking a pointer from the Itata, tried to escape, but Hampton opened fire and rounded them too. They furnished bail to appear for trial. One of the fellows remarked that he knew the warden didn't mean to shoot them, but that he feared he was such a blanked poor shot that he might accidentally do so.—*Beilatre (Mich.) Breeze*.

TO COLORADO VIA BURLINGTON ROUTE. only one night on the road. Leave Chicago at 1:00 P. M. or St. Louis at 8:25 A. M., and arrive at Denver 6:15 P. M. the next day. Through sleepers, chair cars and dining cars. All railroads from the East connect with these trains and with similar trains via Burlington route to Denver, leaving Chicago at 6:30 P. M., St. Louis at 8:15 P. M., and Peoria at 3:20 P. M. and 8 P. M. All trains daily. Tourist tickets are now on sale, and can be had of agents at all roads and at Burlington route depots in Chicago, Peoria and St. Louis. There is no better place than Colorado for those seeking rest and pleasure.—*Adv.*

Fishculture.

NEVADA FISHCULTURE.

Editor Forest and Stream

We have now in our State hatchery some 700,000 fry of the brook trout (*Salvelinus fontinalis*) in a perfectly healthy condition and with extraordinary appetites, requiring them to be fed three times per diem. We are now distributing them as fast as possible to individuals and stocking public waters. Mr. B. Close, in charge of State hatchery, left here last evening with 120,000 fry for Humboldt River and its tributaries; Carson River and tributaries, Lake Tahoe and Washoe, have already received their quota. We have some 25,000 fry of the landlocked salmon still in the troughs, which will be kept until the fall and then distributed.

Some two years ago I placed about 1,000 fry of the Mackinaw trout (*Salvelinus namaycush*) in a small stream in the southern part of this State; they are now being heard from in the shape of 3 and 4lb. fish.

The Sacramento River perch, transplanted some five years ago, are now being taken in Walker Lake in large quantities, affording most excellent sport with fly; fish weighing 2 and 3lbs. are quite common.

This fall the Commission, if feasible, will establish a branch hatchery at Elko, in the eastern portion of this State, which will have a capacity of 500,000 ova. This hatchery will dispense with the transportation of fish from the main hatchery to that portion of the State, which has always been attended with a large percentage of loss; and a greater section where streams are abundant will be reached and stocked.

The last session of the Nevada Legislature passed almost an entire new law as regards seasons, illegal fishing, etc. It gives the trout in streams from Oct. 1 to April 1 of each year as a close season; and trout in lakes from Jan. 1 to April 1 close season. This is something the State never had before; the former law permitted fishing with hook and line at any season of the year. The measure was vigorously opposed by the market fishermen and a few dealers in trout. Under the new law the Commission hopes to be able, with the assistance of the various county peace officers, to put a stop to the heretofore wholesale slaughter of trout while ascending rivers on their way to spawning beds.

The efforts of the Commission to prevent the illegal dumping of sawdust and refuse from lumber mills in the Truckee River have been in a measure encouraged, and, with the promised assistance of the Commission of our adjoining State, California, we hope to stop the practice entirely.

G. T. M.

CARSON CITY, Nevada.

HATCHING LAKE STURGEON.—In our issue of June 25 we mentioned the experiment by the Ohio Fish Commission with the lake sturgeon in Detroit River. Dr. Henshall, president of the Commission, has since informed us that the jars did not give satisfaction for this work, but in the floating boxes, used by Superintendent Lanz in Detroit River, between five and six millions of eggs were developed and the fry liberated in the stream. The water seemed to be too warm in the hatchery at Sandusky, and all the eggs sent there died. The expense of this interesting and important experiment was not over \$100. Mr. Lanz found no difficulty in getting eggs from the females by pressure alone and the breeding fish were returned to the water alive.

NEBRASKA.—The appointment by Governor Thayer of Joseph H. Blair as a member of the State Fish Commission, to succeed B. E. B. Kennedy, resigned, will meet the approval of all who take an interest in fishculture. Mr. Blair is an angler of wide experience and repute; but with his love for the sport he combines a scientific knowledge of the fishy tribe gained from much reading and personal investigation. In this Western country those having practical, useful knowledge of the science of fishculture are rare, hence Governor Thayer's appointment of Mr. Blair is most fortunate. The Commission consists of three members, Mr. Lew May and Mr. T. McBride, of Fremont, being the other two members.—*Omaha Mercury.*

The Kennel.

All communications must reach us by Tuesday of the week they are to be published; and should be sent as much earlier as may be convenient.

FIXTURES.

DOG SHOWS.

Sept. 1 to 4.—Dog Show of the Youngstown Kennel Club, at Youngstown, O.

Sept. 9 to 11.—First Annual Dog Show of the Hamilton Kennel Club, at Hamilton, Ont.

Sept. 14 to 18.—Toronto Industrial Exhibition Association Third International Dog Show, at Toronto. C. A. Stone, Sec'y and Supt.

Sept. 22 to 25.—Inaugural Dog Show of the Montreal Exposition Company, at Montreal, Canada.

Sept. 29 to Oct. 1.—Third Annual Dog Show, in connection with the Central Canada Fair, at Ottawa, Ont. Alfred Geddes, Supt. 1892.

Jan. 13 to 14.—Second Annual Dog Show of the South Carolina Kennel Association, at Columbia, S. C. F. F. Capers, Secretary, Greenville, S. C.

FIELD TRIALS.

Nov. 2.—Inaugural Trials of the United States Field Trial Club, at Bicknell, Ind. P. T. Madison, Secretary.

Nov. 16.—Eastern Field Trials Club's Thirteenth Annual Trials, at High Point, N. C. Members' Stake Nov. 12. W. A. Coster, Secretary.

Nov. 26.—Central Field Trial Club's Third Annual Trials, at Lexington, N. C. O. H. Odell, Sec'y. 44 and 46 Wall street, New York city.

Dec. 14.—Philadelphia Kennel Club's Field Trials. Charles E. Connell, Secretary.

THE ENGLISH BULLDOG CLUB SHOW.

IN the English *Kennel Gazette* for June appears about the best judge's report we have yet met with. This is Mr. C. F. Jackson's report of his classes at the above show. We have been asked so many times, especially by bulldog men, for some means by which they can form an adequate idea of the different winners on the other side with a view to purchase, that we think such a report as this will no doubt have a good effect and cause some jealous people say is "all broke up" over his own ugliness. Mr. Jackson writes:

"I wish that I could have avoided having to decide against either of two such grand specimens as Bedgebury Lion and British Monarch. But I have no doubt that, in selecting Bedgebury Lion for premier position, I chose the dog of the greatest intrinsic merit. In only two respects is B. Monarch better than his antagonist, i. e., in taper of back from shoulders to stern, viewed from behind, and in the width of underjaw. B. Lion is certainly beefy in his hindquarters; in B. Monarch the frontal eminences are absent, while they are very pronounced in B. Lion, whose cushion also is very near the ideal. B. Monarch is very much the wider across the shoulders, but B. Lion is sufficiently so to pass muster as a good bulldog, and to satisfy me. So often as the two dogs are allowed to move with their full freedom in the ring, with

a view to a comparison with regard to function, the issue can never be in doubt. B. Lion is simply a marvel of activity whereas B. Monarch is markedly slothful and lacking in energy. I was glad of the opportunity of showing how good a dog I consider Pathfinder by placing him in front of champion Datholite and Romance. Of his overwhelming superiority there cannot be a shadow of doubt; he is excellent in shoulders, lay-back and set-up. The others have no point in the superlative.

Dryad, alone in the heavy-weight challenge bitch class, has certainly a grandly-formed head for a bitch, but I consider the shape of her body lacks character to a very great extent.

In the light weight challenge class for dogs, Grabber came out full of years and honors, and won. If only for the narrowness across his loins, in comparison with the width across his shoulders (which I call taper of body), and for the fire and vivacity with which he shows himself in the ring, he will find a place on the head roll of fame, so long as there are bulldog fanciers. I preferred Forceps to Don Pedro for second prize, because Forceps is shorter on leg, has more bone, and is shorter in back; but Don Pedro is certainly better out at shoulder, and has an infinitely better formed foreface, it being square instead of round, as Forceps's is. Previous to judging them together, I should not have said Enfield Grabber would be the inferior of the four, but, on comparing them, he certainly is, being very flat-sided and lacking prominence of frontal bones, and he is not sufficiently up at shoulder. He is a dog who has completely upset my early expectations of him.

Ayessha was alone in the challenge class for light-weight bitches. I can see nothing very striking about her.

Open classes: Dogs over 55lb. weight.—No doubt it is a pity that King Orry has decided black in his coloring; but, as he is 95 per cent. white, what is so small a percentage of undesirable color in a dog whose head is certainly one of the best formed and finished I ever remember to have seen in any bulldog, let alone a big one! I certainly consider him incomparably superior to anything else in this class. This is more than I can now write about H. M. Stanley, who is wretched in front of eye, and sadly deficient in much that goes to make a good bulldog. I am now almost sure Jemmy should have beaten him. Aston Lion has a froggy appearance. I don't say he is froggy, but he has the same outline, viewed side face, as Mr. Shirley's Firefly and Mrs. Raby's Lord Arthur, which I consider very objectionable. Boor's Czar struck me in the ring as having a head too small in proportion to his body, and his ears are not carried quite as they should be. Still, I fancy if I could have altered my awards in the calm, after judging, Czar would have gone to third prize. Big bulldogs are so wholly opposed to my fancies, so alien to all I desire in a bulldog, that probably it was only natural that I was not able to satisfy myself as to their respective merits. Rustic Sovereign and Bill Richardson were absent, so I escaped having to pass an opinion upon them. Force died on his journey up to this show, which is much to be regretted. I admired him when I last saw him alive. He was certainly much truer to type than most big bulldogs, that is to say, if he weighed 55lbs. Big Buffalo Bill I considered the *caput mortuum* of the show—he is so far from being an example of the breed that he may almost be pointed to as a warning of what breeding for size will produce.

Bitches over 45lbs. weight.—Again in this class I am not at all sure that I placed the winners in the right order. The three winners stood out distinctly from the rest of the class, but whether Carrie and Indra should not have beaten Saleni I doubt. Saleni, as she appeared before me, was a complete shock. The sight of one eye was dimmed, her jaws were in a sad state, and she was shrunken in girth of brisket. Nor was Indra produced in at all blooming condition. In fact, Carrie was the only one of the three shown fit and well. They are undoubtedly a grand trio, so that I fancy I ought to have allowed condition more influence in my awards.

Dogs over 45lbs. weight.—This class was unmistakably the best that entered the ring. If six prizes had been offered instead of four, they could all have been awarded to real dinking good bulldogs. When I saw German Monarch and His Lordship on the bench, after judging, it struck me I had gone wrong, so I had them in the ring again, when I am glad to say I was satisfied with my previous decision. His Lordship is shorter in back, lower on leg and altogether more compact than German Monarch, but he requires cushion and bone in front of the eye to make a tip-topper—points that German Monarch is richly endowed with. I admired His Lordship's air of stolid indifference on the bench, and his devil-me-care rolling gait in the ring. Guido, only fourth here, I am prepared to see shortly placed much higher, as he has been bought for a kennel from which he will be shown in a way a bulldog should be. His face and head are very conspicuous, being well high perfect, but he showed so much daylight under him that I placed him as high as his present form merited. Still, without doubt, he has the making of a really superb bulldog in every inch of him. I admired him so immensely at Manchester, where I first saw him, that I never anticipated he would have to succumb to such a dog as Phulax. The latter's form can never be improved—his faulty tail must forever handicap him. Bilali is an unlucky dog, far above the average, and yet with nothing striking to lift him into the front ranks. His head is wide, but not sufficiently deep. Lord Trevor is accurate in conformation, and should play a big part among the ordinary company seen at provincial shows. Holy Friar I discarded for the color of his nose and eyes, conveying, to my mind, a strong suspicion of Dudley.

Bitches over 35lbs. weight.—The quality in this class, I think, was disappointing. I preferred the gray-colored Peckham Lass, who looks like being a rare bitch to breed from. Armida I once much liked, but I could not form any accurate opinion of her on this occasion, as her face was swollen. She has an ugly tail, but I remember I considered her cheap when claimed at her catalogue price of £40 at the club's last year's show. I was informed, the day after judging, that no less an accredited authority on the bulldog than Mr. Vero Shaw had stated that he considered Tomsh (placed reserve in this class) was the best specimen, and should have won. Be this as it may, I cannot, by any showing, value her, with her long tail and dreadfully long back, higher than I placed her.

Dogs under 45lbs. weight.—Another commendable lot of bulldogs were to be seen in this class. Of the fact that Morris's Prince George scales less than His Lordship, the winner in the previous dog class, I am sceptical, but I was assured by the secretary that Prince George qualified to compete in this class by $\frac{1}{2}$ lb. Such being the case, he, of course, smothered the class. The second prize in this class I gave to Orphan Lad, nor do I in the least regret doing so. He is fair only in face and quite up to average in skull, but his whole character is very strikingly attractive. That he is deformed in any way I deny; that he unfortunately has a trick of turning his toes in instead of out I admit; and I think he conclusively demonstrated by the freedom with which he moved in the ring that he was no cripple. Honest as the intentions of many critics may undoubtedly be, they are full of partialities and prejudices. They enter a show with their verdicts already prepared, and they can no more write dispassionately of any dog other than their particular fancy, than can a mother about her own children. Ashton Billy is a very typical light-weight dog. I wish I could have placed him higher than third, which, with Prince George in a heavier class, I could have done. The appearance for the first time of King Lud in an open class is a valuable addition to the light-weight bulldogs that are exhibited. He is a grand young dog to look at, but he spoils his chance when he

moves. Instead of a rolling gait, found with a pear-shaped front, he struts his legs out sideways in walking, so that his feet are further apart than his legs are at their setting on to the shoulders. The black and tan, Satan II., I rightly (or wrongly) refused to judge, on account of his color. If I had judged him he would probably have had a prominent position in my awards, and that would to a certainty have raised a hue and cry. Just in the same way I refused to judge Dick II., though I admire his getting, and think him a most useful stud dog. Still his wall-eye and split nostril debar him from any possible chance in an open competition. I rather fancy that in no dog in the show is physical weakness and degeneracy of pluck more exemplified than in Tommy Truckle.

Bitches under 35lbs. weight.—It was in this class that I discovered in Nina Fidget the bitch that pleased my eye best in the whole show. Granted that on occasions she can raise her ears almost to prick them, it should be remembered that these ears of hers are wonderfully small and thin, and are more often than not carried rose shape, and were so while she was in the ring. She showed such distinct excellence to any other bitch in the show that I cannot believe her victories came as a surprise to impartial men, who are strict followers of the club's standard. I have no doubt but that if any artist should depict her he may very likely in future years be accused (by those who have not seen her) of having exaggerated her marvellous muscular development and compactness. It seems only fair and proper, therefore, for me to leave it on record that no artist needs to be untruthful. Rather, be it remembered, that all he did was to select an animal without a compeer among her own sex so far as typicality is concerned. Magic would have beaten Salvo for third place in this class if she could have moved her hindquarters in the ring.

Novice Dog Class.—This was headed by Orphan Lad and King Lud. Lord Yarmouth, a coarse, undesirable type of dog, was third, and Al a Mode, whose skin was in a miserable plight, fourth. The last-named is small-skulled, but his shoulders are immense, and he struck me as being a good class of dog.

Novice Bitch Class.—Was not up to average. Bar the winner, there was nothing to make me wish to break the tenth commandment. Ninepins has a nice expression, good stop and lay-back, but she is otherwise fairly all through.

Dog Puppy Class.—Quite the worst class I can remember ever to have seen at the club's show.

Bitch Puppy Class.—I cannot describe this as a strong class for quality, though the entries were fairly numerous (15). I am aware I outraged public opinion by placing the diminutive Zohara first, but, as I saw her at 7 months old, she gave distinct promise of making a bitch in every way cut out to compete in the under 35lbs. class—in which class, given average luck during the next 12 months, she will take a tremendous amount of beating. Stanford Mary is of nice type and will figure again. Sister Dora was objected to as being over age; she certainly appears so in the catalogue. Hannab, of whom great things were expected by her owner, may develop into a good one. She appears to have plenty of growth about her.

Selling Classes.—I failed to discover any brilliant bargains in either of these classes.

Stud Dog Class.—I placed British Monarch first. From his loins I am confident cannot fail to spring descendants who will, without doubt, worthily perpetuate to generations yet to come the sterling qualities of their renowned ancestor.

Team Class.—Mr. Ellis, with his glorious team, has seemed, for some time past, to have secured the fee simple of these certainly tangible prizes, but I preferred British Monarch in Mr. Woodliss's team so very much more than any dog in Mr. Ellis's team that I gave the first-named the call.

American Class.—This class, provided for dogs owned by exhibitors residing in "The Hemisphere that owns no King," met with a poor response. They were a sorry lot, bar H. M. Stanley. None of them have ever crossed the Atlantic, and I should question the policy of the club's repeating the experiment another year.

Special Prizes.—The long list of specials loomed up before me like a bewildering maze that I should have to plod through. These prizes, though they speak volumes for the *bon accord* existing among members of the club in giving them, and the energy of the secretary in collecting them, are growing impracticable. I know they are the panacea generally prescribed to make any show a success, and though it may appear incongruous for one who has been responsible for the issue of four schedules, certainly not deficient in specials, I have grave fears, unless, perchance, some wholesome corrective to this modern spirit is devised, that an innocent hobby for a man of moderate means may be lowered into an ill-organized scramble, a competition for kudos into a mere lust for lucre.

I will take this opportunity of saying that there are many devoted to the breed *laudatores temporis acti*, who think we might go back with advantage to the old style of light-weight bulldogs, which a certain school of fanciers have done their best to render obsolete. Though bulldogs have been longer recognized in England as a distinct breed than any other dog, it is nevertheless in this breed only that disparity in weight is allowed so wide a scope, and for no good or sufficient reason, but simply as evidence of a schism in the theory of breeding them which not only strikes doggy men, but breeders of every other animal, as an anomaly. Yet after several years of apathy on this point among members of this club, in which an ancient breed has been all but ruined by fabulous legends and gross superstitions, I hope there are now indications of the dawn of better times. May it be Mr. Sprague's high privilege—above even all the other useful things he has done for this club—to reunite breeders by lessening the extremes in weight and giving them a more definite size as a standard to breed to.

In conclusion, I have to tender my sincere thanks to Mr. Sprague for having rendered me every assistance in his power in unravelling the complex conditions under which many of the specials were offered, some being as mystic as the writing on the wall to the Assyrian Monarch. Also I feel very grateful to Mr. Smart, who most kindly acted as ring steward from start to finish, and who marshalled the dogs into the ring very promptly. CYRIL F. W. JACKSON.

SHY BREEDERS.

Editor Forest and Stream:

A few weeks ago you gave Vero Shaw's account, from the London *Stock-Keeper*, of bleeding a bitch that had missed to several different dogs, the result being a litter of pups. As you then said you would be glad to have accounts of successful experiments, I now give my experience. Some years ago I owned a collie bitch, which I had served at her second heat. She then had seven puppies. The next time she was served she missed; I tried her again with a similar result. I then consulted "Stonehenge," and he advised me to get her in as low condition as possible, to dose her well with salts, and to take three or four ounces of blood from her before service, by opening a vein in the neck. I accordingly did so, and the result was a litter of eight. The next time I thought that she would probably breed all right and only kept her as thin as possible, but it was no use, so when she came in again I purged her well with salts, but did not bleed her, and this time she proved in whelp. After this I had always to dose her well for a day or two before service, otherwise she would invariably miss, but I never found it necessary to bleed her again. I may add that each time she visited a different dog.

E. BARDOE ELLIOTT.

BAY RIDGE, L. I., June 22,

BEAGLE TRAINING.

[Continued from Page 461.]

FOLLOW him slowly, about a rod behind, occasionally speaking an encouraging word to him and endeavor to hold him to his work, always remembering to keep him ahead of you. It is hardly possible he will run this rabbit very far before he will get thrown, but if he runs it a hundred yards, or even less, you have made a good beginning and one that will remain in your pup's memory several days at least. I don't think it advisable to make a puppy of this age do too much at first. Your time will not by any means be wasted if you do not run a rabbit at all the first time or for the matter of that, for the first half dozen times you take your pup out with you, because he will be getting more and more accustomed to his surroundings, and this means a great deal to any dog, especially if he is the least bit inclined to be timid, as very many beagles are. I will now suppose you have had your pup out several times and he has run a few rabbits in his own way and taking his own time, it is now that you step in again to your pup's advantage and aid him. Cast him off from you—he should be made to follow at heel until he gets the word to leave, and where you have only one to attend to, this is comparatively easy, especially as you have taught him that you are master when he was young and never given him an opportunity to think otherwise. Let him search the favorable places and the unfavorable ones too, as he most likely will until he strikes a trail or starts his game.

Right here let me say that in rare instances a dog will run mute or, what is worse still, will not leave your side under any provocation. In the first case you can usually overcome this muteness, which by the way is very rare indeed in a well-bred beagle, by running your puppy with an old dog—a good "tonguer." In the second instance, if by repeatedly moving yourself every time your pup sits down and calling him to you does not cure him I would recommend the following, applied internally through the left ear in one dose: Sill. Take of Hazard EFG, 3½ drs., insert in a U. M. C. shell, place on this one cardboard and two pink-edge wads, then put in about two dozen buckshot and discharge at short range. It is in my opinion the only remedy, and I will vouch for its effectiveness if used according to directions.

Having disposed of the mute dog and the habitually "tired" dog, I will now return to the time when your pup starts game. As soon as you are sure he is on a trail, go to him and watch him. If he is pottering round and seems to be making no headway, push him a little; tell him to go on, get out, etc., making him search new places, and here is where your control comes in. Send him into the most likely places, and if he is accustomed to obeying you he will go without hesitation, and as soon as you think he has worked a place long enough to have thoroughly covered it, call him to another, and so on, until you get him on a straight trail.

As soon as he has things straightened out drive him as fast as you can, keeping right behind him, which you can easily do with a puppy of this age, and make him run as fast as he can trail. This will be of special advantage to him when the rabbit makes a "ding," as you, being so much higher up than your puppy, can see the most likely places to cast in and thus save much time at a period when it is valuable—when the trail is hot. Keep this mode of procedure up until your puppy gets too fast for you, then only endeavor to keep within hearing and to be in at the "flings," as you can always be of advantage here whether with a puppy or an old dog. After this it is no longer work but pleasure. You have got your puppy to run tolerably well, and every time you take him out makes him better, and now you have only to teach him to "mark the hole" and the use of the gun, etc. I have purposely refrained from referring to the gun before as I never bring it into play until the puppy is otherwise thoroughly trained, for the simple reason that I believe that a puppy can be thoroughly gunbroken in half a dozen lessons at the outside. To do this I load for a 12-gauge a dozen shells with 1½ drs. of powder and three wads, and when I get my puppy on a hot trail and running well, I discharge one barrel of my gun. The puppy should not be nearer to you than 40 or 50 yds. at first, and should not see you when you fire—this last I believe to be very important. The puppy may stop and look up, and may quit altogether, but what is most likely of all, will continue with his work without making more than a momentary stop if indeed he stops at all. Should he pay but little or no attention to the report you can safely try him again, gradually coming nearer until he will stand a full charge in the open without flinching and when not on the trail. But remember to make haste slowly in this matter, as many otherwise valuable dogs have been ruined for all practical purposes by a little carelessness in the beginning.

Now I come to the dog that, as soon as he hears the report of the gun, quits his work; and here you will see the value of keeping yourself concealed from him when you fire, for if he is frightened, the minute he quits his work he will look for you, his master. If, on the other hand, he understands that this awful noise proceeds from you, he will be very apt to prefer your room to your company, and will not infrequently seek for home. I will suppose, however, that you have followed out my plan and the pup does not connect you in any way with the noise, then you should run to where he was driving, calling to him and endeavoring to excite him to run again. The chances are that he will succeed and get him to work again. Let him finish his hunting today without any more shooting, and on the following day or when next you take him out repeat, and you will soon accustom him to the light and then the full charges. I believe this plan would prove equally effective on setters, and it is certainly better than fish horns and tin pans. Your pup will now go out with you and drive his rabbit and let you shoot it ahead of him, if you wish, and will come to you when called, when not on the trail; and here is where, I think, some of your readers make a mistake in expecting to make a dog leave the scent. He should be taught to obey you at all times, excepting when on the trail; then, if you are wise, you will let him rule, or if you want him, catch him off. I believe it is next to impossible to make good beagles leave the trail unless you are within a rod or so, and not then if the track is very fresh, and should you succeed in so doing, it would result in eventually spoiling your dog for hunting purposes. At all other times he should obey you, and if taught as I have described, he will obey. You might as well ask a setter or pointer to leave his point as to call a beagle off a "hot foot."

The best way I know of to make a dog mark the hole, which is quite an important point when you come to consider that by this means you can tell exactly what has become of your quarry without, perhaps, a long tramp and a weary search for the dogs, is to get a rabbit or two every time you go out and make the dog stay and watch you. You can, of course, use a crowbar, but by far the best and easiest way is to use a ferret, muzzled. This is, I well know, against the law in some States, but it is about the only way to do if you wish to teach your dog, unless you use the crowbar, which attains the same end but is more laborious and within the law. I will suppose your dog has run bunny to earth, and by a little searching you have found the hole. Try to get your puppy to dig if you can, if not, tie him near and put in your ferret. As soon as your ferret is in untie your puppy and hold him facing the hole. In a minute out comes the rabbit almost in your face, unloose your dog as soon as bunny appears and you will see a lively chase until cover is reached. Now, as soon as your ferret appears catch him, slip him in your pocket and follow your dog. A few such experiences as these will teach your dog

to stay at the hole, and by patting him on the flanks and egging him on you can usually get him to barking. Your dog is now well trained, and having got him perfected so far, you can add such little points as your style of hunting may suggest or necessitate. Several things you should bear in mind, *i. e.*, that a dog to do good work alone must be the superior of a good pack dog, inasmuch as he must combine in one dog all the good qualities that is perhaps divided among several members of the pack, also that you should never allow a dog to get into the habit of thinking that perhaps you want him and perhaps you don't, therefore don't try to call a beagle, a hundred yards away, off a hot scent, as the chances are very likely he will not come, and you have lost just so much control over him every time you allow him to disobey you, in other words, never issue a command to your dog you are not prepared to enforce.

Much more might be said on this subject of beagle training, as probably no two men use just the same method to gain their end, but as I have no wish to monopolize this department, I will withdraw and listen to what others may have to say.

PERFECT TRAINING.

Editor Forest and Stream:

I was agreeably surprised a few days ago by meeting an old friend here in the person of Mr. Jas. Hennessy. This meeting called vividly to mind several days of rare sport which I have enjoyed in the field in company with this friend and his dogs. For several years past I have been making trips to the South and Southwest on business, and I have timed these trips so as to get some sport. I would take with me a 12-gauge shotgun and a Hunter's Pet Stevens .22cal. On my first trip I took a dog also, a fine young Irish setter, but was unfortunate enough to lose him; since then I have omitted the dog on these trips.

Being in Little Rock with a few days' time to spare, and having heard that my friend was located at Carlisle, only thirty-five miles distant, I resolved to pay him a visit and have a few days with the partridges, as they are called in the South. At this time Mr. Hennessy had quite a number of fine dogs in his kennels. The team which we shot over during my stay of three days consisted of two English setters and one Gordon setter. The English setters were Bee, white bitch, with black head and a few black patches and ticks on the body. The dog Startle B., half brother to the bitch, was a very handsome black, white and tan patched and ticked; the Gordon was a very handsome black and tan; he was called Jim. This dog was one of the most intelligent animals I ever saw. He was one of the few really tip-top Gordons that I have seen in speed, style, nose and all the qualities that go to make up a first-class field dog. There would be no choice between this dog and the best Lewellyn setter that I ever saw turned down in the field. These three made the best working team I ever shot over, or ever saw in fact. They were fast, high rangers, perfectly staunch at point and they would back as far as they could see each other; they would also back their handler. For instance, if they saw Mr. R. stop and crouch with the gun in position for a shot, they would back instantly, and as soon as Mr. Hennessy assumed an upright position they would be off at their work again as if nothing had occurred. To check them, at the crack of the gun every dog would drop as if knocked down, and they would remain down until ordered up.

For my edification they were dropped while Mr. Hennessy went a distance of over a quarter of a mile to a pond out on the prairie; they showed no signs of impatience nor did they attempt to rise until they got the signal to do so. When a bird was killed the dog whose name was called would go to the front and retrieve; if more than one bird was down another dog would be sent on as soon as the first one had found. They seemed to understand just what was to be done by them. In order to get the best work for the gun each worked independently of the others and there was no sign of jealousy among them. The dog Jim could be sent on errands, and one day when we were about three-quarters of a mile from the house Jim was given a handkerchief which had been loaded with birds and empty brass shells, the corners of the handkerchief being tied together so that the dog could carry it handily. He went to the house on a run and soon returned with a lot of loaded shells. I was told he could be sent to much greater distances and one need not wait for him, as he would return to the spot from which he was sent and from that point trail out the party, sometimes carrying a load in his mouth. Altogether he was a very remarkable dog.

The first thing in the morning and in the evening, just before feeding time, the dogs, some seventeen or eighteen in number, were taken in a body to a piece of mowed prairie about a hundred yards from the house; this was the exercising ground. It was an ideal spot. On three sides there was a wall of timber and the ground was undulating, with here and there a patch of sumac and blackberry bushes. It was just the place for a dog to show to the best advantage. On the last evening of my stay I was invited to go and see the dogs put through their drill, and I shall always remember that evening. The dogs were kept at heel until we reached the exercising ground; they were then commanded to drop and rise several times before they were given their liberty. At the sign to go, they were off like so many arrows shot from well-strung bows, and what a beautiful sight it was to see them skimming the close-cropped grass! Some of them seemed to be flying rather than going aloft. After they had been ranging for about fifteen minutes the gun was fired, and every dog dropped as if the shot had been fired at him and had proved fatal. When the gun was reloaded some of those that were nearest showed signs of impatience and wanted to be off, but they quieted down on being gently admonished. At the signal to rise, which was an upward wave of the right hand, they were up and off in various directions, flying over the ground as before. To say that I was surprised and delighted but faintly expresses my feelings, but the greatest surprise was yet to come.

After the dogs had been allowed to range for a short time, Mr. Hennessy bade me stand where I was and watch until he advanced well into the field where he could be plainly seen for a great distance, then, at a favorable moment he crouched with gun in position for a shot. One of the dogs, who was nearest, caught sight of him and came to a stand, the others, as they caught sight of this dog backed beautifully, some at a great distance, when all were in position Mr. Hennessy straightened up, holding his right hand on a level with his face, palm to the front, and every dog held his place. After holding them there for what seemed to me a very long while, the hand that held myself and the dogs spellbound, as it were, was raised above his head and every dog sank to the ground. After holding them down a short time they were given the sign to rise, and were then allowed to finish their romp without further interruption until we reached a narrow belt of timber near the house, when all were whistled in and kept at heel until the kennels were reached, when they were put up to cool out before feeding.

Mr. Hennessy tells me he has perfected a code of signals to be given with the whistle and vocal organs, which the dogs learn to understand in a very short time. And he says they will obey more readily than if given verbal orders. For instance: One short blast on the whistle means drop, two short blasts is the signal to rise, three or four turns the dog from right to left and *vice versa*. At close work it is a hiss to drop, and a cluck to rise. These signals and the waving of the hand, Mr. Hennessy tells me, is his method of working the dogs at present. When the chicken season opens I hope to be able to join my friend for a few days, when I shall have an opportunity to see a brace of pointers at work of

which he has been telling me. I will say this before closing, the only thoroughly educated field dogs that I have ever seen have been those from the hands of Mr. Hennessy. For the past two years he has refused to take dogs to handle, as he tells me he has quit handling for the public, giving as a reason that all of his best work was wasted. He talks of running two or three of his own in the field trials the coming season. If he should, I wish him luck.

HAL.

CHICAGO, ILL.

GREYHOUNDS AT CHICAGO.

Editor Forest and Stream:

Of the eight questions addressed to you last week the following was fourth on the list:

4. Mr. Lacy says: "To prove that we did not mean that a greyhound should have a short back it was only the week before, while judging at Boston, that we put back an otherwise good hound, Imperator, for that very fault." Now, as a matter of fact, Mr. Lacy did nothing of the sort, which is proved by his report of the greyhound class at Boston. This is what he said (FOREST AND STREAM, April 9): "Imperator by some mistake was either not in the ring or was sent out by the steward." (The report went on to say "though too short in back, etc.") And Mr. Lacy asks me to accept this as "proof" that "he did not mean that a greyhound should have a short back." Does it not seem strange that a judge should put a dog back for having a short back when he never saw the dog in the ring? Will your kennel editor kindly explain just where the "proof" comes in?

It will be seen from the above, Mr. Lacy, to clear himself, added the words in brackets. Now, sir, I do not object to Mr. Lacy telling us that "wonderful rib development means length of back; that Mother Demdick is faulty in ribs and back; that when Mr. Lacy wrote 'short back' he meant 'short loin';" that greyhounds of a very fast and clever family are not well let down behind; that Mr. Lacy turned out of the ring a dog he had never seen in the ring; that my questions were fully answered before they had been written, etc., etc. But when Mr. Lacy undertakes to convince me that he cannot read or quote his own reports, I feel that the time has arrived to put in a most vehement and indignant protest. The Boston report does not go on to say that Imperator is "too short in back." The Boston report (FOREST AND STREAM, April 9) does not even mention Imperator's back. It does, however, say that the dog is too short in "body." It is now in order for Mr. Lacy to state that "body" means "back" and *vice versa*, or that he meant "back" when he said "body." But "body" does not mean "back," and in view of the fact that Mr. Lacy has told us that "rib development" means length of back, there is actually not the smallest kind of a hole by which he can escape. He might spring another trap on us by stating that "short body" means "wonderful rib development," and this would clearly land him on the back. The argument, however, would hardly be a safe one. Will Mr. Lacy kindly answer this question: Why did he misquote the Boston report? The question has not been "fully answered in our last."

Mr. Lacy's summary mode of getting rid of those eight questions by saying they were "fully answered in our last," is not creditable to that gentleman; because as a matter of fact several of them had never been written, told or conceived. These are 1, 2, 3, 4, 5 and 6. No. 7 had been asked, but as Mr. Lacy could not answer it in any fashion other than by admitting his inability to produce evidence, he very carefully left out any and every kind of an allusion to it. No. 8 he answered on the theory that two wrongs make a right; but he carefully shirked giving a direct and explicit reply on the question of prick-ears. To say that questions which were never asked had been "fully answered" is to take a rather-low estimate of the ability of the readers of this paper.

Mr. Lacy assures us that if I cannot understand his answer he knows of "no further remedy." The remedy is right here, plain, unadulterated and easy of digestion. Give intelligible answers to questions asked, do not evade the real issue, state facts, never say black is white and never misquote. This done, the writer and other readers of FOREST AND STREAM will be given a chance to "understand." As matters stand now, they cannot understand what Mr. Lacy cannot understand himself and cannot explain.

I am much grieved to learn that a discussion of the correct formation of the greyhound is a subject of "hardly sufficient interest to merit a newspaper controversy." The greyhound is a gallant dog. His royal lineage, his aristocratic appearance and bearing, his graceful lines and the fascinating and noble sport he gives to those who are capable of appreciating it, makes him a central figure in the world of sport. In truth, as a factor in sport he stands second, and a very handsome second, to the thoroughbred horse. His pedigree has been guarded as jealously and carefully as that of man himself. The lines on which he is built have been a worthy study for noblemen and statesmen. No society in the world is too good company for him, and methinks that his back, loin, ribs and hindquarters constitute a fit subject of discussion for FOREST AND STREAM or any other sportsman's paper on the face of the globe. However, as greyhound form is not a matter of interest to your readers you will please consider my promise to write an article on wolfhounds canceled. There are probably thousands of greyhounds where there is one wolfhound, and in view of your astonishing statement a controversy on the latter breed would simply be a waste of paper.

CHAS. H. MASON.

[Greyhound form is a matter of great interest, but not a quibble on words as to what we wrote or did not write. There is, however, this to say regarding Mr. Mason's question about Imperator. It was a mistake on our part to say we had not seen this dog in the ring. We did see it, and told Mr. Mason so at the time and why he was put to one side, and now we candidly confess he was forgotten afterward, perhaps owing to the steward having sent him out along with one or two others, and when we came round to write our notes the mistake was rectified as far as possible. Quoting from memory, we said "back" instead of "body" in the brackets. There is a difference certainly, and though back does not mean body, body includes back. We are sorry to lose the article on Russian wolfhounds, but perhaps some other well-known authority on this breed will help us out.]

DEATH OF DR. J. W. ALSOP.—Hulton, Pa.—*Editor Forest and Stream:* Comparatively few of the dog men of to-day knew Dr. Alsop, but many of those of six or more years ago will always remember the kindly heart, the bright, winning manners and the thorough goodness and nobility of the life that went out at Fenwick, Conn., on June 24. Never at all a public man in dog matters, none took a warmer interest in all things concerning dogs in their best relations to us, and none made himself more thoroughly a friend of his dogs. He was emphatically the kind of man we should most value and most miss. Dr. Alsop was a mastiff man, and had kept them for years, many years, although very rarely exhibiting. He imported the rarely bred bitch Boadicea, by Rajah out of a Young King bitch, but her failure to breed made her importation almost barren of results as far as American mastiffs were concerned.—W. WADE.

We hear that Pittsburgh will make its claim of being the head center of "Barzoidon" certain and sure, for Mr. Hacke is in the mood to buy out a whole Russian kennel of these grand dogs. Mr. Hacke certainly deserves encouragement at the hands of bench show committees for his efforts toward popularizing this breed.

DOG CHAT.

WE hear that an American, through Mr. McNiall, of Killaloe, has purchased from Mr. C. C. Ellis the well known and excellent Irish setter Drogheda, that the London *Field* speaks of as "perhaps all round for field and show purposes, the best of his variety in this country." Considering the fact that several noted Irish setters have either been imported lately or will be here shortly, it would seem that the call for funds toward the expenses of the coming field trials will meet with ready response. We have already in the country several Irish setters which have made records in the field, so that competition in the trials should call forth the greatest energy on the part of owners, trainers and dogs. That another year there need be no necessity for separate trials, but rather shall we see the Irish setter competing shoulder to shoulder, and successfully too, with his more favored cousins the pointers and English setters. The only thing necessary is cooperation on the part of owners and trainers. Let the owners lay out as much money and exercise as much care in breeding as the owners of the other breeds have done and the trainers will be found quite as ready to devote their time to bringing out the acknowledged abilities of the Irish setter in the same way that they have done with the pointers and English setters.

We are sorry to hear of the death, in parturition, of Messrs. Luckwell & Douglass's black cocker spaniel bitch Rosedale Busy. She whelped five fine pups by champion Black Duke, none of which, however, were saved.

Both Canadian and American exhibitors will be pleased to find that, through the efforts of Mr. A. D. Stewart, there will now be no obstacle in the way of their exhibiting at the circuit shows in Canada this fall. In another column we give some particulars of the official correspondence.

We understand that Mr. Jarrett, of Chestnut Hill Kennels, has purchased from Mr. Edgar Huidekoper, the promising young collies, by Prince Charlie—Hera, shown at Cleveland. They were certainly very nice specimens when we saw them.

The prices for sensational-bred St. Bernard stock seems to increase rather than diminish, for we see that Mr. Chapman has sold three six-weeks-old pups, by Marvel out of Princess Florence, for \$850.

We hear that Dr. J. Frank Perry, who in years past identified himself so heartily with mastiffs and made his Ashmont Kennels of worldwide fame, has transferred his kennel of these dogs, together with the title, to Mr. W. B. Rolinson, of Rosindale, Mass. This gentleman was a well-known breeder of mastiffs on the other side, and many of his dogs found their way to this country. Included in the transfer is the stud dog Ben Franklin, by champion Orlando out of Wunna, dam of Lady Beatrice and other good ones, together with several finely bred brood bitches, including Ashmont Juno, who is the nearest living descendant of those pillars of the stud book, Hanbury's Queen and old champion King, for she is by Tusco out of Queen II., by Emperor out of Hanbury's Queen; Tusco, by Mack out of Nerpra, by King out of Phyllis; Mack, by Rajah out of Queen. Mr. Rolinson will retain the name of Ashmont Kennels, and no doubt, as it is Mr. Rolinson's intention to take a more active part in breeding and showing, we shall see some good results at future shows.

At the periodical sales held at Aldridge's, London, some good bargains may be picked up in sporting dogs, and most of them well trained, too. At a sale held about the middle of June Mr. F. C. Lowe sold Trip of Kippen, a well-known field trial dog and a winner of several stakes, a Derby among them, and said to be one of the best English setters in England for work, for the low sum of \$175. Mr. Bulled withdrew Devonshire Nero, Sall and Lady after \$365, \$495 and \$300 had been bid on them, respectively. Friend Mercer should have been round when a Clumber spaniel dog, Beau of Sussex, bred and broken at the Duke of Westminster's, and good enough to show and win, went for \$13. Another good one, Rene R., perfect in the field and a first prize winner on the bench, was knocked down at \$125; and a lemon and white setter by Sir Tatton brought \$57.50. From Mr. A. Fletcher's kennel in Aberdeenshire, four and a half brace of setters brought \$575. An interesting sale was that of an old dog called Major, by Count Wind 'em out of champion Moll, which fetched \$21.

The new Barzoi, Korotal, which we spoke of last week, is illustrated on the front page of *Stock-Keeper* (England) in the issue to hand. Mr. Krehl, in an interesting description of him, says he is taller than any Barzoi yet shown in England, and that he belongs to Prince Gagarin's pure strain, of which he is a highly-esteemed specimen. He was unofficially judged in Russia and scored 41 points out of a possible 45, and would only require one more point to entitle him to coveted gold medal form. His sire, Ataman, can score 33½ points and has won the silver medal at one of the Imperial Moscow Club exhibitions; and his dam, Soodarka, won the highest possible award at another time, the gold medal, obtaining 42 marks out of the 45. Ataman, though not a young dog, was sold a month since in St. Petersburg for \$835, and an Englishman paid \$575 for a first prize winner. The Russians, owing to the increasing popularity of these dogs, have correspondingly increased the price, and the best dogs cannot now be purchased.

The subject of the Lort Memorial is assuming definite shape, and the Rev. E. W. L. Popham, whose address is care of Manager, Messrs. Stuckey's Bank, Wellington, Somerset, has consented to act as treasurer. Mr. Cumming Macdonald, in a letter to the London *Field*, suggests that instead of a stained window an assurance company for aged and disabled sportsmen, to be called the "Lort Society," should be formed by subscription. It is interesting to relate, according to this gentleman's letter, that the letter written by Mr. Lort to the London *Field*, on wolf hunting, which we published, appeared as the writer "lay still in the house" beyond earthly recall.

The Kingston, Ont., dog show will be held this year in connection with the County Fair, as the Midland Central Fair will not be held. The judges have not yet been selected, but these will be decided on at the next meeting of the club. It is intended to have a Canadian for the spaniel classes, and some other judge to take the rest of the breeds. As this is the first of the Canadian circuit shows it should command a good entry.

Mr. E. H. Moore has set his face homeward, and by this time no doubt is safe within the shade of his own vine and fig tree. Our readers will remember that we last week expressed the opinion that it would be waste of money on Mr. Moore's part to try and improve by purchase the St. Bernard stock now in this country, and it would seem as if the owner of Plinlimmon had the same opinion, for he has withstood all temptations and contented himself with buying for Mr. James W. Whitney, of the Flour City Kennels, Rochester, N. Y., the young mastiff Cardinal Beaufort. The English kennel papers give notice of the sale as if Mr. Moore had purchased it for himself, but from private advices and a peep at Mr. Moore's letter we are able to give the above information. The dog will cost Mr. Whitney \$1,250, and this for a mastiff is a large price, but Mr. Moore writes he is the best young dog, barring a brindle, that he

has seen, and the brindle Mr. Whitney does not want. The London *Field* says in the Maldon show report: "Mastiffs were numerically a small lot, but strong in quality. Avshire won in open dogs, but he was shown fat, and Dr. Turner had no easy win with him; so and went to an active good stand of dog, Mr. Court Rice's Cardinal Beaufort, and his Frizza Secunda won in the bitch class. They are of the same litter and very like each other, big, good in bone, active on their legs, but neither was in good coat, and we should like both more were they a little better in head—they appear to be rather flat on the top of the face, i. e., from the skull to the nose; a brace of very good young dogs anyhow." *Stock-Keeper* says: "Avshire and Cardinal Beaufort are both good specimens: the first-named is more furnished than the other, and with his good head, bone and size was rightly placed over him, but if the young one goes on all right he will see a better day; he is very good in muzzle." His position at this show and at Southampton was, we are told, due to poor coat and condition, for he was only reserve at the latter show to the dogs he beat at the Kennel Club show at Agriculture Hall, and this shows that he must be a good one, though he is not yet developed, for he is under 18mos. old. He has a very short muzzle. Cardinal Beaufort was purchased from Mr. Court Rice. In concluding his letter Mr. Moore says he has seen nothing in mastiff bitches that can touch Caution's Own Daughter, and this furnishes us with the hope that Mr. Whitney will see his way clear to send this "best American-bred" one to England, where she would be sure to render a good account of herself.

A very interesting article appears in *Fanciers' Gazette* on "Reminiscences of Fox-Terriers and Fox-Terrier Men," by "Old Turk." In speaking of the fox-terriers he remembers in his native place fifty years ago, he refers to Squire Donville Poole who kept from fifty to one hundred of the game 'uns. He says he never saw a black or a black and tan marked one in the lot, the smooths being white with few exceptions, and these were marked with tan nearly allied in shade to what is now called the Belvoir tan, on head and ears, back and set on of stern. The ears were in some of the terriers carried erect, and in others correctly carried close to the skull. The head was smaller than that of the present day, rounder in skull and shorter in muzzle, and showing not a very remote cross of bull or bull-terrier, and weighing from 14 to 16lbs. The wire-haired were a little larger, with coats like pig's bristle in texture, and in color, white with patches of a blackish blue, grizzly mixture. Some of the smooths had plum or red-colored noses. He gives an interesting account of old times in writing of the way the pups were reared and tried for gameness—without which essential quality no fox-terrier was allowed to remain within the Squire's fold. The pups were reared at walk by neighboring farmers, and at stated times brought in for the trials, an account of which we give in the writer's own words: "Trials of the Marbury young tykes were held periodically, and these not infrequently took place on Sunday mornings, one of the Squire's maxims being, 'The better the day, the better the deed.' On these occasions the youngsters out at walk were collected together for the fray, and woe be to the tykes when the day of trial came if they did not come up to the Squire's standard! It did not matter how smart or good-looking they were, unless they answered the Squire's requirements on their day of trial, death was their doom very shortly. When sufficient game was got together to give the tykes a trial, a day was fixed, and on most of these occasions no one except the Squire and his keepers were allowed to witness it, except a rev-rend divine occasionally, and old Tom Rogers (there were two Toms—old Tom and young Tom), who was generally there at the trials. Sometimes, however, the Squire would invite a few friends, farmers who kept terriers for him, to witness the sport, and at such times as these there was always a grand field day. Old Tom was the Squire's *factotum*, and foremost with him in all his favorite sports. He did most of the business at gentlemen's residences for miles round, so that this brought him in contact with keepers, trappers of all kinds of vermin, farmers, and others, from whom he got his different kinds of game, viz., foxes, badgers, wild and other cats, fitchets, stoats, weasels, etc., etc.; and at Marbury Hall there were places where these animals were kept and well fed and attended to until they were wanted. Early on the morning of the trials out comes the Squire with his friends and retinue, and the sport begins, the vermin being placed at the far end of the receptacles prepared for them, such as troughs made of wood, with curves, etc., in them, drains of different sizes, all laid underground, tubs, boxes, and a heap of faggots, etc. When all was ready the Squire would give the signal, and an old-tried veteran would be let go, a tribe of youngsters being held round and about the entrance to show the youngsters how it should be done. Up the old tyke would go, and come back with his game most likely, and you would not hear a sound. After this the young ones were tried, either single or sometimes a brace, the keepers encouraging them, shouting, 'Run in, Buns!' Buster, Varmint, Tinker, Tancrode, etc., etc.; this, with the sharp ring of the bark of the tykes waiting for their turn to come, the yelping, etc., of those who had just tasted blood and were getting punished, together with the bottle and glass circulating freely, made one's blood all a-fire. Some of the dogs came back again quickly with their tails between their legs, others came or had to be got out hanging on like grim death to the varmint, both, oftener than not, having had enough, not infrequently one or two dead as a door nail. Those that had come out rudder down were never seen any more, while the others could not be bought. Still the Squire gave many away to friends, etc. He was a bachelor, and thought of little else except his terriers and sport. As soon as the performances were ended all adjourned to lunch, at which entertainment, as well as at these sports, I have often figured."

A letter from the Seminole Kennels informs us that their new kennel is completed, and accepting their invitation to come and see it, we shall do so in the course of a week or two.

Mr. Bremer, who is well known to many exhibitors for years past in connection with the Medford Fancy Goods Co., tells us that he has purchased the entire property and business of which he has been, since its inception, the leading spirit. The artistic designs and finish of the dog furnishings put out by this firm in the past is a guarantee that with abundant capital and enlarged facilities the business will no doubt increase proportionately.

Mr. P. H. O'Bannon, so popularly known among his fellow fanciers, has purchased from the Heywood-Lonsdale Kennels, through Mr. C. E. Buckle, the English setter bitch Sophie. She is by Rake out of Maggie, by Baron Doveridge out of Mailee; Rake, by Armstrong's young Dash III. out of Armstrong's Moll, going back to Blue Drake, Rival, Tam O'Shanter and other celebrities. There is likely to be some trouble in getting her through the Customs, as Mr. Brailsford in shipping her on the City of Chicago, which arrived last Saturday, failed to either register her in the Kennel Club Stud Book or send any of the certificates necessary to pass her through. Mr. Brett, of Spratts Kennels, was asked to look after her, and he has had an annoying time of it. Application has been made to Washington for permission to release her on signing a bond.

To commemorate the visit of Messrs. Brailsford and Cameron with his team of dogs to the American field trials, Mr. Heywood Lonsdale is having the noted artist, Mr. George

Earl, paint a large picture of Mr. Brailsford with the four setters and Angus Cameron with six of the pointers. Mr. Brailsford writes that he has done his penance and Cameron is now undergoing the torture. Speaking of paintings of notable trainers and dogs reminds us of a tale that John Brett tells us. It seems when Colonel Platt's dogs, Di and Darkie, won, one a Derby and the other a \$500 cup, Mr. Earl painted a group consisting of the owner, dogs and Brett. Much to Mr. Brett's displeasure, however, the artist, to get a color note, handed him down to posterity wearing a bright red necktie. This Brett has earnestly protested against ever since, as he never wore a necktie in his life.

"Cheerful Horn" asks a pertinent question about dachshunds in the issue of *Canine World* to hand. He wants to know why the dachshund of the present day is so long in the back, as the best dogs at the Belgian trials were more terrier-like in build and very active; this he says the English show specimens are not, their chief characteristics being a body that requires six legs, a snipy face, and ears that could be ripped as easily as silk, and "swingers" in place of legs in front. This he ought to certainly know is the approved English method of improving a foreign breed.

Mr. Teague, we hear, has received his new purchase Altonetta all safe. She is a litter sister to Col. Ruppert's Altonette, and here we may remark that the similarity of names in these two St. Bernards is unfortunate, and is bound to lead to more or less confusion in future. The other sister, now in England, is called Altonella.

At the battle of Ulundi, when the Zulu chief Cetewayo was finally routed and forced to take to cover, a curious specimen of a Zulu breed of dogs was captured, Sir Bartle Frere brought it to England with him, and it is now in the care of a Mr. Mutter. In appearance it is somewhat like an Australian dingo, but has a peculiar mane extending from the neck to the hindquarters.

We hear that Dr. J. H. Meyer has sold his Gordon setter bitch Beemont to Mr. William Tallman. Perhaps our readers will fail to recognize this gentleman's name, so we will add that he is sometimes known as "Billy." Friend Tallman will very likely run her in any special Gordon stake that may turn up this fall.

The mastiff man whom we spoke of as coming over to this country, and which gave rise to Mr. Wade's letter on "Mastiff Judges," turns out to be Mr. Joseph Evans, who owned The Emperor and Linda, from which pair he bred the celebrated mastiff Moses, which was imported to this country in the spring of 1888 by the Winlawn Kennels, but died very suddenly during the summer. He was in bad shape when he landed, and never seemed to pick himself together afterwards. Mr. Johnston, in writing of the mastiff Shah and his excellence of disposition, asserts that Moses had not the sweetest of tempers, and this we can from personal acquaintance fully indorse.

St. Bernard breeders on the other side seem to be scurrying round not knowing hardly what to buy or what to sell. Now we see that the great Salvador Rosa has been sold by Mr. J. F. Smith to Mr. Thos. Shillocock, the owner of Lord Bute and others. Many people think Salvador Rosa the best St. Bernard in England and when he made his first and only appearance at the last St. Bernard Club show, he won four firsts and numerous specials and proved the sensation of the day. Judging from several stud cards Mr. Shillocock has sent us of dogs in his kennel, this gentleman must hold a very strong hand just now both for breeding and showing.

Mr. Mann tells that the exact price paid by Mr. Chapman to Mr. Shillocock for Sir Hereward was \$1,000. As he saw the receipt or check, we forget which, this should put an end to all doubt. We give this information for the benefit of the *Stock-Keeper*, Eng., which feels rather troubled over the fact that buyers or sellers are falling into the bad habit of putting on a little bit when price gets into four figures.

Mr. Whitney writes us that he has bred the mastiff bitch Caution's Own Daughter to his Ilford Chancellor. As this will be C. O. D.'s first litter, the result is anxiously awaited and should be highly satisfactory.

Before Mr. E. H. Moore left England a little coterie of St. Bernard men captured him and a dinner was in order. The English *Stock-Keeper* says that among the amusing reminiscences related over the table, the Rev. Arthur Carter told the tale of a goggle-eyed brute he turned out of the ring when he was judging St. Bernards at a certain show. After his labors were concluded the injured owner wanted to know what was the matter with his dog, so the reverend judge pointed to its lobster eyes. "Well," retorted the proud proprietor, "that's the shape they should be, so as to look over the mountains."

We understand that the bond for costs, which Mr. Peshall had put to up before his mandamus for reinstatement could be heard has been reduced from \$500, which has generally been accepted as the proper amount, to \$250. This, in view of the several suits Mr. Peshall is bringing, is an important action. The bond will now be filed and the case brought to an issue.

We hear that a decision has been arrived at by the committee appointed to settle the question as to whether the National Greyhound Club should have a separate stud book or not. It has been decided that the Greyhound Club should be allowed to "list" their dogs by paying a fifty-cent fee, and this list will be printed as a supplement to the A.K.C. Stud Book. To secure a number, however, the man with the greyhound must still pay his dollar for the regular registration in the A.K.C. Stud Book. What the Greyhound Club gains by this is hardly discernible. The gain is rather in favor of the A.K.C., which has shown itself a benefactor to its own interests in the sense of making two blades of grass grow where one grew before.

Among the new kennel advertisements this week we notice that the Ashmont Kennels have a stud mastiff for sale; H. F. Littlefield—St. Bernards; W. H. Hyland—pointer bitch and pup; E. E. Beach—St. Bernard pups; H. D. Weeks—English foxhounds and setter pups.

PRICK EARS.

Editor Forest and Stream:

Mr. Fellows's letter in a late issue is characteristic of the man. It is straight; no sharp curves. His wish not to be drawn into a controversy shall be respected. However, as he has made statements which need an answer I would like to direct attention to them. Mr. Fellows is too old and good a fancier to go off on a wrong tack. He says that Elcho "did not have prick ears when in the ring." A prick-eared dog is prick-eared in the ring or out. I suppose Mr. Fellows meant to say that the dog threw his ears back and did not give Mr. Fellows a chance to detect the fault. When he tells us that while he was taking notes of the dogs on the benches he saw Elcho's ears "elevated slightly, but not by any means a prick ear" he goes very wide of the mark, and has evidently overlooked the fact that all greyhounds with perfect ears elevate them "slightly." The statement is misleading. If the ears were elevated to a certain point and then bent over (outward, not forward as seen in the

THE REVOLVER RANGES AT BISLEY.

THE writer has just been to see the revolver and "running deer" ranges at Bisley, and if there was only a 50yds. range besides (for which there is plenty of room) the revolver ranges would be about perfect. No doubt as people in England get to know the capabilities of the revolver a 50yds. range will be added. As the ranges are at present arranged for this year's meeting, the revolver range is on the extreme left, next comes the "running deer" (which range is also used for the "running man"), next comes the stationary range for hitting rifles and next to that the 1,000yds. range. The volunteer ranges are further off to the right. By this arrangement the civilian members of the English National Rifle Association have all their ranges together, which will be a great convenience to them.

The revolver range is about as perfect (barring the absence of a 50yds. range) as it well can be. There are two disappearing targets, two stationary targets and two sliding targets, which move sideways, all at 20yds., the firing points being on a line with about 6ft. between each competitor, except at the sliding targets, where the space is some 12ft., there is no partition between competitors, which is a great comfort to competitors, as the old wooden partitions used to almost deafen one by confining the noise of the explosion to the boards behind the target and down the side (which used to add to the echo and noise) have been done away with, the boards at the side being unnecessary for safety, as the firing point is in line with the "running deer" and other firing points, so that nobody gets forward in a dangerous position.

The bullets are stopped after they go through the cardboard targets by an earth butt, covered with grass, some 12yds. behind the targets, not close up to them, as the boards used to be. This will still further deaden the noise. If only two 50yds. targets were put on the extreme left (there is plenty of room there even for two 100yds. targets besides) it would make a range hard to beat. The tickets for entries are to be sold at a little wooden house between this range and the "running deer" and the range will of course be roped off to prevent spectators getting too close to the competitors.

PEEP.

LONDON, June 9.

BOSTON, June 27.—The Massachusetts Rifle Association held its regular weekly shoot to-day, and also closed the six months' record matches that have run since Jan. 1. H. Severance won the first prize in the off-hand rifle record match, and also first prize in the record pistol match. J. Francis (Rabboth) won first prize in this range and the "running deer" and the range will of course be roped off to prevent spectators getting too close to the competitors.

REVOLVER COMPETITIONS AT BISLEY FOR 1891.—There will be £150 given for revolver prizes this year at the English Rifle Association meeting; £50 for the disappearing series (first prize £10, £50 for the sliding target series and £30 for a quick-firing series, all at 20yds., Smith & Wesson and Colts revolvers may be used, if not less than .44cal. and with fixed sights (no screw adjustments allowed).

NEW YORK VS. CALIFORNIA.—In the telegraph match between the Zettler Club, of New York, and the California Schutzen Verein, Wm. Hayes, of the Newark Shooting Society, will represent the California team. The teams will comprise 15 men each, and each man will fire 50 shots on the German rug target. The Zettler team will shoot its score on the Shooting Park ranges, Newark, N.J.

THE TRAP.

Scores for publication should be made out on the printed blanks prepared by the Forest and Stream, and furnished gratis to club secretaries. Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

FIXTURES.

If you want your shoot to be announced here send in notice like the following:

July 2.—Third Annual Tournament of Canastota (N. Y.) Gun Club. E. B. Roberts, Sec'y.
 July 4.—Slater, Mo., Third Annual Tournament of the Slater Gun Club. Wm. Reid, Secretary.
 July 4.—Shoot of the South Side Gun Club, at South Norwalk, Conn.; sweeps, team shooting at innatimes, and other interesting events will be shot off; all are welcome; no one barred.
 July 4.—Third Annual Tournament of the Towanda Rod and Gun Club, at Towanda, Pa. Sweeps and guaranteed purses.
 July 7.—Wellington Gun Club Tournament, assisted by the Inter-State Manufacturers' and Dealers' Association, Boston, July 7, 8 and 9; \$1,000 guaranteed.
 July 22.—Pearl River Gun Club Tournament. First two days bluebirds, last day live birds. J. J. Blauvelt, Pearl River, N. J.
 Aug. 12.—The Missouri State Amateur Shooting Association Annual Tournament, at Lexington, Mo. G. A. Sturges, Sec'y.
 Aug. 30.—Sept. 1.—Hackettstown Gun Club. Two days at targets. For programmes address James L. Smith, Hackettstown, N. J.

THE WELLINGTON GUN CLUB of Boston will give its Inter-State Association tournament at Wellington, next Wednesday and Thursday. The Inter-State managers guarantee \$1,000. The grounds may be reached via Boston & Maine R. R. from depot in Haymarket Square. The following list of experts will have to shoot at unknown angles: H. McMurchy, C. W. Budd, R. O. Helges, J. E. Stice, W. Crosby, W. Volstead, John Ruble, F. D. Kelsey, H. B. Whitney, E. S. Benscoter, D. D. Hill, V. O. McDonald, A. L. Bandle, M. F. Linsley, Frank Parmlee, Jack Winston, A. G. Courtney, W. E. Perry, O. R. Dickey, H. G. Wheeler, Mr. Stanton of Boston, J. A. Sherman, and all others who are known to be better than 90 men. As soon as an amateur proves to be shooting strong enough, he will be advanced to the expert class, and be compelled to shoot in the higher class.

DALLAS, Texas, June 24.—George Mathews and Will Allen shot a match at 100yds. on bluebirds. American Shooting Association rules. Mathews broke 88 of his 100. Allen withdrew when he had shot 75 birds, having broken 88.

TRAP-SHOOTING VS. POLITICS.

Editor Forest and Stream:

Every sportsman as well as politician in the State knows more or less of Roswell P. Flower, who will probably be the next Democratic candidate for Governor. The worst that a Republican can say of him is that he is a Democrat. He is one of the most genial, generous and companionable men that can be met in a day's travel. He attended the annual trap shoot at Rome, and took part in some of the sports, giving his whole attention to the pastime, throwing politics to the dogs. A Utica Observer man had a conversation with him, in which he touched upon various matters in a style peculiar to himself. In speaking of the tame and half-dead pigeons which were put in the traps on Friday, he said he guessed the audience felt about as he did on the subject, for when a bird would escape, the onlookers would applaud, instead of doing so when they were shot. He declared he would not raise his gun at one, and he did not. The birds did not have enough of their wild nature in them to fly when the trap was pulled. He thought it was a regular slaughter. "Why," said Mr. Flower, "it is a great deal more of a trick to shoot kingbirds than those tame pigeons." The reporter asked him if he was used to shooting, and he said he enjoyed the sport immensely, but had not done any shooting before this year, and therefore he was now out of practice. "If you want to see me shoot, you had better come up to Watertown next week. I visit an old chum of mine just outside the city. He has a trap on his farm, and we will go out there in the field and shoot all day long, and I will break the birds in strings of twenty straight. When I am in trim I don't take a back seat for any of the boys."

Mr. Flower said he did not think such a shoot as that of Friday afternoon would be permitted again at another State shoot. He was present when the Dean Richmond trophy was presented to the State Association, and if Richmond could have seen the shoot of Friday on those birds he would have raised a strenuous objection. He thought the common sparrow would be the proper thing to shoot at, and would make a much better target and one more difficult to hit.

The reporter asked him what he thought of politics this fall. "What do you think of them?" he replied.

The reporter said he had not formed any opinion or even an idea, but he did not think Mr. Flower would be out of sight.

"Neither have I formed any idea," said Mr. Flower, "I have given politics a rest and shall keep quiet till harvest time; I am a sportsman now, and not a politician."

But the reporter wanted something political, so asked him what he thought of Hill. He said the farmers had a great deal of "hilling" to do in their business, and that he would harvest his crop with the farmers when the time came this fall; and he thought he would get a good crop, too, the way things looked at present. That is all that he would say in reference to politics.

At this point of the conversation a friend of Mr. Flower from Utica stepped up and said: "Well, Congressman, how is politics?"

"Look," said the Congressman, "there is another bird that escaped those fellows; I wish they would all get away, but they are too tame."

"Say (addressing the Utican), how many times are you fellows in Utica going to change the name of that club?" Then turning to the reporter he said: "Now, I have nothing to say on political questions, but if you want something good on me, I will give it to you." He proceeded to give a good shooting, kingbirds, Friday, the club gives several prizes. The Engeman badge was won by J. O'Brien after tying with H. Kronika with 7 straight. He killed 3 straight in the shoot-off and Kronika missed his second bird. Six tied for the Borden medal with a score of 6. C. E. Morris killed 8 straight to J. C. Poyser's 7, and won it. The third prize was divided by J. B. Voorhees and C. E. Morris, each killing 7 straight. Several matches were shot at 25yds. rise. W. A. Weber beat C. Ferris, 9 to 8, for \$25 a side; J. C. Poyser beat Judge Sutherland, 5 to 2, for the same amount, and C. E. Morris and D. Monsees shot at 5 double risers each, same rise, for \$20. Morris made the good score of 9 to Monsees's 6.

At the regular monthly shoot of the Erie Gun Club at Woodlawn Park, Long Island, to-day, only 11 members shot, but the field for the club medal was worth looking at. C. Jerico and C. Plate, each shooting at 30yds. rise, killed their 7 straight. Jericho had to kill 12 more straight to Plate's 11 before he could win it. J. Plate won the second prize.

June 26.—Frank Ibert and Peter Eppig, the Brooklyn brewers, at Dexter Park, L. I., to-day, shot at 50 pigeons each for \$300 a side, Hurlingham rules, 25yds. rise. Eppig won the match by a score of 35 to 19.

The second monthly shoot of the Linden Grove Gun Club at Dexter Park, L. I., to-day, was fairly well attended. Twelve members shot at 7 birds each, Hurlingham rules, the gun handicapped, 25 and 27yds. rise. W. Cunningham, J. Link, Capt. Kitsoe and J. Schlemman, the first three, each made 7 straight. As the medal goes to the man making the best average through the season, it was voted to Capt. Kitsoe by acclamation. The second medal was won by F. Frank with a score of 6.

At the regular monthly shoot of the Erie Gun Club at Woodlawn Park, Long Island, to-day, only 11 members shot, but the field for the club medal was worth looking at. C. Jerico and C. Plate, each shooting at 30yds. rise, killed their 7 straight. Jericho had to kill 12 more straight to Plate's 11 before he could win it. J. Plate won the second prize.

SAN FRANCISCO, June 21.—The Lincoln Gun Club of San Francisco held its third medal contest for the season at Alameda Point this afternoon. The attendance was large and the sport thoroughly enjoyed by all present. The scores of the two classes in the match were as follows: 20 birds each:

First Class.	Second Class.
Kearny.....18	Potter.....12
Cate.....18	Mellish.....13
Ford.....18	Campbell.....13
Parker.....16	Venken.....10
	Malhot.....10

Following the regular match came a 12-bird pool shoot, \$1 entrance, for which 19 members entered, scoring as follows: Cod 12, Ford 8, Cate 6, Fisher 7, Allen 9, Campbell 4, Ostrander 3, Ruse 6, Franzen 6, Cobin 8, Foster 6, Potter 4, Mellisa 9, Karney 8, R. S. Smith 7, Ostrander 6, Venken 5. Allen second, Mellish and Karney div. third.

Fourteen members then made up a purse for another match at 6 singles and 3 doubles, which resulted in an equal division of the money between Cod and Karney on 11 birds each.

In another match of 12 singles, 30c. entrance, Cod took first money on 11 birds, Franzen and Karney div. second money on 10 breaks each.

CLEVELAND, June 25.—There was a fair attendance at the Cleveland Gun Club shoot this afternoon. Rudolph won the first badge, Upson second, Jones third, and Correll fourth. The following is the score:

Rudolph.....	10111111111111111111—23
Hoyt.....	010111111111010101010—16

READING'S NEW CLUB HOUSE.—The new club house of the Reading (Pa.) Shooting Association, which is beautifully situated a square below the Black Bear Inn, is completed, and the members of the association, 41 in number, are highly delighted with it and the surroundings. The building is frame, 14x20 ft., 2 1/2 stories high, and the first floor is handsomely furnished. There are 20 closets on the south side of the room, which will contain the targets, guns, etc., belonging to the association. This room will also be used as a meeting place. The second floor, from which there is an excellent view of the shooting grounds, will accommodate 200 persons and be used by the friends of the club. Judged by the appearance, the building has been placed on a lot from which a beautiful flag will be thrown to the breeze. It is white, with red trimmings, in the center of which are the initials "R. S. A." in blue. The flag is a gift from Mrs. H. C. W. Matz and is highly prized by the association. The grounds are 100ft. square and the back ground is the

Canoeing.

AMERICAN CANOE ASSOCIATION.

OFFICERS, 1890-91.

COMMODORE: WALTER U. LAWSON, Boston, Mass.
 SECRETARY-TREASURER: RALPH F. BRAZER, 47 Central street, Lowell, Mass.
 REGATTA COMMITTEE: J. A. Gage, Lowell, Mass.; W. G. MacKendrick,
 Toronto; L. B. Palmer, Newark, N. J.

CENTRAL DIVISION.

NORTHERN DIVISION.

OFFICERS:
 VICE-COM: C. V. White, Albany, N. Y.
 REAR-COM: T. P. Gaddie, Dayton, O.
 PURSER: Howard Brown, Albany, N. Y.
 EX. COM: J. K. Bakewell and H. M. Stewart.

OFFICERS:
 VICE-COM: W. H. Cotton, Kingston.
 REAR-COM: J. C. Edwards, Lindsay.
 PURSER: C. E. L. Porteous, Kingston.
 EX. COM: Colin Fraser and F. H. Gilborne.

EASTERN DIVISION.

ATLANTIC DIVISION.

OFFICERS:
 VICE-COM: J. W. Cartwright, Jr.
 REAR-COM: L. F. Parmelee, Hartford.
 PURSER: R. Apollonio, Winchester.
 EX. COM: Paul Butler, E. S. Towne and Sidney Bishop.

OFFICERS:
 VICE-COM: L. V. Dorland, Arlington.
 REAR-COM: E. D. Anderson, Trenton.
 PURSER: Richard Hobart, Newark N. J.
 EX. COM: H. L. Quick and H. M. Kreamer.

Applications for membership must be made to division pursers, accompanied by the recommendation of an active member and the sum of \$2.00 for entrance fee and dues for current year. Every member attending the general A. C. A. camp shall pay \$1.00 for camp expenses. Application sent to Sec. Treas. will be taken to the proper division.
 Persons residing in any division and wishing to become members of the A. C. A., will be furnished with printed forms of application by address ing the Purser.

WESTERN CANOE ASSOCIATION.

Commodore—D. H. Crane, Chicago, Ill.
 Vice-Commodore—N. B. Cook, Chicago, Ill.
 Rear-Commodore—O. A. Woodruff, Dayton, O.
 Secretary-Treasurer—J. H. Ware, 130 Rialto Building, Chicago, Ill.
 Applications for membership should be made to the Sec. Treas., on blanks which may be obtained from him, and should be accompanied by \$2 as initiation fee and dues for the current year.

THE MARINE AND FIELD REGATTA.—The third canoe regatta of the Marine and Field Club has proved the event of the spring season, the attendance being far above that of the regular canoe club regattas, and including two visitors, Messrs. Butler and Goddard, from such a distance as Lowell. The establishment of one important regatta which shall bring together racing men, to the possible detriment of the many regular club regattas, has been opposed by some; but on the whole the plan seems a good one, as men cannot find time to attend the regular round of regattas at distant points, as Yonkers, Newark, Staten Island and Brooklyn. If any one club is to have the honor of a yearly event of such exceptional prominence, there is none better fitted than the Marine and Field. While promoting canoeing, it is not distinctively a canoe club, and can conduct such a regatta from a more impartial standpoint than any large canoe club, which might be disposed to look first to its own interests. As it is now working in unity with the Manhattan Athletic Club, it is in a position to offer good prizes and to conduct a large event of this kind in an appropriate manner, while its sailing ground is the nearest approach to a fair and neutral course that can be found anywhere about New York. We congratulate the two clubs upon the success of the present event, and hope that it may continue as an annual fixture.

DROP RUDDERS VS. NO RUDDERS.—The recognized imperfections of the standard drop rudder, with pivoted blade, have led to the entire abandonment of the type by some of the advanced racing canoeists, who claim that the weakness, flexibility and drag of the brass drop rudder make a serious difference in speed, and that much better results can be had with a solid blade, narrow and deep, projecting some distance below the keel. In theory this view is correct; arguing from the club float, the deep fixed rudder is probably faster and more efficient than the drop rudder. When actually afloat, however, and especially in New York Bay, the matter is likely to present itself in a more practical aspect, and after running over a plank or a floating log, the canoeist may come to the conclusion that the question may be stated in another way—drop rudder vs. no rudder; and perhaps no post either. Accidents of this kind are quite frequent in the Bay, and several canoes have recently torn their rudders off entirely, with more or less damage to the sternpost.

A NEW ASSOCIATION.—We learn that the subject of a new canoe association is now being discussed in the vicinity of St. Paul, Milwaukee, Minneapolis and Madison. This part of the Northwest the Western C. A. has entirely failed to reach, nor can it do so under its past and present policy. If any organization is formed in the above territory it should be a division of the American Canoe Association, as under the present division scheme the local body would have full power in all domestic affairs, while profiting from the established standing of the national body, and specially from the rules, which embody the results of a dozen years of labor and experiment. There is a promising field for a new division in the locality mentioned, and the work of organization will be easier under the name of the A. C. A. than as a merely local body.

THE FISH AND THE FRYING-PAN.—We understand that one of the cups in the Marine and Field regatta was made with a dolphin as an ornament. In view of the result of the race for which it was made, and of the future holders, the question suggests itself whether the fish should not be shown in a frying-pan, instead of disporting itself afloat.

NEWTON BOAT CLUB.—The Newton (Mass.) Boat Club held its regatta on the Charles River last Saturday, the events being as follows: Tandem, 18ft. canvas canoes—C. W. Cole and A. R. Richards, first; L. S. Drake and F. J. Burrage, second. Tandem, 16ft. canoes—H. S. Potter and George Angier, Jr., first; J. Linder and R. A. Ballou, Jr., second; F. Newhall and P. A. Warner, third. Rowing race—C. H. Higgins first, Newton Canoe second, J. B. Waterbury third. Upset race, tandem—J. Linder and R. A. Ballou, Jr., first; L. S. Drake and C. W. Cole, 2. A reception and dance was given in the evening.

UNION BOAT CLUB.—On June 17 the Union Boat Club, of Boston, started for Nahant with the barge and the war canoe Mahanazee, there being twenty-three in the party. Owing to a heavy sea the boats but in at Point Shirley, going by rail to Lynn and then across to Nahant, where dinner was eaten. Leaving at 8:30, the boats reached home at 7 P. M., the trip being a decided success.

DOWN THE SUSQUEHANNA.

[Continued from page 485.]

INSTEAD of going to the other shore and heeding the friendly advice, I concluded to risk it and took the middle of the river. When opposite Liverpool, which is three miles below Mahanago, on the opposite side of the river, I got into a nest of fish dams and lost an hour getting out. The river from side to side from Liverpool to Millersburg, three miles further down, is just one mass of these obstructions. The only channel is a raft channel lying close to the Liverpool shore and the one I should have taken to avoid trouble.

After reaching Millersburg I got my mail, and visiting a few friends, I again pushed across the river, using the raft channel to Bald Eagle Island, one mile below Millersburg, where I made camp. Opposite Bald Eagle Island are the noted fishing grounds for salmon and bass. The largest salmon that has ever been caught has been taken out of the river at this place. While relieving my canoe of its freight, a fisherman pushed his bateau up on the shore, and from him I purchased some lamprey eels. Toward evening I started a fire for supper, and jumping into the canoe, in half an hour I had six fair-sized salmon, all caught by trolling with the lampreys.

Supper finished and the camp put in order for the night, I crossed on a small foot bridge which connects the towpath along the canal with the island, and walked up to the lock about 200 yds. above. While in conversation with the lock-keeper, I was surprised to see my friend who helped me make a portage up near Nanticoke dam. He said that he had been to the lock, and that he had waited for the slow time. After they had tied up for the night below the lock, he visited me at my camp, where we sat close to a bright fire and smoked and talked, he revealing to me some of his past life and his experiences on the towpath, which were very interesting. About half after ten he left me, returning to his floating home, and after throwing several logs on the fire I turned in.

Wednesday, July 22.—I arose at 6:15 A. M. and went over to the canal to bid my rustic friend good-bye; but his boat had gone, probably starting at the break of day. Throwing off my clothes, I took a good swim in the canal before returning. On my return I scraped the hot coals together and cooked breakfast. I then resumed my trip, passing through the rapids at a great speed. Working over to Halifax, 3/4 miles below Millersburg, I made a short stop.

At Halifax I hoisted sail, and shoving my centerboard down, sailed almost directly down the river to Powell's Creek, 5 miles below. Beaching my canoe on the grassy shore, I bought some milk at a farmhouse close by and enjoyed a light lunch. Idling away the time by sailing on the head of the English club house, which is owned by people from Harrisburg, I used up the best part of the afternoon.

Toward evening, as the sun was setting and with a light breeze, I sailed down to the breast of the dam, lowering my sail to run through the chute. Again stepping it, I sailed across below the dam and up the Juniata, which joins the main river at Clark's Ferry, about 30 ft. above the bridge, in a grove of trees. I made camp on the mainland. My supper being next in order I cleaned two of the salmon I had caught the night before, and with Saratoga chips, bread and butter and coffee I made a good meal. After supper I strung my tent and fixed the camp for the night, making everything serene. I then walked down to Benvenue Lodge, which is a fish house situated below the dam, and owned by Harrisburg lovers of sport. Tarrying there a while I crossed the bridge to the country store and post-office at Benvenue and stayed there till 9 P. M., listening to the tales of several residents. Returning to my canoe I spread the blanket out before the fire and smoked.

That night of all nights was one not to be forgotten. The moon was full and coming up from behind the large mountain on the east, it lighted up the whole valley, turning night into day. To sit alone, with your back against a tree, smoking your pipe and watching the large camp-fire throwing the sparks through the branches of the trees and into the darkness above, and listen to the noises that are heard on all sides, while through the bright glare of the fire you see the decayed wood throwing out its ghostly and startling light, makes you wish that you could spend a whole summer in this way.

These and many other scenes are sought after by the venture-some canoeist. Cruising on the different waters, every foot as the canoe moves along reveals to him something new. Paddling along with the current, he knows nothing of the future, contenting himself entirely with the present and with the pleasant thrills of the river. In different kinds of paddling, one of which his canoe carries him, he thinks is all placed before him for his special enjoyment, and enjoy it he does. The roar of rapids and falls never worry him until he comes to them, and then, trusting to his paddle, but mostly to luck, he soon appears at the lower side ready for the next. The dew beginning to fall very heavily and it growing somewhat chilly, I turned in to get some rest.

Thursday, July 23.—I was awakened about 5 A. M. by the small noise of a conch shell horn blown by a canalboatman, to open the wickets for his boat to enter the lock in the canal on the opposite side of the Juniata.

To start a fire for breakfast I was compelled to cut up a rail from the fence close by, and while it was burning I crossed the river to buy some fresh bread and eggs. On my return I cooked breakfast about 9 A. M. left the shore, paddling out of the "Blue Juniata" into the main river. In a short time I passed Duncannon on my right, one mile below the Juniata bridge, the river being low and very rocky, compelling me to keep close to the left shore.

When about one mile below Duncannon I crossed the river to Cove Forge, where I met plenty of fishermen, rolling for salmon, as they call it, and resort to putting in a spoon, holding out a fish, or stone roller as they are commonly called, attached to it, I was rewarded after an hour's paddle in and around the many rocks by the capture of one salmon and a very fine bass.

About noon I ran in on shore and took lunch, staying there in the cool shade of the trees till late in the afternoon, when I again took up my paddle, crossing the river to get to the head of the canal. The run from Geiger's Point, which is nearly opposite Cove Forge, to Dauphin, four miles below, was made in a short time, the river being very rapid. Dauphin Rapids were soon reached, which is a nice piece of canoeing water, the river running about twelve miles an hour, making the canoe shoot around the many rocks, giving one no time to enjoy the beautiful mountain scenery that abounds on these shores.

The only channel to get through is close to the left shore, and it extends the full length of the rapids. From shore to shore one can see nothing but boulders, large and small, and on looking across the river from the shore one could hardly realize how it is possible to get through without an upset. After getting through Dauphin Rapids safely, soon heard the roar of the Rockville Falls, but these did not amount to anything, as there is a good channel close to shore. Paddling out into open water, where the river is about 1 1/4 miles wide, I got my sail out from under deck, and stepping it, gradually worked down to McCormick's Island, about two miles below Rockville, where I made camp.

After a good supper of fish, fried tomatoes, bread and butter and coffee, also fresh milk purchased from the farm on the island, I went down on the shore to clean my cooking utensils, when, looking down around the bend in the river 1/2 mile below, I saw five canoes under full sail headed for the island.

It was not long before I had my glass leveled upon them and soon made them out to be five of the members of the club. Running down to the head of the island I awaited their approach. As they neared I stepped from behind a tree and gave the conch yell. In an instant all heads were ducked under their sails, nearly causing several upsets. It was a jolly time as the boys came up to meet me, as they had not expected me until the morrow.

Jollification ran high that night and little sleep was indulged in. We all sat about a large roaring fire and I was pined with all kinds of questions, regard to my lonely voyage. The next morning, Friday, July 24, was spent in racing, paddling and sailing, upset paddling races, etc. The Kodak came into use at every opportunity and the day was soon spent. The darkness of night closing in upon us and being fatigued somewhat by the day's sport we all turned in.

Saturday, July 25.—The whole camp was astir at 6 A. M., and after a swim in the river, a good breakfast we paddled for home, reaching there at 9 A. M. According to the log, I had traveled 150 miles on one of the most beautiful rivers in the State and through scenery that cannot be surpassed in central Pennsylvania. M. W. F.

MAHNAWAUK C. C.—The Mahanawauk C. C. was organized March 21, at Milwaukee, Wis., with 15 members, all canoe owners, the officers being: Com., E. H. Holmes; Vice-Com., F. W. Dickens; Sec'y-Treas., F. B. Huntington. The club voted is the letter M in a circle. The club house is located on Milwaukee Bay, Lake Michigan. No dues have been fixed for racing, but the club will camp from July 3 to 17 on Oconomowoc Lake, Wis.

ROCHESTER C. C.—A grand cruise is planned for July 4 in the war canoe Huff, to Manitou Beach. The invitations, one of which we have received, are most temptingly worded.

TORONTO C. C. June 27.—The first of the series of sailing races of the Toronto C. C. was sailed over a triangular course in the Bay on Saturday, the three classes being sent over the same course, the 1st class completing the triangle 4 times to the others 3 and 2 times respectively. The second gun, containing a poor cartridge, was not heard by some of the sailors, occasioning an unsatisfactory start to them. Another feature of the race was the disappointment of some who, starting from the club house for the starting buoy when the wind was blowing fresh, carried their small sails. The wind petered out to very light by the time the first gun was fired. The men going out later and carrying large sails having rather the best of it throughout, as the wind remained light the rest of the afternoon. Una, Colin Fraser, finished first, and Eel, W. J. Sparrow, second in 1st Class; Kalula, H. Fort, first, and Get-There, F. Rogers, second in 2d Class; and Edna H. Fortier, first, and Storm, J. C. Zredale, second in 3d class. The next of the series will be sailed in a couple of weeks, when the disappointed ones may have a chance of turning the tables. Matters are looking very bright for the Toronto C. C. this season, especially in the sailing line; several new canoes having been added to the fleet this spring. The paddlers are also upholding their end of the stick, as will be shown by the number of entries at the annual regatta on July 4. Both contingents have signified their intention of sending a goodly number to the division and general meets.—W. L.

BROOKLYN C. C.—The gale of Saturday prevented the holding of the Brooklyn C. C. regatta, the following paddling races being held: Event No. 1, special paddling race for juniors; course from the club float to and around a stakeboat off the Atlantic Y. C. distance about 220 yds.; P. Vernon's No Name won, time 4m.; F. Sinclair's Modoc second; W. Ward's Red Devil withdrew. Event No. 2, senior paddling twice around the same course, distance about 440 yds.; J. W. Stewart's B'o Hoo won, time 5m. 58s.; M. V. Brokaw's Red Devil second, time 6m.; W. W. Brownell's Modoc and A. S. Putnam's No Name also competed. Event No. 3, tandem paddling race around sloop off Sea B'ach dock and return, distance about half a mile; J. B. Stewart and J. Duguid's Ithaca won, time 8m. 18s.; J. W. Stewart and L. B. Palmer's Valfreya second, time 9m. 42s.; H. M. Smyth and F. M. Sinclair's Torment did not finish. W. J. Stewart and L. B. Palmer should have won, but they turned the wrong boat and lost fully 30 yds. Event No. 4, Senior single paddling, 880 yds., straightaway from the Sea Beach dock; L. B. Palmer's Cricket won, time 10m.; R. J. Wilkin's Unaqua second, time 10m. 8s.; W. J. Stewart's Valfreya and H. H. Smyth's Torment also competed.

THE ATLANTIC DIVISION MEET.—The meet of the Atlantic Division, A. C. A., is now in progress at Cheesapeake Creek, Morgan's Station, N. J. Vice-Com. Dorland is in command of the camp.

PEQUOT ASSOCIATION.—The new ground and club house of the Pequot Association, at Morris Cove, were opened on June 13, a very large assemblage of members and guests being present.

A. C. A. MEMBERSHIP.—Northern Division: Fred W. Frank, F. C. Bloomfield, Brantford, Ont. Atlantic Division: Edward H. Weed, Newark, N. J.

THE A. C. A. BOOK.—The year book of the A. C. A. was issued this week, and has been mailed to all members.

THE DEBUTANTES.—*Gloriana*, *Smuggler*, *Mab*, *Chippewa*, *Jes So*.—There is material for careful study in the new boats of 1891 which have come to the front in the course of the spring races in New York and Boston. First of course is *Gloriana*, fast, powerful and successful; but ugly beyond question. In her beam, draft, lead and canvas have proved the prominent factors, combined by more than common skill. Next in size is the little 25ft. corrected length racer, *Smuggler*, a modern and moderate keel boat with a purely racing rig, the jib and mainsail, with small sails for her length. In the races thus far sailed she has shown that the modern cutter hull with lead keel can race successfully with the old centerboard open boats. Coincident with Herreshoff's triumphs in New York comes the news of a little flyer from the same hands, a skimming dish of the lightest and most elaborate build, that has beat boats of local renown, from 8 to 4ft. longer than she. It is no great surprise that the very original Mr. Olapham does not propose to be left out in this exhibition of novelties that constitute the spring opening, and he has in fact turned up with a new "Bouncer," the *Chippewa*, which did so well on June 22 as to attract almost as much attention from her speed as her shape. On the same day there came out in the *Pavonia Y. C.* regatta, her first race, another small flyer, which made a record by the remarkable way in which she beat the seven competing boats in her class: the *Jes So*, a 18ft. skimming dish with spars of incredible dimensions. A more dissimilar lot of boats could hardly be picked, and yet each promises to make a high record in her class during the season.

LENGTH OVER ALL.—While the length on load waterline is likely to remain the most important of a yacht's dimensions, the fashionable clipper stems and long counters have made the length on deck, or length over all, a matter of general interest to yachtsmen, and this dimension now invariably accompanies the others in describing a yacht. As now given, however, it is devoid of any exact meaning, the measurement being taken in half a dozen different ways by the various rules, none of which tell what a yachtsman wishes to know. The deck or over all length has long formed a factor in the Custom House rules of the United States and Great Britain, but the points to which the measurement is taken are very loosely designated, and differ, as stated, in the various rules. That commonly used in this country is taken from the inside of the planking or plating, and gives no idea of the exterior length of the vessel. The most desirable measurement for all the purposes of the yachtsman is from the extreme fore side of the stem head, including the figurehead or scroll if there be one, to the after edge of the plank-sheer at the center of the stern. This measurement shows the excess of the deck over the waterline, and is the same whether the yacht is built of wood or iron, which is not the case with the present measurements. It would be a good thing if the clubs would discard entirely the present length over all which appears in each club book, and place in its stead a table of lengths taken between these definite points, the stem head and the center of the plank-sheer at its extreme after point.

STOP THE GLORIANA.—We all remember the plaintive cry which went up from Boston just two years since for something to "stop the *Minerva*," and *Gloriana's* performances within the week have been brilliant enough to give cause for a similar appeal. *Minerva* was very quickly disposed of. *Sayonara* perhaps promises better, though really little has been seen of her yet. From these two, however, it is safe to conclude that neither *Owene*, nor *Ilderim* if raced, can stand long before the *Bristol* flyer. This narrows the field down to three boats, the *Burgess* centerboard *Beatrice*, the *Paine Alborak*, and the *Fife Barbara*. Before *Gloriana* is called on to start with either it is quite possible that the question may be narrowed down to one of the three. The meeting between her and the best of these boats will prove a battle royal such as no contest for the America's Cup has ever called forth.

RACES ON LONG ISLAND SOUND.—It is probable that one of the large clubs whose June regattas have been a marked feature of yachting on New York Bay has sailed its last regular race there. With the new club house in use at Oyster Bay by next spring, the race of the *Seawanhaka C. Y. C.* will be transferred to Long Island Sound, making one less race in the Bay and one more in the steadily increasing number of Sound races. The programme even now is an extensive one: June 30, Larchmont special, 46ft. class; July 2, *Seawanhaka* special, Oyster Bay; 4, Larchmont annual, Douglaston annual; 6, American annual; 7, New Rochelle annual; 8, New Haven annual; 11, Riverside annual. All of these are open events, besides which are the steam races of July 10 and 18, and the *Cherry Diamond Y. C.* race of July 25.

COMMENTS ON THE NEW CLASS.—The new 46ft. class, whose existence promises to be equally brief and brilliant, has called forth some curious comments from the yachtsmen who have watched the New York races. The class, barring *Gloriana*, has been likened to a lot of Christmas chickens whose heads were off before each was fairly out of the coop. The *Tribune* quotes the following famous couplet, which seems to fit the case very neatly:

"Since I was so soon done for,
I wonder what I was begun for."

Mr. Bayard Thayer is credited with the classic remark that when his new yacht started down the Bay in the Corinthian regatta, her first race, her name was *Sayonara*, but when she came home her name was "mud."

WHO DID IT?—At one time during the winter there were several prospective claimants for the honor of suggesting and starting the new class, but in view of the developments thus far it seems probable that the claim will not be pressed, and that no one will care to face the owners of a large number of beaten boats. So far as any added knowledge is concerned, there is nothing to be learned from the new class that could not have been demonstrated fully as well in the 40ft. class, with *Gossoon* and *Minerva* and such new boats as would have been built to beat them. The cost of the same experiment in the 46ft. class will probably be 25 per cent. greater than in the 40ft., while the larger boats, when condemned as racers, will be less useful as cruisers than a 40, in proportion to the added draft.

A FAIR TRADE.—A funny yarn is flying about the Upper Bay in connection with the race of *Clara* and *Anaconda* in the Marine and Field regatta. *Anaconda* was on hand, with Capt. Ellsworth to steer her as on the previous day, but Mr. Pragne proposed to Mr. Alley, of *Clara*, to sail without clubtopsails. To this proposition Mr. Alley would not agree, but finally consented on condition that Capt. Joe should not steer *Anaconda*. Mr. Pragne agreed to this, which, by the way, was placing a rather poor estimate on Capt. Ellsworth's skill, and the race was sailed without clubtopsails before it was discovered that *Clara* had come down from Bay Ridge in the morning without her topsail yards.

A JUNE GALE.—The weather on Friday night and Saturday of last week was something almost without parallel in June. All about New York, the Sound and the Hudson, the day was fair and bright, but with a veritable gale of wind blowing from the northwest, kicking up seas that did considerable damage to piers and docks, while a number of races were entirely stopped, among them being the regattas of the Corinthian Mosquito Fleet, at Larchmont, and the Corinthian Navy, at New Rochelle.

THE SINKING OF THE AMELIA.—The examination of Thos. Walsh, pilot of the tugboat F. W. Devoe, which ran into and sank the sloop yacht *Amelia* in the North River, off 110th street, on the night of June 14, was begun before Justice Divver, in the Harlem Police Court, on June 26, but was postponed until Tuesday. Very damaging charges are made by the crew of the yacht.

THE OCEAN DORY RACE.—After several delays, the final start of the two dories, *Sea Serpent*, Capt. J. W. Lawlor, and *Mermaid*, Capt. W. A. Andrews, was made on June 5, at 6:30 P.M., from Ocean Pier, Crescent Beach, near Boston, both of the men being reported as in poor condition for such a trip. Their destination is Mullion Cove, Land's End, England.

LIRIS.—Though relegated to the ranks of the cruisers, *Liris* has been about the Bay during race week, starting whenever necessary to make a race in her class, and doing some very good sailing. Her appearance has been greatly improved by the higher bulwarks, the excessive sheer aft being decreased to a very pleasing sweep.

EASTERN Y. C. ANNUAL, JUNE 29.

It is not the fault of the regatta committee of the Eastern Y. C. that the races thus far have proved anything but successful. The committee was at work during the winter, and special measures were devised and put in operation to promote racing in the face of the prevailing adverse conditions. Much was expected from the race on Monday, the annual regatta of the club, but like the late regattas in New York the result was a disappointment. But four schooners started, only one new 46 was ready, and she in poor form, and the 30-footers made the only interesting class. *Alborak* and *Owene* were at Marblehead with *Barbara*, but one had broken a spreader, the second parted her bobstay, and the third was out of trim, so the class dwindled down to *Beatrice*, *Thelma*, and *Gossoon*, 40-footers.

The courses were from Half-Way Rock to the Whistling buoy, off Eastern Point, thence around E. Y. C. Buoy, thence around a mark off Nahant, and home, 32 miles, for all above 80ft., the latter class going directly home after turning the club mark, making a triangular course of 22½ miles.

The start was made at 11 A. M. with a moderate N.E. wind and hazy sea. Most of the fleet covered the first leg in one long leg, the order at the whistler being: *Beatrice*, *Gossoon*, *Thelma*, *Enone*, *Mildred*, *Fancy*, *Mayflower*, *Triton*, *Hawk*, *Merlin*, *Saladin*, *Mignon*, *Harbinger*.

The next leg was before the wind, but after carrying spinakers for a couple of miles the wind shifted to southwest, making a beat to the E. Y. C. Buoy, where the times were:

<i>Beatrice</i>	3 03 24	<i>Mildred</i>	3 45 37
<i>Gossoon</i>	3 18 05	<i>Merlin</i>	3 51 18
<i>Thelma</i>	3 24 01	<i>Triton</i>	4 05 24
<i>Mayflower</i>	3 31 18	<i>Hawk</i>	4 10 25
<i>Enone</i>	3 34 21	<i>Harbinger</i>	4 22 45
<i>Fancy</i>	3 45 07	<i>Algonquin</i>	4 32 50

The 30-footers ran home here under spinakers, the others reaching in a light breeze for Nahant, being becalmed for a time near the Nahant Buoy. When the wind came it was very light southeast, but toward evening a strong northeast breeze sprung up, the fleet beating home just within the time limit. The times were:

FIRST CLASS SCHOONERS.			
Start.	Finish.	Elapsed.	Corrected.
<i>Mayflower</i>	11 20 31	7 30 41	8 10 41
<i>Beatrice</i>	11 20 31	7 30 41	8 05 09
SECOND CLASS SCHOONERS.			
<i>Enone</i>	11 25 58	7 42 54	8 17 54
<i>Gossoon</i>	11 34 25	7 53 40	7 53 22
<i>Beatrice</i>	11 35 51	7 55 28	7 45 37
<i>Thelma</i>	11 35 58	7 55 51	7 45 53

SEVENTH CLASS SLOOPS.			
<i>Fancy</i>	11 38 00	5 07 20	5 20 20
<i>Mildred</i>	11 38 00	5 08 07	5 30 07
<i>Hawk</i>	11 38 00	5 33 58	5 55 58
<i>Harbinger</i>	11 38 00	6 07 30	6 29 30

Mayflower, *Enone*, *Gossoon* and *Fancy* win first prizes and *Mildred* second. *Gossoon* wins Puritan cup and *Fancy* the sweepstakes postponed from June 19. *Merlin*, *Triton*, *Wayward*, *Saladin* and *Mignon* withdrew. The regatta committee included Messrs. Wm. S. Eaton, Jr., R. D. Sears, P. T. Jackson, Jr., A. N. Rantoul and H. H. Buck.

CHERRY DIAMOND Y. C.

THIS new club, the yachting department of the Manhattan Athletic Club, will hold two regattas in July, the first on the 10th for steam and naphtha launches, off New Rochelle; the second, a sweepstakes for sailing yachts, on the 25th, off Milton Point, open to yachts owned by members of the New York, Eastern, Larchmont, Atlantic, *Seawanhaka* Corinthian, New Rochelle, New York Corinthian, Corinthian of Marblehead, New Haven, Oyster Bay, American (of Milton, N. Y.), Philadelphia, Douglaston, Riverside and Hempstead Bay yacht clubs, the Corinthian Navy and Corinthian Mosquito Fleet. The entrance fees are: All schooners, \$50; sloops, 70ft. class, \$50; 53ft. class, \$50; 46ft. class, \$50; 40ft. class, \$25; 35ft. class, \$20; 30ft. class, \$15; 25ft. class, \$10; all under 25ft., \$5. Entries, including check and yacht's racing length, are to be sent to Joseph W. Gibson, Chairman Regatta Committee, No. 757 Broadway, New York, by noon of July 18.

If more than four yachts start in any class the club will add a prize equal in amount to half the entrance fee in that class. If less than four start the stakes and prizes will be divided as follows: 70 per cent. to the winner, 20 per cent. to the second boat, the remaining 10 per cent. to the yacht making the best elapsed time over the course in her class. If five or more start, 60 per cent. to the winner, 25 per cent. to the second and 15 per cent. to the third boat. No third prize will be given unless five boats start in a class. As the race is to be sailed over the courses of the Larchmont Y. C. it will be governed by the racing rules and time allowances of that club (except as modified by the special conditions of the Cherry Diamond Y. C.).

The club has offered a solid gold cup, valued at \$500, for the 46ft. class, upon the following conditions:

1. All races for this cup shall be sailed in New York or Newport waters.
2. First race, July 25 (on Long Island Sound, Larchmont course).
3. Second race, Aug. 7 (or first week after Corinthian Y. C. sweepstakes), off Newport, R. I., to windward or leeward and return.
4. Third race—The final race shall be sailed over a course to be designated by the regatta committee of the Cherry Diamond Y. C., or by its commodore, representing the Manhattan Athletic Club.

5. Any yacht of this class that wins a leg for the gold cup will be awarded a prize of \$25 or its equivalent in a trophy.

6. If she succeeds in winning the cup two consecutive times this season she will not be liable to challenge again until the beginning of the next yachting season.

7. In case the yacht that wins the first leg for the cup fails to win the second one, the winner of the second leg shall not be liable to challenge for sixty days. A challenge must then be accepted from the owner of any yacht in the same class, and the yacht must be ready to sail a match for the cup in fifteen days from the receipt of the challenge (provided the date is within the limits of the yachting season—June 1 to Nov. 1).

8. The cup will become the property of the yacht that wins it three times.

9. Entries, including sailing length of yacht, should be sent prior to July 10 to Joseph W. Gibson, Chairman Regatta Committee, 757 Broadway, New York.

On Sept. 6 a ladies' sailing and rowing race will be held by the club off New Rochelle.

HALOYON, schr., has been sold by the estate of the late Mr. Henry Lippitt, to H. S. Bloodgood, of Providence, son of the former secretary of the New York Y. C.

TUGBOATS AND YACHTS.

Editor Forest and Stream:

It has been said a man can be a sailor and yet a gentleman, and it is quite possible also that the gentleman is the best sailor. In fact this has been so frequently demonstrated by acts of manly courtesies that the possibility is hardened down to a fixed fact. Young *Tate*, for instance, in the last Reedy Island race unhesitatingly gave up his chances of winning to help Commodore Dressler. That gentleman in turn thanked the youngster and bade him continue in the race, as a steam tug near by would assist him. This was done for an exorbitant money equivalent. The difference between the young gentlemanly yachtsman and the philanthropic captain of the tug is very marked.

Some years ago the writer and his "man" (a gentleman) captured a 25ft. open cut while approaching the Delaware Breakwater, and drifted out to sea on her bottom. An "Eastern oil jug" bound in took us on board and immediately demanded \$200 for saving our lives. While willing to pay \$100 for my "companion," I preferred to be put back on the bottom of my upturned boat, and my "mate" preferred my company to that of the humane captain of the schooner, and we were both set adrift. Two hours after the "take off," pilot boat Gen. Pike came along, righted the boat, freed her of water, and towed us under the "stone pile." Well I remember the almost savage look of that grand old pilot when I offered to pay him for "services rendered." He was a rough and weather-beaten old pilot, and a gentleman. God bless his dear old soul, now at rest in the great unknown future for big-hearted men.

R. G. W.

Captain West, of the tugboat *Irwin*, may think he is entitled to a few of those beautiful medals which the Government has struck off to be conferred upon brave and generous life-savers, but he will probably be a long time without any. Nor will the Humanitarian Society just yet hunt him out and hold him up to the admiring gaze of the public. On Tuesday last he rescued four men from a capsized yacht a few miles below Long Island Neck, but it was only after he had taken advantage of the helpless condition of the yachtsmen and had driven a hard bargain with them. On that day seven open yachts started on a race from Cooper's Point to Reedy Island and return. The wind was heavy and puffy, and a very heavy sea was running. Commodore Dressler's yacht, the *Ethel*, in diving through the waves half filled with water, and was finally capsized by a particularly hard squall half a mile from shore. The tugboat *Irwin*, which was steaming slowly down the river, was signaled by the men who could barely hold on to the bottom of their boat. "What do you want?" asked Captain West. "We would like you to tow us to shore," was the reply. "What's in it?" "Whatever you think is right." "I'll take you for \$5." The price was deemed very steep and the tug started away, but returned, and after what appeared to be another hour's delay, consented to cast the *Ethel* a line for \$3. Even then Captain West insisted upon having the cash before landing the boat, clearly intimating that he would cast her adrift unless payment was made. Of course Commodore Dressler, who was one of the thoroughly soaked yachtsmen, did not hesitate to pay the amount. The yacht was then placed on a mud flat, and the yachtsmen were permitted to jump into deep water and deeper mud and left to care for themselves and their boat the best they could. Captain West of the tugboat *Irwin* is hardly entitled to a medal for bravery and generosity in saving life as yet.—Philadelphia Call, June 18.

AMERICAN MODEL Y. C.

Editor Forest and Stream:

At a regular meeting of the American Model Y. C., held at the residence of Mr. G. W. Townly, considerable business was transacted, an important motion being made by F. Nichols and seconded by J. Sheridan that a special race be sailed on the Fourth of July after the windward races have been sailed. The third class yachts to sail to windward and return over a course of ½ mile, and the fourth class to sail to windward and return over a course of ¼ mile. It is proposed that the race be sailed on the day, as it will bring out the best all-round points of the yachts.

It may seem impracticable for model yachts to sail down the wind, but it is accomplished by an automatic tiller controlled by the mainsail, this contrivance being used by nearly all of the third class yachts, it keeping the yacht before the wind. In fact, it acts so nearly like a skipper at the tiller can be, and it is simply irresistible.

The English model yachts use a weighted rudder, one for windward work, one for reaching and down the wind, causing a loss of time in changing rudders. In the windward work of the American Club the tiller is not used, the yachts being so well balanced in relation to centers of effort and lateral resistance that it is not necessary, and down the wind it is only necessary to slack off mainsheet, another sheet having the necessary length to take effect on tiller, thus jamming rudder to leeward at a sufficient angle to keep the yacht off the wind.

After the regular business of the club, Mr. Fisher offered a cup for the third class yachts, subject to donor's restrictions, to be sailed for over a triangular course on any Saturday afternoon desired by him. This race will require considerable skill.

The club now have a tank the dimensions of which are 7ft. x 50in. x 50in., with a thin wire stretched across one end so that when the tank is full a yacht placed in it will displace her weight of water, causing the water to flow over, retaining it on a level with wire, so that a T-square slid along a rule placed on the side of tank, an accurate measurement of the length of yacht on 1 ft. of water.

The races on the Fourth of July will be started at 10:30 A. M. F. NICHOLS, Measurer.

QUINCY Y. C., JUNE 27.—The Quincy Y. C. sailed its first championship on Saturday in a fresh N.W. breeze, the times being:

FIRST CLASS			
	Length.	Elapsed.	Corrected.
Erin, John Cavanaugh.....	26.11	1 35 10	1 11 06
Eureka, E. B. Rogers.....	19.06	1 41 50	1 14 25
Adolph, Henry Moebis.....	22.07	1 40 43	1 18 48
SECOND CLASS			
Madge, Thayer & Poor.....	20.02	1 38 57	1 12 14
Scamp, W. S. Fox.....	18.04	1 47 05	1 18 23
Mabel, H. L. Rice.....	19.11	1 45 44	1 18 45
Helen, R. W. Sawtell.....	19.11	1 47 28	1 20 20
Niobe, A. F. Schenkelberger.....	19.03	1 48 22	1 20 20
Egret, W. P. Barker.....	19.03	Withdrawn.	Withdrawn.
THIRD CLASS			
Rocket, H. M. Faxson.....	16.02	1 46 00	1 14 34
Bess, C. W. Cherrington.....	17.03	1 45 41	1 15 40
Flora Lee, C. D. Tanning.....	16.10	1 58 40	1 23 08
Freak, G. F. Maybury.....	15.05	2 01 02	1 29 22
Dandelion, Arthur Adams.....	17.05	2 05 18	1 35 80
Mab, John Shaw.....	16.03	Withdrawn.	Withdrawn.

White Fawn was present, but did not start, her helmsman being a professional. Dandelion, Mr. C. F. Adams's old racer, was captured by her on her last race. Arthur, age 14, and John and Harvey, still younger. Mab tore her sail and withdrew. Adolph lost some time by taking the ground. Mabel protests Madge and Helen protests Madge and Scamp for fouls at the start. The judges were John Sanborn, Chas. F. Colby and E. B. Glover.

SAVIN HILL Y. C., JUNE 27.—The Savin Hill Y. C. sailed the first of a series of the races for cups presented by Fleet Captain J. H. Bearick on Saturday. The classes were: First class, over 21ft. sailing length; second class, 18ft. and under 21ft.; third class, 15ft. and under 18ft.; fourth class, under 15ft. The wind was northeast fresh, the times being:

FIRST CLASS.			
	Length.	Elapsed.	Corrected.
Pioneer, J. F. Turner.....	21.05	2 05 00	1 39 21
Bertha, A. C. Smith.....	21.05	2 06 10	1 40 41
Mildred, G. L. Sears.....	22.02	2 04 03	1 41 41
SECOND CLASS.			
Caprice, R. W. Bird.....	19.11	1 19 00	1 23 57
Siko, F. A. McInness.....	19.08	2 04 03	1 39 52
Avis, L. H. Odell.....	18.10	2 14 10	1 45 63
Lella, H. T. Washburn.....	18.10	2 07 30	1 45 63
THIRD CLASS.			
Marchioness, C. E. Hodges.....	16.01	1 58 00	1 23 27
Florrie, W. H. Bearick.....	15.06	2 01 45	1 30 46
FOURTH CLASS.			
Marigold, Earle D. Gay.....	14.08	1 46 00	1 39 41

Pioneer, Caprice and Marchioness each win a leg for the cup in their respective classes. Marigold scores no win, having no competitor. The judges were Messrs. C. E. Coffin, A. Swallow and R. K. Rice.

THE NEW HEARST STEAM YACHT.—On June 28 the new, high-speed steam yacht built for Mr. Wm. R. Hearst was launched by the Herreshoff Mfg. Co. at Bristol. She is 110ft. over all, 12ft. in beam, and 6ft. 4in. draft. Her engines are quadruple expansion, with a Thornycroft boiler.

BODY PLAN.

JACK O' LANTHORN.

2½-RATER.

THE great changes which result from a season or two of hot racing are nowhere better shown than in the new class of racing boats of 2½-rating which has grown up about Southampton and the Solent within three years. This locality was practically the only place in England where the old Y. R. A. tonnage rule was inoperative, and where beamy boats could be built and raced, the result being the creation of a class of very wide, deep and over-rigged boats, such as the Daisy, now in this country, a most undesirable type. The smaller boats in the 2½ ft. l.w.l. class, such as the Minima, were nice little cutters of the same general type as the Boston Pappoose, with full cutter rig, though in some cases pole-masted. Within the past three years racing has increased greatly about Southampton in the 2½ and 5-rating classes, equivalent nearly to 25 and 30 ft. corrected length by American rules, and a number of yachts have been built for that purpose and no other. As speed alone has been considered, over certain local courses, the build, rig and fittings have undergone great changes. Under the present Y. R. A. rule, Rating = $\frac{L \times S \times A}{6,000}$, the allowance of sail is for 24 ft. l.w.l., 625 sq. ft.; 25 ft., 600 sq. ft.; 26 ft., 573 sq. ft.; 27 ft., 555 sq. ft.; 28 ft., 535 sq. ft. These figures come within a fraction of 25 ft. corrected length when applied to the Seawanhaka rule. Experience has demonstrated that the best proportions lie very near to 26 ft. l.w.l. and 573 sq. ft. of sail, the leading boats being from 25 ft. 6 in. to 26 ft. 6 in.

The yacht whose lines are here given was designed for the class by Capt. Henry E. Bayly, of Exmouth, Eng., former owner of Buccaneer, Spunkadillo and Scaramouch, to whom we are indebted for the design. Scaramouch, designed by her owner, was built in 1889 as a 3-rater, her dimensions being, l.w.l., 28 ft.; beam, 7 ft. 6 in.; draft without board, 4 ft. 6 in.; with board, 9 ft.; displacement 4½ tons, and 780 sq. ft. of sail. She was afterward reduced to 650 ft., making her rating but 2.5. She was too far distant from the headquarters of the class to be tried against the leaders, but she showed herself quite fast in the home racing, and late last season was sold to go to Odessa, in the Black Sea. She made the passage of 600 miles, from Dartmouth to Newcastle on Tyne, where she was shipped to Russia, under her own canvas late in the fall, encountering some very bad weather, but came through all right. The new boat, designed last fall and built during the winter, is 3 ft. longer than Scaramouch, but like her has a center-board, and of considerable size, unlike most of the boards heretofore fitted in English yachts.

Though differing in this respect from the majority of the class, she possesses most of the characteristics which have been called forth by the exigencies of close competition. The immersed surface has been reduced as much as possible by the cutting away of all deadwood, the hull has been lightened of all superfluous weight, the rig, as we shall show next week, has been simplified to the greatest possible degree, while the fittings are simply those of a racing boat, there being no attempt at anything in the way of accommodation below. Her dimensions are:

Length, stem head to taffrail.....	36 ft.
L. W. L.....	25 ft. 8½ in.
Beam, extreme.....	8 ft. 6 in.
L. W. L.....	7 ft. 8 in.
Draft without board.....	4 ft. 5 in.
with board.....	8 ft. 6 in.
Displacement, long tons.....	4 tons.
Ballast, lead keel.....	225 tons.
Steel centerboard.....	15 tons.
Total about.....	25 tons.
Sail area, sq. ft.....	680

The construction of the hull is of the lightest, the actual weight on the scales of the wood work, without lead keel or centerboard being but 19 cwt. Though some of the class differ from Jack O' Lanthorn in having plumb stems and square sterns, they are all much alike in the cutting away of the deadwoods, the keel proper being in the shape of a very deep lead fin, practically a fixed center-board, while the rudders are of the same shape as in the drawing, the rudder stocks being of steel, 1½ in. diameter with steel blades.

WINTHROP Y. C. CHAMPIONSHIP, JUNE 27.—The championship regatta of the Winthrop Y. C. on Saturday was sailed in a very light and hazy N. E. breeze, the times being:

FIRST CLASS.				
Pilgrim, E. W. Dixon.....	23.10	2 50 00	2 53 03	2 27 23
Owl, J. S. Cushing.....	24.02	2 50 00	3 21 40	2 52 58
Alida, D. E. Wilmarth.....	25.06	2 50 00	3 27 46	2 59 23
SECOND CLASS.				
Auk, A. A. Martin.....	13.05	2 55 00	2 04 22	1 33 42
Erminie, A. W. Torrey.....	19.03	2 55 00	2 13 50	1 44 10
THIRD CLASS.				
Marron, Chesterton & Dever-				
aux.....	19.03	2 55 00	2 16 55	1 47 16
Mattie G., W. A. Garrett.....	18.05	2 55 00	2 18 19	1 47 39
Harriet, L. T. Harrington.....	20.08	2 55 00	2 20 27	1 52 22
FOURTH CLASS.				
Modoc, D. W. Belcher.....	15.03	3 00 00	1 29 53	1 06 56
Cadet, C. L. Smith.....	16.09	3 00 00	1 30 02	1 08 03
Mischief, E. S. Belcher.....	16.08	3 00 00	Withdrawn.	
Scud, L. S. Weston.....	17.02	3 00 00	Withdrawn.	

The judges were Com. J. S. Cushing, Mr. Harvey Hutchinson and Mr. Willard M. Bacon.

NEWBURGH CANOE AND BOATING ASSOCIATION.—The gale of Saturday disarranged the plans of the Newburgh Canoe and Boating Association, and spoiled what was intended to be the most important regatta ever given by the club. A very elaborate programme had been arranged, including races for 40 ft. cutters, catboats, canoes and cruisers, with paddling and rowing races. On Friday night a N.E. gale came down the river, with a very high tide and a furious sea, so that few boats were ready on Saturday, while the Hudson was in no condition for boat or canoe racing. In the 40 ft. class Choctaw started, but having no competitor, withdrew. Three of the catboats made a race, the times being:

Flight, W. T. Hilton.....	Start.	Finish.	Corrected.
Pauline B., Raymond & Smith.....	2 41 48	4 35 04	1 14 51
Dolphin, Beggs & Moore.....	2 40 48	4 30 43	1 15 07
	2 45 48	4 34 39	1 17 03

The double scull race was rowed, being won by Harry Shaw and Fred Smith, their two competitors giving up. The other events were postponed. A match is likely to be made between Choctaw and Xara for July 4.

A STEAM YACHT IN COLLISION.—On June 26 the steam yacht Peerless, owned by Mr. Harkness, of Cleveland, was in collision with the tug Thos. Y. Boyd, sinking her. The yacht was bound for New York from the Sound, and at 8:30 P. M., when off the lighthouse at Hallett's Point, Hell Gate, she struck the tug, which was going through the Gate with two schooners in tow. The tug sank instantly, her crew being picked up by boats. The responsibility for the collision has not yet been determined.

JACK O' LANTHORN. 2½-RATER Y. R. A. RULE. DESIGNED BY CAPT. HENRY E. BAYLY, 1890.

AMERICAN Y. C.—A special regatta of the American Y. C. will be sailed on July 6 over courses off Milton Point, the Club station, open to yachts of the New York, Larchmont, Seawanhaka, Eastern, Atlantic, Corinthian of New York, Oyster Bay, New Haven, New Rochelle, Riverside, Indian Harbor, Corinthian of Marblehead and New Bedford clubs. Prizes will be given in each class provided two or more start, with second prizes for four starters. A special prize of \$250 will be given for the 40ft. class. The sixth annual regatta of the club will be held on July 13, over the club's straightaway course of eighty nautical miles, with a time limit of five hours, for the Atlanta Cup and the regular club prize steam yacht race, the big prize being the Atlanta Challenge Cup, presented by Mr. Jay Gould. Any seagoing cruising yacht over 100ft. of waterline belonging to any organized yacht club in the United States is entitled to enter. The trip will go to the yacht making the fastest time over the American course, irrespective of time allowance, but must be won three successive years by the same yacht before it becomes the property of the owner. Eighty nautical miles must be made in five hours, or should the course be changed for a shorter or longer distance an average speed of 18 nautical miles per hour. Yachts entering for the Atlanta Cup will start from a stakeboat anchored $\frac{1}{2}$ knots east, $\frac{1}{4}$ north, from Race Rock, and finish off the club house. The regular prize is open to all steam yachts enrolled in any yacht club. The regatta committee includes Mr. George H. Hall, Mr. Ezra S. Connor, Mr. Wm. S. Alley, Mr. J. Howard Wainwright and Mr. Walter J. Price.

BEVERLY Y. C., June 27.—The 171st race of the Beverly Y. C. was the first fizzle in the history of the club, it was an attempt at an open sweepstakes for the 40ft. class, but the race was held at Monument Beach, and for several reasons was a failure. There were many other races the same day for larger prizes and entries were few; several boats postponed entering till the list was closed and could not be accepted. Then it blew very hard N.E. in the early morning, with a big sea, and the Boston boats were unable to get down. Hawk and Mignon were on hand in the 30ft. class, but were scared by thick weather and fear of losing space, in view of E. Y. C. race Monday, and agreed to postpone. Wanda and Susie were on hand, but having walkovers did not start, and race resolved itself into a match between third-class sloops Kraken and Wraith. They started on a beat in a good S.E. breeze and Wraith at once took lead and beat the larger boat till wind died out, when Kraken caught up and drifting home with a free wind left Wraith far behind.

	Length.	Elapsed.	Corrected.
Kraken, Percy Chase.....	26.03	2 19 15	2 11 30
Wraith, H. P. Benson.....	22.03	2 39 45	2 11 22

NEW HAVEN Y. C.—The tenth annual regatta of the New Haven Y. C. will be sailed on July 8; open to yachts of the following dimensions: Cabin sloops and cutters, 45ft. and under 1.w.l.; open sloops, 25 to 45ft. 1.w.l.; catboats, 15 to 35ft. 1.w.l.; and enrolled in any organized yacht club. To be sailed over the club course, and under the regatta rules, regulations and time allowances, and under the direction of the regatta committee of the New Haven Y. C. Cash prizes will be offered in the following classes: Class 1, 40 to 52ft.; Class 2, 33 and under 40ft.; Class 3, 28 and under 33ft.; Class 4, 22 and under 28ft.; Class 5, open sloops, 25 to 31ft.; Class 6, catboats, 15 to 25ft. Length for classification, length on waterline. The Warner challenge cup will be contested for by yachts in Class 3 enrolled in N. H. Y. C. A special prize will be offered for the yacht making best corrected time in Classes 1, 2, 3 and 4. The steamer Elm City has been chartered to follow the yachts over the course. We earnestly desire all yachts eligible to participate. For regatta and sailing regulations see N. H. Y. C. Book for 1890. Entry blanks and further information may be had by applying to the regatta committee. Entries close Monday, July 6, at 9 A. M. Regatta Committee—W. A. Foskett, Jr., chairman; L. A. Elliott, Frank P. Tyler.

PORT JEFFERSON NOTES.—Port Jefferson, Long Island.—I see you mention the old Fanny, so famous in her day. Well, she will soon be to the front again, for Capt. Bayless of Port Jefferson, has been making a new boat on the old lines, having added a fantail overhang. The old lines were closely followed, but almost all the planking is new. It will be interesting to see how she will show up under the guidance of Messrs. Fisk, her present owners. Messrs. Mather & Wager made a right good job out of Zolus. They cut her in two, lengthened her and put on overhang, so that the schooner Comanche, as she is now called, is 98ft. over all. The lines show Burgess influence, and they had a good model to work from, as Constellation was close by all the time. The two boats were on the ways side by side this spring, and Comanche will be seen well forward in her class, and the crossed pipe and tomahawk in yellow on a blue field be brought home to Denver in glory by its owner, Mr. E. P. Fowler. There were a lot of yachts here this spring, but all except the Fanny are in the water. Constellation has not yet gone into commission, but is ready any moment. There has been good blackfishing and flounders were plenty. A few weakfish have been taken by spearing or in nets, but none on hook and line. No bluefish so far.—GRAY JOHN.

LARCHMONT Y. C. SPECIAL, JUNE 30.—A very fine race was sailed on Tuesday by the 46-footers for a prize offered by the Larchmont Y. C., the times being:

	Start.	Finish.	Elapsed.
Sayonara.....	12 02 13	4 10 33	4 08 20
Mincola.....	12 00 53	4 10 57	4 10 04
Jessica.....	12 01 41	4 21 49	4 20 08

Sayonara wins, with Mincola second.

NEW ROCHELLE Y. C.—The annual regatta of the New Rochelle Y. C. will be sailed on July 7 over the regular club courses on the Sound, the classification being: Schooners—First class, all over 90ft. on 1.w.l.; 90ft. class, 78ft. class, 67ft. class, 58ft. class, all 58ft. and under. Cabin sloops, cutters and yawls—First class, all over 80ft. on 1.w.l.; 80ft. class, 70ft. class, 61ft. class, 53ft. class, 46ft. class, 40ft. class, 35ft. class, 30ft. class and 25ft. class. Jib and mainsail boats—First class, all over 26ft. on 1.w.l.; 26ft. class and 23ft. class. Catboats—First class, all over 26ft. on 1.w.l.; 26ft. class, 23ft. class and 20ft. class. In each class at least two yachts must start or no prize will be awarded for that class. The regatta committee may refuse an entry and may accept an entry made after the date of closing. Commodore Abbott has offered two prizes of sterling silver for the 46ft. class.

MOSQUITO FLEET Y. C., June 27.—The first cup race of the Boston Mosquito Fleet for fourth and fifth classes was sailed on Saturday, over the club's course, in a light and fluky breeze, the times being:

	Length.	Elapsed.	Corrected.
Tantrum, J. F. Small.....	14.11	1 23 48	1 22 43
Bessie, W. L. Young.....	12.11	1 29 51	1 27 36
Nadine, D. N. Palmer.....	14.11	1 28 10	1 28 05
Nadine, E. H. Rich.....	14.11	Withdrew.	
Nellie, J. O'Leary.....	14.11	Withdrew.	
Nina, J. P. Bullard.....	14.11	1 28 41	1 28 36

CORINTHIAN Y. C. CRUISE.—Com. B. W. Crowninshield, of the Corinthian Y. C., has cruised the following order regarding the club's cruise: "FLAGSHIP TOMAHAWK, Marblehead, June 12.—The captains of the yachts of the Corinthian Y. C. are invited to assemble at the club house Friday evening, July 3, at 9 P. M., and the fleet will start the morning of July 4 for a cruise to the eastward. The smaller yachts will be sent away each day ahead of the larger ones, and if such yachts do not care to go the whole cruise, their presence as long as possible will be appreciated. On arriving at the anchorage Friday evening, captains will report to the flagship. By order of B. W. CROWNINSHIELD, Commodore, ROBERT F. HERRICK, Fleet Captain.

THE 46-FOOTERS.—Gloriana will not start again before the New York cruise, by which time she will have a new and larger mainsail. Sayonara, Mincola, Jessica and Nautilus will race in the Sound this week and next, while Owens, Thelma, Alborak, Beatrice and the 40-outer Gosson will race at Marblehead. Like Minerva and Jessica, Barbara is below her lines, being, as reported, 4in. under at the bow and 4in. aft. Jessica was lately kept in her class by a liberal use of the adze, but Barbara will require to be hauled out in order that about a ton may be taken from the fore end of her hull. She will haul out at Lowley's after the Eastern regatta.

PHILADELPHIA Y. C. CRUISE.—General Orders, No. 2.—The second cruise of the club will take place July 3 to 5, and will extend to Cape May if the weather is favorable. Yachts will rendezvous off the club house at 10 o'clock on the afternoon of July 3. Captains will report to the commodore on the flagship Norma at 3 P. M. If the arrangements are completed, the start will be made on the afternoon of the 3d; otherwise early on the morning of the 4th. By order of the commodore, W. BARRELL HENRY, Fleet Captain.

TRIP OF THE ALLEGRO.—Col. S. V. R. Cruger's steam yacht, the Allegro, built by Seabury & Co. in her recent trial trip made 17 miles an hour for 6 consecutive hours. On June 24 last she made 4 trials of 9 miles each over a measured course. Her first run was in 32m., second in 25.25m., third in 30m. and fourth in 28.25m. The speed guaranteed is 18 miles for 2 consecutive hours. She made 36 miles in 116½m.

OCEAN Y. C.—A club by this name has recently been organized at Stapleton, Staten Island, the officers being: Com., J. H. Boldt; Vice-Com., Geo. Michael; Sec'y, Jas. Gould; Treas., Geo. Stapleton; Fleet Capt., Chas. Randall. Fifteen small boats are already enrolled, and the club will hold its first regatta on July 4.

SEAWANAHKA CORPHEAN Y. C.—An important meeting was held on June 23, at which it was finally voted to raise the annual dues from \$25 to \$50, to take effect after the present year. The initiation fee remains as at present, but the life membership has been increased to \$500.

MR. BURGESS.—The latest news of Mr. Burgess is to the effect that he is still quite ill, being very weak and delirious. It is expected that he will be able to be moved to his cottage at Marblehead in a couple of weeks.

HULL Y. C., June 27.—The ninety-second regatta of the Hull Y. C. on Saturday was a complete failure from lack of wind, the yachts starting with a light breeze which soon died out, none finishing the course.

LYNN Y. C. EXPERT CUP, JUNE 27.—A race for the Expert cup of the Lynn Y. C. was sailed on Saturday in a light breeze, Emma L. winning, with Irene second, out of 6 starters.

CONQUEROR. steam yacht, Mr. F. W. Vanderbilt, was at Halifax June 29, from Plymouth, Eng., for Newport, with only officers and crew on board.

SALES.—Fad, cutter, has been sold to L. Boyce, of New York. Glimpe, sloop, G. E. Bartlett, Lowell, has been sold to L. B. Hallett, of Boston.

DORCHESTER Y. C.—The regatta announced for June 27 was indefinitely postponed.

BOOKS RECEIVED.—Quincy Y. C. year book. Annuaire du Yacht.

Answers to Correspondents.

No Notice Taken of Anonymous Correspondents.

W. S. F. Kentucky.—Schoverling, Daly & Gales, 302 Broadway, New York.

F. B. Kan.—You will find good trout fishing in streams easily accessible from Denver.

C. E. S., Alexandria Bay, N. Y.—Will you kindly inform me if the humming bird is migratory? Ans. Yes.

B. B.—The carp fishing is good at certain points in the Passaic River, New Jersey, in the vicinity of Little Falls.

J. S.—Chilled shot will not injure the barrels of your gun. It preserves its form better than the soft shot. The No. 9 is right for snipe.

L. P., University Club.—For bay birds try the Curruck country. Write to J. P. White, Norfolk, Va., who will post you as to exact localities.

BASSFLY, New Albany, Ind.—American black bass were imported into England in 1890 by the Duke of Newcastle, the shipment consisting of more than 1,000, collected by Fish Commissioner Blackford, of this city. The fish at last reports were doing well.

M. G., Chicago.—There are moose in Maine. For good hunting ground write to Edgar Smith, Round Mountain Lake, via Eustis, Me. The best caribou country is Newfoundland, but you should have no difficulty in striking them in Maine.

G. S. L., Catonsville, Md.—Are the squirrels, natives of Maryland, injurious to birds, their nests and eggs? Ans. The red squirrel is most destructive of bird life, the gray less so. We think that the little ground squirrel or chipmunk cannot be considered as doing much harm.

A. Z., Mechanicsville, Ia.—Barn pigeons may be captured by providing for a board or shelter to close the entrances to their coops. Standard black bass flies are the coachman, grizzly-king, red-bis, professor, white-miller and red, yellow, brown and gray hackles. Dr. Henshall recommends also the polka, Oconomowoc and Henshall.

J. R., Philadelphia.—1. Please advise me whether or not the 40-83 Winchester rifle is heavy enough for deer. 2. Also, is it suitable bore for turkeys and how far will it carry accurately? Ans. 1. Suitable for deer. 2. Also for turkeys, but less powder would do. 3. Its range depends altogether upon accuracy of holding and adjustment of sights. No one can say just how far a rifle will carry accurately.

J. W. G. D., Philadelphia.—1. Where can I get a folding, portable camp bed? 2. Is there any waterproof glue or cement that is not melted by the sun's heat. I want it to fasten on decoy duck heads. 3. If the above ducks have three coats of paint could they remain in (fresh) water for 5 or 6 days at a time without being injured? They are made of white pine and cedar. 4. Would it injure a full choke Greener trap gun to shoot 2 buckshot in a load with BB. out of the same cartridge? Ans. 1. At any of the sportsmen's supply stores. 2. Try Jeffery's Marine Glue. 3. Yes. 4. It would not injure the gun but the shooting would be poor.

B. H., Tucson, Arizona.—A, B and C make a match to shoot at five bluebirds each, \$30 entrance outside of price of targets. A breaks 5, B breaks 4 and C breaks 5. A and C having tied on 5 each, they agree to shoot off the tie miss and out. In the shoot-off A breaks his first bird, C breaks his first bird. A misses his second bird and C refuses to shoot at his second bird, claiming that A was out, and that it was not necessary for him to shoot after A had missed his second bird. Ans. C should have shot at his second target, and can have no claim to money without doing so and breaking it. It certainly was necessary for him to shoot, for he might have missed too, and then A and C would have been even again.

INFORMATION WANTED.

J. F. S. wishes information about the game and fish in the regions of Namakagon and Long Lakes, Wisconsin.

Will some of your readers kindly inform me where the best fall gray squirrel shooting is to be had? I should like to go hunting this fall, and wish to find the best sport within reasonable distance of the city.—H. S.

PUBLISHER'S DEPARTMENT.

A GREAT DISPLAY OF BOATS.—We were much pleased and gratified in passing through the boat salesroom of Merwin, Hulbert & Co., 29 West Twenty-third street, and the styles, sizes and finish of the boats displayed therein would seem to gratify everybody's wants or pocketbook. Finely finished rowboats for family use, Adirondack boats for hunters' use, sailboats for salt waters, Indian canoes, paddling canoes; in fact boats adapted to all climates and to all waters. We think that it would pay our readers to drop in there and see this display.

PAWNEE HERO STORIES AND FOLK-TALES.

With Notes on the Origin, Customs and Character of the Pawnee People.

By **GEORGE BIRD GRINNELL ("YO.")**

Cloth, 417 pages. Illustrated. Price \$2.00.

Pawnee customs and beliefs are richly illustrated by the folk-tales and in the copious notes Mr. Grinnell gives an uncommonly spirited account of Pawnee life in peace and in war. There is an account of the defense of a Pawnee village by 200 sick men, cripples, old men and squaws, against 600 Sioux warriors, which for sheer gallantry and indomitable pluck will match almost anything in military history. The bold warriors were all away at the time, and the Sioux counted upon an easy victory. But the Pawnee cripples and women actually beat them off after a hard day's fighting, and at last so terrorized them that the bold assailants fled in panic and sustained a heavy loss. Mr. Grinnell also has written a picturesque and vivacious sketch of one of the last Pawnee buffalo hunts, in which the Indians commonly reverted to primitive weapons and usages, often hunting quite naked with no other arms than their bows and arrows. A particularly interesting part of the book is that which treats of the Pawnee doctors or medicine men. The statements of Mr. Grinnell show the possession by some of these men of a kind of skill in sleight-of-hand far beyond that usually attributed to Indians; some of the facts here described are as puzzling and unaccountable as those performed by the famous jugglers and fakirs of Hindostan, while one of their tricks is a close parallel to the East Indian mango feat. Those who desire to learn of the many other wonders done by the Indian doctors must refer to its pages for themselves. As it is certainly one of the best works on Indian life, legend and character that has been written for a long time, it should obtain a wide circulation.—N. Y. Tribune.

FISHERMAN'S AUTOMATIC REEL.

When a sportsman finds anything which adds to his pleasure, with-
out increasing his labor, he wants all his brother hunters
and anglers to know of it and share with him
the newly discovered "helper."

WHAT WE CLAIM FOR

The Automatic Reel.

FIRST—It will wind up the line a hundred
times as fast as any other reel in the world.
SECOND—It will wind up the line slowly if
the angler chooses.
THIRD—No fish can ever get slack line with it.
FOURTH—It will save more fish than any
other reel.
FIFTH—It will prevent tugs, lines and snells
from being broken by large fish.
SIXTH—It enables the angler, and makes it
desirable, to use lighter tackle.
These claims have been substantiated by
the most skillful fishermen in America and
Europe.

ANSWERS TO CORRESPONDENTS.

JULY DAYS.

THE woods are dense with full-grown leafage. Of all the trees, only the basswood has delayed its blossoming, to crown the height of summer and fill the sun-steeped air with a perfume that calls all the wild bees from hollow tree and scant woodside gleaming to a wealth of honey gathering, and all the hive-dwellers from their board-built homes to a finer and sweeter pillage than is offered by the odorous white sea of buckwheat. Half the flowers of wood and fields are out of bloom. Herdgrass, clover and daisy are falling before the mower. The early grain fields have already caught the color of the sun and the tasseling corn rustles its broad leaves above the rich loam that the woodcock delights to bore.

The dwindling streams have lost their boisterous clamor of springtide and wimple with subdued voices over beds too shallow to hide a minnow or his poised shadow on the sunlit shallows. The sharp eye of the angler probes to the bottom, the green depths of the slowly swirling pools, and discovers the secrets of the big fish who congregate therein.

The river has marked the stages of its decreasing volume with many lines along its steep banks, and discloses the muskrat's doorway, to which he once dived so gracefully, but now must clumsily climb to. Rafts of driftwood bridge the shallow current sunk so low that the lithe willows bend in vain to kiss its warm bosom. This only the swaying trails of water-weeds toy with now; these and the rustling sedges and swift-winged swallows coyly touching it. There is not depth to hide the scurrying schools of minnows, the half of whom fly into the air in a curving burst of silver shower before the rush of a pickerel, whose green and mottled sides gleam like a swift-shot arrow in the downright sunbeams.

The sandpiper tilts along the shelving shore. Out of an embowered harbor a woodduck convoys her fleet of

ducklings, and on the ripples of their wake the anchored argosies of the water lilies toss and cast adrift their cargoes of perfume. Above them the green heron perches on an overhanging branch, uncouth but alert, whether sentinel or scout, flapping his awkward way along the ambient bends and reaches. With slow wing beats he signals the coming of some more lazily moving boat, that drifts at the languid will of the current or indolent pull of oars that grate on the golden-meshed sand and pebbles.

Lazily, unexpectantly, the angler casts his line, to be only a convenient perch for the dragon flies; for the fish, save the affrighted minnows and the hungry pickerel, are as lazy as he. To-day he may enjoy to the full the contemplative man's recreation, nor have his contemplations disturbed by any finny folk of the under-water world, while dreamily he floats in sunshine and dappled shadow, so at one with the placid waters and quiet shores that woodduck, sandpiper and heron, scarcely note his unobtrusive presence.

No such easy and meditative pastime attends his brother of the gun, who, sweating under the burden of lightest apparel and equipment, beats the swampy covers where beneath the sprawling alders and arching fronds of fern, the woodcock hides. Not a breath stirs the murky atmosphere of these depths of shade, hotter than sunshine; not a branch nor leaf moves but with his struggling passage, or marking with a wake of waving undergrowth the course of his unseen dog.

Except this rustling of branches, sedges and ferns, the thin, continuous piping of the swarming mosquitoes, the busy tapping and occasional harsh call of a woodpecker; scarcely a sound invades the hot silence, till the wake of the hidden dog ceases suddenly and the waving brakes sway with quickening vibrations into stillness behind him. Then, his master draws cautiously near, with gun at a ready and an unheeded mosquito drilling his nose, the fern leaves burst apart with a sudden shiver, and a woodcock, uttering that still unexplained twitter, upsprings in a halo of rapid wing-beats and flashes out of sight among leaves and branches. As quick, the heelplate strikes the alert gunner's shoulder and as if in response to the shock, the short unechoed report jars the silence of the woods. As if out of the cloud of sulphurous smoke, a shower of leaves flutter down, with a quicker patter of dry twigs and shards of bark, and among all these a brown clod, dropping lifeless and inert to mother earth.

A woodcock is a woodcock, though but three-quarters grown; and the shot one that only a quick eye and ready hand may accomplish; but would not the achievement have been more worthy, the prize richer, the sport keener in the gaudy leafage and bracing air of October days, rather than in this sweltering heat, befogged with clouds of pestering insects, when every step is a toil, every moment a torture? Yet men deem it sport and glory if they do not delight in its performance. The anxious note and behavior of mother song birds, whose poor little hearts are in as great a flutter as their wings concerning their half-grown broods, hatched coincidentally with the woodcock, is proof enough to those who would heed it, that this is not a proper season for shooting. But in some northerly parts of our wide country it is woodcock now or never, for the birds bred still further northward are rarely tempted by the cosiest copse or half-sunned hillside of open woods to linger for more than a day or two, as they fare southward, called to warmer days of rest and frostless moonlit nights of feeding under kinder skies.

While the nighthawk's monotonous cry and intermittent boom and the indistinct voice of the whippoorwill ring out in the late twilight of the July evenings, the alarmed, half-guttural chuckle of the grass plover is heard, so early migrating in light marching order, thin in flesh but strong of wing, a poor prize for the gunner whose ardor outruns his humanity and better judgment. Lean or fat, a plover is a plover, but would that he might tarry with us till the plump grasshoppers of August and September had clothed his breast and ribs with fatness.

Well, let him go, if so soon he will. So let the woodcock go, to offer their best to more fortunate sportsmen. What does it profit us to kill merely for the sake of killing, and have to show therefore but a beggarly account of bones and feathers? Are there not grouse and quail and woodcock waiting for us, and while we wait for them can we not content ourselves with indolent angling by shaded streams in these melting days of July rather

than by contributing the blaze and smoke of gunpowder to the heat and murkiness of midsummer?

If we must shed blood let us tap the cool veins of the fishes, not the hot arteries of brooding mother birds and their fledglings.

THE NEW YORK ASSOCIATION.

THERE is in this State a society with an excellent title—The New York State Association for the Protection of Fish and Game. For many years the title has been all there was in the society so far as to the purpose indicated by the name. Season after season the Association has met for trap-shooting; but the delegates have had neither time nor inclination for such protective work as they might well have accomplished.

Last week we published a communication from Gen. D. H. Bruce of Syracuse urging that a new society should be formed to take up the work neglected by the old one, or that the latter should be reformed. This letter has brought out a response from Mr. Horace White, the president of the State Association. He cordially indorses the spirit of the plan proposed by Gen. Bruce; and tells us that there is still left capital material in his society to do all that the times demand. In this estimate Mr. White is without doubt correct. The Association represents a large proportion of the citizens of this State interested in shooting. Its constituent clubs are numerous and influential. In securing legislation, in aiding the State game and fish protectors, in moulding public sentiment to appreciate right protection, these clubs, welded into a State association, could be all powerful. There is here presented a magnificent opportunity for those now in control of the Association to make it in spirit and effect all that it is in name. We urge upon Mr. White and Gen. Bruce and others in Syracuse, that they discuss the subject, decide upon a plan of action and take early steps to put it into effect. Their letters give abundant assurance that Syracuse is the center to which we must look for the new movement.

And why not begin now? President White has proposed that delegates interested in the work should be sent to Syracuse next June. But there is work to be done before then. The codification bill will come up again at Albany next winter. May it not be practicable to perfect the fish and game protective organization in season to provide that the sportsmen of this State shall not be fooled with at another session of the Legislature? Indeed there are so many lines of effort, so much that might be accomplished with a proper organization, that we are most earnest in expression of a hope that our Syracuse friends will take immediate action.

SNAP SHOTS.

THE Superintendent of Fish Culture for the Dominion of Canada, Mr. Charles Wilmot, believes that gill-nets have done more injury to the Lake Ontario whitefish than the pound-nets, or any other form of fishing apparatus. He states that they have already destroyed some of the finest spawning beds in the Great Lakes, and particularly in Ontario. They accomplish this extermination by taking young fish in great numbers. In Georgian Bay he says there are 1,000 miles of this destructive netting. Mr. Wilmot considers the fixed pound-nets not injurious to the whitefish, as they catch only adult fish. However this may be, the pound-net is regarded as the destroyer of the river fisheries for shad in the Connecticut and Potomac.

We have received through Mr. Wade one dollar "from a little girl" for the Helen Keller fund. In response to a remittance from us of funds collected, Dr. Anagnos writes under date of June 29:

In the absence of Helen Keller, who went home last week to spend the summer vacation with her parents, I write to acknowledge the receipt of the additional amount of eighteen dollars, which you were so very kind as to send to her for the benefit of her protégé, little Tommy Stringer, and to thank you, and through you each and all the contributors, for your continued interest in the unfortunate boy. That Heaven may bless and reward all of you for your active benevolence is the earnest wish of yours, very sincerely, M. ANAGNOS.

ANY subscriber may supply a friend with a copy of the current issue of the FOREST AND STREAM by sending us on a postal card the name of that friend.

The Sportsman Tourist.

A MID-SUMMER PÆAN.

FROM the meadows comes faintly the sound of the mowing,
Borne up to the ear on the soft southern breeze,
The hillsides in scarlet with lilies are glowing,
And the cattle lie resting beneath the broad trees.

It is mid-summer noon, and the sun in his glory
Pours down his warm rays on the bosom of earth,
Forever repeating the wonderful story
He has told through the ages since time had its birth.

'Tis small wonder, that bursting from clouds in the morning,
Or robing in crimson from victories won,
All nature with light, heat and beauty adorning,
The life-loving Greeks made a God of the sun.

When he rose from his slumbers beneath the Ægean,
How the daffodils opened their buds in the spring,
While the bees and the birds, in a mid-summer pæan,
All hastened the praise of Apollo to sing.

Who else but a Deity, blessed and blessing,
Could thus condescend upon mortals to shine
With his smiles, now the tenderest flower caressing,
Now ripening the olive, the corn, and the vine.

Although Greece has long faded, with all of her glory,
The same sun sheds its beams over earth's widest range,
While no record of mortal, though ever so hoary,
Detects in his brightness a shadow of change.

Through the beauty of springtime, the splendor of summer,
The glories of autumn, and winter's long rest,
He repeats the same legend to earth's latest comer
That he told the first day when he sank in the west.

No longer we worship the fabled immortals,
Nor bow to their images, graven in stone,
But we dimly discern, as through the half-opened portals,
A power above as unseen and unknown.

While we throw to the winds mythological fables,
Cast the shackles and fetters of creeds down the line,
As we gaze on the seasons, so changing, yet stable,
Who can doubt that the author of all is divine!

CHARLESTOWN, N. H., June 21.

VON W.

AN OUTING IN CENTRAL AMERICA.

IT was on an April day and a party of Yankees were riding down the (almost) dry bed of the Rio Grande River, between the town of Rivas, on the shores of Lake Nicaragua and the Pacific Ocean. There were a dozen in the party, but half of them were some distance in advance. Rounding a bend in the stream they came suddenly upon a fat buck lying asleep like a pig in the water and mud of a little pond under a steep bank 10ft. high. The horses and mules were reined in promptly, while the party, who were tenderfeet to a man, told one another that the buck was dead, and wondered how it happened so, until the buck winked at them, when they concluded it must surely be very badly wounded. Thereat they proposed to rope the beast and take him into camp. The buck continued to wink while they got a rope and turned a noose into one end and one of them approached to within 6ft. of it. Thereat the buck, with a snort, that was probably its way of laughing, skipped nimbly over the 10ft. bank and ambled into the brush.

The writer was one of the tenderfeet. We had traveled from San Juan del Norte (sometimes wrongly called Greytown on the maps), Nicaragua, and were examining the work so far done in digging a canal from sea to sea. But though we were tenderfeet, we could not help seeing the game that appeared about us, nor could I, being a constant reader of *FOREST AND STREAM*, refrain from making inquiries by the wayside about the sport to be found in that country. The result was that I concluded that the sportsman who would like to fish in a stream that never was fished in, to sit on a runway where no one else ever sat, to camp on a lake where no one else camped, in short, to see and bring to bag game that never was before disturbed by any human being, should go to Central America. I fancy that not many readers of the *FOREST AND STREAM* will at first thought take kindly to this suggestion, for if I may judge by what I read of outings for sport, the average American finds a journey to Canada, or the Northwest at most, as great an undertaking as he is equal to. However, if there is one who has the pluck to go to Africa for game, there may be one willing to try the nearer, equally interesting and less known fields of our own continent.

About the first thing I saw when my steamer reached the dock at the canal company's settlement at San Juan del Norte was a small bear skin stretched on the side of the shed near the pier. It was a very good beginning. A few minutes later the headquarters of the engineers was reached, and there hung at least a dozen panther and jaguar skins—chiefly the jaguar, and very fine trophies they were. Thereupon we sat down upon the veranda after dinner and smoked and talked about the game of the country.

Although about a thousand men have been at work about the eastern terminus of the canal for more than a year there is a plenty of wild game within ten miles of the settlement. Indeed, some of the skins hanging about headquarters had been taken on the beach within five miles.

Ten miles back from the sea one enters the hills and mountains, and here game of all kinds indigenous to the country can be found. The best way to reach the hills is by boat up some of the rivers. One may go to Bluefields and hire a boat to carry him up, but the Rawa River offers better opportunities for wild sport because but one party has ever gone up this stream and across to Lake Nicaragua, and that was a party of British engineers under Mr. J. B. Gillespie. I saw Mr. Gillespie in Managua. He was not greatly interested in such matters, but he said game of all sorts came about his camp as fearlessly as ground squirrels about a New York corn patch. The jaguars, the panthers, and "the rare black tiger," as Mr. Gillespie called it, were seen, when in the heart of the woods, every day. This black tiger I took to be the rare black leopard of which two specimens are (or were) in the Central Park menagerie in New York. These animals came about the camp apparently attracted by the smell of

cooking meat. They were in no way ferocious, neither were they timid.

The tiger-cat and the ocelot were often seen, as well as their larger cousins, but he did not see a lynx. Of course there were plenty of deer and wild hogs. The deer are of two varieties, one of which was very small. Bears of two kinds, both very small, were seen. Here, then, was a chance for a man to get a variety of trophies, not to mention the interest one would find in tramping through an unexplored wilderness.

However, the list of game is by no means complete. There are two animals peculiar to the country, one of which they call the tepezcutinte and the other the guatusa. I saw the guatusa. It is a sort of kangaroo pig, or perhaps a rabbit pig. The head is shaped like a pig's, while its hindlegs are long, and it travels about the woods like a veritable *Lepus americanus*. It is delicious eating.

The most dangerous brute there, not excepting the felines, is a kind of tapir called the danta. I saw numerous tracks of this animal. It sleeps in the mud by day, and when awakened by the approach of man is pretty certain to charge on him, the natives said, when by reason of its strength and size it can quickly chew a man to death.

I was told of two kinds of squirrels, though I saw but one individual. It was gray on the sides and belly and a rufous brown on the back—a handsome little fellow nearly as large as our gray squirrels.

Coyotes and foxes abound in the open lands about the big lakes, while the possum is seen as often and is as toothsome as in old Virginia.

Of the birds, no game more beautiful than the wild turkey need be asked for. As I saw it the cock looked more like a peacock than a North American turkey; but served hot from a Central American outdoor brick oven I am bound to say that by any name it tastes as well as any bird that ever scratched gravel. There are really two kinds, the cock of one breed being entirely black, while the other has a white breast. Both have topknots on their heads.

I saw three sizes of doves, one being very small—smaller than a robin. But one partridge rose withing sight. It was said to be like the English pheasant.

Of ducks I saw but few, and I do not believe that there are any great numbers of them. They said that two kinds of wild geese could be found in big flocks on the waters at the end of the rainy season. The dandy snipe of the world, however, lives in Nicaragua. It is called patillos, also jacanas. The male's beak is a lemon yellow at the tip and white at the base. A bright yellow leaf-shaped growth springs from the base of the beak and covers the forehead, which is a purplish black. The back is maroon colored, the breast the same only darker, while the long feathers of the wings are a mile green, and so, too, are its legs. A peculiarity of the bird is the growth of sharp yellow spurs a half-inch long on the first joint from the ends of the wings. The natives say the birds kill one another with these sometimes in the love-making season. In their fight they at once arrest the attention of the spectator, but when they alight and hold up their wings for a moment and turn their heads from side to side while the colors flash in the sunshine, they are an animated bouquet such as I never saw equalled elsewhere. They are good eating and can be killed by the hundreds.

I did not mention the monkeys, although the red monkey is said to be most excellent eating. If one wanted specimens to mount, he would find scores of red monkeys, gray monkeys, white-faced black monkeys and the howling black congos about his camp every night. The little dog-faced monkeys are scarcer. In the trees the monkeys are delightfully graceful.

I was told that the large ones were very tenacious of life, that a cango, for instance, held on to the branches of a tree until after three bullets from a Winchester express .38cal. rifle had been sent through his shoulders, heart and lungs, but when a fourth tore his head all to pieces he fell.

The cry of the wounded monkey is heart-breaking, for it is exactly that of a child in distress. But when, one day, an expert shot in our party barked the tail of a cango, the sight of the beast as it started up in wild surprise, stopped and picked up its tail to see what the matter was, jumped again, only to stop once more and look with increasing wonder at the tail, was so ludicrous that we simply rolled over on the ground and laughed till we cried, in spite of the possible cruelty in clipping a harmless beast.

There are so many things in Nicaragua to interest one who loves animate nature that I cannot mention a thousandth part of them. The late Thomas Belt wrote a book called "The Naturalist in Nicaragua," that is a very interesting book, but it does not cover a hundredth part of what I would like to read about. For instance, he deals chiefly with insects, but a little beggar of a tick that digs a tiny crater in the fine loam by working his head catapult fashion and then hides at the bottom till something good to eat tumbles into the crater is not mentioned. I saw one that was three-sixteenths of an inch long grab the hindlegs of an ant three-quarters of an inch long, and for over ten minutes hold on while the ant pawed up the earth in its endeavor to escape. Smaller ants though of no mean pluck and strength, fell victims. Nor is anything worth mentioning said in the book about fishes; and birds receive but scant notice. The same may be said of the general run of mammals.

The fish that I saw were new to me. The only man of the party who carried a rod and reel was W. E. Simmons of New York. With a variety of lures he had a deal of sport taking a fish called the sabaleta. It was more like a bass than anything else, and had an average weight of about 3½lbs. It was of a dark greenish color on the back and white below. There were three rows of teeth, one row being very strong and in the front very like human teeth. It was a most vigorous fighter, often leaping far out of the water and shaking the hook from its mouth.

A much larger fish, and one that fairly swarmed about the rapids of the San Juan, was like a tarpon; of say 20 to 30lbs. weight. I never saw so many fish in any stream as there were of these there. They were said to be grand fish for the rod and reel—equal to the tarpon of Florida; but we had no tackle that would hold them. They bit the hook off every time they were struck.

There is doubtless magnificent salt-water fishing on both shores, but particularly in the bays of the Pacific coast. The bay at San Juan del Sur would satiate the most eager Walton that ever cast a fly. Of all that I

saw there, a barracouta was the most pleasing. Imagine a pike 6ft. long at the end of your line and the fight with the barracouta will be pictured beautifully.

This reminds me of a fish story told me by ex-Governor Pacheco, of California, now American Minister to Central America. Every afternoon at 4:30 o'clock a great shark comes in alongshore at Amapala, on the Bay of Fonseca. His appearance so terrifies the smaller fish there that they fly into the surf and are cast up on the beach by the bushel. In consequence the people of the town repair to the beach regularly at the hour named and gather in the spoils, making a great lark of the occasion. The shark is called the padre, and is well nigh worshipped by the people.

If one would go to Central America for an outing he should leave New York in February. One may go from New York to San Juan del Norte, Nicaragua, or to Limon, Costa Rica, or from New Orleans to Bluefields, Nicaragua, or Livingston, Guatemala, or Porto Cortez, Honduras. From what I was told, the best place to land is Bluefields, for from that place he can go in a dugout to other streams along the coast, and then strike up through the country on a journey that may last two weeks or six, to end on Lake Nicaragua. This journey would be through an absolutely unexplored country, but one that is certainly passable, and as full of game as all streams are of fish.

An easier journey would be by steamer up the San Juan River to Lake Nicaragua and across to Rivas or Granada. The whole territory between the lake and the Pacific is inhabited and cut up by wagon roads, but is alive with small game, deer and pigs. The feline tribe is wanting west of the lake.

The west or Pacific side is in all respects the most pleasant to hunt through. The east side is so dense that one must often cut his way with a machete through the tangled vines and underbrush. Then, too, much more rain falls on the east side, the proportion being 306in. per year at San Juan del Norte and 70 at San Juan del Sur. It rains in the dry season east of the divide. A most delightful outing could be had by going to San Juan del Sur via Panama and the Pacific mail steamers, and there hiring a coasting canoe with a native or two and so sailing back down that picturesque coast to Punta Arenas, Costa Rica, or even to Panama. The shooting would have but one drawback—the game would be too easily found and killed. The scenery is everywhere magnificent, and the weather indescribably beautiful.

Doubtless the fear of fevers has kept sportsmen and tourists from braving this untrod wilderness, but after my own experience there, and from what I was told by Americans now living there, the climate of the hills and the Pacific coast is remarkably healthy. There is as much difference between the Atlantic coast swamps and the hills of Central America as there is between the swamps of the Pamlico and the black mountains about Asheville. I have no doubt whatever that the mountains of Nicaragua will become famous as a health resort as soon as the inter-oceanic canal is opened—an event not so remote, by the way, as it may seem to be. The only danger to health which any man need fear there will be found in a lack of backbone to resist gentle temptations in the inhabited districts.

There is one other feature that might tempt a Yankee to go there—perhaps two more. The forest is dotted over, if one may judge by the explored parts, with ancient ruins of cities. Engineer Gillespie found some remarkable ruins in his survey from the Rama and Ubalde, while the gold he found was something more remarkable still. Gold mines are not usually as valuable as they seem to be, though there are placer diggings now known that yield incredible sums to native miners. But the possibility of making a collection of works of art from the ruins of an old city would certainly prove a temptation to a host of the readers of *FOREST AND STREAM*.

The matter of expense is not great, say \$300 for steamer fare and \$5 a day while in the country. This would pay the expense even of a coasting trip where two natives and a big dugout were hired.

JOHN R. SPEARS.

NOTES FROM A SHEEP CAMP.

"To me are mountain masses grandly dumb;
I ask not, Whence? and ask not, Why? they come.
When Nature in herself her being founded,
Complete and perfect, then the globe she rounded,
Glad of the summits and the gorges deep,
Set rock to rock, and mountain steep to steep,
The hills with easy outlines downward moulded
Till gently from their feet the vales unfolded."

—Göthe.

JUNE has come to change the face of nature, and here among the mountains her influence is already felt. After the trial, of which I spoke in my last article, I hastened back to the realm of trout and deer, and again Ike was my host and guide. We drove out of Panguitch on the first of June in the midst of a snowstorm that lasted all day, and night found us at Henrie's camp on the Mammoth. But the Mammoth was not our destination. It is time for shearing and Ike has gathered his herds on Asay Creek, another fork of the Sevier. Tuesday was clear and warm, and Ike helped Henrie with his lambs, while I took my first lesson in holding the innocent little creatures that were having their ears slit, tails docked and being otherwise tortured to enhance their value.

At 4 o'clock we set out for Ike's camp and reached it just as the sun was going down. We left the wagon at Asay Creek and climbed up half a mile through balsams and long-leaved pines to his sheep wagon, where the main camp was pitched. Here, in company with four herders, we passed the night. We were within five miles of the summit of the great divide and the night was cold.

FOREST AND STREAM does not devote its columns to a discussion of politics, but in camp we talked about the political situation until 2 o'clock in the morning. It was a marvelous change, for generally the dweller in cow camps and sheep camps is compelled to listen to vulgar yarns that are repeated night after night until he would fain take out his blankets and sleep alone beneath the stars. But the recent disorganization of the People's and Liberal parties has made Republicans or Democrats of every one, and the boys take positive delight in talking over the situation and in making all manner of inquiries about the events of the day and the noted characters now in the political arena. I had thought the revolution confined to Salt Lake, Ogden and Provo, but it has spread into every town, hamlet and camp in the Territory, and

young Utah is confident of soon being able to take a hand in the great game of national politics.

A word as to the "lay of the land." Asay Creek has two forks, each about one and a half miles from camp. Between the two is a divide that rises almost 8,000ft. above the sea level. The bushes along the creeks are in full bloom, and along the hillsides the cacti are displaying their gold and crimson flowers. On the clay ridges are numberless deer tracks and bear sign, and the white hare dwells among the rocks. But the herder's greatest enemy is the wildcat, that annually destroys thousands of lambs. The north fork of Asay Creek is a narrow stream, that may be jumped at almost any point. It flows through a narrow, heavily-timbered cañon. The water is clear and cold and is positively alive with small trout running from 8in. to 1ft. in length. The south fork is wider. It flows through broader cañons and fertile meadows. In it are large trout, suckers and herring or dace. Never before have I seen suckers and trout associating together. But these suckers are more gamy, firmer fleshed and better flavored than their congeners that inhabit the sluggish, muddy waters of the East.

We stayed at the hilltop wagon for a week. Some days I would fish and at other times I would ramble to one of Ike's other camps and watch the docking of the lambs. Then we moved down to the north fork, and all hands turned in to build a great shearing corral. All hands but Jock, one of the herders, he would let his wethers wander away while he would cut a birch pole and stroll up and down the creek, returning at dusk with from thirty to fifty specimens of the delicious rosy-sided, speckled *fontinalis*.

The corral was completed and the boys were off with their sheep, all but Jock, who, as usual, was away with his birch pole. The sun was about two hours high. Ike and I sat alone in the tent. Jock's wethers had been peacefully grazing just above the corral, but now they had disappeared, even the tinkling of the bell had died away. Suddenly Ike spoke up:

"I guess either you or I will have to hunt up those wethers. No tellin' when Jock will show up."

Now, I was just in condition for a good walk, and I thought that in less than half an hour I would be back at camp; so I started out with neither coat nor vest. Up the creek I strolled, up among the quaking aspens. Our side of the cañon was of white sandstone, hewn and water-worn into all sorts of fantastic shapes. The other wall was of black, volcanic rock—the picture of desolation. From these black stones Asay Creek sprang forth a lusty stream that roared and sang with voice louder than the song of woodland bird or cry of winds among the branches. And at the black rocks by the spring I lost all track of sheep. But I kept on and on to the head of the cañon, and I knew that the wethers had not gone out that way. It would have been the part of common sense to have gone right back to camp and to have let the herder hunt his own sheep, but I hated to give up the search. I climbed the sandstone parapet and wandered along that ridge for a mile, not finding a hoof print. Then I came back to the head of the cañon and walked down the trap ridge. Just as the sun went down I struck the tracks of the herd, and the dogs started merrily along the trail to the southwest, leading me directly away from the camp.

Through the gloaming I hurried, and suddenly I came upon one of nature's wonders. The crust of the earth had fallen in, leaving a circular hole some 10yds. in diameter, and from the bottom of this hole four caves led in different directions. It was no time for exploration and I pressed on, following the barking of Nell and old Kaiser. Had I wanted to do so I could not have found my way back to camp, and no amount of money would have tempted me to clamber down the rocky wall after dark. About me the night hawk whistled, and from far away the piping of the young quail floated on the evening air. I was tired out; my shoes were cut through, and now and then a cactus spine would find its way into the ball of my foot and I would hop along in silent agony. I felt in my pocket. Not a match was there, and I remembered that my hunting knife was left by my plate at dinner.

Hark! Yes, that is the faint tinkle from the bell wether. The journey is almost done. Ten minutes more and the odor of the sheep greeted me, and the band at another one of Ike's camps, to which I had never been before, and Bert, the herder, with his dog was standing between the wethers and the ewes wearing like a pirate. To make a long story short, we drove the wethers back for nearly a mile, bedded them and I returned to Bert's wagon for supper, and in a few moments was dozing on the hard bed.

I had not lain long when there was a thud against the wagon and the four dogs ran between the wheels, then out a few feet, growling all the time. Bert sprang out with the rifle and I was not long in following suit. He said that he saw a dark object a little way off but he did not get away from the friendly gleam of the candle. The ewes and lambs now became very uneasy and I took Bert's rifle from him and started out. The moon was five days old and by the feeble light I could see a black she bear and two cubs. It was impossible to get good aim but I blazed away in the darkness and hit the brute, for she growled and turned savagely toward me, but two more shots put an end to her career and the cubs made good their escape. Then it was necessary to go around the sheep and get them quietly settled on their bed ground. By the time this was done we heard rifle shots and shouts in the distance. We answered and in a few moments Ike and Jock were with us, Ike's anxiety for my safety having brought him over the hill. We took a good smoke, laughed over our adventures and at midnight turned in for good, and so ended my first and last experience as a sheep herder.

Ike and I were up with the sun, but early as we were Jock was ahead of us, getting his wethers back to their own herd. We reached camp at breakfast time and "dad," for I, being the senior member of the outfit, have acquired this sobriquet, was made somewhat vain by the encomiums that were bestowed upon his tracking, staying and shooting qualities. At all events no one has since intimated that he was a tenderfoot.

That afternoon a party of three visited the wonderful cave. Jerome Asay, an old settler who knew every nook and turn of the subterranean labyrinth, was our guide. On the way up we managed to kill a porcupine with clubs. Had it been among the pines it would have escaped easily, but among the rocks we had the advantage.

It was the first porcupine that I ever knew to show fight, and it never once thought of rolling into a ball to escape its pursuers.

At the mouth of the cave we built a fire and lighted our fat pine torches, while the bishop picked his way down into the most beautiful of the underground avenues. This cavern was about 600ft. deep. At first it seemed like walking through a railway tunnel cut in trap rock. The floor was strewn with jagged boulders. Had this been all there was of interest, our journey would soon have been ended and my tale told. But the tunnel opened into one lofty chamber after another. Throughout the black rock an iron stain was apparent. The floors were covered with beautifully rounded yellowish stalagmites, and pendant from the roof were stalactites, black as ink, that when broken seemed in color and porosity exactly like worthless iron castings. Then the air grew colder; the walls narrowed; we were entering the portals of Dante's frozen Hell. Suddenly it burst upon us, and from the walls the light of our torches shot forth the dazzling splendor of countless diamonds, rubies and sapphires, and the reflection of our feet was as though we were walking upon a sea of glass. This was the ice cave, 40ft. in diameter and 15ft. high. There was neither sight nor sound of dripping water, but we were upon a lake of ice, and the black, rocky wall and ceiling could not be seen for their hoary covering. There were no icicles, but a uniform mass of crystal sheen, in form varied as the crystals of snow and of the thickness of a man's hand. It was the cave of Aladdin, and long we feasted on the lovely scene. I am told that the temperature of this cave is uniform during the entire year.

Back to daylight and then into another cave, the warmest of the four. Here the floor, walls and roof are a mass of vivid moss, and the transition seemed like coming from the sanctuary of winter to the abiding place of eternal spring. The bishop now told us that he would take us back to camp by a new route, but we must be prepared to crawl. Into another tunnel he went and we followed. At first we could get along on our hands and knees, but, all too soon, the roof came down and we were obliged to flatten out and "snake it" as best we could. The floor was of smooth, white sand, evidently it had once been the bed of a subterranean stream, probably of Asay Creek that was now many feet below us. The smoke from our torches would have stifled us had it not been for the frequent rifts in the rocks, that were of sufficient size to admit light and fresh air, though altogether too narrow to allow of our passage to the outside world. After an hour of this laborious pleasure we came to an aperture through which we could make our exit, and though the bishop told us that he could take us underground for yet another mile we declined his offer with many thanks, and were soon back at the tent discussing the events of the day over a mess of trout.

Were such a cave as this in any other part of the land it would be visited by tens of thousands of tourists, but I doubt if fifty persons have ever been down in its depths or if 100 have heard of it. I am told that other and larger caves are to be found in this vicinity, and I hope to see some of them before I leave; if they surpass in beauty this matchless cave of the southern Rockies, I shall think that I have discovered a heretofore unknown wonder of the world.

ASAY CREEK, Utah, June 15.

SHOSHONE.

TROUTING IN THE SWEETWATER.

ON the 15th of August last I received a message from the Sweetwater Lake region, in Colorado, that a relative of mine, who had been camping there during the summer for the benefit of his health, had become worse and needed immediate attention if he were expected to leave that country alive. Receiving this message on Saturday, a hurried packing of satchel and arranging of business affairs let me off on the 2:50 train of the next day, Sunday. The road taken to Denver was the U. P. R. R., than which there is none better west of the Missouri River. Monday morning, 9:30 o'clock, found me in Denver just in time to catch the train going to Leadville on the South Park R. R. The trip over this road to Leadville is worth a year of one's lifetime, but it is impossible to describe the beauties and wonder and grandeur of the scenery along this route without writing volumes. We arrived in Leadville at about 8 o'clock in the evening. The next morning found us steaming out of Leadville, bound for the little station I had been told to stop at, on the Denver & Rio Grand R. R.

This day's trip was another delightful one, except for the fact that we had to stop and wait two or three hours at Red Cliff for the workmen to clear from the track the debris from a heavy blast.

After a time we were started again, and soon, while I was intently watching the fishermen landing trout from Eagle River, which the road follows, the brakeman announced the fact that we had reached Dotsero, my destination. I barely had time to tumble off the train before it was under way again. On looking about me for the city and depot building, I found nothing but good solid ground and a cabin a few rods distant. This station should be named Dot, dropping the last two syllables, as they are entirely superfluous, and the first one describes the city briefly and perfectly. Well, knowing that there were fourteen miles of mountain road to be traversed before reaching the camp of my friends, I hastened to interview the inmates of the cabin to ascertain whether they could furnish me transportation, and whether there was still time to reach the camp before night.

To my intense delight I received an affirmative answer to both of my questions. The only drawback in the whole business was that a pony and saddle constituted the conveyance that I would have to take and I now weigh 210lbs. and have not been guilty of doing much horseback riding since boyhood. However, I assured the proprietor of the cabin and ponies that nothing would suit better and that something of this kind had long been an unfulfilled desire to me. The gentleman concluded to send his brother-in-law, a sixteen-year-old lad, with me to act as guide and to bring the ponies back. Well, we started as soon as the ponies could be saddled, and the first part of the journey was very nice and easy for me, as it was all up hill, and the ponies necessarily had to walk. After about an hour or so of this climbing, and when I had about concluded that horseback riding was as easy now as when I was younger we came to the top of the "divide," where my guide,

who in the meantime had discovered that my birthplace was "Down East" and had sized me up for a tenderfoot of the first water, suggested that we had better increase our gait if we wanted to reach Sweetwater before dark.

He set the pace and I followed. Things went pretty well for a few miles, and then we commenced going down, and then the trouble began for me. Riding up hill and on a level had been comparatively easy work, but this was new business for me and I soon began to feel the effects of it, but having a little stubbornness in my make-up, like all good hunters, I determined to follow the little red-headed cuss into camp at his own gait, if my back didn't break before we got there. On we went, the worse the trail the faster the little imp rode, until at last we struck the valley of Sweetwater River and commenced to climb upward again, along the edge of the valley toward the lake. As we slackened our pace my guide informed me that we were only a half-mile from camp and that we had made remarkably fast time, in fact he thought it a little the quickest time he had ever made over that trail. We arrived at the camp in just four hours from the time of starting, and that, too, over one of the roughest of mountain trails. Well, I was not so very tired, but I could stand up much better than I could sit down. There was some surprise in camp at my arrival, for a telegram had been sent to tell me the invalid was better. The telegram I never received. The welcome was just as hearty as though everything had turned out as planned, and after a hearty supper of cold venison, fried trout and everything else that is fit for a hunter's table, we gathered round the lantern, in the tent, and swapped news for fish stories. I had the news and the other four the trout yarns. They had been camped here all summer long, and had nothing to do but fish and hunt and think up stories to bury me under when I should arrive. Well, they did it most effectually, but I am not going to write anything but the truth, and only a little of that, so will not repeat any of their stories but give my readers a brief sketch of one day's trout fishing out of six, all equally good, which we had before breaking camp and starting on our return trip. After a great deal of talking and a little of sleeping it was decided that L., the veteran fisherman, should take me the next morning up the left fork of the Sweetwater River, or creek, for a day with the speckled beauties.

The next morning, not very early, found us with tackle, lunch, etc., starting from the camp, at the lower end of Sweetwater Lake, bound for the trout stream which we intended to strike where the two branches came together, a half mile above the upper end of the lake. As the lake is about a mile in length this gave us a tramp of a mile and a half before reaching the battle ground. Just before reaching there an incident occurred which seriously disturbed the peace of mind of my friend L. As we were walking along the trail, thinking of the fish we were going to catch, there suddenly came a whirr that made us jump as some dozen or more willow grouse got up from nearly under our feet and settled in different parts of two trees that were standing a few yards from the trail. Oh, how we did groan, because we had not brought the little .22 along with us, as here was the chance to add some of the finest of meat to our larder, if we only had something to shoot with. L. was not going to give it up without an attempt, at least, so collecting a few stones of proper size he commenced a bombardment of the grouse family. Some of his shots were very close, but he failed to bring any game to bag and sorrowfully gave it up when his ammunition was gone. We left the covey holding the fort without any loss of their number and tramped along a few rods further to the stream. And here our sport commenced.

The left branch of the Sweetwater River is the stream of trout streams as it comes roaring and tumbling down a deep gorge, hemmed in on both sides by rocky cliffs towering hundreds and hundreds of feet above the bed of the stream, and shutting it in so closely that at many points the only path for man or animal is the river itself. For about three miles this stream is one succession of cataracts, each one having its pool below. Fallen timber at close intervals makes the tramping up this stream very hard, but does not often interfere with the casting of the fly. At the point where we struck the stream we changed our shoes for wading boots and commenced the work of the day. I took a turn down stream for a few yards to commence with, and just where some willows shaded the water over a deep riffle I got a rise and caught a pound beauty belonging to the rainbow trout species. A second cast and his twin brother grabbed the fly. There was not an ounce difference in the weight of these two. Turning up stream at the next pool I caught two half-pounders. So far L. had caught nothing and everything was coming my way, but well I knew this would not last, as I had been fishing with the veteran before. After crawling over some fallen trees we came to a larger pool where we caught four nice ones, and one only fell to my lot and that not a very large one, while the one of immense size that should have been landed shook the hook from his mouth and went sulking under the ledge of rock at the further side of the pool.

Passing on above this pool we came to a huge tree, which had fallen diagonally across the river bed, damming the stream and making a deep pool above. Over this pool leaned another tree, making it impossible to cast a fly in any shape on this water. As we stood below the log, the water above was about even with our shoulders, so we could see into the pool pretty well without casting any shadow on it or being seen ourselves. Reeling in all of my line, except three or four feet, I pushed my rod just below the branches of the leaning tree, letting the fly strike the surface of the water and started to drag it across the pool. But the fly had only started to cross the pool when it was seized by a monster trout who started with it for the corner made by the bank and tree coming in contact. The poor chance for playing him and my awkwardness combined, allowed him to get away. Making the same cast again, the fish was hooked the second time, and again he got away. A third cast, or poke, was made, and he came at the fly this time with more vigor than ever. But this time we were more successful, for with the help of L. the brave beauty was this time safely landed. Another cast resulted in the catching of a second fish equally large. No more rises could be got from that pool, so we passed on to the next. At this pool L. caught the big ones and I the little ones, he catching three that would weigh 1½ lbs. apiece, while mine weighed only half of that, and besides, I caught only one fish.

And that is the way it went, from pool to pool, until

at two o'clock we stood on a rock with a cascade falling some ten feet to a deep pool below us, while, a few feet above us, was another deep pool with a boiling sheet of water foaming into the edge of it from the rocks above. Standing on the rocks between these two pools we caught fourteen beautiful trout weighing from $\frac{1}{2}$ to 1½ lbs. apiece. Then eating our lunch of bread and butter and cold boiled trout, we proceeded to dress and count our fish. We found that we had forty-five that would average 1½ lb. apiece, the largest 1½ lbs. and the smallest half a pound. The veteran scored one more than me, he having twenty-three. As we had all the fish we could use and did not want to murder the beauties for our pleasure, we concluded to quit. So we unjointed our rods, put our fish in our creels and started for camp, bravely passing by pool after pool where we knew there were fish aching to be caught. The only malignant look that flashed across the veteran's countenance on our tramp homeward was when we passed under the tree where the covey of grouse took shelter in the morning. We reached camp in time for supper, not tired, but very hungry.

And so passed one of the happiest days we have ever known, full of excitement and pleasure, with just enough hard work in it to make it enjoyable, but not enough to tire one so completely as to drive sleep from his weary and aching limbs when night comes, and he fain would drop himself into the arms of "tired nature's sweet restorer."

Natural History.

DO CARIBOU EXIST IN OREGON?

Editor Forest and Stream:

First let me enter a plea of ignorance. Most sportsmen deny the existence of caribou in Oregon. In fact the burden of proof seems to rest heavily upon those of us that presume to adopt the affirmative of the proposition. Mr. Charles C. Ward, in his delightful chapters on "Caribou Hunting" in "Sport With Gun and Rod," edited by Mayer, says: "If the species reaches the wooded region at and west of the Rocky Mountains its presence does not seem to be well attested. * * * A competent authority doubts the existence of the caribou in the United States west of the Red River of the North."

No person can read the twenty-five page article above referred to without appreciating the painstaking investigation given the subject by its writer. A thorough recognition of this fact on my part admonishes me that what I may have to say on the subject must be interrogative rather than assertive.

Two years ago I stopped at the ranch of a Mr. Welch at the foot of Mt. Hood, in Clackamas county, this State, near the old Barlow wagon road. The first thing that attracted my attention was a magnificent pair of caribou antlers adorning the gable end of his rustic abode. The horns were of very great size and perfect in palmation, resembling those of Newfoundland as distinguished from the Labrador caribou, in which latter the palmation seems to be confined to the times at the top of the horn.

In answer to my questions he declared that they were the antlers of a funny looking elk killed a short distance below his house. When informed that they were undoubtedly caribou antlers he wrote the word caribou down in order to remember the name and be the better able to enlighten McIntyre and others of his neighbors that had also killed "funny looking elk." It seems that doubts had arisen in their minds whether these animals were really elk.

I had almost forgotten the incident when yesterday two mountaineers, Mr. Floss and Mr. Gray, called at my office on some business matter. A pair of elk antlers hanging on my wall attracted their attention and led to conversation respecting the big game of their section. They live in this county about twenty-five miles from Portland, having settled near Gordon Creek in the Cascade Mountains, some fourteen years ago. They went on to tell me about a large herd of the same "funny looking elk" that came down to Gordon Creek during a terrific snow storm that raged in the mountains last winter, and added, "but their horns didn't look like those," referring to my elk antlers. It occurred to me that here were two witnesses for my caribou theory; so I asked them if they thought they could recognize the animal should they see his picture. Of course they could, for they had killed several out of the herd. I took three pictures, representing the elk, moose and caribou, respectively, and laid them side by side, asking my friends if either of the three represented their game. Both instantly recognized in the picture of the caribou the animal seen and killed by them. Now you will very naturally say that if caribou are so plentiful here it is strange that some are not killed. Answering, I would say that hundreds have been killed; but most of those hunting large game here are not so much interested in getting zoological specimens as in getting meat. Go into any fur and hide store in Portland and you will find at least a dozen pairs of caribou antlers. It is, however, difficult to find out from whence they came.

Fully appreciating the fact that we Portland sportsmen ought to be able to settle this question, I submit the testimony at hand with the hope that some of us may soon be able to add practical demonstration. As an excuse for our ignorance, permit me to say that within 25 miles of Portland, a city of 70,000 people, there are places absolutely unexplored—*terra incognita* as dark as central Africa. What, then, can be known of the more remote mountain regions? As for myself, individually, I am an angler and wildfowl shooter, and not much disposed to seek larger game and endure the attendant exposure and hardships.

All of the sporting gentlemen with whom I have conversed upon this subject, including such experienced hunters as Wm. Curry, George Stuart, H. T. Hudson, W. A. Storey, Capt. Riley and T. D. Honeyman, while doubtful of the existence of caribou in this State, seem willing to qualify their opinions a little in view of the unexplored condition of even this, our own county.

Several mountaineers have promised to send me portions of the next "funny elk" they may kill, even if nothing more than the peculiar heart-shaped hoofs, which, of course, have not heretofore attracted their attention.

PORTLAND, OREGON, June 15.

S. H. GREENE.

[We have no doubt that the "funny looking elk" men-

tioned by the hunters who talked with Judge Greene were caribou, though so far as we know direct evidence of the existence of caribou in Oregon is as yet lacking. By this we mean nothing more than that we know of no statement by a competent authority that he has seen this species in Oregon. We are confident that our correspondent, by a little effort, can supply the proof of the caribou's existence in Oregon, and can thus considerably extend the animal's range to the southward. Mr. Charles C. Ward's article on the caribou, in "Sport With Gun and Rod," was written a long time ago and when much less was known about the fauna of the West than at present. It has long been known that this species, the so-called woodland form, exists in large numbers in suitable localities in British Columbia, in Washington, probably in Idaho and possibly in Montana, on the western slope of the Main Divide of the Rocky Mountains. Hon. Theodore Roosevelt has killed them south of the boundary line, as have many other persons well known to us. Besides what is stated in Judge Greene's letter, there is reason to believe that they are to be found further south, especially in the higher mountain regions. Captain Charles E. Bendire, the well-known naturalist, told us a number of years ago, that he once saw at Boise City, Idaho, three pairs of caribou antlers, which were said to have been killed near that place. We have good reason for believing that a caribou was once killed on the Missouri River not very far from old Fort Peck. This animal was shot from the deck of a steamer by Mr. R. McGonigle, a perfectly trustworthy man, who did not know what it was that he had killed. He described the animal to us in great detail and we believe that it was a woodland caribou—a straggler which had wandered across the mountains and far to the south of its ordinary range. It must be remembered that, unless they have been examined by a person who has had some training in biology or is familiar with the species, the antlers are not always a safe guide in determining species. No naturalist could mistake the horns of an elk for a caribou, yet as the horns of the former are occasionally somewhat palmated toward the tips, it is not at all unusual to hear a hunter announce that he has killed a cross, or hybrid, between a moose and an elk, or a caribou and an elk. We have seen very many pairs of palmated elk antlers, but we have never seen a pair of antlers about which there was any question as to the species to which they belonged. We shall hope to hear further on this subject from our correspondent before long.]

PENNSYLVANIA NOTES.

THE prairie horned lark (*Otocoris alpestris praticola*) is one of the native birds of Lycoming county. Young, one of which was but a few days old, were captured early in June last by State Ornithologist Dr. B. H. Warren, of West Chester, and Prof. August Koch, of Williamsport, in fields near the city last named.

The prairie horned lark breeds sparingly in Erie county near the city of Erie, in fact nests with eggs are reported to have been taken within the city limits, and young of the year have been obtained in the vicinity of Erie by both Mr. Geo. B. Sennett, of Erie city, and Dr. B. H. Warren. This bird is reported by Dr. Livingston W. Hartman, of Pittston, to breed in Luzerne county; and it is also believed to breed in Beaver county.

Mr. W. Clyde Todd reports golden-winged and cerulean warblers to be breeding in the neighborhood of Beaver city.

The common crossbill (*Loxia curvirostra minor*) is frequently seen, singly or in small parties, in May and June in the vicinity of Williamsport. This species breeds regularly, but is not abundant, in the forests about Renovo, Clinton county, also in Cameron county, and Dr. L. W. Hartman, of Pittston, has taken nests and eggs in March in Luzerne county.

Hooded, chestnut-sided, pine, black-throated green and black and white warblers, also the American redstart, are common summer residents on the Bald Eagle Mountains, along the West Branch (Susquehanna River) near South Williamsport. In the same locality rattlesnakes, which have doubtless been driven from neighboring mountain ranges by recent forest fires, are much more numerous than for many years past.

Dr. G. A. Scroggs, of Beaver, reports quail and ruffed grouse to be quite abundant in Beaver county. In Chester county quail are much more plentiful than for several years past.

Several broods of wild turkeys have been seen recently in Huntington and Clinton counties. It is stated that a good many of these noble game birds have bred this year in the southern part of Bedford county.

The snowbird (*Junco hyemalis*) is breeding in considerable numbers in the vicinity of Bradford, McKean county.

D. A. D. Johnston, of Allegheny City, during the last of May and early part of June, spent a week in Armstrong and Butler counties, where he reports rose-breasted grosbeaks, chestnut-sided warblers and Wilson's thrushes to be breeding.

The eggs and young of nighthawks are frequently found on roofs of buildings in the cities of Allegheny and Pittsburgh.

Dr. T. L. Hazard, a naturalist of Allegheny City, has specimens of the hellbender (*Menopoma alleghaniensis*) in an aquarium with a view of making a careful study of the life history of these ugly reptiles which are so common in the Allegheny River.

BREEDING OF THE TEAL DUCK.—Geneva, N. Y., July 2.—I had a conversation with a man this morning, who told me that yesterday he saw a teal duck with nine young ones, and that "a boy caught three of the little ones, but released them on being told to do so. This proves that the bluewing teal will breed in this part of New York; and yet there are men calling themselves sportsmen who will insist on open season for ducks to May 1.—J. G. S.

FROG VS. SNAKE.—Editor Forest and Stream: I have just witnessed an incident so novel that I deem it worth recording in your interesting paper. On going to the boat landing this morning I saw a common striped snake of about 20 in. in length in the act of swallowing the head of a recently caught trout. I confess to an antipathy to the reptiles, and as this one's head lay invitingly on a flat stone I dealt it a blow that crushed it to a pulp. It was then tossed into the water, where it floated, when

an immense school of small fry attacked the bruised and bleeding part. The water was boiling under the attack. At this juncture a frog started from the shore toward it, stopping within two feet. I was wondering what the attraction was; was it to see the circus, or did he think to gobble up some of the fry so near to the surface? Presently I was enlightened, when he leaped clear of the water and pounced upon the snake near its middle. With it he started for the shore, making slow progress, as the ends of the snake fouled his legs. With his hindlegs resting in the water he made slow progress swallowing his prey, as his feet did not get a good hold. I went up the bank a few yards, when he came out on dry land and got on faster. With every effort to swallow he pulled the snake with his front feet, making such efforts once in about two minutes. At length he was so full he could eat no more, and with about 3 in. of the snake's body and twice that length of tail still protruding he crawled to the shady side of a rock near the water, seemingly content to let appetite wait on digestion.—CLAYTON BROOK.

ANNUAL REPORT OF THE AMERICAN MUSEUM OF NATURAL HISTORY.—The annual report of the trustees of the Museum for 1890-91 is just at hand, and shows the institution to be in a flourishing condition, the year which has just passed having been one of growth and prosperity. Through the energy of the trustees the long desired endowment fund has been secured, and the total subscriptions now amount to \$801,600. The interest of this sum will do much to provide additions to the collections in the future, and it is probable that the fund itself will be increased by further subscriptions. Among the important gifts received during the year is a magnificent collection of cut and uncut gem material known as the Tiffany collection of gems, which was on view during the recent Exhibition in Paris. This gift to the Department of Minerals is due to the generosity of Mr. J. Pierpont Morgan. Mr. John J. Crosse's collection of land shells, which includes 2,300 species, was presented to the Museum during the past year. The increase in the collections of birds and mammals are important, numbering over 1,500 specimens for the former and 490 for the latter. An important start has been made in the establishment of an entomological collection. The library is growing rapidly and is annually becoming more valuable. On the whole the report is most encouraging.

GROUSE AND QUAIL IN CONFINEMENT.—Editor Forest and Stream: The little grouse previously mentioned have one and all succumbed to the inevitable and gone over the divide. They refused persistently to the end to notice their foster mother in any way, neither noticing her call nor allowing her to cover them at night. Their run was enlarged and everything done to encourage them to make a success of it; but they grew despondent and pitifully turned up their little toes, *etait* three weeks. The quail eggs responded to the seductive wiles of the incubator on the 26th of June, and produced eight wee quaillets, as large, possibly, as bumble bees, which Mr. Dyer placed with a couple of bantam chicks three weeks old, in a brooder, where they are now, apparently prospering. The chicks hover the quail, or do the best they can at it; and one of them flew at Mr. D. the other day in a funny little rage when he put his hand into the brooder. When I saw them, there were three or four attempting to cover themselves with one chick, and as a concealment it wasn't an unqualified success; but the little biddies were patiently standing on tiptoe and playing mother in a very conscientious way. Long may they all prosper.—O. O. S. (Vineland, N. J., July 3).

BULLETIN OF THE AMERICAN MUSEUM.—The Bulletin of the American Museum of Natural History, signatures of which appear at frequent intervals, contains a great deal of interesting material on North American mammals. We have received pages 237 to 306, inclusive, of No. 2, Volume III., of the Bulletin, which includes papers by Dr. Edgar A. Mearns describing a new subspecies of the eastern chipmunk from the upper Mississippi region, a new species of weasel and a new subspecies of gray fox from Arizona, giving the results of his observations on the American badgers and on the otter and skunks of Arizona. Dr. Allen contributes a series of highly interesting notes on North American mammals, in which he describes a number of new forms and treats of a number of interesting points. The Bulletin of the American Museum of Natural History has become a necessity of every student of American birds and mammals.

A TYPICAL NOTE.

Forest and Stream Publishing Co.:

GENTLEMEN—Please continue my paper for another six months, for which please find enclosed \$2. I long for my paper every week, as it takes me (or rather makes me feel as if I were there) over and over the good old times of years gone by.

Of course I am tied down to work very much, but still I find a little time once in a while to slip out with old Dash and the gun and fool a few chickens.

There is promise of a good harvest of both quail and chickens here this season, and also law breakers. J. T. P. CORALVILLE, IOWA.

I love to lie in sylvan shades,
And watch the line that falls
Into the stream, so still and calm,
And wait for fish in heavy hauls.
I love to lie and watch all this,
Beneath the azure, summer sky,
And when to town I hurry off,
With not a fish, and people scoff,
I love—ah then, I love to lie.

—Boston News.

A gentleman suggests a way to get rid of woodchucks which are doing a great deal of damage to meadows in this county. His idea is to smear a slice of turnip with strychnine, turn another slice over it and drop it into the woodchuck's hole and then close up the hole with a stone. The woodchuck gets hungry, eats the turnip and his home becomes his grave without any further trouble.—Exchange.

FOREST AND STREAM, the favorite paper of those who handle rod or gun, never flags in interest, but keeps one in tune with wood and field, lake and brook, all the year round. The current issue for this week is an "Adirondack Number," and is in itself worth as much as many a book of travel or adventure.—Baltimore Methodist.

Game Bag and Gun.

THE FULL TEXTS of the game laws of all the States, Territories and British Provinces are given in the *Book of the Game Laws*.

THE NEW YORK ASSOCIATION.

Editor Forest and Stream:

Sportsmen throughout the State cannot fail to have been impressed with the truth and importance of the suggestions offered by Gen. Bruce in his cogent discussion of the protection of fish and game, published in the last number of the *FOREST AND STREAM*. His opinions are founded on a wide experience and on long study. He has brought forcibly to the minds of all thinking men the urgent need of immediate and vigorous measures to protect our forests, fish and game. Innumerable arguments can be brought forth to illustrate the danger that confronts New York State in this direction, but they are unnecessary; every one who has given this question the slightest thought realizes the condition of affairs. The problem before us is how to render the greatest service, by what means can we accomplish the most toward the protection of our wild lands and streams.

It is undoubtedly true that the New York State Association for the Protection of Fish and Game has to some extent departed from its original purpose. Of late years trap-shooting has largely occupied its time and attention, and yet the records of its annual meetings will reveal the fact that each year the old idea has cropped out, at each convention some effort has been made to revive the purpose for which the Association was established. At the recent convention at Rome the resolution there presented denouncing the destruction of the Adirondacks were most enthusiastically received and unanimously adopted. This shows that the State Association has not entirely forgotten its original purpose, and that the proper spirit still exists in the minds of its members. All it needs is to have its designs and efforts systematically organized and promoted under competent and interested men.

During the last five years the individual clubs composing the State Association have done good work protecting game and fish. At the hearing before the Assembly Committee in Albany last winter the prominent clubs had representatives to plead for the codification of the game laws, and central New York sent a delegation of about fifty men to urge certain provisions which they deemed for the best interest of the whole State. Several new clubs have recently joined the State Association whose sole object is "protection and preservation," who have no other purpose and indulge in no other business or sport. These facts further show the good material still existing in the old association and strengthen the contention advanced by Gen. Bruce that the State Association can bring about the desired results.

The next annual convention will be held under the auspices of the Onondaga County Sportsmen's Club, at Syracuse. It is the club's intention to make every effort to bring together not only trap-shooters, but also a large representative gathering of sportsmen, whose main object shall be the protection of fish and game. It has been suggested that on Monday evening, the first night of the convention, all routine business be completed, and that the second meeting night be devoted exclusively to the adoption of such measures as will best carry out the Association's original purpose. Each club will be early requested to choose its delegation with this meeting in view, and a general invitation will be extended to all clubs and individuals throughout the State, not now members of the State organization, to seek such membership at the first meeting, and so be in a position to take an active part in the deliberations concerning forests, fish and game.

At this latter meeting let each club designate the man among its members best qualified (having the time, enthusiasm and experience) to occupy the position of committeeman. Let this body compose a State committee, which shall with the officers of the State Association and as a part of the latter organization have sole and entire charge of the protection and preservation of fish, game, and forests. Let this committee select its own officers and hold a meeting at Albany each winter during the session of the Legislature to decide upon its course and to urge its recommendation upon our law-makers. In this way the best men will be brought together for concerted action, and a good attendance at the Albany meeting will be assured. By this course the State Association, with its large number of members, will be directly interested, offering political advantage and influence which comes from numerous and diversified interests. The State shoot will be an attraction which, coupled with the fish and game protection plan, will give a larger field to draw from than could probably be obtained in any other way.

The various committeemen ought to be able to bring the influence and efforts of their respective clubs to bear on whatever work or plan the central committee deemed advisable, and the responsibility being thus centralized, if proper and effective results were not accomplished, it would be easy to locate the fault and to remedy it.

The Onondaga County Sportsmen's Club is deeply interested in this subject, and for many years has spent much time and money in its efforts to protect fish and game. One of its objects in wishing to hold the next convention was to revive the Association's original purpose and to do all in its power to make this revival lasting. However indifferent the trap-shooters may have been to this purpose in the past, they are after all the men as a whole most interested in the protection of fish and game (they are nearly all fishermen and hunters), and with the infusion of a new element into their ranks devoted exclusively to this original purpose, a larger, more powerful body can be brought into active service than could be obtained in any other way.

If men of Gen. Bruce's type and all interested in this subject will join with us next spring in an effort to effect within our ranks an organization such as has been here scantily suggested, what would then be wanting as a nucleus, about which can be gathered power and influence enough to accomplish wise effective legislation and the efficient enforcement of the same.

But this is a question of vital importance, far-reaching in its effects, it concerns not pleasure alone but the health and prosperity as well of the whole people of this great Commonwealth, it is neglected in a way that forebodes disaster, it is indeed terrible to think of the ruthless des-

truction of fish and game that has gone on for years and is still going on. Worst of all is the devastation of the Adirondack wilderness, that great haven of rest and source of health, and whatever is for the greatest ultimate advancement of a plan or organization which will effectually and permanently protect and preserve our forests, game and fish, whether it meets our individual opinion of not, will receive the hearty support of the great majority of members of the New York State Association.

HORACE WHITE.

GUN GOSSIP.

THE pages of *FOREST AND STREAM* bear expressive witness that there are few subjects on which more diverse views are held than in matters pertaining to guns and shooting. It can do no harm, therefore, for any of us who have any opinions, solidly based on experience, to give them. Then, the novice by reading can find any style of argument that suits his own particular predilections and prejudices, and will be able to buy just what he likes.

I am not of much account as a shot, still less do I know it all; but I have had some experience, and can see an aperture in a step-ladder when it is held squarely between me and the blue ether. I have owned and shot guns of bores from 20 to 10, of lengths of barrel between 26 and 50 in.; of all patterns and actions, from the flint-lock to the "latest agony," the hammerless.

Some years ago I gave at length my conclusions as to the killing power of large and small-bored and long and short-barreled shotguns. They were, in brief, that long barrels were better killers than short, and that the small bores could not stay in with the large.

I have a great partiality for small-bore guns; and have owned three times as many smaller than 14 as I have larger. Though there is not so much difference in the penetration given by a good 20 and a good 10, as many would suppose, the latter is much the superior of the former on game. Both of the shotguns I own now are 12-bores. I wouldn't shoot either of them any more if I could find a 16 that would do their work.

Every little while the man who does not like choke-bores has his say, and we are told that the rage for close-choked guns is subsiding. Perhaps in this, as in some other things, I am slightly eccentric; but I think as highly of the full-choke as of any modern improvement. You can't make a cylinder shoot a very close pattern, but by a proper manipulation of the wadding and lessening the weight of shot a full-choke can be made to give a sparse enough pattern for brush shooting; and it is one's own fault if he shoots his game to eternal smash.

For wildfowl a full-choke is, in my opinion, the only gun. To stop a strong-flying duck, so effectually that you can be assured of finding him within three feet of where you marked him down, requires a gun that will send plenty of shot right where you aim. Better it is to make a clean miss than a half kill. In three seasons, from '84 to '88 inclusive, I spent four nights out of each week in a famous fly-way for ducks. I shot an 8 lb. 12-bore, full-choke American-made gun. There were three other regular habitués of the place, who all used cylinder guns. In cogitating on the situation one evening, the thought struck me that if the so-called express systems were good in rifles, why not apply something analogous to it to chokebore shotguns? Straightway I set about experimenting. I finally adopted the following load, at which the brethren can laugh as much as they like—it was no laughing matter with the ducks: 4 dr. powder, 1 oz. shot, 6 in the right and 4 in the left. After that I lost just one cripple—the others lost two or three a week. I wasn't particularly noted for the number of birds I killed, but when I hit one it was twilight with him right then; and I killed at longer ranges than any one in the crowd. The gun I shot then was a peculiarly bored weapon. After I got the hang of loading it, it made a very even pattern, remarkably free from patches; yet one barrel would throw from six to ten pairs of shot in such a way that one cut about half on the hole made by the other. Wherever a pair of these twins struck the penetration was nearly double that of the rest of the charge. Where only a few pellets were taken, a gun like this would roll up a mighty record in a penetration test. It would shoot all sizes of shot well up to A; above that it was worthless.

The appearance of the modern hammerless comes in for much adverse criticism. An old proverb says, "Handsome is that handsome does." I readily admit that at first sight it doesn't impress the old-timer favorably; but now that I am used to it, to me it looks a clean, trim, businesslike weapon—the peer of any made in any age, and I have seen them all. For practical worth, it beats the collection. It is handy and safe; and you never fail to ring in that second barrel when you want it because it is not cocked. My position in connection with the hammer and hammerless actions, is something like that of the "Canny King of Kent," who, while he raised a large altar for worship, erected a small one in a corner for Satan; just to show "that he meant him no dishonor." My favorite is an American-made hammerless. The other, which I seldom use, is an English hammer, that, though in the matter of ears it might not run a jack rabbit a very close race, would certainly scorn to ask any odds of a Virginia mule. Average the two, and they make a pair of nice hammer guns.

Occasionally we hear some talk about English vs. American guns. The person of moderate means, for whom either is not good enough, is, it seems to me, very much like Uncle Lisha's customer, who objected because the old shoemaker made him a pair of "right and left" boots on a "right" last—he's "too dum p'ticklar." Ten years ago the English were far ahead, for few American makers then used even the extension rib. But between the years '81 and '87 American gunmaking advanced with a length of stride of which its friends may justly feel proud, till now, for variety and ingenuity, the American actions lead the world, in shotguns as in rifles and revolvers.

It widens a person's views a little to get out from home and see what is actually on the market. In '87 Greener was supposed to have a monopoly of the automatic ejector principle. Yet in the spring of that year I found a hammerless gun manufactured by D. Kirkwood, of Boston, well balanced, well finished and a good shooter, which would eject automatically in as good shape as any gun made. Mr. Kirkwood told me that he had been making the same gun for four or five years.

BLOOMFIELD, N. B.

L. I. FLOWER.

MOOSE HUNTING IN NOVA SCOTIA.

LEAVING Lewis's Wharf, Boston, Sept. 16, on steamer Yarmouth, I arrived at Yarmouth, Nova Scotia, the next morning. Going out on the wharf I found Nat, who was to meet me here. Dumping my duffle into the wagon after it had been "gone through" by the custom house officer and a deposit left on the guns we proceeded at a smart pace up the hill to Jones Hotel, where, while breakfast was being prepared I put on my camp toggery.

The pleasure of getting into rough clothing on such an occasion as this is known only to those who "have been there."

Our provisions having been securely boxed and placed on the wagon we started. We stopped at Gilman's at Tushet, for dinner. Here we had the pleasure of meeting four sportsmen from Boston, and were in time to help them dispatch some trout they had just brought in. Mr. Gilman had taken them up to the Forks for a few days, where they had had good luck with the trout and partridge.

A railroad runs from Yarmouth up the west coast of Nova Scotia, this side being thickly settled, and most sportsmen go up to some of the towns there and "go in" after moose from them. I prefer going in from Yarmouth first because it is the cheapest and fewer go in from there. The Tusket River runs for many miles through this part of the country, its headwaters being in a splendid moose country. There is excellent trout fishing in the river, but the canoeing facilities are poor, owing to the many rapids, which is a lucky thing for the moose.

It was long after dark when we arrived at Rockingham, Nat's home. We were welcomed by good Mrs. Forbes, who proceeded to spread before us poor rain-soaked travelers moose steak, apple jam, hot biscuits and coffee; and to me it was a glorious repast.

Sept. 18.—Arising early I found it still raining, as it had been, according to Nat, for ten days past. After breakfast, Nat's brother John, who is to be my moose caller, came round. He is a fine specimen of the Scotch American, just in his prime, sturdily built, and with the reputation of knowing more concerning the habits of moose than any man in the country. Last spring John burned over a large tract of woods seventeen miles further in, and he was going to take me there, feeling confident we would find moose there, attracted by the tender shoots which had sprung up since. But to get there we would have to cross the Tusket River twice, and owing to the present freshet he was afraid the oxen could not make the trip. We had to take our duffle in on an ox team. He proposed that we spend a few days with a party of log drivers, and we started at once for their camp, five miles away, reaching there in time to help them dispatch their dinner of spuds, salt mackerel and tea. That afternoon John went with the loggers, and taking my shotgun I sauntered out back of camp looking for partridges.

The country here is simply barrens and swamps, huge tracts of land having been desolated by previous fires. These barrens in some places are almost covered by quartz boulders, and sometimes stretch for miles, bounded on either side by swamps covered with hackmatack. The swamps are usually narrow, and crossing one we step out on another barren which looks like the one we just left, so that it is very easy for a tenderfoot to become lost.

Tramping along the edge of the barren I came to a hard timbered ridge, and succeeded in knocking down a couple of partridges. They were so tame I could have killed them with stones. I then turned back, not caring to stray too far. On my tramp I saw at least a dozen rabbits. The last one presented such a pretty shot that I bowled him over.

It is interesting to watch these woodmen erect a camp. They look on trees as their natural enemies and show them no mercy. Most of the timber here is spruce, pine, "fire" and tamarack.

We moved the camp on Friday morning to the two forks of the Tusket at the head of a rapids, where the logs had become jammed. The men went to work on the logs, leaving Orin and me to build camp. I held down the log while Orin did the erecting. Cutting two crotched poles 8 ft. long he jammed them into the ground about 20 ft. apart, then placed a cross pole in the crotches and then placed a number of birch poles sloping from the cross poles to the ground, binding the whole firmly together with withrwood. Over all was stretched a huge piece of No. 8 duck and bound firmly to the framework. Then breaking off armfuls of spruce branches he proceeded to shingle them into the ground, beginning at the foot, and soon had a soft mattress made, being the nicest bed I ever slept on. Then he fixed the fire for the night. Felling some large birches he drove some back stakes 3 ft. from the shanty and piled up against them four logs 10 ft. long and a foot thick for backlogs, placing near a number of logs to "nigger" in two, together with bark, deadwood and chips enough to last a week. It was a healthy, dry, warm camp, and was built almost as quickly as I can tell it.

At noon it stopped raining, the sun came out, the wind shifted to the west and John came to camp after me to go with him over to Dennis's Lake to try for a moose. Quickly tying some grub in a pair of blankets John slung the bundle over his shoulder and picked up his old Sharps .50 cal., with his caller stuck on the end of it, and we were off.

Crossing the river in the loggers' scow, we tramped three miles over barrens and through rough swamps and arrived at the lake. A little searching brought us to Dennis's shanty, containing two bunks, a stove, table, stools, etc. On the way we saw plenty of fresh moose sign. We smoked and John spun yarns until dusk, and then had supper. Starting a fire in the stove, John put on a kettle of water to boil and then discovered he had forgotten to bring any tea. So, Indian style, he made a decoction of spruce, and we satisfied our appetites with spruce tea, bread and apples. At dark we went back of the shanty to listen, hoping we would hear a moose calling, but heard none. John felt quite sure there were moose here, however, having seen plenty of fresh sign. The nights were getting quite chilly now, so going back to the shanty we kept a rousing fire going and talked and smoked long into the night.

Sept. 19.—There was too much wind this morning to expect good calling, but we went over some distance, and John climbed on to a boulder and began calling for a bull. A caller consists simply of a strip of birch bark about

10in. wide and 1ft. long wound into the shape of a funnel and tied.

After listening for some time John thought he heard something down in the swamp. After waiting awhile longer we went down there and found tracks only a few minutes old of a young bull. The bull had undoubtedly scented us and turned off at a sharp angle. John and I returned to Dennis's shanty, got our breakfast and then started back to the loggers, arriving among them at noon.

Sept. 20.—John and I walked from Nat's over to the Tusket River, about a mile, and I cast my first fly in Nova Scotian waters. We had splendid sport. I gathered forty ranging from $\frac{1}{2}$ to 1lb. in the morning's fishing. In the afternoon we took a tramp through the woods, John showing me some traps he had set for wildcats which are numerous here; one had killed six of old man Forbes's sheep the winter before.

Sept. 21.—We were up at 4 A. M. loading our duffle on the ox team and were off at 8, John, I and Sylvanus, a boy we took along to mind the oxen. The oxen have to be carefully watched. They can scent game like a dog and if they smell a bear or moose they become frightened and if loose are very apt to take a straight cut for home. They got away from Sylvanus once on this trip and it took several hours of hard tracking to find them. I have great respect for oxen, for I find they will do anything but climb trees.

Our road soon became a loggers' road, then a trail and finally a "Nessmuk" once said turned into a squirrel path and went up a tree. John then went before with his axe and when necessary cleared a road for the team.

At noon we arrived at an old Indian camp on the Tusket, called Bartlett's, where we got dinner, and then crossing the river went on. At 4 P. M. we were in what John called good moose grounds, so we decided to camp for the night.

After supper we went out and called a while, but as there was a strong wind blowing we heard nothing and so returned to camp and turned in. In the morning the wind was still blowing. Breaking camp we moved on and were soon at the headwaters of the Tusket, at Oakland. A few miles further and we put up our camp in what John called the best moose ground he knew of. Moose hunters, however, around here consider the "Devil's Den" as the best place. This is a large swampy thicket surrounded by half a dozen lakes, situated about five miles from Oakland; and a fall never passes but what a number of moose are brought out of the "den."

In the evening it began to rain. We went out on the barren and called. After a while we heard a big bull traveling by in the swamp. John called to him but he paid no attention, so I hurried down to meet him; but he traveled faster than I, evidently bent on getting somewhere, and I missed him. Returning to John, we waited a while; but as it was now raining hard we returned to camp.

Sept. 24.—Called this morning with no better luck. We then looked around our calling ground and found tracks of two bulls which had evidently answered the call last night. They came up after we had returned to camp and one of them must have stood in a clump of tamarack a hundred yards from our boulders for some time, evidently wondering where that cow was.

In the afternoon we went still-hunting and came upon one of John's old bear traps. He told me how, a few years ago, he visited this trap and found a large bear lying beside the trap with one foot caught in it. At first he thought it was dead, then something in its appearance made him think it might be playing "possum," so he started back from it, when it started up with a growl and nearly tore its foot loose in its rage. A couple of bullets soon put it beyond doing harm.

We finally struck fresh tracks of a young bull and followed them to a swamp. Leaving me posted on the barren, John went in. Finding the tracks led to leeward he came out again and skirted along the edge of the swamp, which was small, until he came to its end, and then started on a run into a thicket of young alders. I waited now with great impatience, expecting every second to have the moose come dashing out of the swamp. Suddenly I heard John call. Pretty soon he appeared at the swamp and beckoned to me. Going down he showed me the track of the bull, which was running and had gone out on the other side of the swamp. John heard him get up with a grunt when he rushed into the thicket, but did not see him.

Returning to camp we had a rousing supper, and as there was a strong wind we did not call that night. It began raining at midnight and poured steadily until noon the 25th. In the evening we went out again. Heard some hard firing a few miles away and decided some other fellows were having better luck than we were.

Sept. 26.—We went this morning two miles from camp to call. Heard a bull and thought he would come to us. Waiting a while, John went over to a ridge to see what had become of him, and found traces of a cow and bull. We followed, tracing them across two brooks. Finally they began to run, having either seen or heard us, so we returned to camp. In the afternoon we went over to Oakland Deadwater and had some sport with the trout. We hoped to shoot a few ducks, but did not see any. We met a couple of Canucks prospecting for gold, and they told us that several parties in the "Den" had hauled out their moose. I was for going there the next morning, but John wanted to wait, asserting that we had had poor weather so far.

Sept. 27.—This evening it was perfectly calm, the moon came out full and the air was frosty. Going a few yards back of camp, John called and was answered by a bull. We waited; heard nothing for an hour. I began to be impatient. John said the moose was around yet, but was timid. Sometimes they will stand on the edge of a swamp for two or three hours listening.

Suddenly from behind a big boulder stalked the moose and stopped in a clump of tamarack, thirty yards away. Raising my rifle, I aimed low down on his shoulders and fired. He gave a great bound; then John pulled and he started over the hill like lightning. John felt sure he was badly hurt and that we would find him in the morning. Returning to camp, we cooked a second supper and felt very jubilant.

The next morning we traced the moose some distance, his tracks leading to a swamp. We found where he had lain down twice a short distance from where we shot, and also found considerable blood. Feeling confident that we would find him in the swamp, we went in carelessly. He had lain down three times within a few yards

of the beginning of the swamp; and while examining one of these beds we heard him get up and "git" a little further on. John ran on and out on the other barren calling. I felt rather crestfallen. If I had not been so careless and had gone around the swamp while John went in I would probably have dropped him. As it was he got away, although badly hurt, having lost lots of blood.

As it was Sunday we loafed around the camp the rest of the day. We decided to break camp the next morning, spend the following night in the Devil's Den and then make for Nat's.

So the following day we started, crossed the Tusket and arrived in the Den in the early part of the afternoon. We camped in a swamp; saw plenty of sign. Called in the evening. Heard a cow which John thought was the calling of some other hunter. In the morning wind blowing a gale and we started home after dinner. Arriving at Nat's the next afternoon, we found that several parties had come out with moose, one party bringing out two. Nevertheless I believe our poor success was owing to the weather, strong winds blowing all the time we were out, except one night, and then we had a shot. Such is a sportsman's luck. The two nights spent in journeying home to New York were the finest I ever saw for calling. Well, the trip is over, and I am sitting before the open fire again with my pipe for company. Although I shot no moose I gained twelve pounds, and added to the bank of health no small amount.

Game or no game, I got my full of enjoyment during my moose hunting trip to Nova Scotia. B. L. L.

DR. KIDD'S WORK AND METHODS.—The Newburgh (N. Y.) *Daily News* has this to say about State Game and Fish Protector Kidd: There appeared in the last issue of the *Kingston Argus*, under the heading of "Serve all alike, Doctor," an article which read as follows: "Dr. Willett Kidd, Game Protector of Newburgh, has caused the arrest of two men for fishing for trout contrary to the law at Phenicia, Ulster county. All hail! You are engaged in a laudable work; but we fail to hear of any arrests you have made of members of New York fishing clubs who have their huts in the country, and who openly violate the Sabbath by fishing Sundays. These cheeky fellows lease streams after having been stocked by the State hatcheries, for whose support every taxpayer must contribute, and then post notices forbidding any resident of this county to catch any of their fish, while they themselves openly violate both law and decency. If Kidd will display as much energy in the future in punishing these gentry from New York, who openly violate the law, as he has in the past hunting up little boys and men ignorant of the law in the county, he will be in much better business than he seems to have been in of late." This literary effusion is merely amusing. The writer of the paragraph starts off by praising Dr. Kidd for his suits against Mr. John Quincy Adams Ward, the celebrated sculptor, and his friend, the eminent Mr. Josiah Wentworth, of New York, and winds up by talking about that official "hunting up little boys and men ignorant of the law in the county." And yet, when we consider the matter, Dr. Kidd has found more ignorance or pretended ignorance of the law (and everything else) in Ulster county than he has discovered in all four of the other counties of his district rolled into one. The fact of the matter is that the vigilant game protector has never yet started a suit against a boy. He has found many violators of the game laws in Ulster county, but they all ranged in height from 5 to 7ft. If they were giants of 10ft. he would make it just as hot for them as he does now. Some of these Ulster county men, notably Carl Smith and Smith Mance, of Ellenville, have paid the penalty by being imprisoned in the Kingston jail, while others have paid fines for their misdeeds. And, come to think it over again, Messrs. Ward and Wentworth did their illegal trout fishing last April in an Ulster county stream of the former, such as the *Kingston Argus* man refers to when he bewails the alleged fact that Dr. Kidd don't "go for" the members of New York fishing clubs. Does the *Argus* man term Delmonico, Morello and the other New York restaurateurs against whom Dr. Kidd has begun suits for alleged violations of the game laws "little boys?" No, it looks as though some friend of the *Kingston* editor had taken into the hands of the law through the vigilance of the game protector and that the editor was seeking to have revenge on that official, for we don't want to be obliged to think that the *Argus* man's name should be added to the list of Ulster county men whose ignorance is dense. From an acquaintance of many years standing with Dr. Kidd, we long ago concluded that he was a man of the utmost fairness in the discharge of his official duties. He shows no partiality in hunting up game law cases. But it is a very difficult matter sometimes to secure evidence in cases that come under his jurisdiction. We can safely say that if the *Kingston Argus* writer has personal knowledge of any violations of the game laws in his county and will back it up on the witness stand, Dr. Kidd will proceed as soon as possible against the guilty persons. It matters not if the violators of the law do hail from New York or are Vanderbilts or Astors.

HOW A SWAMP HAS BEEN DRIED UP.—Piper City, Ill., June 29.—A few years ago the Vermilion swamps, north of this place, furnished great sport to Chicago and Peoria hunters, who came out here every spring and killed large numbers of ducks, brant, geese, etc., and shipped them to the cities. Thousands of these birds were annually shipped from here every week during the season, local hunters sending in their share too. A great change has taken place since then. The swamps have been drained out, and where the sportsman hid in the thickets not long ago the farmer boy is "going through" his corn for the last time before "laying bye." A thirty-foot ditch is all that remains of the places where, as one writer describes it, the "birds made such an infernal racket that sleep was impossible until long after midnight. Couldn't get a wink. Just as he was dropping off to sleep a roar like artillery would suddenly arouse him, as thousands of geese rose and circled over the water, alighting again to the increased music of ten thousand rancorous throats." Our "shootists" now go to Beaver Lake, Indiana, when they want to shoot ducks. Very few have been seen the past spring. Prairie chickens and quail are plenty around here, and great sport is expected with them this fall.—H. P. B.

THE HASBROUCK HEIGHTS FIELD CLUB opened their club grounds July 4.

DEATH OF JAMES TERPIN.—Lexington, Ill.—James Terpin died at his home in Lexington, Saturday, June 20. He was a famous hunter and enjoyed the distinction of being one of the very few men in this section of the country who knew perfectly well the haunts and habits of local game. As a judge of native game he stood at the head of local sportsmen. His knowledge of the art of approaching wild game was considered very fine. Sportsmen throughout the State knew him as a quiet and unassuming gentleman. He was 37 years old.

Sea and River Fishing.

THE FULL TEXTS of the game fish laws of all the States, Territories and British Provinces are given in the *Book of the Game Laws*.

KENNERLY'S SALMON.

THE smallest known salmon of the Pacific region is the one first described by Dr. George Suckley in 1861 under the name *Salmo kennerlyi*—Kennerly's trout or Chiloweyuck red salmon trout. In 1862 Dr. Theodore Gill proposed to establish for this species the new generic name *Hypsigaster*, because of its "compressed body, projecting snout, etc." The remarkable changes in the Pacific salmon during the spawning season were at that time less known than at present. About 1882 Dr. David S. Jordan examined the *Salmonidae* in the National Museum in Washington, D. C., and came to the conclusion that Kennerly's salmon is identical with the common red salmon or blueback of the region (*Oncorhynchus nerka*), and this belief was generally accepted as final. The material bearing on this relationship, however, was chiefly the actual red salmon collected by Capt. Charles Bendire, U. S. A., and the individuals were considerably larger than the Kennerly's salmon to be discussed in this article. Since the time of Dr. Jordan's study of the Museum specimens we have received new material and recent information, which enable us to place the species, as I think, in a different light and to contribute something of interest to its life history. On Nov. 26, 1888, and Oct. 8, 1889, Prof. O. B. Johnson, of the University of Washington, Seattle, Wash., collected for the Smithsonian Institution a large series of these small salmon in a little stream tributary to Lake Washington, near Seattle. In March, 1891, Dr. George M. Dawson, of Ottawa, Canada, sent the writer a photograph of one of the fish which he found in Nicola Lake, British Columbia, Sept. 7, 1890. Each of these gentlemen added something to our knowledge of the habits of the species.

This recent material includes only salmon in or near the spawning condition, yet it seems to me now sufficient to warrant the separation of Kennerly's salmon from the red salmon as a subspecies at least and I would write its name *Oncorhynchus nerka* subspecies *kennerlyi*. In the first place, Kennerly's salmon becomes sexually mature when only 8in. long and seldom exceeds 10in. at any time of life. It has about 30 gillrakers, while the red salmon has about 40. Its fins are much larger than those of the red salmon. It lives permanently in fresh water, most of the year in deep parts of lakes, from which it runs up small tributaries in autumn to spawn.

Names.—Dr. Suckley first described the species as Kennerly's trout, or the Chiloweyuck red salmon trout. The Indians of the Chiloweyuck Lake region call it *Tsi mia*. According to Dr. George M. Dawson the Kamloops Indian, or true Shuswap, name of the fish is *Kuk-en-owh*. The Okanagan Indian name, *Kuk-en-eh*, slightly differs. Since the affinity of the species to the genus *Oncorhynchus* became known it has been called Kennerly's salmon.

Size.—The types of Dr. Suckley's description were 10 to 11in. in length, and there was no difference between the sexes except in shape and in the development of the jaws. Some sexually mature males and females received from Prof. O. B. Johnson were scarcely more than 8in. long. Dr. George M. Dawson wrote me that the salmon "is seldom over a foot long, generally about 10in." Numerous specimens observed by the writer range from 8 to 11in. in length. The average adult Kennerly's salmon weighs scarcely $\frac{1}{2}$ lb., while the average weight of the adult red salmon is 7 or 8lbs., and examples of 15lbs. have been reported.

Distribution.—The most southerly locality at present known for this salmon is Lake Washington, near Seattle, Washington, in a small tributary of which Prof. Johnson found the species spawning near the end of November, 1888, and early in October, 1889. Dr. Kennerly believed the fish to be peculiar to Chiloweyuck Lake (north latitude 49°), near Fraser River, and east of the Cascade Mountains. He was informed by Indians, however, that it inhabited two other lakes of the region. Mr. Gibbs had it from the Nahoi-ai-pit-kun River, west of the Cascades. Dr. Dawson wrote me as follows concerning it: "I know this fish is common in many of the large lakes of British Columbia. I have seen it in Nicola, François, Fraser and Okanagan lakes, the first three tributary to the Fraser River, the last to the Columbia. Nicola Lake is about ten miles in length, it is on the course of the river of the same name, which is a tributary of the Thompson. The lake is a little north of latitude 50°." The little river in which Dr. Dawson observed them early in September, 1876, and which connects Fraser Lake with François Lake, carries the distribution up to north latitude 54°. Prof. Macoun informed Dr. Dawson that he caught Kennerly's salmon with a spoon bait on Arrow Lakes, Kootanie Lake, and on the Columbia River a few miles below Arrow Lakes in June and July, 1890. In August, 1877, Dr. Dawson saw the fish in Eagle Creek, a tributary of Shuswap Lake, emptying near the present position of Sicamous Station, on the Canada Pacific Railway. "All the lakes mentioned," writes Dr. Dawson, "are in part of their extent deep and clear, and all are or may be reached by the salmon from the sea (generally, I think, the *sau-qui*), except Kootanie Lake, which is cut off by a fall. There is, also, in the last-named lake a larger fish, which I take to be a landlocked variety of the spring salmon [*O. chowichal*]." Capt. Charles Bendire, U. S. A., has informed me that obstructions in the Kootanie are occasionally overcome in heavy freshets and the king salmon (spring salmon of Dr. Dawson) pass up into the lake and become landlocked. It may be that Kennerly's salmon owes its origin to a similar modification of the red salmon, but of this we know too little to indulge in theories.

Habits.—Dr. Kennerly was told by an Indian that this fish never descends into smaller streams and never goes

to the sea. Dr. Dawson wrote as follows: "The Indians all affirm that this salmon lives throughout the year in the various lakes in which it occurs, only leaving them to run up certain streams to spawn in the autumn." In August, 1877, at Eagle Creek, he was assured by Indians that the little salmon does not go to or come from the sea, but ascends from the lake to spawn. The ascent of the streams for reproduction begins early in August, and in one instance, mentioned above, Prof. Johnson observed them as late as Nov. 26. The height of the run seems to vary with the latitude, as in salmon generally. Dr. Dawson's letters to the writer contain the following reference to the death of Kennerly's salmon after spawning: "In the first week in September, 1877, they were very abundant in streams along the west side of Okanagan Lake, and last autumn, on Sept. 16 and 17, I noted them again in these streams, particularly in that known as Bear's River. In my notebook, under date of Sept. 16, and referring to this river (again a small stream) I find the following: 'A great number of little salmon-like fish, apparently running up to spawn. It is singular that though they have evidently been long in the stream (from the livid red color of many of them, their frayed fins and tails, with white fungoid growth in places) they have not got further up the river, which offers no particular impediment to their ascent. They cannot all have spawned, as many still hold spawn and milt. Indians say that they all die in the streams and do not return to the lake. Many were dead along the stones, and the crows had collected in great numbers in the vicinity. This was within a quarter of a mile or less from the mouth of the river on the lake.'" Dr. Kennerly noted that the species disappeared suddenly about Sept. 1 at Lake Chiloweyuck. In the course of spawning the fish crowd into very shallow brooks, where they may easily be taken with the hands. "The ova," writes Dr. Dawson, "struck me as being rather large and few in number for the size of the fish."

Abundance.—Kennerly's salmon appears to exist in large numbers wherever it is known to occur. When

ON THE NORTH SHORE.—X.

[Continued from Page 474.]

THE next morning disclosed a bright sky brilliant in soft feathery masses of clouds; a lake in gentle wavelets of lovely sparkle, and an atmosphere of inspiring quality. Immediately after breakfast word was given to break camp and head for Aguawa River. The boatmen moved with alacrity, for they were both yearning for the return trip, particularly Joe.

There was hardly breeze enough to keep the sails spread when we started, and resort was therefore had to the oars. We rounded into the bay a mile or two from camp, in order to give Joe an opportunity to see the Indian who had moved his quarters from Jackson's Cove and had located here. He was to give Joe a final answer about a small boat he contemplated building. The Indian was up on the high hills when we stopped at his wigwam, but a halloo or two soon brought him to the beach. He followed us along the craggy shore some distance chatting with Joe, until finally he closed the contract for the boat. We told the boatmen to push along lively, as we had had Chippewa talk enough for one day. Thus urged, they bent to their ash-blades quite lively, while we feasted with admiration on the bold and pleasing coast pictures that were continually passing in review.

By 10 o'clock we reached the picturesque group of islands that form Aguawa Harbor. They presented a grand and impressive appearance as the cheerless and blackened bulwarks of flinty granite came into view. Many of their shore lines rose from the lake as straight as a plummet falls, while others gently sloped, as if they courted companionship with the murmuring waters. Between many of these islands the channel is of sufficient width and depth to permit of the passage of steamers, which frequently pass through them when passing this way in order to give the passengers a view of the charming group. On many of the bold bluffs, like the pictured rocks of the south shore, you can find almost any design, if you are only a little fanciful. On one of these rough

one had a bait-box strapped around his waist—a lamentable sight, I assure you. They knew nothing about the gentle art, and had no desire that way, and moreover stated they could discount all the fly-fishermen they ever saw by the use of the anglerworm. This boastful talk satisfied me that argument on the beauties of "the contemplative man's recreation" as an accomplishment would avail nothing here, so I declined discussion on the subject, knowing full well it would simply be casting pearls to pot-hunters.

I can excuse the use of the "barnyard hackle" in certain conditions, but how one can taint the crystal waters of Lake Superior or its rivers with a dirty wriggling anglerworm, when the fly will secure all the trout an angler desires, is beyond my comprehension. I should think the presiding deities of the aqueous realms would rise in rebellion at such desecration.

The anglerworm party stated they had frequently fished the river in the past, and intended going in the morning to the big pool at the falls, five miles above. They were to go on foot by the forest route, and then return in canoes with Indians which they had previously engaged to meet them there.

About 4 o'clock we took the boat and ascended the river as far as we could, about a mile and a half. We found no trout that desired to change their element, only having one or two rises from some of the fingerlings that abound in the stream.

The Aguawa is a fine sheet of water of about 100ft. in width at its mouth, and abounds in numerous ripples, rapids and cascades. Five miles above its mouth its sparkling waters come tumbling and foaming over a ledge of ragged rocks, some 75ft. in height, into a granite basin below of magnificent proportions, in which the trout, with a singular regard for picturesque scenery, love to dwell. Turn to the left, and a range of granite mountains with sugar-loaf tops confront you, with their scarred sides in spruce and fir that crowd to the very water's edge, and impress you with their singular fascination. Follow the winding river as it threads its mur-

KENNERLY'S SALMON (*Salmo kennerlyi*).

first seen by Dr. Kennerly in a small stream tributary to Chiloweyuck Lake, he reported its presence in vast numbers. In company with Capt. Woodruff and several men he went to the brook Aug. 17, and the party caught 180 of these fish with hook and line. About Aug. 10, according to the same authority, they appear at the mouths of all the small streams emptying into the lake in such immense numbers that they can be caught with the hands. Among a thousand or more specimens taken near Seattle, and observed by Prof. Johnson, the females were as plentiful as the males. In the first week in September, 1877, Dr. Dawson found the species very abundant in streams along the west side of Okanagan Lake, and Sept. 16 and 18, 1890, he noted them again, particularly in Bear's River.

Associates.—In Kootanie Lake Dr. Dawson observed what he believes to be a landlocked variety of the spring salmon (*Oncorhynchus chouicha*). Prof. Johnson noted an occasional silver salmon (*O. kisutch*) and a few large red salmon (*O. nerka*) in company with Kennerly's salmon. One of the active enemies of this little fish is the che-wagh, mentioned by Dr. Kennerly, now better known as the malma or Dolly Varden trout. In a che-wagh weighing 9½ lbs. the Doctor found two whole salmon of this species.

Form and Colors.—Dr. Suckley described the fish in the following terms: General color red, dingy along the back, paler on the sides, and fading to pure white on the belly, small, irregular black spots above the lateral line. Pectorals bluish, their tips slightly grayish. Dorsal and ventrals red. Tail slightly spotted. In the female the general color is red, but slightly darker than the male. In other respects the sexes appear to agree. According to Dr. Dawson "the back is dark gray, slightly reddish; the belly bright silvery, shaded with gray. Flesh red, about the same as that of the saw-quit (*Oncorhynchus nerka*). In June and July, when seen by Prof. Macoun in the upper Columbia, the back was steel-gray in color, with no trace of red. In form Kennerly's salmon is a diminutive copy of the red salmon, as will be apparent by reference to the accompanying illustration, which Mr. Baldwin has made for FOREST AND STREAM from a specimen belonging to the National Museum. As usual in the genus, males have the pectorals and ventrals longer than females and their jaws are much produced and bent, while the body is distinctly deeper and, in the height of the breeding season, has a large fleshy hump on the nape.

Mode of Capture.—Not much art is required to take a salmon that crowds up into small brooks where it can be caught with the hands; but in deeper water the fish has been readily taken with hook and line, and Prof. Macoun has already been referred to as having captured them with the spoon. Indians spear them by torchlight during the spawning season and take large numbers in weirs and traps.

T. H. BEAN.

walls, some artistic (?) Indian has completed a series of pictures by cutting away the moss that creeps o'er the rocks until the flinty surface is laid bare. In these rude sculptures we observed a man on horseback, sailboat, canoe, bird and stars, all of which plainly indicate their origin, as these untutored savages have but one style of drawing, and it is not of the Rembrandt or Raphael school I assure you.

These islands are best seen on the approach of sunset; the combination of color and cloud are like visitations of ethereal light, which at times surpass all the resources of expression. This tinted beauty is only rivalled by the gathering and realization of a grand storm that battles over and against the massive bulwarks. "Then the sublime and the grand, and the awful and the terrible, are all wrought up to a fearful intensity at the same moment." Time and again have I viewed these storm pictures when my spirit would quail, and as often enjoyed the revelations of their beauty when the sea seemed to sleep and the sunset fires seemed burning in crimson and gold.

We ascended one of the group, the only one, Ned said, on which you can camp, and feasted for a while on some huckleberries, which grow in great abundance here. Joe suggested a lunch, but as we were only two miles from the Aguawa River, we declined, and ordered him to push ahead. His infernal gluttony so disgusted me that I gave him some emphatic talk, which he did not at all relish, and which I thought would result in a general row; but the trumpets were lulled in slumber, while the cheerful horns of peace were blown, amid which softened notes Joe declared he would depart for home. As we were not averse to it, and had had all the sport we desired, we gave him to understand that he could not lift the latchet of his door any too soon for us.

As soon as we landed at the mouth of the Aguawa we had our dinner before the tents were put in position. It took us but a moment to realize that we were in a small colony of sand flies in consequence of our being near the bush, and as a preventive against their sanguinary attacks resorted to the fly medicine, with which we generously smeared ourselves, and which gave us the appearance of a tawny savage. It drove the *brulots* away for the time being, and when another annoying was necessary never failed to apprise us of the fact.

We noticed a vacant tent on the beach in our immediate vicinity, and presumed its occupants were up the river in search of the tinted beauties. The surmise proved correct, for in a short time a small skiff, containing four men, put in an appearance at the tent, having come from the falls above. They had a couple of dozen of small trout, which they had caught with worms, they being strictly bait-fishermen, as they proudly acknowledged. They were provided with plain cane poles, about 12 or 15 feet long, and mounted as bass rods; and in addition each

muring way in curving and ragged lines, and a world of wild beauty unfolds itself which no artist's canvas ever presented. Carpets of lichen and moss, forests of birch and balsam, shadowy ravines and rocky ridges, lovely lakes and trickling rills, succeed each other in most entrancing disorder. If you know, as Emerson says, "What sweets and virtues are on the ground, the waters, the plants, the heavens," you will be fully qualified to appreciate the grand panorama of Lake Superior's magnificent and sublime scenery.

After supper that evening we went to a post station of the Hudson Bay Co., a few rods away, which is kept by Wm. Fanning, a half-breed, who it is reputed rejoices in the possession of three lovely daughters of mature years. Joe had time and again spoken so highly of their peerless charms that we had an inquisitive desire to see them. Ned wanting to purchase a pair of fine point blankets at this post to take home with him, gave us the golden opportunity of gratifying our curiosity regarding these woodland nymphs of the tawny hue. Arriving at the dwelling we knocked, and one of the trinity admitted us. She was tall and exceedingly graceful and symmetrical in figure. Her face had the strong half-breed complexion, with a skin finely transparent, eyes large and expressive, and hair long and dark as a raven's plume, which, when free, rolled in tresses of rich abundance. Her dress simplicity itself, and her deportment quite lady-like. She was withal quite a prepossessing looking maiden, and many a dusky lover enamored of her winsome charms, has doubtless chanted his *chansons* of love to her in the quiet hours of the night, with a fervency relating that

"My love, she is a handsome girl, she has a sparkling eye,
And a head of flowing raven hair, and a forehead arched and high;
Her teeth are white as cowry shells, brought from the distant sea,
And she is tall, and graceful all, and fair as fair can be.
And if with art I act my part, and bravely wooing stand,
And with address my suit I press, I gain Nimosha's hand.

"Oh, I will search the silvery brooks for skin of blackest dye,
And scale the highest mountain tops, a warrior's gift to spy!
I'll place them where my love shall see, and know my present true;
Perhaps when she admires the gift, she'll love the giver, too.
And if with art I act my part, and bravely wooing stand,
I'll gain my love's unsullied heart and then I'll gain her hand."

The raven-haired beauty waited on Ned with a business-like air, but her high tariff on the blankets prevented her making a sale. As we departed from the store, which adjoined the dwelling, the other two tawny beauties appeared. They were of medium height, buxom in form, graceful in figure and possessed very agreeable features and expressive eyes. Ned said they were of the partridge style of beauty—plump—and that he admired their style much more than that of the other. Neither of us being

infatuated with these forest nymphs, our stay was not prolonged. Joe, who had a reputation as a great masher among the dusky-hued maidens, paid them a visit, but as he soon returned to camp I was of the opinion that he failed to create any great sensation in this court of beauty. He, however, made a purchase of a knife, for which he paid the munificent sum of 25 cents.

In the evening quite a number of young half-breeds, who live here, gathered around our camp-fire and remained till a late hour, chattering in Chippewa and satisfying their curiosity concerning us. There was but one among them that could talk pigeon English, and he was the brother of the three Hebes. I noticed that nearly all of them had snooded fish hooks in their hat-bands, and ascertained, on inquiry, that they used them especially for trout. The nightmare of that 18 per cent. premium on the *fontinalis* again arose in hideous proportions. Everywhere along this coast, as far as we had been, he was ruthlessly pursued with all kinds of market-hunting tactics, that fully satisfied me that this beautiful game fish would soon be a rarity here. Shame on a Government that will set idly by, with folded hands, and see such wanton destruction!

As we were to break camp in the morning and make a trip of thirty-five or forty miles, we gave orders for the boatmen to arise early, so that we could take advantage of the morning, and soon had the boys aroused, who prepared breakfast in short order, and quickly had the entire camp dismantled and ready for the boat. A few minutes sufficed for the loading, and then we were aboard, and out of the river into the great sparkling lake, with our sails spread to the balmy breeze. The morning was a poem of supernal beauty, the sky one dense uniform rose-color from east to west—soft and shimmering—and when the sun rose over the mountain peaks, the rocks and boulders glittered in opaline tints, while the lake tossed in silver ripples that sprayed from the bow in rainbow tints. It was delightful—thus slipping through the water in such magnificent weather, and Ned, who was always enthused on such occasions, charmed us with his melodious airs. His repertoire of music, which ran in melodies the most varying, seemed almost inexhaustible and unwearying. The boys were highly delighted with his vocal strains, and when he rendered one that struck their fancy they invariably requested a repetition. Joe himself finally caught the fever, and when Ned was indulging in the luxury of a smoke he would set his mournful voice to some plaintive air that was entirely too doleful for admiration.

About 10 o'clock the breeze freshened perceptibly, and then Joe declared we would have plenty of wind before we reached a harbor. He set about arranging the freight on the windward side near the stern, so as to have the bow well out of water. Every minute there was a perceptible increase, and the water was now tossing from her bow in a white foam, while her lee side was buried up to the rowlocks. Joe said we would make a harbor in about an hour and a half; time enough, Ned thought, to create a gale that would test the capacity of the boat as well as ourselves. No one was alarmed, although we all knew what a fickle dame Madame Superior was. Many a time have I seen a sea arise here in such a brief time that I have stood in perfect terror upon the rocky shore, gazing upon the mighty billows careering onward as if mad with a wild delight; while a wailing song, mingled with the tramping surf, would ascend to the gloomy sky.

Ned kept up his bravery of song in unison with the wind, selecting those that suited the occasion to a dot. He now sang:

"And while the wind began to sweep
A music out of sheet and shroud,
We steered her toward a crimson cloud
That, landlike, slept along the deep."

We were booming along lively, with the wind whistling a merry tune in our sail, and the harbor of delight miles away. Joe had her in good sailing trim and direct to the point we were so eager to reach. She was making a splendid race, as we judged by the rocky shore line we were rapidly passing, and on which the waves were now battling furiously. Poor chance for an unfortunate there, we thought, if that were his only means of escape in storm. The crags were rugged and riven and their tops inaccessible. It was not a pleasing picture just then to contemplate, as that of a gravelly beach, and yet at times we go into ecstasies over just such a scene.

At last Joe announced that the breeze was letting down, and then we all prayed that it might hold till we reached port. Such is human nature, longing for this thing to-day and for that thing to-morrow; to change likings for loathings, and to stand wishing and hankering at venture. Evidently we are as fickle as woman, ay, as the wind.

We had now crossed that great horseshoe bend of the lake, and were close enough to the rockbound shore to observe the clearing of light among the shadows on the hillside, which made the green of the forest seem like large masses of chenille. The grand scenery that was now unfolding itself with its rocky cliffs, green forests, purple hills and wave-washed shores was woven into splendors of eloquence that excited the most sluggish imagination. What grand material for imagery of some poetic genius—"imagery sure to be vivid as that shining bloom, mystic as the interblending of those hues, soaring as that granite column, tender and pathetic, too, as that all soothing loving haze."

Rounding the point which we had so long desired to reach, we soon arrived at Mamaine harbor, which is composed of a lovely cluster of islands near the shore, upon one of which we landed and had a royal spread. The wind had now fallen to a gentle breeze and the bright sunlight which prevailed was turning wood, shore and water into glittering gold.

ALEX. STARBUCK.

A CHARMING REGION.—The Milwaukee, Lake Shore & Western R. R. Co. have recently issued two little pamphlets interesting to sportsmen. One of them describes the attractions of the lake region of northern Wisconsin and Michigan, where we are told deer, trout, muskallonge and bass abound, while the other is devoted to sample scores of fish caught in the lakes and streams of the region. These two pamphlets form interesting reading for the angler. Last autumn the Milwaukee, Lake Shore & Western Railway Co. sent Mr. G. O. Shields up into the State Park region to investigate its possibilities and report on it, and these papers are the result of his visit.

CHICAGO AND THE WEST.

CHICAGO, Ill., June 30.—This week I have a lot of letters to offer, all bearing on the work in fish protection in this region. Some readers always skip the fine print and the fish protection, but in this case they should not do either. The first letter is from my old friend Col. Bond, the game dealer. It reads:

I notice in the FOREST AND STREAM that you claim the credit for the bill prohibiting fishing through ice. Give the devil his due. The game dealers controlled all legislation on game and fish in the Legislature. Our friends wired me if I wanted the bill defeated, in return I wired them to let it pass, which was done. So give the game dealers credit aside from a bill as to partridges. The sportsmen did not get a show. Now we are going to hold our meeting for uniform game laws throughout the country.—E. S. BOND.

I am not sure in my mind but that it was Col. Bond who discovered America. Anyhow, it is discovered. All last winter, when Geo. Clark, and Paddock, and Savage were shipping him black bass caught through the ice in the Fox Lake range, did Col. Bond ever say a word about stopping that practice, by law or any other means? Not that I remember. He just bought the fish. I think it was the general confusion of affairs in the past session as much as the doughty game dealers that kept the sportsmen from "getting a show." Beyond that, so far as the dealers' negative good deeds are concerned, I am willing and anxious to give the dealer his due, but I must confess the worthy Colonel's letter reminds me very much of the school boy's essay on "Pins." It ran to the effect that "pins saved a great many people's lives." His teacher stopped him there and asked, "How?" "By not swallowin' 'em," replied the boy. Col. Bond has shown great judgment by not swallowing any unnecessary pins, but the credit for the ice bill belongs just exactly where it was placed in these columns last week.

Our Chicago friends who do not often get over to the lovely Rock River for fishing will be glad at any rate to hear that the boom in fish protection is being felt along that stream also. Mr. Cole, who is attending to northern Illinois for the State Commission, has the following cheerful letter from a resident angler of that stream:

ROCKFORD, Ill., June 27.—Mr. Geo. E. Cole, Pres.: I am very much gratified, speaking for the Winnebago Fish and Game Club, to know that you are taking such active interest in securing fishways in the Rock River. The Governor has lately appointed a fish warden for this district, Mr. Jas. E. Moon, who is a very active and energetic man, and I do not believe that any spearing or seining of fish will take place in any of the adjacent waters while he holds office. If there is any done it will be detected and the parties prosecuted and fined. We shall be delighted to hear that you have heard more definitely from Sterling and Dixon. An satisfaction that the fish have been greatly benefited in Rock River above Rockford by the fishway that was placed in our dam over a year ago. Thanking you for your interest in the matter, I am GEO. S. ROPER.

The main interest in such matters in Chicago just now, however, centers on the first steps of the Kankakee Association. The beginning of the work was mentioned last week, Warden Buck's letters about the Mommence dams being then the latest news from his trip. I will let Mr. Buck tell the rest in his own words, his letters being the official reports on the work. From Kankakee, next below Mommence, he writes as follows:

KANKAKEE, Ill., June 25.—Geo. E. Cole: I arrived here this morning. Found there was a fishway constructed in the same manner and from the same plan as you have, only the ladder is not in the dam but up side of the mill, as per accompanying drawing. Just as soon as the water gets low enough so they can commence work they will put in a wing into deep water, which, I think, will make the fishway all right. I go in the morning to Aroma to see about the dam there and from there to Wilmington.—F. L. BUCK, State Fish Warden.

On the next day he reports as follows from Kankakee:

KANKAKEE, Ill., June 26.—I have just returned from Aroma, above here. They had a ladder in there the same as I put in the Fox River. It needs a shute to deep water and then will be all right, and the ladder will be put in this week. I don't think there will be any time there is a break of 70 ft. in the middle of the dam and before they shut the water off they will fix the fishway. I go from here to Wilmington to-day. Your letter and the one in regard to the C. & E. I. R. Co., at Mommence, received just now. I have written to Mr. Lyford, attorney for the C. & E. I. R. Co., in regard to the matter and if I go to Lockport, to see Capt. Lyon will go up to Chicago and see Mr. J. M. G. (don't think there will be any trouble getting this river all fixed this season, and if there was a patrol of the river for a while the law-breakers would quit along it).

At Wilmington, below Kankakee, the warden struck a whole flock of dams, but his report is not discouraging:

There are four dams near this place, one of 17 ft. about 1½ miles above the town, owned by the Wilmington Water Power Co., Mr. Claflin, Boston, Mass., Pres.; Joel Hill, Boston, Mass., Treas.; C. S. Waters, Holyoke, Mass., Sec'y. The same company own the dam 3 miles below town. That is out in several places and will not be repaired, and there is no use for the upper dam, as the water is only used for ice. There is no one here that has anything to do about the dam. There is another dam about a quarter of a mile above town 6½ ft. high used by the mills here and owned by H. Stewart, J. and J. Whitten, American Straw Board Co., S. H. Emery, Manager, Quincy, Ill., J. Ray and J. Campbell. This dam has a piece on an apron on the north end, so that a fishway can be made on it, and it will be done just as soon as the warden goes down. The next dam is owned by the Wilmington Water Power Co., and is broken in several places and will never be fixed. The next dam is the State dam, about one mile below the Wilmington Water Power Co. dam. 3½ ft. It has two or three places with slides, and fish can go over at present time. Mr. Kelly, the watchman, is fish warden, and says that fish go up at all times when the water runs over, but I shall see Capt. Leighton and have a fishway put in.

On Monday, June 29, Warden Buck came up to the city, and reported that he had only two more dams to see about, the one at Wilmington and one unvisited at Marseilles, the latter the lowest dam on the stream. Mommence dam he had all right, provided the C. & E. I. R. R. would release on their injunction against changing the dams. Warden Buck called on Mr. Lyford, the C. & E. I. R. solicitor, who by the way is a very reasonable and pleasant gentleman, and came away with the following valuable paper, which simply means that the C. & E. I. will do all it can to help along the work which will so plainly benefit the attractions of their fishing country:

STATE OF ILLINOIS, ss: In the Circuit Court of
KANKAKEE COUNTY, ss: Kankakee County.
Chicago & Eastern Railroad Co. }
vs. }
William B. Shelby et al. } STIPULATION.

It is hereby stipulated and agreed by and between the parties to the above entitled cause, that the defendants may construct in the dams which are described in the original bill herein, fishways, under the supervision of the State Fish Commissioners, as provided in the law of 1889; provided, that said fishways shall not in any way destroy the efficiency of said dams or lower the water above the dams. W. H. LYFORD, Solicitor for Complainant.

Warden Buck explained that the fishway would only need 12 x 13 in. total volume of water, and thus cleared the way to the above stipulation, which doubtless will be signed by defense also. This should obviate all difficulty in regard to the Mommence dams. Mr. Buck left for

Marseilles last night, and before going confidently remarked, "If the high water goes down, we will have the fishways in every dam on the Kankakee within 30 days." Now, if that is not a good showing for the first field week of the association, I don't know anything about it. It will go through, I believe, without a single lawsuit. It is not a hard thing to do, this protective work. When things are steadily let alone they don't get done, but the difficulties melt before energetic and systematic work. It is early in the day to talk, but we do believe here that the outlook for the Kankakee is highly encouraging. One of the most encouraging tokens thereof is the hearty disposition to help the association evinced by men resident along the stream. Warden Buck wanted a lot of blanks to take with him, and said that at Mommence Mr. Durham told him they would get together a good membership. At Kankakee town, the gun club and the fish club both promised aid, and at Wilmington also they would raise some money for the work. The scheme of this work, which I have tried to show in these columns from its first inception, is very simple. And the purpose is too good to allow the thought of failure.

July 1.—One more letter about the Kankakee Association, this time from Mr. Durham, a well-known Mommence man. The outlook at that town certainly seems good:

MOHENCE, Ill., June 30.—Wm. P. Mussey, Treas.: I hand you draft for \$50, for which kindly mail annual cards for parties whose names are marked paid. The rest are good and will collect in a day or two. I will raise \$10 more anyway, and perhaps more, as there are a number of my fishing friends who have not put in an appearance. By the way, the C. & E. I. R. R. ought to contribute, as they have had quite an income at this point for a good many years. Our boys will most heartily join in anything that will help along the fishing here. Would be pleased to see any of the club at any time.—W. M. DURHAM.

A strongly signed petition comes up from Mommence asking for the appointment of Chas. Heimbaugh of that place as game warden for the Kankakee Association, and it is likely that the committee on protection will appoint him. Mr. Heimbaugh has a steam launch of his own and can get about the river well. State Warden Buck is much in favor of Heimbaugh's selection.

The ways and means committee of the Association meet to-morrow night, and will appoint soliciting committees for work in the different Chicago clubs. This will bring in more money.

The market-shooters at Water Valley, on the Kankakee, have been shooting woodcock for the past week and holding them on ice for the opening of the season, to-day. Dick Turtle has gone for his regular woodcock hunt in that country, and it is hoped he can get some evidence against these market-shooters. A warden is sadly needed along that part of the stream. I hear that English Lake Club has a patrol out. Mak-saw-ba Club this fall will try to procure State Fish Warden Buck for a month or so of the duck season.

As mentioned last week, four boats floated the Kankakee from Mak-saw-ba to English Lake. The party got back Monday morning. They caught about 30 bass and wall-eyes, nearly all out of one hole, near Skunk Hill, four miles below Mak-saw-ba. This was in the evening, and the fish, wall-eyed pike and small-mouth bass, were taken on the frog, surface fishing, which seems a rather singular state of affairs. The water in the Kankakee is high just now.

Messrs. Fannin, White, Burbridge and Higgins, who had left for Madison lakes, should meet good luck, for the fish have been biting well there of late.

We must chronicle another cheap and pleasant angling trip out of Chicago, this time one of which my friend Mr. J. M. Clark tells me. In early June Mr. Clark, Mr. Geo. Morell and Mr. Harry Babcock took Mr. Clark's canvas boat and camping outfit, and started in at Burlington, Wis., to float down the Fox River to the main lake, Burlington is on the Wisconsin Central Ry., 85 miles above Fox Lake. This distance the party made in two days, but they say that is not time enough, and that three or four days would be better. For a two days' trip it would be better to stop at Wilmot, and take a train over to Camp Lake station. The trip from Burlington to Silver Lake can be made in one day, but it is too far to go and enjoy good fishing. This party stopped for the night about 10 miles below Burlington. They found the best fishing near Bundy's bridge. This point can be reached by wagon, about three miles from Silver Lake. The latter lake is sometimes good for some bass also. Mr. Clark says they found the river about 125 ft. wide, a very pretty stream. The best baits seemed minnows and the spoon. They caught 27 small-mouthed bass, 7 big-mouths and a number of wall-eyed pike and pickerel, the latter being very abundant. I should think this must be a very pleasant trip, though better if one has his own boat and camp outfit. It seems strange that Loon Lake, near Antioch, does not get fished out. Mr. Roth, whose 20 bass there I mentioned earlier, was up one Saturday with two friends, Messrs. Bond and Forney, and in one day they caught 28 bass, all big-mouths, of course. They say the bass were simply ferocious after the frogs, often going clear out of the water in striking.

There is a great lot of good fishing lakes in that Fox Lake country, and on the banks of many of them there dwell human sharks who make their living by running summer resorts in the summer and fishing through the ice in the winter. Last January I went up into that country, and took great pleasure in "turning over" some of these summer resort men. It may be remembered that I later published a statement from Col. Bond, the game dealer, to the effect that shipments of fish from those points in the winter were "very light." Well, to-day I saw Billy Farmer, the boy who first brought down the story of this ice fishing, and who goes regularly to Geo. Clark's place on Lake Maria. Young Farmer told me that on the last two days of the ice-fishing this spring Geo. Clark caught 98 black bass. He further said that he had seen a bill for over \$100 for fish shipped to Bond & Whitcomb, of this city, in one lot. Mr. Farmer is sincere in this, and could not well be wrong; so that the actual destruction of game fish by this one man Geo. Clark may be judged. The fish brought an average of 5 cents a pound, I am told, the bass selling for more than that. Now, what I want to ask is, Who wants to go up to Geo. Clark's summer resort place this summer, now that the fishing season has begun, and pay such a natural robber his money for board and boats? What real good sportsman will do that? Better go to Ed Howard's, or to Clarke & Neltnor's, or some place run by a sportsman and a man above this ice-fishing butchery.

The Cleveland party of eight, Mr. C. W. Burrows and his friends, mentioned earlier as en route for the muscal-

longe country, passed east through here on their return, and left the following memorandum for FOREST AND STREAM: "Arrived Manitowish Lake district, via Lake Shore & Western, Friday A. M. Had a magnificent time. Got about 60 good muscallonge; largest 23½ lbs., next 23 lbs., and so on down. Also large numbers of wall-eyed pike and bass. Largest wall-eye 9 lbs., next 8½ and 8 lbs." Well, that surely ought to be good enough for anybody on earth. The only trouble is, these grand fish are caught so easily that they are not appreciated. One good muscallonge to a week's fishing ought to be something for congratulations. It will be before long.

Mr. Geo. E. Cole returned from Fox Lake early this week, where he had been attempting to destroy and not protect some fish. The fish were "on to him," and he only caught five bass, thus retaining his reputation as a protector. But he has a lovely sunburn.

His Excellency Joseph Fifer, Governor of the State of Illinois, has gone to Minneapolis fishing. He took his gun along. His Excellency should have a copy of the *Book of the Game Laws*, unless he is carrying the gun in self-defense.

Four buffalo calves were born in the Lincoln Park herd this spring, and at last accounts were doing well, so Mr. Geo. T. Farmer tells me.

Carp Lake Club holds a bait-casting tournament on the 4th, which will be well attended, if appearances hold out. E. HOUGH.

MAINE WATERS.

THE following letter, addressed to Mr. Geo. Shepard Page, of this city, has kindly been handed to us for publication:

DIXFIELD, Maine, June 29.—Dear Mr. Page: Yours received. You ask how the fishing this season compares with former years in Maine, and I am happy to say that it has, except in a few localities, been the best for the last ten years. At Moosehead, I am inclined to think, perhaps at Rangeley also, there has been no improvement, and possibly it is not quite as good, but in other localities we more than made up the deficiency. The landlocked salmon fishing has improved wonderfully, especially at Sebago, and more than double the number have been taken than ever before. The same thing may be said of Weld Pond and many new ponds and lakes that have been stocked have shown fish this year for the first time. I was at Sebago on June 2 with a friend and stopped over night. We took 13 salmon of from 3 to 7½ lbs. Besides these we caught several smaller ones which we put back. The lake is plentifully stocked with small salmon—something I have never seen till this year, it being very rare heretofore to get one of less than 8 lbs. If you and Mr. Eugene Vanderpool had gone there in June, from the 1st to the 15th, you would have had fine fishing, I think.

There is a lake near Belfast (Swan Lake) well stocked with trout, which the residents in the neighborhood have always thought could not be caught with hook and line. I happened to be there the next day after the ice went out and trolled for them half a day. I got two that weighed 9 lbs., which set the fishermen angling, and hundreds of trout have been taken ever since, some very large, from 7 to 8 lbs. each. They are the handsomest fish I ever saw, resembling the sea trout in color, but very short and chunky. I think that they are far ahead of any trout in Maine, and if so, then in the world. I think also they are very abundant. I have been to the lake twice since I caught the first one and got them each time. Some landlocked salmon were put in there six years ago, and several of them have been taken this spring when fishing for trout, one weighing 7½ lbs. I saw the fish placed beside some Penobscot salmon, and could see no material difference in their appearance. The lake is fed entirely by springs, with no inlets of any account. A large stream flows from the lake the year around and runs several miles. In fact it is pure spring water, and one can see the bottom plainly at 20 ft. depths. It is also full of smelts, some of them 14 in. long and weighing a pound.

I have no doubt that there are trout in Swan Lake that will weigh more than any in Rangeley Lake, also much handsomer ones. This may sound "fishy" to you, being an old Rangeley angler, but you know I am the same, and am also too old to tell extravagant fish stories. I also thought Rangeley beat the world till I caught and examined trout from Swan Lake.

We now intend to build a hatching house there the coming fall and distribute some of the stock in other Maine waters. HENRY O. STANLEY.

NEW ENGLAND WATERS.

BROOK trout fishing in Maine waters is reported to be remarkably good, provided one has the endurance to stand the mosquitoes and black flies. Thousands of trout are being reported, and it is to be hoped that the great numbers are not made up of the usual fingerlings. A party from Auburn, Me., has been to Long Pond, Franklin county, two or three miles from Rangeley, on a fishing trip. They were so much pleased with their success that they have formed an association, and will build camps and put in more boats. They say that they took only trout of good size—from one to three pounds. Report says that over 800 lbs. of trout have been taken from Quimby Pond in that section this season.

Mr. D. H. Blanchard, of Bo-ton, has gone to his salmon river on the northwest branch of the St. Marguerite, Saguenay district, in Canada. His friend, Mr. Horace Willis, is with him for a part of the time. Mr. Blanchard is one of the few who own their salmon reservation, instead of renting it, he having procured it several years ago of the Canadian government. It is hinted that he paid a big sum for it. It is said that it is the upper and the best end of the salmon fishing of that district.

Black bass fishing in the Pennesseewassee Lake, Norway, Me., has commenced in good earnest this season. Old fishermen report the bars remarkably plenty and rising to the fly readily. The lake is well stocked, but fishermen are requested to return those they catch to the lake that weigh less than 1 lb., in order that the supply may be kept up. Some remarkably good catches of bass are also reported from Lake Coboscoontee, in Gardiner, Me. The fishing is now at its height there. One party reports catching 110 in a few hours' fishing. It is only within a week, however, that these fish have been rising, the weather having been cold. At the Winthrop Ponds above some good fishing is also reported. Mrs. E. E.

Richardson, of Attleboro, Mass., was fishing on Norway Lake the other day when she hooked a large fish. She played him half an hour, and when finally landed it weighed 5 lbs. and was 20½ in. long. This is reported to be the largest black bass ever taken from the Pennesseewassee. It is being mounted.

Gov. Russell, of Massachusetts, has been fishing at the Rangeleys, and has taken his string of trout. Mayor Mathews, of Boston, has been to the Megantic preserve and has taken his four-pound trout. Judge W. P. Whitehouse, of the Supreme Bench of Maine, has taken his big landlocked salmon at the Rangeley waters. Senator W. P. Frye, of Maine, has been fishing at his beautiful camps on the shores of Mooselucmagantic; he goes there every year for that matter, his name being introduced here only to show how the big men do love to fish. Now comes the Hon. Nelson Dingley, ex-governor of Maine, and at present a most active member of Congress from his State, and shows a record of a six-pound landlocked salmon caught in the Rangeley Lake last week. His Excellency is greatly elated over his success. He was an hour and five minutes bringing the beautiful fish to the net after he struck him. He leaped out of the water eight times, and several times took about all the line the reel held. It is singular how these lively fish are honoring the dignitaries of the State of Maine. The landlocked salmon are the children of the State. The State has hatched them, and the able Commissioners have turned them loose in the waters of the State, and now the fish, when they have come to the years of maturity and understanding are honoring the creels of the great men of the State with their presence. They have doubtless reflected like sensible fish that they have got to be caught anyway, and for this reason they prefer to be taken by the lures of some of the great men of the State. Oh, to be a child of the State!

Two thousand five hundred young salmon have lately been turned into the tributaries of Parmacheene Lake, the first salmon, it is understood, that have been turned into Parmacheene.

The last Indian of the Magalloway River is dead. His name was Archie Annance, and he was much beloved by all who had ever had the good fortune to fish or trap with him. He disliked civilization, like the most of his race, and naturally took to the woods, though reported to have been educated in his younger days. Mr. John Danforth is reported to have in his possession one of Archie's make of bark canoes. It is entirely Indian in its construction. It is sewed together with strips of cedar bark and spruce rosin, and does not contain a nail or the least scrap of iron.

Mr. E. M. Gillam, commercial editor of the Boston *Advertiser*, has been fishing again, and this time with better success. Mrs. Gillam went with him. She took over twenty salt-water perch on the Fourth while Mr. Gillam managed the boat. It was a little rough off Ocean Pier that day, but the lady, who had never fished for any sort of fish before in her life, forgot all about the rough water in the fun of taking fish. She even forgot to be seasick, and is now an enthusiastic fisherman. So they begin, but the ending is in costly rigs and tours to the Maine lakes. The next day the Bean boys came over and more perch were taken. Geo. W. Bean, the elder, was in the party, with James W., Mr. Gillam's assistant on the *Advertiser* and a member of the Somerville Common Council, and Ed L. El took nearly all of the perch, 185 in all, while James had an account to settle with Old Neptune. Perch and mackerel fishing is very much in order off Beachmont and Crescent Beach at this time.

SPECIAL.

THE WARE ROD AND GUN CLUB.

WARE, Mass., June 29.—*Editor Forest and Stream:* I inclose account of the opening of the new club house of the Ware Rod and Gun Club. Our lake has been stocked with trout, for which it is admirably adapted, there being a number of large springs. Pickerel grow by the thousands and will afford the finest kind of fishing in another year. We are also putting in white perch, the best pan fish I ever ate; grows 1 to 2 lbs. and good sport for lady fishermen. Fishing privileges in the lake are limited to one day a week. The largest trout registered this season is 8 lbs. 2 oz. The lake offers a fine feeding and resting place for ducks on their passage south and a number were shot last fall. The FOREST AND STREAM is on file at the club house and thoroughly read. We shall another season lay out ground for trap-shooting, and develop the shooting element. The dedication is thus recorded in our local paper:

"Uncle Ike Walton has long been represented in Ware by more than the usual allotment of devout followers of the gentle fishing art, but not until about two years ago were they united by any closer ties of kinship than those which naturally draw together the lovers of any pursuit or pastime; then a rod and gun club was organized, a pond with from 300 to 400 acres flowage rights and two acres of wooded land, were leased, and active work on a fish and game preserve, with all the usual attractions, was begun. The dam was raised, the size of the pond increased to a beautiful lake and stocked with gamy fish, the surroundings and approaches put in trim condition, a handsome club house built, sail and row boats launched, horse sheds and other conveniences provided for, until now there is no better resort of its kind in western Massachusetts, if indeed there is in the whole State. The location is about three and one-half miles from the village by either one of two pleasant roads, in a picturesque and heretofore unfrequented spot. Nature has been generous in its lavishment of scenic beauty and man has adapted its work to the modern idea of an ideal retreat for the various forms of pleasure which are suggested by a summer home in the woods by still water.

"The club house stands by the water's edge on a gently sloping shore and fronts an island of wild and tangled beauty, while to the right and left a broad expanse of lake stretches away, dotted here and there with floating islands, and beyond, almost as far as the eye can reach, the weather-beaten roofs and glinting windows of one or two farm-houses may be seen amid surroundings of pastoral beauty. The shores of the lake are heavily wooded, affording many a romantic spot for secluded rest or quiet picnicking.

"The club house is a spacious building of two stories, and basement, the latter floor being nearly even with the water's edge and forming a wide and convenient boat landing. The second floor has an office and large reception room, with a kitchen annex, while the upper floor is fitted up with furnished lodging rooms where members of the

club may stay over night or spend a week at a time during a protracted outing. On three sides of the building are balconies affording extended views, while on the roof is a point of look-out which commands a wide stretch of land and water, hill and dale. None of the little conveniences essential to comfortable life in the woods are lacking, and here wives and daughters, sisters and sweethearts of the members may come and go and always find a welcome and enjoyment.

"Such is the home of the Ware Rod and Gun Club, to an informal dedication of which, on Tuesday evening, some 200 invitations were issued, which drew together 300 representatives of the leading families of town and many from elsewhere. It was an unusual gathering for Ware and may safely be recorded as the leading social event of many seasons. The reception was from 4 o'clock to a late hour, during which time the roads were alive with carriages. The house was handsomely decorated with the national colors and lanterns, the grounds illuminated, fireworks were touched off, a fine banquet lunch was served, and several pieces from the Springfield orchestral club discoursed sweet music for promenade and dance. The various committees were more than attentive, and the wants or pleasure of the numerous guests were anticipated beyond the point of expectation. It was a great success, and the first social levee of the Ware Rod and Gun Club will be handed down in local history as an event synonymous with all that constitutes a royal good time." G.

ANGLING NOTES.

MR. H. C. WILSON, of this city, who has just returned from the Restigouche, reports that the salmon fishing is unusually poor this season; in fact, the worst they have ever had. When he left they had only killed 17 salmon at the Restigouche Club. There are plenty of fish reported at the mouth of the river, and they will no doubt have fine sport in a few days.

Visitors from the Chateaugay lakes, Adirondacks, say that the glory of that region of trout and deer has departed. Notwithstanding the liberal stocking that has been done every year, the trout are small and scarce. The miners use giant powder in the spring holes and on the spawning beds, and the hotel keepers are afraid to complain. In addition to this, many of the residents go up the side streams and catch fingerlings by the hundred. This is always fatal to good fishing. As long as the little fish are left undisturbed, the stock is kept up; but going up the little brooks and fishing them out is killing the goose that lays the golden egg.

Collecting fishing tackle is quite a hobby with some anglers, and many of our wealthy fishermen have large and handsome collections. A letter from an English friend states that he has 241 rods, many of which are American split-bamboo rods, and he has the reels, lines, etc., to match. He thinks our split-bamboo rods perfection, and prefers them to all others.

Trout are often found where least expected, and many a fished-out stream contains a few old settlers too smart to be deceived by the average fisherman. Mr. R. B. Lawrence came across such a bit of water the other day, almost in sight of the City Hall, and took 7 fine trout on the fly, the largest of which weighed 1½ lbs.

A landlocked salmon was recently caught in Grand Lake, Me., that contained 38 smelt. The fish only weighed 4½ lbs.

A number of fine weakfish were killed near Fire Island last week by jigging (i. e., jerking) a tin squid up and down. These fish weighed from 3 to 5 lbs. each. Weak-fishing at Barnegat Bay is now excellent. Down the Bay toward the inlet they run small, but big tide-runners can be caught by fishing pretty well up the Bay.

Sheepshead in large numbers are being taken in the pound nets off the Jersey coast, and bluefish are quite plenty outside, too. Very few striped bass are being caught; the largest, so far, was taken at Ocean Beach, it weighed 26½ lbs. SCARLET-IBIS.

OREGON FISH AND FISHERMEN.

Editor Forest and Stream:

The happiest man on earth is the man who likes to fish and has the opportunity. Therefore the Oregon angler ought to be happy. There are, of course, many sources of pleasure in this world for those disposed to enter into the spirit of the various entertainments, but from the days when the disciples fished in the sea of Galilee to the present time the angler has been regarded as the best example of human contentment and happiness; so much so in fact, that in modern times angling is spoken of as the gentle art. Nevertheless, fishermen are looked upon, the world over, as great liars. I don't know why. Anglers as a rule are gentlemen; and gentlemen will not lie. Ignorant, worldly people imagine, because the angler comes home with a basket of fingerlings and a story about hooking and losing a monster that carried away his fly, leader and may be part of his tip, that he is lying about the monster. They don't stop to consider that the big fish are more powerful, active and cunning, and therefore better able to get away than the little ones.

Sometimes it happens that the angler is able to prove what he says, although we must confess that this is the exception to a general rule. I once caught a fine 8-pounder just below a high dam. In landing him he got soiled, and I stepped above the dam to rinse him. He looked so symmetrical and handsome after being washed that I held him up for the delectation of my envious companions across the stream. How he did it I don't know, but like a flash of light he sprang out of my hands and into water 14 ft. deep. My first impulse was to go after him and I went. I got my fish all right enough, but if my statement was not backed up by good substantial proof I would not make it, for the general verdict would be, as usual, that it was another fish lie. When you consider the facts, however, there is nothing very remarkable about it. You see, the fish coming from rapid to still water in a dazed condition naturally lost his bearings and luckily, when so ardently pursued, shot directly up to and upon the sloping dam and became easy prey for the merman that was after him.

Anglers are a jolly set, and like to tell jokes on each other, even if in doing so they have to compromise themselves a little. Let me tell you a little joke that will be news to some of the parties interested. You will have to decide for yourself who the joke was on. L. S. Barin (U. S. Marshal, and an angler of the first water), Rob Roy McGregor (the boss salmon fisher of Oregon), G. A. Van Derbeck (the champion lazy man of Oregon) and your humble servant took a trip up to Willamette Falls at the opening of the present salmon season just to see if their majesties were ready to open the ball. Of course none of us anticipated any particular sport, but we wanted to find out whether the salmon had got the salt washed off their tails enough to rise. Understand, however, we were using spoons, not flies.

At about the second cast made by Van, he succeeded in hooking and landing a fifteen-pounder. Then Mac landed a beauty, which ended the salmon catching for that day so far as our crowd was concerned.

Things were getting interesting for me, for I knew Van and McGregor well enough to know that if I should not get a fish I would be compelled to endure their sympathy all the way home; and it seems that they fairly boil over with expressions of sympathy when they can get the unfortunate in a crowd. I knew that everybody aboard the steamer would know that I did not catch a solitary fish. So I felt the necessity of having a fish and good one.

It is beyond my understanding why the lazy, careless fisherman should be so lucky. The more anxious I became the less chance there seemed to be for me to get a strike. I got desperate and went around to a big rock opposite my enemies, where the chubs were thick and hungry enough to take a spoon, knife and fork. A boy came along and added to my misery by sympathizing. Some way this sympathy racket don't set well with an angler who prides himself on his accomplishments. At any rate, I informed him that his mother wanted him and went on with my vain labor. A happy thought struck me, and calling the boy back I asked him if he wanted four bits. Unlike most boys, he did. Then and there we entered into a contract. He was to go up where the old Indian was scooping salmon out from under the falls and get, at least, as big a fish as Van's and land it behind my rock, unobserved. The old Indian gave him the finest one he had and it was duly deposited. The first big chub that struck my spoon completed the programme, and after making a great pretense of playing him I jumped down behind the rock, dragged the loafer in, reached over and picked up the salmon and held him up for the other fellows to admire. Barin did not get a salmon that day; but Van and McGregor did not have an opportunity to waste any sympathy on me. Barin has the best record for a single day's catch, however, he having landed 45 salmon with hook and line in one day.

It is unfortunate that the full-grown Chinook, Columbia River and blue-back salmon of this coast will not rise to the fly, but the young are voracious fly-eaters and furnish fine sport.

S. H. GREENE.

PORTLAND, Oregon, June 12.

Fishculture.

ILLINOIS FISHCULTURE.

WE have the report of the Fish Commissioners of Illinois for the period from Oct. 1, 1888, to Sept. 30, 1890.

The Commissioners record a great increase in fish distribution and a growing interest in the enforcement of protective laws and the establishment of fishways. The cooperation of the various fishing clubs and all others interested in fish protection throughout the State has been productive of gratifying results.

In this State the rescue of fishes, which are left in the overflows by freshets, is a principal feature. The U. S. Fish Commission has aided in this work by sending its cars and messengers to conduct the utilization of such fishes on a large scale. The distribution has been limited chiefly to breeding fish ranging in length from four to fourteen inches and consequently past all dangers of youth. The expense of this method is comparatively trifling and the results very great. During 1890 bass and croppie were the species predominating in the distribution. "Some idea of the number of fish that must perish annually may be had when it is known that from one point of operation alone, namely, along the Wabash Railway, opposite Meredosia, where the overflow of the Illinois River covers thousands of acres when at its height, but which, when the river falls within its banks, is drawn down into a series of lakes and flats covering but a few acres, we took during this last season over thirty car loads of game fish for distribution besides hundreds of thousands of fish which were put into the river itself." At the time of writing this report the place was perfectly dry, so that if the fish had been left there they must all have died. In twelve days time 441,700 fish were put into the river near Rapids City, Ill., by a party under the direction of Mr. D. J. Webb.

The Illinois River has been the scene of a great amount of illegal fishing; and the problem of enforcing protective laws has been a difficult one, but by the appointment of fish wardens and with the energetic help of the Fox River Fish and Game Association, together with a growing public sentiment in favor of the protection of fish, great work has been accomplished. Mr. Geo. E. Cole, president of the Fox River Association, has given personal attention to the inspection of dams, and through his cooperation and that of his representatives a good fishway has been placed in every dam on Fox River in the State of Illinois. Other obstructions have been overcome in the same way. The report contains a list of fourteen fish and game clubs, all of which have contributed to the cause of fish protection. In May, 1889, 11,400,000 pike-perch were deposited in public waters in Illinois by the U. S. Fish Commission, and in May, 1890, upward of 7,000,000 more were planted in similar waters. Illinois has thirty-two fish wardens, and the Commissioners testify to the value of their work. The railroads, as usual, have rendered valuable assistance in handling fish, especially the Chicago, Burlington & Quincy, and the Wabash. The appropriation for 1890 was \$7,500.

Illustrations from photographs show the method of gathering fish for distribution, and are supplemented by cuts of the black bass, calico bass, croppie, rock bass and pike-perch. The appendix contains a valuable article on the food relations of fresh-water fishes, by Prof. S. A. Forbes, reprinted from the Bulletin of the Illinois State Laboratory of Natural History.

SUNDAY TRAIN TO MOMENCE.—The Chicago & Eastern Illinois Railroad placed in service June 14 a Sunday train between Chicago and Momence, leaving Chicago at 8:32 A. M., and returning leave Momence at 8:45 P. M., thus affording anglers a fine opportunity to spend a day on the Kankakee River.—*Adv.*

The Kennel.

All communications must reach us by Tuesday of the week they are to be published; and should be sent as much earlier as may be convenient.

FIXTURES.

DOG SHOWS.

Sept. 1 to 4.—Dog Show of the Youngstown Kennel Club, at Youngstown, O.

Sept. 8 to 11.—First Annual Dog Show of the Hamilton Kennel Club, at Hamilton, Ont.

Sept. 14 to 18.—Toronto Industrial Exhibition Association Third International Dog Show, at Toronto, C. A. Stone, Sec'y and Supt.

Sept. 22 to 25.—Inaugural Dog Show of the Montreal Exposition Company, at Montreal, Canada.

Sept. 29 to Oct. 1.—Third Annual Dog Show, in connection with the Central Canada Fair, at Ottawa, Ont. Alfred Geddes, Supt. 1892.

Jan. 13 to 14.—Second Annual Dog Show of the South Carolina Kennel Association, at Columbia, S. C. F. F. Capers, Secretary, Greenville, S. C.

FIELD TRIALS.

Nov. 2.—Inaugural Trials of the United States Field Trial Club, at Bicknell, Ind. P. T. Madison, Secretary.

Nov. 16.—Eastern Field Trials Club's Thirteenth Annual Trials, at High Point, N. C. Members' Stake Nov. 12. W. A. Coster, Secretary.

Nov. 30.—Central Field Trial Club's Third Annual Trials, at Lexington, N. C. C. H. Odell, Sec'y, 44 and 46 Wall street, New York city.

Dec. 14.—Philadelphia Kennel Club's Field Trials. Charles E. Connell, Secretary.

THE GREYHOUND ELCHO.

Editor Forest and Stream:

Elcho's sire is a strongly-made, good-sized brindle, his dam a beautiful fawn bitch that has won at a large bench show. After careful examination I chose Elcho when six weeks old from a large litter. He was reared very carefully and all his life has shown many qualities for which I most esteem him and for which I consider him valuable as a stud dog, viz., sound make up in general, good health, unusual stamina, and when grown, remarkable speed.

When a puppy he met with an accident which rendered one ear somewhat thicker, the dog consequently having less control over it when raised. Though under daily observation by me, I have never once seen his ears "stand erect like a rabbit's," and the difference between the one ear and the

ROUGH-COATED ST. BERNARD PRINCE REGENT.—OWNED BY MR. W. C. REICK, NEW YORK CITY.

other is due I believe entirely to the injury sustained. Elcho's record on the bench is as follows: Vhe, at Ottawa a year ago last fall under J. Otis Fellows, when a yearling puppy; first at Kingston last year under the same judge; second at Ottawa under H. W. Lacy; shown at Toronto and received no recognition, C. H. Mason judge; entered for New York, but withdrawn when it was ascertained that the judge was to adjudicate on dogs he had himself owned for years till a few weeks before the show.

Numerous statements, false as to facts, have appeared among other misrepresentations in the English Stock-Keeper, both as regards Elcho and his owner, in letters signed "Nutcracker." Statements have recently appeared in FOREST AND STREAM, both in regard to Elcho and his owner, which are not true to fact and are offensive in spirit, and notwithstanding that corrections of some of these statements have been made from several sources, the author of these statements has not as yet in any way alluded to this.

As Mr. Fellows, when judging, feels his dogs very carefully all over, he probably discovered the true nature of Elcho's ear defect—i. e., the thickening, etc.

Mr. Lacy compared Elcho carefully with the other dogs at Ottawa last year, and impressed me at that show and ever since I have known him as a competent, fair-minded judge and kindly, peace-loving man. As the judge at Toronto never laid a hand on Elcho, he could not but be ignorant of many of his qualities, including the real condition of his ears.

Thus much for the facts and the history of the dog. A few words as to opinions. I do not consider Elcho a greyhound of the highest class, like Gem of the Season; he is small, and this alone would keep him out of the very front rank as a bench show specimen; however, he is a good little one and has been much admired. His qualifications for stud purposes have already been alluded to. So far as I know, the ear peculiarity is not either hereditary or congenital; for though I have seen both sire and dam many times, their ears always seemed to be carried perfectly. Elcho has a head that could be improved some, though it suits his whole make-up very well; his teeth are excellent and meet evenly, his front is good, legs and feet excellent, the forelegs being remarkably good; neck, shoulders, back, spring of ribs, loin and quarters good; lower thigh not developed enough; chest might be deeper, but is capacious. Muscling extra good, especially as to quality (hardness), which is natural—I. e., he does not grow soft when not in constant training; movements and character much above the average; quality considerable; ears defective, one slightly larger and thicker in texture than the other, to be explained by the injury that it sustained; carriage usually good, but at times wrong to a variable degree, which interferes with his expression, and should be penalized, but as I understand "Stonehenge," cannot disqualify or put the dog back appreciably except in close competition.

Such is my own opinion of the dog, and as I have been breeding dogs and other animals since my boyhood, i. e., for more than thirty years, and studied bench show dogs

both in England and America, possibly I may be entitled to an opinion. During that time I have learned many things about dogs and men. I regard the dog to-day as a model of honesty, straightforwardness, fidelity and affection. During this long period no dog of the many I have had has ever turned round upon me, which is more than I can say of all my friends of the kennel world. Another conviction I have to-day is that life is too short for controversies. They do little or no good, but infinite harm. This communication is not meant to be a part of any controversy or a reply to any one, but a plain unvarnished tale with a few opinions of a student of nature in general and the dog in particular tacked on. As a student of science I can understand the value of discussions in a calm, dispassionate spirit, but neither by nature nor by training have I any sympathy with the author, whether he would be at the head of an empire or of the kennel world. I deeply regret the bickerings and bitterness that prevails among so many that are devoted to man's best friend; and I am sorry that any dog that I am so fortunate as to own should have been the subject of a sort of discussion which I think is to be deplored; nor should one word have appeared in print from me did it not recur that if I did not state certain facts, two respectable judges and esteemed men might in some way suffer.

Elcho I like, and his regard for me seems to have greatly increased since I rescued him, as often as an adherence to necessary rules would permit, from the unnatural surroundings of bench show life during the last Canadian circuit. I therefore am very glad that the dog at least is quite unconscious of all this feeling between the superior (?) animals.

WESLEY MILLS, M.D.

MONTREAL, Canada.

IRISH SETTER TYPE.

Editor Forest and Stream:

In your issue of May 25, under "Dog Chat," I notice some remarks relative to Irish setters with which I cordially agree. It is not difficult to guess who the foremost breeder of "reds" is to whom you allude, and I quite indorse his opinion that "importing dogs is not sure to improve the breed," especially, I may add, when they are imported in the haphazard, unintelligent way in which they have been lately. The pure bred Irish setter should, above all else, have a dome-shaped skull, should be fairly long from eyes to nose and square in muzzle. Is this, I ask, the style of animal your people have been importing lately? Certainly not—for to my knowledge most, if not all, late importations have heads as flat as fox-terriers and muzzles like collies; but worse even than this, some of them are the progeny of an animal which is in no sense an Irish setter, an animal as

ugly as it well could be, with a great big flat head and no color. Now, sir, I maintain that the reckless importation and advertising of so-called Irish setters of this stamp cannot fail to cause untold injury to Irish setters in America, and it must take years to undo the mischief and wipe out the stain; no matter how pure bred may be the sire or dam on one side, one cannot expect success from a cross with impure stock on the other.

If these few remarks should be the means of turning the attention of Irish setter breeders to the mistake they are making in breeding to or from anything but pure bred animals of correct type, then my object in writing to you will have been accomplished.

ROBERT O'CALLAGHAN, Chaplain R. M. L. I.
BORSTA HOUSE, ROCHESTER, England.

"DOGS OF THE DAY."—We have received from the Artotype Publishing Co. the first number of a publication entitled "Portraits of Dogs of the Day," which cannot fail to interest all owners of good dogs. The work is issued monthly, and each number will contain the portraits and descriptions of four dogs. The pictures are large artotype prints—in other words, photographs in printer's ink—and the text is furnished by Mr. H. W. Lacy. Having said so much we may feel sure that both portrait and description are well done; the sun is the artist, and he neither flatters nor discriminates against his subject, while Mr. Lacy's good judgment and fairness are well known. The first number of the "Portraits" contains pictures of the mastiff Caution's Own Daughter, the English setter Count Howard, the rough-coated St. Bernard Sir Bedivere, and a group of Mr. Comstock's quaint little Japanese spaniels. Each portrait is accompanied by a page of text. These are all typical specimens, and render the first number very attractive. No lover of a good dog will look at this work without feeling a desire to possess it. The size of the plates is 14x11 in., and the prints vary in size from 7x5 in. to 8x10. The paper is heavy and rich and the whole aspect of the work artistic, and the twelve numbers will make a luxurious volume. The price is \$1 per number, or \$10 for the year (12 numbers).—G.

FOREST AND STREAM, Box 2,832, N. Y. city, has descriptive illustrated circulars of W. B. Leffingwell's book, "Wild Fowl Shooting," which will be mailed free on request. The book is pronounced by "Nan," "Glean," "Dick Swiveller," "Syllabene" and other competent authorities to be the best treatise on the subject extant.

FRANK MILLER'S HARNESS DRESSING is used in the stables of the White House at Washington, and has been for years the favorite preparation in our first class stables. If you have not tried it do so at once and you will never afterward use any other harness dressing.—*Adv.*

A BOOK ABOUT INDIANS.—The FOREST AND STREAM will mail free on application a descriptive circular of Mr. Grinnell's book, "Famous Hero Stories and Folk-tales," giving a table of contents and specimen illustrations from the volume.—*Adv.*

DOG CHAT.

MR. F. H. PERRY writes in glowing terms of a young Irish setter bitch, Rose of Claremont, a candidate for Derby honors, which we notice he is advertising in our business columns. Mr. Perry's increasing business cares make it impossible for him to give due attention to his dogs, so he thinks it the wisest plan to sell. Rancho, who is also in the market, will run in the U. S. and Irish setter field trials. By the way, Rose of Claremont was wrongly printed as having been whelped July 20, 1891, when Jan. 20, 1890, is the correct date.

We hear that Mr. Toon, of Sheffield, England, has purchased two crack greyhounds, a dog and bitch that have done some good running as well as having taken premier honors on the bench. We presume they are either for the Anglo-American Kennel or Mr. Purbeck, but have no definite news concerning them.

"We look forward to the arrival of the American mail as a weekly treat," says *Stock-Keeper*, "for there is more news pleasantly and lightly conveyed in one transatlantic journal than all our own press together can muster. We are consequently disappointed in proportion when, as is too often the case, some of our contemporaries are missing on mail day." We are pleased to note, however, that *FOREST AND STREAM* stands first on the list of the most punctual ones.

The noted St. Bernard Scout died very suddenly June 23 under suspicious circumstances. Mr. Gosling, his owner, was just starting for Bristol show when the kennelman ran in to say the dog was very sick. Mr. Sewell was sent for but the dog died before he could reach him. Poison is suspected and Mr. Sewell will make an examination. The dog has been more or less celebrated, owing to his immense bone, size and particularly fine head. Before he was twelve months old he had reached the astonishing weight of 190 lbs., and it was owing to the enormous weight of his body, being too much for his legs, that he was not straight in front. Mr. Gosling had a carriage made for him which sustained his weight of body without impeding his movements when walking. He was by Phylimon out of Lapitha and was whelped February, 1888. He was much sought after in the stud and is sire of Mr. Gosling's enormous bitch Tamora.

Through the kindness of Mr. John Brett we are enabled to publish this week a picture which cannot fail to interest those of our readers who delight in field dogs and field trials. Those who attended the field trials last fall will not need any introduction to these well-known handlers, but to those who unfortunately had to stay at home we must give their "pedigrees." The imposing figure on the left, standing with quiet and conscious dignity and withal bearing the honors of victory modestly, is Mr. Frank Richards, who guided the now well-known pointer Spotted Boy to victory both in the Pointer Derby and the final heat for absolute winner at the Central trials. At his feet lies Spotted Boy. The man with the smile, on the right, is one of England's cleverest trainers, Mr. Angus Cameron, and a man who has made himself popular in both countries. His genial countenance shows that he can accept victory or defeat with equal grace. The English setter lying at his feet is Ian, winner of the Setter Derby.

The California Kennel Club has claimed May 4 to 7, 1892, for its next bench show. Those desiring any information on the subject should write Mr. H. L. Miller, secretary, Box 2,317, San Francisco, Cal. The above dates have been recognized by the A. K. C.

Mr. Cook wrote Mr. Whitney that his Queen Alice whelped June 15 six puppies, five of which were dogs, by the latter's Ilford Chancellor. Mr. Cook adds: "They bid to make great ones. I hope to show some winners from this lot next winter; I never had a better litter."

Mr. Clutterbuck, of Ogdensburg, N. Y., has sent us an illustration in a newspaper of his promising pup Prince Barry II., bred by Mr. H. S. Pitkin, of Hartford, Conn. At ten months old this youngster stands 32 in. and weighs 170 lbs.

In writing to continue his kennel advertisement, the owner of the Illinois St. Bernard Kennel says: "My kennel supply is growing short, but I hope soon to have occasion for a larger advertisement. Through your paper I have sold puppies all the way from Pennsylvania to New Orleans, and it has given better satisfaction than any other medium." Mr. Fornof is the editor of the *Free Press*, Streator, Ill., and judging from the kennel catalogue he sends us he certainly has some fine St. Bernard blood in his kennel, as we notice a number of well-known champions in the pedigrees of his dogs.

The Hamilton Kennel Club has decided to hold a four days show instead of three, as at first intended. The dates will now be September 8 to 11.

We hear that the whole of Chestnut Hill Kennels' English kennel of collies will be brought over this month and offered for sale. Among them will be included the great Christopher, a gold mine in himself for stud purposes, as he surpasses all others in this particular, and on the bench he can at anything yet imported to this country, with perhaps the exception of the same kennels' Wellesbourne Charlie. Up to the present time, Mr. Jarrett informs us, Christopher has sired nearly two hundred winners, so that his acquisition would be an important one for the collie interests of America. Mr. Jarrett is more than pleased with their new purchases from Mr. Huidekoper, exclusive mention of which was given in these columns recently, though when he says "they are way above my expectation," we are not particularly flattered with friend Jarrett's estimate of our judgment. They are eligible for the Collie Sweepstakes next year, and some one will have to breed some pretty good ones to put them in the background.

Now there is some trouble over the three pups that Mr. Chapman sold for \$850. This week Mr. Smith writes to *Stock-Keeper* that he alone purchased the pups, two only of which were out of Princess Florence and the other out of Bessie III, by Marvel. As Mr. Shillcock wrote that paper that he and Mr. Smith had bought them, there is some confusion somewhere, and the editor strikes the right note when he says "that unless some means can be found to put a stop to this sort of thing, we are afraid the St. Bernard fancy will suffer in the opinion of the kennel world."

We hear that Salvador Rosa, the crack young St. Bernard, has again changed hands, Mr. Shillcock, who did not keep the dog very long in his kennel, having sold him to Mr. Sidney W. Smith.

A regular meeting of the National Beagle Club will be held at 263 Washington street, Boston, Mass., July 10, at 6.30 P. M. All members are earnestly requested to attend, as the arrangements for the coming field trials will be fully discussed.

Why should Bobtails be called Richard-tails? ask *Stock-Keeper*.

The Earl of Lonsdale is as fond of dogs as he is of his hunters, and we see he has just given \$250 for a white English setter, Fennyhurst Shot, and also purchased a "business" wire-haired fox-terrier.

Now that dog shows are becoming so numerous in this country the striving for honors in the ring will naturally lead to every endeavor to put the dogs in the best possible condition for the competitions. Although, from our experience of dog shows, we think there is very little "artificial" conditioning in this country, still in the natural order of things such conditions are at any time apt to arise. Owners of dogs who have perhaps laid out large sums of money in their kennels would therefore do well to ascertain whether the beautiful sheen on their dog's coat is procured by honest labor or the use of drugs. It is well known that many unscrupulous grooms have ruined the health of their horses by the use of so-called tonics and condition powders, which, though they may, through the use of antimony and other drugs, for a certain time give the horse an appearance of blooming health, yet it is only a matter of time when these deleterious mixtures will make themselves felt by stomacachic derangements and other ills. The same reasoning may be applied to dogs. Arsenic is a drug which is freely used in some kennels, and though the animal may appear bright and animated, with coat "all asheen," after the necessity for such an appearance—the show season—is passed, the drug is stopped and the dog visibly suffers in consequence. These drugs are often given to save a little work. Owners of dogs generally place too much reliance on the outward appearance of a dog's coat as an evidence of health. This is not a reliable token, as under the pile the skin may be clogged with dandruff and dirt. A soft cloth or flesh glove will produce the outside gloss, but nothing but the brush will reach the skin and open the pores so that the system may be cleansed. A daily grooming with brushes suitable to the texture of the dog's coat is more beneficial than the occasional washing that is, by some owners, deemed the only

MESSRS. FRANK RICHARDS AND ANGUS CAMERON WITH SPOTTED BOY AND IAN.

thing necessary. Keep a dog as naturally as may be possible, aided by those simple concessions to cleanliness and comfort which civilization has taught us are necessary both for man and beast.

The American dogs Beaconsfield and Prince Regent, black and tan terriers, appeared at the Bristol, England show and were at the top of the tree. In the challenge class Beaconsfield won, and also special for best in the show. In the open class of 17, Prince Regent scored his first win. Mr. Geo. Raper was the judge. His judging was also memorable from the fact that two dogs were disqualified for having a little more color than nature intended they should have. Beaconsfield's picture, we are informed, will shortly appear on the frontispiece of *Canine World*. Mr. Toon writes that he has purchased for the Anglo-American Kennels a young dog by Beaconsfield and a capital brood bitch. An Irish terrier dog, an own brother to the unfortunate Bellman, who it will be remembered was killed by Frank Dole's bull-terrier on board ship, has also been secured, and they will be sent over at once to the Salem kennels, where they will be needed next month for breeding purposes. At the above show George Thomas handled for Joe Lewis a fine English setter bitch called Nia, which the latter has purchased, and took premier honors in the bitch class. *Stock-Keeper* describes her as "in good form, and a really good class of bitch, nice body, legs and feet, very fine head and plenty of quality, with bone and substance added to it." In connection with this show, which is considered an important fixture, no catalogues were on sale till the afternoon of the second day, and then they were full of mistakes. This is something unusual for English shows, and only emphasizes the fact that owing to the acceptance of late entries the English Kennel Club must take a leaf out of the American book and institute some such remedy as Rule XXVIII, and we are told that proposed action in the matter is now under discussion. Some of the dogs in a show held that week were not classified at all and not even in the catalogue. After all, Americans may congratulate themselves that they are not so far behind anyhow.

Another of our best St. Bernards has joined the silent majority. The rough-coated bitch champion Plevna, of the Wyoming Kennels, died on the morning of July 4 of peritonitis, caused by a rupture of one of the ovaries. She was left at 9:30 o'clock the night before apparently in her usual health, and the only warning they had of her sickness was

when Mr. Green opened the kennels at 7 o'clock and found her dead. Plevna was too well known to at this time need any special comment. Mr. Sears purchased her from Dr. George F. Inman, of England, last December, in whose hands she had won many encomiums of praise for her superior quality and merit. Great things were expected of her union with Sir Bedivere, to whom she was bred on June 1. To say that she will be missed at the kennels is only too true, for she was always playful and affectionate and always wanted petting. Next to Sir Bedivere and Lady Wellington she was the pet of the kennels. English critics say of her: "She was the best bitch that ever crossed the Atlantic." It is only necessary for some of those people who think that the dog fancy is all profit to meet with some such losses as this to be satisfied to the contrary. From Plevna's great size and bone it was expected that she would do a great deal for the St. Bernard breed in this country, and though she was not appreciated at her full value, principally on account of a tendency to curl in her coat, this by treatment was seen to have almost disappeared when shown at Lynn, her last appearance in public. Plevna was by Phylimon out of LaMascotte, and her list of prizes entitled her to the title of champion in England. Her breeder was Mr. Norris Elye, and she was whelped May 17, 1885. In the stud book she is mentioned as having five toes and dew claw on each hind leg. Her death, coming so soon after that of Hesper, entitles Mr. Sears to the sincere sympathy of all who take an interest in the "holy breed."

The Philadelphia Kennel Club's Derby entry will close Aug. 1, and the All-Aged and Members' stakes Oct. 15. Entry fee \$5 and \$10 additional to fill. A Champion Stake will also be made.

Mr. Lamb, of the Woodbrook Kennels, writes us that he has determined to run the risk of sending his St. Bernard bitch Margharite back to England to visit Lord Bute, owing to the remarkable success of the litter she had by this dog when owned in Scotland. She sails July 15 per S. S. Rossmore for Glasgow, and will there be in charge of her former owner, Mr. W. S. Clark, who will have her bred and immediately re-shipped home so that she may not run any risk of repeating the contretemps which happened when she first came over in whelping on board ship and the consequent loss of the litter. Mr. Lamb is also importing another bitch, Clydesdale Nell, which is coming over on the S. S. Rossmore to Baltimore. She is a litter sister to the dam of Lady Livingston, and has done some winning on the other side. She was bred to Lord Bute the first week in June. Mr. Lamb has therefore good reason to expect that his stock will be found well up in the prize lists of future shows.

In writing of the proposed sale of Mr. Heywood Lonsdale's dogs at Aldridge's which was to take place July 2, we spoke of several commissions having been sent over to secure some of them for this country. Mr. T. G. Davey now writes us that he has just received a telegram from Mr. Brailsford that he secured the following dogs for him at that sale: The liver and white ticked pointer bitch Madge, two years old, own sister to Tyke, winner of a first prize in the Canadian field trials last year; Dominie, a liver and white pointer dog, by Danger out of Damask; Rhiwlas, a black and white ticked English setter dog, by Downe out of Lloyd Price's Seonaidh, by Baron Doveridge; Downe, by Armstrong's Young Dash III, out of Empress Minnie, a pure Laverack bitch. This dog ran in the National field trials puppy stake this spring.

We should really like to have some cheerful news from Ottawa, but this seems altogether too much to expect. Our latest letter from Mr. Mercer reads: "More ill luck to chronicle. Snow killed all her pups but one and that died two days afterward. I did not think she would whelp that night, or should have stayed with her. On returning home at midnight I went out to the kennels, and on entering her yard she ran out to greet me and then back to her bed where she sat chewing what I took to be a bone, but going in to take it from her, I found to my horror that it was a half-eaten pup. I then saw it would be an all-night business for me as the man had gone to bed tired, so I carried a chair and table to her kennel and began one of the worst nights I ever put in. Each time it was a race between us, whether she would take a bite first or I should save the pup. She won by nine to one." Unfortunately this one went too, as the foster mother Mr. Geddes had kindly placed at his disposal was not obtainable at that time of night. All the pups were sold with the exception of two. This kennel's Lady Belle, which is now in England, won reserve in a mixed class at Southport, England, show, and as several good black spindles were against her, Mr. Mercer is well satisfied with her performance.

We hear that Col. Ruppert is experiencing some bad luck already. Empress of Contoocock, that bitch of superlative St. Bernard quality, whelped last Thursday nine puppies by the late champion Hesper. Unfortunately she laid on and smothered all but one. This they hope to raise. Mr. Loveland now has charge of the kennel.

An enthusiastic meeting of the Gordon Setter Club was held Tuesday evening last at Mr. Tallman's store on Thirty-fourth street, New York city. By a unanimous vote of 29 out of 37 members, the appeal of Mr. Malcolm against the action of the committee regarding his expulsion from the club was overruled and the action of said committee upheld. Four new members were elected, and this makes a total of 21 new members elected since last October, certainly a most healthy sign of a vigorous growth. The question of field trials was discussed at length and the idea seemed to be to have them during the week between the Eastern and Central trials. A new constitution and by-laws were adopted.

Mr. Tallman did not keep Beaumont, the Gordon setter, very long, for we hear he sold her to Mr. Jas. B. Blossom and received from this gentleman the bitch Perth of Beaumont, by Beaumont out of Lady Venus. This Beaumont is the celebrated Scottish bitch, Heather Bee, which Dr. Meyer imported recently.

Talking of Gordons, we hear that Mr. Hunt, of Palmyra, has sold the noted bitch Belmont to Mr. Blossom, who will now have a pretty strong hand in this handsome breed of setter.

The celebrated St. Bernard Prince Regent, arrived on the Arizona last Monday morning. He is very much out of condition as far as coat and skin goes, although in good flesh. We might here remark that it hardly seems fair for a man to pay nearly \$3,000 and have the dog delivered in the shape that Prince was, and the same may be said of Scottish Prince. Want of coat is admissible, but sores are not. Prince had one nearly six inches long on his tail and another on his fore leg; that he had them when delivered on the ship is proven by the butcher, who was told to keep a bandage on the tail till the day before he landed. One would not receive a horse in the shape some of these high-priced dogs have lately come over in, and why should owners be imposed on where dogs are concerned. Prince Regent seems otherwise in good health. His records on bench and in stud are well known, and that the

public will have an opportunity to secure his services at a reasonable figure may be seen on referring to Mr. Reick's advertisement in the present issue. We are indebted to Mr. Reick for the picture of Prince Regent which appears on another page.

The English National Dog Show will be held at Birmingham Nov. 28 to Dec. 8.

The protest which Dr. Foote entered against the black and tan terriers Beaconsfield and Empress, owned by Mr. Symonds, at the Baltimore show, has been overruled by the M. K. C. We are told that Dr. Foote entered four black and tans and then was informed by the committee that his dogs were the only entries. Not wishing to rush his dogs too much, he sent his second string—The Senator and Bloomfield Madge. When, however, the classes were judged, Mr. Symonds' two dogs turned up and won. They had been entered in the Clydesdale class and we are told were so entered on the entry blank received from the Salem kennels. The outcome of the protest is unsatisfactory to Dr. Foote and he will very likely appeal the case. It was a very unfortunate go for him, for on the journey down The Senator caught cold and this, developing into pneumonia, carried him off during the show week. We know that it is customary to transfer dogs wrongly classified, at the same time this is a peculiar case, and though there is no rule under which the protest would hold, still justice seems to lean toward Dr. Foote's side of the case.

Mr. Stone writes: "The National Greyhound Club of America will offer the following specials at the coming Industrial Exhibition Association's dog show, to be held at Toronto, Canada, Sept. 14 to 18: The bronze medal of the club for the best greyhound (dog or bitch), best deerhound (dog or bitch) and best Barzoi (dog or bitch). We have to thank Mr. H. W. Huntington, secretary of the club, for his kindness in securing the above medals for this show, and they will be well worth winning. They are now in the hands of the die makers, and will be 3 in. in diameter and are considered the finest ever offered by any club. At a committee meeting held on Friday afternoon the following resolution was passed, viz.: That the thanks of this committee are hereby tendered to the American Collie Club, the National Beagle Club and the National Greyhound Club for their kindness in donating the different specials that they have given to be competed for at this show in September. By a mistake in publishing the list of classes to be judged by the different judges, greyhounds were allotted to Mr. Davidson, they should have been given to Mr. Mason. The premium lists will be ready in about a week."

A letter from Mr. Washington informs us that he has purchased from Mrs. Avis the Irish setter bitch Queen Elcho. This bitch was bred by Dr. Wm. Jarvis and is by ch. Elcho, Jr., out of Maid, and is therefore a full sister to Dr. Jarvis's Duke Elcho, that is said to be such a good one, and also a litter sister to Glen Jarvis, who took second to Beau Brummell at Pittsburgh this spring. Queen Elcho was whelped early in 1890 and may start in one of the Derbies this fall. She has been bred to Mr. Wenzel's Tim. Mrs. Avis was compelled to part with the animal on account of accompanying her husband, Lieut. E. S. Avis, U. S. Army, who has been ordered to a post in the Far West.

Mr. S. C. Bradley will handle Rowdy Rod, Harry C. and others again this year for Mr. Ewing and take full charge of his kennel.

Mr. Patterson, of Lake View, Mass., writes us that the St. Bernard bitch Mariana II, that he purchased in England recently, has been mated with Lord Bute and sailed from Glasgow July 8, on S.S. State of Georgia.

We are extremely sorry to hear that Mr. W. S. Diffenderfer has, since the death of his mother, decided to sell the farm where his kennels are situated, just outside of Baltimore. A reference to our advertising columns will show that all his dogs are now on the market. This kennel is particularly strong in good St. Bernard bitches, such as Hepsey, Lady Myra, Zenith, Prudence, Lakme, Republican Belle, etc., and he should realize proportionate prices. We do not believe that Mr. Diffenderfer will sever his connection with the kennel world entirely, as he is naturally too fond of dogs to keep out of the swim very long.

Among the new kennel advertisements this week we notice several important ones. The New York St. Bernard Kennels place Prince Regent and champion Hector in the stud; Greyhound and Poodle kennels place Gem of the Season and Dexter at stud. Those who have dogs for sale are: F. H. Perry, Irish setters of well known quality; F. G. Stewart, several greyhound pups; Illinois St. Bernard Kennels, St. Bernard puppies; Frank B. Echlin, St. Bernard pups; F. E. Lamb, several fine St. Bernards; C. T. Brownell, Gordon setter pups and hounds; C. Paetzel, pointers; F. L. Cheney, several fine Irish setter bitches.

MONTMORENCY.

THOSE of our readers who are fortunate enough to own a fox-terrier, we do not mean those who have kennels full of these dogs, for they cannot naturally get such an insight into a dog's nature and individuality as the single dog man can, will fully appreciate what Jerome K. Jerome says, in his inimitable style, about the fox-terrier Montmorency in his book, "Three Men in a Boat." One can almost recognize Montmorency as a personal friend, so true to life are the scenes he depicts.

Speaking of cats he says: "The only subject upon which Montmorency and I have any serious difference of opinion is cats. I like cats; Montmorency does not. When I meet a cat I say, 'Poor pussy!' and stoop down and tickle the side of its head; and the cat sticks up its tail in a rigid, cast-iron manner, arches its back and wipes its nose on my trousers; and all is peace and gentleness. When Montmorency meets a cat the whole street knows about it, and there is enough bad language wasted in the next ten seconds to last an ordinarily respectable man all his life, with care."

I do not blame the dog (contenting myself, as a rule, with merely clouting his head or throwing stones at him), because I take it that is his nature. Fox-terriers are born with about four times as much original sin in them as other dogs are, and it will take years and years of patient effort on the part of us Christians to bring about any appreciable reformation in the rowdiness of the fox-terrier race.

I remember being in the lobby of the Haymarket stores one day and all around about me were dogs waiting for the return of their owners, who were shopping inside. There were a mastiff, and one or two collies and a St. Bernard, a few retrievers and Newfoundland, a boarhound, a French poodle, with plenty of hair round its head but mangy about the middle, a bulldog, a few Lowther Arcade sort of animals, about the size of rats, and a couple of Yorkshire tykes.

There they sat, patient, good and thoughtful. A solemn peacefulness seemed to reign in that lobby. An air of calm and resignation—of gentle sad pervaded the room.

Then a sweet young lady entered, leading a meek-looking little fox-terrier, and let him chained up there between the bulldog and the poodle. He sat and looked about him for a minute. Then he cast up his eyes to the ceiling and seemed, judging from his expression, to be thinking of his mother. Then he turned, then he looked round at the other

dogs, all silent, grave and dignified. He looked at the bulldog, sleeping dreamlessly, on his right. He looked at the poodle, haughty and erect, on his left. Then, without a word of warning, without the shadow of provocation, he bit that poodle's near foreleg, and a yelp of agony rang through the quiet shades of that lobby.

The result of his first experiment seemed highly satisfactory to him, and he determined to go on and make things lively all round. He sprang over the poodle and vigorously attacked a collie, and the collie woke up and immediately commenced a fierce and noisy contest with the poodle. Then Foxey came back to his own place and caught the bulldog by the ear and tried to throw him away; and the bulldog, a curiously impartial animal, went for everything he could reach, including the ball porter, which gave that dear little terrier the opportunity to enjoy an uninterrupted fight of his own with an equally willing Yorkshire tyke. Any one who knows canine nature need hardly be told that by this time all the other dogs in the place were fighting as if their hearths and homes depended on the fray. The big dogs fought each other indiscriminately, and the little dogs fought among themselves and filled up their spare time by biting the legs of the big dogs.

The whole lobby was a perfect pandemonium, and the din was terrific. A crowd assembled outside in the Haymarket and asked if it was a vestry meeting, or if not, who was being murdered and why? Men came with poles and ropes and tried to separate the dogs, and the police were sent for. In the midst of the riot that sweet young lady returned and snatched up that sweet little dog of hers (he had laid the tyke up for a month and had on the expression now of a new-born lamb) and kissed him and asked him if he was killed, and what these great nasty brutes had been doing to him; and he nestled up against her and gazed up into her face with a look that seemed to say, "Oh, I'm so glad you've come to take me away from this disgraceful scene!"

Such is the nature of a fox-terrier, so I do not blame Montmorency for his tendency to row with cats."

The description of the packing preparatory to a camp out on the Thames, is humorously related. "Montmorency was in it all, of course. Montmorency's ambition in life is to get in the way and be sworn at. If he can squirm in anywhere where he particularly is not wanted, and be a perfect nuisance, and make people mad and have things thrown at his head, then he feels his day has not been wasted. To get somebody to stumble over him and curse him steadily for an hour is his highest aim and object; and when he has succeeded in accomplishing this, his conceit becomes quite unbearable."

"He came and sat down on things just when they were wanted to be picked, and he labored under the fixed belief that whenever Harris or George reached out their hand for anything it was his cold, damp nose that they wanted. He put his leg into the jam, and he worried the teapots, and he pretended the lemons were rats and got into the hamper and killed three of them before Harris could land him with the frying pan. Harris said I encouraged him. I didn't encourage him. A dog like that don't need any encouragement. It's the natural, original sin that is born in him that makes him do things like that."

A RUN WITH THE BEAGLES.

Editor Forest and Stream:

It was the last hunt of the season and as I left the kennel with the beagles at my heels I was alone. But in some mysterious way the news that the dogs would not be out again had spread, and as I follow the main street of the straggling village, first one hunter and then another appears till the party is large enough to carry consternation to any unfortunate cotton-tail found out of his burrow. First I meet J. and L., inseparable friends and gunning chums, strong, good-natured fellows, ready for anything that promises sport, whether it be watching for ducks in an ice stand or breaking through a bull birch thicket to kick out a rabbit. Then comes P. with the air of a mighty hunter who knows all that is to be known of rabbit hunting and other sports afield; he glances critically at the beagles, distributes a few words of wisdom among the boys and stalks along with the air of old Nimrod himself. A little later A. completes the party: a good fellow with a "deep sea roll" in his walk for which the sidewalk is all too narrow. Having crossed the bridge and climbed the fence we sent the beagles on. Clyde and June, always together, race for the long, narrow swamp that skirts the river. Belle Ross, playful and jolly, starts with them but circles to jump over Baby Bunting and nip Grace by the ear as they hurry on behind the leaders. But we are not out for play and in a moment all the beagles are in the swamp and busily at work. P. is put on a cart path that divides the swamp and warned that no rabbit must go by him; he replies with a superior air that "there is no danger, any fool can shoot a rabbit," and is about to explain the proper way to do it when he is interrupted by a whimper from Clyde, quickly followed by his ringing call to the rest of the pack, and then comes the chorus so dear to a hunter's heart. We can distinguish Belvidere's deep notes and June's high clear voice, Clyde's melodious tonguing and the excited voices of Bunting and Grace all harmonizing together. Like a flash of light the rabbit leaves his form, crosses the road guarded by P. before he gets his gun to his shoulder, and leaving that worthy looking rather foolish, bounds along the river bank. The swamp is long and narrow and bunny must either leave the cover or come back to the point where he started. He turns back and now we are ready for him. J. gives him a barrel and misses, P. with a "now-see-me-do-it" air fires twice and on he goes; A. adds to the racket but without effect, and the rabbit finding the swamp too hot takes to the open. The beagles are close behind him and in the field run by sight; he puts on his very best gait and reaches a clump of bayberry bushes just in time to escape June who was leading the pack; once or twice he circles in the thicket, but L. catches sight of him and a snap shot ends the race. We move along to the shore of the Seine pond. Here are two large swamps separated by a hill and surrounded by dense scrub oaks. We put the dogs in and seating ourselves on some brush in a sunny corner, wait for a start. We do not wait long; this time Belle is the first to find, the others hark to her and away they go. The hunters separate and each one chooses a favorable place for a shot. The underbrush is almost impenetrable, but the trailing is good, and the rabbit is hustled from one swamp to the other and back again a dozen times or more. In vain we try to be in the right place at the right time and get a shot; once we caught a glimpse of his white tail and again we heard him running through the brush, but he was born under a lucky star, and after leading the beagles a race for nearly two hours he concluded he had had sport enough and disappeared in his burrow, leaving five disgusted dogs barking and digging at the entrance. This run affords a topic of conversation as we move along to the next swamp. A. would have got him if he hadn't moved at the wrong time, P. would certainly have shot him if his gun had been cocked, J. and L. if the brush had not been so thick, and each of the party had an excellent excuse for failure, as indeed what true sportsman has not.

The next swamp is small, and surrounded by a thicket of bull briars—an ugly place for the dogs but a grand place to start a rabbit and one is put up immediately, all the dogs getting on at the same instant. His race is short, and J. bags him before the dogs have fairly warmed up to their work.

As we move along we miss Belle Ross and a moment after discover her working hard under the pines. True to her field trial record as an untiring worker and fine trailer, she picks out a cold track, and we watch her with interest as she

carries it slowly along under the pines to a little thicket where bunny is taking his siesta. She wakes him rudely and in a great hurry he takes the shortest possible course to his burrow and disappears just in time to save himself. It is now getting late, but we decide to keep on around the pond and soon find ourselves on an abandoned cranberry bog. It extends over a couple of acres and is covered with cedars, bayberry bushes and young pines. The dogs all work well and two rabbits are started almost at the same time. The pack is divided but one cotton-tail is soon shot and the other then has the attention of the whole pack and they make him run as he never did before. At last he comes straight for A., who has waited all the day for a shot. Eagerly watching every opening in the underbrush, he stands ready, scarce daring to move for fear of turning the rabbit; the excited dogs are close upon him and in a moment he will have a shot at the best runner on Cape Cod, when above the tumult we heard P. shout "Look out A., look out, he's coming!" The rabbit took the warning, turned sharply about and in a few moments went to earth, while A. made a few remarks, short, concise and suitable to the occasion. On our return home we have a couple more short runs, bag one rabbit and lose a white hare in a wet cedar swamp. That ends the hunt and a few days later the game law ends the open season. But there are still rabbits on Cape Cod, and we have pleasant anticipations of many a good run next fall with some of the best dogs of the National Beagle Club pack. BRADLEY.

AVAILABLE MASTIFF JUDGES.—Buffalo, N. Y.—Editor Forest and Stream: I notice in Mr. Wade's letter re "Mastiff Judges," what he says in regard to certain exhibitors taking the trouble to advise shows that they will not exhibit if Mr. Mason judges any breed. This should not frighten any committee who want to secure an honest, impartial and capable judge. Some of these parties tried to bluff the Buffalo Kennel Club by threats of that kind last year. Mr. Mason was engaged, and the result was 397 entries, which was about 100 more than the average of all shows of that season, excepting New York, Chicago and Boston. This in spite of the fact that we gave a much smaller amount in prizes than some of the other clubs. While some may stay at home others will make an extra effort to exhibit under Mr. Mason, and wherever he judges you will find an entry larger than the average, and the best dogs, regardless of ownership, at the front.—A. W. SMITH.

KENNEL NOTES.

Kennel Notes are inserted without charge; and blanks (urnished free) will be sent to any address.

NAMES CLAIMED.

Prepared Blanks sent free on application.

Lady Ormonde. By Fairhill Kennels, Philadelphia, Pa., for orange and white rough St. Bernard bitch, whelped May, 1883, by Monte Rosa (Ch. H. Sombray) out of Theon (Rougeau—Hare).

Harry P. and Winsome. By L. Gardner, Mr. Vernon, N. Y., for whi e and lemon English setter dog and bitch, whelped May 13, 1891, by Roger (Count Noble—Queen Meg) out of Dora Deane (Count Paris—Nellie Cambridge).

Sparkle. By L. Gardner, Mr. Vernon, N. Y., for white, black and tan English setter bitch, whelped May 13, 1891, by Roger (Count Noble—Queen Meg) out of Dora Deane (Count Paris—Nellie Cambridge).

Lady Hope. By McColloch & Hesser, Ferguson, Mo., for liver and white pointer bitch, whelped July 17, 1890, by Rene Croxteth out of Lola Rea.

Erminie. By McColloch & Hesser, Ferguson, Mo., for liver and white pointer bitch, whelped April 16, 1891, by Rank out of Jill.

BRED.

Prepared Blanks sent free on application.

Theo—Rattler III. C. W. Smith's (Green Springs, O.) beagle bitch Theo (champion Chimney—Blossom) to W. S. Gates's champion Rattler III. (champion Rattler—champion Music), June 16.

Nadly of Nasa—Spot Dash. Geo. H. Holtham's (Bangor, Me.) pointer bitch Nadly of Nasa (champion Nick of Nasa—Temptation) to Robt. Leslie's Spot Dash (Sir Phillip Sydney—Topsy), May 17.

Sara Bernard—Spotdash. Eberhart P. Kennels' (Cincinnati, O.) pug bitch Sara Bernard (Lord Rosberry—Cora) to C. P. Kinzie's Spokane (champion Kash—Lady Thora), June 29.

Patch—Royal Krueger. Hornell-Harmony Kennels' (Covert, N. Y.) beagle bitch Patch (My Boy—Freckles) to their champion Royal Krueger (champion Bannerman—Cora), May 28.

Lucia—Valdemir. Hornell-Harmony Kennels' (Covert, N. Y.) wolfhound bitch Lucia (champion Klutt—Elsie) to their Valdemir (champion Klutt—Elsie), May 27.

Elf—Royal Krueger. Hornell-Harmony Kennels' (Covert, N. Y.) beagle bitch Elf (Little Ned—Spangle) to their champion Royal Krueger (champion Bannerman—Cora), May 25.

Princess Irma—Valdemir. Hornell-Harmony Kennels' (Covert, N. Y.) wolfhound bitch Princess Irma (champion Klutt—Elsie) to their Valdemir (champion Klutt—Elsie), May 23.

Harmony—Memnon. Hornell-Harmony Kennels' (Covert, N. Y.) greyhound bitch champion Harmony (champion Double Shot—champion Clio) to their champion Memnon (Caliph—Poly), May 3.

Nellie—Tricotrin. Hornell-Harmony Kennels' (Covert, N. Y.) beagle bitch Nellie (Rattler—Rose Bud) to their Tricotrin (champion Royal Krueger—Midge), April 5.

Jessie—Royal Krueger. Hornell-Harmony Kennels' (Covert, N. Y.) beagle bitch Jessie (Elmore's Flute—Pussie) to their champion Royal Krueger (champion Bannerman—Cora), March 28.

Baby W.—Royal Krueger. Hornell-Harmony Kennels' (Covert, N. Y.) beagle bitch Baby W. (champion Cameron's Racket—Pussie) to their champion Royal Krueger (champion Bannerman—Cora), March 2.

Joan W.—Royal Krueger. Hornell-Harmony Kennels' (Covert, N. Y.) beagle bitch Joan W. (champion Royal Krueger—Kate W.) to their champion Royal Krueger (champion Bannerman—Cora), Feb. 24.

Trissa W.—Royal Krueger. Hornell-Harmony Kennels' (Covert, N. Y.) beagle bitch Trissa W. (champion Royal Krueger—Pussie) to their champion Royal Krueger (champion Bannerman—Cora), Feb. 12.

Midge—Royal Krueger. Hornell-Harmony Kennels' (Covert, N. Y.) beagle bitch Midge (champion Bounce—Jessie) to their champion Royal Krueger (champion Bannerman—Cora), Feb. 6.

Lady Lowther—King Regent. Fairhill Kennels' (Philadelphia, Pa.) rough St. Bernard bitch Lady Lowther (Huntman—Lady Linton) to Swiss Mountain Kennels' King Regent, June 15.

Bud—Bradford Harry. Michael Gougerty's (New Haven, Conn.) Yorkshire terrier bitch Bud (Snj'er—Mollie) to P. H. Crombs's champion Bradford Harry (Cravshaw's Bruce—Beal's Lady), June 16.

Topsy—Toon's Royal. Anglo-American Terrier Kennels' (Salem, Mass.) Yorkshire terrier bitch Topsy (Roy—Topsy) to their Toon's Royal (Dreadnaught—Filly), May 23.

Venus—Endcliffe Spice. Anglo-American Terrier Kennels' (Salem, Mass.) fox-terrier bitch Venus to their Endcliffe Spice (Rustle—Ambrose Diamond), June 12.

Flo—Prince Al. Anglo-American Terrier Kennels' (Salem, Mass.) Yorkshire terrier bitch Flo (Bright—Fan) to their Prince Al (Sandy—Tiny), June 10.

Jenny—Toon's Royal. Anglo-American Terrier Kennels' (Salem, Mass.) Yorkshire terrier bitch Jenny to their Toon's Royal (Dreadnaught—Filly), June 24.

Pearl—Toon's Royal. G. Macdonald's (South Boston, Mass.) Yorkshire terrier bitch Pearl to Anglo-American Terrier Kennels' Toon's Royal (Dreadnaught—Filly), July 1.

WHELPS.

Prepared Blanks sent free on application.

Nellie. Hornell-Harmony Kennels' (Covert, N. Y.) beagle bitch Nellie (Rattler—Rose Bud), June 12, five bitches, by their Tricotrin (champion Royal Krueger—Midge).

Harmony. Hornell-Harmony Kennels' (Covert, N. Y.) greyhound bitch champion Harmony (champion Double Shot—champion Clio), July 4, ten (three dogs), by their champion Memnon (Caliph—Poly).

Jessie. Hornell-Harmony Kennels' (Covert, N. Y.) beagle bitch Jessie (Elmore's Flute—Pussie), June 4, four (three dogs), by their champion Royal Krueger (champion Bannerman—Cora).

Baby W. Hornell-Harmony Kennels' (Covert, N. Y.) beagle bitch Baby W. (champion Cameron's Racket—Pussie), May 5, six (two dogs), by their champion Royal Krueger (champion Bannerman—Cora).

Joan W. Hornell-Harmony Kennels (Covert, N. Y.) beagle bitch Joan W. (champion Royal Krueger-Kate W.), May 8, five (two dogs), by their champion Royal Krueger (champion Bannerman-Cora).

Triss W. Hornell-Harmony Kennels (Covert, N. Y.) beagle bitch Triss W. (champion Royal Krueger-Pussie), April 27, four bitches, by their champion Royal Krueger (champion Bannerman-Cora).

Midge. Hornell-Harmony Kennels (Covert, N. Y.) beagle bitch Midge (champion Bounce-Jessie), April 7, four (three dogs), by their champion Royal Krueger (champion Bannerman-Cora).

Lady Ormonde. Fairhill Kennels (Philadelphia, Pa.) rough St. Bernard bitch Lady Ormonde (Monte Rosa-Therm), June 25, two (six dogs), by Chiquasset Kennels' Sir Herbert (Pittsfield-Moon-Jury).

Hops. Charlottesville Field Trial Kennels (Charlottesville, Va.) pointer bitch Hops (Mike-Romp), June 23, six (two dogs), by Westminster Kennel Club's King of Kent (Priam-Kent Baby).

Rye Lily. Jas. B. Blossom's (New York) Irish setter bitch Rye Lily (champion Garrovon-Bessie), June 25, eleven (nine dogs), by his Kelsie (champion Glenloch-Sweetie).

Dolly. A. P. Lukins's Yorkshire terrier bitch Dolly, April 16, four (two dogs), by Anglo-American Terrier Kennels' champion Toon's Royal (Dreadnaught-Fails).

SALES.

Prepared Blanks sent free on application.

Gates's Dan. Black and tan dachshund dog, whelped April 10, 1891, by Jerry C. O. of Fraulein Waldeck II., by W. S. Gates, Chagrin Falls, O., to C. E. Phillips, same place.

Gates's Beauty. White, black and tan beagle bitch, whelped April 9, 1891, by Colonel out of Millie, by W. S. Gates, Chagrin Falls, O., to W. M. Weeks, Green Springs, O.

Hemmore Shamrock-Daisy whelp. Red Irish setter dog, whelped Jan. 2, 1891, by F. L. Cheney, Pittsfield, Mass., to S. E. Don, Lanesboro, Mass.

Chief-Biencene whelps. Red Irish setters, whelped Jan. 21, 1891, by F. L. Cheney, Pittsfield, Mass., a dog to H. J. Hollowell, Conshohocken, Pa., and a bitch to S. E. Don, Lanesboro, Mass.

Barney's Sport. Red Irish setter dog, whelped Jan. 2, 1891, by Hemmore Shamrock out of Daisy, by F. L. Cheney, Pittsfield, Mass., to B. J. Jaun, Chicago, Ill.

Nady of Naso. Liver and white pointer bitch, whelped Aug. 2, 1887, by champion Nick of Naso out of Temptation, by R. Leslie, Lynn, Mass., to G. H. Holtham, Bangor, Me.

Daniel. Silver fawn pug dog, whelped October, 1890, by John Bull out of Ruby F., by Eberhart Pug Kennels, Cincinnati, O., to W. H. Shipley, Burton, Kan.

Falcons. Black and white rough St. Bernard dog, whelped December, 1889, by Rudce out of Lady Lowden, by Fairhill Kennels, Philadelphia, Pa., to Mrs. Ed Shuman, same place.

PRESENTATION.

Roger-Dora Deane whelp. English setter bitch, whelped May 13, 1891, by L. Gardner, Mount Vernon, N. Y., to Harry Freeland, Paterson, N. J.

ANSWERS TO CORRESPONDENTS.

There is no charge for answering questions under this head; we are always glad to give advice on the care and management of dogs; and we shall make this a special feature.

A. G. O. Syracuse, N. Y.—I have a mastiff bitch I purchased from E. H. Van Velder, Oneida, N. Y., named Zilda. Her dam was Honto (2780), and her sire Hero is litter brother to Hugo (4040). Zilda has a full brother in Itube that is registered. What shall I do to register my dogs? Ans. Write to A. P. Vredenburgh, 44 Broadway, New York city, giving pedigree, and inclosing one dollar for registration fee.

F. P. Saugerties, N. Y.—1. I desire to claim names and register dog and bitch. To whom shall I apply? State cost. 2. At what age does the first heat occur in a bitch? I have a pair of young dogs, 5 and 4 months old, running and sleeping together, and I do not want to breed for a year yet, so want to guard against any possible danger in this direction. 3. Does the registry of a dog or bitch relieve the owner from taxes on same, or must the declaration be made that they are kept for breeding purposes, and if they are, is this a relief from tax? Ans. A. P. Vredenburgh, 44 Broadway, New York city. The fee for registering is one dollar; "listing," twenty-five cents. 2. About 10 months. 3. No, the law that allowed registered dogs in certain parts of this State, exemption from taxation, has been repealed.

Rifle and Trap Shooting.

RANGE AND GALLERY.

THE NEWARK SHOOT.

NEWARK, N. J., July 4.—To-day closed the very successful two days' tournament of the Newark Shooting Society, held in the shooting park here. On Friday the light was bad, and in the afternoon the wind was very tricky. Despite this fact, John Coppersmith, of this city, distinguished himself by making 74 out of a possible 75 in three shots on the German ring target, a feat that has been equalled upon four occasions in this country, but has never been exceeded.

To-day the conditions were entirely different, the light being first rate all day, but the wind being extremely tricky, blowing first one way then the other, besides varying from eight all the way up to twenty miles an hour. During the morning the best ring ticket was 73, by Frank Ross, of Brooklyn. About 4 o'clock this afternoon M. Dorrier, of the Zettler Rifle Club, duplicated Coppersmith's feat of the previous day and made a score of 74 on the ring target. This was the second score of 74 made by Mr. Dorrier, and he is the only man in the country to make two such scores.

The full list of winners in order in the various events is appended: Man Target—F. Campbell 57, G. Joiner 57, O. Harris 56, G. Homrighausen 56, M. Dorrier 55, Zimmerman 55, A. Berger 54, A. Seitz 54, S. J. Lyon 53, B. Walker 53, G. Zettler 53, R. Busse 53, L. Vogel 53, C. B. Gensch 53, F. Ross 53, A. A. Boyken 52, J. Coppersmith 51, H. Holger 49, G. D. Weigman 49, H. C. Keyes 41.

Bullseye Target.—Prizes for best center shots in order: G. Joiner (an exact center shot), Gensch, Homrighausen, Coppersmith, Harris, Pope, Seitz, Busse, Dorrier, Zettler, Begerow, Campbell, Zimmerman, Boyken, Hutch, Weigman, Vogel, Townsend, Walther. Premiums for most flags were won in order by Harris, Coppersmith, Campbell, Homrighausen and Ross.

Ring Target.—Prizes for best first ring tickets: J. Coppersmith, 74, 71, 70; M. Dorrier, 74, 71, 70; O. Harris, 71, 71, 70. Best two tickets: F. Ross, 73, 69; F. C. Watts, 73, 68; H. M. Pope, 70, 70; Holger, 70; Walther, 71, 68; Boyken 71, 68; Zimmerman, 71, 68; Lyon, 70; Joiner, 69, 68; Busse, 68, 67; Townsend, 69, 67; Weigman, 71, 64; Gensch, 68, 65; Fisher, 68, 67; Vogel, 67, 64; Bergerow, 66, 65; Homrighausen, 66, 64; Zettler, 67, 64; Keyes, 69, 61; Hutch, 62, 67; Weatherby, 62, 60. Premiums for best first ring tickets: Dorrier, 74, 71, 70, 68; Harris, 71, 71, 70, 70; Coppersmith, 74, 71, 70, 67; Ross, 73, 69, 67, 67; Holger, 70, 70, 67, 67; Boyken, 71, 68, 68, 67; Zimmerman, 71, 68, 66, 65. On the bullseye target the special premiums for daily flags were won as follows: Friday—First flag, H. M. Pope; last flag, A. Seitz. Saturday—First flag, J. A. Boyken; last flag, J. A. Seitz.

While Coppersmith and Dorrier tied one another on scores of 74 on the ring target, the score of Coppersmith will stand really as world's record, his shots in order being 24, 25, 25, while Dorrier's were 25, 24, 25. The center shot made by George Joiner on the bullseye target is the first ever recorded in off-hand shooting.

SAN FRANCISCO, June 28.—Some time ago a competitive rifle match was held between four well-known military shots in this city. The defeated contestants were not satisfied with the outcome of the contest, and resolved upon another meeting. The return shoot was held at General Dickinson's rifle range, at San Salito. The contestants used the Springfield rifles, with 6lb. pull of trigger, and fired at the Blunt target, 200yds. distant. Major G. R. Burdick acted as inspector and looked after the interests of all concerned. The persons participating were General J. H. Dickinson and P. Linville against Colonel Beaver and Corporal L. R. Townsend. Each contestant fired 40 shots, and the scores are as follows for each 10 shots: Gen. Dickinson, 41 41 39 44—165 Col. Beaver, 43 42 44 49—174 P. Linville, 41 41 42 45—169 Corp. Townsend, 40 42 48 44—174

This was a very close and exciting match, the winning team beating their opponents by only 2 points in a match of 80 shots.

REVOLVER SHOOTING IN ENGLAND.

LONDON, June 23.—Practice for the Bisby meeting is still going on briskly, the best scores at the disappearing target, which appears and disappears every three seconds, have been made by Mr. Walter Winans at one of his private shooting grounds near Bagshot, Surrey, he made two scores of 41 last week (equal to the "best on record" with which he won at Wimbledon in 1889), some half-dozen scores of 40 and about twenty scores of 39 (which latter is the best score made by Mr. Halg when he won last year).

It looks, therefore, that if an Englishman wants to win this competition at Bisby this year he will have to make a "highest possible" of 42 points.

In practicing for the quick-firing competition Mr. Winans is using a Rann trap and a 32-gauge shot pistol of French make (by Gastine Renette), shooting at 12yds., so as to have a small spread of shot and more nearly accurate shooting with a bullet; he hit yesterday 22 out of his first 25 clay discs and 19 out of his second 25 in which he pulled the trap himself.

The revolver donated by Messrs. Smith & Wesson to the English National Rifle Association is going to be a .38cal. in Russian model frame.

BOSTON, July 4.—The Massachusetts Rifle Association celebrated the Fourth by holding a shoot at their range with a good attendance of rifleman. The shooting conditions were unfavorable for high scores, there being a hard e'clock fish tail wind. The record matches were opened for best and off-hand shooting, W. I. Getchell won the bronze and silver military medal. Following are the best scores made to-day, distance 200yds., standard American target, re-entries allowed:

All-Comers' Best Match.			
J. R. Munroe.....	111	W. Conway.....	101
J. Daniels.....	108	J. French.....	98

THE TRAP.

Scores for publication should be made out on the printed blanks prepared by the Forest and Stream, and furnished gratis to club secretaries. Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

FIXTURES.

If you want your shoot to be announced here send in notice like the following:

July 21.—Johnstown (N. Y.) Open Tournament. F. W. Partiss, Secretary.

July 22-24.—Pearl River Gun Club Tournament. First two days bluebirds, last day live birds. J. J. Blauvelt, Pearl River, N. J.

Aug. 12-14.—The Missouri State Amateur Shooting Association Annual Tournament, at Lexington, Mo. G. A. Sturges, Sec'y.

Aug. 30-Sept. 1.—Hackettstown Gun Club. Two days at targets. For programmes address James L. Smith, Hackettstown, N. J.

THE HOLLYWOOD CUP.

LONG BRANCH, N. J., July 2.—About 100 sporting men and a large number of spectators attended the live-bird shooting match at Hollywood Park this afternoon. The match was shot just south of the Hollywood Hotel. To shelter the spectators from the wind and rain, proprietor Frederick Hoy had several large tents erected. He also provided refreshments.

The match was for the Hollywood Futurity Stakes of \$500 and a handsome massive silver cup valued at \$500, which was presented by Frederick Hoy. There were three money prizes, \$25 to the first man, \$150 to the second and \$50 to the third. The entrance fee was \$50, and the ten entries comprised some of the leading crack shots of the country, five declared out. They were Edgar G. Murphy, Dr. G. Lee Knapp, W. C. Floyd-Jones, Walter G. Murphy, Frederick Hoy, Capt. Money, W. Brese Smith, Wm. Kent, J. Williams and Yale Dolan. Mr. Dolan arrived from England yesterday afternoon at the summer City of New York, and for the express purpose of participating in the shoot. The boundary was unusually short, only 18yds. The wind was quite fresh from the east, though it veered around capriciously at frequent intervals. The birds were from Philadelphia and were a fairly good lot, a number being quite speedy. The wind at times favored the short marksmen, as it drove wind-birds into innumers. The majority of the birds were right quarters and the bird, Edgar Murphy ran in hard luck on the first dozen birds, having all fierce right-quarters. He hit them all, but one dropped dead a few feet outside the boundary, and he wasted his second barrel on a bird that was sitting in front of him waiting to be shot by firing rapidly and carelessly. Capt. Money was in rare luck for the first dozen, getting the best of the hands. They ran harder after that and everybody was "rooting" against him, the crack Englishman ran up a list of lost birds. Fred Hoy had some particularly hard birds. Walker Smith was out of the race early and thereafter spent his time hunting bets. He was accommodated on all sides, and his wazering being no better than his shooting his losses in a very short time ran up in the hundreds. Dr. Knapp made the acquaintance of some vicious drivers, but did fairly well.

Kent, W. G. Murphy and "Williams" were three long shots that made things interesting for the cracks. The former made two misses in his first 10 birds, but after that took everything that came his way, drivers, quarters, towers, being all one to him. The Murphy boys and Floyd-Jones chased him right to the tape, but he made his winning shot on the most difficult bird of the day. The complete score is as follows:

Kent.....	11111011101111111111	23
E. G. Murphy.....	11100111101111111101	22
Jones.....	11111101101111111111	22
W. G. Murphy.....	11111011011011111111	22
Money.....	11111111111011111101	21
Knapp.....	01110111111111111101	20
Williams.....	1111101101101111111101	20
Hoy.....	1111101011011011111111	19
Dolan.....	1101101111101111011111	19
Smith.....	0011011011011111111101	18

E. G. Murphy, W. G. Murphy and Jones being tied for second and third prizes a shoot-off took place, the Murphy brothers killing 3 birds, E. G. Jones only scoring 2. In shooting for second money E. G. beat W. G. Murphy by 5 to 4. The former had made a feature of using his second barrel less than any man in the contest, and it was trying to keep up his record that lost him second money, for a bird he might have killed easily with his second barrel got away when the retriever, Cartaret Gun Club, shot at him. Jones was shot after the handicap and out-sweptstakes were shot after the handicap and the betting was at high fever. Walker Smith, after his losses, seemed to have imbibed luck, for toward the close of the day all money was running his way and he retrieved his losses to a large extent. John Hoy was an efficient referee, though he had some ticklish decisions to make. The handicapping was done by three of the contestants, Messrs. Hoy, Knapp and Jones, and the committee's allotments were adjudged fair by all interested.

BOSTON, July 4.—The shoot of the Jamaica Plain Gun Club at Clarendon Hills was largely attended and some good scores were made. The contests for prizes offered by friends of the club were of special interest, and the scores were close. A series of matches at 6 days and 6 bluebirds for merchandise prizes was held in the morning and afternoon. An all-day shoot was held at the Wellington Gun Club range. It was thinly attended the first part of the day, but at the arrival of the 2:35 P. M. train new life was infused by the arrival of more shooters.

NEW JERSEY.—The Riverton Gun Club has filed articles of incorporation in the County Clerk's office at Mount Holly. The capital stock is \$15,000. The incorporators are William M. Thomas, Edwin H. Miller, Jr., Charles H. Howard, Thomas S. Dando, Daniel A. Keyes and John O. W. Frishmuth.

DAVENPORT-LEIBENGER.

The second and final match of the series between the above-named gentlemen was shot at Woodlawn Park, Brooklyn, on Thursday last. The day was cloudy and threatening rain, but 2 P. M., the hour for the beginning of the contest, saw fully 200 interested spectators upon the ground, among whom were noticed A. H. Heritage, Dr. Wynd, W. Fred Gumbly, Hugh McLaughlin, J. K. Orr, Dr. Van Sire, J. A. Epfig, Chas. Barret, John Schlemman, Neuf Appar, Dick M'nses, Wm. Rich, J. Ayers, and D. Nolan.

The first contest having been shot under Long Island rules, Hurlingham, according to the articles of agreement, governed the second.

The birds for the first half of the match were but an ordinary lot, but in the second half they appeared to be of the highest order. Davenport was shooting in grand form, and, as predicted before the contest began, he proved to be an easy winner. His run from the 40th to 93rd bird without a miss was as clever an exhibition as has ever been seen at the trap, and if it had not been for a vocal duet of "Who Killed Cock Robin?" that was being mutilated by two old "vets" who fondly imagined they could sing, he would more than probably have killed out straight. As it was, 96 out of 100 is fairly clever shooting.

Mr. Leibenger, although clearly outclassed, was a good loser, and expressed a willingness to shoot another match, but insisted on the game being held clearly to the wind.

A match between L. T. Davenport and Phillip Leibenger, 100 birds each, Hurlingham rules to govern, for a trophy, Mr. Jacob Pentz referee:

L. T. Davenport.....	122112221122110222102221	23
	2122222222221122220111	24

	2202211111121202020201	18
	c210 without score.	TEA X.

HONEYE FALLS, N. Y., July 4.—The scores are poor on account of very high wind, which came in gusts with rain. We had a number of shooters from the Victor Gun Club; they are a gentlemanly, fine lot of boys, and we hope to meet them again; also a Mr. Fred Ely, from Olden Gun Club, who carried off the gold medal with a score of 17 bluebirds out of 25. Match for solid gold medal (value \$20), 25 bluebirds:

	1001010011011010111110	15
Dr. Weller.....	10010100101010000010	14

WALNUT HILL, July 1.—On the programme of the new shot-gun match opened to-day by the Massachusetts Rifle Association is found a sentence which suggests modestly enough that among the prizes will be found "some suitable for New Year's gifts." An inspection of the prize list certainly would lead one to think so, for the 25 prizes which appear in it aggregate \$370.50 in value, and include everything from a silver tea set to a cut-glass inkstand. The new match served to attract the usual crowd of shooting enthusiasts at the first competition to-day, and the pace set was a warm one. Mr. Bowker proved to be the best stayer, and to him fell the distinction of wearing home the handsome medal, which at the end of the year will become the property of the competitor having scored the highest aggregate in the entire match. Besides the main event of the day, the sweepstakes were shot. Below will be found the summary of the day's work, which was carried out under the most favorable of weather conditions. Gold coin and merchandise match: First competition, 20 Keystone targets from 5 traps, under Keystone rules; fortnightly competitions, beginning July 1, until Dec. 30, 1891: Bowker 18, Black 18, Barrett 10, Hosmer 16, Curtis 14, Snow 14, Eager 13, Nichols 13, Dann 12, H. Sayre 12, Lee 11, Thompson 10, Nelson 9, Smith 7. In the shoot-off of ties for the club medal Mr. Bowker won.

NEWARK, N. J., July 2.—Some fine shooting was done in the live-bird match at Harry C. Keogel's grounds on the East Side grounds to-day. Each man shot at 50 live birds for \$50 a side under Hurlingham rules, Chris Reinhardt was referee. At the finish the score stood Keogel 47, Griffen 45. Keogel missed his 22d, 37th and 40th birds. Griffen missed his 9th, 18th, 22d, 27th and 29th birds. Keogel used his second barrel 15 times and Griffen used his 29 times.

CLEVELAND, O., July 3.—At the weekly shoot of the Blue Rocks' shooting to-day Barney won the badge. The conditions were 25 single bluebirds, 3 unknown traps, A. S. A. rules. Following is the score: Rees 12, Hinde 14, Arnold 14, Zapp 16, Richner 15, Barill 12, Barney 20, L. W. 9. Barney's Barill 10, Granger 9, Sweep shoot at 10 singles, 3 prizes: Arnold 8, Zapp 7, Hinde 3, Lewis 4, Barney 6, Jet 4, Barton 8, Arnold first, Barney second, Lewis and Jet div. third.

BRIGHTON, L. I., July 2.—One of the most interesting live-bird matches of the season was shot off at the grounds of the Atlantic Rod and Gun Club to-day. It was a sweepstakes of \$20 each at 25 birds, the contestants being Mr. Dwyer, Robert Beck, of Rye Beach, E. J. Joppert and Dr. Cox. The men were all in good condition, and although they had some hard drivers and right quarters, they made excellent scores. Dwyer won with 20 killed, Robert Beck second with 19, Dr. Cox third with 14, and Dr. Cox killed 12. Messrs. Dwyer, Beck and Joppert were then entertained at dinner by Dr. Cox.

TORONTO, June 30.—The Drovers' Gun Club held the fourth shoot for the silver medal presented by Mr. Wm. McDowell. The following are the scores, which were made at 15 birds, 20yds. rise: Newsom 14, Wray 13, Habberty 13, Watson 11, Sloper 10, Granger 9, Smith 7, Tarter 6. The Ayr Gun Club shot their third match for the McDowell medal on Saturday afternoon last, with the following result, at 25 bluebirds: A. W. Murray 19, Thos. Taylor 15, Jas. Barill 15, A. Matheson 14, Wm. Rutherford 14, W. E. Gammon 14, H. W. Weller 12, Wm. Clark 12, Jas. Henderson 12, John Hirstad 12, A. Bunyan 12.

THE JAMAICA PLAIN GUN CLUB are ready to shoot a five or ten-man team match with any gun club or club captain. If members of the different clubs will send the name of their club and address of their secretary to H. F. Amsden, captain, J. P. G. O., 51 Elm Hill avenue, Boston, Highland District, their club will soon receive a challenge for a contest.

THE JOHNSTOWN, N. Y. GUN CLUB will give a day's tournament on their shooting grounds July 21, open to the world.—F. W. PARTISS, Sec'y.

THE READING A. C. GUN CLUB held a sweepstakes shoot, good work being done.

A McCloud river woodsman in the heart of Oregon cut down a big five-foot sugar pine recently which proved to be hollow for 35ft. The McCloud Pioneer asks us to believe that in that hollow tree were five black, and seven cinnamon and three grizzly bears, and that the woodsman, after nailing slabs over the open end of the log, sent it rolling down the mountain toward the town, where it arrived in safety with the animals all alive to be exhibited.—Springfield Republican

Yachting.

BUILDING UNDER SURVEY.

RACING construction is a new thing on this side of the Atlantic, dating back no further than Liris and Kathleen, built in 1889, but enough has been seen already to show the desirability of a body which shall do the same work as the British Lloyds, and much more too; in laying down rules for the construction of yachts, and the surveying and rating of all pleasure vessels. The building to Lloyds rules is in no way compulsory in Great Britain, nor is it generally done in the case of racing yachts, but even there the desirability of complying with the rules is very evident. Even with a long experience to guide them and their strong conservatism to hold them back, British designers are pushing toward a dangerous extreme in light construction. On this side, with far less practical experience, the characteristic enterprise and recklessness of Americans are likely to carry them much further, and already there are indications that strength has been seriously neglected in the striving for a few extra pounds of lead in the keel. The practical question of the organization of such a body, with suitable rules for building, and of making it compulsory, or at least highly desirable that every racing yacht shall be built under its survey, is a most difficult one. The necessity, however, is likely to be apparent to all in two or three years more, by which time a great deal of money, and probably some lives, will have been wasted in a fleet of dangerous and useless racing boats. In the interests not of safety alone, but of yacht building and yacht racing, it is most imperative that a timely and adequate check should be placed on the extreme of light construction which is now threatened by such competition as that in the 40ft. class.

MYSTERIOUS NEW YACHTS.—The New York Sun has lately called attention to two yachts now building in Great Britain, of which very little has been published, and both of which are suspected of being intended for America. The larger of the two, according to the *Field*, is a 60-rater, about Yaranara's size, or about 65ft. l.w.l. She was designed by Mr. Arthur E. Payne and is building by Camper & Nicholson, though neither the new Lloyds nor the *Field* give any hint as to her owner or her class, racer or cruiser. One fact about her that is sufficiently remarkable to attract comment is that Mr. Payne's work thus far has been confined to racers of 20-rater and under, his great success in the smaller classes having thus far brought him no orders for racers of large size. It may be that the present craft is only a cruiser, which would account for her receiving no special notice before she is well completed. In any case it is highly improbable that she is destined as a challenger for the America's Cup. The other yacht is a 20-rater designed and building by Mr. Will Fife, Jr., at Fairlie, her owner being a Mr. Paterson, a new and unfamiliar name in yachting on both sides of the Atlantic. The supposition is that she may prove the half-expected dark horse for Admiral Tweed, but this is little likely if the dimensions thus far given are at all correct, as they are identical with those of the new Dragon, 49ft. l.w.l. and 10ft. 11in. beam. The boat is a 20-rater, of composite construction, and hardly such a craft as might be expected from Mr. Fife for American courses. What is still more conclusive is that even though she should sail at once from the other side, she could not be ready for a race off Marblehead in much less than two months, by which time the racing will be nearly over. It is not for a moment likely that Mr. Tweed will again try the Minerva experiment, of bringing a boat here one season to race the next, and we can only conclude that whatever surprise he may have in store, his plans have not yet been discovered.

REGATTAS AND RACES.—That good old term regatta, which has been rather set aside by some clubs of late years in favor of the more ambitious titles of race or match, is having its meaning very clearly and practically defined by the natural course of events. In every one of the large clubs, save the New York, it has been found necessary to continue the regatta as a popular fixture, but at the same time to supplement it with a special race of a very different sort. The Atlantic Y. C. held its usual regatta on June 16, open to yachts of all rigs and classes, with the usual club steamer, ice cream and band. A week later, however, it hunted up a better course down the Bay and gave a very fine race for the three classes of yachts that alone show any signs of racing life this year. The Seawanhaka followed the same course, the regatta on the Bay being supplemented by a race on the Sound a couple of weeks later for the 40ft. and 25ft. classes. The Larchmont held its special race just before the regatta, while the Eastern arranged a special handicap for the racing classes to precede its regatta, which, however, was postponed to a later date. Unfortunately most regattas prove anything but races, and at the same time a race need be in no way a regatta, but both are called for under existing conditions, and the sooner the distinct functions of each are recognized the better it will be for spectators, committees and racing men.

PRIZES FOR SAILING OVER.—The custom of giving prizes for sailing over the course when but one boat in a class comes to the line has never been popular in America perhaps for good and sufficient reasons in the past. In the present condition of yacht racing, however, it is but proper that a yacht which comes to the line for a race should receive some recognition for what she has done and not be kept out of a prize perhaps by the withdrawal at the last moment of some other yacht. The main consideration just now, and probably for some time to come, is to get starters; and from this point of view it is good policy to offer every inducement to owners to start their vessels. It is undeniable that a certain feeling exists against men, who, owning fast boats, bring them to the line for every race, whether their class is well filled or not, but it is just these men who are doing the most for racing to-day. For the time being at least we would advocate a liberal prize to every yacht which sails over without a competitor; at least half, if not the whole, regular prize. We believe that such a course will in a short time promote entries, and at least it will break up the practice sometimes indulged in of a yacht declining to start because she knows that by so doing she prevents a competitor from racing.

"KILL THE UMPIRE."—There was some grumbling about Larchmont after the first handicap race that sounded very much like this familiar cry of the ball field, and if handicap races become general the same cry will be heard again. From all appearances in the present case the committee, who for obvious reasons prefer to remain incog. like the estimable pair in "Erminie," have tried to do their work fairly, and though they made some mistakes there was really small ground for complaint as the race turned out. The task was a thankless one, that few would care to undertake as an afternoon's amusement, and the end in view was certainly praiseworthy.

THE COURSE OF YACHT RACING.—A rather sad indication of the course of modern yachting is found in the amount of space given up perforce in the *Field* to the doings of a fleet of Brats, Babes, Pups and Bairs, which mongrel lot is monopolizing so much of the attention of racing men, already too few in number. Such a scaling down in size is but natural and inevitable, and the racing of small craft is a most desirable form of sport in many ways, but at the same time one cannot forget the grand fleets of old, such craft as Formosa, Kriemhilda, Iona, Bloodhound, Cetonia, Egeria, Miranda, Samena, Vanuara, Coriande, Freda, Annasona, Neptune, Vanessa, Sayonara, May, Julianar and Florinda. The development of boat sailing is a most excellent thing, but the rapid decline of yacht racing is a very different matter, and yet it is evident that the same change is taking place in America as in Great Britain. It is a bad thing for yachting when an old racer forsakes the deck of a Yaranara for the stern sheets of a Brat.

ALBORAK.—The event of the week is the defeat of the new Paine boat, Alborak, the craft that was looked to for a proof of Gen. Paine's well known views as to power. In justice to the boat and all concerned in her, Gen. Paine, Mr. John B. Paine and Capt. Haff, it must be admitted too little has yet been seen to condemn her as a failure; and she is thus far, like a number of the others, in very poor shape for racing. At the same time she has made the poorest showing in her first race of all the new boats, and there seems little probability of her ever proving the chosen one to stop Gloriana. The present week has been an off one for the laws of nature, Alborak so badly beaten by Oweene, Mineola losing her mast for the second time in two weeks, and Jessica scoring a fair win on elapsed time from Sayonara and Mineola.

VREDA AND WHITE WINGS.—The race for the Queen's cup, described in another column, brought together an interesting pair of yachts, the American centerboard sloop White Wings, designed by the late Capt. Cuthbert, and the steel 20-rater cutter Vreda, designed by Mr. Watson and sailed across last year to Lake Ontario. The performance of the two was so even that a comparison of their dimensions must be interesting. Vreda is about 46ft. l.w.l., 10ft. 2in. beam, and 9ft. 6in. draft, while White Wings is now about 42ft. 6in. l.w.l., 14ft. 9in. beam and 4ft. draft. Vreda's displacement is about 28 tons and White Wings' 16.5 tons. The sail area of the two is nearly the same, about 2,500sq. ft. by the Seawanhaka rule.

TIME'S CHANGES.—It is a curious chance that has placed Captain John Barr in temporary command of Cinderella, the yacht that he defeated so often while skipper of Clara in 1888. A race between the two now would be very interesting with Capt. Barr at the wheel of the centerboarder, provided she were in good racing form; and might possibly justify the remark of Mr. Watson on inspecting the two models in the Seawanhaka C. Y. C. rooms. He said: "I think that the greatest difference in the two is about here," placing his finger on Clara's deck by the rudder post.

LONG ISLAND SOUND RACES.

THE great chance in New York yachting, the removal of the local yachting center from New York Bay to the west end of Long Island Sound, has been made so gradually that it is hard to say just when the turn of the tide occurred, but the strong set to the eastward is now too plain to be mistaken. Some of the most potent of the causes of this change are becoming more powerful each year, the increasing number of vessels in the harbor; the greater speed at which many, such as the new Sandy Hook boats, are run; the increased value of the water front, due to the demand for the great railroads, and the sea encroachments on the limited waters of the Upper Bay, of these same causes by means of wharves and piers. Staten Island, once the chosen land of yachtsmen, boating men and canoeists, has been so thoroughly encircled by the great railroads that it is no longer available for any form of water sport, and in another five years it will be far worse than to-day, while the Jersey and Bay Ridge shores are rapidly sharing the same fate, the bulk of the pleasure craft and the cranking chains of the steam dredge being heard day and night.

Gradual as this change of base has been, it is marked by some prominent milestones, the organization of the Larchmont Y. C. in 1880, being the first and most important. Following this, in the years from 1885 to 1890 a number of new clubs have sprung up and flourished, the influence of each being purely local, but all helping toward the ultimate development of yachting in the Sound. In 1889 the principal regular event of the year in the Sound, the annual regatta of the Larchmont Y. C., was supplemented by the races of two more clubs, the American Y. C. of Milton Point, near Larchmont, which for the first time held a sailing regatta, and that of the Seawanhaka C. Y. C. at Oyster Bay, this being the first time that the racing club of the Sound had a growing importance of the Sound as a racing ground. The races of these three clubs made a most interesting and instructive series, the great feature being the new 40ft. class, with Gorilla, Liris, Marquita, Papoose and Nymph. Though of such recent origin, the July race week on the Sound offers a very favorable comparison to the long-established June week of the Bay, and while the importance of the latter has unquestionably diminished, there is every reason to look for a rapid and prosperous increase of racing among the Sound clubs.

The present year promises to be a marked one in the history of yachting on Long Island Sound, through the return to its birthplace of one of the strongest of the New York clubs, the Seawanhaka Corinthian, organized originally as the Seawanhaka Yacht Club of Oyster Bay. Throughout its twenty years of life the Seawanhaka Club has been distinctively a racing organization, its whole policy being directed to the encouragement of yacht sailing. Of late years, with the serious drawback of no station at all, or at best, of one on New York Bay, it has been at a disadvantage in the matter of racing; but once in its new home, one of the finest harbors on the Sound, and with a racing course at its door, it will be in a position to make its class as important as in the old times at Oyster Bay, or a few years later at Staten Island.

The calls of business are too imperative to the average American, however keen a yachtsman he may be, to permit him to take a whole week for racing so soon after the June regattas and so close to the club cruises in the latter part of July; and this is certain to act to the detriment of the later races of the series, as those of Monday and Tuesday. In spite of this, however, we look to see in a very few years a large number of races, with classes well filled in each, under the management of the Larchmont, the Seawanhaka, the American, the New Rochelle, the Riverside and other neighboring clubs, that will bring together the entire local racing fleet between the Narrows on the south and New Haven on the east.

LARCHMONT SPECIAL, 40FT. CLASS, JUNE 30.

In addition to a double race in the regular regatta the Larchmont Y. C. gave a special race for the 40ft. class, with prizes of \$250 and \$100, the latter for four starters, the course being 12 miles to windward, which race was sailed on Tuesday of last week. Gloriana was not entered, Mr. Morgan having decided to race her no more until the New York Y. C. cruise, which made the light race more interesting between the others of the class. Nauticus was at Bay Ridge for a larger mast, so the only starters were Mineola, Sayonara and Jessica. The wind was E.N.E. blowing quite strongly, the weather mark being laid down off the Cows, near Shippan's Point. The forty-footers have carried working topsails in worse weather, but this time the forty-six-footers were content with reefed mainsails, Sayonara having her topmast hoisted. Neither wind nor sea were specially bad for racing, but like most of the new boats, both the old and the new Sayonara will need a deal of mending before they are fit to drive at the pace their sails and lead would warrant.

The starting gun was given exactly at noon, Mineola doing a bit of quick work as she came to the line with Sayonara to leeward that sent the other boat about and made her lose over a minute. The time was timed: Mineola 12:00:53, Jessica 12:01:41, Sayonara 12:02:13.

The two white boats on starboard tack headed for the Connecticut shore; but Jessica, on port tack, started across the Sound, Mineola very soon started after her, leaving Sayonara to work the north shore alone. Once down at her work, Mineola moved faster than it was possible for Sayonara to follow, and in the three miles, after the next tack all around, Sayonara crossed the wake of both the others. She then held a long tack until well under the Long Island shore, where she shook out her reef, the other two meanwhile working the north shore together, Jessica dropping astern, until Parsonage Point was reached, where they tacked and stood out to meet Sayonara, now approaching on starboard tack. The question of whether Jessica was quicker for a board race, or whether she was faster in the light breeze, was, at the time, but Mineola settled it by just crossing Sayonara's bows, the latter easily weathering on Jessica. Of course the two white boats could not get so close together without an interchange of compliments, and they were soon at it, hammer and tongs, Mineola having gone about on Sayonara's weather and staying there in spite of Captain Watson's efforts as the pair tacked back and forth. Finally Captain Watson made a tack, which put him and Captain Haff met by putting his boat about, only to find that Sayonara had filled away on the old tack after a long shoot and was clear of him. While Sayonara stood over toward Greenwich Point, Mineola held the port tack out into the Sound, shaking out her reef off Oyster Bay; while Sayonara set topmast and jib header. Within five minutes again came together Sayonara, had the best place, holding it to the turn, where they jibed as follows:

	Elapsed.
Sayonara.....	2 35 40
Mineola.....	2 38 48
Jessica.....	2 40 31

Shoals were started and spinnakers set to port, Jessica sending up a subaltern race for the being the first time in which the wind held until half the leg was covered, when it shifted to the south, so that spinnakers came in and jibtopsails were set for a reach home. Jessica dropped astern as the other two pushed ahead for first place, the finish being very close and exciting, Sayonara winning by a few seconds on even time, the allowance not being calculated as the yachts were not measured. The full times were:

	Start.	Finish.	Elapsed.
Sayonara.....	12 02 13	4 10 33	4 08 20
Mineola.....	12 00 53	4 10 57	4 10 04
Jessica.....	12 01 41	4 21 49	4 20 08

In the run and reach of 13 miles, Mineola made the best time, 1:41.19, Sayonara 1:44.34, and Jessica 1:41.18. Sayonara wins \$250. The regatta committee included Messrs. F. M. Scott and Otto Sarony.

SEAWANHAKA C. Y. C. SPECIAL, JULY 2.

After paying due respect to old-time traditions by going through the form of a regatta, the Seawanhaka C. Y. C., like several other clubs, has made a practical recognition of the new order of things by a supplementary race for the racing boats, which will include but two classes, the 40ft. and the 25ft. corrected length. The annual regatta was sailed as usual on the Bay, but the special race was transferred to the Sound, being set for the first day of the cruise, which, by the way, was a sort of quiet family reunion at the club's old, and now new home. On Wednesday afternoon there were at anchor the flagship Miranda, Com. Hilly Irigoin, Vice-Com. Ellis, and Vandal, Rear Com. Stanton, with the schooners Montauk, Crusader and Inrepid, and the cutters and sloops Shamrock, Ulva, Kathleen, Mariquita, Jessica, Nameless and Mineola. The courses and conditions of Thursday's race were as follows:

Special race for the 40ft. class and 25ft. class of sloops, cutters and yawls.—For this race the club offers a prize of the value of \$100 in the 40ft. class and a prize of the value of \$50 in the 25ft. class. The race in either class will, at the option of those entering, be made a sweepstakes, entrance fee \$25 each for the 40ft. class, and \$15 each for the 25ft. class, and in that case in either class, if five boats start, the second boat in that class will save her entrance money. Courses.—For 40ft. class, starting between the committee steamer and a stake post at anchor at the mouth of Oyster Bay, around the Red Can Buoy on Cow's Reef off Shippan Point, leaving it on port, thence around Black Spar Buoy on Matinick Point, leaving it on port, thence around Red Can Buoy on Cow's Reef, leaving it on starboard, thence across the starting line—25 nautical miles. For 25ft. class, starting between committee steamer and a stake post at anchor at the mouth of Oyster Bay, thence around the Red Can Buoy on Cow's Reef off Shippan Point, leaving it on port, thence around the Black Spar Buoy on Matinick Point, leaving it on port, thence across the starting line, keeping to the northward of the buoy on Center Island Reef—18 nautical miles. The compass course from the starting line to Cow's Reef Buoy is about north, and from Cow's Reef Buoy to Matinick Point Buoy is about south-west by west. A one-gun start will be made at 11 A. M. precisely, without regard to wind or weather, fog excepted. A preparatory signal will be given at 10:50 A. M., by a blast of the whistle of the committee steamer, when the national ensign will be lowered. At 11 o'clock A. M. a blast of the whistle will be given and the club flag hoisted; and the race will then be on for the start. The following exceptions to the racing rules are made for this race: Full preparatory signal crews may be carried without restriction as to number, but the helmsman must be an amateur. Sailing masters may be carried as mates. Clubtopsails may be carried. In case of a walk over in either class the value of the prize will be reduced one-half.

The course of the club in starting its special races from one gun has met with the serious disapproval of the daily papers both of Boston and New York, but in spite of this the regatta committee, Messrs. Walter C. Kerr, Mr. M. M. Howland, Wm. A. Haines, Wm. H. Plummer and J. Langdon Ward, ventured to try the experiment again. So far as the racing yachtsmen are concerned the race was this time a success, but the daily papers still refuse to countenance such liberties on the part of yacht clubs, and in place of the official times, only the times as taken unofficially from the crossing of the yachts were published.

The day was a most unpleasant one, rainy, and with little wind, so little in fact at the advertised hour that the start was not made until 12:30, by which time a light but steady easterly breeze was blowing. Mr. Belmont was on hand to steer Mineola, while Mr. Herman Duryea had the stick of Sayonara, and Jessica had no Corinthian helmsman. At the last moment Mr. A. P. Montant was persuaded to take the stick, though he had never been aboard the yacht. These three, with Smuggler and Nameless, made up the starters; Smuggler being sailed by Mr. Bourry and Nameless by Mr. Sanderon. The starting gun was fired at 12:30, and the race was on with a fair breeze. The first to cross the others being timed, unofficially: Smuggler 12:51:05, Sayonara 12:51:14, Jessica 12:51:20. Jessica carried a jibheader, the other two swinging club topsails, while all carried No. 1 jibtopsails for the reach. The times at the Cow's Reef buoy were:

	Elapsed.
Mineola.....	1 25 30
Sayonara.....	1 26 11
Jessica.....	1 27 07
Nameless.....	1 36 47
Smuggler.....	1 38 45

Mineola and Sayonara indulged in their usual luffing match, leaving Jessica to sail her own course as the three reached across to Matinick Buoy under balloon jibtopsails. The final time this match was:

	Elapsed.
Mineola.....	2 36 00
Sayonara.....	2 36 16
Jessica.....	2 36 48
Nameless.....	2 59 50
Smuggler.....	3 01 20

There was now a fresh breeze, with sea enough to bother the 25-footers. The fleet divided, the larger boats going back as they had come, while the two little ones went directly up hill to the finish, a hard hammer in which Nameless fairly beat her rival. As long as the wind lasted, Jessica did good work on the third leg, carrying small jibtopsail and jibheader, the others carrying clubtopsails, but saving for a time with no jibtopsails. The times at the Cow's Reef Buoy were:

	Elapsed.
Mineola.....	4 02 36
Jessica.....	4 13 17
Sayonara.....	4 16 55

The last leg was made with balloon jibtopsail on Mineola, and No. 1 on the other two, the times being:

	Elapsed.
Mineola.....	4 44 23
Jessica.....	4 49 24
Sayonara.....	4 42 31
Nameless.....	4 57 20
Smuggler.....	5 00 12

In the 6 miles to windward, Nameless beat Smuggler 1m. 02s., while over the course Nameless won by 2m. 52s. The full times were:

	Start.	Finish.	Elapsed.	Corrected.
Mineola.....	12 00 00	4 44 23	5 54 23	5 54 23
Jessica.....	12 00 00	4 49 24	5 59 24	5 59 24
Sayonara.....	12 00 00	4 52 31	6 02 31	6 02 31
Nameless.....	12 00 00	4 57 20	6 07 20	6 07 20
Smuggler.....	12 00 00	5 00 12	6 10 12	6 10 12

The corrected times of the 46-footers are only estimated, Mine-

ola and Sayonara not being measured. Mineola wins \$100 and Nameless \$50. Jessica's Corinthian helmsman, Mr. Montaut, made a particularly creditable showing for himself and the boat, sailing her well all day.

LARCHMONT Y. C. ANNUAL, JULY 4.

For one reason or another the Larchmont has fared best of all the New York clubs in the matter of a regatta, and that of Saturday may be said down as a complete success, the only ones who were at all dissatisfied being a few unfortunate yachtsmen whose craft were loaded down with specially heavy handspans. There were pretty girls by the hundred about the club grounds; for once they were all safely lighted out to the club steamer without serious danger of being drowned or drenched; the ice cream was not forgo ten; there was a good breeze all day; the largest display of attendant yachts that has been seen this year; a good entry list under the new handicap, making something for the spectators to see; and incidentally there was a real yacht race for the delectation of the experts. The race of the 46-footers was not only worth seeing, but it could easily be seen from start to finish by those on the judges' boat and club steamer, there being every opportunity to watch each maneuver of the boats. The chief novelty of the regatta was the handicapping, the work of a committee of experts, whose modesty was to induce them to withhold their names. The result was as follows:

SCHOONERS—CLASS D.

M. S.	Temp.	M. S.
Viator.....	allows	2 40
Lotus.....	1 52	
SLOOPS—CLASS 5.		
Sayonara.....	allows	5 30
Mineola.....	1 30	8 00
SLOOPS—CLASS 6.		
Kathleen.....	allows	2 00
Senorita.....	allows	3 45
Mistral.....	1 00	
SLOOPS—CLASS 8.		
Kangaroo.....	allows	1 30
SLOOPS—CLASS 9.		
Bantam.....	allows	6 30
SLOOPS—CLASS 10.		
Smuggler.....	allows	0 45
Nameless.....	allows	
SLOOPS—CLASS 10.		
Dot.....	allows	2 30
Nellie.....	1 00	25 00
Elfin.....	2 00	
OPEN YACHTS—CLASS 14.		
Tattler.....	allows	5 00
OPEN YACHTS—CLASS 15.		
Ada.....	not measured	Vanda..... not measured
OPEN YACHTS—CLASS 16.		
Phyllis.....	allows	2 00

While this handicap, which was supposed to be a fair one, condition, speed and other attributes, was not in the main unfair, there were several boats that had rather heavy loads to carry, considering the weather. Jessica was given a generous allowance of 8m. from Sayonara, Mineola got 80s. from her sister. Senorita, a new boat sailing her first race, was scratched with Kathleen, though 6ft. longer, while the 4th gave 2m. to Sasqua, a 66ft. boat that is not done much racing, but has been known for years as one of Ellsworth's smart boats. As Kathleen is but 80ft., she was hardly able to give 2m. to so good a boat of so much greater size. Needle, the new Gardner 25-footer, received 45s. from her older sister on account of this being her first race. The most fortunate boat of the fleet was the little cruising cat yawl Mimette, who drew off 25m. from the leader in her class, which, however, she did not need, winning by nearly 5m. under her regular allowance. No doubt the handicap could be improved; there were a number on hand who proclaimed their ability to do so, but we give the committee all credit for the best intentions and an effort to infuse a new, though artificial interest into racing, in which, as the table of starters shows, they were very largely successful. The handicapping of this kind, in which the committee are bound to consider first the slowest boats that can be induced to enter, is not to be thought of as a permanent institution, to take the place of regular racing, but for an occasional event, especially for a show regatta, it was worth trying and may be worth repeating.

The usual starting line was marked off outside the harbor, the yachts of 30ft. L.W.L. and over sailing around the Hempstead and home around the same course, 20 nautical miles. The smaller cabin boats sailed around the Hempstead mark and Matinick Buoy and back, 13 miles; while the open cats rounded the Scotch Caps Buoy and the Hempstead mark, a triangular course of 10 miles. Amateur helmsmen were in order. Sayonara was sailed by Mr. Alley, Mineola by Mr. Belmont, Nautilus by Mr. Maxwell and Jessica by Mr. Lovejoy. The new 25s, Needle, came out swinging a lug mainsail, like the Solent 24s raters, Mr. W. C. Brown handling the stick, the other two of the class being sailed by Messrs. Boury and Sanderson. The day was fair and bright as possible, not too warm, and with smooth water, the wind being a little sou'wester of moderate strength.

The start was made at 11:53:30. Sayonara going over the weather end of the line close to the gun. Mineola was a little later, crossing near the leeward markboat, Jessica shaved the weather end of the line, while Nautilus, the last of the class to start, went over on the leeward end. All the larger boats carried No. 1 jibtopsails. Nautilus and Jessica setting balloon foresails. The start was timed:

Sayonara.....	11 53 10	Ariel.....	11 55 45
Tattler.....	11 53 32	Nautilus.....	11 56 14
Mineola.....	11 54 19	Kangaroo.....	11 56 33
Jessica.....	11 54 47	Needle.....	11 56 38
Mistral.....	11 54 52	Elfin.....	11 56 49
Mimette.....	11 55 02	Saona.....	11 56 56
Iris.....	11 55 06	Kathleen.....	11 57 38
Sasqua.....	11 55 14	Lotus.....	11 58 32
Dot.....	11 55 18	Smuggler.....	11 58 38
Nameless.....	11 55 34	Nellie.....	11 59 29
Viator.....	11 55 36		

Zelica, Tempest, Ada, Senorita and Vanda were handicapped. Vanda was warned before starting that she carried too large a crew, but she crossed the line. Phyllis was in hard luck, coming over from Port Washington early in the morning for the race, but springing her hollow mast on the way, so that she could not start. The sailing was very even on the short 8-mile reach to the first mark, as the following times show:

	Elapsed.

The fleet separated here, the smaller ones running well down wind for Matinick, while the larger hauled up for the reach to Captain's Island. Nameless turned the mark just inside of Kathleen, and lost some time, while the larger boat crossed in front of her. Once clear, she eased sheet, finally set spinaker, the other two drawing up on her a little. The larger boat's hurried off for Captain's Island, Sayonara showing the way, carrying her No. 1 jibtopsail. Nautilus set her balloon jibtopsail, running very fast under it, while both Mineola and Jessica tried spinakers. Nautilus passed Jessica but failed to pass Mineola. The times at Captain's Island were:

Sayonara had lost her jib, and was carrying only her No. 1 jibtopsail, and making a neat turn she started straight for Hempstead on a close reach. Mineola turned in good shape, but Lotus, all in a snarl, was almost on top of her as they rounded. Mineola

kept off and made a short hitch in shore before completing her tack, thus setting her to windward of Sayonara's wake. Nautilus turned short about the mark, but lost time by her sails before settling down to work. Jessica made a good turn, but stood over to the north shore.

There was some queer displays of seamanship about the mark, due to the attempts to take in kites from the weather side. Nautilus carried her silk balloon jibtopsail around the mark and it immediately flattened against the stays and headsails, so that by the time it was finally taken in the sail was ruined and the boat had lost what she gained on the run. Lotus rounded with everything adrift, sails dragging overboard, and lost some time before she was in a condition to resume her course. Viator also carried her kites around the mark, meeting with the same trouble as Nautilus, being hove to with balloon jibtopsail to windward for a time.

As the fleet came in the wind headed them, until it became a dead beat over the last half of the leg. Sayonara worked toward the Long Island shore, Mineola and Nautilus being astern of her, but Jessica sailed her own course, holding well to the north and keeping the westerly wind there as long as possible. She finally came in with the others near Matinick Point, being well up with Sayonara. For a time the latter pained a little as she worked in shore, while Jessica made a hitch out into the tide, but as they came into Hempstead Bay Sayonara tacked and stood out after getting all day's distance. Jessica was following her, but instead of tacking, Mr. Lovejoy took his ship well up into the bay, in dead water and holding a nice breeze, while Sayonara was out in the strong ebb tide. Jessica held her starboard tack until she was safe to weather the markboat, then came for it with a rush. Meanwhile Sayonara was working up against the tide, being obliged to make a tack when quite near the mark. Jessica had been sailing very all day, and in the opinion of the judges, her prize on the handicap and regular allowance, but this bit of work in Hempstead Bay made her a winner on elapsed time, independent of any allowance. She turned the mark with 45s. lead on Sayonara, and with jibtopsail drawing, reached off for home. The little fellows were picked up at the mark, Smuggler having a good lead, while Needle had dropped to third place. Just at the mark the cats Dot and Elfin were some cross tacking, while Elfin fouled Dot, carrying away the latter's fore stay. The times were:

	Elapsed.
Smuggler.....	2 03 15
Nameless.....	2 04 23
Needle.....	2 09 50
Jessica.....	2 24 25
Sayonara.....	2 25 10
Mineola.....	2 26 40
Nautilus.....	2 35 30

Jessica had shown to great advantage on the windward work, beating Sayonara by over 3m., and this by no fluking, but solely on the merits of the boat and her helmsman; she was well sailed and she traveled very fast. The wind was streaky and uneven, varying in force and direction in different parts of the course, but at the same time every boat had plenty, and there was no time during the whole day when there was not a good working breeze. Nautilus made very poor work to windward.

The reach over the last leg was a sight worth seeing. Jessica, Sayonara and Mineola in line a few hundred yards apart, and practically holding the same distance, though each was pushing at her heels for the finish. Of the two white boats, it was noticeable that the narrower Sayonara, carried her sail a little better than the wider. The finish was timed:

Jessica wins the two class prizes on the handicap and club allowance, but the Commodore cup passes to Sayonara. Jessica not being enrolled in the Larchmont Y. C. Elfin and Vanda were disqualified. The regatta committee—Messrs. F. M. Scott, Harold Fordwood and Otto Sarony—were on the tug Dalgell, on which Com. Lowery hoisted his flag for the day.

AMERICAN Y. C.

Though the starters were few in the third annual sailing race of the American Y. C. on Monday, there was a sailing N. W. breeze that made a splendid race. The course for the cabin yachts was the same as the Larchmont save that the start and finish were off Milton Point, the course being around Hempstead and Captain's Island mark boats and home the same way, 24 miles. The catboats sailed a 10-mile triangular course, around Hempstead mark and Matinick Buoy and home. The four legs of the course were all reached, there being no windward work.

The starters in the 46ft. class were Mineola, sailed by Capt. Haff, Jr.; Sayonara, sailed by Capt. Watson; Nautilus, sailed by Mr. E. A. Willard, and Jessica, sailed by Capt. Harvey. None of the own-ers were aboard their boats. In the 40ft. class were the sloops Notus, Saqua, Estrella and Mistral, while the cats were Archer and Wonder. Nameless was present, but did not start, having no competitor, and Pongo, who started, gave up, as she was sailing alone.

The chief feature of the race was of the 46-footers, and with a lower sail breeze they made a very fine race. Mineola was sailed with a great deal of dash and very little judgment, overcanvassed most of the time, running into the weather mark; and, though mast in crowding on a topmast near the finish.

After a jibe, each started sheets a little, all but Mineola dousing topsails as the wind increased. Mineola was first at the mark, but made a very bad turn, fouling the sailboat with her mainsail and only gaining a couple. Capt. Haff was not stopping for a little thing like this, but hurried off as though Mineola was still in the race. The times were:

	Elapsed.
Mineola.....	12 51 31
Sayonara.....	12 54 08
Jessica.....	12 54 53
Nautilus.....	12 56 59
Notus.....	1 08 14
Sasqua.....	1 10 00
Estrella.....	1 12 25
Mistral.....	1 16 30

The reach back was nearly to the wind, and sheets were trimmed in, Nautilus setting her foresail, which she had lowered on the previous leg. The times at Hempstead were:

	Elapsed.
Mineola.....	1 57 04
Sayonara.....	1 59 24
Jessica.....	1 41 28
Nautilus.....	1 45 00

It was a tack at the mark and a close reach in. When a couple of miles from home Capt. Haff ordered the working topsail on Mineola, but as it was being set the mast gave way about 25ft. from the deck, everything going to leeward. No one was hurt, and the steam yacht Narwhal towed the wreck over to Hempstead Bay. The finish was timed:

AMERICAN MODEL Y. C., JULY 4.

THE second regatta of the season was sailed on Saturday. The first heat of the third class yachts was called at 10:50 A. M. The first yacht crossing the line 11:02, the wind being very strong from the west by south, kicking up a nasty sea. Out of eight yachts, four fouled just over the line, throwing them out of the heat, the balance finishing. Electra, showing up in her old form, sailed away from the others and crossed the line as winner of the heat by 1m. 28s. corrected time, 1m. 23s. elapsed time. Ida May being second. The second heat had four yachts starters, the others having had enough of it, Electra showing her wonderful speed to windward by winning this heat hands down from the fast yacht Star, who has beaten her in three straight heats at the previous regatta on May 30.

The Star has had some ballast taken out of centerboard to bring her to her designed L. W. This alteration has hurt her chances of winning from the Electra. Her owner will probably lower her weight and lengthen out her centerboard, which will improve her stability and speed in the future.

The second class race brought out a newcomer, the schooner yacht Normandie, and a handsome yacht she is. Considering this her first race, she did remarkably well, and Kate C. will have to hurry in the future.

This heat was devoid of interest, as Kate C. had a walk over, the others not being able to work up in time. Three yachts started. The second heat proved more interesting, Kate C., Normandie and May finishing in the order named, Normandie pushing the winner closely, May not doing so well as usual. Kate C. won by 37s. corrected time.

The special race, which should have brought out more talent, narrowed down to two starters—Electra and Marjorie. This race being confined to third class yachts, the course was to windward and return, total distance 1/2 mile. This windward and down wind work should be encouraged more by the owners of model yachts in the club, as it brings out the best points of the boats and tests the skill of the skippers to work a straight course down wind. Electra proved herself an all-round boat, as she won this race by 23s. elapsed time over the course being 1m. 53s. Marjorie is a hummer down the wind, and with better handling will make it interesting for Electra in a race of this kind in the future.

Scrub races wound up the day's sport. The next regatta will be held on Labor Day, Sept. 7. The distance sailed was three-tenths of a mile less 150ft.

THE ST. LAWRENCE Y. C. JUNE 27, JULY 1.

THE second series race of the St. Lawrence Y. C. was sailed on Saturday, three classes, the A, 20ft., and 21ft., competing. There was a strong and puffy breeze from the north, and the prudent ones put in one or even two tucks, but it was one of those days where prudence was rather a handicap than an advantage, for the boats under full sail made more in the lulls than they lost in the puffs. While the fleet was boxing about the starting line, the Chaparron, then under all plain sail and with a man on her cross-trees, got a knock down that seemed to lay her flat, and which more than put her fiddle blocks into the drink. She came up, however, as fast as she went down, and although she shipped a good deal of water she crossed the starting line in as good trim as ever, a good witness to the efficacy of outside ballast, even on a lake where 8ft. is an extreme draft. The start was as follows:

Start.	Finish.	Elapsed.	Corrected.
Black Eagle, 4 02 00	Frolic, 4 03 20		
Elidra, 4 02 00	Mollie Bawn, 4 03 20		
Valda, 4 02 30	Dream, 4 04 00		
Vesper, 4 02 30	Lulu, 4 05 00		
Thora, 4 03 00	White Squal, 4 06 00		
Chaparron, 4 03 05	White Squal, 4 06 00		

Dream carried a working topsail over her lower sail and never took in a reef all day. Valda set her working topsail over a one-reefed mainsail. All the rest of the fleet were content with all plain sail as a maximum, although Frolic set a jibtopsail just after the start, which did her little or no good. It was a reach to the Valois Light Buoy, during which Dream passed the fleet and took second place. Valda broke her spinnaker out of stoop in good form as she got past the buoy, all the others getting into more or less trouble with theirs, and the little white boat gained well on the leaders on the run. This gain she increased on the windward work in to Pointe Claire, after the Chateaugay Buoy was rounded, and she actually led the fleet around the Pointe Claire Buoy, the half way mark of the course. Dream followed her closely, then Lulu, which had picked up well on the windward work; then Chaparron and the rest at regular intervals, making as fine a spectacle as has ever been seen on Lake St. Louis. On the reach out Valda was passed by Dream and Lulu, and on the beat back to the Valois Buoy from the Chateaugay mark the little Thora, a boat of 19ft. L. W. L., rigged with two butsway sails and manned by four men, knew how to hike to windward and secured third place. It was a close race back to the starting point from the Valois Light Buoy and no change took place in the position of any of the boats. The time summary was as follows:

C. L.	Start.	Finish.	Elapsed.	Corrected.
Dream, 32.00	4 04 00	5 50 15	1 46 15	1 49 15
Lulu, 29.02	4 05 00	6 00 10	1 55 10	1 49 15
White Squal, 31.01	4 06 00	6 17 25	2 11 25	2 07 25
Black Eagle, 37.07	4 02 00	6 15 25	2 20 25	2 10 25

20FT. CLASS.

Valda.....	24.01	4 02 30	6 03 45	2 01 15	1 56 00
Chaperon.....	29.08	4 03 05	6 04 30	2 01 25	2 01 25
Frolic.....	28.00	4 03 20	6 05 50	2 02 30	2 01 29
Mollie Bawn.....	25.09	4 02 30	6 12 20	2 09 00	2 05 40

21FT. CLASS.

		Start.		Finish.		Elapsed.		Corrected.	
Thora,	19.00	4 03	00	6 33	00	2 00	03		
Vesper	18.07	4 01	50	6 18	30	2 16	40		
Elida,	21.00	4 02	00	6 22	50	2 20	05		

Dream was there in the A class, but was not by 18sec. corrected time. Valda wins in the 20ft. class by 5.23 corrected time, and Thora wins in the 21ft. class by 20.2 elapsed time. The standing of the winners in the series is now for the commodore's cup, Lulu has one leg and Dream one leg; for the vice-commodore's cup, Valda has scored two legs, and for the 21ft. trophy Thora has scored two legs.

The third of the St. Lawrence Y. C. series races took place on the morning of July 1 over the usual club course above the club house at Dorval. At the start there was a light easterly breeze, which was no stronger than was necessary to enable the boats to stem the current at the line, but this freshened before the finish into a whole-sail breeze with some strength in it. Valda was the first boat across the rest of the fleet following in a bunch, and all but two with a handicap, and until the Valois Light Buoy was reached there was a good deal of blanketing. Dream drew through the fleet on the run, taking second place at the Valois Light Buoy; but it was not until the reach for that buoy on the return was nearly over that she was able to collar Valda, and take the lead of the fleet. Lulu succeeded in taking third place on the first reach to Pointe Claire, and there she was passed for second place in the 20ft. class race between Chaparron and Mollie Bawn, a bad part of which was a foul, which resulted in the two boats becoming locked. It was a close reach from the Valois buoy to the finish line, during which topsails had to be struck because of the freshening breeze. The time summary of the race was as follows:

C. L.	Start.	Finish.	Elapsed.	Corrected.
Dream, 32.6	11 00 00	12 49 42	1 49 42	1 46 28
Lulu, 29.2	11 00 00	12 54 24	1 54 24	1 45 33
White Squal, 31.1	11 00 00	1 05 35	2 05 35	2 01 15
Black Eagle, 37.7	11 00 00	1 05 32	2 05 32	2 05 32

-------------	------	----------	---------	---------	---------

Dream wins in A class by 2m. 5s. from Lulu, and Valda wins in the 2ft. class by 9m. 6s. from Mollie Bawn. This practically give Valda the vice-commodore's cup, as she has scored three win

Dream wins in A class by 2m. 53. from Lulu, and Valda wins in the 20ft. class by 9m. 53. from Mollie Bawn. This practically gives Valda the vice-commodore's cup, as she has scored three wins for it.

In the afternoon there was a ladies' cruise, and in the evening the commodore, Mr. A. W. Morris, and Mrs. Morris, gave an At Home in the club house.

CORINTHIAN Y. C. SWEEPSTAKES, JULY 1.

OWING to a change in the date of the cruise, the sweepstakes of the Corinthian Y. C. of Marblehead, originally set for July 4, was sailed on Wednesday of last week. Though by no means a conclusive one, with but three starters and light and fluky winds, the race has created more comment than even Gloria's performances in New York from the fact that the new Paine boat, Alborak, sailing her first race, was left almost hull down by one of the class, the Burgess Owens, The race was a \$25 handicap, with \$100 added by the club, there being four entries: Beatrice, owned by Messrs. Bryant and Prince; Owens, Mr. R. Turner; Alborak, Mr. J. B. Paine; and Gossoon (40ft.), Messrs. Adams. After racing on the previous day, Beatrice was in the doctor's hands from that chronic complaint of modern centerboard racers, "something the matter with the board," and so could not start, a fact that was much regretted in view of her initial performance, or rather promise. Of the starters Owens was sailed by Captain Charles Barr, Alborak by Capt. "Hank" Half, the elder, and Mr. J. B. Paine, and Gossoon, as usual, by Mr. Chas. Adams. Gen. Paine was not on board of Alborak.

The start was made off Marblehead Rock, the first leg being to the Graves Whistling Buoy, the second to the new Eastern Y. C. mark and the third back to the starting line, 24 nautical miles, 8 on each leg. The sea was smooth and the wind west of south at the start, making a beat, but drawing to the eastward when little more than half the first leg was sailed, making a close reach for the Graves; on the second leg it had hauled so far ahead that Owens barely made the mark in one stretch, Alborak having to tack: while on the last leg it was so far aft that spinakers and balloon jibtopsails were carried.

The start was made at 11 A. M., Owens being beautifully timed, coming for the line on the port tack and tacking as she crossed within 3sec. of Gossoon, who was by 3sec. astern of her on starboard tack, while Alborak was astern of Gossoon, crossing at 11:00 A. M. They crossed the line both Gossoon and Alborak tacked, standing inshore, while Owens held off shore alone. All carried clubtopsails and baby jibtopsails. At the end of the first short leg Gossoon was ahead of Alborak, both tacking together. When well to windward of Paine's Island, Owens went on port tack, and by dint of her good work to windward and the favorable slant of the wind later on, she was able to make Whistling Buoy without further tacking. On the first off shore tack Gossoon did better work than her big companion, being well to windward when the two finally tacked and stood in toward Nahant. Though gaining slowly, it was not until near to the mark that the big boat finally got well clear of the 40-footer. The times at the Graves were:

Start.	Finish.	Elapsed.	Corrected.
Owens, 12 24 46	12 24 46		
Alborak, 12 24 03	12 24 03		
Gossoon, 12 23 50	12 23 50		

The second leg was made by Owens in one hitch, while Alborak was compelled to tack. The times at the E. Y. C. mark were:

Start.	Finish.	Elapsed.	Corrected.
Owens, 1 39 10	1 39 10		
Alborak, 1 38 57	1 38 57		
Gossoon, 1 38 30	1 38 30		

Owens took the lead in the spinnaker drill, setting her sail in 1m. 50s., while Alborak took 3m. 37s., and Gossoon 2m. 16s. The run home was without incident, save that Alborak gained on the leader, the times at the finish being:

Start.	Finish.	Elapsed.	Corrected.
Owens, 3 00 50	3 00 50		
Alborak, 3 13 47	3 13 47		
Gossoon, 3 23 30	3 23 30		

The full times were:

Start.	Finish.	Elapsed.	Corrected.
Owens, 11 00 00	3 00 50	4 00 50	3 58 51
Alborak, 11 00 00	3 13 47	4 13 47	4 13 57
Gossoon, 11 00 00	3 23 30	4 23 30	4 19 25

Owens wins \$200, half given by the Corinthian Y. C. and half being the sweepstakes. The race was managed by Messrs. Geo. A. Stewart and Fred Newhall.

BEVERLY Y. C., JULY 4.

THE 12th regatta, third open sweepstakes, sailed at Monument Beach on Saturday, was one of the best races ever sailed here, many of the new boats appearing for the first time. The day opened with a strong southeaster, almost a gale; it was very hot during the day, and about half the morning it rained hard. All the entries appeared, however, except Edith, who was unable to get a crew, and just before the race it cleared up, the wind shifted to S. by E., giving a good beat, and blew a strong two-reef breeze during the race.

First and second classes were sent over course No. 2, a dead beat to Scraggy Neck and to Bird Island, a long and a run home. Third class had a dead beat to Pines Buoy, a long and short leg to Abial Ledge, a run home, then a beat to Pines again and came home before the wind, 8 1/4 miles, while the little fellows beat down to Pines and returned, twice round, 5 miles.

In first class the new Hector led off, much more heavily ballasted than in the last race, followed by Mattie carrying her big wind, both of which were reefed. Hector did much better than before and won handsly.

Eight boats entered in second class, but for some reason Bonita did not start, though she was on hand and intended to do so. In fourth class Cat, a new boat built by Holmes, met Squall, just built by Dunn. Cat was handled better than her competitor and sailed away from her time for first round being: Cat 2:09, Squall 2:13.

Third class next appeared in a bunch at end of first round, though Phenomenon, who had started first, had fallen back, and Puzzle, sailing wonderfully well, had come up from last place to second. Eina, who started with Puzzle, had shipped a lot of water and brought up the rear. The times of first round were: Parole, 2:42 32 Tycoon, 2:42 25 Buzzard, 2:42 32 Tycoon, 2:42 25 Asantee, 2:44 41 Phenomenon, 2:44 52 Eina, 2:47 20.

On second round Cat gained a little on Squall, but not so much as on first round. Puzzle took first place from Parole and Eina gained on the whole class.

The finish was very close and exciting, first, second and third classes crossing all together, the leaders in these three classes coming within 1 1/2 of each other. Anonyma sailed a splendid race and led the fleet home. Puzzle was right after her, followed by Hector and Parole within a few seconds. Moccasin was ordered and built for third class, but her builder, Crosby, got her into second class by 10in.

CHICAGO, June 20.—Last Saturday two rival yachts of this city, the Growler and the S. E. Gross, sailed a race five miles to windward and return, \$100 a side. Growler won, time 1h. 45m. The annual yachting regatta at Oconomowoc Lake, Wisconsin, was sailed this year on the 3d and not on the 4th.—E. HOUGE.

BOOKS RECEIVED.—New York Y. C. year book, Corinthian of Marblehead, Slipican and Corinthian Navy.

BOSTON CITY REGATTA, JULY 4.

THE annual regatta given by the city of Boston was sailed on Saturday in a strong S.W. wind, the fleet being reefed, the breeze falling lighter after a time. The official times were:

JACK O' LANTHORN—SAIL PLAN.

JACK O' LANTHORN.

2 1/2-RATER.

THE sail plan of the 2 1/2-rater Jack o' Lantern, whose lines appeared in our last issue, is of special interest just now from the fact that the same rig has just made its appearance in American waters on the new Needle, designed by Mr. Gardner. On the Solent and the Clyde the lug sail has superseded entirely the ordinary boom and gaff for racing boats. The dimensions of the above rig, compared with some corresponding measurements of the Gardner boats, Smuggler and Mr. Wetmore's unnamed craft, are as follows. Both of the American boats carry the ordinary boom and gaff mainsail.

Foremast boom and gaff	Jack o' Lantern.	Smuggler.	Wetmore.
Mast from fore end l.w.l.	5 ft. 9 in.	25 ft. 1 in.	25 ft. 7 1/2 in.
deck to highest sheave. 23ft. 8 in.		27 ft. 9 in.	26 ft. 9 in.
Boom	26 ft.		
Yard or gaff	26 1/4 in.		16 ft. 5 in.
Base line of sail plan	35 90	41 87	38 53
Mast fore side to jib track	10 40	13 45	11 45
Mainsail, area sq. ft.	460		
Jib	133		
Total	618		
Y. R. A. rule	594		
Seawanhaka rule	632	663	618
Sail area, square root	25 14	25 69	24 87
L.W.L.	25 70	24 08	24 87
Corrected length	25 42	24 88	24 87

*The regular Seawanhaka rule makes no provision for lug sails, but the rule as lately adopted by the Corinthian Navy has a special proviso, by which 80 per cent. of the yard is added to the base line. In this case the actual area of sail is over-measured by 14 sq. ft. To make the even 2 1/2 rating by the Y. R. A. rule, the sail plan will be reduced to 580 sq. ft. in place of 594.

BOUNCER BOATS.

Editor Forest and Stream:

Gloriana, the new British 2 1/2-rater, Bouncer, and its successors, like the Arab dhows or the ancient galleys of Phoenicia, all demonstrate the virtues of their prototype, the "Flying Pontoon," first built by Mr. Clapham, of Roslyn, inasmuch as all do away with deadwood and depend on beam mainly for stability, with a scow-like disregard to perpendicular sharpness at bow. Not one of them, however, has the beam designed by the inventor of the Flying Pontoon. Some day you'll see a "shovel-nosed shark" with a square deck plan that will be able to hold out a tow-rope to even the best of Herreshoff's productions. RED THEOIL.

Editor Forest and Stream:

Noting your somewhat sarcastic remarks concerning "a non-descript from Long Island Sound, one of Mr. Clapham's original 'creations,'" I will say in reply that some time ago the FOREST AND STREAM asked the following conundrum: "If Mr. Clapham thinks his light draft boats can sail with the deeper craft why does he not enter some of the regattas about New York?"

So on June 22 I sailed my new yacht Chippewa in the regatta of the Corinthian Y. C. The Chippewa has a waterline length of 23 ft. 6 in., beam 11 ft., and draws 15 in. of water, her racing length being placed at 25.50 ft.

Her class competitor was a racing cutter by one of the most successful designers in the world. Her racing length is 26.71 ft. She is deep and sharp, with much lead in the place where "it will do the most good."

Well, in the race of 19 miles Chippewa beat her more than 14 m. with a good breeze blowing on every point of sailing.

Not only this, but at the same time Chippewa beat, dead to windward, another extremely narrow and deep cutter measuring 36.10 ft. sailing length. Chippewa carried a very small cruising rig and no ballast at all.

THOMAS CLAPHAM.

ROSLYN, L. I., June 29.

EASTERN Y. C.—A series of special races is announced by the Eastern Y. C. for July 22, the classes being: For yachts of any club in racing trim—First class schooners, over 75 ft. waterline, \$100; second class schooners, over 30 ft. and not over 75 ft. waterline, \$100; fifth class, sloops, over 40 ft. and not over 46 ft. l.w.l., \$100; seventh class, sloops, 30 ft. and not over 35 ft. l.w.l., \$75. For yachts of the Eastern Y. C.—In cruising trim with handicap allowances, first and second class schooners as one class, \$100; third and fourth class sloops as one class, \$75; sixth class, sloops, \$75. The handicaps will be posted on the evening before the race. The committee also offer to arrange sweepstakes in the racing classes should owners desire it.

CLUB CRUISES.—The fleet of the Seawanhaka C. Y. C. met at Oyster Bay on July 1, waiting over until the morning of the 4th, when it sailed for Larchmont, being present at the regatta. The cruise of the New York Y. R. A. began with a rendezvous at City Island on July 4, the fleet sailing eastward on Monday morning. The cruise of the Corinthian Y. C. of Marblehead began on July 4, the fleet sailing to Isle of Shoals, where it anchored all night. The cruise of the Larchmont C. Y. C. will probably begin on Saturday next. The Yorkville and Harlem clubs each started on July 4.

RIVERSIDE Y. C. REGATTA.—The Riverside Y. C. has issued a specially good programme for its regatta on Saturday, a large chart of the Sound, from David's Island to Long Neck Point, being given on one side. The race will be sailed under the club's new classification by corrected length, Seawanhaka rule, and will be open to yachts of the New York, Seawanhaka, Atlantic, Larchmont, Corinthian, American, New Rochelle, New Haven, Oyster Bay and Cherry Diamond clubs.

BARBARA.—A ton of lead has been taken from Barbara's keel at Lawley's, and she now floats within her class.

SATELLITE, steam yacht, has been sold by J. A. Aspinwall to Alfred Van Santwood.

ANSWERS TO CORRESPONDENTS.

No Notice Taken of Anonymous Correspondents.

R. W. P., Island Lake, Dak.—The manufacturers have been invited to send us a gun for testing.

X. Y. Z., Oakland, Cal.—Rev. Myron W. Reed, of Denver, Col. once camped out a week or two with "Nessauk" in Pennsylvania, and there are other camp companions of his in Wellsboro, Pa.

Canoing.

PREPARATIONS FOR THE A. C. A. MEET.—We are reminded by the list of ten new A. C. A. members from the Mohican C. C., published this week, that now is the time for the clubs to make suitable preparation for the A. C. A. meet next month. Any members desiring to join the A. C. A. should be proposed immediately, and each club should be canvassed for men who can and will go to the meet. Arrangements for transportation, mess, etc., are to be made, and the usual supplies of club badges and lanterns are to be provided. It pays every club down to the smallest to have a good representation, no matter how small in numbers, at the annual meet.

REGATTA OR RACE.—In our yachting columns we call attention to the difference which exists between a regatta and a race, something that canoe clubs as a rule do not recognize. There may be some question as to what does constitute a regatta, but there can be no doubt that there is one thing that does not, and that is a mere display of fancy sailing and balancing in front of the house piazza for the whole afternoon, to the exclusion of all general racing.

THE CHICAGO C. C. is figuring to bring back the vast majority of the prizes from the W. C. A. meet at Ballast Island, Lake Erie, July 11 to 23. Mr. R. P. Marks, of this city, offers as a prize for a free-for-all race an elegant blanket, which must be seen to be appreciated, but which I have not been able to see yet, though Purser C. W. Lee tells me it is on exhibition at one of the large stores here.—E. HUGH.

A. C. A. MEMBERSHIP.—Central Division: Rufus H. King, Jr., Thos. S. McLaughlin, Alfred S. McLaughlin, Matthew Van Alstyne, Geo. C. Halcott, S. H. Ransom, John T. Bender, D. Stewart McKinley, E. K. Palmer, Samuel Anable, 2d, all of Mohican C. C., Albany; Wm. C. Jupp, Detroit, Mich. Northern Division: Jas. E. Browne, Toronto; John O. Donnell, Bobcaygeon; T. W. Butler, Lindsay.

ATLANTIC DIVISION MEET.—The races of the Atlantic Division meet at Chesequake Creek were sailed on July 3 and 4, the camp breaking up on Sunday after a pleasant meet. The full report of the races will appear next week.

ARLINGTON C. C.—The annual regatta of the Arlington C. C. will be held on the morning of Sept. 7 on the Passaic River. The club at its last meeting elected five members, and decided that only canoes would be allowed in the boat house.

NAMES AND PORTRAITS OF BIRDS, by Gurdon Trumbull. A book particularly interesting to gunners, for by its use they can identify without question all the American game birds which they may kill. Cloth, 220 pages, price \$2.50. For sale by FOREST AND STREAM.

For Harness, Buggy Tops, Saddles, Fly Nets, Traveling Bags, Military Equipments etc. Gives a beautiful finish, which will not peel or crack off, smut or crack by handling, does not lose its lustre by age; dust will not stick to work finished with it. Is not a varnish. Contains no Turpentine, Benzine, Naphtha, Alcohol, or other injurious articles. Sold by all Harness Makers.

PAWNEE
HERO STORIES AND FOLK-TALES.
With Notes on the Origin, Customs and Character of the Pawnee People.
By **GEORGE BIRD GRINNELL ("YO.")**
Cloth, 417 pages. Illustrated. Price \$2.00.

Pawnee customs and beliefs are richly illustrated by the folk-tales and in the copious notes Mr. Grinnell gives an uncommonly spirited account of Pawnee life in peace and in war. There is an account of the defense of a Pawnee village by 200 sick men, cripples, old men and squaws, against 600 Sioux warriors, which for sheer gallantry and indomitable pluck will match almost anything in military history. The Pawnee warriors were all away at the time, and the Sioux counted upon an easy victory. But the Pawnee cripples and women actually beat them off after a hard day's fighting, and at last so terrorized them that the bold assailants fled in panic and sustained a heavy loss. Mr. Grinnell also has written a picturesque and vivacious sketch of one of the last Pawnee buffalo hunts, in which the Indians commonly reverted to primitive weapons and usages, often hunting quite naked with no other arms than their bows and arrows. A particularly interesting part of the book is that which treats of the Pawnee doctors or medicine men. The statements of Mr. Grinnell show the possession by some of these men of a kind of skill in sleight-of-hand far beyond that usually attributed to Indians; some of the facts here described are as puzzling and unaccountable as those performed by the famous jugglers and fakirs of Hindostan, while one of their tricks is a close parallel to the East Indian mango feat. . . . Those who desire to learn of the many other wonders done by the Indian doctors must refer to its pages for themselves. As it is certainly one of the best works on Indian life, legend and character that has been written for a long time, it should obtain a wide circulation.—N. Y. Tribune.

FISHERMAN'S AUTOMATIC REEL.

When a sportsman finds anything which adds to his pleasure, without increasing his labor, he wants all his brother hunters and anglers to know of it and share with him the newly discovered "helper."

WHAT WE CLAIM FOR

The Automatic Reel.

FIRST—It will wind up the line a hundred times as fast as any other reel in the world.
SECOND—It will wind up the line slowly if the angler chooses.

THIRD—No fish can ever get slack line with it.

FOURTH—It will save more fish than any other reel.

FIFTH—It will prevent tugs, lines and snells from being broken by large fish.

SIXTH—It enables the angler, and makes it desirable, to use lighter tackle.

These claims have been substantiated by the most skillful fishermen in America and Europe.

This reel is manipulated entirely by the hand that holds the rod.

ANSWERS TO CORRESPONDENTS.

EDWARD BURGESS.

SPECULATION is never idle on the subject of international racing and challenges for the America's Cup; every year fresh possibilities are discussed of challenges from this man or that, of new yachts intended as challengers, and of a thousand and one circumstances which may affect the racing. While for four years there has not been an occurrence connected with international yachting which has amounted to more than a matter for a few days' gossip, the present week has brought a change which has startled the whole yachting world, and which must have a most important bearing on the subject in the immediate future.

Of all possible contingencies, favorable or otherwise, that might affect the America's Cup, no one has ever suggested the removal of Mr. Burgess from the ranks of its defenders, nor has such an event seemed at all probable. Strong and vigorous, in the prime of life and at the height of his fame, prosperous in his business and most happy in his social and domestic relations, his death was almost the only contingency which had not been suggested by the busy tongues that are constantly on the alert for a new sensation in yachting.

The challenge of Genesta in 1884 has brought into well-deserved prominence a number of men who were up to that time comparatively unknown outside of their immediate localities, but who have since achieved international fame as yachtsmen. Of them all, the foremost was the designer whose fertile brain provided the yachts, which with splendid handling and marvelous performances have astonished the world.

The whole history of yachting offers no parallel to the brilliant and brief career which has closed so abruptly

this week. A student and a man of leisure, taking up the designing of yachts merely as an interesting study, suddenly called on to meet the masterpieces of the best professionals in a contest for the great yachting trophy of the world, he triumphed not only once but thrice. Following up this success, from the same drawing board has come a fleet of over 200 vessels within the brief period of six years, craft of all models and sizes, racing and cruising yachts, steam yachts, pilot boats, fishing and trading vessels. Many of these have been successful in the highest degree, Puritan, Mayflower, Volunteer, Sachem, Titania, Pappoose, Gossoon, Wona, Fredonia, Carrie E. Phillips, and dozens of others whose reputations are more local. Within this time Mr. Burgess was in active competition with the leading designers of the world, as well as with the famous local builders of yachts, fishermen and pilot boats; many of them specialists in one particular line. The genius of the man was shown by the fact that he made a place for his name at the top or very near it, not in one branch alone, but in every one; while in his chosen specialty of yacht designing he made a name and record which are likely to stand out as brilliantly beyond those of his successors as they now outshine all who have preceded him.

SHOOTING TOURNAMENTS AND GAME PROTECTION.

THERE is no reason in the world why the membership of an effective game protective organization should not be largely made up of trap-shooters; but experience has demonstrated again and again that the two interests must be kept apart at a convention where it is proposed to accomplish anything as to protection. A trap-shooting tournament or a game protective meeting may be an entire success if held alone; but if the two are in conjunction the trap-shooting enthusiasm will absorb attention, and the other will be slighted. At every combined convention in recent years shooting has been the "circus" and protection the "side-show," and not a very great success even as a "side-show."

In the plan proposed by Gen. Bruce for the restoration of the New York State Association for the Protection of Fish and Game, and in the later communication from Mr. Horace White, president of the Association, it has been suggested that in addition to the present membership a new contingent be received of men who are more certainly and more deeply interested in a movement to preserve our forests and fish and game. This is highly desirable. It is the first thing to do. But we are firmly convinced that no permanent change can ever be made in this respect, until the managers of the State Association shall provide for meetings from which the trap-shooting interest shall be wholly divorced.

The Association may be converted from its present position to one of power and dignity and influence in protective work, only by such a system of separate conventions. The trap-shooters are certain to have a successful meeting at Syracuse next year. They will be out in force. The entertaining club will have all it can do well to "run the shoot." The officers will be overwhelmed with business relating directly to the shooting tournament. The delegates will be intent on shooting. Interest will center in the shooting. There will be no time nor inclination for anything aside from the shooting.

To organize a convention of representative men in the interest of concerted game protective effort is a task which in itself will require all the labor and all the time that those who are most interested can afford to give; and such a meeting may well be arranged for in the coming autumn. As was said last week, Syracuse is the point to which we must look for the first move in the work, and we sincerely trust that a call may issue from the clubs there.

THE expressive colloquialism about "paying for a dead horse" just fits the case when a man settles up by paying \$157, fines and costs, for catching trout out of season. One might expend two or three times that amount without very many legitimate trout to show for it, and not begrudge it nearly so much.

THE annual meet of the National Rifle Association of Great Britain is on this week and next at the Bisley range. Cable reports say that the attendance is not so large as usual. The Canadian contingent started in with some fine work.

SILVER TROUT OF MONADNOCK LAKE.

"TWO sportsmen from Keene," N. H., recently published an account of their wholesale capture of Monadnock Lake trout as if it were meritorious to kill 175 of these beautiful fishes even with a fly-rod. This silver trout, or Dublin trout—the present Monadnock Lake was Dublin Pond a few years ago—has been found in only a few little lakes of New Hampshire. Our salmon and trout supplement, of April 4, 1889, will enable you to tell its distribution and recognize its form, since the fish is well figured in that number. When Mr. Thos. E. Hatch was a Commissioner of New Hampshire Fisheries (in 1872) he forwarded a few specimens to Prof. Baird from Monadnock Lake, then known as Center Pond. Twelve years later, Mr. Walter J. Greenwood, of Dublin, sent another lot of the "Dublin trout" to Prof. Baird, and about the same time the fish was mentioned in FOREST AND STREAM under the title "A Peculiar Fish" (FOREST AND STREAM, March 27, 1884). Prof. Agassiz obtained specimens of this Dublin trout upward of 30 years ago and pronounced it a distinct species, but it remained for Mr. Garman to describe the fish, which he did seven or eight years ago, giving it the name *Salmo agassizi*. We call it now *Salvelinus agassizi* and recognize it easily by its entire lack of reticulated markings on the sides, as well as by characters less perceptible to anglers. It is, perhaps, needless to say that trout of this kind are not found in "a lake near the Pacific coast," as announced in a recent newspaper article.

The average length of these trout is not far from 10 in. and the weight, 4 or 5 oz. The flesh is salmon-color and excellent for the table. The fishing season is in May and June and the trout rise only too eagerly to the fly for their own good. Judging from the descriptions, the colors must be very beautiful, although the red spots are not so numerous as in the brook trout and reticulations are not present on the sides. Spawning takes place in the shallows in October.

The silver trout is a lover of very clear, cold lakes, fed by springs, and should be a favorite one for introduction into suitable waters.

SNAP SHOTS.

THE Clark's Lake Anglers' Club is an association of fishermen resident in New York, Newark, and other cities, who recently secured or claimed to have secured the exclusive right of fishing in Wickham Pond, in Warwick, N. Y., in the lovely region made famous by Frank Forester. The pond is a mile in length and half a mile wide. It has always been open to the public for fishing and boating. The club secured from owners of the larger part of the lands abutting on the water a lease of fishing privileges; and the public was warned not to trespass. Residents of Warwick have not been pleased at this turn of affairs; and some of them have persisted in fishing. Last week two young men were arrested for trespassing on Wickham Pond; and a fund has been raised by the villagers for their defense. Then to make it pleasant for the club members, a warrant was sworn out for President R. H. Moses, of this city, who was taken before a justice and fined for fishing on Sunday. Mr. Moses paid up, but has appealed his case. It was said that the land owners who gave the leases to the club claim title to the body of the lake under an original patent granted in 1703; and like many riparian-rights cases, the Wickham Lake litigation may prove long and expensive.

Behold how good and how pleasant it is for brethren to dwell together in unity. A man who resented his neighbor's overlooking his own house built up a huge board fence—of the style known as spite-fence—and completely cut off not only his neighbor's view but his own too, and made the whole town laugh, until a fire one night destroyed the fence and the houses, and there was nothing left to quarrel about. Very similar is the case of two brothers of the angle dwelling near a body of water back of Swartswood, N. J., which bears the poetic name of Sucker Pond. A dispute about fishing rights converted these friends into enemies, and one of them fenced up a lane across his land through which the other had been accustomed to pass to the pond. Then somebody exploded a charge of dynamite in the water, and killed all the fish. The cause of difference being removed, we see no reason why the fishermen of Sucker Pond should not resume those relations of unity which are declared to be so good and so pleasant.

The Sportsman Tourist.

ON THE NORTH SHORE.—XI.

[Continued from Page 500.]

A CANOE containing a woman and three children, en route to Michipecon, touched at the island while we were feasting. Joe, who knew them, met them on the beach and had quite a chat with the party. On his return to us, he said the woman was one of the wives of a noted medicine man who was cruel and wicked, and who had mercilessly killed those who offended him. On inquiry as to how he killed them he said:

"By witchcraft."

"To thin, Joe," I replied.

"You laugh, but he kill you."

"How?"

"Why he get a berry and put it in you, if you are fifty miles away."

"A sort of traveling berry, is it not?"

"He put it in you anyhow."

"What then?"

"It kill you."

"Mere baby talk."

"He dead now."

"I feel relieved."

"His boy just like him. I saw him make little wigwam shake."*

On the low bluffs we noticed an humble cabin or two that nestled in a landscape of gentle and inspiring beauty, which, lighted up by the lake, never tires, never becomes commonplace.

"Here hills and vales, the woodland and the plain,

Here earth and water seem to strive again."

Lunch over, we sunbasked on the boat, and going two miles reached Maimainse proper, the fishing station of the Raisaines brothers. Here we found Mr. Turner and his party, who reported that they had had no fishing at all, only catching a few fingerlings. I was astonished that they had not sought other grounds, but the veteran said his "cautious friend" had become discontented, and was awaiting the arrival of the tug to return home. We knew what a disappointment this was to Mr. Turner, who was an accomplished angler from way back, and who had fished all the choice waters in the States.

He stated that he had set his heart on this trip, and had been to the trouble and expense of going to New York and purchasing for \$1,000 the naphtha launch expressly for this outing. As he told his disappointments my heart went out to the old gentleman, who I well knew would rather catch a trout than eat. When we told him the magnificent sport we had enjoyed with the spangled beauties since we left him, the tears stood in his eyes, and I have no doubt he bewailed the unfortunate fate of being caught in company with a "tenderfoot," who would neither fish nor cut bait. We tarried but a few moments here, and then left to go into camp two miles below. We found good quarters on an elevated plateau overlooking the lake. Ned being eager for a trout soon had his rod ready and went along the rocks, sending his flies into every available spot he thought contained the quarry. I sat in my camp chair and had a

fine view of the ardent angler as he threaded his way along the flinty rocks in the white splendor of the sunset. With his snowy hair falling o'er his broad shoulders, his white beard, purity itself, tossing in the breeze, and his bronzed and rugged features lit with the earnest animation of his pastime, he presented a pleasing picture, a *fac-simile* as it were of the true disciple of the gentle art. With what delightful skill he lifts his flies from the surface, and then again sends them with unerring aim and feathery lightness to the rippling waters. Hope is in every cast, and though the reward comes not, he never loses heart, never tires, but industriously tramps along over the rocky surface, still expectant with every cast, still as ardent as ever, still true to the art he so dearly loves. I looked and looked at the persevering angler, watching each cast with eager interest, in hopes of seeing some tigerish trout break the water, but the realization came not, for Ned was compelled to retire from the contest without a trophy.

"They are not here," he says, as he joined me, and so it seemed. They had either left for their spawning grounds in the rivers or they had fallen a victim to the rapacity of the copper-colored natives, to the premium of 18 cents per pound.

That night we had a terrific blow, and when we awoke in the morning discovered that the front end of the tent had succumbed to the windy element and was fiercely flapping on the ground. The boatmen were called and soon had the tent once more in position.

We had concluded that morning to wait for the tug and take passage on her for the "Soo," and thus conclude our trip. Joe desired us to secure some ice at Maimainse and then go into Maple Bay for another week's angle, but as he declared for home in one of his tantrums we determined that should be our destination, and for once the surly half-breed was defeated at his own spiteful game. It was a bitter disappointment to him, as he wished the total value of his wages to be further increased. If Joe could only divest himself of his imperious, surly and aggravating disposition he would be one of the best boatmen on the lake; but these disagreeable qualities are so innate with him that they will never be eradicated. They may slumber for a while but are sure to develop on some trifling occasion.

About 10 o'clock that morning, growing weary of waiting for the tug, we concluded to break camp and go to Maimainse and there await her, thinking it very probable that in a severe blow she would not stop for us. Looking around for our half-breeds, to give orders for breaking camp, they were nowhere to be seen. We then thought they had gone to Maimainse and so we had to content ourselves till they put in an appearance. This absence so excited our ire that we heaped all the anathemas we could invent upon their heads. Ned said it would be the pleasure of his life if he could only bring the tortures of an inquisition upon the vagabondizing lot. I was equally as vindictive, and just then would liked to have had them over a ton of nitro-glycerine with the battery in hand.

As we arose from our seats and started for the beach, lo, and behold! there were the dusky twain in question, serenely lying under a rocky bluff not ten feet away. They had doubtless hid themselves in the wood and then sneaked under the bluff. They evidently ascertained our candid opinion of them. The situation struck me as being so ridiculous that a smile of undue proportions broadened o'er my face. Ned, not taking the situation in its humorous phase, ordered them at once to get ready for Maimainse. Joe demurred, saying the sea was rather boisterous for the trip; but as Ned and I concluded to walk over, thus lightening the boat, they at once began preparations for their departure.

Our route to Maimainse ran over hills and vales of dark rock, slashed and notched as if by the axe of an infuriated giant; by great masses of splintered granite in the most eccentric confusion, and through dense thickets of scrub spruces and junipers, and over a large quantity of decaying timber. Ned perspired freely as he clambered along the adamant route, and several times called a halt; but my impetuosity carried me on, and being in the lead several times got off the beaten track, but through Ned's superior knowledge of wood lore recovered it soon after. Our improvised alpine staffs were of great service to us through this rugged route. We brought up at a ladder some twenty feet high, and descending this were in Maimainse; and seeing the camp of the Turner party close by, gave an Arab yell that awakened the quiet party that were just then having a quiet little game of poker on a twenty-five cent limit. On going in we were given a warm reception and invited to participate in the fascinating pastime, but seeing that we could not soon become millionaires in such a small game, declined. Turner, it appears, had a bushel of checks on his side, and was rapidly cleaning the party out of their small change.

Ned, who had been on the lookout for our boat, reported that she was rounding into the dock through a very heavy sea, and Joe, when he joined us, said the waves ran "damn high," an emphatic way he had of expressing himself on all important events.

At dinner time the poker game was discontinued and not again resumed, as every one began preparations for the departure on the tug which was momentarily looked for. The veteran publisher once more related his tale of woe and disappointment, declaring that when he again selected a partner for trouting, he would assuredly ascertain before starting if he were of the tenderfoot genus or not. I must admit, however, that I was somewhat pleased with Mr. Turner's partner, as he appeared to be quite an affable and cultured gentleman; but, as he expressed it, had not only become discontented with Lake Superior trouting, but had no confidence whatever in the naphtha launch for such waters' where sudden and dangerous gales are of frequent occurrence.

Mr. Turner, I will here state, on his return home, published a very readable and instructive account in his paper of the trip with his launch. He stated that he had made a voyage of about fifteen hundred miles with the little boat, returning by way of Lake Huron, Michigan and Grand River, making the entire trip without the slightest manipulation of the machinery, except at start and finish. We take the following extract from the account:

"On the whole, the naphtha launch is 'a thing of beauty' both in model and equipment, and can be implicitly relied upon, with ordinary care and slight attention, to do its work, both in speed and seaworthiness—in which latter respect it certainly excels, by reason of

its light weight and consequent buoyancy, any other power boat yet afloat; while its speed is fully up to the promises of its builders, from seven to ten miles per hour, according to size, varying from 18 to 50 ft. in length, employing motors of from two to eighteen horse power."

Since dinner a decided change of the weather had taken place. Sombre clouds from the far west were striding across the blue vault with a swiftness that drove the fleecy folds from the azure field. About 2 o'clock a slight sprinkle set in as an introductory, and then it began to rain in earnest. We stood around under shelter and speculated as to its continuance, and the non-appearance of the long-looked-for steam tug Annie Clarke. In a few minutes the rain cleared, but a misty drizzle continued that was far from being pleasant. Some one proposed a game of whist, under shelter of a shed on the shore end of the pier, but as there were only three whist players in the party, Ned, to make the game, agreed to play a dummy hand, and so at the scientific game we went. The first game was never finished, for it began to rain again so hard that the roof, not being waterproof, leaked like a sprinkling pot, which at once put a stop to the card playing.

A Jesuit priest, Father Chinborn, was also here awaiting the arrival of the steamer. He informed me that his circuit extended from Sailor's Encampment on St. Mary's River to Michipecon, and that he frequently voyaged by sailboat when the lake was open, and on dog-sledges and snowshoes in the winter. I have heard much of the pious courage, patience and self-devoting zeal of these missionaries on Lake Superior. They are well educated and learned men, many better educated indeed, than the majority, and yet they resign not only all enjoyment and comforts, but also all the mental inspiration and excitement of polished society. They live isolated and scattered in little log huts round the lake, often no better off than the natives. Only the thought of the great Universal Church to which they belong keeps them connected with society and the world.

Chateaubriand has described in a most attractive and pathetic manner, the labors and perils which the old missionaries patiently endured in these wild countries, that they might cultivate a garden of the Church. The good father conversed with me quite a while, and in a very interesting manner, telling me what crude minds he had to deal with, and what simple methods he introduced to make them fully understand his teachings. Father Chinborn is, as to looks, of French origin, and I presume about fifty year of age; of attenuated form and an expressive face which plainly indicates the marks of hardships he has endured in his missionary work.

Some one now discovered a tug tossing and rolling some distance on the lake, and then there was manifest interest to ascertain if it was the long-looked-for tug Annie Clarke. It was nearly an hour before she could be recognized, and then the camp was broken in a hurry and preparations made for the departure. The rain had again ceased, but still left a dirty little drizzle. When the tug landed there was hurrying to and fro of the crew, who busied themselves taking off some of the barrels of salted fish with which she was so heavily laden. A cautious person who was on the dock, waiting passage, stepped up to the captain, who was just then wrestling with a barrel, and remarked:

"Captain, I am glad to see you lightening the boat."

"Lighten her? I am just putting this freight forward so I can take on those fish cans," pointing to some near by that weighed a couple of tons each.

"Oh, is that it?"

"Yes, the Annie Clarke cleans up all freight as she heads for port."

Mr. Turner, who was standing near by, a quiet observer of what was passing, said:

"That settles it, I don't go on that boat."

Neither did he, for he remained and had his tent put up again, determined to await propitious weather and then return in his naphtha launch—the Eagle.

The captain, who had been approached a couple of times relative to taking passengers, and had given no positive answer, now that he had time, the freight being all aboard, told the anxious parties that he would take them all, including their boats, but that he could not provide them with meals. As he was to run into Bachewanaung Bay that evening and remain till morning, it would give us an opportunity to provide our own meals.

The little tug had a cargo of two hundred barrels salted fish, six cases of fresh fish in ice, three small boats in the bow, three towing at the stern and about twenty passengers besides the crew. She was evidently loaded to her full capacity, and yet had to take additional freight at Bachewanaung Bay. This was all right in fair weather, but in a heavy blow the situation was really one of hazard.

The seamen of the north shore are so familiar with danger that they have a supreme contempt for it, and never seem to realize the situation unless it is from the bottom of an upturned boat. They are as bold and hardy as the Norsemen of old, and as generous and hospitable as they are daring.

The captain stated that he had started early that morning from the Lizard, but the sea was so high from a prevailing gale, after he had left the islands, that he was compelled to return and await a lulling of the storm.

The final whistle from the little tug prompted us all to get aboard, and there we spread ourselves for comfort as best we could, some taking to the fish barrels and others to the 6x8 ft. of space that alone remained in the center of the stern. I was fortunate in getting a seat on a couple of stanchions that stood about three feet above the deck, and that ran alongside the small cabin. Several sat on the cabin deck with their legs dangling down, and those who had taken to the fish barrels tried to find comfort by sitting on the upturned heads; but the drizzle soon made their seats quite moist, and so they stood around wherever there was an inch or two of space.

ALEX. STARBUCK.

GRAPHITE PAINT.—Ordinary paint when exposed to the weather lasts from two to five years, but Graphite paint, it is claimed, withstands the elements for ten or fifteen. Well known people who have used Dixon's Graphite Paint, made by the Jos. Dixon Crucible Co., of Jersey City, N. J., state that this paint is not only durable but handsome, and suited for all outside metal work where a dark paint can be used.—*Adv.*

SUNDAY TRAIN TO MOMENCE.—The Chicago & Eastern Illinois Railroad placed in service June 14 a Sunday train between Chicago and Momence, leaving Chicago at 8:35 A. M., and returning leave Momence at 8:45 P. M., thus affording anglers a fine opportunity to spend a day on the Kankakee River.—*Adv.*

*I had heard so much talk relative to the wigwam shaking business, during my two trips on this coast, that I determined to investigate the matter by a research in Indian lore on my return, and subjoined is what I found concerning it in a work called "Kitchie Gami," by J. G. Kohl, 1880:

"The Indians have for a lengthy period been great spiritualists, ghost-seers, table-rappers, and, perhaps too, magnetizers, which we have only recently become, or returned to. The lodge which they Jossakids, or prophets, or, as the Canadians term them, 'jongleurs,' erect for their incantations, is composed of stout posts connected with basket-work and covered with birch bark. It is tall and narrow, and resembles a chimney. It is very firmly built, and two men, even if exerting their utmost strength, would be unable to move, shake or bend it. It is so narrow that a man who crawls in has but scanty space to move about in it."

Ned said he had camped here on one of his trips some years ago, and had magnificently sport around the islands and along the shore. As it was close to Maimainse and trout brought 18 cents per pound, he was satisfied it had been pretty well fished out by Indians and half-breeds. At one time there was a large fishery at this harbor, but presumed it so depleted the lake in its immediate neighborhood, that it had either to go elsewhere for its profitable harvests or abandon the business.

"Thirty years ago," a gentleman told me who had lived much among the Indians and was even related to them through his wife, "I was present at the incantation and performance of the Jossakid in one of these lodges. I saw the man creep into the hut, which was about ten feet high, after swallowing a mysterious potion made from a root. He immediately began singing and beating the drum in his basket-work chimney. The entire case began gradually trembling and shaking and oscillating slowly amid great noise. The more the neomancer sang and drummed, the more violent the oscillations of the long case became. It bent back and forward, up and down, like the mast of a vessel caught in a storm and tossed on the waves. I could not understand how these movements could be produced by a man inside, as we could not have caused them from the exterior."

"The drums ceased, and the Jossakid yelled that 'the spirits were coming over him.' We then heard through the noise, and cracking, and oscillation of the hut, two voices speaking inside, one above, the other below. The lower one asked questions, which the upper one answered."

"Both voices seemed entirely different, and I believed I could explain them by very clever ventriloquism. Some spiritualists among us, however, explained it through modern spiritualism, and explained that the Indian Jossakids had speaking media, in addition to those known to us, which tapped, wrote and drew."

"I cannot remember the questions asked and answers given, still much of the affair seemed to me strange, and when an opportunity offered, long after, to ask the Jossakid about his behavior on that occasion, he explained it through modern spiritualism, and truth, I did so. Thirty years later he had become an old man and a Christian, and was lying on his death bed, when accident again brought me to his side."

"Uncle," I said to him, recalling that circumstance, and having nothing else to talk about, "uncle, dost thou remember prophesying to us in thy lodge thirty years ago, and astonishing us, not only by thy discourse, but also by the movement of thy prophet lodge? I was curious to know how it was done, and thou saidst that thou hadst performed it by supernatural power, through the spirits. Now thou art old and hast become a Christian, thou art sick and canst not live much longer. Now is the time to confess all truthfully. Tell me, then, how and through what means thou didst deceive us?"

"I know it, my Uncle, my sick Indian replied. 'I have become a Christian, I am old, I am sick, I cannot live much longer, and I can do no other than speak the truth. Believe me, I did not deceive you at that time. I did not move the lodge. It was shaken by the power of the spirits. Nor did I speak with a double tongue. I only repeated to you what the spirits said to me. I heard their voices. The top of the lodge was full of them, and before me the sky and wide lands lay expanded. I could see a great distance around me, and I believe I could recognize the most distant objects.' The old dying Jossakid said this with such an expression of simple truth and firm conviction that it seemed to me, at least, that he did not consider himself a deceiver, and believed in the efficacy of his magic arts and the reality of his visions."

"This is the entire story, and you must draw your own conclusions, as I will not attempt its revelation, though I assure you this wigwam-shaking business is a big card with the Indians on Lake Superior."

Natural History.

THE PORCUPINE.

THE remarks of "Lotor" about the porcupine rolling itself into a little ball were read with interest, as also the pertinent reply of "Backwoodsman," in your issue of May 28. I most heartily indorse "Backwoodsman" in his assertions, but want to add a few observations carefully made during the last twenty years. He says he has seen thousands of them in the pine woods, but does not give his address so we may understand where these improperly-called hedgehogs are so numerous. I live in Michigan, and though I have been a close observer, not over twenty-five porcupine have come to my notice altogether, and I have hunted and collected in both peninsulas.

The common porcupine (*Erethozon dorsatus*) is well known to persons living in wild and unsettled portions of the Union east of the Mississippi River and north of 43° north latitude. To the east it is getting scarce, and even in this State is now very rarely taken south of 42°, although formerly quite common here at Kalamazoo, 42° 20'. I am informed that it is still found in some parts of northern Pennsylvania, and, as is well known, it is abundant in Maine, northern New York, Vermont and New Hampshire in the wilder portions, while in Wisconsin and Michigan north of 44° it is a familiar rodent.

I am not aware that the porcupine ever feeds on any substances not vegetable, and therefore cannot indorse "Backwoodsman's" assertions that it will devour almost anything around camp. His observations were undoubtedly made during the winter months, as he embraces old boot packs in the porcupine's *menu*, and as my notes were mostly made in the spring and fall it follows that I may not understand the predilections of this strange creature at other times. That the animal is mischievous and disposed, like a colt, to investigate and mutilate, is true, and this characteristic may account for the habits observed around camp, when it apparently attacked anything available. In careful dissections made upon both young and old specimens, I have found the stomach to contain only vegetable matter. Leaves generally compose the fare from May till August, and I doubt not that the animal could live entirely upon this diet. The bill of fare is often varied with tender bark of young trees and shrubs, and frequently by bark not so tender, as I have seen them feeding on the inner bark of the white oak (*Quercus alba*). In season the acorns of this oak furnish food for the needle-backs, and in the fall I have shot them from immense timber-land oaks fully 75ft. from the ground. These oaks, all of 50ft. without a limb and 30in. in diameter, would seem insurmountable to animals apparently so clumsily formed, but the unwieldy creatures scale the rough-barked trees with ease, if not with the activity of a squirrel, at least with much greater ease than the woodchuck (*Arctomys monax*). The porcupine feeds largely on grass and clover when it can get it, and in this respect much resembles that other destructive rodent, the woodchuck, which has come to almost entirely select clover fields for his burrows, moving about as the farmer shifts his crops from field to field.

It is when the young are with the old one that grass and the foliage of shrubs, as well as roots, are chosen, for I do not think the young mount into trees of any size until quite half grown; at least I have never met with small ones in trees nor have I learned of their being taken there. I have never seen young so small that they were still nursing, but have thrice taken them when still in company with their mother, though they had adopted a vegetable diet. The young are undoubtedly brought forth in burrows, though as to this I cannot attest. At least they quickly hide in burrows when disturbed, as do the old ones also, although, if alone, the old ones evidently prefer hollow trees. One place that I know of where these strange animals are to be found is in a huge hollow sycamore, intricately connected with other and smaller trees by huge roots, which contain a labyrinth of passages. This sycamore is so smooth that a squirrel could hardly mount it, yet the old porcupine has been seen at the top. It always seemed to me that the animal must have climbed to the top by way of the hollow.

I have once found two young in company with the old one, and twice only one young. The litter undoubtedly consists of at least two and probably more, for I do not know of one species of Michigan rodents which brings forth less than two, and generally there are three or more in a litter.* The young run along after the mother in her search for food, and are exact counterparts of the parent when only 8 to 10in. long. At this length they are provided with spines, and will throw themselves into a defensive posture if an intruder comes suddenly on the scene, as does a kitten when disturbed by a dog.

The porcupine is a muscular but very clumsy animal. With great strength, both of jaw and limb, and undoubtedly capable of making a good defense if it were gifted with activity and courage, it is as great a coward as exists, and if prevented from seeking safety in flight offers no offensive resistance, but squats down and waits the expected onslaught, with elevated back and erected bristles. If not molested it will, upon the slightest chance being given it, shuffle off to a place of security. When in this position, although not in shape like a ball, as described by "Lotor," it rests upon its feet, which are drawn in under the body, with its head turned down, offering the best position to repel attack. Against a hunter this position does not afford it safety, as a smart blow with a stick will turn it heels up, when it may be quickly despatched; but to a dog or other animal the defense is practically complete, and the porcupine is as safe behind its impenetrable *cheveaux de frise* as if it was in its burrow or in the top of a tree. Woe to the dog that ignorantly bites at that animal in an attempt to worry it. The result is a mouthful of sharp, bearded spines or quills, from 1 to 3in. long, which are readily detached from the integument and as readily penetrate the lining of the mouth and the nose of its luckless assailant. Sometimes as many as fifty or more quills may be found sticking in the mouth and muzzle of an uneducated dog, which, maddened with pain after his first mouthful, has renewed his attack, thoroughly enraged at his quiet enemy. These quills must be drawn out, and the sooner the better for the sufferer, as they cannot be removed by the dog and will lead to frightful suppuration, and usually to death.

*Of imported rodents, I have repeatedly known of instances where the Guinea-pig produced but one at a birth.

Wildcats and even the cougar or American lion are said to have been found dead with quill-filled mouths, the result of hunger-inspired attacks on the porcupine. These quills, largest and most numerous on the back and rump, are the natural covering of certain parts of the animal and, like the intermingled hairs, spring from follicles in the creature's skin. They are readily reproduced and are undoubtedly intended for a protection of an otherwise defenseless animal. They may be readily disengaged from the integument, and the removal quickly follows the tension made on them after the point of the quill is driven into the flesh and is held there by the barbs, small and numerous, which press backward against the penetrated skin or other integument. I am thus explicit, and perhaps unnecessarily diffuse, as read by those who have examined the arrangement, because I want to mention a mooted question. There are still many who firmly believe that porcupines throw their quills, and though it is almost too simple a subject to discuss, a word may not come amiss. There are many intelligent people who could not be brought near to one of these inoffensive animals, firmly believing that the creature has the power of shooting the quills to quite a distance and with great accuracy. I have been told repeatedly, and by men of undoubted veracity, that they had often seen men, fences, dogs and trunks of trees filled with the thrown quills of the hedgehog. They were simply telling what they had often heard and had come to sincerely believe,

"Like one
Who, having unto truth, by telling of it,
Made such a sinner of his memory
To credit his own lie."

These people would be hard to convince of their error under any circumstances, and yet I have much sympathy for them, for there are numerous stories at present going the rounds which are much more ridiculous.

The porcupine when assailed elevates its back and makes the skin tense, so that the quills are erect and in the best position for defense. This position is followed, when an attack is made on the creature, by quick elevations or jerks upward and sideways of head and body, accompanied by floppings of its armed tail, which are made to inflict injury on the enemy, the animal in the meantime looking about for an advantage or chance for safety. There is no other time when a wild animal will fight as it will when found in company with its young, and the efforts of a female porcupine to protect her single young one called forth my admiration. The old one kept its front toward its offspring, which it placed beside a log and partially covered with its foreparts, and in addition to its bristling armor it also used its teeth, savagely biting a stick when pushed away. This old one weighed 21lbs., and its stomach contained over 1½lbs. of green vegetable material ground up as fine as good teeth could chew it. The small one weighed 4lbs., and its paunch was distended with the same food.

The senses of the porcupine are evidently very dull or else it is conscious of no danger, deeming its protection sufficient guarantee for its safety. I have more than once discovered them by the dropping of bark or acorns from the limbs where they were feeding, and have then watched their actions for some time as they continued to feed, wholly ignoring my presence. If shot at when feeding in a large tree, say 60ft. from the ground, they are not easily brought down, and when resting on a limb three or four inches in diameter, which protects the head and vitals, a good many shots are required to bring it off its perch. The quills offer strong protection against anything but very coarse shot, and even with Bs it is not readily dislodged, as it possesses great vitality and will hang till the last gasp. One that was well riddled, after falling fully 70ft., escaped me in a piece of dense undergrowth.

Having a true hunter's appetite, with addition of a great amount of curiosity, I have been in the habit of testing the edible qualities of many of the wild birds and mammals not generally in demand. Among others I tried some porcupine stew, being led to believe that it would be palatable and gamy, as it is said to be quite often eaten by our red brothers. Now, woodchuck, coon and possum go well, and I have nothing particular to say against some other animals not generally chosen, but as to porcupine, excuse me. After cooking for five hours, and still finding it not done, it was thrown to the dogs, which discreet animals elevated their noses to heaven and gave a dismal howl.

In nearly every specimen that I have examined, the intestines as well as stomach were found to be suffering from the ravages of a peculiar parasite, and, strange to say, these entozoans of singular habit were always found attacking the external lining of the tissues and were not found within the alimentary canals of the otherwise apparently healthy animal.

In conclusion, a word in regard to hedgehogs. This animal is only found on the Eastern Continent and islands. It belongs to the order *Insectivora*, and has teeth formed much after the fashion of the mole. The porcupine, so often incorrectly called hedgehog; belongs to the *Rodentia*, or gnawers, and its teeth are formed more like those of the rat, squirrel and woodchuck. It is several times the size of the little hedgehog. The name hedgehog, therefore, in no way applies to our American porcupine.

KALAMAZOO, Mich.

WHALE, WALRUS AND SEAL.

EARLY in July, 1889, the small schooner *Nicoline*, registering about forty tons and drawing only 5ft. of water, left San Francisco for the mouth of the Mackenzie River in search of the bowhead or Polar whale. The vessel was commanded by Capt. Louis Herendeen, whose brother, Edward P. Herendeen, a correspondent of *FOREST AND STREAM*, accompanied him as first mate. The crew comprised nine men, and additional help was to be obtained among the Esquimaux at Point Barrow or Herschell Island, all of whom are excellent and fearless whalers.

Many whalemens believe that the bowhead breeds at the mouth of the Mackenzie. Although many whales pass into the Arctic through Bering Strait in the spring, very few are seen to return southward in the fall during the stay of the whalers. Of course they all come south later. Mackenzie saw a great many whales at the mouth of the river bearing his name during his Arctic explorations. Near Point Barrow whales have been killed with old irons

of the Greenland whalers imbedded in their blubber. When stationed at Point Barrow with the Signal Service expedition of 1882-1883, Capt. E. P. Herendeen traveled far to the eastward and learned from the natives that whales are abundant in the locality in which the *Nicoline* and other vessels are now operating. The *Nicoline* was selected because of the advantage a vessel of light draft would have in following small leads in the ice near shore. She reached Herschell Island about last August, and the steamer *George W. Hume* and another vessel or vessels were there at the same time. While at Point Barrow illness forced Capt. E. P. Herendeen to abandon the voyage to the eastward, and he returned to San Francisco. He has taken steps, however, to secure information for *FOREST AND STREAM* and collections of natural history objects, which we hope to report upon after the return of his brother during the coming fall.

In conversation with the Captain recently we have obtained some additional interesting notes on the whale, walrus and seal, which we give herewith.

Capt. Herendeen has seen whale calves only a few days old at Point Barrow—so small that their flukes were not yet straightened out and the whole calf could be taken into a single *vomiak*, or skin boat. The very young calves are not timid and are easily caught by the natives, who delight in eating them. In a short time the cows teach them to sink in times of danger and their capture becomes difficult. The whales commence going to the east at Point Barrow about April 15 and the young accompany them; they continue running until June and are seen occasionally as late as June 15.

Walrus breed on the ice and live along its southern edge, coming furthest south in winter. When the whalers catch the pups in June and July they find them pretty well grown and bearing little tusks. Natives informed Capt. Herendeen that walrus, some time ago, were taken as far north as Point Barrow in winter, and that they have breathing holes in the ice just like seals. A herd of 1,000 walrus was driven ashore and captured at Point Moller years ago; from these were obtained 8,000lbs. of ivory. A pod of 40 was started inland and kept moving for some time by pricking those that turned, in the nose with a sharp iron-pointed pole. Finally, however, they became utterly unwilling to go further from the sea and every one of the lot dug his snout deep into the moist sand, completely protecting the only tender portion, plowing as much as one foot deep, and it was impossible to turn a single individual. When walrus haul out on the land the near approach of good weather may be confidently expected; they love to lie in close contact like pigs and frequently one will partially overlap another.

In the winter of 1885 a number of seals were killed by Esquimaux while traveling over the snow from the frozen rivers to the sea. Capt. Herendeen saw the tracks of four or five that were escaping from their imprisonment in this way. About 80 miles inland, southeast of Cape Smythe, he found a seal that had been killed by a native when going out with his dog team. The seals go into the rivers for whitefish, trout, smelt and other fish; they find open holes full of food and continue their feast until the ice freezes up everything solid, and then they are forced to travel overland. The Esquimaux say they never make a mistake and go the wrong direction; the course to the sea is laid along the nearest route.

T. H. BEAN.

RECENT ARRIVALS AT THE PHILADELPHIA ZOOLOGICAL GARDEN.—Purchased—One Humboldt's saki (*Pithecia monachus*), one grizzly bear cub (*Ursus arctos horribilis*), one golden cat (*Felis montana*), one prong-horned antelope (*Antilocapra americana*), two Gillespie's hair seals (*Zalophus californicus*) and 1, one red-billed hornbill (*Trochus erythrorhynchos*), two Orinoco geese (*Chenalex jubata*) and 2, five European widegones (*Marca penelope*) 2 and 3, five black snakes (*Bascantion constrictor*), one glass snake (*Ophisaurus ventralis*), seven king snakes (*Ophiodon terribilis*), three ground rattlesnakes (*Crotalophorus mitchilli*), three rattlesnakes (*Ptyopsis melanoleucus*), three chicken snakes (*Coluber quadrivittatus*), four copper-welt snakes (*Bascantion constrictor flagelliforme*), one Indigo snake (*Spilotes erbenemus*), one common hog-nosed snake (*Heterodon platyrhinos*), one black hog-nosed snake (*H. platyrhinos atmodus*), two garter snakes (*Eutania sirtalis*), and one boa (*Boa constrictor*). Presented—One Barbary ape (*Macacus lewis*), 2, twelve opossums (*Didelphys virginiana*), three raccoons (*Procyon lotor*), one painted wolf (*Canis latrans*), one red fox (*Canis vulpes fulvus*), one sparrow hawk (*Falco sparverius*), one mockingbird (*Turdus polyglottus*), two barred owls (*Syrnium nebulosus*), six alligators (*Alligator mississippiensis*), six musk turtles (*Amocheilus odoratus*), one yellow whip snake (*Bascantion flagelliforme testaceum*), one Say's king snake (*Ophiodon terribilis*), one Holbrook's water snake (*Tropidomachus rhombifer*), two Woodhouse's water snakes (*T. sipedon woodhousei*), one hog-nosed snake (*Heterodon platyrhinos*), one pine snake (*Ptyopsis melanoleucus*), and three garter snakes (*Eutania sirtalis*). Born—One American deer (*Capreolus virginianus*), one fallow deer (*Cervus dama*), one bactrian camel (*Camelus bactrianus*), one black lemur (*Lemur macaco*), one llama (*Lama peruviana*), one American elk (*Cervus canadensis*), and six garter snakes (*Eutania sirtalis*). Engaged—Four Bell's painted terrapin (*Chrysemys bellii*), one unarmed soft-shelled turtle (*Ambyda mutica*), and one Robben Island snake (*Coronella phocaenae*).

Game Bag and Gun.

THE FULL TEXTS of the game laws of all the States, Territories and British Provinces are given in the *Book of the Game Laws*.

ANOTHER OLD STORY.

Editor Forest and Stream:

Old Captain Prout, for whom Prout's Neck, now a well-known summer resort, is named, was a noted gunner in the days when waterfowl were plenty in that vicinity. "Early one spring, 1860 or thereabouts," said an old settler to me, "he brought home from the West Indies a gun, the like of which had never been seen by the natives. It was a muzzleloader, about a 2-gauge, and weighed some 80lbs. Soon after its arrival there came a heavy storm, and the next morning a pond a couple of acres in extent back of the Captain's barn was covered with ducks so thick that another one could not possibly have been squeezed in. Here was an opportunity to try the new gun, and loading it with the regulation charge, of ½lb. powder and ½lb. shot, he sallied forth. At the corner of the barn he cocked the piece and stepped out with it held in readiness. When within about 40yds. all the ducks jumped as one bird. The Captain aimed at the middle of the mass and fired."

Here my informant stopped as if expecting some encouragement, and somewhat against my will I felt constrained to ask, "How many did he get?"

"Wal," he replied, "he didn't get any, he undershot but he picked up three bushels of ducks' legs."

MAINE.

E. W. L.

IN MEXICO.

OUR correspondent has been hunting in company with Mrs. Aztec, and thus discourse of it to his brother in "the States":

We started, J. and I, on a midnight train the night of May 25. We got to our station at daylight, and found the hacienda coach in waiting for us. We had a lovely ride of nearly ten miles in the dewy morning, and were cordially received by the young host. From then till Saturday the place belonged to us. The weather was too warm to save game any length of time, so we did not exert ourselves much in hunting. Besides the boss clerk was absent, and Don Luis had all the business to attend to, and so could not get out very often. On Wednesday he and I took a turkey hunt. He had a place baited in a cedar brake about twelve miles from the house, and we got up early and struck out, reaching the ground about half after seven. The turkeys were gobbling all around, but we sat down in the blinds and waited for them. Don Luis got an old gobbler about nine o'clock, and as we came back from our lunch where the horses were tied, at noon, there was a fine old fellow just showing up at my place, but he saw us too far and got away. About the middle of the afternoon two hens made their appearance at my corn pile.

I made up my mind to get them both, but was so well hid that I did not have good use of myself. Don Luis is in the habit of shooting with a rifle, and had put me in a blind all shut in by trees. At my first movement one of them said *put* and I jumped up. As they started to run I rolled one over with the first barrel, and just as quick as I knew how, took a bead on the other as she rose to fly. But I didn't have elbow room enough and banged the whole load into a tree just as she went behind it. She flew up to Don Luis's stand and he clipped her under the throat with his rifle, but she managed to get into the thicket. The woods were full of them, but the day before the man had left so much corn that they were not hungry.

The next day we rode around in the coach, saw sights, and in the evening had a lot of fun shooting doves near an old barn. Friday I decided I would try for a deer, as I thought I could get it home the next day. Don Luis was very busy, so I got up early and struck out with one of the men. We went about three miles from the house, and had a fine little still-hunt on the side of a mountain. It was pretty brushy and rocky, so a fellow had to be extra careful. I found fresh signs of two deer up on the mountainside and commenced to sneak around for I couldn't tell which way they had gone. They either saw or heard me, and slipped off down the hill about a hundred yards. Pretty soon I stepped out into an open place and they began to snort and jump over the bushes. The sun was about half an hour high and they were between me and below it. When they moved in the chaparral I could see them, but as soon as they stopped I could not make them out. The ground between us was perfectly open, so that there was no chance to creep up. So I lost them. They were not wild, and under the same circumstances ordinarily I should have been sure to get one of them. It was a mere accident that I did not see them sooner.

In the afternoon we went in the coach to a cane field where Don Luis had seen them come out often to feed on the cane. The sun was still two hours high, but when we reached the place there were three already out and saw us. We tried to get on them, but they were suspicious of the coach which had stopped in view, and besides, a plow-boy over in a neighboring field began to whistle at them. So we had to take a hurried shot at long range, not knowing the distance. Neither of us scored. Following them into the bushes we found them again, but got no shot, and Don Luis found a big buck which he could easily have killed but thought it was a donkey. Even a veteran hunter will get fooled sometimes.

Next day was our last and we were bound to have some meat to bring home to save our reputation. So we went for the turkeys again. I had found a caller, and told Don Luis that if they gobbled around so much again I was going to try my hand at calling one up. J. went along and stayed in the blind with me. I had loaded her little 20-gauge with No. 2 shot, and was sure that she would get her turkey if one came out. But Don Luis had all the luck. Nothing showed itself at our blind, and I didn't even hear one gobble. But at different times during the day three old fellows came to his stand and paid the penalty of their rashness. He has a fine 32-40 Ballard that is sure death to anything that comes in range.

From the woods we went to the station and found that we had to wait all night for the train. The boss of the ranch gave us a bed, and we got along finely. Our only mishap was that it was eight o'clock Sunday morning before we got home.

SIX YEARS UNDER MAINE GAME LAWS.

X.—THE ONE BEFORE THE LAST.

THE time has come to close this series of papers. Unforeseen circumstances have delayed their preparation, and other causes equally unforeseen have altered their original plan, so that they are widely different from the first design. It is therefore impossible to draw conclusions or to sum up in any orderly fashion what has been said. But there are a few additional points to be touched upon and some probable consequences—which may a better ordering of affairs avert!—that need to be set forth; and just a word may be said of what was intended but was not accomplished.

In the beginning a state of feeling was described in which a bitter and unreasoning resentment must have seemed predominant. It was planned to account for this, to show how it arose and why, and what were the principal local modifications of it with their local causes. The plan has been carried out only in part. What was said of the waste of game and non-transportation in open season applied with varying force to all the counties and has been influential in all to produce the present state of dissatisfaction. But what has been said of deer hounding and killing dogs pertains only to the southeastern counties of the State. Nothing has been said of Piscataquis and its interests, nor of Aroostook and Aroostook affairs, although the plan was to illustrate and explain the causes which had operated in these to produce a feeling substantially the same but differing in its degree. A change made last March in the law permitting the destruction of dogs, bringing new and unexpected dangers close upon us, as it was feared, caused the abandonment of the original design and a fuller treatment of topics relating to deer hounding than was at first intended or deemed

desirable, while in consequence the other sections had to be slighted.

I have said that it was not the intention to speak of deer hounding at such length. There were other topics equally interesting which did not have the peculiar disadvantages of this, namely, that whoever would speak of abuses connected with its suppression must consent to be accused of favoring the practice. Now, the practice cannot be defended in this State. As a method deer hounding may be the best or the worst, the most humane or the most cruel way of getting a deer—that is a matter of opinion; as a *practice* it is illegal and should be stopped. Yet it is of supreme importance that the means of suppression shall be such that those who wish to see the law enforced can honestly defend the means taken to enforce it. Who could do this of the poisoning and dog killing of years past? The extraordinary abuses connected with these methods of procedure have put them into such disrepute that neither of them can ever gain any measure of popular support. Yet this spring the law has been changed so that the killing of dogs is encouraged by the new license granted, even if it is not intended, as has been feared, to make it an official feature of the campaign this fall. Nothing could be more fatal than this. These practices may be legalized, but such is the odium attaching that they will injure the cause in which they are employed. The reaction against the last attempts has been very strong. Nearly, if not quite twice as much deer hounding was carried on last fall on Penobscot and Union River waters as ever before. Deer were dogged more or less regularly on some thirty ponds and lakes which I could name, and at Chemo Lake, only about fifteen miles from Bangor, they were run all the fall. Hounds used to run deer are openly kept in Bangor and vicinity. Men go from Bangor and surrounding towns to places where deer are dogged, the papers tell where they have gone, and what they bring back, and the deer, shot in the back of the head, are openly exhibited. There is no secret made of it. What is more, men who a few years ago strongly disapproved the practice, now favor it more or less openly. Whoever would stop hounding must overcome an opposition which did not exist a few years ago, and this can be done only by the use of fair and legal methods. Fine the men who engage in it, but give us no more Darling cases and no more dog killing. To repeat the proceedings of the few years past would give us not only more murders, but would be the speediest way of creating a general demand from this section to have a law permitting hounding.

It was planned, among other things, to speak at some length of the illegal sale of fish and game, of the number of prosecutions brought and fines collected, of certain cases tried and minor untenable interpretations of the laws, of the character and efficiency of the wardens now in the service; and facts were collected for this purpose, which the change of plan already spoken of has made it necessary to set aside.

However, that the case may not seem to go by default, we will have a word upon some of these points.

Game and fish have been illegally sold this winter, and not by any means in lone and sequestered spots. It has been done in our largest cities and in the markets, so openly that strangers have commented on it. Not to speak of what has been done nearer home, in Augusta game and fish both were sold contrary to law; and at the very time that new trout laws were under discussion, togue were openly sold in the city and were served under the name of trout on the table of the hotel where many of the senators and representatives boarded. Complaint was made but no prosecutions followed. Without discussing where these fish were taken, it was directly contrary to law to sell them, and yet while the sale was permitted in Augusta, in the eastern part of the State Pete Newell, an Indian, poor undoubtedly, ignorant very likely, was fined for selling trout.

Regarding the collection of fines and their disposition, little can be said in little space. But the aggregate of fines paid in to the treasuries is not what might be expected. In Penobscot it is too small to make any account of. From Jan. 1 to the middle of April of this year only \$40 was paid in from nearly ninety towns and townships which are included in this county. The sum for any year is very small. This would not be a disadvantage if the violations of the law were few, but they are numerous and open. Some cases come up in the higher courts of Penobscot, but very few appear in the lower courts of Bangor. The clerk of the municipal court who has been in the office many years could show me papers pertaining to only two cases, which he said were all that he distinctly remembered. One was the voluntary complaint against himself of a gentleman who killed a moose last September; the other a case against a man for netting fish last October, ending in an appeal. Some cases come before trial justices outside the city. There are a few justices in this and other counties to whom game cases are frequently carried, or who are carried to the cases, whence the nickname of "pocket justices" sometimes applied to them; and there is some particularly edifying history connected with the cases which come up before these men. The aggregate of game cases in eastern Maine for the past few years has been small when we except the seizures illegally made under the transportation fiasco and what has been done on the seashore.

Concerning wardens, we will say as little as possible. It is not fair to speak disparagingly of a whole class without bringing forward the proofs. Yet it is true that after much inquiry I have found many poor wardens and only two that could be called good ones. Good men there may be, undoubtedly are, among the hundred and fifty who are employed as wardens, but unless they live in the western part of the State or upon the seashore, they must be scarce. The majority of the more prominent wardens of eastern Maine are not only bad wardens but bad men. There is full proof of their unfitness for the place. I was intending to bring forward enough to show the kind of men into whose hands the execution of our game laws has fallen, but it would take too long to do the subject justice, and we may leave it with Charley Uter's benediction, "May the Lord think well of you"—and its logical inference.

It is of more importance just now to know that some of these men have been reappointed not once, but sometimes more than once, in spite of repeated protest. We have been told that nobody was responsible for this. The change of the law this year which requires the approval of two of the Commissioners before a warden will be given an appointment, is a great improvement. It makes

the Commissioners personally responsible for the character of the men employed, and the improvement of the service by the substitution of better men for some of those now in the service may be expected. We have been told that heretofore men had been selected for their strength and ability to shoot quickly. The authority for the statement was high, yet this may not be the real ground of selection. At any rate these would be merely imaginary advantages for an active warden. Strength may make an arrest, but it will not take a man out of the woods, and the ability to shoot quickly is merely a negative advantage, since an officer cannot use firearms except as a last resort. Plain, old-fashioned honesty is the best qualification a warden can have, and with it a man can go safely, when without it he would run considerable risk. The second best recommendation to the position should be a thorough knowledge of woodcraft and the ability to go alone through the woods instead of along highways and frequented routes.

One change in the laws this year requires some attention. Henceforth wardens may make arrests without the use of a warrant. This will be a great advantage in securing the arrest of offenders, but visitors and residents alike will need to be on their guard against those who pretend to be wardens and extort fines on false pretenses. In years past this has been done more or less frequently. I know of three cases, one of them occurring this winter, where the attempt has been made by men who were not wardens, and I have been told on good authority of another where a fine was paid only this winter to a man who was not a warden, for fishing pickerel, which it is legal to fish at any season. It is well for every one to carry a copy of the latest issue of the game laws, so that he can determine for himself just what the law is and whether he is guilty. There are many points where by mistake or evil intention a person not perfectly sure of his rights can be intimidated and made to pay blackmail by those who are not officials and have no right to interfere. How many who come here know that Sunday is close time on game but not on fish? or that until this spring deer could be legally shipped from the State provided the legal number was not exceeded, while partridges could not be? or half a dozen other points on which a case could be made or lost? The wise man, if detected in an offense against the laws, will, if possible, stand trial. He never will pay anything to settle a case, nor pay a fine to any one without taking a receipt for it. If in any case he should pay a fine to any one whom he does not know personally, he will at the expiration of two months write to the county treasurer of the county in which it was paid, to find whether it has been paid to the county, that being the limit of time which any justice or receiver of fines can keep them without incurring heavy fines. These are suggestions merely, but they are made to the wise. Never pay anything to any one who may not be an official. Never pay without taking a receipt in full. Never fail to see whether that money was paid into the treasury at the proper time unless there is no room for doubt.

The next paper, which will be the final one, will take up some of the more general evils which will follow if something is not done to improve the present conditions here. They are too serious to be neglected and should receive thoughtful consideration of both residents and visitors who are interested in the welfare of this State. It is not the game alone that makes a trip here pleasant—the game and fish are the least part of it to many who come here, and certainly are not greatly esteemed by the residents. There are other interests upon which both can unite, which now, if not actually imperilled, are at that point where the future danger can be most easily averted. It is for what will be said in this final paper, however simply and unemphatically it may be put forth, that this whole series, with all the labor and unenviable notoriety it involves, was undertaken.

FANNIE PEARSON HARDY.

CHICAGO AND THE WEST.

CHICAGO.—A recent incident will show still further the necessity for some adequate protection of the game birds along the Kankakee River. The incident is the more deplorable in that the culpable party is a member of one of our regular shooting clubs. I say, he is a member, but "was a member" would probably be more correct, for by this time he has probably been expelled from the club or will be soon. The man's name is Roth, and he belonged to the Diana Club. Lately he killed 5 young prairie chickens, not bigger than one's fist, and put them on the ice at the Diana Club House, where they were seen. Mr. Henry Ehlers, a very worthy sportsman of the Diana Club, and others of our sportsmen here, instituted a legal investigation, though attorney Low told them no case would hold, they being citizens of Illinois, while the killing was done in Indiana. The matter was not allowed to rest here, however, Messrs. Henry Ehlers and John Press, the latter president of the Diana Club, have gone down to the grounds in Indiana to see if they cannot get evidence good enough for a conviction even under the absurd Indiana law. In any event, Roth will be promptly jumped from the club, and ought to be debarred from the company of gentlemen sportsmen. It is getting too late in the nineteenth century to do such things as that and still claim to be either a sportsman, a gentleman, or even a half-decent sort of half-way citizen.

A new club organizes to-night, and will next week be named and added to the galaxy of Chicago's bright particular stars. It will consist of 30 members, membership fee \$10, and will be devoted to trap-shooting solely. It will hold 12 shoots annually, and at each shoot a prize of \$25 will be shot for, and the contest settled then and there. Club medals, annual championships and all that will be abolished under this innovation, whose result is awaited with some interest. Name and members cannot be divulged now, but the latter are from our best, and the new club will be a good one.

E. HOUGH.

CARIBOU IN THE NORTHWEST.—New York, July 9.—*Editor Forest and Stream:* In regard to caribou in the far West, I can say that in 1887 we found caribou in considerable numbers in northern Idaho, at the headwaters of Kanusku Lake and the Kootnai River. Eight were killed by our party.—WAKEMAN HOLBERTON.

A BOOK ABOUT INDIANS.—The FOREST AND STREAM will mail free on application a descriptive circular of Mr. Grinnell's book, "Pawnee Hero Stories and Folk-tales," giving a table of contents and specimen illustrations from the volume.—*Advs.*

CLARKSVILLE, Tenn.—Our bird hunters are looking forward to good shooting this fall. The birds wintered well and the crop bids fair to be unusually large. The bird law is very well observed in this locality. The restless shooter who can't bear the idea of his gun lying idle can turn his attention to the trap.—B.

MARYLAND.—Union Bridge, Carroll County, July 6.—The hearty whistle of the Bob White is heard often and in all directions. While fishing several days ago I hooked ten "cut lips" or "stone toters" (*Exoglossum maxilliguala*), but not a single game fish.—BONART.

HUNTING AND FISHING IN THE WEST.

THERE is no excitement so thrilling and healthful as that born of the chase, and when the tremor of expectation has marred the hunt, and its object flies over the hills exultant, it is genuine disappointment which follows. Hunting has been reduced to a science; but the amateur's first idea is to find his game, and, having found it, to blaze away for general results. Until some skill has been acquired by practice the results are apt to be extremely general, but never from lack of opportunity.

Antelope are tempting, albeit their human-like eyes beg with eloquence from their liquid depths for mercy. To find them, be up early, and gun in hand, before the sun has risen; for two hours then will give more shots than all the remainder of the day, for it is then they are feeding, unconscious of danger. On the vast plains, where there is often no shrub, and where the level is like a floor, it would seem that their hiding was impossible; but there are many ravines in which they may be sheltered secure from any enemy. These game ravines permit the enemy to approach under cover. Antelope meat is sweet and tender, and really creates an appetite as it crisps over the camp-fire, and sends its aroma to the outer edge of the circle of light. The flesh of the mountain sheep is regarded as superior to any other trophy of the hunt, not excepting that of elk or black-tailed deer, which, before the rare toothlessness of a juicy saddle and the dripping ribs of a young and tender lamb, is found to be inferior. Never fire at a grizzly unless chased into the wildest abyss, and to the loftiest mountain tops, these difficulties tending only to make the pursuit more attractive, and many to follow it would give up buffalo, antelope, elk and deer. North Park, Colo., is surrounded by such a formation as makes it a favorite place for this game. The immense horns and the bony forehead nature has given the animal often enables it to battle the pursuer by hurling itself from giddy heights and alighting on the protecting frontal. Or it leaps frightful chasms where no foot can follow, and if killed by an accurate bullet would only decompose far out of reach.

The most formidable antagonist to be met with is the grizzly bear, which inhabits the higher ranges of the Rocky Mountains. To meet it requires a steady hand and a stout heart. The best nerve and the best weapons are not in vain. Never fire at a grizzly unless a partner is near with rifle ready poised. To come within the embrace of its mighty paws, which with one blow can break the back of an ox, is to be crushed. And yet there is nothing to which a nimrod will point with more pride than to a grizzly's robe, with a hole through the portion which had covered the heart. This bear may be found in autumn among the raspberry bushes, but the hunter will usually steal quietly away. Ten to one he has not "lost a bear." The cinnamon and common black variety attain great size, but they are lambs compared with their great cousin.

The Western water courses are most prolific of black-tailed deer, that come in little bands to drink just before sunrise or just after sunset. They are at home in all the high and low country, and are found in the highest peaks of the mountains. Generally, four or five are together. The hunter is lucky who gets more than one. It is lower down the mountain that the whistle of the elk is heard as he plunges through the forest, with his great horns laid back. It is a delightful sound to the sportsman, who steals up for a shot in the gray of the dawn. He must keep well hidden, for the elk is keen; and to the windward, for the scent is most acute. But by evening the hunt is a splendid shot is obtained and some magnificent bull bounds away in an instant, and falls with a crash—strong to the last. It is then that the sportsman exults.

The time was, and not many years ago, that to enjoy this sport, long excursions were necessary by horse or wagon, but now the most perfect hunting and fishing grounds are reached by the diligences of the Union Pacific.

Antelope are found on all the plains adjacent to the Union Pacific where there is any pasture. They abound in the parks of Colorado and Wyoming, and on the plains just east of the mountains. Jack rabbits and smaller game are met with in great numbers in the smooth portions of the mountains and on the prairies. Grizzly bear is found in the more elevated peaks of the mountains, and is especially numerous in the Uintah and Wabash ranges of Utah, Wyoming and Montana. In Colorado and Idaho they lurk about the rugged defiles, near the timber line. Black and cinnamon bear, elk, black-tailed deer, mountain sheep and mountain lions are common to all the higher regions of the range. In Montana and Wyoming account mountain goats and buffalo are brought down. Ducks, geese, brant and other water fowl can be found on the shores of all the rivers and lakes in the regions traversed by the Union Pacific. Nearly all the mountain brooks and lakes abound in trout and other varieties of fish. The Snake River and other tributaries of the Columbia are filled with salmon. The angler can scarcely go amiss in any part of the region above named. Prairie chicken, sage hen, quail, snipe and other land birds are abundant everywhere. Eagles are picked off the peaks of the Rockies occasionally. In short, the country tributary to the Union Pacific everywhere presents attractions to the sportsman. Perhaps the most famous and favorite hunting ground of North America to-day, is that portion of Wyoming lying north and south of Rock Creek and Rawlins. In that region can be found all varieties of game, from the mountain squirrel to the grizzly bear, and from the harmless beaver to the howling buffalo. Transportation thither can be engaged at Cheyenne, Laramie, Rock Creek or Rawlins. Arrangements should be made for camping out, and from two to six weeks should be spent in the field to thoroughly enjoy the sport. The North Park of Colorado is another famous hunting ground where the largest game animals are frequently seen. The Bear River country, in Idaho, Utah and Wyoming has been a glorious region for disciples of the gun and rod since the earliest days of its discovery. But, as said before, the hunter or fisherman can find rare sport in almost any portion of the territory tributary to the Union Pacific.

Among the several varieties of food-fish which are found in the streams of Colorado, Wyoming, Idaho, Montana, Utah, Oregon and Washington may be mentioned speckled mountain brook trout, silver trout, black trout, common trout, bass, pike, pickerel, salmon, etc., some twenty-five or more species abounding in the Western water-courses. Particular attention is called to the speckled mountain brook trout, here so common, for it is considered the finest food-fish, as well as the "gamest" of all the finny tribe, and consequently affords more sport to the angler.

Fly-fishing for trout is good during the months of July, August, September and October. Bait-fishing is generally good during the early summer. The angleworm is good bait the world over. Besides the artificial bait, which can be procured anywhere, nature provides an abundance of flies and worms along every stream, which the angler can readily find.

Game trout fields are found in Plate Cañon, South Park, Middle Park, North Park and Estes Park; in Clear Creek Cañon, Green Lake, near Georgetown, and in Boulder Cañon, all in Colorado; in Blackfoot Creek, near Soda Springs, Idaho; in Yellowstone National Park, and in almost all the mountain streams of Montana, Utah, Oregon, and Washington, particularly in the northern streams of Idaho, around Hailey, Ketchikan, and Boise City. Write to E. L. LOMAX, G. P. & T. A., U. S. Post, Omaha, for a copy of 1891 "Gun Club Rules and Revised Game Laws" and "Western Resort Book." Mention this paper.—Advs.

SAVED MANY LIVES.—An example of the practical use to which a book sporting copy may be put was given in the terrible flood which recently nearly overwhelmed the town of Cherokee, Ia. The Associated Press despatches of June 29 contain the following item: "Mr. Thos. M. Oulla, editor of the *Times*, rendered valuable service. In a light canvas boat he ventured into the raging torrent, and by his heroic conduct saved many lives." The boat referred to in this despatch was manufactured by the Acme Folding Boat Co., and weighed 45 lbs.—Advs.

NAMES AND PORTRAITS OF BIRDS, by GURDON TRUMBULL. A book particularly interesting to gunners, for by its use they can identify without question all the American game birds which they may kill. Cloth, 220 pages, price \$2.50. For sale by FOREST AND STREAM.

Sea and River Fishing.

THE FULL TEXTS of the game fish laws of all the States, Territories and British Provinces are given in the *Book of the Game Laws*.

WHERE THE TROUT RISE.

Editor *Forest and Stream*:

I promised to write you of my trip on my return from New Brunswick and Canada. I reached home last Friday after an absence of nineteen days. There were four of us in the party. We had previously written Mr. Raymond, of Edmonston, N. B., to get our guides and supplies ready, together with a permit for fishing, which upon our arrival we found he had done. We went from Edmonston some fifteen miles up the Temiscontia railway, where they kindly stopped and let us off. There we found our guides and canoes waiting, but the man who was to drag our canoes through the woods had to build a raft to take his horses over the Madawaska River, which delayed us. However, we went over with the canoes, and while getting dinner heard a number of shots fired in the woods near by, and a Frenchman soon came out, saying, "Me kill two bear; want to see him?" We went in with him and, sure enough, he had two bears, one a very large one and the other small.

After getting the horses over and helping to build the drags, we started. It was rough, hard and very wet, and we got only as far as Mud Lake that day, camped and next morning started for our destination, Squatuck Lake. I have been through some rough places in my life, but that trip beat them all. The brook from Mud Lake to the river emptying into Squatuck was simply awful. We had to wade over falls and rough places for miles, and the last part of it being still water, the alders grew from each side across the stream close down to the water, and we could get along only by continually lifting them over our heads and shoving the canoes through. To walk on the shore was impossible, it was so tangled with underbrush. After reaching the river we had better going, as the stream is a fair-sized one, swift and full of trout. We saw some beaver in this river and fresh moose tracks were frequent on the banks.

We reached Squatuck Lake about night. It is 8 miles long, and is very seldom visited. We camped there some eight days, and if there is a place in the world where trout are plenty, it was just there. "There were trout galore." We caught lake trout from 5 to 15 lbs. until we were tired of taking them off the spoon and putting them back into the water. Then as to fly-fishing, we took them on the shores and out in the lake as well. Trout from 4 lb. to 4 lb. would take the fly till one was tired of fishing. After leaving this lake we continued on through several lakes and rivers, in all of which the fishing was equally good, and fly-fishing in the rivers cannot be excelled. Sometimes we had on two or three at once. In coming down one of the falls my Frenchman lost his balance and pitched head foremost into the stream, and, as his feet caught under the cross-bar of the canoe, he turned the boat over and away I went into the swift running stream. He began to swear in all the languages he knew before he struck the water, and kept it up till we reached the shore, much to my amusement, wet as I was. However, all things come to an end, and we got through at last.

Although the fishing is the best I know of, I would advise no one to make the trip we did, as "the game will not pay for the powder." One can, however, have first-class fishing by going to Notre Dame on the Temiscontia railroad, cross that lake and go up the river we came out say 2 to 4 miles. Mr. Raymond, of Edmonston, is a reliable man and will fit one out with guides and canoes for this or any other trip. I will give you our route and distances: Madawaska River to Mud Lake, 6 miles (awful); Mud Lake to Squatuck Lake, 12 miles (damnable); Squatuck Lake, 8 miles long (good); Squatuck River to Sugar Loaf Lake, 15 miles (fair); Sugar Loaf Lake, 4 miles (good); Little Squatuck Lake, 6 miles (good); Dead Water River to Two Lady Lake, 9 miles (good); Two Lady Lake, 7 miles long, Two Lady River, 4 miles long, swift water 4 miles, but excellent fishing, to Temiscontia Lake. On Temiscontia Lake, 15 miles to St. Rose station, on the Temiscontia railroad, thence 21 miles by rail to Edmonston. From Edmonston 171 miles to Vaceboro, Maine.

WALTER AIKEN.

FRANKLIN FALLS, N. H., July 6.

SAINT MARY'S LAKES FISHING.

THE St. Mary's Lakes are situated in the Rocky Mountains, about nine miles south of the international boundary line. The outlet, the St. Mary's River, is the south fork of the South Saskatchewan. The lower lake is about seven miles long, and in places two miles wide. The upper one, fifteen miles in length, reaches back into the very heart of the mountains. The greatest depth in the lower lake which I have found is 76 ft., the upper one must be very deep. About a mile from the outlet I found bottom at 182 ft., and beyond that made no soundings.

Three varieties of trout are common here. The lake trout (*Salvelinus namaycush*), the black-spotted trout (*Salmo purpuratus*), and the Dolly Varden trout (*Salvelinus malma*), locally known as "bull" trout. The lake trout are very plentiful in the upper lake. Trolling in deep water one can catch them right along of large size. The largest one I ever caught weighed 35 lbs.

The black-spotted trout are found along the shores of the lakes in shallow water, but are more plentiful in the river. At the head of the upper lake, however, at the entrance of several small streams, they are quite common, and average about 8 lbs. in weight. The largest one I ever saw was caught here by Col. Chas. Baring, of London. It weighed 51 lbs. plump. The inlets at the head of the lake tumble down the mountain sides from glaciers near by, and are of a milky color. The trout which live in this water are silvery green, the handsomest fish I have seen. The black-spotted trout rise to the fly from early spring until the lakes freeze up, and my experience is that one fly is as good as another so far as color goes. I think a hackle the best shape, be it red, white, brown, or any other color. In the river these trout seem to prefer a rather still deep pool. I never had much success on the riffles.

The Dolly Varden trout here average about 4 lbs. in weight; one often gets them weighing 6 lbs. The largest

one I ever saw weighed 8 1/2 lbs. I have never known them to take an ordinary fly, but they will seize a small spinner with avidity, and, once hooked, I think them the equal to *Salvelinus fontinalis* in fighting qualities. They have great endurance and will break water repeatedly. I found that they frequent the deep pools and eddies in spring and early summer. Later on they seem to prefer swift, shallow water. They seem to be a voracious fish, and yet, so far as my experience goes, their stomachs are generally empty. I was fishing once with a gentleman at Red Eagle Falls when he hooked a black-spotted trout which would weigh about 1 lb. While he was playing it a Dolly Varden of even smaller size chased it around and tried to eat it.

Whitefish (*Coregonus williamsoni*) are very plenty here, the young fry forming the principal diet of the trout. The large lake trout, however, eat only adult whitefish; one or more are always found in their stomachs. I believe that a 24 lb. lake trout devours at least 300 whitefish in a year, a total weight of 750 lbs. The whitefish in the lower lake average 8 lbs. in weight and are fatter and finer flavored than those in the upper lake, which average 2 1/2 lbs. This is probably caused by a greater variety of food in the lower lake. It would seem that the glacial water of the upper lake is too cold for the animalcules which are their favorite food.

The lake trout spawn in November; the black-spotted trout all the year round, and the Dolly Varden, I believe, in November. The whitefish begin to spawn in the lower lake about Dec. 1, but in the upper lake not until January. The lake trout, like the pike, will take almost any moving bait. I once caught one which had a mink, two-thirds grown, in its stomach. Twice I have found three dead whitefish sticking out of their mouths which were too large for them to swallow.

Pike are common in the St. Mary's River, but one is seldom caught in the lakes. Three only, so far as I know, have ever been caught, and they were found near the outlet of the lower lake, in a shallow, reedy place.

J. W. SCHULTZ.

PREGAN, Montana.

CANADIAN ANGLING NOTES.

QUEBEC and Lake St. John, within the past three or four weeks, have been invaded by quite an army of American anglers. From most of the salmon streams come complaints that the fishing this season is not up to that of former years, and some of the salmon fishermen are now turning their attention to the gamy sea trout. Lord Stanley of Preston, the Governor-General of Canada has joined his family upon the Cascapedia, but even this famous stream fails to afford anything like the sport of former seasons. The long drought of the early summer and the consequent clearness of the water are largely responsible for these unfavorable conditions. Nor is any better sport furnished by the old favorite trout lakes of Beauport and St. Charles in the immediate vicinity of Quebec. One has now to leave these far behind him in order to get fishing worthy of the name.

Up the line of the Lake St. John Railway this season's lake fishing has been, so far, much ahead of that in the rivers. These lakes offer, probably, the best fishing in North America. Two members of the Stadacona Club, of Quebec, took recently in a day's fishing no fewer than 125 trout—85 with the fly and the balance with minnows. The largest fish of the lot weighed 4 1/2 lbs., and two or three others turned the scale at 4 lbs. Messrs. E. J. Meyers and A. W. Koehler, of New York, left Roberval on the 5th inst. with four Indians in two canoes for a hunting, fishing and camping expedition up the Peribonca River, to last fifteen to twenty days. They have with them one of the finest assortments of fishing rods and tackle ever brought to Canada by so small a party, running in value, as it does, from \$500 to \$1,000. Other camping parties have gone back from Roberval, a journey of a day and a half up the Oniatouaniche River, where in the lake whence it flows they found trout in profusion of 4 and 5 lbs. in weight.

Of the ouananiche fishing at the Grande Discharge I can speak from experience, having just returned therefrom. I shall refrain from speaking of my own exploits, having not yet sufficiently recovered from the mortification caused by the loss of the traditional big fish. The largest of these finny warriors are certainly guarded by the demon of ill luck and their mouths are exceedingly tender. I had excellent luck, considering the very bad weather (heavy rain and a strong east wind), but my sport was not to be compared with that of many of those whom it was my privilege to meet on the fishing grounds. Some of their catches were exceedingly plentiful. Mr. J. H. Botterell, of Quebec, returned on Monday from his sixth annual visit to the Discharge. He was accompanied this year by Mr. E. H. Botterell, of Montreal, and by Messrs. F. Fairman and John Nicholls, of the same city, and the party took over 100 fish. The largest fish taken out of the Discharge last week was killed by one of the Montreals, and weighed 5 1/2 lbs. A New York gentleman, who was fishing there last Saturday, hooked a good fish, when to his dismay and that of his guide they found that they had forgotten the landing net ashore. The fish relieved them of their embarrassment by jumping, in the course of his contortions, right into the canoe of his captors. Mr. W. Lake Marler, formerly of Quebec, now manager of the Merchants' Bank at Ottawa, was at the Discharge with the Rev. C. Bancroft, of Sutton, while Mr. Botterell and party were there, and also enjoyed excellent sport. So did Messrs. R. G. Mitchell and Geo. Newbold, of New York.

Among others who have had good success this season so far with the ouananiche may be mentioned Messrs. J. L. Chamberlain, of Rochester, N. Y., and J. H. Osborne, of Auburn, N. Y., members of the Alma Club; Mr. Coates and party, of the Springfield Club; Mr. John Mackay and Mr. L. S. Odell, of Quebec, and Messrs. Flanders and Howell, of the Boston & Maine Railway. Mr. C. R. Miller, editor of the *New York Times*, and Mrs. Miller went to the Discharge on Sunday last for the third consecutive season. Mrs. Miller is an ardent and successful angler and last season killed a ouananiche weighing nearly 6 lbs. Other fishermen and ladies now at the Discharge are E. McCarthy, son of Senator McCarthy and Geo. B. Greenway, of Syracuse; C. M. Lea and A. H. Lea, of Philadelphia; Mr. and Mrs. J. B. Lawrence, Jr., and Miss Lawrence, of New York; Mr. and Mrs. W. J. Kimmont and Mr. and Mrs. C. P. Choate, of Detroit, and W. E. Geger and R. L. Fox, of Ontario, N. Y.

It has become quite the proper thing this season for

the anglers at the Discharge not to recross Lake St. John, but to shoot all the passable rapids of the Saguenay to Chicoutimi and return to Quebec by steamer. No less than nine canoes made this trip to Chicoutimi last week. There is another canoe route to Chicoutimi that ought to become exceedingly popular on account of the excellent fishing to be had en route. This is through Lake Kenogami, which abounds in splendid trout. The trip would occupy two days. It was by this route that Father Du Quen, the discoverer of Lake St. John, reached the great inland sea that the Indians then called Pikonagami.

The principal topics of discussion between the new arrivals at Roberval or Quebec and the anglers just returned from the fishing grounds is naturally the nature of the sport and the description and names of the most killing flies. The relative merits of the Jock-Scot and silver-doctor—both favorite flies for ouananiche—are perhaps eagerly compared, while one angler enthusiastically dilates upon his success with the Lord-Baltimore or the Montreal, and another votes his favorite to be what was originally a coachman, but the white wings of which were entirely cut away by his guide, Johnny Morel. The clipped "coachman" is undoubtedly a good killer, its bronze fuzzy body shining with splendid effect through the brown-jackle covering. The picturesque character of these groups of anglers lounging at night about the entrance of the Roberval Hotel is usually heightened by the presence of a number of Indian and half-breed guides—some of them perhaps perfecting an engagement for a trip of a fortnight, or perhaps a month, by canoe and portage through the country lying between Mistassini and Lake St. John, giving information respecting the relative attractions of the routes up the Ashouapmouchouan, the Peribonca, or the Mistassini respectively, and relating a variety of bear stories, never forgetting that of the English gentleman who presented his guide with a hundred dollars as soon as he had killed his first bear.

QUEBEC, July 10.

E. T. D. CHAMBERS.

CHICAGO AND THE WEST.

A FEW weeks ago my friend Harryman and myself slipped out of town for a day of sylvan lakeside life under canvas, we being determined to try the old time joys of camping out. We went up the Chicago & Northwestern R. R. to Powers' Lake, one of the most beautiful of the lower Wisconsin lakes, perhaps the most so for it has bluff-wooded banks, sand and pebble bottom and a pretty beach in places. We were looking after new water for bass fishing near Chicago and felt very well satisfied with our "discovery."

It was raining hard when we left Chicago in the evening, and had been doing so all day, so that it looked rather blue for a camping out trip. Before our two hours' run to Genoa Junction was over, however, the rain had stopped, and before the hackman had finished the four miles drive over to the lake the sky was showing signs of clearing, although the ground was soaking and the trees dripping. We chose not to stop at the Cedar Glen House or at Benedict's place, but went into camp in Mr. Ballast's woods, on a lovely bluff just to the right of the Union Club. As we were out on a sort of experimental trip, and as we did camp dry that night and live well, there may be some who would be interested in knowing how we did it, in the absence of hay, straw, or other ameliorating circumstances. In the first place, we had one of A. S. Comstock's "Protean" tents, the sort he has patented, with one pole on the side and a three-cornered fly with which you can double the area or the thickness of your tent at will. We had our fly made extra large, so that it came clear down to the ground in front of the tent, fastening to the sides and thus practically making two tents, end to end. The front one of these, or that under the fly, we used as a store room, and the back one, or tent proper, 7ft. square, we used for drawing room and boudoir. By untying one side of the fly and throwing it back, we could break the wind, sit under cover and have a good reflector for our camp-fire. The same arrangement, thanks to our improvement on Mr. Comstock's fly, gave us plenty of shade and perfect ventilation in the heat of the day. We found we could have a whole lot of fun making new tents out of our tent and the fly, and the visitors who came were delighted with the elegance and convenience of our house.

The driver who brought us over was drunk, and when we asked for our bill all we could get out of him was that he "guessed he'd sharge four, four, four dol-dorls now, or two dorls next mornin' when he took us back." We accepted the latter alternative, and as he turned to leave us a light of great pity fell upon his face. "Most folks' comes up yer," said he, "kin'ford to sleep in th' hotels."

All the driver could see was that it was wet, and that we had two canvas bags and a bundle of rods. We jerked one of the bags open and took out from its very top a light but waterproof tarpaulin 7ft. square. Below this we found a camp axe and the tent pins. We spread the tarpaulin on the wet grass and drove a pin at each corner of it. These were for the corners of the tent, which were at once attached. We then pulled from the bag the jointed pole, set it up, stretched the guys a little, and to perfect our imitation of two men going into camp in a rain then pulled the other waterproof bag under the shelter of the tent. Thus we would have had everything under cover very quickly. We now put down the remaining pins and stretched the fly. Thus we had a good roof and a good floor, but no bed.

I often read about the downy balsam bed and the pine feathers of the East, and they figure largely in most Eastern camping stories. Plain hay is good enough for me, and I don't feel good when I can't get it. We couldn't get any hay, so started out in the newly laundried woods to get some of the blooming balsam boughs you read about. We amputated two little cedars, and that ended the balsam racket. We concluded that basswood feathers would do us. A little later we discovered that you can make a basswood bed quicker if you're not too blame particular about the size of the boughs. We had a good many boughs about as thick as an axe handle, and a great deal harder, I am sure. We carried these feathers into the tent and draped them over the tarpaulin. Then we open the other bag, the waterproof carryall, and found right on top in it the floor cloth, just 7ft. square, of Soz. brown duck, with an eye and a rope at each corner. The tent had a regular sod cloth running around it. This we pulled in, and tying our floor fast at two corners, we strained it hard and tight over the "bed," and tied it fast, thus leaving a smooth, clean and unquestionably dry

bed, a foot above the ground. Rightly made, a bed of balsam or plain hay can thus, by the use of the two floor cloths, be made very neat, clean and comfortable. This was an idea which we evolved after studying Mr. J. M. Clark's camping outfit.

We now dived again into the wonderful carry-bag and got our blankets, one double pair, one heavy single, and a Mexican serape, sewed together on the edges sleeping-bag fashion. Below the blankets were the provisions and the tackle boxes, and below that a lantern, and below that one of Mr. Clark's compact cooking outfits, all in a little canvas bag. H. and I had gone through a regular drill in packing our outfit, and we had it down fine. It was not very many moments before we were all ship-shape, under cover, dry and comfortable, and with a ripping old fire blazing, all before the sun had set. Presently the bacon in the frying pan began to sizzle, and after a while a most delicious aroma floated up from the coffee-pot. Each laid ten years from off his shoulders and sat up to a supper in which all the zest of youth seemed come back again. And so we sat and babbled, reckless, and wondered if we had ever really put up at a hotel when we went a fishing. After all, the tent and the fire help out an outing amazingly. The city man is too apt to hurry off to a hotel, or to a boarding house kept by some resorter who fishes through the ice all winter. It was to avoid the latter man that H. and I took our notion of camping. I should think that with a light compact outfit like ours one could make these brief fishing trips around Chicago as cheaply and as comfortably, though in a little more troublesome way, as if he went to a hotel. We certainly enjoyed our night and day in camp very much, and will try it again whenever we can.

That was about all there was to our trip. We cooked and ate most of the time, we were so hungry; but we got some bass, as we have done on every trip we ever made for them around here. We only got seven bass, but that was enough. The day was very cold and the lake was rough. In good weather I think a bass fisher could get a good string there. Mr. Brodie, whose cottage is a bit further down the road, caught twenty-eight one morning the week before we were there. The water is very clear, and one needs to cast long and clean with bait. The bass are both large-mouth and small-mouth, and this is one of the few bass lakes about here where I should think it better to cast the minnow than the frog. By trolling or still-fishing some bass, also pickerel, wall-eyed pike and rock bass are caught in this lake, though we never fish in that way. The bait-caster will here, as always, catch the most bass. Our oarsman, Will Dixon, said he had never seen very many "throw a bait that way," from which it would seem that the lake is not fished by the casters. We heard of three bass caught on the fly one evening a week before our visit, and good trial might prove this a good fly-fishing lake. The bass seem to run small, not over 3lbs., but they are very gamy. This is the coldest and clearest lake I have seen in this country. The water is quite unstained, even with heavy rain and wind. We caught one small-mouthed, red-eyed, dark-spotted bass, the sort they call "tiger bass" around here. This fish when taken was light brown in color, but darkened soon to nearly black, so that the spots were hardly visible. This fish was taken over a light sandy bottom. It grew darker in the darker parts of the lake, and was nearly black when we lifted it, still kicking, from the water at the boat landing some hours after it was caught. If it had been left on the string right in the water where it was caught would it have changed color in this way?

We caught here the genuine small-mouth and the genuine big-mouth bass, and we caught also one specimen of the bass they catch around Fox Lake way, a solid green-colored fish, with a mouth about as large as that of the small-mouth bass. Whether this fish is a large or a small-mouth bass I wish some one would arise and say, if he knows. A good many don't who have pronounced on this topic.

About the Powers' Lake trip, then. The fare via Northwestern is \$2.75 round trip. Hack, fifty cents each, each way. Oarsman, \$2.50 a day. Hotel rates, \$1.50 a day. Boats not very good. Minnows or frogs the best bait, then spoon. Just across the road, about 60yds., is Benedict's Lake, smaller and muddier than Powers' Lake, but full of bass also. A little further over in the country is Vernon's Lake, and they told us that was the best bass lake of these three for bass, though we did not try it. For those who like fun with sunfish and rock bass Pell's Lake, two miles from Powers' Lake, is said to offer incessant sport. Twin Lakes, a rather well-known angling and resorting lake, is also reached via Genoa Junction. From Powers' Lake over to Silver Lake, or to the fishing in the Fox River, at Bundy's Bridge, it is only about six miles. All this is a very beautiful and kindly country, and although I have never gone into it before, it seems it certainly ought to offer attractions enough for a trip of a day, or a week or a month. The lake region above Chicago can not be fully visited or described in a summer, or two summers, or in three. It is a very blessed provision of nature, these charming bits of lake and wood right near the big city, and the city will appreciate its mercies in this wise more and more as the years roll on.

July 7.—The smoke of the glorious Fourth for the current year has been waited down the grooves of time. So far as can be learned from those able to be at their places of business, it was a great day. The shooting clubs celebrated largely by trap events. Others went fishing. Some went picnicking. So far as can be learned, nobody at all was left in the city, there being a general exodus to the many accessible pleasure grounds about this fortunate hamlet.

A pleasant little event was the bait-casting tournament of the Camp Lake Club, at Camp Lake, the morning of the Fourth. There were 15 entries, competitions both for distance and accuracy. Mr. Ed. Sturgis won the contest for distance, with an average of 147ft. 3in. His longest cast was 148ft. 6in. His rod was a split bamboo, over 8ft., and his reel a quadruple Abbey & Imbrie. The contest for accuracy was won by Frank Stoltz, 200 out of a possible 500 points, 5 casts. He used a Clark bass rod and Abbey & Imbrie quadruple. The casting for accuracy was at 65ft., on a canvas target, bullseye 24in., to count 100; next ring 36in., count 75; next ring 48in., count 50; next ring 60in., count 25. There was some discussion whether this target was better than casting at a stake and measuring the total string. The main trouble with bait-casting contests is the time spent in measuring. This

makes the sport drag. The facts above are kindly given me by Mr. J. M. Clark, who was present, and who, after the contest, went on up to Burlington with Mr. Peck, the judge of the casting, and Charles Porter on a floating fishing trip down the Fox River. This trip they say was very delightful. They got 16 small-mouth bass and some pickerel, fishing part of two days, camping out, and ending their trip at Wilmet.

Mr. C. S. Burton and a friend or two went up to Mukwanago for their Fourth, and it seems they had good luck with the fly, though the bass, all big-mouths, ran small. Charlie is very enthusiastic over fly-fishing now. It is a form of sport all too little practiced by our Chicago anglers. The fishing in this case was done at Eagle Lake, and not at Mukwanago Lake proper. The successful fly was Parmachene-belle.

Down at Momence, on the Kankakee, or rather at the club house a mile or so above Momence, a friend and myself found Messrs. George Marshall, Sam Young and Metcalf on a little private celebration of their own. In company with a few friends they had been having a little trap shoot at live birds and targets, shooting about 300 birds and several thousand targets, besides doing a lot of boat riding with Charlie Heimbaugh in his steam launch. Heimbaugh says there have been a few illegal nets in the river above this place, and thinks he knows the parties who put them out.

We found fishing in the Kankakee not so good as usual, the water being high and muddy. My friend and I camped out about three miles below town, and had a pleasant time, but caught only a few bass, all of which were taken on the fly. The Donaldson proved the most taking fly this time. We were guided by that most kindly-hearted sportsman, Mr. Fred Duree, of Momence, who took us down the river and staid in camp over night with us. He showed us where he and some friends caught 25 bass four days earlier, but we did not strike them so well as that.

The feeling about the fishway and protective work seemed good at Momence. Warden Buck arrived at Momence Monday, but we did not see him. I might continue the story of his work along the Kankakee by quoting his reports to headquarters. On July 1 he wrote from Wilmington:

I went to Lockport and saw Capt. Leighton and he is to meet me at the State dam below this place to-day or to-morrow and make arrangements to put in the fishway there. Yesterday I went to Marseilles and saw the owners of the dam, the Marseilles Water Power Company, L. Clark, Manager, and made them a working model. They are at work now putting in new head gates and will put the fishway right in. Just as soon as the water goes down the parties will put in their ladder at this place, Wilmington. I shall go to Kankakee as soon as I get through with Capt. Leighton and fix up the matter of the Momence dam and go there and get them at work on their dams. My boat will be sent to Momence and next week I shall take a trip down the river.—F. L. BUCK.

On July 2 he reported as follows from Kankakee town:

Have just arrived here from Wilmington. I met Capt. Leighton at the State dam to-day and he said he would put the men at work the first of next week, as soon as they get through repairing the canal at Utica, and have the fishway put in at once. At Wilmington I saw Mr. Stewart, one of the owners of the small dam, and he said he had sent word to all of the others and arranged to have the work done just as soon as the water is so they can. I will hunt up Mr. Walker, the attorney for Cass & Shelby, and get him to sign the stipulation so I can go to Momence and make them get to work there. I have just heard that there is considerable seining between here and Aroma. I shall go there and see what there is in it and will most likely spend the balance of the week.

And now the work of fishways in the Kankakee gets its first and most serious setback, and that just where it was least expected, at Momence. Only July 3 the warden writes:

Mr. Wheeler, the attorney for Shelby & Cass, the owners of the Momence dam, refuses to sign the stipulation and if when I get to Momence their agent there will not get his signature then I shall serve notices on them and see if that won't bring them to time. I will look up some parties between here and Aroma that have been seining and selling the fish here in the market every week.

The stipulation above referred to is that agreed to by the C. & E. I. R., to waive their injunction rights as against the dam owners provided the fishway shall not lower the backwater above the dam. It seems singular that the dam owners' attorney refuses to agree on a point like this, which is altogether immaterial to his case. The law demands that the fishways shall go in, just the same as a right of way can be condemned for a railway. In nature a right of way is due to the fish. They will have it, and the fishways will go in the Momence dams, either with or without delay, or with or without a legal fight. I can't see the use in a dam owner's delaying a measure like this, when test cases and precedents show him so plainly that he hasn't a leg to stand on before the law. It would be far better and wiser for the attorney to agree at once to so obviously wise a measure. That would be sensible and courteous alike, and the sensible and courteous man is the one who will win in this world.

On July 6 Warden Buck wrote from Momence as follows:

I have sent for my boat so I can travel down the river and not have to spend so much on the cars. I was at Aroma Sunday looking after some parties who are in the habit of using a seine there, but they did not show up. In regard to the Momence matter, I will see Mr. Worcester and explain the situation of the R. R. Co. in the matter, and if they still refuse to go on with the fishways I will serve notices on them. I think they will do the work without any trouble when the matter is fully explained. All of the dams, with the exception of the ones here and the large dam at Wilmington, will have fishways without any trouble. I shall make a trip down the river in my boat as soon as I can find out what they intend to do here to-morrow, or as early as possible, for I think there is a chance to get some of the men who are using a seine above Kankakee.—F. L. BUCK.

The ways and means committee of the Kankakee Association met and appointed "hustling committees" for the different clubs, comprised as follows: Mak-saw-ba, Messrs. R. B. Organ, T. Brenton Leiter and W. H. Haskell; Cumberland, Messrs. H. D. Nicholls, C. D. Gammon, Geo. T. Farmer, Capt. Sanborn; English Lake, Messrs. Abner Price, A. M. Fuller, Chas. E. Deane and T. C. Edwards; Water Valley, Mr. R. A. Turtle; Tolleston, Messrs. F. A. Howe, O. H. Roche, W. R. Linn and A. G. Swartz; Diana, Messrs. Henry Ehlers, John Press, Henry Schaller and A. Stafford; North End Gun Club, Mr. Chas. Burneisher; Pittsburgh Club (of Pittsburgh, Pa.; grounds near Davis, Ind.), Mr. A. E. Kennedy; Prairie Gun Club, Messrs. A. M. and George Hofmann; Grand Calumet Heights, Dr. A. H. Harlan, Messrs. George Marshall and W. L. Pierce. It would certainly seem that the above corps of workers could raise some funds to protect the Kankakee. E. HOUGH.

THE DEADLY SPEAR AND SET-LINE.

Editor Forest and Stream:

Bass and pike fishing have been very poor here on the Susquehanna. From one to six lights can be seen nearly every night from spearing boats manned by people who don't care to fish in a legal way, and say they cannot catch fish with a rod and line. Well, I guess that is about true, for between them and another gang that makes a business of making a network of the river with set-lines reaching from shore to shore, it is plain enough that before long nobody will be able to catch any, and this helped along with now and then a fyke net and seine.

Is there some way to get at them? They claim to catch only eels, catfish and suckers, and that they have a right to spear them. I cannot find anywhere in the game and fish laws of Pennsylvania, passed 1878-89, any such privilege granted them. Of course, those fish are not protected. They claim they don't catch or spear any game fish, but that is not so, for I have found several black bass that had been speared—one that would have weighed 4 lbs., the other nearly as much. They had been speared and torn loose, or else had been thrown away to keep them out of sight of the fish wardens, who are doing all in their power to stop it. Two of them went out and found some lines, but no owners; the lines were baited with little stone catfish and anglerworms. I assure you those lines will not be set again, for the hooks were unbaited and the lines cut in a hundred pieces, and before this goes to press more of these deadly set lines will share the same fate and the owners may have to settle besides. Just think of it—line after line stretched across the river with from 100 to 300 hooks baited with all kinds of bass bait, and, with the spearing boats, the effect it will have on our game fish can easily be foretold. It is not only here, but above and below us as you ride along on the train which follows the river for about one hundred miles you can see most any night the lights from these murderous spearing boats. Perhaps even now some of your old friends with their beautiful bronze back are mutilated with the marks of the cruel spear; it may be some old warrior that you had that fight with just below there by that big rock last summer that you promised yourself you would try next time you came down that way. You are sure he would have weighed 5 lbs., and now perhaps they have killed him as you would kill a snake, without giving him a chance for his life. Is there any way to stop this mode of catching fish? This river is well adapted to bass with its rock and gravel bottom, over which, in a good many places, the water runs very swift, while in other places it is still and deep, so they can have their choice. There will be plenty of fishing for all if they were caught in a legal way. If we had some one here like E. Hough to haul them over the coals as he did those people in the Fox Lake region, through FOREST AND STREAM, I think people would come to the conclusion that it is time to use some means to stop it.

TOWANDA, Pa.

A. V. R.

ANGLING NOTES.

THE best score for salmon so far reported was made by Mr. Murdock on the York River. During three weeks in June he killed forty fish averaging 2½ lbs.

Landlocked salmon are taken very well at Grand Lake Stream, Maine, mostly by trolling. They are from 3 to 5 lbs. each in weight.

Mr. Henry B. Hyde has just started on a grand fishing trip through Canada. He takes his family in a special car over the Canadian Pacific R. R. to the Pacific coast, stopping at the Nipigon and other famous fishing places. He expects to be gone about two months.

Weakfish are fairly plenty, but bluefish and striped bass are exceedingly coy and hard to please. It is interesting to note in how many different ways the striped bass are fished for. The fishermen along the Eastern coast, at Newport, West Island, etc., use a short, stiff rod, casting menhaden or lobster tail bait from raised platforms into the ocean. Along the New Jersey coast they generally cast from the beach, using white or red worms to attract the fish, and they consider it necessary to have a 2 or 3oz. sinker on their line. In Barnegat Bay a long bamboo "pole" without reel is the favorite, with a light sinker and shedder crab bait. At Hell Gate the bass are taken mostly by trolling at night with a hand-line and a gang baited with sand worms. In the lower Susquehanna River large striped bass are taken by trolling with a salted eel tail drawn over a No. 8/0 spout hook. This makes a very tough and durable bait. So that it seems as if every locality had some special way of fishing, and from long experience the local anglers generally know what is best.

Prof. Bickmore started on the Portia last Saturday for Newfoundland. After visiting the different fishing stations on that coast and the coast of Labrador he intends to cross the island from Humber to Exploits River. The Professor will undoubtedly have some fine fishing, and will return well posted about the sea trout, salmon, etc., and will also probably learn something about the flies of Newfoundland.

Harper's Weekly lately devoted considerable space to an illustrated article booming the cold storage warehouses and mentioning the advantages of frozen fish and game. I take it for granted that every one knows that the keeping of game in cold storage houses is illegal, and so it is to keep speckled trout—no matter when or where purchased. This has been decided in the highest courts through the efforts of the N. Y. City Association for the Protection of Game. As for eating game or fish after it has been frozen, that is a question of taste. The finer and more delicate birds and fish are ruined for my taste. They gradually become dry and without flavor, though they may remain sweet. Again, though they may come out of the freezer perfectly sweet and healthy, the minute they thaw out they begin to spoil, so that a bird or fish that was all right in the morning may be utterly ruined for eating purposes before night and even unhealthy. The best restaurants and hotels are giving up the use of frozen fish on their tables. I was served with prairie chicken at the Hotel Brunswick last spring (for which suit has been brought) that was simply frightful, they were so musty and nasty. I cannot think of prairie

chicken without a shudder. They had been taken from the cold storage house and probably kept several days in the restaurant. So while cold storage houses are undoubtedly a benefit in some respects, the sportsman regards them as one of the greatest factors in the destruction of game fish.

SCARLET-IBIS.

ROCKY MOUNTAIN GRAYLING.

OMAHA, Neb., July 7.—Editor Forest and Stream: With a great deal of interest I notice in your issue of July 2 an article on the Rocky Mountain grayling.

The writer has met this game fellow frequently and under varied circumstances, but has never been able to fully identify him, and being far distant from a railroad, whenever an extra fine specimen worthy of sending to such an authority as you are was caught, have been unable to ship one to you. I have caught this grayling in streams in the Big Horn basin, in Wyoming, and in both forks of White River, in northwestern Colorado. During the winter have seen him caught (although he does not seem to be at all hungry then) through the ice with a small piece of bullpout as bait. In the early spring, during the first spring rise of the mountain stream, I have had a good deal of pleasure with these fish by casting below riffles (in the deep holes), using a very light shot to sink the line a trifle, and with crawfish as bait. From June, or after the streams clear after the June rise, they rise well to the fly. They have quite a preference, at least so far as my experience goes, for the brown-hackle, with a peacock body, and the royal-coachman. I have caught them weighing from 1 to 2½ lbs.

During early August, and when the weather is very warm, these fish have a habit of becoming very sluggish and sleeping in the quiet shallow water above the riffles. When they become thus lazy the most tempting fly in the world cannot induce them to stir, and the writer has frequently touched a big fellow with the end of his rod. This is a habit which has given them a bad reputation among fellow casters whom I have met, but when the Rocky Mountain grayling is once hooked he makes a splendid fight. His flesh, though not so fine in quality as that of *Salmo fontinalis*, is very delicate in flavor.

BIG HORN.

[If our correspondent will send us a dorsal fin of the fish we can then be sure of its species.]

INGLEWOOD FISH AND GAME CORPORATION.—This club, organized under the laws of New Brunswick, includes in its membership about fifty merchants and professional men in Boston, besides several New York and Connecticut sportsmen. Its officers are: President, Andrew S. March, Boston; Vice-President, Fred E. Whiting, Boston; Treasurer and Assistant Secretary, Henry O. Cutler, Boston; Secretary, Leonard B. Knight, Musquash, N. B.; Directors: Andrew S. March, Henry P. Brigham, Leroy S. Brown, Samuel Shaw, E. Noyes Whitcomb, Fred E. Whiting, Henry E. Cobb, C. A. Hopkins, all of Boston; Joshua Knight, Musquash, N. B. House committee: Leroy S. Brown, 60 Commerce st., Boston; Samuel Shaw, 18 Beacon street, Boston; Fred E. Whiting, Boston Herald office, 255 Washington street, Boston. The directors report the securing of funds to cancel all indebtedness, and a new and long lease of property on the Musquash River, in St. John and Kings counties, N. B., containing 35,000 acres of land, with twenty lakes and connecting streams. The waters are stocked with sea salmon, landlocked salmon and brook trout. A hatching house with a capacity of 1,000,000 eggs, in which salmon, brook trout and brown trout have been successfully hatched this spring, is one of the improvements; its troughs now contain about 25,000 brown trout. The forests furnish deer, moose and smaller game. The property is accessible from Boston by Boston & Maine R. R. by two trains daily, and the steamers of the International Steamship Co. three times a week.

SPRUCE CABIN, Canadensis, Pa., was totally destroyed by fire on the evening of June 25. For many years past this place had been the resort of a number of New York lovers of sport with rod and rifle, and its destruction by fire will be learned with regret. The fire was discovered through the sagacity of a fine Irish setter named Gyp, the property of Geo. W. Blake, of the New York Sun. Mr. Blake is an enthusiastic sportsman, and has annually visited Spruce Cabin. At the time the fire broke out Mr. Blake's brother, John E. Blake, and his family were sojourning there. On the evening named, Mr. Blake's three children were asleep in an upper room, while Mrs. Blake was reading in the parlor. About 9 o'clock Gyp was heard whining and scratching up stairs. All the men were absent save a friend of the Price Brothers, and he, Mr. James Zabrieskie, took a stick and started up stairs to drive the dog away, as Gyp had never been allowed to ascend the stairs. Reaching the top of the stairs Mr. Zabrieskie observed Gyp scratching at a door with both paws, and seemingly greatly excited. Mr. Zabrieskie opened the door, when a volume of smoke and flame rushed out. Mr. Zabrieskie at once rushed to the rescue of the children, and when they were safely brought out Gyp left the burning building. Ten minutes later it was a mass of flames. The Price Brothers lost their all in the flames, but Spruce Cabin will at once be rebuilt.—KIT CLARKE.

ST. LOUIS NOTES.—Fishing has been fairly good during the past two weeks, the water in the rivers, sloughs and lakes being in fair condition. At Kid Lake the bass are taking the fly freely. Many parties have been up the Merrimac River, but no large catches have been reported. In a trip of thirty miles into the country last week I found an abundance of quail, and there will be fine shooting this fall.—ABERDEEN.

RHODE ISLAND.—A correspondent reports: "With a friend I have been trouting four times and have caught 80 trout; the largest was a 3-pounder. All together weighed over 45 lbs. Game is doing finely, and it looks as if this autumn's shooting would be good.—F. DE C.

BLUEFISHING has been capital in Great South Bay and numerous big catches have been reported. At Sayville, Islip, Fire Island and other places the returning fishermen have fairly staggered under their loads of 6 and 8 lb. fish,

THE LAURENTAIN CLUB.—The sixth annual general meeting of the Laurentain Club was held at the Windsor, Montreal, on Monday the 6th. The treasurer's report showed that the club had had a good year and that after making various improvements to its extensive territory and erecting new buildings it still had a balance on hand. The club's prospects are very bright and its shares are in such favor that it was decided to advance their price to \$200. A resolution was passed tendering the thanks of the stockholders to all the officers, but especially to the president, Mr. T. V. R. Brown, who, because of his intention to leave Montreal, did not wish to be re-elected. For the past six years he has filled most satisfactorily the duties of his position. Directors for the ensuing year were unanimously elected: Louis Sutherland, of Montreal; W. H. Rintoul, of Montreal; David S. Cowles, of New York; George H. Seeley, of New York; Joseph W. Howe, of New York; W. Q. Riddle, of New York; Frederick Stancliffe, of Montreal; Thomas Hiam, of Montreal; T. V. R. Brown, of Montreal. At a meeting of directors held afterward the following officers were unanimously elected: Frederick Stancliffe, of Montreal, President; Joseph W. Howe, of New York, Vice-President; W. H. Rintoul, of Montreal, Treasurer; Thos. Hiam, of Montreal, Secretary. House Committee, W. H. Rintoul, of Montreal; Louis Sutherland, of Montreal; Joseph W. Howe, of New York.

LOCH LEVEN TROUT IN BISBY LAKE.—Early in January, 1885, the United States received 100,000 eggs of Loch Leven trout from Sir James G. Maitland, of Stirling, Scotland. When these were distributed 10,000 were sent to the Bisby Club, Herkimer county, New York, of which Gen. R. U. Sherman was president. The trout hatched from these eggs were reported by Gen. Sherman to be the finest he had seen. The introduction of this new fish into Bisby Lake was scarcely remembered, but early in June the General was surprised in landing a 2 lb. trout of a kind unlike any of the species known in the lake, and which he believes is certainly one of the forgotten Loch Levens. If this prove true, the Bisby Club is to be congratulated upon the success of its venture, and all who go a-fishing in Bisby Lake will applaud their enterprise, for the Loch Leven is a treasure.

HALIBUT IN GREAT SOUTH BAY.—Commissioner E. G. Blackford was informed by ex-Senator Wagstaff, president of the New York & Brooklyn Bridge, that the Hon. Joseph J. O'Donohoe last week caught two small halibut, one weighing 16 and the other 17 lbs., in Great South Bay, close to the mussel beds. He has never known them to be caught before in this locality. The halibut occasionally migrates far south of its usual haunts; a few years ago a 50 lb. specimen was caught in the Potomac River, at Colonial Beach, far above tide water.

SO ALL THE WORLD OVER.

A charming woman, but not in her first youth, had to give evidence in a French court. "Your age, madame?" To this delicate question she replied that she was 30. "But," said the magistrate, "did you not tell me that you were 30 when you appeared before me as a witness about two years ago?" "I think it very likely," said madame, with a smile; "I am not one of those women who say one thing to-day and another to-morrow." I was telling this story at dinner one night, when an innocent damsel sitting next me exclaimed, "Ah! what a glorious example of truthfulness. How different are men. Why, my cousin Tom caught a trout weighing 1 lb. three years ago. Last year he said it weighed 2½ lbs., and this year it has grown to 4 lbs."

"Noo, laird McGlashan, what was really the weight o' that awfu' big saumon you and Saunders killed last Saturday in the Black Dub Pool?" asked the McNab from the midst of a select company who were enjoying the McGlashan's hospitality at a rather late hour. "The weight o' t' man? It was —. Saunders, man, Saunders," calling to his faithful benchmark, "did ye weigh the muckle saumon, Saunders?" "Deed aw weighed it, laird." "Weel, then, tell the company a' about it." "Ye'll excuse me laird, but a canna mind thee noo to an exact pun; but aw heard ye tell Captain McPherson after breakfast that it was twenty-five pun, at luncheon time it was fifty pun, after dinner, when ye sat over the punch, it was sixty-five pun, and last thing at night when ye and the meenester wor ca'ing yin anither leears, it war twa saumon eighty pun a-piece."—Fishing Gazette.

The Kennel.

FIXTURES.
DOG SHOWS.

Sept. 1 to 4.—Dog Show of the Youngstown Kennel Club, at Youngstown, O.

Sept. 8 to 11.—First Annual Dog Show of the Hamilton Kennel Club, at Hamilton, Ont.

Sept. 14 to 18.—Toronto Industrial Exhibition Association Third International Dog Show, at Toronto. C. A. Stone, Sec'y and Supt.

Sept. 22 to 25.—Inaugural Dog Show of the Montreal Exposition Company, at Montreal, Canada.

Sept. 29 to Oct. 1.—Third Annual Dog Show, in connection with the Central Canada Fair, at Ottawa, Ont. Alfred Geddes, Supt.

1892.

Jan. 13 to 14.—Second Annual Dog Show of the South Carolina Kennel Association, at Columbia, S. C. F. F. Capers, Secretary, Greenville, S. C.

FIELD TRIALS.

Nov. 2.—Inaugural Trials of the United States Field Trial Club, at Bicknell, Ind. P. P. Madison, Secretary.

Nov. 16.—Eastern Field Trials Club's Thirtieth Annual Trials, at High Point, N. C. Members' Stake Nov. 12. W. A. Coster, Secretary.

Nov. 30.—Central Field Trial Club's Third Annual Trials, at Lexington, N. C. O. H. Odell, Sec'y, 44 and 46 Wall street, New York city.

Dec. 14.—Philadelphia Kennel Club's Field Trials. Charles E. Connell, Secretary.

A CURIOUS CASE.—Loyds, Va.—Editor Forest and Stream: Does a dog ever eat her own puppies when they are three weeks old? A fine collie bitch whelped four puppies under a house. They were removed on the day of their birth to a kennel prepared for them. The bitch nursed them very well until they were three weeks old. At that time a rain storm occurred one night and she carried them back under the house where they were born. She did not return them to the same bed in which they were littered but took them to another place under the building, which was quite large. The next day the puppies seemed to be whining and crawling about, although they could not be seen. Shortly afterward the bitch appeared with one of them in her mouth, dead, and the other three were never seen again. Did the dog eat her puppies three weeks old?—P. S. HUNTER. [At that age they would be able to crawl away from the nest and may have died of exposure. It is very unusual for a bitch to eat her puppies after they have been nursed.]

UNITED STATES FIELD TRIALS DERBY.

Editor Forest and Stream:

The United States Field Trial Club's Inaugural Derby for setters and pointers, born on or after Jan. 1, 1890, closed July 1, with 84 entries, of which there are 26 pointers, 3 Irish setters and 54 English setters. The list is as follows:

ENGLISH SETTERS.

SANDBORN—Jos. H. and John A. Hunter's black and white dog (Ben Hill—Daisy Hunter).
DAD'S MARK—Jos. H. and John A. Hunter's black, white and tan dog (Dad Wilson—Daisy Hunter).
HOOSIER GIRL—Jos. H. and John A. Hunter's orange and white bitch (Dad Wilson—Daisy Hunter).
FIRENZI—H. J. Smith's black, white and tan bitch (Gath's Mark—Flame Gladstone).
PRINCE FONZO—H. J. Smith's lemon and white dog (Gath's Mark—Flame Gladstone).
RUBY GLADSTONE—H. J. Smith's black, white and tan bitch (Gladstone's Boy—Diamond).
RACE NOBLE, JR.—J. E. Roberts's white and brown dog (Race Noble—Fannie S.).
BOB COOPER—Blue Ridge Kennels' black, white and tan dog (Boi D'Or—Miss Nellie Y.).
EVELINE—Blue Ridge Kennels' black, white and tan bitch (Gath's Mark—Flame Gladstone).
KEEL—Blue Ridge Kennels' black, white and tan bitch (Roderigo—Lufra).
DAD'S GIRL—Blue Ridge Kennels' black, white and tan bitch (Dad Wilson—Bohemian Girl).
LUCCY—Blue Ridge Kennels' black, white and tan bitch (Roderigo—Lee Gladstone).
HILDEGARD—Paul H. Gotzian's lemon belton bitch (Monk of Furness—Countess Amelia).
LATONIA II.—Poston & Burdell's black, white and tan bitch (Paul Gladstone—Latonia).
COLONEL—J. A. Balmer's black, white and tan dog (Jack W.—Stocking).
KING TREX—A. Corradi & C. S. Greer's chestnut and white dog (Coin Gladstone—Blanch Roderigo).
DRUID'S LILLY—G. A. Day's orange and white bitch (Ruby's Druid—Cricketeer).
DRUID'S PRIDE—G. A. Day's orange and white bitch (Ruby's Druid—Cricketeer).
COUNT DRUID—G. A. Day's orange and white dog (Ruby's Druid—Cricketeer).
WUN LUNG'S SISTER—S. J. McCartney's liver, white and tan bitch (Captain Bethel—Enid).
MISS PRIM—Allen Mehle's lemon and white bitch (Roderigo—Queen Ella Noble).
LADY FRANCES—Chas. A. Travis's bitch (Monk of Furness—Merry Girl).
DOC QUINN—Chas. A. Travis's dog (Monk of Furness—Merry Girl).
DON—J. R. Hays's orange and white dog (Don Pedro—Fanny).
FRANK DONCASTER—M. C. Wiles's lemon and white dog (Gladstone—Ruby Doncaster).
TOUGH—T. J. Widrig's black and white ticked dog (Ben W.—Nellie W.).
NELLIE NOBLE—G. T. Kerr's black, white and tan bitch (Race Noble—Fannie S.).
BOOTE—B. Ridgway's black, white and tan dog (King Noble—Queen Vashti).
LIGERO—Bert Crane's black, white and ticked bitch (Roderigo—Maud).
CAZADOR—Bert Crane's black, white and tan dog (Roderigo—Maud).
FIEL—Bert Crane's black and white ticked dog (Roderigo—Maud).
SAPPHO—Royal Phelps Carroll and J. M. Avent's black, white and tan bitch (Roderigo—Ollie S.).
IZA—Royal Phelps Carroll and J. M. Avent's black, white and tan bitch (Roderigo—Ollie S.).
ROBESPIERRE—Royal Phelps Carroll and J. M. Avent's black, white and tan dog (Roderigo—Ollie S.).
CHAS. KEAN—J. M. Avent and Bayard Thayer's black, white and tan dog (Roderigo).
CAMILLE—J. M. Avent and Bayard Thayer's black, white and tan bitch (Jean Val Jean—Haydee).
LDPHONSE—J. M. Dager's dog (Toledo Blade—Lizzie Gladstone).
MAD OF ALMA—A. J. Gleason's (agent) black and white bitch (Dan Foreman—Don's Nellie).
BELLE OF ALMA—A. J. Gleason's (agent) black, white and tan bitch (Dan Foreman—Don's Nellie).
QUEEN OF ALMA—A. J. Gleason's (agent) black and white bitch (Dan Foreman—Don's Nellie).
GLORIANA—A. J. Gleason's (agent) black and white bitch (Dan Foreman—Don's Nellie).
BELLE BALDWIN—A. J. Gleason's (agent) black and white bitch (Captain G.—Queen's Blanch).
FLYAWAY—N. T. Harris's black, white and tan bitch (Gath's Hope—Dimple).
WUN LUNG—N. T. Harris's black, white and tan dog (Captain Bethel—Enid).
MANITOBA PET—Thos. Johnson's black, white and ticked bitch (Dick Bondhu—Manitoba Belle).
MOUTRIE—J. I. Case, Jr.'s black, white and tan bitch (King Noble—Queen Vashti).
LADY ELGIN—J. I. Case, Jr.'s black, white and tan bitch (King Noble—Queen Vashti).
BOHEMIAN LASS—A. Bonstedt's lemon and white bitch (Dad Wilson—Bohemian Girl).
PEMBROKE'S BLUE DON—W. J. Hutchinson's black, white and tan dog (Pembroke's Don—Blue Cubas).
BRUCE M.—A. B. Morgan's blue belton dog (Richard IV.—Rural Neva).
MAY GIRL—A. B. Morgan's liver, white and tan bitch (Roderigo—May M.).
MARK TWAIN—Mrs. S. A. Elliott's black, white and tan dog (Ben W.—Cybella Lea).
HOPE'S MARK—J. M. Lasseter's black, white and tan bitch (Gath's Hope—Lady May).
BESSIE L.—A. M. Hildebrandt's black, white and tan bitch (Noble Dan—Tennessee).

- POINTERS.

BLACK WONDER—Jos. H. & John H. Hunter's black dog (Ike—Bang Bang's Pride).
ABESS OF KENT—Frederick Joy's liver, white and ticked bitch (King of Kent—Lonnie Bijan).
DUDE N.—Oug & Shuttleworth's liver, white and ticked dog (Ossian—Fancy).
SARAH—R. A. Baker's liver and white bitch (Black Joe, Jr.—Scudder's Queen).
BUSY CROX—Chas. A. Paetzel's liver and white bitch (Ossian—Fancy).
SHOT S.—W. B. Sheldon's orange and white dog (Spring Bok—Flush).
MCMAHUS'S HERO—Thos. Ward McMahon's black dog (Black Joe—Dianorah).
MCMAHUS'S ALONE—Thos. Ward McMahon's black dog (Black Joe—Dianorah).
MCMAHUS'S COUNTESS WANDA—Thos. Ward McMahon's black bitch (Black Joe—Dianorah).
MCMAHUS'S WISHBONE—Thos. Ward McMahon's black dog (Black Joe—Dianorah).
MCMAHUS'S ACE OF SPADES—Thos. Ward McMahon's black dog (Black Joe—Scudder's Queen).
MY LADY—Horace F. Wood's lemon and white bitch (Shoh—Forest Queen).
FOREST LASSIE—Horace F. Wood's lemon and white bitch (Shoh—Forest Queen).

DON—J. L. Adams's liver and white dog (Crup—Peach).
FANNIE KIRK—Dr. J. G. F. Holston's liver and white bitch (Kirk—Croxeth Nellie).
DOC FAUSTER—Dr. J. G. F. Holston's lemon and white dog (Count Fauster—Croxeth Nellie).
LORD DRAKE—C. G. Stoddard's liver and white dog (Luck of the Goat—Meteor's Trinket).
BLACK CHLOE—St. Louis Kennel Club's black bitch (Black Joe—Scudder's Queen).
MANITOU—St. Louis Kennel Club's black and white dog (Luck of the Goat—Clary).
PROMOTION—Dr. John R. Daniels's lemon and white dog (Lord Graphic—Stelle).
PHANTOM—St. Mark M. Mundy's liver, white and ticked dog (Krup—Zeka).
HOPS II.—Ossian Pointer Kennels' liver, white and ticked bitch (King of Kent—Hops).
LITTLE ONE—N. R. Fishel's liver white and ticked bitch (Nicomede—Fannie V. Croxeth).
ROXANNA—A. J. Gleason's (agent) liver, and white bitch (Cornerstone—Pearl).
SENSATION PEARL—G. A. Day's lemon and white dog (Bounce—Minnie Geo Ha).
DON OF OSSIAN—Geo. A. McLin's (agent) liver, white and ticked dog (Ossian—Cherrystone).

IRISH SETTERS.

KILDARE CARMEN—Gus Leisy's red bitch (Elcho, Jr.—Ruby Glenmore).
ERIC ELCHO—B. F. Kramer's red dog (Lee Grouse—Della).
FANNIE—Tom Taggart's red bitch (Dick Swiveler—Frankie).

NATIONAL BEAGLE CLUB MEETING.

Editor Forest and Stream:

The regular quarterly meeting of the National Beagle Club was held on July 10, 1891, at 286 Washington street, Boston, Mass. President O. W. Brooking called the meeting to order and made the following remarks: "At this, our regular quarterly meeting it behooves me to say a few words in regard to our past and present acts. As the time is limited I will omit saying much that I would like to, and will make my remarks as brief as possible. It is with pleasure I note the amicable discussion now going on in the FOREST AND STREAM in regard to the training of beagles. Although I have not written anything on the subject as yet, I hope to say a few words in the near future. It is a good cause and I would like to hear from every officer and member of the N. B. C. on the subject. I have only this to add as a fundamental principle: First, never give a command unless required and then be prepared to enforce it at any cost. I thank all for the courtesy shown me and the hearty support which I have received from both officers and members."

Roll call of officers showed two absentees. Minutes of last meeting read and approved. Special committee on a place to hold field trials reported progress and was instructed to go to Nanuet, N. Y., and ascertain the desirability of the place for field trials and to report at executive committee meeting as soon as possible. Special committee on incorporation reported and desired immediate action. H. V. Jameson was chosen clerk and W. A. Power, chairman pro tem. and were duly sworn.

The constitution and by-laws were read and adopted. The election of officers resulted in the re-election of the present incumbents who were duly sworn.

Amendments to constitution and by-laws were read and adopted as follows: Art. V., Sec. 3: "Seven members present and voting shall constitute a quorum of the club."

Sec. 4: "Four members present and voting shall constitute a quorum of the executive committee."

By-Laws. Art. V.—"The initiation fee shall be \$5, which must accompany the application."

Art. VI. "The annual dues shall be \$5, payable semi-annually in advance."

Under new business the field trials were taken up and it was voted to have the following classes: Class for dogs 15in. or under, class for dogs 13in. or under, class for bitches 15in. or under, class for bitches 13in. or under and a final class to decide absolute winner.

More discussion followed about prizes and entrance fee, but nothing was voted upon. It was voted to leave all matters not provided for, in the hands of the executive committee. Moved to adjourn. HUBITE.

USE AND FANCY.

Editor Forest and Stream:

The letters between Messrs. Fellows and Mason are excellent in more ways than one. They are practical, instructive and of admirable tone. Mr. Mason's is particularly good in being a strong representation of his side of the question throughout. Both letters are dangerous, on the principle that "a little knowledge is a dangerous thing," and as few readers as well comprehend the bearings of the subject of the discussion as Messrs. Mason and Fellows, the danger is that raw hands, those who have only "gone in" to fancy to the depth of their shoe soles, will not heed the lessons taught, and absorb only one side of the question. For instance, we all remember how it was when the pointer Beaufort was on the boards; unable to cope with him as a show dog, the owners of the vanquished ones relied on "Oh he is only a show dog, wait until he meets — in the field and you will see where he is!" Mr. Mason did put the dog in the field and the result is not forgotten. This was "a safety valve." Mr. Fellows keeps his fires too level to need a safety valve to his boiler, but he knows full well the number of fellows who run boilers with the water below the lower gauge cock and the steam gauge out of sight. This class of fanciers send their dogs to shows and expect to win on their field value; about as sensible as multiplying a pound of sugar to a quart of molasses. Then again, Mr. Mason's view of the case is dangerous and has wrought great mischief, the fireman filled his furnace to the top, chained down his safety valve and adjourned to indulge in other occupations more congenial for the rest of the day, and the boiler naturally "went up." To drop the metaphor, crude fanciers got their otherwise empty heads filled up with the idea that the distinguishing feature of a breed was the only one resulting in a lot of grand headed cripples, being elevated to the position of the only ensamplers of mastiff type, or "Uncle Dick's" pet abomination, the crocodile spaniel, as the genus is to prevail entirely, to the neglect of the other. Mr. Fellows is that one, simply because practical use is, and always will be, of more importance than fancy points, but there is no necessity whatever of any such conclusion. It should always be borne in mind that while dogs are only looked at in shows, and nothing but their appearance should have any weight with the judge, he should always look at them with consideration of what their use is, and despite all considerations of "character," most valuable as character is, the great points in a dog are those that fit him for his proper use. Take Mr. Mason's illustration of a prick-eared spaniel, such an animal would be utterly uncharacteristic; yet, should such a one compete with one radically defective in some essential for his use, the latter should be preferred. It is more in the condemnation of dogs for shortcomings than in approval of merits that this view of the question comes in, and if this is constantly kept in mind, dogs will be vastly improved in character with no loss of useful qualities, while the extravagancies of unbridled fancy, have wrought immense mischief and always will do so until a bride is fitted on.

W. WADE.

P. S.—Since writing the above, I have read Dr. Mills's contribution in your issue of July 9, and am very sorry that Dr.

Mills took such grounds. Such acquaintance as I have had with Dr. Mills strongly impresses me in favor of his sincerity and well meaning, and I fully believe this letter was written in this spirit, but I would point out to him the very serious nature of his charge that statements have recently been made in FOREST AND STREAM that were false as to fact and offensive in spirit. Such a charge, under the circumstances, and with the context, can only apply to one party, and surely Dr. Mills recognizes the wrong of bringing such a charge without giving the specifications to support it? I fancy that Dr. Mills if far adrift as to the true function of dog shows. He dwells on Elcho having a thickened ear in consequence of some injury, and apparently thinks that the judge should have taken this into consideration. Now, this is utterly wrong; the judge should concern himself with nothing whatever but the dog's appearance at the time he sees it. If going beyond this and taking related matters into consideration in making his awards is to be permitted, where can we stop? Imagine the endless confusion that will result if the judges stray off into all sorts of considerations as to why the dog appears as he does. Dr. Mills's implied censures on Mr. Huntington, the judge of greyhounds at the last New York show are also unjust. Mr. Huntington was strongly averse to judging on that occasion, repeatedly urging other judges on the show, and finally consented to act at the urgent request of the club authorities and only to avoid the butchering of the classes he dreaded, and the fact of his having recently owned some of the specimens he would be called on to judge, is of no weight with those who know him. I expressly wish to be understood as writing this without any ill feeling to Dr. Mills, but such statements as his are mischievous and should not pass unchallenged. W. WADE.

HULTON, Pa., July 11.

AMERICAN KENNELS.—II.

ORIOLE KENNELS.

THE other afternoon, as the quicksilver was dawdling in the nineties, I thought it an appropriate time for a little sea voyage. So arming myself with a camera, it was not long before I was comfortably seated on the ferry boat Middletown, bound across New York Bay for Bay Ridge. Readers of FOREST AND STREAM are aware that on Mr. John A. Logan, Jr.'s, departure for Europe Mr. Harry E. Twyford was given full charge of his kennel of fox-terriers, and consequently they were all brought from Youngstown, O., to Mr. Twyford's home, in Bay Ridge, by the whilom manager Mr. Peck. Meeting Mr. Twyford a few weeks since, he said, "When I've had time to straighten things out a bit come down and see me." It was not long before he was ready. Arriving at Bay Ridge, I inquired the way, and soon found that both manager and dogs were well known in the village. Bay Ridge is a suburb or continuation of Brooklyn, and not far from the station, on the line of the steam cars familiarly known as the "dummy." Mr. Twyford's home is pleasantly situated in a large plot of ground with excellent shade trees all round. It was late when I arrived and friend Twyford had almost given me up, so we adjourned immediately to the kennels. Mr. Twyford is an Englishman, and has been over here several years. His brother is a well-known fancier on the other side, and he himself has always had a dog or two, so that Mr. Logan, as events have proved, did not go far wrong in selecting him to look after his interests. He has the full management of the kennels. Mr. Logan is now on the lookout for something good in the fox-terrier line, and will no doubt when he returns, towards the end of this month, bring a good bitch or two with him. As your readers are aware Mr. Thayer recently purchased Pitcher and Dono at a long price from Mr. Logan. Opening a wire door past Mr. Bernheimer's terriers, which are also kennelled here (among them Baby Trigger), we entered the kennel yards. At the back of the house stands a medium-sized barn, in which are several compartments, in size about 6 by 4 ft., with partitions about 6 ft. high, half wood, half wire. Although, owing to the new kennel not being completed, it is a hard matter to house all the dogs, yet by the exercise of prudence and ingenuity Mr. Twyford has managed to get them all in. I say prudence advisedly, for this is a trait that every man who essays to keep a kennel of fox-terriers should have in a superlative degree, especially when cramped for room. The reason I need not state here, the erring one would very soon find out. I could detect no offensive smell, although the afternoon was intensely hot, and was told that Walker's soluble cresote was the disinfectant used.

In the first compartment I found Valens, a dog that has won several prizes, among them first at Birmingham, Eng., in 1890. He has a white body, with almost whole tan head, which rather spoils his appearance, though his head is fairly well formed and of good punishing length. As I have said before, it is not my province to criticize dogs in these articles, that can be left until they are once more under the fierce light of public competition. Valens was whelped Jan. 31, 1889, and is by the noted sire Pitcher out of Flossie, by Velasquez out of Pickles; Pitcher by Brockenhurst Jim out of Waffodilly, by Akaley Joe out of Dahlia, by Foiler, running back still further to Old Foiler, Belgrave Joe, Brockenhurst Joe and many others noted in the records of fox-terrier lore. As might be expected, he is getting and has got some good stock. His breeder is Mr. Vicary, of England. In the next compartment four young pups by Dusky Trap were trying to worry their mother Verdict, she looking as plump and fat as a mole, as if her maternal duties fully agreed with her. The pups were lively and full of fun. One, a white one with tan patches, looks very promising, ears well carried and having lots of bone.

Verdict, the mother, is well known, having won her spurs while in the Blemton Kennels, from whom Mr. Logan purchased her. She was bred by Mr. Belmont, and is by champion Result out of Diadem, the latter, I believe, imported *in utero*, and was whelped May, 1886. She is white, with a black and tan spot on eye. As she can claim five champions in as many generations back in her pedigree, it is at once seen that this bitch will come honestly by any future winners she may produce. She is a litter sister to Lira, which has done so much winning. Bred to dogs of Valens's style she should breed something good. Verdict was sent over to England to the Jubilee show in 1887, but failed to get into the money, taking vhc. in the open and reserve in the novice class.

"Now stand back, please," says friend Twyford, as he releases Dominica, the pride of the kennel, from durance doubly vile. Then out into the yard risks one of the sensational bitches of the past spring circuit. This kennel had what is known on the turf as a "cinch" on the ladies' division in the fox-terrier classes at the different shows this spring with Dono in the open and Dominica in both the open and puppy classes; for it must be remembered that Dominica has kept but one birthday as yet, she having been whelped in 1890, and is by Dominie out of Daphna. She was bred by Mr. Redmond. She will it is believed by many good judges, pass her whilom kennel mate in the struggle for honors when she is fully let down, and this her coming litter by Volunteer is expected to accomplish. It was intended that she should be bred to Mr. Thayer's Russley Joker, but Blemton Volunteer would stand no such unfairness as that, and the promised litter will claim him as the sire; and perhaps, considering his build and his breeding, it won't be much of a *fancz* pair after all.

Dominica came over with Dono and arrived half an hour before judging time at the New York show and captured, in spite of being in sea going trim, first prize in the open class for bitches. She afterward ran second to Dono, her kennel mate, in the open classes till Cleveland, where Dono moving

up into the challenge class, she took first in the open. Of course the puppy bitch class was at her mercy till Chicago, when she had reached the limit of twelve months. There is something very intelligent in this bitch's expression, something "beyond the eye" as the saying goes, and when she lets down and feels her feet, she will be one of the best in the country at present. Next to receive the welcome summons and hear the familiar sound of the door latch lifted was old champion Bacchanal, an old friend, and one I always thought a terrier from one end to the other, and had he only a new set of teeth he could still give the best of them a shake in more senses than one. His molars or rather the want of them have often made the judges turn unwillingly away to others who could show an even month. Terrier like in appearance he is fully entitled, from his illustrious progenitors, to all his good looks, for is he not by champion The Belgravian out of champion Bedlamite, by champion Joker out of Rosamond, by champion Brockenhurst Rally out of Jess; champion Joker, by champion Jester II. out of Beauty; champion The Belgravian, by Belgrave Joe out of Old White Vic. He was whelped in July, 1881. The Rev. T. C. Fisher bred Bacchanal. In his list of winnings he can claim firsts in England at Oxford, Brighton, Southdown Fox-terrier Club shows in 1885, and first at Crystal Palace in 1886, and in this country firsts at New York, Philadelphia, and several challenge prizes. In color he is white with a few ticks on his ears.

Then came a terrier of a different mould, Blemton Ransack, head too thick but good in bone, body, coat and front. He is white with a black and tan marked head. He was bred

examine, and she looked in excellent shape, though showing signs of her visit to Valens, with whom she should nick well. This bitch was bred by Mr. Belmont, as her name would imply, and is now four years old. She is by The Moonstone out of Media, and runs back to champions Diamond Dust, Roysterer, Diadem, Brockenhurst Rally, etc. Her list of winnings is a fairly large one. She was second in the Produce and Tomboy stakes of 1888, and is now in the challenge class.

I must say that Mr. Twyford deserves great credit for the condition he shows the whole kennel in. I saw no signs of skin disease, and all are well muscled and fleshed up. Biscuits, scraps and meal are fed to the dogs. In front of the stable is a large yard where another kennel with eight compartments is in course of construction. These will have small runs attached to them, thus allowing the inmates continual fresh air. I asked Mr. Twyford how he managed to keep everything so quiet, for fox-terriers are proverbially noisy customers. "Well, you see," he said, "when they came here they were like a lot of savages and I could do nothing with them, but they recognize me now as the autocrat of the kennel—you see that whip—well, thereby hangs a tale, and they've felt it." I understood. Now the dogs are as docile as possible and mingle one with the other with the greatest cordiality, while friend Twyford seats himself in the arm-chair in the yard and, smoking his pipe, examines every one of the dogs when the boy turns them out for exercise every morning. At night they are liable to make a noise, as the situation is rather near the main road, but a bell hangs in the kennel connected with the boy's sleeping compartment,

some dog that sires or begets the best progeny; there are many, very many, instances to prove the contrary. It is the true blood that has been instrumental through many generations in bringing any one breed to perfection, either in speed, field qualities or form; this the breeder should strive to obtain, and this is where the National Greyhound Club ought to protect present and future breeders, and are willing to do so through pure love of the breed and an ambition that America should have the best. Will the A. K. C. stud book committee find time to do as much? I think not. Then let the greyhound men have a separate stud book. Specialty clubs in England have their own stud books, and the Greyhound Stud Book has long been a treasured work of record.

The greyhound men have little to gain by an affiliation with the A. K. C., and if I can judge the feeling aright, if the A. K. C. will not let them do as they wish in this instance, why break loose and let us stand on our own bottom. If the greyhound men find they must pay \$1.50 for a registration that is verified in the A. K. C. stud book by themselves, are they not foolish to do so when with a little "refreshing independence" they can have a carefully compiled book of their own for a fee of \$1 or less?

KING COB.

DOG CHAT.

THE question is often asked at dog shows, when the Mexican hairless are seen shivering in their cages, of what possible use they can be. The answer is sometimes given "None that I know of except that they can do without any hair." The reply of Judge Masterson to a reporter of the Chicago Herald would indicate that they have a hidden power little known outside their native country. This gentleman was asked what was his most novel experience in Mexico. "Hunting the pumas or spotted leopards," was the reply, and he related the following: "About a month ago we were in the southern part of the State of Chiapas, which borders on Central America. One day a party was gotten up to hunt the spotted leopards. We left the hacienda at sunrise with a pack of thirty dogs, not the American hunting dog, but those little hairless Mexican animals that you see in the streets of this city once in a while. As we rode away I asked the guides where the guns were. They said we needed no guns, and we rode on. After going a few miles we reached the celebrated ruins of Palenque. There the dogs began to prick up their ears and dash away. After a short run they treed one of the finest pumas I have ever seen. It was an immense animal, and, as he swung to and fro on a limb of a tree, his picturesque coat shining in the sun's rays, I could only think what a study for an artist. The dogs encircled the tree and began to bark. How they did yell and howl! It was the queerest, weirdest sound that I had ever heard. Standing still and looking up at the beautiful prisoner, these trained dogs howled like demons. Soon I saw the effect. The leopard walked out to the end of the limb and gazed fixedly at the dogs below. He did not appear frightened, but charmed. And he was. The leopard had been hypnotized by the dogs. The spotted beast acted like a sleep-walker, and if he had not been under a spell he would have fallen from the dangerous position that he had taken on the tree. When he was declared to be thoroughly hypnotized one of our guides went up the tree and fastened a little rope around the leopard's neck. The other end was tied to the tree. The guide patted the dangerous animal as he would his pony, and the beast did not notice it in the least. The man came down the tree, and we called off the dogs. Then the leopard came out of the trance with a start and attempted to jump away from the little grass rope on his neck. He fell downward and was hanged to death. In this manner we got six leopards that morning. It is one of the greatest sports in Mexico, and is rapidly taking the place of the bull fights. The animals captured this way are valuable, too, for their skins are not pierced with bullet holes or scarred with knives." It only remains now for owners of our exhibition hairless to develop this hypnotic power on the luckless judge and possibly he may see his way clear while in the trance to send each dog out of the ring with the coveted blue ribbon, and what a lot of heartburning this would save.

Spaniel men seem to be in bad luck these days somehow. Friend Mercer loses his Clumbers and Friend Oldham his article. Mr. Wilmerding called upon the latter the other day and found him all "upset." A day or so before while driving, his horse shied at a dead cow in the road and pranced along the top of a stone wall for a mile (Mr. Wilmerding says so), in the meanwhile Mr. Oldham was acting as a brake on the wheel, and now for some time to come will eat his meals from the mantelpiece.

The Kennel Gazette publishes rather late in the year, two judges' reports of the W. K. C. show held in February last. Mastiff men will be interested in Mr. Marshall's defense of his judgment in those classes, and especially in regard to Beaufort. Referring to this dog he says that he made the award according to a rule which he supposed was the rule of all shows, to judge the dog as he saw it in the ring, and not from previous records, and he saw no reason in the statement made by his owner in the ring, that Beaufort was exhausted by service in the stud, why he should ignore the superior condition and action of other dogs. The dog's condition, he says, was due, not to accident or misfortune, but to an attempt to win a prize and secure several stud fees at the same time, and he therefore "placed Beaufort third because of his condition and conduct." Mr. Marshall's explanation of the statement that he had voted against the proposed engraving of the head of Beaufort on the seal of the Mastiff Club, is peculiar. He admits that the dog's head was worthy of the honor, but not that his name should be attached to it, because it might offend other owners who had dogs in competition with him. We are told that Caution's Own Daughter was put back entirely on account of her "white or pink-faced" markings, or, as he puts it further on, "the light of her countenance," and that he looks upon such dogs as freaks and in the same category as albinos.

By a transposition of the types, in our issue of June 25, we were made to say, "A writer in the English Field now proposes a subscription with a view to putting in a memorial window in the church, or brass in the graveyard of which Mr. Lort is buried." We wrote "a memorial window or brass in the church, in the graveyard," etc.

The St. Bernard Mange Cure Co. issue a very handy little pamphlet in extolling the virtues of their panaceas, and not the least interesting features to sportsmen are trap-shooting rules, a form of constitution and by-laws for clubs, and the dates of the open season for game and fish in every State.

The schoolmaster is evidently not abroad in Southampton, England, and the writer of the following address, an official of the late Southampton show, can never even have heard of "Maryland! My Maryland!" and its milk routes, for this is how he makes "assurance doubly sure" when addressing the owner of the Woodbrook Kennels: "F. E. Lamb, Esq., Woodbrook Kennels, Arlington, Md., Nr Baltimore, New York."

A correspondent writes us that Mr. Charles Searle, of Hamilton, Ont., has sold the black cocker dog King Raven (C.K.C. 1,196), by Black Duke out of Topsy, to Mr. J. Kennedy, also of that city. This dog is a full brother to Oban, which made such a good record during the spring circuit. Those who take an interest in this breed in Hamilton are

THE FOX-TERRIER DOMINICA.

Owned by Mr. John A. Logan, Jr., Youngstown, Ohio.

at the Blemton Kennels and whelped June 20, 1889, and boasts for a father none other than the well-known "as he presents himself" dog, Lucifer, or Lucifer (as in Present), as we generally find it in the catalogues, a puzzle to every one till the urbane German Hopkins vouchsafes the desired information as to its meaning. The peerless Rachel is his mother, and she is by champion R-sult, but Ransack hardly does either justice. His winnings need not be mentioned here. When Ransack turned in Richmond Crack took his place for inspection. He was whelped March 1, 1884, and is white with black head and patch on neck. He is by Lytham Crack out of Lytham Flo, and goes back to old Moslem II., that came over to this country in 1881. In his salad days he won several prizes at small shows in England and vhc. and he, at Youngstown, O., and Toronto, Can. respectively. He's a "thick 'un," and cannot by any stretch of courtesy be called a show dog and he's even a bit too cloddy for utility, so I really did not know what to do with him except ask Twyford to put him back again.

Then came a dog I have not seen since 1886 at the Newport fox-terrier show, where I believe he won in the veteran class for the Rutherford brothers, who owned him so long and then gave him to Mr. Logan. He is, of course, now in driving dotage as regards his head, blind in one eye, gray in muzzle, with teeth all gone, still he looks a terrier, and I am told is yet a sure stock getter, though he is just eleven years old this month. He is by Nailer out of Active, and was bred by Messrs. L. & W. Rutherford. Wasp II. next claimed my attention, and she was whelped in March, 1883, is white with black and tan head. Champion Raby Tyrant, one of the winners of bygone time, is her sire, and Wakely Nettle her dam. Her claim to mention is that she is the mother of Raby Tarquin.

At the same time Blemton Vice ran out into the yard. Never much of a favorite of mine, as she is more suited to a lady's lap, judging from her slight build, than the duties of a terrier. She is small and lathy, but no doubt will do to breed to such heavily-built dogs as Ransack and Crack. She was bred by Mr. Belmont, and whelped Feb. 13, 1889, is white with a black and tan patch on eye. She is by Dusky Trap out of Belgrave Viola, and is full of Splinter blood. She has been placed at several shows. I saw a nice pup by Ransack out of this bitch, the heaviness of the sire being toned down by the dam.

Blemton Rapture came next; she is too lathy for good terrier form. In color, white, with black and tan markings. She is by Regent out of champion Rachel, and was whelped Oct. 10, 1887. In pedigree she goes back to champion Spice, who, it will be remembered, was imported to this country by Mr. Ed. Kelly, and almost before he had time to look around, as it were, was doomed to death between the powerful jaws of the deerhound Heather in the summer of 1886. Dusky Daze is a large bitch, whelped March 14, 1888, but I cannot say much if anything in her favor; she is too large altogether and leggy in the extreme, the fault of her sire, Dusky Trap, intensified. Her dam is Daze. Claiming Dusky Trap's pedigree on one side, she is also full of Splinter blood.

Something better than answered the whistle, Warren Vice and Warren Sparkle, both purchased at the Rutherford sale during the New York dog show in February last. The former has a neatish body but is a bit snipy in muzzle; a nice stamp of breed, but lathy though. She is white, with ears ticked. Valens is responsible for her coming litter. Warren Sparkle is by champion Splanger. Her strong point is body, legs are fair, head faulty. She was bred to Pitcher but missed, and next time she will form the acquaintance of Valens. Then two pups, by Leg Logos out of Rapture, gambled around for awhile, and these were followed by a 9 months old pup by Rubicon out of Marguerite. He shows the head faults of his sire and is a bit long cast, otherwise a fair pup.

A prize winning puppy next trotted out, one I gave first to at Cleveland when a couple of months old or thereabouts, but I cannot say that it will be a hard matter to chronicle its future winnings. Blemton Brilliant was the last one to

and when that rings they know enough to keep their mouths shut. Mr. Twyford, like most Englishmen, is fond of outdoor sports, and just now cricket occupies his spare moments. So after a wash we took the cars to the cricket grounds of the Fort Hamilton Cricket Club and indulged in a little practice for the match with Staten Island that was to come off on the morrow. After an hour's play we returned, and Mrs. Twyford's kind hospitalities and a pleasant chat and smoke afterward, brought a very enjoyable evening to a close.

H. W. L.

GREYHOUND MEN FOR GREYHOUNDS.

Editor Forest and Stream:

I have been watching the rather one-sided struggle which the National Greyhound Club is making to secure a stud book of their own, with some little anxiety, and I must add amusement, since I saw the paragraph in your "Dog Chat" a week or two since. As a breeder of greyhounds, and one who wishes to see this grand breed take the position it is entitled to, in my mind the foremost in the rank of sporting dogs, I think it time to protest against any such imposition as this "addendum" business. The main and vital point of the whole argument is that greyhound men require some means whereby they can be sure that the pedigrees as given in the stud book are correct. Now, is the A. K. C. stud book committee willing, and have they the facilities at hand to verify and trace up these pedigrees, and if not, why should the greyhound men have to pay fifty cents for the privilege of listing in the appendix? We might be willing to pay fifty cents extra if we could be assured that the committee would verify the pedigrees, but will they do it? Will they not rather, as at present, turn the work over to the specialty club as is customary? Then they, the A. K. C. get the money for what a few greyhound men spend many weary hours in unravelling. There are many men interested in greyhounds who do not care a rap for other breeds, and who would be willing to pay a dollar or more for a separate book, but hardly care to incur that expense for the sake of looking at the pedigrees of seventeen greyhounds, the number in the last issue of the A. K. C. stud book.

The time will soon come and is almost here now when the interchange of good running blood in greyhounds between the East and the Far West and England will become more general than at present, therefore it is very important that some such safeguard as the National Greyhound Club proposes to assume should be instituted at once. We are told by those who take little interest in the sport, that coursing in America will never amount to much, and especially in the East. This is a pessimistic view I cannot agree with, for I feel sure from present indications coursing will become a recognized sport here, and especially so if the plans of the N. G. C. are carried out as intended, so that natural coursing may be indulged in. If the A. K. C. is afraid of losing the paltry income they derive from the present order of greyhound registration, and do not wish to lose their hold on the greyhound interest, I am sure that with a fee of one dollar in a stud book of their own, the National Greyhound Club could afford to pay a percentage of twenty-five cents on each registration to the coffers of the A. K. C. This is, of course, only a suggestion, in case the club decided to still sail under the A. K. C. banner; and as a discussion is the only means of finding out the opinions of the majority, I simply advance it as such, and think that it should meet with the approbation of the A. K. C. magnates, as it secures to them an income which, I take it, is what they are after, with no trouble to themselves.

Under the present rules of the A. K. C. a winner of two first prizes can be registered in the stud book. I do not think this, in the case of greyhounds, is one to be encouraged. In looking for true blood lines the amateur breeder in the future will see this dog in the stud book, and, naturally supposing him a blue blood, will use him or his get, when for all he knows this dog may not have had a pedigree, though he be an Apollo in form, and his ancestry be such that the infusion of this dog's blood into his kennel may work incalculable harm. It is not always the hand-

pleased that this promising young dog will remain in that city.

Mr. Jas. B. Blossom has long had a kindly feeling for the handsome Gordon, and now that he has succeeded in getting together Beaumont, Belmont and Beemont (late Heather Bee), and with the aid of others in his kennels, he will be in the very front rank in the struggle for kennel prizes at future shows.

The Hamilton Kennel Club had a rousing meeting July 9, Mr. Stewart occupying the chair. The principal topic discussed was the coming bench show and the arrangements that must be made by the committee appointed. The show will be held in the Thistle Rink, and the building is said to be one of the best for the purpose, being well lighted and ventilated, with every convenience for exhibitors and the press, in the way of separate rooms. The money to be given in regular prizes amounts to \$1,200. The judges we have already announced, and the efforts of the club should meet with the support of exhibitors.

The English setter Dashing Kent, whose name has appeared in several show reports in this paper, is dead. He was a full brother to Count Howard, Sir Tatton and Monk of Furness, and was imported by Mr. Weiss, of Bethlehem, Pa. At the time of his death he was owned by Mr. I. W. Kemble, of Philadelphia.

We hear wonderful accounts of two dog puppies from Hepey's last litter by Scottish Prince. At three months old one weighed 51lbs. and the other over 48lbs.

Scottish Prince has recovered his health and will now stand at stud, as may be seen by a reference to our business columns. New York is now better off for good St. Bernard stud dogs than in years past, and we should certainly expect our St. Bernard men to show up in the prize list quite as prominently as those from the city of culture.

The Kingston people are working hard to have a good show now that they must go it alone. We hear that \$300 has already been collected toward the expenses. It is proposed to have a regular list of about \$500. Those who are arranging the details are Messrs. J. R. Walkem, R. E. Kent, C. H. Corbett, G. O. Oldrive and Dr. Clark. The judges selected are Mr. Geddes, of Ottawa, and Dr. Mills, of Montreal. Mr. Lacy, of New York, but what breeds they will take is not yet decided. Very likely it will be Dr. Mills setters and pointers, Mr. Geddes spaniels and Mr. Lacy the rest.

The Southern Field Trials Club announce that their next trials will take place on Feb. 1, 1892, commencing on Monday. Two stakes are arranged for. The Derby, with prizes of \$400, \$250 and \$200, for setters or pointers whelped on or after Jan. 1, 1890. Entries for the Derby close Aug. 1. The All-Aged Stake is open to all setters and pointers that have not yet won first at any recognized field trials in America; \$650 is given in prizes, as follows: \$300, \$200 and \$150. It is also announced that the club expect to have a sweepstake race for all-aged pointers, six to fill or the stake declared off. The winner is to get 75 per cent. and the second 25 per cent. The spotting system will prevail in future meetings, and the judges may announce the winner in a stake of sixteen dogs or under after the third series, and in a stake where more than sixteen are entered after the fourth series. The judges have the privilege of putting down again any dog that has been previously dropped, providing the first and second prize winners have already run as a brace. In the first series the heats shall be forty-five minutes or more.

A meeting of the National Greyhound Club is called for Wednesday evening, July 15, when several important matters will be discussed.

We hear that Mr. W. C. Reick took a trip down to Baltimore last week to see Mr. Diffenderfer's kennel, and came back the owner of Republican Belle, Prudence and Zenith. These should do well for the New York St. Bernard Kennels. It is not true that Mr. Reick purchased Altonetta, as some of our contemporaries stated last week. Speaking of this kennel reminds us of a funny coincidence. *Fanciers' Gazette* published some years since a colored plate of Ch. Plinlimmon and within three weeks he was sold to Mr. Emmett, and history repeats itself in the case of his son Prince Regent, whose picture was published in the same journal and within a week or two he came to America.

Hot weather does not seem to stop the coursing enthusiasts on the Pacific slope, for we see that a sixteen-dog stake was run off two Sundays since for a prize of \$200. In the finals Cranston's Whip beat Cronan's Dan O'Connell, thereby winning the first prize of \$100, Dan O'Connell taking second money, J. Hough's Dexter, third, and M. Tierman's Glen Farrow, fourth. Mr. John Grace was the judge, and his decisions, as usual, met with entire satisfaction. We should think this a poor time for the hares, for surely at this time of the year they cannot do themselves justice—nor seemingly obtain it.

A notable sale in fox-terrier ranks has just been made in England, the noted Vesuvian returning to his former owner, Mr. Astley, at the same figure he was bought for by Mr. Vicary. Vesuvian as the sire of Venio, Vesuvienne, Verdad and Verdan, is a most valuable dog in any kennel, and is said to be looking very well just now.

Good collies have always commanded proportionate prices and Mr. Megson, of Manchester, England, the owner of Metchley Wonder, has done his share toward booming them, and now he has just given \$225 for a bobtail called Challenger to Mr. Packwood, and the same gentleman also offered the latter \$1,000 for three collie puppies of one litter.

Another St. Bernard is coming to America in the dog Beauveale, which Mr. J. Green has sold to a Mr. Warren of New York city. This dog we are told is well bred, being by Plinlimmon of Dacia, who owned Bayard as her sire. He has done some winning in England, taking third at Bristol only the other day.

Mr. Patterson's Maritana II. was to arrive on one of the steamers of the Allan State Line from Glasgow, Monday last.

Mr. W. K. Taunton, of Maryland, owner of champion Beaufort, has lost a valuable mastiff bitch in Empress of Tring, at the age of 8½ years. She was very much inbred to old champion Cardinal, who was her sire, grandsire and great grandsire, but she had nothing to do with Crown Prince.

This is a good example of cause and effect. A lady in New Haven, to be exact, she lives at 671 Chapel street, in the City of Elms, has a black spaniel that abstracted a feather duster from the sitting-room and took it out into the yard to play with. During his frolic the feathers were all torn out. The lady took the handle away and gave the dog a severe whipping, at the same time showing him the featherless handle. About an hour afterward the animal walked bravely into the yard with a brand new duster like the one he had destroyed in his mouth. He walked up to his mistress and meekly deposited the new brush at her

feet. By the mark on it she saw that the dog had stolen it from a neighboring fancy-goods store. Some people may not believe this.

Salvator Rosa, the St. Bernard, is indeed a rover. Now we hear that Mr. Smith has sold him to Dr. George F. Truman, who at one time owned Plevna. This gentleman has changed his name to Siegfried, though why we are not told. Siegfried has changed hands no less than four times in three weeks.

In a mixed terrier class at Boston one of the Anglo-American Terrier Kennels' dogs, Beaconsfield or Prince Regent, took an extra third. No other American dogs were shown that week.

Our occasional correspondent "The Onlooker," from whose pen several wise suggestions have fallen from time to time, is taken to task this week by *Stock-Keeper* (Eng.) on the sportsman-fancier question. This is what we find in one paragraph: "But we think he has recently allowed himself to go astray as to the relative value of sportsmen and fanciers in the doggy world. In sporting breeds it is desirable that the fancier should be a bit of a sportsman, but we believe that a good fancier, even if not able to shoot over his own dogs or ride to his own hounds, would naturally breed for a strain to suit the work required. He knows that that is how the dogs will be judged at all events, and he will breed to suit the judge. Your self-styled sportsman generally affects not to care what his dogs look like so long as they work well. Then the fancier asks, if he can breed dogs capable of performing their natural duties, is there any harm in their being also beautiful?"

We have heard little about the dog-catchers till last Wednesday, when a lady walking along Third avenue was brutally assaulted and knocked down by these rascals. It seems almost beyond comprehension that these officials, for such they are in a sense, should be tolerated in a civilized city like this, or if tolerated they should have some respectability about them. A Mrs. Kieffer every morning took her dogs out for exercise, one is a Mexican hairless and the other some sort of terrier, both valuable dogs. Suddenly the Mexican tugged on the chain and turning round she saw a man with his hands clasped round this dog's neck. In her excitement she let go of the other dog. The man struck the woman in the chest, knocking her down, and then threw the dog in his wagon. It took four dog-catchers to secure the terrier and then the men drove off. The right sleeve of the woman's dress was torn and her right forearm was cut and bruised and covered with blood. Other parts of her body were also bruised. It is said the four men surrounded Mrs. Kieffer and crept up on tiptoe to do their nefarious work. Neither dog was muzzled or licensed, still they were on the chain and under control. The lady's husband went to the pound and heard one of the men say: "Ain't dem fine animals? I nipped them, and it was a tough piece of biz, too." This man, we are pleased to say, was arrested and is held in \$300 bail for trial, charged with assault. If these brutes would confine their attentions to the homeless curs which roam the streets in many parts of the city without let or hindrance they would do good, but as it is they are a menace to the public and we trust an example will be made of this fellow.

In the Albany suit of Gallup vs. American Kennel Club members for libel in publishing the plaintiff's name in the disqualified list in the *Kennel Gazette*, Judge Mayham has just rendered an opinion overruling the defendants' demurrer.

We hear that the Gordondale Kennels of English setters have been removed from Readville, Mass., to the Tiz. Fisher farm, 2½ miles from Attleboro post office. This is a much better location for the purposes of the kennel.

Mr. "Amazement" Bell writes us a little bad news and some good. Some miscreant on July 4 poisoned his new greyhound bitch White Wings. On the other hand he informs us that Amazement whelped on June 29 a splendid litter of all black cockers by his Obadiah. He has been reducing his kennel and now has only about seven. His bitch I say is only just recovering from a severe attack of distemper. She whelped on July 13, four, by King of Obos. Though she is very weak he hopes to pull her through. He tells us that Mr. W. B. Palmer of Woodstock has purchased from Mr. J. P. Willey his black cocker Jersey Boy, that did some winning in the spring.

We are pleased to hear that Mr. Lamb's new bitch Clydesdale Nell arrived in such good condition on the S. S. Rossmore last Saturday, and what is of more importance, heavy in whelp to Lord Bute. She is a large bitch, standing fully 31in. and weighing about 165lbs. She has a beautiful head and excellent bone and roomy body. She is by Monarch out of Lady Floris, going back to Bayard, Rollo, Bonivard and other noted ones. She was whelped in 1886.

Mr. Mercer's Clumber Lady Belle, now in England, has, we hear, been bred to Mr. Holmes's Hotpot on June 27. We hope this will mark the turning point in "Clumber's" bad luck.

Dropping in on Mr. Tallman at his uptown rendezvous, 109 West Thirty-fourth street, we learned that he had sold for Mr. Van Zandt two Irish setters, Dennis (Darragh Pat-Ruby Glencho), to Miss C. J. Williams of New York, and a brother, of a later litter, to E. H. Johnson, Newark. He has also sold his well-known field bitch Galatea to C. C. M. Hunt, the Gordon setter man of Palmyra, N. Y.

Mr. A. W. Purbeck of Salem, Mass., is getting together an excellent kennel of greyhounds. He writes us that Mr. Toon has purchased two good ones for him on the other side. They are Onatus who won first over Gem of the Gems; he is a black and white. The other is Lily of Ganisha, who won first in the bitch class at the same show. *Stock-Keeper* says in its report: "Greyhounds a good and big class. In dogs a big upstanding black and white won well, his splendid condition and wonderful muscular development stood him to the good. The best bitch in the class was exhibited by Mr. Pickering. She is a large, roomy, deep-chested black and white, a little weak in pasterns and feet, otherwise a sterling good bitch." She won over the noted Park Lane Beauty. With Gem of the Season and the oft-times winner Pious Pembroke, Mr. Purbeck will be sure to be near when the kennel prizes are given out.

Among the new kennel advertisements this week we find that the Dutchess Kennels have placed Scottish Prince and Aristocrat at stud; and Clas. E. Bunn calls attention to his mastiff Ormonde. Those for sale are St. Bernards by C. A. Houck; Scottish and fox-terriers by J. A. Dittmas; cocker spaniels by E. Cohoon; St. Bernard puppies by G. W. Patterson; choice Llewellyn setters by Llewellyn Kennels. Attention is also called to the advertisement of "Portraits of Dogs of the Day."

THE DOG CAN BE DEPENDED ON.—Goshen, N. Y., July 6.—*Editor Forest and Stream:* I have been off on a little camping trip over in Pike county, Pa., and New Jersey. I had a good time all to myself and my spaniel Hornell Sport. He is the best companion I can get, for this reason, he is willing to stay as long as I want to and is ready to

come home when I am, and always takes it in good humor and keeps his short tail wagging all the time. Most fellows I have run across are afraid to sleep in the mountains over night. Once I went out for a week's camping with two chums of mine. We made camp on a nice island down in Sussex county, N. J., and went to sleep all night, but about 10 o'clock the hoot owls began their night meeting. I opened my eyes and saw both my companions resting on their elbows, with their heads going like an old lion in a circus show cage. Pretty soon one got up on his knees, but kept his head on the swing; in about five minutes the other one came over to me and said: "What in thunder is that noise, anyway?" "What noise?" I said, "there are no wild animals around here larger than a catamount or wild cat; lay down and go to sleep." In the morning when I woke up I was keeping bachelor's hall, for they had got up and gone home, leaving me to fight my way out alone. After that I go by myself, with only my dog, and he sticks to me rain or shine, seeming to enjoy it as well as I do myself. I had not much luck this trip, too many at it.—AUSTIN VASS.

KENNEL NOTES.

(Kennel Notes are inserted without charge; and blanks (furnished free) will be sent to any address.)

NAMES CLAIMED.

Prepared Blanks sent free on application. Onward, Bv G. Amory, Bourne, Mass., for liver and white pointer dog, whelped April, 1891, by Wisse (Croxeth—Annin) out of Nolee V. (Robert Croxeth—Nellie V. Croxeth).

BRED.

Prepared Blanks sent free on application. Rochelle Naddy—Buffalo General, J. J. Lang's (Buffalo, N. Y.) black and tan terrier bitch Rochelle Naddy (Voritzger—Meersbrook Maiden) to A. W. Smith's champion Buffalo General (Halfax General—Lady Lotfie), July 6. Maritana II.—Lord Bute. Thos. Shillcock's (Birmingham, Eng.) St. Bernard bitch Maritana II. (champion Angelo—Miscabel) to his Lord Bute (champion Save—Sabrina), May 20. Dell—Count. G. W. Patterson's (Lake View, Mass.) St. Bernard bitch Dell (imported Everest—Sequa) to his Count (champion Apollo—champion Miranda), June 10. Belmont—Beaumont. J. B. Blossom's (New York) Gordon setter bitch champion Belmont (Dasher—Blanche IV.) to his champion Beaumont, July 1. Fly—Beaumont. Geo. Meister's (Jackson, Mich.) Gordon setter bitch Fly to J. B. Blossom's champion Beaumont, July 6. Duchess of Parma—Bo'swain. E. A. Woodward's (Chicago, Ill.) bull bitch Duchess of Parma (British Monarch—Tiney) to his Bo'swain (Grabber—Susan), April 30. Charmion—African Monarch. E. A. Woodward's (Chicago, Ill.) bull bitch Charmion (Buga Boo—Young Rocket) to his African Monarch (Claudine—Dinah), May 3. Pauline Burr—Breeze Gladstone. J. L. Smith's (Hackettstown, N. J.) English setter bitch Pauline Burr (Paul Gladstone—Latonia) to F. G. Taylor's Breeze Gladstone (Gladstone—Sue), May 29. Dorothy—Breeze Gladstone. F. G. Taylor's (Philadelphia, Pa.) English setter bitch Dorothy (Buckelwell—Rodreka) to his Breeze Gladstone (Gladstone—Sue), June 15. Lady Snowflake—Breeze Gladstone. G. W. Lovell's (Middleboro, Mass.) English setter bitch Lady Snowflake (Prince Noble—Cassandra F.) to F. G. Taylor's Breeze Gladstone (Gladstone—Sue), June 18. Winnie—Breeze Gladstone. F. E. Rogers's (New York) English setter bitch Winnie (Count Noble—Queen Meg) to F. G. Taylor's Breeze Gladstone (Gladstone—Sue), June 25. Daisy Wentworth—Breeze Gladstone. J. H. Austin's (New York) English setter bitch Daisy Wentworth (Lark P.—Nettie II.) to F. G. Taylor's Breeze Gladstone (Gladstone—Sue), June 26. Rod's Ruby—Breeze Gladstone. F. G. Taylor's (Philadelphia, Pa.) English setter bitch Rod's Ruby (Buckelwell—Rodreka) to his Breeze Gladstone (Gladstone—Sue), July 7.

WHELPS.

Prepared Blanks sent free on application. Rhube H. Blake & Herbertson's (Detroit, Mich.) black and tan terrier bitch Rhube H. (imported Prince—Nanon, Jr.), July 4, four (two dogs), by their Sir Wallace (Mahomet—Lady). Buttercup. Blake & Herbertson's (Detroit, Mich.) black and tan terrier bitch Buttercup (Victor—Queen), June 19, two dogs, by their imported Prince (Brookfield Turk—Duchess II.). Duchess of Parma. E. A. Woodward's (Chicago, Ill.) bull bitch Duchess of Parma (British Monarch—Tiney), June 30, three (two dogs), by his Bo'swain (Grabber—Susan). Topsy. E. Cohoon's (Franklin, N. Y.) cocker spaniel bitch Topsy (Black Harry—Maud S. II.), June 12, six (three dogs), by his Obo C. (champion Black Pete—Phyllis). Nellie. E. Cohoon's (Franklin, N. Y.) cocker spaniel bitch Nellie (Prince Obo—Fern), June 19, seven (three dogs), by his Obo C. (champion Black Pete—Phyllis). Gypsie. E. Cohoon's (Franklin, N. Y.) cocker spaniel bitch Gypsie (Jel—Vixen), June 21, six (four dogs), by his Obo C. (champion Black Pete—Phyllis). Butterfly. E. Cohoon's (Franklin, N. Y.) cocker spaniel bitch Butterfly (Capt. Stubbs—Princess Obo), June 23, four (three dogs), by his Obo C. (champion Black Pete—Phyllis). Connie. E. Cohoon's (Franklin, N. Y.) cocker spaniel bitch Connie (Prince Obo—Queen Bee), June 23, six (four dogs), by his Capt. Stubbs (Col. Stubbs—Maud). Dot. E. Cohoon's (Franklin, N. Y.) cocker spaniel bitch Dot C. (Prince Obo—Fern), June 24, four (two dogs), by his Capt. Stubbs (Col. Stubbs—Mand). Maud S. II. E. Cohoon's (Franklin, N. Y.) cocker spaniel bitch Maud S. II. (Col. Stubbs—Daisy Dean), June 30, four (two dogs), by his Capt. Stubbs (Col. Stubbs—Maud). Fern. E. Cohoon's (Franklin, N. Y.) cocker spaniel bitch Fern (Capt. Stubbs—Obo Nellie), June 30, four (three dogs), by his Obo C. (champion Black Pete—Phyllis). Front. D. Stern's (Milwaukee, Wis.) English setter bitch Front (Drake, Jr.—Daisy), May 11, thirteen (five dogs), by F. G. Taylor's Breeze Gladstone (Gladstone—Sue). Gussie Bondhu. J. L. Sneed's (Toledo, O.) English setter bitch Gussie Bondhu (Gus Bondhu—Jessie Noble), May 14, eight, by F. G. Taylor's Breeze Gladstone (Gladstone—Sue). Donna Juanita. J. W. Wood's (Poughkeepsie, N. Y.) English setter bitch Donna Juanita (Rockingham—Donna), May 15, ten (six dogs), by F. G. Taylor's Breeze Gladstone (Gladstone—Sue). Fanny H. Osthoiff's (Philadelphia, Pa.) English setter bitch Fanny (Baker—Nancy Lee), June 3, fourteen (eleven dogs), by F. G. Taylor's Breeze Gladstone (Gladstone—Sue). Lily Bondhu. N. B. Thomas's (Philadelphia, Pa.) English setter bitch Lily Bondhu (Gus Bondhu—Rodreka), June 5, six, by F. G. Taylor's Breeze Gladstone (Gladstone—Sue). Myra Goodwin. D. A. Goodwin's (Newburyport, Mass.) English setter bitch Myra Goodwin (Boh Gates—Flo Maclin), June 23, twelve, by F. G. Taylor's Breeze Gladstone (Gladstone—Sue). Rodreka. B. Mann's (Philadelphia, Pa.) English setter bitch Rodreka (Rodriguez—Gem), July 2, nine (seven dogs), by F. G. Taylor's Breeze Gladstone (Gladstone—Sue).

SALES.

Prepared Blanks sent free on application. Louisc. Red cocker spaniel bitch, whelped May 18, 1891, by Darkey out of Chloe R., by Blake & Herbertson, Detroit, Mich., to E. W. Kirk, Pittsburg, Pa. Edwidge. Black cocker spaniel dog, whelped May 8, 1891, by Darkey out of Chloe R., by Blake & Herbertson, Detroit, Mich., to C. W. McCauley, same place. Macie. Black cocker spaniel dog, whelped May 8, 1891, by Darkey out of Chloe R., by Blake & Herbertson, Detroit, Mich., to Mrs. Thos. Blain, Geneva, N. Y. Beaumont. Imported black and tan Gordon setter bitch, whelped July 15, 1889, by Heather Grouse out of Heather Rose, by W. Tallman, New York, to J. B. Blossom, same place. Belmont. Black and tan Gordon setter bitch, by Dasher out of Blanche IV., by C. C. M. Hunt, Palmyra, N. Y., to J. B. Blossom, New York. Bernard Beauty. Orange, white markings, St. Bernard bitch, by Don out of Grina, by J. F. Parker, Portland, Me., to G. W. Patterson, Lake View, Mass. Lydia. Orange, rawn, white markings, St. Bernard bitch whelped Sept. 25, 1889, by Beauchamp out of Dell, by G. W. Patterson, Lake View, Mass., to G. W. Schenk, Burlington, Ia. Monte Carlo. Orange, white markings, St. Bernard dog, whelped Jan. 21, 1891, by Alton out of Bayard, by G. W. Patterson, Lake View, Mass., to H. H. Moore, Philadelphia, Pa. Maritana II. Rich orange, white markings, St. Bernard bitch, whelped April 11, 1888, by champion Angelo out of Miscabel, by

Wednesday, July 8, Second Day.

At 10 A.M., when the first event was called, the weather conditions looked most unfavorable and every one looked for a repetition of the weather of the preceding afternoon. A strong south-west wind was blowing and there was every indication of rain, but before an hour had passed the sun shone brightly and the balance of the day was a perfect one for trap work, good scores being the result.

The surplus to day amounted to \$10.84. Dickey was again the fortunate one in his class, and he netted \$36.75 in his wallet as a result of breaking \$6.33 per cent. of his birds fired at, E. D. Miller, of Springfield, N. J., getting \$18.39 as his share with a percentage of 85. In the amateur class, S. A. Tucker, of Meriden, Conn., got first money with a record of 94.23 per cent.; C. B. Sanborn, of Somerville, Mass., second, 92.10 per cent.

Extra No. 1, 10 single Keystones, \$1.50 entrance, known angles open to all, four of the corners of the trap were shot by members of the Richmond Gun Club.

The shooters were again greeted with pleasant weather on this the last day of the meeting. At an early hour the first event was called, as was desired, and a run of 100 birds of the regular programme was possible, in order to start off a 100-bird match, for which \$100 had been donated by a member of the Wellington Club. The management finding it impossible to get through with the programme, decided to shoot only four of the programme events, and split the 100-bird match into six different sweeps, the aggregate scores of the eligible contestants to count, the conditions of the contest being only members of the Wellington Club to enter. The contest was watched with interest by both spectators and contestants, and the finish between the second and third place men was close and exciting.

No. 5, 20 single Keystones, optional sweepstake, \$1 entrance, birds extra: Perry 20, M. Murchy, Brooks, Rockworth, Root 19 each, Le Roy, Eager, Sanborn, Miller 18 each, Bond, Wheeler, Bradbury, Apgar, J. Wolstencroft 17 each, Stanton 16, Dieck, Warren, Stone, *Bowler 15 each, *Nichols, Keller, Amsden, Cowee 14 each, Dan, Snodgrass, Beach, Bradstreet 13, Purdy, Dennison 8 each.

No. 6, same conditions as No. 5, M. Murchy, Stanton, *Bowler 19 each, Sanborn, Root, Quimby, 19 each, Purdy, Dieck, Bradbury, Wheeler 18 each, J. von L., Sterry, Miller, Perry, Bradstreet, Davenport, Bond, Eager, Snow, J. Wolstencroft 17 each, Apgar, Brooks, DuBray, *Nichols 16 each, Amsden, Stone, Cowee 14 each, Snow, D. 13 each, Needham, Warren 9 each, Purdy 7.

Event 11, cruising trim:			
Tempest.....Geo. P. Douglas.....	2	1	10 30
Lasata.....Geo. L. Metzke.....	1	2	17 30
Sybil.....E. W. Edinger.....	3	3	1 23 00

There being no general-purpose canoes at the meet, the event was thrown open to canoes with cruising kit on board. Tempest won with ease, and Lasata was a good second but was ruled out for not having sufficient outfit, and Sybil got second prize. First prize, banner presented by Robt. Peckles; second prize, banner presented by F. C. Moore.

Event 12, sailing upset:			
Tempest.....Geo. P. Douglas.....	1		
Oricker.....J. B. Palmer.....	2		
Torment.....H. H. Smythe.....	3		
Echo.....O. F. Coe.....	4		
Eros.....W. L. Dudley.....	5		

First prize, banner presented by Mrs. W. P. Stephens; second prize, banner presented by committee.

Event 13, man overboard:			
Tempest.....G. P. Douglas and C. L. Metzke.....	1		
Sybil.....E. W. Edinger and W. L. Dudley.....	2		

This was a good race and with a large entry should prove exciting and a good test. Prize, flag presented by Mrs. Charles G. Bahmann.

Event 14, unclassified boats:			
Neola.....J. H. Sipp.....	1	1	1 21 51
Wraith.....B. Fredericks.....	2	2	1 25 01
Yeh Yah.....H. F. Des Braysay.....	3	3	Withdrawn.

Neola started well in the lead and gained on both first and second rounds. In the third round Wraith made faster time over the course, but did not make any difference in the result. There were no war canoes at the meet, so the race for unclassified boats was called instead. Prize, flag presented by New York C. C. Of the appropriation of \$100 voted us, we have used but \$15.81, an itemized account of which is given below:

Stationery and postage.....	\$25 31
Man and skiff, 23 days.....	7 50
Signal guns, flags, cartridges.....	6 50
Expressage.....	1 50
Loss of watch from starter's boat.....	5 00

Respectfully submitted,
MORTON V. BROKAW, Committee.

NEW YORK, July 11.

AMERICAN AND BRITISH CANOE RULES.

WHEN we consider that the British Canoe Association has no measurement rules nor classification, the question naturally suggests itself as to what the members do when they are ashore and where they find any excitement other than mere sailing, the Royal C. C., however, has rules of its own and, as canoe racing plays but little part in the meets of the B. C. A., perhaps rules are unnecessary; however, the members miss a lot of fun by not having and changing them. The new rules of the A. C. A. call forth the following comments in the *Field*, which of late has given considerable attention to canoeing:

"A new class of canoe has been established in America, called the general purpose canoe, the intention of which is to conserve the cruising capabilities of the craft which are threatened with extinction in the racing classes. It would seem, however, that the new limitations imposed in the class are hardly as perfect as we might have expected from such a practical and able body of men as the A. C. A. committee. For instance, the width of the well opening or hatchway is set down at 16 in. The object of limiting the width of the well hatchway is to always enable the man to sit down in the canoe, the limit, therefore, should be the smallest width necessary, or roughly speaking, 15 in. Where arbitrary limitations are to be placed, it should be carefully guarded that the limitation does not adversely affect craft constructed to fit the average man. The limitations further assume that space for sleeping on board should be maintained; but quite a large majority of men owning and cruising in 16 ft. by 30 in. canoes never desire or attempt to sleep in them, but carry and use a shore tent. The space below, or well, which should be conserved in fairness in all canoes, cruisers and racers, is that which enables the man to sit below. Taking a fair average it is 4 ft. in length, 16 in. in width, and the depth of centerplate case. The draft of water is limited to 10 in. Why? What can draught matter, so long as the total depth of hull is limited?"

"The new limitations of the general-purpose canoe are very likely to prove far from perfect, at least such is the expectation of their framers, as they are out experimental; the special objection which the *Field* makes are, however, not very well taken. The object of limiting the width of the well is to preserve that adaptability which has always been the chief charm of the canoe and which has very generally disappeared under the stress of match sailing. To this end a certain amount of room in the boat is necessary, enough to sit at ease, to move about for a change of position if in the boat for some hours, to carry stores and clothing when the easy rowing and to use the well as a seat. While 15 in. may be sufficient width to allow a man to sit below, it is very little for comfort, especially for a man of more than average build, while nothing could be more embarrassing than the mishap which occurred to a well-known canoeist who once took a Class B girl out in a Class A canoe, and found great difficulty in disembarking on her return. As a matter of fact, the limitation has been carefully guarded, a measurement of a large number of canoes showed that 16 in. was within the limit, the average being about 17 in.

The well in most American cruising boats is from 5 to 6 ft. long, semi-circular at after end and pointed at the fore end. The requirements are that at least 3 ft. 6 in. of length shall be not under 16 in. wide. The only objection which we find is that a man may evade this rule by making a rectangular well 16 x 42 in. Sleeping in the canoe has gone out of fashion, as in England, but the rule is framed to encourage the interior arrangement which has been proved the best for cruising and all general uses, the movable bulkhead after the canoeist, for tent, clothing, etc., and a similar space on each side of the centerboard trunk at fore end. Merely space for a man to sit, with a fixed bulkhead at his back, and feet, may do for certain purposes, but it does not give the accommodations for storage, or the carriage of a fair passenger or fellow paddler, which should be part of the general purpose canoe. The R. C. C. rules call for the same space, 6 ft. between fixed bulkheads, the minimum size of well, 14 x 33 in., being so small that this space cannot be utilized unless to exist in the canoe, and yet tend to preserve the canoe bottom as opposed to the keel or fin. At the same time the regatta committee suggested another limit of depth, not over 15 in. from lowest point of keel wherever found to lowest point of gunwale, or approximately an allowance of 5 in. foreboard and 10 in. draft. In connection with the limitation of one class, we also proposed the removal of all limits from the racing class, but the proposal was not carried. The other limit was left to the regatta committee, who finally made it 10 in. draft. The present limitation of the R. C. C., not over 16 in. depth, is entirely useless, as it may be evaded by a trick of construction, making the canoe draw 2 ft. if desirable.

It happened very unfortunately that the great pressure of business and the time involved prevented a careful and thorough discussion of the changes in the rules, a matter that required at least a half day, but which was left to the regatta committee to complete, against their wishes; the general outline of the changes alone being indicated. The result has proved that the changes in the rules are not as perfect as they should be, while the way in announcing them was also detrimental. The general purpose canoe is likely to make a poor showing at the coming meet, but we still adhere to the idea that its recognition is in every way desirable, and no matter how little good may come, no harm can follow.

Continuing further, the *Field* takes up the R. C. C. rules as follows: "The English rules are, on the other hand, far too minute, and are complicated with vexatious and, at the same time, useless limitations. The difference between the first class and the second class (which has adopted the misleading and inappropriate title of cruising class), is simply ridiculous, viz., that the second class canoe must be of 'clench' build. We have yet to learn that two canoes built to the same lines and fitted in similar manner and of similar rig, but one of which is clench built, are so different in their capabilities that the clench-built boat is entitled to rank as a cruiser and the smooth-skinned one as a racer. For some cruising work—especially duck shooting—a clench-built canoe is utterly unfitted; she is at all times unsightly, and is merely a relic of the barbaric ages of the north—the wily savage all the world over builds his canoe of smooth skin."

The distinction between smooth built and lapstrake (clench built) canoes is about as useful a basis for classification as that between varnished and painted canoes, and it has been in the rules for a dozen years. The R. C. C. rules limit sail area

to 112 sq. ft., also allowing a 50 ft. spinnaker. The former limitation, which limited the mainsail to 75 per cent. of the total sail, has been abolished. The sliding seat is entirely prohibited, deck seats not being allowed to extend beyond the side of the canoe at any time.

If British canoeists have any idea of contesting for international supremacy, or of meeting an American challenger under other conditions than the R. C. C. rules, they must consider soon the two important questions of unlimited sail area and of the sliding seat. So far we are unable to see that either board nor sail the American canoes through unrestricted sail area, and though we firmly believe in the limitation of sail area on yachts and most small craft, the conditions of the 162 ft. one man canoe do not seem to call for it here or in England. If other necessary limitations are imposed, sail can well be left to itself.

The matter of the sliding seat is a more difficult one, it has been unquestionably the main factor in the development of the sealed canoe and the suicide cockpit; but at the same time sailing a canoe with a sliding seat is safer, far more comfortable, and dryer, to say nothing of the excitement and exhilaration which accompanies this exalted perch, and we believe now that British canoeists will gain in every way by adopting the sliding seat in the R. C. C. 14 x 33 in. canoe. With the present limits of the R. C. C. 14 x 33 in. or the well and the centerboard, not at the center of length, there can be no possible danger of the monstrosities that ornament American canoeing, and the deck seat and thwartship tiller can be safely adopted. At the same time the experience here indicates that a limit of length of slide is necessary, the one which naturally suggests itself being 30 in. for five a tier to keep sails quiet, and in the blow matches the limit, less by 15 in. than some a morning and a rapid slide, that a desirable on trial, a longer slide can be allowed in certain races. With all that has been said against it, the sliding seat is too important a factor in canoe sailing to-day to be ignored by any body of canoeists.

Since the above was in type we have received the current number of the *Field* in which the following appears: "Sliding-out deck seats have not as yet been tried on English canoes in racing, owing to there being a rule against their existence; but it is more than mere speculation to assert that a sliding-out seat could not have been used effectively in any race yet sailed this season. In the two or three first races it was not wanted, in the light airs one had to balance rather inboard so as to give a tier to keep sails quiet, and in the blow matches the cuts and shifts of wind have been so savage and rapid that a slider would have quickly planted its crew in the lake. None the less, it is curious that no English canoeist goes the length of fitting and testing a sliding seat. There are several races open to anything within canoe-yawl definition; that, of course, admits sliding-out deck seats."

CANOE-YAWLS AND CANOE-YACHTS.

EXACT names and definitions are the exception rather than the rule in canoeing and yachting, there being very few terms which apply strictly to any one rig or model, or to both in combination. One of the most bewildering is the term canoe-yawl, now in such common use, but conveying no definite idea of proportions, model or rig. Before the modern canoe was well out of its crib and tucker days, about 1875, the general model of the Rob Roy was developed and expanded into a much larger model, 16 ft. long and 4 ft. 6 in. beam, but with the lug mainsail and small mizzen, the canoe, together with other features which, in spite of its size, showed its relationship to the canoe rather than to any existing forms of sailing boats. To this craft, whose evolution was due mainly to the swift tides and rough waters of the river Mersey, the name canoe-yawl was given in recognition of its origin and rig. The wonderful growth of canoeing and of the canoe-yawl as distinguished from yachting in decked craft since that day, has produced a very large fleet of small craft that are neither canoes nor yachts in the strict acceptance of each term, but which have been generally classed as canoe-yawls.

It needs no proof that a vessel 20 to 24 ft. long, with 5 to 6 ft. beam and ton of new rig is not a canoe, while at the same time she may be a sloop, cutter or ketch in rig, and the name canoe-yawl has stuck to her. Among the many boats of this class are the well-known Viper, Vital Spark, Water Rat, Iris, Tom Boy and others, lines and descriptions of which have frequently appeared in our pages. Between these extreme craft and the canoe proper centerboard canoes, such as the Ethel, Vim, Kwoneshe, Pelican; capable of being beached or housed, though not of being sailed as a rule. This class of boat has become very popular in England within three or four years; in fact, so much so as to encroach on the 162 ft. canoe, being more conspicuous than the latter at the meets of the British Canoe Association.

At the November meeting in 1889, the Royal C. C. established the following limits for the new class, which have been generally built to: "A canoe yawl shall not exceed the following limits: length shall not exceed 20 ft., over all in length; it shall not be less than 5 ft. in beam; it shall not be over 3 ft. in depth from top of deck at center line to the bottom of the keel, taken anywhere, forward and aft. No ballast shall be carried outside, or below the transom except centerplate or drop keels. No counter stern or transom stern allowed. By the R. C. C. rule.

Length x Sail Area.....	6,000
—Rating.....	180 sq. ft.

Under this rule some racing machines have been built, wide, shoal, canoe-shaped craft, one of them, the Snake, being 18 ft. 1 in., 4 ft. 10 in. beam, depth amidships to deck 1 ft. 10 in., mainsail 135 sq. ft. The only objection which we find is that a man may evade this rule by making a rectangular well 16 x 42 in. The rough waters of the Humber and Mersey have developed the keel craft, the Thames about Oxford and London is rapidly producing a fleet of racing machines, and at the same time of cruising canoe yawls about 16 ft. x 4 ft., mere big canoes. Still another type showing up in considerable force this year about Southampton is the new 16 ft. yawl class, called racing machines designed by the leading men, such as Watson, Fife and Payne, and of the most delicate and elaborate construction.

While the canoe yawl, as has been seen, has progressed further in England than on this side, especially from a racing standpoint, the class is growing rapidly in the United States, and is likely to be very popular in a few years, filling the wide space between the 162 ft. canoe and the smaller singlehand cutters and yawls, such as Windward. The sailing canoe, or its American equivalent, corrected length, seems peculiarly adapted for the class at large. The boats, which may be included under the present term canoe-yawl, may be broadly divided into two classes, the keel craft, with a large percentage of outside ballast, and the centerboard craft of moderate draft and with inside ballast, all movable.

The need of some distinction between these two classes has been apparent for some time, and to meet it we suggest that the name canoe-yawl be restricted to such boats as by their draft, model and ballasting may be beached and housed, while the other large class, such as Tom Boy, the small cutter Dodge and the St. Lawrence, and others, whose lines were published on April 10, may be classed as "canoe-yachts." This term, while open perhaps to the same technical objections as canoe-yawl, is at least a fitting complement to it, and the two together will serve to distinguish with sufficient exactness for all practical purposes the typical difference between the two classes of boats. There is just now no special call for a strict definition of either term, nor is there any club or body directly interested in classifying and encouraging the boats, but they are increasing in number so rapidly that the recognition and limitation is only a matter of time; and in the meanwhile we suggest for popular use as a means of distinguishing the difference which actually exists the term canoe-yacht in addition to the established one of canoe-yawl.

THE A. C. A. YEAR BOOK.—The Year Book of the American Canoe Association for 1891 is uniform in size with those of the past three years, and contains the usual matter, the constitution, lists of members and regatta records, the constitution, reports and racing records for 1890. The list of members is arranged by divisions, as in previous years, but in addition the list of division officers and the clubs within the division, as well as the boundaries, are given at the head of the list of members, making a complete record of the division. The membership up to date of the regatta was divided as follows: Atlantic 292, Central 157, Eastern 311, Northern 173, and Southern 108. These must be added a supplementary list of new members, making 1,011 members. Besides these are 8 honorary and 62 lady members, the grand total being 1,081. The highest number on the list up to about June 1 was 1,043, that being the number of active members enrolled since the Association was organized, in August, 1880. The number of clubs was 23, total 108. Nearly 100 of these are canoe clubs, the others being in part boat or sailing clubs. The names of the officers, with their terms, are printed in colors, a list of officers, stations, etc., being also given. One of Stoddard's charts, showing a portion of Lake Champlain from Plattsburg to Willsborough, is given, with a railroad map showing routes to the camp.

TRANSPORTATION TO THE MEET.

WE have received the following circular relative to the transportation of canoes from about New York to Lake Champlain. The late date at which it was sent, out made it impossible for canoeists to reply by July 11, but if there is still time to make arrangements, the proposed trip by canal-boat with the canoes should prove a very pleasant one for those who can spare the time:

To Member American Canoe Association: We would like to ask you if you intend to take in the meet at Willsborough Point, N. Y., on Lake Champlain, commencing Aug. 6; if so, would you like to join us in trying to get enough canoes together to make it an object to this company to send the canoes all on one boat without carrying other freight. If we can get enough canoes together we will take them from Pier No. 6, East River, to Willsborough Point, N. Y., at \$2 each, which includes rigging or any other merchandise that can be put in the canoes.

If there are enough canoes at any club house to warrant the expense of towing the canal boat to and from club house, we will send the canal boat for them and charge each canoe her proportion of cost of towage. If we can secure enough canoes to warrant our placing a canal boat to take the trip the canal boat will be the property of the N. Y. C. C., commanded by Capt. M. A. Knowlton, who is one of Lake Champlain's old pilots. Why we mention this canal boat in particular is, that it is the same boat and genial captain that took up the canoes in 1887, and all our patrons at that time were well pleased with the care given by Capt. Knowlton.

If you wish to take up your canoe in the above plan, we would be pleased to receive your answer to that effect on or before Saturday, July 11, as it is necessary for us to know how many canoes we can depend on; and it is still more important that we should have, say, two weeks' notice, so as to arrange our freight charters for this canal boat and get her in readiness to receive in New York City, Monday, July 27.

We also would like to mention, which will be a novelty on this special occasion, of taking any canoeist of the American Canoe Association on the canal boat C. W. Woodford, which is a splendid boat, from New York to the camp on Lake Champlain, at \$2 per day, which includes passage, board and berth, which is made in a rough way, as each passenger is required to furnish his own blankets and pillow if required for berth.

The boats will be built in main hold of boat along the sides; the boat is 98 ft. long, about 18 ft. wide; the size of hold in the main is about 75 ft. long, 16 ft. wide and 7 ft. high between decks, and perfectly dry.

The route taken on this trip is via Hudson River to Troy, N. Y., the boat being towed in a tow with about 30 other canal boats, and it takes about 40 hours from New York to Albany, N. Y., thence via Champlain Canal from Waterford, N. Y., to Whitehall, N. Y., which is towed by mules, a single boat at a time; distance is about 60 miles and takes about 48 hours to reach Whitehall, N. Y., which is on Lake Champlain, and from there the boat is towed by a powerful lake steamer in tow with, say, 20 other boats, and takes about 12 hours to reach "La Camp de Paddle Your Own Canoe" or dock of the American Canoe Association at Willsborough Point, N. Y.

A trip of this kind is very romantic and a most enjoyable time could be had, and it would be a trip that would never be forgotten. Kindly let us hear from you, fully, at an early date and oblige, yours truly,

N. R. MOE & CO., G. E. A., No. 9 South Street.

NEW YORK, July 8.

THE CLUB REGATTA.

BOYS! perhaps an old fossil, like myself, can give you a few points. It may be that you know more about it than I do. If so, it will do you no harm to hear what I have to say, and then go and do what you please.

You know who has the fastest paddling canoe in the club house, as you have often, no doubt, been beaten by it in your cruises or "club races" near home. You know very well, too, who among your members is a real "half mile in the shortest time," without getting up a regatta to prove it. Perhaps there is another canoe club near yours with a strong man in it. If so, a race between your man and that club's champion will make an interesting event. Likewise you know who is the best sailor with the best boat—perhaps there are two nearly equal—and a regatta sailing race cannot add to your information. If you can get other clubs' champions to race your man, interest may be injected into a sailing race.

Generally speaking, then, the club regatta cannot add much to your knowledge about the sailing and paddling merits of your club men. How often have you had a good sailing race over your club course? Not often, I will venture to suggest. When a difference of opinion exists as to the merits of men or boats you are likely to round a race off by a private race, and then you are left with the thing. These club races are lots of fun for the interested, and settle satisfactorily the relative standing of boats and men. When you go to the canoe meet you go to race in earnest with the best men from the other clubs, and no one can predict the result. When a club can get members of several other clubs to compete in races, then, too, the events are very interesting to the canoeists.

We are considering now a club regatta, pure and simple. What shall it be? The members want their friends to view the events and make a social affair of the whole thing.

How many of your friends—the ones you invite to view the races—know why a canoe cannot sail straight to windward in a sailing race other than seeing the pretty effect of a start? How tiresome they find it when the wind fails and the canoe simply drift about aimlessly and nothing is going on to amuse the spectators—since all the canoes are in the race.

Well! We want to have a club regatta. We want to invite our friends and entertain them. We want to have some fun ourselves, and we want to get a new event on the programme off at a proper time and without too long a wait. If we put a race on, on a sailing race it may ruin the whole affair—for lack of wind, too much wind or too much tide. Let us omit it then. But every one likes to see a canoe under sail do something. All paddling events would be stupid. An upset sailing race can be arranged for the club house, and can be worked off successfully in a short time if there is any wind at all, and the club's sailing champion is by no means sure of winning. If other visitors are sure to be deeply interested in the novel performance. This holds good of a maneuvering race sailing, where a paddle is thrown overboard astern at a given signal and recovered. It is well to have the paddle thrown over twice, so that a miss the first time may not prevent a man's winning. Another sailing event can be added to bring out the skill of the members in handling a canoe tag. A canoe sails across a given line and the crew, if within ten minutes. Fifteen seconds after the start of the first another canoe is sent off, the skipper of which must touch any part of the first canoe, man or rig, with a 9 ft. wand, padded at the end (and kept on deck), before No. 1 recrosses the starting line.

The up-paddling, hand paddling, standing up paddling, single blade paddling (to be done on one side of the canoe only without the help of a rudder), are all races that can follow one another rapidly and create considerable amusement for contestants and spectators. Canoe tricks, gymnastics, tugs of war and a tournament also help out a regatta wonderfully. Other novel events will suggest themselves to committees according to the weather, the canoeing facilities of a club and the ingenuity of the members. I have never seen a deck paddling race. Put a board lengthwise over the cockpit and sit on it while paddling.

The clerk of the course should secure all the entries early, and each man ought to pledge himself to contest the races he enters. The races should be so arranged that the same men do not compete in too successive events, as they need rest after a hard struggle and need time to get the canoe ready again. The events in which the canoe is upset and gets water aboard should be put last, so no time is lost in waiting for a man to bail out before starting in a succeeding event. There are innumerable gymnastic tricks to be acquired, and many of them have been described in former numbers of this paper. Don't make a fizzle of your regatta when success is so near.

Now that many clubs have big war canoes, why not add a crew drill to the programme? Evolutions will suggest themselves to the captain of the crew, and very little training would be necessary to make an effective show. A paddling drill may also be added after the suggestions printed in your last number, Mr. Edges, by the secretary of the Hartford Club. I enjoy seeing a canoe sailing race about all I can; but I don't like to see a regatta totally ruined by trying to sail one under difficulties.—*Sail and Paddle*, August, 1890.

A. C. A. MEMBERSHIP.—Central Division: P. N. Jacobson, Detroit, Mich.; C. C. Powers, Rochester, N. Y. Northern Division: W. J. Wickham, Toronto; W. L. Henn, Ottawa. Eastern Division: Chas. A. Gay, Boston, Mass. Atlantic Division: A. D. King, Paterson, N. J.

TORONTO C. C.

THE race of June 27 was sailed in a light wind, the winners being: Class 1, Colin Fraser first; W. J. Sparrow second. Class 2, H. Ford first; F. Rogers second. Class 3, H. Fortier first; J. C. Iredale second.

The annual spring regatta was held at Center Island on July 4, in a gale with rain, but it was decided not to postpone it, as the men would soon be separated in cruising. The sailing race was won by Walf, D. B. Jacques. There were 5 starters in the open paddling, Johnson being first and Tilley second. In the decked paddling, H. C. McLean won. Three men entered for a novel contest, each using two canoes, one for each, with a single blade. Mr. Stobert won, though the wind nearly spoiled the race.

The tandem handicap had 8 starters: Iredale and Rogers, Stewart and Stobert, Thomson and Sanderson, Brown and Sparrow, Bell and Musson, Hackburn and Weston, Ellis and Woodland. The race was won by Thomson and Sanderson, with Ellis and Woodland second.

In the fours, three crews started: Johnston, Hackburn, Stewart and Tilley, Iredale, Ford, Ellis and Bell, R. B. Elgie, Sanderson, Thomson and Brown. They finished in the order named, the winning crew being composed of two champion paddlers, Johnston and Tilley, and two other very strong men.

E. N. Stobert won the paddling race in which the paddler was seated in stern to paddle stern foremost.

On July 11 the second sailing race of the series was held, with the remaining events postponed from the regatta.

The first class race resulted thus:

Walf, D. B. Jacques.....	1
Chum, Colin Fraser.....	2
Rush, W. C. Lee.....	3
Ell, J. W. Sparrow.....	4
Gwen, Roy Sweeney.....	5

The second class resulted thus:

Erie, Walter Smith.....	1
Kadula, Henry Ford.....	2
Nemo, Fred Rogers.....	3

The third class resulted thus:

Edna, H. C. Fortier.....	1
Irma, W. A. Fraser.....	2
Vita, J. C. Iredale.....	3

The hurry scurry and paddling upset were won by M. F. Johnston, and the tug of war by J. E. Brown (captain), M. F. Johnston, H. R. Tilley and Roy Sweeney from J. C. Iredale (captain), T. D. Ellis, H. Ford and B. W. S. Thomson.

BROOKLYN C. C., JULY 11.—The races of the postponed Brooklyn C. C. regatta were finished on Saturday, there being a strong N. W. breeze. The only novice, Delight, Irving Ruland, was started with the unlimited fleet, sailing but one round. The starters for the two rounds were: Bonnie, C. B. Vaux, Seabright, W. T. Wittingham, Unqua, R. J. Wilkin, Eclipse, F. L. Dunnell, Azec, W. W. Howard. Bonnie was late at the line, but finally won after a very good race, with Seabright second. Aztec broke down and capsized and Eclipse parted main sheet and withdrew. A fine race of canoe yaws followed, being won by Wm. John Johnson, with Kwonose second and Margaret third. The last event was a paddling race for the Rudd trophy, won by Eclipse, F. L. Dunnell.

HUMBER YAWL CLUB.—The Humber Yawl Club, of Hull, England, the only club which devotes itself specially to the canoe yawl, is a very lively and vigorous organization, with a fleet of 36 boats, mostly canoe yaws, from 24 ft. length and 3 to 6 ft. beam. The membership is 45. The club has two notable features: its annual cruise, usually to Holland, the boats being swung aboard a steamer at Hull and launched at Amsterdam or some other Dutch port, when the cruise proper begins; the other feature being a yearly pamphlet narrating the doings of the club, and embellished by a number of very clever sketches by some of the members. The copy for 1891, which we have lately received, contains a chart of the North Sea, the lines of a canoe yawl, the list of members and boats, with numerous illustrations.

A NEW CLUB.—The London Rowing and Canoe Club of London (limited) has just received its charter of incorporation from the Ontario Government. The directors for the first year Col. John MacBeth, M. J. King, G. D. Sutherland, Capt. E. Cartwright, H. S. Blackburn, J. B. Kilgour, W. S. Smith, G. H. Gillespie, Jr., and W. C. L. Gill.

MAHNAWAUK C. C.—The race on July 4 on Oconomowoc Lake, Wis., was won by Lilla, F. B. Huntington, with Blackhawk, F. W. Dickens, second; distance 3 miles.

MR. BURGESS' WORK.

THAT republicans are not always ungrateful has been very clearly proven in the honors of all kinds that have been showered upon Mr. Burgess by Americans; honors such as have never before fallen to the lot of a designer. While his efforts have received the heartiest recognition of American yachtsmen, the real magnitude of the work that he has done is still unappreciated by the majority. The fact that he has been the means of defeating all challengers and keeping the America's Cup in New York is indeed a very small matter in itself; the great point is that to him is chiefly due the credit for forcing American yachtsmen to accept a type of yacht which, however good for them, they did not want. Puritan herself was the outcome of years of hard fighting against the heaviest odds on the part of a small handful of "cutter cranks," with whose leading principles Mr. Burgess was at least in strong sympathy, if he was not one of them. The faults and dangers of the American type of yacht, together with the advantages of the lead keel and the cutter rig, had been proven beyond question long before Puritan was dreamed of; and yet Americans as a body held firmly to the old type, and would have none of the new-fangled British innovations.

So far as practical demonstration of the truth of its principles, the work of the "cutter cranks" has been successful; but it had stopped far short of a complete and popular success, in that yachtsmen still hesitated from motives of prejudice and local feeling from adopting features which were so prominently identified with the yachts of another nation.

To such an extent did this feeling prevail even so late as 1884, when the necessity for a Cup defender was apparent, that with a full knowledge of the value of the lead keel before it, the New York Y. C. in deciding on the type of yacht which should defend the Cup, was true to its principles and built a steel scow, with inside ballast and sloop rig. The club is a progressive body; it had got beyond Pocahontas, but not very far, and it still held to the old ideas of model, rig and ballasting.

Educated, liberal and progressive, Mr. Burgess was quick to perceive the opportunity, and to avail himself of it. Unhindered by the narrow bounds of misallied patriotism, and fully appreciative of the fact that the truths of science have no political nor geographical limits, he used to the utmost the whole range of advantages and appliances open to the yacht designer. Whatever the origin of her lead keel or her cutter rig, the Puritan was distinctively American, in that she represented thought, enterprise and progress; the same restless, energetic effort which has achieved success in so many other fields.

With her success, the work of the "cutter cranks" was fully accomplished, the day of the wide, shoal and dangerous sloop was ended and a new era of better and safer craft, whose design was based on principles and not on prejudices, was begun. The success of Puritan at once opened an easy way for the general adoption of lead ballast and a different rig on American yachts; an opening that has since certainly been utilized to its fullest extent. The mere retaining of the cup by Puritan was a comparatively small matter, it is not unlikely that had she not been built Priscilla might have defeated Genesta. Had such been the case, however, the fleet to-day would have been composed of a very different class of boats; the old ideas would have hung on, with a new lease of life; and inside ballast and the sloop rig might even now have been found in a large number of recently built craft.

Whatever objections may fairly be made to the extreme racing craft of the day, there is no proof needed of the radical improvement in the whole fleet of American yachts, from the largest schooners on the coast down to the smallest catboat or sloop on lakes or millponds, and the birth of this new era, the popular recognition of a new order of things in yacht designing, dates from the advent of Mr. Burgess as the expounder of more advanced and liberal ideas.

MATCH RACES.—Two match races have been arranged by Fleet Captain Peabody, New York Y. C., for the schooner Marguerite, R. S. Palmer. One is with Huron, cutter, Rear Com. W. B. Duncan, N. Y. Y. C., and the other with Iroquois, schooner, Vice-Com. Ellis, S. C. Y. C. Both will be sailed off Newport for the New York Y. C. cruise. The match with Huron is for \$250 the loser to pay the expenses of the contest. The New York Y. C. rules will govern, except that there will be no time allowance; the time limit is six hours, the yachts will start on one gun, and there will be no restrictions, except that clubtopsails are barred. The course will be 10 miles to windward or leeward and return. The conditions governing match with Iroquois are the same, except that there are no restrictions as to sails and time limit is fixed at five hours, for a stake of \$500. It is probable that both races will be sailed immediately. In either match if one boat should break down within thirty minutes from the start, she will be given forty-eight hours in which to make repairs and come to the line again.

OBIGIN OF GLORIANA.—A very fierce tempest has been waging in a very small teapot as to whether the entire credit for ordering a 46-footer from the Herreshoffs should be given to Vice-Com. Morgan, or whether the boat which has proved such a flyer was first ordered by Mr. Royal Phelps Carroll; the order being countermanded and the boat finally completed for her present owner. If almost any other yachtsman than Mr. Morgan were concerned, there might be some ground for such a dispute, but in view of the money he has spent and the spirit he has shown in building new boats, the present discussion seems entirely unnecessary. Leaving Gloriana entirely out of the question, Mr. Morgan's reputation as a plucky, persevering and spirited racing man was established before the 46 ft. class was thought of.

COLORS OF YACHTS.—It seems curious that, with all shades of color to choose from, but two, white and black, have proved at all suitable for yachts. Blue has been tried at times, as on the little steamer Aida, and on the royal yachts of Great Britain, but it has not come into general use. It is proposed in one of the small

classes in England to paint each boat of a distinctive color, after the plan of racing jockeys, and the effect should be pleasing when a number are seen in company. In these days of decoration and high art the yachtsman might get some valuable hints in painting his boat from a professional artist, at least something better than dull white.

RIVERSIDE Y. C.

THE third annual regatta of the Riverside Y. C. was sailed on Saturday, July 11, on Long Island Sound, starting from off the club house, at Cos Cob, Conn., the courses being: For schooners, sloops and cutters to Black Buoy, off eastern point of Little Captain's Island, keeping it on starboard, thence around a mark off Matinecock Point, keeping it on port hand, thence around a mark off Centre Island, thence home; seventeen miles. For classes under 30 ft. to Flat Neck Buoy, keeping it on port hand, thence to Cow's Buoy, off Shippan Point, keeping it on starboard hand, to a stake boat anchored three and one-fourth nautical miles southwest by west of that buoy and thence home; eleven miles.

The wind was very light from the east all day; the schooners Princess, Rebecca and Victor being unable to reach the start in time. The full times were:

SCHOONERS—17 MILES.

Jewel.....	12 34 28	3 33 18	2 58 48	2 58 48
Effie.....	12 33 30	3 33 30	2 58 48	2 58 48

The winners are Nirvana, Alcedo, Doctor, Vorant, Chippeway, Nameless, Meropie, Dot, Nahma, Tattler and Zeilca.

The boats were classed under the corrected length system lately adopted by the Riverside Y. C., the result being very satisfactory so far as the proper grouping of the various yachts in classes is concerned. The Clapham boat Chippeway beat the fast open boat Sirene very badly. The regatta was very well managed by the committee, Messrs. F. B. Jones, W. A. Hullington and C. E. Wilson. The steamer J. G. Emmons carried a large party of guests over the course, the day closing with a dinner and dance.

LIGHT DUES FROM YACHTS.

THERE is more trouble ahead for yachtsmen at the hands of the Commissioner of Navigation, Mr. W. W. Bates, as will be seen from the following circular.

TREASURY DEPARTMENT, WASHINGTON, D. C., July 9, 1891.

COLLECTOR OF CUSTOMS, New York, N. Y.: Sir—this office is in receipt of your letter, dated the 21 inst., requesting instructions whether dues are collectible under section 4,225, R. S., as light money from vessels arriving from domestic ports.

The bureau held Oct. 23, 1887 (S. 8,508), that such dues accrue, under section 4,225, R. S., on undocumented foreign built vessels owned by citizens of the United States and on undocumented domestic built vessels similarly owned, whether used for purposes of trade or pleasure, on their entering the ports of the United States, and whether furnished with certified bill of sale or otherwise; and that they should be collected in the same manner and under the same regulations as tonnage dues—that is, by the customs officers, who would give receipts.

This decision covers the case of vessels entering any port of the United States, whether from a domestic or foreign port. The ruling is in accordance with an opinion of the Attorney General dated Aug. 19, 1879, in which he stated that certain foreign undocumented vessels when found trading between district and district are liable to such dues under sections 4,219, 4,225 and 4,371, R. S. It should be noticed that the act of June 19, 1888, section 7, repealed section 4,371, R. S., only so far as it related to vessels entitled to be documented as vessels of the United States, the intention of Congress having been to make it operative as regards other vessels.

Respectfully yours, W. W. BATES, Commissioner.

Section 4,225 of the Revised Statutes reads thus: A duty of 50 cents per ton, to be denominated light money, shall be levied and collected on all vessels not of the United States which may enter the ports of the United States. Such light money shall be levied and collected in the same manner and under the same regulations as the tariff dues.

NEW YORK Y. C. CRUISE.

THE following general orders have been issued by Fleet Captain Stephen Peabody for the New York Y. C. cruise: FLAGSHIP ELECTRA, NEW YORK Y. C. HARBOR OF NEW YORK, July 9.

GENERAL ORDERS No. 2.

1. The vessels of the squadron will rendezvous at Glen Cove on Monday, Aug. 3.
2. Captains will report aboard the flagship on the same morning at 11 o'clock, when the future movements of the squadron will be considered. Yachts will be in readiness to start on signal from the flagship immediately after the meeting, if so ordered.
3. Speed will be called to the race for cups presented by Cape Ogden Golet, which will take place at Newport on Friday, Aug. 7, unless otherwise ordered.
4. During the cruise the Owl and Game Cock colors will be raced for by the four-oared gigs and double-screw cutters and dingies belonging to the yachts of the squadron, and the holders will be subject to challenge at any time on one day's notice.
5. There will be a race for the steam and naphtha launches belonging to the squadron, the time, conditions and prizes for which will be hereafter announced by the Commodore.
6. The routine and rules contained in the club manual will be observed during the cruise, attention being called to the changes that have been made in the manual and club signal code during the past winter.
7. There will be special cups given for competition, dates of which will be announced by the Commodore.
8. Yachts when in squadron will take their ships' time in striking bells from that of the flagship, and in no case anticipate it.

CAROLINA Y. C.—Regular regatta, July 4.—Club course, Wrigitsville, N. C., distance 8 miles, weather fair, wind moderate E.S.E., tide high.

FIRST CLASS.				
Length.	Start.	Finish.	Corrected.

Mamie B. H. L. Fenell.....	14 11	4 31 35	6 19 53	1 48 18

By special order all boats were cat-rigged. Regatta committee: J. M. R. Cowan, H. N. Parsley, M. S. Willard, Judges: George Rountree, W. C. Jones, D. M. Williams.

THE DEATH OF MR. McMULLEN.

THERE is something particularly sad about the death of Mr. R. T. McMullen, on board the little single-hander Perseus. A little more than a week ago he set out in the Perseus to sail single-handed to the Land's End. He had done such things before—notably in 1867, when he made his well-known single-handed cruise in the Perseus; but perhaps these feats were eclipsed by his achievement in 1880, when his crew having left him, he sailed his 19 ton yawl Orion from Cherbourg to the Isle of Wight. In publishing the account of this trip, under the title of "How I came to Sail Alone in the 19 tons Yawl Orion," he took the opportunity to make some very original remarks on the subject which will show him to be a very deep thinker. Mr. McMullen was anything but a hardy sailor, but his views were most carefully thought out, and so carefully executed that he never had to write the word failure. His sail over the "Jubilee course" round the British Isles in the Orion in 1887 (a long account of which was published in the *Field*) shows what he could do in the way of organization. After this achievement he sold the Orion to Mr. C. C. Dallas, and writing to us on the subject, said: "I cannot conceal the intense pleasure I derive from the thought that she was not lost at the Jubilee course. Whether I should have taken her to sea again would probably have depended upon as sudden a fancy as the last; at all events my determination was never by any inferior performance to lessen the effect on my own mind of that most perfectly organized and successful cruise. My first cruise in 1850, which then seemed to me very formidable, was round the North coast in 1857 round the British Isles; and there I am content to leave it. It is not improvable, however, that I may build another craft of the Procyon class for quiet amusement; but as far as I know at present, my more ambitious undertakings are at an end." This other craft was the Perseus, and it was on board her that Mr. McMullen sailed and died alone on the sea. He was a man who would have met his death, alone upon the sea, but without disaster, had he not been killed by what cause life failed him we have not yet heard, but it was through no disaster or misadventure by tempest, or by his handling of the yacht, and we feel sure his end was serene and confident. Mr. McMullen was unlike any other yachtsman we ever met; we have known men just as fond of the sea as he was, but never any one who regarded it with such reverential interest. Yachting and yachting racing in the ordinary sense of the terms had no charms for him; but he was just affected by that "mystic spell which none but sailors know or feel, and none but they can tell." He had just told the story of his last cruise in the Perseus, and we sent him the last proofs of the account on June 11, which we believe he received upon calling in at Dover. The cruise of the Perseus is told at length, and we hope to be able to publish it in the *Field* as soon as the racing season is over.—*Field*, June 30.

The end of Mr. R. T. McMullen was much the same as we expected—peaceful, and not the result of any accident or misadventure. He left Greenhithe on June 10 in the high spirits common to him when about setting out on a trip to sea, and all had gone well with him as usual when he landed at Eastbourne on the 13th, and posted a card containing a brief extract from his log up to date. The next heard of him was the telegram on the 16th referred to in our last issue. He was found on the 15th sitting in the cockpit with his face looking toward the sky, and the vessel sailing herself along. The doctor said he had been dead twenty-four hours, when his body was found, the cause of death being failure of the heart's action. He must, therefore, have died in mid-Channel on Sunday, the 14th. He was buried at Beaulieu (about six miles west of Trouville), and the Vice-consul, Mr. A. O'Neill, at once communicated with his family and arranged for the funeral. Mrs. McMullen and his brother Mr. J. McMullen, reached Beaulieu on the 18th, and Mr. R. T. McMullen was buried the next day in the cemetery at that place, after a simple service in the Protestant church.—*Field*, June 27.

"SMALL YACHTS."

THE vigorous and trenchant pen of Mr. Kunhardt, ever ready in the cause of yachting, whether to report a stirring race, to repel the assaults of adversaries and write the praises of honest, seaworthy ships, or to win freer converts to the special form of yachting, single-hand sailing, which was his chief delight, never did better work than in the volume which, already familiar to yachtsmen all over the world, has just appeared in increased bulk and a new dress. Since the book first appeared in 1885 it has found a ready sale in all places where yachts or boats are sailed, and its sterling merits have been generally recognized. In preparing a new edition a great deal of new original matter has been changed and entirely rewritten to meet the changed demands of yachtsmen; in particular, the chapters on designing, in which the entire series of operations is described at length, all the calculations being given, making this part of the subject far more complete than the original scope of the work seemed to call for. Since the first edition appeared the range of types has become far wider, and in conformity with this greater number of new plates have been added. In doing this much attention has been paid to a very large class of small boats which must always find a general use in American waters, and which from their moderate cost, simplicity of construction and adaptability for such water as is found everywhere, both inland and on the coast, are especially valuable to the amateur designer and builder and the Corinthian cruiser. The book as a well known yachtsman to require a detailed description, but to those not familiar with it may say that it covers the whole range of designing, construction, fitting up and handling, the information being of the most simple and practical sort, and based in every case on examples taken from all types, deep and shoal, wide and narrow. The new volume contains 168 pages and 37 plates, compared to 500 pages and 63 plates in the old; and in addition is handsomely bound in leather with cloth sides.

CAPSIZING OF A LAUNCH.—On July 12 a party of four, Messrs. Louis Caemmerer, G. M. Norwood, D. R. Dennis and Louisa White, left Rockaway for a run outside in a 28ft. sloop, the *Elbe*. Mr. Caemmerer was the owner, and his two friends knew nothing about managing the boat, and White, fisherman and boatman, was taken to run the launch. On first starting out two ladies were in the party, but as they became seaskick they were set ashore, the launch then ran out through Long Beach Inland, where the sea was very rough, the party probably being ignorant of the danger. When the launch came to anchor, at about 2 o'clock, the launch capsized in crossing the bar, the launch being swum, White succeeded in reaching a large spar buoy, the other three being drowned. For three hours the man clung to the buoy, which was tossing about in a heavy sea, the sun beating down on him. A little after 5 o'clock he was seen by a passing boat, the *Algonquin*, and with a sailing party on board; and after great difficulty, on account of the heavy sea, the boat was taken off in the sloop's yawl by a young man, John Martin. White was badly bruised and so exhausted as to be nearly helpless, and it was only through the skill and daring of Martin that he was hauled into the yawl and transferred to the sloop. He was well cared for and finally reached home, the sole survivor. The launch came ashore next morning, with a hole in the bottom and boiler and stack missing. White has told several different versions about an explosion, but the facts all point to the conclusion that the disaster was a capsizing due to recklessness on the part of the owner in taking the boat into such water, and ignorance in handling her.

ALBORAK.—A single race has proved the need of radical changes in the new Albora, both in construction and trim. She has been out at Lawley's for new channels, to carry three in place of two shrouds, while the interior will be braced as strongly as possible. She leaked so badly in the race that the water was up to the cabin floor. The other changes are a longer bowsprit by 3ft., the cutting away of the forefoot, the removal of 100lb. of lead from the fore end of keel, and the bolting of a foot of wood to her rudder. The only boats in the new fleet which were fitted with channels not obviously defective are Barbara and Nautilus. Both of these boats are strapped over the frames with sail, Barbara being the only one of the special kind being used. The other boats are very deficient in the special kind of strapping and bracing that is the vital feature of light construction. The worst part is, that it will be impossible to remedy this defect in a satisfactory manner in a boat already completed. While Gioriana is far better than the other boats in her bottom and sides, her original deck construction was very defective, and she lacks of diagonal strapping or braces, and after her trial trip a complete set of diagonal filling pieces between the beams, backed by steel straps 2 in. wide, added. All of the 46-footers, with one or two exceptions, have been enjoying a much needed rest for the past ten days, either being repaired and strengthened or undergoing alterations in rigging. Albora has a new and larger mainsail, and Nautilus will also have important changes in her canvas.

MASSACHUSETTS Y. C.—The race of the Massachusetts Y. C. to-day, for the 46ft. class over the 24-mile triangle of the Eastern Y. C., is likely to have as starters Beatrice, Oweine, Alborak, Sayonara, Tania and Barbara. Gossion, 46-footer, may also start. A strong effort has been made to induce Vice-Com. Morgan to send Gioriana around the Cape for this race and the one of the Eastern Y. C. on July 22.

EDWARD BURGESS.

IT had been generally known for some weeks that Mr. Burgess had been seriously ill, with typhoid fever at his Boston home, but of late the news had been so reassuring, at least in the reports that have appeared in the papers, that there was no thought of a fatal termination. Late last week, however, he experienced a serious relapse which resulted in his death on Sunday at 4 P. M. Edward Burgess was the fourth of the five sons of Benjamin F. Burgess, a wealthy Boston merchant and ship owner. Edward was born at Sandwich, Barnstable county, Mass. on June 30, 1848, and like all of his brothers was familiar with boats from his early years. In the ten years from 1870 to 1880 his yachts—and they owned many—were famous about Beverly, Marblehead and Nahant as prize winners, always being well handled; while in model and outfit they were generally ahead of their fellows. As a boy young Burgess fitted for college at Epes S. Dixwell's private Latin school in Boston, entering Harvard College and graduating in 1871. With all his love for yachting and open air life, Mr. Burgess was by nature a student, quiet, thoughtful and retiring; a great deal of his time when in college and after graduation being devoted to natural history, in particular to entomology, in which he was long recognized as an authority. In 1872 he was elected secretary of the Society of Natural History of Boston, which office he held for fifteen years, when the pressure of his new profession compelled him to resign it. While on a trip through Europe some time after leaving college, he became acquainted with Miss Catherine L. Sullivan, of Columbus, O., and they were married in 1877.

Mr. Burgess was never idle, he was instructor in entomology at Harvard for many years, while a great deal of his time was given to mathematical studies, but it was not until the failure of his father, about 1880, that he went into business, forming with his brother Sidney the firm of Burgess Brothers, yacht designers and

EDWARD BURGESS.

agents, at 13 Exchange place, Boston. His skill as a yachtsman and an amateur designer naturally led him to select a vocation so closely allied with his tastes, but for a time the work of the firm, drawing, was merely buying and selling yachts. His first order for a design was in 1884, when he turned out the cutter Rondina, a staunch little cruiser that has made her name known along the whole Eastern coast, for Dr. W. F. Whitney. When, in the same year, the news came of a challenge from the fastest cutter in Great Britain for the America's Cup, held by the New York Y. C., Mr. Burgess had nothing more imposing to show of his work than this same little cutter, but he had among his friends men with the pride of Boston and the East at heart, and with sufficient confidence in him to venture with his aid on a task that was commonly condemned as presumptuous and absurd. Although a part of the credit must be given to his associates who shared the risk and cost, the leader among them being Gen. Paine, to Mr. Burgess was intrusted the task of designing and superintending the new venture, soon to become famous everywhere as the Puritan. How she came to New York almost unnoticed, save for the sneers of some of the papers and the usual anonymous "prominent yachtsman," how she carried all before her in the trial races, and later on defeated Genesee twice; how she was followed by the victory of Plover and a year later by Volunteer, each repeating the victory of Puritan, a tale too familiar to need telling again. After Puritan came Sachem, schooner, Titania, cutter, Pappoose, cutter, and the long list that was crowned when last season closed by little Gossion. Of this year's work it is too early to speak yet, not until the season closes can the final result be known, but the fleet whose accounts are already in the hands of the club, and the list of the races, show that the racing boats before they are outclassed, have made a reputation for their creator which will live as long as yachts are sailed. Though his fame rests chiefly on his yachts, Mr. Burgess has done equally good work in different lines, fisherman, pilot boat and other craft. In 1887 he was appointed by Secretary Whitney as one of the commission to pass upon the designs of new warships, holding the office until his death. He was one of the first members of the Eastern Y. C., and for many years its secretary. In 1888 he was appointed permanent chairman of the Board of Life-Saving Appliances. That Mr. Burgess's home life was peculiarly happy will be readily apparent to all who knew his kindly, gentle and agreeable disposition. His winters were spent in a handsome house built by him on Beacon street, Boston, and his summers in a large cottage on Marblehead Harbor. He leaves two children, William Starling Burgess, about 13 years of age, and Charles Paine Burgess, about 8 years.

HULL Y. C., JULY 11.—The first championship race of the Hull Y. C. for third, fourth, fifth and sixth classes was sailed on Saturday over the regular club courses in a strong south wind, the times being:

THIRD CLASS CENTERBOARDS.			
Posy, R. S. Hunt.....	Length. 22.08	Elapsed. 1:46 49	Corrected. 1:12 01
Moondyne, W. H. Shaw.....	22.08	1:45 25	1:12 59
THIRD CLASS KEELS.			
Swordfish, Hall & Johnson.....	24.07	1:42 44	1:13 27
Echo, Burwell & Isham.....	24.06	1:46 39	1:15 17
FOURTH CLASS JIB AND MAINSAIL.			
Idler, F. L. Dunne.....	20.07	1:14 59
Eureka, E. B. Rogers.....	20.07	Disab.
FIFTH CLASS CENTERBOARDS.			
Egeria, F. Ware.....	19.11	1:15 48	0:52 41
Magpie, H. S. Ouis.....	19.09	1:17 21	0:54 05
FIFTH CLASS KEELS.			
Composite, J. McIntyre.....	16.04	1:30 52	1:04 07
SIXTH CLASS CENTERBOARDS.			
Rocket, H. M. Faxon.....	12.05	1:22 53	0:53 01
Mab, John Shaw.....	15.09	1:25 03	0:57 30
Crocket, E. B. Lambert.....	16.08	1:26 19	0:59 57

Eureka parted her bowsprit, Crockett made a bad start and was handicapped. The judges were Messrs. J. R. Chadwick, J. B. Forvith, H. C. Woodbury, L. C. Poor, J. A. Stetson, W. A. Cary, H. P. Smith, G. W. Keats and W. E. Sheriff. The regatta committee included Messrs. E. L. Burwell, J. J. Souther, H. W. Lamb, E. F. Souther and I. R. Burwell. A hop was given in the evening at the club house.

PEQUOT ASSOCIATION, JULY 4.—Appropriate and patriotic exercises were enjoyed on the "Glorious Fourth" by the Pequots seeking pleasure at their club house, Morris Cove, New Haven. Baseball, tub racing, sailing, driving, illuminations and fireworks programme to properly round off a finished day, with beautiful music and partners in the animating pleasure of the evening's hop. Mention should be made of the excellence of Steward Rogers' café service to the horde of hungry Pequots (and whisper it) of the 25 applications for membership, which appreciation of the club's efforts prompted. The Pequots are anchored to stay.

NEW HAVEN Y. C.—The tenth annual regatta of the New Haven Y. C. was sailed on Wednesday, July 8, in a moderate W.N.W. wind. Owing to the strong wind of the previous day a number of promised starters from other clubs did not arrive. The regular club courses were sailed: From Paradi's Bar buoy to and around mid channel buoy, entrance to Housatonic River, return same course, distance 20 nautical miles. The full times were:

CLASS 1.			
Concord, H. C. Roome.....	Length. 51.50	Elapsed. Did not start.	Corrected. Did not start.
CLASS 2.			
Notus, Wm. H. Rowe.....	41.25	Did not finish.
Rival, P. G. Sanford.....	39.25	3:56 50	3:56 50
Mariota, Vice-Com. Harris.....	35.40	4:33 14	4:28 20
Flora, Rear-Com. T. F. Hammer.....	35.15	4:02 01	3:59 00
Carrie W., E. Baker.....	37.70	Did not finish.
Hazel, Geo. W. Poucher.....	35.60	Did not start.
CLASS 3.			
Nautilus, John B. Haskins.....	32.50	Did not start.
Sea Belle, Com. Seyman.....	31.60	4:51 53	4:51 53
Jewel, Geo. E. Dudley.....	31.60	Did not start.
Portia, S. H. Mason, Jr.....	29.55	Did not start.
Wanda, C. R. Waterhouse.....	31.40	4:36 23	4:32 38
Aria, C. B. Warner.....	28.00	4:35 46	4:34 23
Stranger, J. N. Macaulay.....	28.00	4:11 16	4:05 22

Dare Devil, C. C. Andell..... 27.50 Did not finish.
Champion, F. Burritt..... 27.00 3:55 55 3:55 55

Winners: Derby Silver Co. challenge cup, class 2, Rival; Warner challenge cup, class 3, Stranger; special prize for best corrected time, classes 1, 2, 3, Stranger; class 2, first prize, \$50, Rival, second prize, \$10, Flora; class 3, first prize, \$30, Stranger; second prize, \$10, Wanda; class 6, first prize, \$30, Stranger. Regatta committee, W. A. Faskett, Jr., L. A. Elliott, Frank P. Tyler, Judges, E. F. Mansfield, R. B. Farren, A. W. Adams.

Mr. C. R. Waterhouse, the owner of the sloop yacht Wanda, entered a protest against the decision of the judges in awarding the Warner challenge cup to the Stranger. She was entered in class 4, but according to the club rules sailed in class 3 by assuming the minimum time allowance of that class. As a matter of course when she made the best time of any of the boats in class 3 she was given the first prize of \$30 and no protest was made on that ground. The claim of Mr. Waterhouse is, however, that although the Stranger was eligible to compete for the cash prize, she could not be justly admitted in competition for the Warner challenge cup. The question now is did or did not the Stranger gain all of the rights of a boat which belonged to the class above. The judges decided that she did. The appeal is from the decision of the judges to the regatta committee, and their decision is not yet announced.

The following orders have been issued for the cruise:

General Orders No. 2.—The squadron of the New Haven Y. C. will rendezvous for the annual cruise, Saturday, July 18, 1891, at Thimble Islands, anchorage off Money Island. The plan of the cruise (subject to change) is as follows: Monday, July 20, to New London; Tuesday, July 21, Greenport; Wednesday, July 22, Stonington; Thursday, July 23, New York; Friday, July 24, New Bedford; Saturday, July 25, Vineyard Haven. Per order Commodore Seymour, MYRON R. DURHAM, Fleet Captain.

MOSQUITO Y. C. OPEN JULY 11.—The open regatta and nautical race of the Mosquito Fleet Y. C. of South Boston was very successfully sailed on Saturday, the courses being: From judges' boat off foot of K street, to Buoy No. 3 off Thompson's Island; to club barrel N.W. of middle shaft; back to starting point, passing between the judges' boat and stakeboat, leaving everything on starboard, and repeat. In the open race the classification and prizes were as follows: First class, all yachts measuring 21ft. and not over 25ft. sailing length, prizes, \$12, \$8; second class, all yachts measuring 18ft. and not over 21ft. sailing length, prizes, \$10, \$5; third class, all yachts measuring 15ft. and not over 18ft. sailing length, prizes, \$8, \$4. The race was sailed in a strong south wind, the times being:

FIRST CLASS.			
Ustane, S. N. Small.....	Length. 21.27	Elapsed. 1:40 07	Corrected. 1:03 55

Annie, D. H. Rich.....	14.11	1:05 24	1:05 04

The judges were T. W. Fisher, chairman; W. W. Ransom, J. F. Barry, W. H. Ransom and W. O. Elliott.

OYSTER BAY Y. C. ANNUAL, JULY 11.—The ninth regatta of the Oyster Bay Y. C. was set for July 4, but was postponed on account of the death of Mr. Alfred Roosevelt, a member of the club, who was killed by a train at his home, at Mamaroneck. The race was sailed on Saturday, the times being:

FIRST CLASS—35ft. and OVER.			
Mirth.....	Length. 10 48 11	Elapsed. 2:39 08	Corrected. 1:03 09
Indolent.....	10 49 52	2:41 10	1:05 42
SECOND CLASS—30ft. and UNDER 35ft.			
Jennesse.....	10 50 00	2:52 22	1:02 22
Nadjet.....	10 50 00	2:39 40	1:01 40
THIRD CLASS—25ft. and UNDER.			
Dodo.....	10 47 50	2:47 50	1:00 50
Marion.....	10 50 00	Not timed.
Meteor.....	10 47 07	2:38 45	1:01 07
Shibad.....	10 47 37	2:45 25	1:07 09

The winners were Mirth, Nadjet and Meteor. The regatta committee included Messrs. E. Townsend, Wm. Tuckerman and J. A. Roosevelt.

ATLANTIC Y. C. CRUISE.—Fleet Captain Church has issued the following orders:

ATLANTIC Y. C., BROOKLYN, N. Y., }
FLAGSHIP CHITPA, July 8, 1891. }

GENERAL ORDERS No. 2.

The fleet of the Atlantic Y. C. will rendezvous for the annual cruise at Whitestone on Saturday, July 18, 1891.

The starting signal during the cruise will be the firing of a gun from the flagship and the display of the code signal indicating the port to which the fleet will sail, after which vessels of the fleet may get under way for the port of destination at their convenience.

On Saturday afternoon, July 18, at 2 o'clock, the fleet will sail for Greenwich, Conn., anchoring on arrival off the Indian Harbor House.

On Monday, July 20, the fleet will sail for Morris Cove, anchoring on arrival off the Piquet Club house.

On Tuesday, July 21, the fleet will sail for New London, anchoring on arrival off the city.

On Wednesday, July 22, the fleet will sail for Shelter Island, anchoring on arrival in Deering's Harbor.

By order of the Commodore. GEO. H. CHURCH, Fleet Captain.

LARHOMONT Y. C. CRUISE.—The annual cruise of the Larhomont Y. C. began on July 11, the following yachts comprising the fleet: Leona, Rear Com. Joseph H. Sterling; Dauntless, C. H. Coltrane; Phantom, H. S. Parmelee; Gevalia, H. W. Coates; Teinest, S. M. Roosevelt; Princess, Wilson Marshall; Clochette, E. L. Bushe; Toga, S. H. Hunter; Nonpareille; Trochilus, M. W. Bronson; Clara, C. C. Monroe; Heedless, L. C. Burger; Harriet, Ed J. and Stanley Green.

TIDAL WAVE.—On July 13, at noon, the schooner yacht Tidal Wave, Dr. A. L. Ranney, New York Y. C., ran ashore in a dense fog on Pasque Island, Vineyard Sound. Dr. Ranney and his family were landed safely, but the yacht lies on the beach with several holes in her hull and full of water. It is hoped to lighten her with no worse damage than the loss of her cabin fittings and furnishings by water.

THE PRIZE STEAM LAUNCH.—The \$800 gift launch of the Davis Boat & Car Co. will be completed within a week's time, and the weight and the name of the person winning the same will be published in this paper in the second issue from this date.

DOUGLSTON Y. C. ANNUAL, JULY 4.—The newly organized Douglaston Y. C. sailed its first annual regatta on Saturday, the affair being quite a success, although the Larchmont regatta kept away some that would otherwise have entered, including the 25ft. class. The course was from Douglas Dock, in Little Neck Bay, around Old Tom and the Gangway buoys, a 15-mile triangle. The wind was strong from W. The flagship Ada lost her mast. The times were:

CLASS A, CABIN SLOOPS AND CUTTERS, 19 TO 27ft.			
	Elapsed.	Corrected.	
Meropie, W. S. Gilmer.....	2 19 45 1/2	2 15 27 1/4

ROYAL CANADIAN Y. C., JULY 4.—On Saturday week the Royal Canadian Y. C. sailed a race for 21-footers in a gale, the times being:

	Elapsed.	Corrected.
Gwendoline.....	2 05 12	1 59 55
Widgeon.....	2 13 39	2 12 01
Edna.....	2 32 50	2 32 50
Caprice.....	Did not finish.	

On July 11 the postponed race of the 30ft. class was sailed, the only starters being Samoa, Wona and Erma. Samoa beat Wona by 40min. Erma broke her mast. A race for 25ft. class was also sailed, the times being:

	Elapsed.	Corrected.
Hilda.....	1 47 08	1 44 10
Ariel.....	1 46 58	1 43 22
Keipie.....	1 49 06	1 49 06
Imogene.....	2 19 06	2 19 06

AMERICAN Y. C. NAPHTHA RACE.—On July 4 the American Y. C. held a race for naphtha launches in two classes, under and over 30ft., the course being from off Milton's Point around Execution Light, about 9 miles. There were sixteen starters, all but one finishing, though the smaller boats had a wet time of it. The official table is as follows, being computed by the Isherwood formula, the relative merit being represented by the speed in knots divided by the cube root of the waterline. Olive and Victory were not measured, so the winner in the class was not known:

CLASS ONE.			
	Time.	Speed in Knots.	Relative Merit.
Louise, G. C. Smith.....	1 04 14	7.473	2.4585
Marianna, J. L. Motte.....	1 05 43	7.305	2.4277
Maspeh, H. Offerman.....	1 04 43	7.433	2.3864
Whitecap, W. G. Brokaw.....	1 07 49	7.079	2.3526
Cherry Diamond, W. J. Swan.....	1 13 29	6.552	2.1708
Olive, C. S. McLaughlin.....	55 28	8.655
Kingfisher, G. C. Sackett.....	1 13 56	6.493
Golden Rod, A. E. Watt.....	1 21 42	5.875	2.2212
Satan, J. S. Imman.....	1 23 55	5.532	2.1077

Sweetheart wins a silver flag and Sans Souci \$25. The prizes in first class are a silver model of a launch and \$25. The regatta committee included Messrs. G. W. Hall, W. S. Alley, E. S. Connor, J. H. Wainwright and W. J. Price.

COLUMBIA Y. C.—The annual regatta of the Columbia Y. C. was sailed on June 24, the courses being for classes B, C and D, around a stake boat anchored off the Yonkers Corinthian Y. C. house, at Yonkers, and return. Classes F, G and H—cat and open jib and mainsail boats—twice around a triangular course from Seventy-sixth street to 130th street, thence to the Jersey shore and home. The wind was strong N.W. The times were:

CLASS B—CABIN SLOOPS, 36 TO 42ft.			
	Start.	Finish.	Elapsed. Corrected.
Notus.....	11 15 00	2 52 32	2 37 32 2 38 01

The winners were as follows: Class B, Notus; class C, Nautilus; class D, Brant; class E, Uncas; class F, Bonafide; class G, Charles T. Willis; class H, Novice. The Willis prizes, presented by ex-Commodore Charles T. Willis, were won by the Bonafide, Charles T. Willis and Novice.

QUEEN CITY Y. C., JULY 11.—A very good race for 21ft. class was sailed by the Queen City Y. C., of Toronto, on Saturday, the times being:

	Start.	Finish.	Elapsed. Corrected.
Caprice.....	2 55 00	4 50 12	1 55 12 1 55 52
Enid.....	2 55 00	4 55 07	1 57 07 1 57 07
Widgeon.....	2 55 00	4 56 40	1 58 40 1 58 53

LYNN Y. C., July 11.—The third race of the Lynn Y. C. for the Expert cup was sailed on Saturday in a strong N. E. wind, the times being:

	Length.	Elapsed.	Corrected.
Irene, W. B. Gordon.....	22.08	1 20 45	1 05 52
Nellie Farley, E. C. Smith.....	20.05	1 31 12	1 08 31
Astrea, R. M. Benner.....	19.02	1 35 51	1 12 03

SIREX.—This yawl has lately been chartered by Mr. C. O. Iselin, owner of Titania, now in England, and is fitting out at Gosport for his use. She is an old boat, designed by Mr. St. Clare J. Byrne, of composite build, and 76ft. l.w.l. by 18ft. beam.

A YACHT WRECKED.—Yetira, sloop, Mr. W. W. Carlie, is reported ashore at Fairton, N. J., Delaware Bay, having been run ashore after being disabled and partly waterlogged in heavy weather on the Bay. Her crew are reported safe.

HORNET.—Mr. J. B. Paine has sold the 20-footer Hornet, designed by him last year, and raced so successfully, to Mr. H. P. Benson, owner of Wraith, who has sold the latter to Mr. H. L. Higginson.

VERENA.—Mr. J. A. Beebe has sold his c.b. 40-footer Verena to Mr. W. O. Gay, owner of Nomad, sloop.

SHIFTING BALLAST—PROFESSIONAL SAILORS.—San Francisco, June 19.—Editor Forest and Stream: The rules of the Corinthian Y. C., of this city, state that no boat shall shift her ballast inside of 24 hours of the starting of a race. A protest has been filed here that the sloop Cyretta shifted her ballast inside of the 24 hours of the start of the race. What she shifted was her cabin fixtures, such as blankets, stoves, pictures, cushions, etc. The question arises, are the fixtures that she put ashore ballast? Another question which has caused quite a discussion in yachting circles here is the definition of a professional man aboard a boat. If you could decide the above questions you would confer a favor on a number of "Prize" yachtsmen.—YACHTSMAN. [The term "ballast" as used by Eastern yacht clubs applies only to such articles as anchors, chains and the regular lead, iron or stone carried in the bottom of the boat. It does not apply to furniture and fittings, bedding, stove, etc., and these are very frequently set ashore on the morning of a race unless special conditions for cruising trim are imposed. The yacht has a right to be measured in such trim as her owner desires, and after measurement she is allowed to decrease her length, but never to exceed it. The term "shifting" applies most particularly to moving heavy weights to windward on each tack, and not to the addition or removal of weight of any kind prior to starting. We know of no definitions of a Corinthian or professional which are in any way complete, but there can be no question that fishermen, boatmen and all who sail boats for pay, hire or passenger fares must be classed as professionals.]

NEW YORK Y. R. A. CRUISE.—The fleet of the New York Y. R. A. met at the appointed rendezvous, City Island, on July 4, where the flagship Edith, Admiral Prime, was at anchor. On Monday the fleet sailed for Norwalk Islands, the yachtsmen attending a hop in the evening at the Roton-Point Hotel. On Tuesday the run was made to New Haven and on Wednesday to Saybrook. On Thursday the run to Shelter Island was made, the fleet disbanding there.

RICHARD POILLON.—On July 4 Mr. Richard Poillon, of the firm of C. & R. Poillon, died of heart failure at his residence in Brooklyn, aged 74. The Poillon family have carried on the business of shipbuilding for a hundred years at the old yard, foot of Bridge street, Brooklyn, the building for the past thirty years being mainly yachts, among which are Sappho, Fortuna, Montauk, Graying, Coronet, Intrepid, Noma, Norseman.

ANSWERS TO CORRESPONDENTS.

No Notice Taken of Anonymous Correspondents.

J. S. W., Baltimore, Md.—Write to Wm. English Co., Peterboro, Ont.

L. H. T., Philadelphia.—The Coast Survey charts cover a great part of the Delaware River; we know of no good chart of the Susquehanna. Camp kits can be had of Ward & Averill, 23 William street, New York.

S. T., Philadelphia.—1. Will a patched give better results than a grooved bullet? 2. Will a .22cal. rifle shoot as well with a 24in. barrel as with a 28 or 30? 3. In a .35-105 or 185 cartridge, which weight bullet will give the best results as to penetration, accuracy, etc.? 4. Which is the better cartridge for small game, the .32-105 W.C.F. or .32-35-105 or 185? Ans. 1. Yes when carefully loaded. 2. Yes, except in extreme ranges. 3. The heavier bullet is steadier in wind. 4. .20-105 best and most agreeable for short distances and .35-105 for general use.

THROUGH VESTIBULED AND TOURIST SLEEPERS BETWEEN CHICAGO AND TACOMA, WASH., AND PORTLAND, ORE.—The Wisconsin Central and Northern Pacific Lines run through Pullman Vestibuled and Tourist Sleepers between Chicago and Tacoma, Wash., and Portland, Oregon. The train known as the "Pacific Express" leaves the Grand Central Passenger station, at the corner of Fifth avenue and Harrison street, at 10:45 P.M. daily. For tickets, berths in Pullman or Tourist Sleepers, etc., apply to Geo. K. Thompson, City Passenger and Ticket Agent, 255 Clark street, or to F. J. Eddy, Depot Ticket Agent, Grand Central Passenger Station, corner Fifth ave. and Harrison st., Chicago, Ill.—Adv.

The fame which Captain Bogardus has won with the gun is such that anything which he may write on the subject of shooting is sure to be interesting to those fond of that species of sport. It is, therefore, little wonder that this volume on "Field, Cover and Trap-Shooting" should have reached its third edition. In the book Captain Bogardus avoids technical terms and relates, in a free and pleasing style, facts gained by him during his shooting trips in nearly every State of the Union. Besides this, he gives such plain instructions in loading shells in hunting game of all kinds that any one can understand them. Included in the volume, also, are valuable hints as to the best method of training dogs for the hunting field, interspersed with many pleasant anecdotes about their surprising instinct. The book is illustrated by several portraits.—Philadelphia Public Ledger.

FISHERMAN'S AUTOMATIC REEL.

When a sportsman finds anything which adds to his pleasure, without increasing his labor, he wants all his brother hunters and anglers to know of it and share with him the newly discovered "helper."

WHAT WE CLAIM FOR The Automatic Reel.

FIRST—It will wind up the line a hundred times as fast as any other reel in the world.

SECOND—It will wind up the line slowly if the angler chooses.

THIRD—No fish can ever get slack line with it.

FOURTH—It will save more fish than any other reel.

FIFTH—It will prevent tugs, lines and snells from being broken by large fish.

SIXTH—It enables the angler, and makes it desirable, to use lighter tackle.

These claims have been substantiated by the most skillful fishermen in America and Europe.

This reel is manipulated entirely by the hand that holds the rod.

The New York St. Bernard Kennels

Place these famous stud dogs at the service of the public.

PRINCE REGENT.

The most successful rough-coated stud dog of modern times. Among his progeny are Scottish Prince, Princess Florence, Earl Roseberry, Duke of Arundale, Lady Gladwin, Kingston Regent and King Regent. He is the best son of Champion P. H. Limmon; he stands 35in. at the shoulder; he has great bone, weighs over 200 lbs., and his color is a deep orange with correct markings.

"The most phenomenal stud dog that has yet been known."—Fanciers' Gazette (London).

"The sire of sires."—Forest and Stream.

Fee, \$75.

Champion Hector.

(Smooth-coated). Winner of sixty-six first and special prizes and numerous stud cups. He is the sire of Champion Oleopatra, Duke of Sparta, Lord Hector and many others.

Fee, \$40.

ROUGH AND SMOOTH PUPPIES FOR SALE.

New York St. Bernard Kennels,

138th St. and Hudson River, New York.

COUNT NOBLE-GLADSTONE-SUE.

AT STUD. FEE \$25.

PAXTANG, the '86 Derby Winner.

The only known dog of any reputation by Count Noble out of Gladstone-Sue bitch. His puppies are not excelled by any. He is large size, healthy and a fast dog with the most delicate nose. Parties having good bitches, desiring to produce the perfection of the field trial strain of English setters should address for pedigree and particulars.
